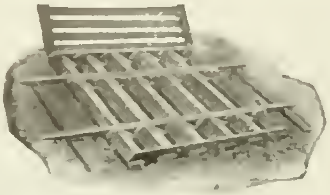
Lower Row—Geo. Low Reid, Engineer; W. Wallace, Traffic Agent; G. H. Howard, W. Orr, G. B. Spriggs, J. Howard, Purchasing Agent; Thos. Swinyard, General Manager; Brackstone Baker, English secretary of the company; T. Bell, J. Hall, Foreman of Running Department; J. Weatherstone, Track Superintendent; J. A. Ward, Mechanical Accountant; P. Neilson, Station Agent at Hamilton; W. Wilson, Track Foreman.

Kalamazoo "PERFECT" Steel Surface Cattle Guard

ONLY GUARD THAT **ALWAYS** TURNS AWAY ALL STOCK WITHOUT INJURY



Furnished ready-to-place, saving expense of hardwood ties, much excavating and much assembling. Offers no catching points for dragging chains—readily removable during track overhauling—cannot rattle to pieces—proof against corrosion—self-cleansing of snow and rubbish. In short, this is **the perfect guard.**

RAILWAY NECESSITIES

Great Northern Building - Chicago

WOOD'S FLEXIBLE NIPPLE END PROTECTOR

FOR AIR-BRAKE AND SIGNAL HOSE

Prevents chafing and abrasion effecting a saving of from 40 to 50% in maintenance of air-brake hose.

THE MONOGRAM BRACKET

will absolutely stop shifting and leaking of air-brake train pipes. All M.C.B. requirements are obtained and maintained.

P. & W. HOSE PRESERVATIVE

FOR AIR-BRAKE AND PNEUMATIC TOOL HOSE

will prevent cracking of rubber cover and deterioration due to climatic changes. Easily applied.

U.S. "Bliss System" Axle Electric Car Lighting Equipment and "National" Storage Batteries

Efficient and economical operation is a consideration which leads to the adaptation of the "Bliss System."

"National" Storage Batteries for Car Lighting or Railway Signal Service give the best service at the lowest cost.

President, James Anderson, General Manager Sandwich, Windsor and Amherstburg Ry.; Vice President, P. Dubee, Secretary, Montreal St. Ry.; Secretary-Treasurer, Acton Burrows, Managing Director Railway and Marine World.

Association's Office, 70 Bond St., Toronto.

Executive Committee.—E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; H. M. Hopper, General Manager, St. John Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.; D. McDonald, General Manager, Montreal St. Ry.; M. N. Todd, President, Galt, Preston and Hespeler St. Ry.

Assistant Secretary, Aubrey Acton Burrows, Secretary and Business Manager Railway and Marine World.

Official Organ, The Railway and Marine World.

Canadian Street Railway Association.

The annual meeting opened at Windsor, Ont., June 6, there being a large attendance of representatives of member companies from as far east as Halifax and as far west as Vancouver. In the unavoidable absence through pressing business of the President, Duncan McDonald, General Manager, Montreal St. Ry., Montreal, the Vice President, James Anderson, General Manager Sandwich, Windsor and Amherstburg Ry., occupied the chair.

The Executive Committee having reported in favor of admission to membership of the Chatham, Wallaceburg and Lake Erie Ry. Co., the Galt, Preston and Hespeler St. Ry. Co., Ltd., the Levis County Ry. Co., and the Peterborough Radial Ry. Co., they were unanimously elected.

The Secretary-Treasurer, Acton Burrows, presented an exhaustive report dealing with the Association's work during the past year, reviewing the Dominion and Provincial legislation affecting electric railways, the actions of the Board of Railway Commissioners and the various Provincial Boards having jurisdiction over electric railways, and giving a large amount of information on various subjects which had been collected at the instance of member companies.

The following papers were read and discussed:—"Let the Public Know," by A. Dexter B. Van Zandt, Publicity Manager, Detroit United Lines; "Private Plants versus Niagara Power," by J. Milne, Consulting Engineer, Sandwich, Windsor and Amherstburg Ry.; "Notes on Distribution of Power in Street Railway Operations," by Donald S. Barton, Consulting Engineer, Quebec Railway, Light, Heat and Power Company; "Shop Accounts," by F. P. Griffith Superintendent of Shops, Dominion Power and Transmission Company; "Checking Power Consumption on Cars," by D. E. Blair, Superintendent of Rolling Stock, Montreal Street Railway; "The Use of Tee Rails In Street Railway Construction," by F. G. Simmons, Superintendent Construction and Maintenance of Way, Milwaukee Electric Railway and Light Co.

The Board of Railway Commissioners having requested the appointment of a committee to compile a code of rules for the operation of electric railways to be submitted to the Board for approval, the following were appointed as the committee to deal with the matter:—J. Anderson, General Manager, Sandwich, Windsor and Amherstburg Railway; E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; P. Dubee, Secretary, Montreal Street Railway; A. Eastman, General Manager, Windsor, Essex and Lake Shore Rapid Railway; G. Gordon Gale, General Superintendent, Hull Electric Co.; J. E. Hutcheson, Superintendent, Ottawa Electric Railway; W. R. Robertson, Superintendent, Niagara, St. Catharines and Toronto Railway.

The second day's meeting was held in Detroit, Mich., when J. Kerwin, Superintendent of Tracks, Detroit United Railway, gave an address on "Modern Track Building."

Considerable time was devoted to interesting topical discussions on various questions submitted by representatives of member companies relating to operating and other matters.

The election of officers for the current year resulted unanimously as follows:—President, James Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry.; Vice President, Patrick Dubee, Secretary, Montreal Street Ry.; Secretary-Treasurer, Acton Burrows, Managing Director of the Railway and Marine World.

Executive Committee.—The President and Vice President, and E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; H. M. Hopper, General Manager, St. John Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; C. B. King, Manager, London Street Ry.; D. McDonald, General Manager, Montreal Street Ry.; M. N. Todd, President, Galt, Preston and Hespeler St. Ry.

Assistant-Secretary-Treasurer, Aubrey Acton Burrows, Business Manager, Railway and Marine World.

A letter was read from R. H. Sperling, General Manager, British Columbia Electric Ry., inviting the Association to meet in Vancouver in 1912, and was referred to the Executive Committee.

On the evening of June 6 the representatives attending the meeting were the guests of the Sandwich, Windsor and Amherstburg Railway Co., being taken over the line from Windsor to Sandwich, and from there crossing to Bois Blanc Island, in Detroit River, where they were entertained at dinner, one of the chief features of which was delicious planked white fish. On June 7, Elmer J. Smith, Secretary and Treasurer of the Peter Smith Heater Co., Detroit, entertained a number of the representatives at luncheon at the Detroit Motor Boat Club, the automobile ride to and fro being much enjoyed. Late in the afternoon of June 7 the representatives went by special car accompanied by a number of the D.U.R. officials, whose guests they were, from Detroit to Toledo, Ohio, making the 70 mile trip in a little under 2 hours, including the slow run through both city limits and a stop of some 15 minutes at Munroe, Mich., to inspect the power house. At Toledo they were charmingly entertained at dinner by the D.U.R officials, and returned to Detroit about 10 p.m. James Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry., who presided at the meetings in his capacity of Vice President, in the absence of the President, D. McDonald, and who also took the chair at the dinners at Bois Blanc and Toledo, was most assiduous in his attentions, and was ably assisted by a number of other D.U.R. officials, including H. Bullen, General Superintendent; T. Fullerton, Auditor; A. E. Peters, Assistant-Secretary; E. J. Burdick, Superintendent of Power.

The Peterboro Radial Ry. has ordered three 18½ ft. semi-convertible, pay-as-you-enter car bodies, 29½ ft. over all, mounted on 21-E trucks, and one heavy double broom electric snow sweeper from the Ottawa Car Co., Ottawa.

Toronto Suburban Railway.

The control of this company has passed into the hands of Sir William Mackenzie and associates. On June 20th an issue of £540,000 sterling 4½% debenture stock was offered in London, Eng., through the British Empire Trust Co., for the purpose of improving the existing lines and building extensions. We are advised that the present line will be relaid with heavier rails and otherwise improved and that an extension will be built from either Lambton or Weston to Guelph, so as to give a through line from the north end of Toronto to that city. A survey has already been made west as far as Brampton. Nothing is likely to be decided about construction until after Sir Wm. Mackenzie's return from England. But it is said to be likely that some work will be gone on with this year.

The company's capitalization, prior to the recent issue, was $1,500,000 common stock. The directorate was as follows: President, Allan H. Royce; Vice President, R. L. McCormick; other directors, G. C. Royce, Dr. G. Royce, R. B. Henderson. The officials are: G. C. Royce, Secretary-Treasurer and General Manager, and Agent; J. Rankin, Engineer of Power Station; J. Boyd, Master Mechanic; D. Kinsman, Roadmaster.

The company buys its power from the Electrical Development Co. of Ontario, which is also controlled by Sir Wm. Mackenzie. It has 10.26 miles of track, 4 ft. 10¾ in. gauge and has 15 motor and 2 other cars. It owns an amusement park at Lambton Mills..

Under the provisions of the Ontario Joint Stock Companies Act, and the Street Railway Act, there was incorporated by letters patent Nov. 12, 1890, the Weston, High Park and Toronto Street Street Ry. Co., and in the following year the Legislature changed the name of the company to the City and Suburban Electric Ry. Co., with power in addition to building railways between certain points to acquire not exceeding 100 acres of land for park purposes. On Oct. 5, 1891, an agreement was signed by J. S. McMurray, President, and L. L. McMurray, Secretary and Treasurer, on behalf of the company, with the Corporation of Toronto Junction, for a franchise for the building of an electric railway on any street or highway within the municipality, except such as had been included in the franchise granted June 8, 1891, to the Davenport St. Ry. Under this agreement a specific line was to be built along Conduit St., from the city limits to Keele St., thence northerly to Humberside Ave., thence westerly along the most direct route to Elizabeth St., thence northerly to Dundas St., to city limits, also along Keele St. northerly to the north limit of the town, on or before Sept. 1, 1892; connection to be made with the Toronto Ry. as soon as that system had been extended to any point to which the company has power to build. An indenture of mortgage securing an issue of $140,000 of 6% first mortgage bonds was given to the Trusts Corporation of Ontario, under date Feb. 1, 1893, in which it was set out that the company had built an electric railway (provided with power house and other equipment) on the following streets: Keele St., from St. Clair Ave. to Dundas St.; Dundas St., from Humberside Ave. to Lansdowne Ave.; Humberside Ave., from Dundas St. to Glendonwynne Road; Glendonwynne Road to Glenholme Drive, along Glenholme Drive to Fairview Ave., on to Louisa St., along Loulsa St., to Lans-

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

- Wiley & Russel, Stocks, Dies, Taps, Etc.
- Butterfield, Stocks, Dies, Taps, Etc.
- Oster, Stocks and Dies
- Starret's Fine Tools
- Brown and Sharp's Fine Tools
- Western Tool Co.'s Lathe, Planer, and Shaper Tools

We cordially invite all interested in Tools to come in and view our stock. We will gladly demonstrate any of our lines.

Rice Lewis & Son, Limited = Toronto

downe Ave., and along this avenue to Dundas St. It was also set out that the company had acquired the Davenport Street Ry., built by a company incorporated by letters patent Feb. 11, 1891, under an agreement with the township of York, and the town of Toronto Junction. This line is described in the mortgage as extending from the crossing of Bathurst St., by the C.P.R., to St. Clair Ave., thence westerly along Davenport Road to St. Clair Ave., and along that avenue to Toronto Junction.; and the mortgage also covered the franchise granted within the limits of Toronto Junction. F. Turner was President and Allan Royce Vice President of the D.S. Ry. in 1891, and M. D. Barr was President in 1892. On April 20, 1893, a further agreement was made between the township of York and the D. S. Ry., by which rights of construction were granted from the southern boundary of Toronto Junction to the Lake Shore Road.

The D. S. Ry. was built by the Street Railway Construction Co., and in order to satisfy the claims of this company, a company was incorporated by the Ontario Legislature, May 5, 1894, with the title of the Toronto Suburban Street Railway Co., Limited, having power to acquire the railways, property, franchises and other assets of the two companies named, and amalgamate them under the title of the Toronto Suburban St. Ry. Co., Ltd.. The capital was fixed at $250,000, power being given to issue bonds to the amount of $20,000 a mile of line built. The provisional directors were: R. W. Smith, J. Torrance, A. W. Atwater, Montreal; R. H. Fraser, Toronto; H. W. Darling, Toronto, and Boston, Mass.

Having completed the amalgamation, the Toronto Suburban St. Ry. Co., Limited, operated 9.89 miles of line, extending from what was then the Toronto city boundary on Dundas St., along Dundas St. to Lambton, with a branch southerly to Evelyn Crescent; a line to Weston, branching from the Dundas St., at Keele St., and the Davenport Road line branching off from the Weston line easterly to Bathurst St. Owing to lack of patronage the Evelyn Crescent line was abandoned for some years, but traffic on it was resumed on the general revival of business. In 1899 an arrangement was made with the Toronto Ry., by which that company operated its lines to Keele St., the T. S. Ry. operating its lines in two sections, one along Dundas St. to Lambton, with the Evelyn Crescent branch, and the other along Keele St. to Weston, with the branch to Bathurst St.

In 1901, the company began to look forward to an extension of its lines, and secured authority to extend its Lambton Mills line to Hamilton, and in the following year was given a franchise through the township of Etobicoke, the extension to be completed in 1903. Nothing was done under this agreement. In 1904, the Legislature granted an extension of time for building the lines authorized in 1901, and authority to build the following additional lines: From Hamilton to Niagara Falls; a line from near Weston to Woodbridge; a line from near Lambton Mills to Brampton; and other branch lines in Niagara Peninsula. At the last session of the Legislature, an extension of time for one year was granted for the building of the lines, and power was given to build a line from Cooksville.

By the Act passed in 1904 the company was authorized to issue bonds to the amount of $30,000 a mile in respect of its lines built or to be built, and in 1909, a mortgage to the National Trust Co. covering an issue of bonds to that amount was confirmed. The mortgage provided that no portion of the bond issue beyond that for the existing mileage should be issued unless with the previous consent of two-thirds in value of shareholders present or represented at a general meeting called to authorize the issue of bonds.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for April, $368,233; working expenses, $243,097; net operating earnings, $125,136; renewal funds, $29,770; net earnings, $95,366; approximate income from investments, $20,000; net income, $115,360, against $247,307 gross earnings; $153.776 working expenses; $93,581 net operating earnings; $17,852 renewal funds; $75,679 net earnings; $16,500 approximate income from investments; $92,179 net income for Apr., 1910. Aggregate gross earnings for 10 months ended Apr. 30, $3,440,733; net income, $1,336,479, against $2,471,631 aggregate gross earnings and $1,047,717 net income for same period 1909-10.

Calgary Municipal St. Ry.—Total earnings for May, $28,731.85; expenses, including a contingent account amounting to 5% of gross earnings and $2,715.88 for interest and sinking fund, $17,720.81; surplus, $11,010.44.

Edmonton Radial Ry.—The report of the city auditor upon the operation of the street railway for the year 1910, forms a part of the report of the city commissioners for Edmonton, Alta., recently issued. The auditor sets out that the revenue account for the year shows a deficit of $29,269.74, which added to the deficit of 1909, makes a total deficit of $38,754.38. The liability for tickets sold and not collected, $4,219.62, has been charged against revenue account. The number, 108,412, of tickets outstanding, appears to be abnormally large, but no statistics are available for comparison in this matter, with cities of similar size elsewhere. The financial loss is accounted for by the lowness of the fares charged, the high cost of labor, and the haste with which the line was built, which rendered considerable reconstruction necessary on the tracks.

The amount raised on capital account during the year was $434,500, and after liquidating the balance of the capital expenditure for 1909, and deducting the cost of extensions during 1910, there is on hand $247,133.06 to meet future expenditures. The amount charged by the power house department for power for street railway purposes was $46,480.75.

The receipts for the year were $148,294.17.

Halifax Electric Tramway.—Receipts for May, $17,198.82, and for two weeks ended June 14, $12,631.23, against $15,- ...., and $12,417.59 for same periods 673.97 and $12,417.59 for same periods

London St. Ry.—A dividend of 3% for the half year was declared at the semi-annual meeting of directors, June 15.

Montreal St. Ry.—Passenger earnings for May, $419,459.55; miscellaneous earnings, $12,229.97; total earnings, $431,689.52; operating expenses, $216,730.32; net earnings, $214,959 20; city percentage on earnings, $38,776.01; interest on bonds and loans, $15,963 07; rent leased lines, $607.10; taxes, $5,000; total charges, $60,346.18; surplus, $154,613.02; expenses per cent. of earnings. 50.21, against $360,480.85 passenger earnings; $9,753.28 miscellaneous earnings; $370,234.13 total earnings; $199,616.79 operating expenses; $170,617.34 net earnings; $29,442.27 city percentage on earnings; $14,982.37 interest on bonds and loans; $552.90 rent leased lines; $4.000 taxes; $48,977.54 total charges; $121,639.80 surplus; 53.92 expenses per cent. of earnings for May, 1910. Aggregate total earnings for eight months ended May 31, $3,006,913.47; operating expenses, $1,787,921.86; net earnings, $1,218,991.61; total charges, $339,889.47; surplus, $879,102.14; expenses per cent. of earnings, 59.46, against $2,707,235.45 aggregate total earnings, $1,607,443.21 operating expenses; $1,099,792.24 net earnings; $306.147.51 total charges; $793,644.73 surplus; 59.38 expenses per cent. of earnings for same period 1909-10.

Ottawa Electric Ry.—We are advised that while there have been repeated rumors during the last few months of a merger of the O. E. Ry., the Ottawa Light, Heat and Power Co., and the Ottawa Car Co., nothing is likely to be done in the way of bringing it about in the immediate future.

Port Arthur and Fort William Electric Ry.—Net earnings for Apr., $4,675, against $2,851 for Apr., 1910. Gross earnings per car mile, 23.672c.; net earnings per car mile, 8.961c.

Toronto Ry.—Gross earnings for April, $364,458; working expenses, maintenance, etc., $188,341; net earnings, $176,117, against $328,785 gross earnings; $171,146 working expenses, maintenance, etc.; $157,639 net earnings for Apr., 1910. Aggregate gross earnings for four months ended Apr. 30, $1,432,422; net earnings, $671,138, against $1,303,050 aggregate gross earnings; $605,102 net earnings for same period, 1910.

A quarterly dividend of 1¾% has been declared.

Winnipeg Electric Ry.—Gross earnings for April, $308,113; working expenses, $148,096; net earnings, $160,017, against $238,054 gross earnings; $124,642 working expenses; $113,412 net earnings for Apr., 1910. Aggregate gross earnings for four months ended Apr. 30. $1.280,472; net earnings, $615,387, against $1,051,534 aggregate gross earnings, $509.159 net earnings for same period 1910.

Toronto P.A.Y.E. Car Requirements.

The following Act was passed at the Ontario Legislature's recent session:

1. The Ontario Railway Act, 1906, is amended by adding the following as section 214a:

214a—(1) What is known as the "pay as you enter system" of collecting fares shall not be operated on any street railway car unless such car complies with the following requirements: (a) It must have a rear platform at least 72 ins. deep with a folding step not less than 54 ins. long. (b) The rear platform must be enclosed and properly heated, and provided with a door or doors having an aggregate width of at least 54 ins., so arranged as to permit of the entrance and exit of passengers at one and the same time. (c) If there is a partition between the rear platform and the body of the car such partition must have doors or openings so arranged as to permit of the entrance and exit of passengers at one and the same time. (d) The front platform must be enclosed and properly heated. It shall be provided with an exit door at least 30 ins. wide and a folding step of the same width. If there is a partition between this platform and the body of the car it must be provided with an exit door or opening not less than 30 ins. wide.

(2) This section shall only apply to cities having a population of 100,000 or over.

(3) Every company or person who violates the provisions of this section shall, on summary conviction therefor, incur a penalty of $100 per day for each car operated contrary to the provisions of this section.

(4) The provisions of the preceding sub-sections may from time to time be varied or extended by the Ontario Railway and Municipal Board on any application made to the board for such purpose.

LET THE PUBLIC KNOW

By A. Dexter B. Van Zandt, Publicity Agent Detroit United Railway.

The following paper was read before the Canadian Street Railway Association at its meeting in Windsor, Ont., recently:—

Let the public know; tell them all about yourselves. It is a duty you owe, not only to the people, but to yourselves as well.

Of all the modern inventions of urban and suburban life developed within the past half century—inventions that are now classified as public utilities, whether in the form of transportation service, lighting service, heating service or the service of transmitting messages by wire—none has been so wonderful in its growth and ramifications as the public utility you here today represent, the electric street railway. Yet because of the misrepresentation of those with ulterior motives, supplemented by the non presentation by those who know, no other necessity of modern civic life has been subjected to such abuse as is heaped upon the calling to which you are devoting your lives.

The English speaking nations are broad, liberal minded peoples, by natural bent prone to have faith in their fellow beings, for only because of this faith in the honesty of purpose have we been able to become what we have, great nations in the uplifting of mankind. Some day there will be more of this faith in what you have done and are doing, and this confidence in your work, when it does come, will redound to your glory as well as to the peace and welfare of town and country.

Today you introduce to a municipality this wonderfully comfortable means of annihilating time and space, and you are hailed as a giver of new life. but a year from today and the same people will not be greatly adverse to placing you on the cross of carping criticism. Today you invest all the money at your command, adding to it all the credit you can obtain, in rails, cars and power, all the best products of the art, and then give a service far beyond the wildest dream of the most optimistic citizen, but a year from now your track, your cars, your power and your service are condemned as being antiquated. Your critic continues to live in his same house, use his same furniture, and eat from the same dishes, content in the belief that he is doing what is proper. He can readily see the financial folly of wiping out his investment, but he doesn't understand why you shouldn't scrap a five thousand dollar car.

Today your average citizen goes to his butcher and, asking the worth of meat, is told and believes; he goes to his tailor and, asking the worth of clothing, is told and believes; then your same citizen comes to you, and asking what it costs to make his street car ride possible is told, whereupon you are made chief in the Ananias club. This is the condition that confronts you. Why the condition exists is, perhaps, rather hard for you to understand, and I am not certain that any one fully knows why these views are as common as Canadian thistles on the farm or as dandelions on the city lawn.

As I read the history of urban and interurban railway development I take it that the prevailing opinion of the public had its origin in your own lack of comprehension of what you started out to do. In the beginning all you planned was the substitution of motors for horses. You would give, you believed, the same service—perhaps a little better service—at a less cost. Your original cars and their duplicates would do; to them you would fasten motors and string up some wires from which to secure the current of electricity and save the cost of feed and loss of dollars by sickness, old age, or death of animal power. Coupled with these was the certainty of somewhat shortening the running time, so you figured it out that you could perform the public service of transportation not only better but cheaper. You proceeded by contractural relations to perform this service at rates that have since proven to be far less than they should have been. Others, lured by the pot of gold at the end of the rainbow, and with less knowledge than you, entered the field with even rasher promises than you believed you could fulfill. You found that the mystifying motors required larger cars, and then the larger cars required larger motors, and these in turn required larger cars. With larger cars and more powerful motors came greater speed, and greater speed and heavier equipment required rails and road beds of costly design—a constant succession of using capital and still more capital, with the scrap heap growing apace long before even a fractional portion of the original investment had been returned into the treasury from which it came.

In the meantime, as new discoveries and inventions came with startling rapidity, and they are still coming, placing into the discard today what in themselves were discoveries of but yesterday, the people have been served lavishly. You have made it possible for them to live far from the smoke and noise of shop and factory; you have given them a means of transportation within the city, faster, more frequent and more certain than human mind ever thought possible. You have spread the cities out into the country, with its free air and blessed sunshine, and you have given the man of broad acres all the peculiar joys of city life added to the beneficence of wheat field and woodland. You have done all these things, but so intent have you been with your work that even though through bitter experiences you learned that deficits are not surpluses, and depreciations must sometime be met, you have not set about it to tell the user of your street car that every five cent piece he pays is far from being all profit. I mean you have not gone about it scientifically. Today your car shops are scientifically organized; you employ engineers to do your track building; you make use of chemists; operating departments are in the hands of men of wide knowledge of the public's needs and your ability to supply these needs; you are quick to locate defects in your internal organization, but you have not yet brought to an equally high standard a public information department.

Today several of the states and provinces have begun a scientific study of the art of transportation through trained men in the employ of the railway commissions. There is more deep investigation of the problem than ever before, and as the years go by the knowledge gained will seep through to the minds of the people, but this knowledge should not all be theoretical in nature; the difficulties besetting practical men must be made known in order that there be a clear comprehension. Each railway should do an active work in properly educating the public with which it is in immediate and constant touch.

I know of no public utility that receives so much attention today in that greatest of all public utilities, the press, as is given the utility you represent. Day after day and year after year the name of your railway appears in public print, often in words of truth, often with words of falsity.

Occasionally you are being given credit for doing something for the public good and more often you are being accused of crimes you never committed. If a nagged conductor and a crabbed passenger have a quarrel, headquarters are given the blame; if a transfer is wrongfully issued it is done on the advice of the president of the company after months of consultation with the directors, and should some one coming around the rear end of one car be run over by the car going in the opposite direction, it is, of course, all deliberately planned by the general manager. Your patron may over-sleep, and, perforce, have to snatch an unsatisfactory breakfast, but you must have the car ready for him when he reaches the corner. As a matter of fact, it is your fault the alarm clock doesn't pull him out of bed and dress him. Similarly you are to blame because you do not buy cars enough, and build tracks enough, and have an abundance of car crews on hand to take back the armies from the shop, the factory and the ball game within the space of five minutes or less. That the butcher and the grocer cannot assuage one's wants promptly is no excuse for you of public utility service—that phrase so beautifully mouthed by the man in office and the man who wants to be in office.

Why not intelligently try to direct the information that goes out broadcast among the people whom you transport? They are entitled to know what you are doing and why you are doing it. You should tell them that your prosperity means their good service, and their prosperity means still better service. Let them see that there is a proper, decent relationship between you, the common carrier, and they, the riders. Take them into your confidence, and in time they will learn that while personally you are a quiet, sedate Christion gentleman, you are not officially a cut-throat, porch-climber and leper. I, myself of newspaper training, have no hesitancy whatever in saying that you have neglected your department of publicity, that department which is the connecting link between the railway and the people who ride.

No matter what may be the motive of the man higher up in newspaper control, it should be remembered that the reader believes in what his paper tells him. His newspaper is the source of his information and his school of instruction. The very fact that a man reads a certain print is the best of evidence that he believes in it from first column to last, including, sometimes, the advertisements. Your average citizen believes his newspaper is published primarily to furnish him with local and world information, and so he necessarily believes he is being honestly dealt with, but of the real purposes of the man higher up he has never had occasion to ponder.

Make the giving of news a definite department of organization, with the same attention to it as to other departments. Let the public know what you have done and what you are doing. Let the public know of your new appointments and of your accidents. Let the public know of your schedule changes, of where you add to the service, and where you take off, and why. Municipal corporations, through their clerks and departments, let the public know what is going on, because the public is interested. You should do no less. Don't be afraid of printer's ink. Let the public know

* * *

The action brought by W. Kerley against the London and Lake Erie Ry. and Transportation Co. to recover penalties under the Lord's Day Act, for the operation of cars on Sundays, came before Chancellor Boyd at St. Thomas, Ont., June 20. The company is operat-law. The Grand Valley Ry., which also that it is independent of the provincial law. The Grand Valley Rd., which also operates under a Dominion charter, is running cars between Brantford and Galt on Sundays.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

Projects, Construction, Betterments, Etc.

Brandon, Man.—A bylaw authorizing the construction of an electric railway in the city was passed by the ratepayers June 16. It provides for the building by the city council of about eight miles of line.

Negotiations are in progress with a syndicate represented by J. D. McGregor for the operation of the line. If these negotiations are completed the syndicate will assume the cost of the work done by the city, and complete the construction. The first lines to be built will lead to the Experimental Farm and the suburban park. (June, pg. 555.)

Brantford.—The Ontario Legislature has authorized the city council to pass bylaws for building and operating a street railway from the corner of Brant Ave. and Church St. to a point opposite the waterworks plant, and to raise $12,000 by debentures for such purpose. The council is also authorized to lease the line to any company.

British Columbia Electric Ry.—The freight yard which the company proposes to lay out at New Westminster will have a capacity of about 300 cars and will contain over two miles of track, with room for extension. It lies between the Eburne line and the proposed cut-off from McNeiley St. to Twelfth St.

General Manager Sperling informed the New Westminster City Council June 5, that plans had been approved for an extension to Millside, and for a new line in the city.

The Board of Railway Commissioners having authorized the opening for traffic of the Vancouver, Fraser Valley and Southern Ry. from Park Drive, Vancouver, to New Westminster, 10 miles. It was opened for traffic June 12.

Proposals are being discussed prior to submission to the company for a line from Vancouver to the Delta district; from Vancouver to Ladner, 14 miles, and for a further extension of the Lulu Island line. (June, pg. 555.)

Calgary Municipal St. Ry.—The special track work at the intersections is being put in, but it is slower work than was anticipated, and it is doubtful whether the extensions will all be completed by the date for opening the exhibition. The construction of the Hillcrest loop line this year is under consideration, and it is expected the work will be put in hand at once. (June, pg. 555.)

East Calgary Corporation Co.—Press reports state that application is being made for incorporation with this title for the purpose of building an electric railway for eight miles southeasterly from the present easterly terminus of the Calgary Municipal Street Ry. Colonel Walker and P. Burns are interested in the proposal.

Grand Valley Ry.—The plant for the power house at Galt, Ont., is being installed. This power house will receive the current from the Hydro-Electric line. (Feb., pg. 167.)

Guelph Radial Ry.—The contract for the construction of the extension of the line in St Patrick's Ward, Guelph, Ont., has been let to P. H. Secord and Sons, Brantford, Ont. The overhead work will be put up by the company. (May, pg. 453.)

Halifax Electric Tramway Co.—A press report states that the directors passed a resolution June 15 consenting to the extension of the line from Green Bank to Point Pleasant Park, Halifax, N.S., asked for by the city authorities. The work will be proceeded with as soon as the city engineer gives the necessary authority, and it is expected to have it completed by Aug. (May, pg. 453.)

Hamilton, Waterloo and Guelph Ry.—A representative of a London, Eng., financial house is expected in Hamilton, Ont., to look into the proposal for the building of this railway, according to a statement made by J. Patterson on his return from England, May 26. (April, pg. 365.)

Hamilton St. Ry.—The company has notified the Hamilton, Ont., city council that it will be unable to make any more extensions this year, but it has consented to shift its tracks on Barton St., east of Sherman St., from the side to the middle of the road. (May, pg. 453.)

Hamilton to Galt, Ont.—The General Manager of the Dominion Power and Transmission Co. is reported as stating, June 16, that the company intended to build a line from Hamilton to Galt, Ont., as soon as possible, but that its action will depend largely upon the action of the electors on the Hydro-Electric power bylaw, which is to be voted on in Hamilton at an early date. (June, pg. 555.)

Hull Electric Co.—Plans showing the car barns, repair shops and offices which it is proposed to build near Hull Jct., on the Little Farm, were filed at the city hall, Hull, Que., June 1. The estimated cost of the buildings is $25,000. The present shops are at Deschenes, and these will be turned into car barns when the new buildings are completed. (Sept., 1910, pg. 781.)

Lake Erie and Northern Ry.—W. P. Kellett and others interested in this projected electric railway from Port Dover to Brantford, Ont., went over the route, June 6. A bylaw was passed by the Brantford City Council, June 12, granting the company permission to build its line along Newport St. and across certain streets in the city. The municipalities through which the line will pass are being asked to guarantee the company's bonds, Brantford being asked to become responsible for $300,000, and the town of Simcoe and the village of Port Dover for $50,000 each. (June, pg. 555.)

Medicine Hat, Alta.—The city council instructed its finance committee, June 9, to apply next session of the provincial Legislature, for a charter for an electric railway.

Montreal Street Ry.—The question of a new franchise for the M.S.R. and its allied companies is still under consideration. The President informed the Board of Control, June 15, that it would be early in July before the company would be in a position to discuss the matter. (June, pg. 557.)

Mount McKay and Kakabeka Falls Ry.—Bylaws affecting this railway as constructed in Paipoonge tp., were confirmed last session of the Ontario Legislature as follows:—exemption from taxation for 21 years from 1911; grant of $4,000 in aid of the construction of a bridge over the Kaministikwia River at the boundary of lots 8 and 9; and a franchise for lines on any highway in the township. (Mar., pg. 259.)

Nanaimo, B.C.—A bylaw granting a franchise for the construction and operation of an electric railway in the city has been given a second reading by the council, and referred to the solicitor. Stewart and Rogers, Victoria, are solicitors for the syndicate with which the preliminary arrangement has been made. A local syndicate has submitted an offer to build a line, if the first named proposition is not carried through. (Feb., pg. 169.)

Niagara Frontier Ry.—A bylaw granting the company a 25 year franchise for an electric railway in Niagara-on-the-Lake, Ont., was passed by the taxpayers, June 6. (June, pg. 557.)

Oshawa Ry.—The Ontario Legislature has authorized the Oshawa town council to enter into an agreement with the Oshawa Ry. for the paving of the track allowance, and for the spreading of the cost over a period. (Mar., pg. 259.)

Ottawa Electric Ry.—The Ottawa City Council was authorized last session of the Ontario Legislature to borrow $14,500 for the purpose of providing for the cost of a roadway to enable the O.E.R. to extend its line to Beechwood and Notre Dame cemeteries in Gloucester tp. Negotiations are in progress with certain property owners at the corner of Carling Ave., in order to extend the Preston St. line and form a new loop line. (June, pg. 557.)

People's Ry.—A special meeting of shareholders was held at Berlin, Ont., June 26, to create 6% preference stock of an amount not exceeding 25% of the capital from time to time authorized; to confirm a bylaw passed by the directors as to the terms of the preference stock; to authorize the issue of bonds, debentures or other securities, and to create mortgages to secure the same; to confirm and ratify contracts for the building of the railway, and to ratify the acts of the directors up to the holding of the meeting. G. A. Wanless is Secretary and the company's offices are at Berlin, Ont. (June, pg. 557.)

Port Arthur and Fort William Electric Ry.—The Ontario Legislature has confirmed bylaws authorizing the raising of $90,000 for paying the street railway proportion of certain streets, and for the laying of 80 lb. steel rails on Cumberland St.

The taxpayers of Port Arthur will vote, July 6, on a bylaw authorizing the city council to raise $17,250 by debentures for extending the line from the present terminus at Current River Park for 1,800 ft. along Cumberland Ave.

In the act respecting Fort William, passed last session of the Ontario Legislature, it is set out that the amount of the debenture debt for street railway purposes is $372,500, in respect of which a sinking fund is being provided. The council is authorized to borrow money for the street railway's part of the cost of paving and macadamizing certain streets without obtaining the assent of the electors. The act also confirms a bylaw for borrowing $20,000 for street paving on Victoria Ave. and Simpson St., on which the street railway is double tracked (June, pg. 557.)

The Prince Rupert Hydro-Electric Co. has been incorporated under the Dominion Companies Act, with a capital of $5,000,000, and offices in Montreal, for electrical development purposes at Prince Rupert, B.C. The powers given to the company are general, and include the construction and operation of electric railways. The provisional directors are: O. B. MacCallum, G. V. Cousins, P. F. Brown, W. R. Ford, S. T. Mains, Montreal. This is the company which has taken over the charter of the Tsimpsian Light and Power Co., as well as other companies interested in electrical development in the Prince Rupert district. (See Tsimpsian Light and Power Co., June, pg. 559.)

Quebec Ry., Light and Power Co.—We are advised that it is the company's intention to electrify the Montmorency Division, between Quebec and Ste. Anne de Beaupre, but that it has not yet been decided when the work will be done. It is intended to establish a divisional point at Ste. Anne de Beaupre, and to operate the line from that point through to Murray Bay, on the Quebec and Saguenay Ry., by steam. The ownership of the Q. and S. Ry. is vested in the Quebec Ry., Light, Heat and Power Co., which owns the Q. Ry., L. and P. Co., but it will be operated as the Q. and S. Ry.

The extension to the Kent House was so far completed that a steam locomotive was run in on the new rails to the hotel grounds June 9.

Replying to a communication from the locality, R. Forget, President, has

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 15 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog now.

INTERNATIONAL TEXTBOOK COMPANY
Box 1072, Scranton, Pa.

Department of Railways and Canals, Canada
HUDSON BAY RAILWAY.
NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for construction of Hudson Bay Railway," will be received at this office, until 16 o'clock on Tuesday, the 1st of August, for a section of about 185 miles from Pas Mission to Thicket Portage.

Plans, specifications and form of contract to be entered into can be seen on and after Wednesday, May 31, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Chief Engineer of the Hudson Bay Railway, Winnipeg, at which places forms of tender may be obtained.

Parties tendering will be required to accept the fair wage schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind, that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of [illegible]00 000.00 made payable to the order of the Minister of Railways and Canal must accompany each tend[illegible] will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheques thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES,
Secretary.

Department of Railways and Canals, Ottawa, May 26, 1911.

Newspapers inserting this advertisment without authority from the Department will not be paid for it.

During April, seven employes were killed and one injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, all of which were due to drowning, six were caused by a wreck off the B.C. coast, the non-fatal accident being caused by falling machinery.

written stating that the company will undertake the construction of a line from Charlesbourg to Lorette, as an extension of its lines, if the municipalities interested will secure the necessary right of way. (June, pg. 557.)

Regina Electric Ry.—H. Doughty, who is in charge of the building of the electric railway in Regina, Sask., under L. A. Thornton, City Engineer, stated recently that the line would be completed to the exhibition ground by July 1, and would be in operation for the fourth. No definite arrangements, we are advised, have been made for the operation of the lines, but in any case the City Commissioner will have the direction of the work. (June, pg. 557.)

St. John Ry.—An extension of the line as far as Kane's Corner is under construction, and if the arrangements are completed with the municipality, the extension will be carried as far as Fernhill cemetery. An addition to the power house is to be built immediately. It will have a frontage of 30 ft. on Nelson St., St. John, N.B., and will connect at the rear with the company's offices. (May, pg. 455.)

Sandwich, Windsor and Amherstburg Ry.—The Ontario Legislature has declared that sec. 11 of chap. 97, Vict. 56, "shall not prejudice or affect the rights, powers and privileges of the said town of Sandwich existing or enjoyed by the said town of Sandwich prior to the passing of the said act." The second section limits the company's franchise to a period of two years from the present year. (Mar., pg. 261.)

Saskatoon, Sask.—The taxpayers will vote, July 6, on a bylaw to authorize the city council to grant a franchise for an electric railway. The agreement which it is proposed to ratify is made with H. M. E. Evans, Edmonton, Alta., who has acquired the property, rights and franchises of the Saskatoon Power Co., and provides, so far as the street railway is concerned, that construction is to be started within three months after the agreement is made and completed within 15 months, subject to incorporation at the next session of the Saskatchewan Legislature. Special conditions are provided to come into operation if the special act be not obtained, or if the street railway be completed before the hydro-electric plant is ready. The franchise is for 20 years, and is exclusive, covering also any areas that may be added to the city in the future. The corporation may call upon the company to build extensions at any time under certain conditions; radial lines outside the city limits may also be built. The company will pay to the city, after the line has been in operation three years, 3% of the gross earnings every year for seven years, 4% a year for the next ten years, and 5% a year thereafter until the city exercises the right of purchase under sec. 27 of the agreement. (May, pg. 455.)

Sherbrooke St. Ry.—The Board of Railway Commissioners has authorized the company to change the location of its crossing of the C.P.R. at the corner of King and Belvidere Sts., Sherbrooke, Que.

It is expected that the reconstruction of the old company's lines in the city will be completed by July 31. (May, pg. 455.)

Toronto and York Radial Ry.—The additional lines which the company is authorized to build under the Act passed last session of the Ontario Legislature include extensions and branches of the different railways forming the T. and Y. R. R. upon highways, with the consent of the municipal authorities, or upon private rights of way; a line from the Toronto and Scarboro division to Markham; and a line from the Metropolitan Division at Sutton to Pefferlaw. The present Act does not extend the rights of the company under any existing agreement with any municipality so as to empower the company to lay double tracks upon any highway where such right does not expressly exist under such agreement.

Application is being made for the construction of additional switches on the Metropolitan division in North Toronto. The present switches are only short passing places, about 400 or 500 ft. long, and the proposed new ones extend from 1,050 to 1,650 ft. in length. The municipal authorities are opposing the plans before the Ontario Railway and Municipal Board. (June, pg. 559.)

Toronto Civic Street Railway Proposals.—The Act respecting the city of Toronto passed last session of the Ontario Legislature declared that the power to acquire the part of the Toronto and York Radial Ry. in the city, as set out in schedule B., was legal, and granted power to acquire it under the terms of the agreement of Dec. 23, 1890. The piece of line mentioned is the section of the Toronto and Mimico Electric Ry. from Sunnyside to the city boundary. The council may take possession of the line, Dec 23, of the current year, and may issue debentures to pay for the cost, subject to the passage of a bylaw. The city is also given power to extend the line easterly along the Lake Shore Road so as to connect with the Toronto Ry., and may make agreements with that railway for the interchange of traffic, or for running rights over the T. Ry. as far as the St. Lawrence Market, or to other points, subject to the approval of the Ontario Railway and Municipal Board. The city's application for rights in connection with the T. Ry. is under consideration by the Ontario Railway and Muncipal Board. (June, pg. 559.)

Toronto Eastern Ry.—The Board of Railway Commissioners will be asked, July 5, to recommend the Governor-in-Council to sanction an agreement made with the Canadian Northern Ontario Ry. for the running of the company's trains over C.N.O.R. tracks. A number of orders have been made by the Board of Railway Commissioners for the crossing of public highways in the townships of Darlington and Whitby East, Ont. (Apr., pg. 365.)

Toronto Ry.—Work on the new lines and new turnouts, etc., is being pushed forward, both by the company and the city, and it is expected that some of the new routes will be put in operation by the end of July. The Ontario Railway and Municipal Board has granted the company permission to lay a line on the Spadina Ave. line south to Front St., and to put in an intersection there. (June, pg. 559.)

Western Central Ry.—A special meeting of shareholders was held in Toronto, June 19, to authorize the directors to issue first mortgage bonds to the amount of $35,000 a mile of single track, and $55,000 a mile of double track line. J. L. McDiarmid is interim Secretary.

A. T. Drummond, who represents the company, stated June 11, that the company would agree to give over its passenger business destined to city points to the civic railway, if permitted to stop at certain points and allowed the use of certain streets to reach the civic lines. It is understood that a proposal will be submitted to the city at an early date. (June, pg. 559.)

Winnipeg Electric Ry.—The City Engineer was instructed, June 9, to get into communication with the railway officials with a view of deciding on the extensions to be built. It was announced, June 14, that the company was sending a representative to discuss extensions with the city of St. Boniface. (June, pg. 559.)

Electric Railway Notes.

The Pay-as-you-Enter Car Corporation has taken out patents in China.

Mrs. Butler, who died in Montreal, May 28, was wife of J. W. Butler, Supervisor of the Montreal Street Ry.

The Port Arthur and Fort William Electric Ry. has added to its rolling stock a baggage car, built at its own barns.

The Moose Jaw Electric Ry. has received two 21 ft. cars, 31½ ft. long over all, mounted on 21-E trucks, from the Ottawa Car Co., Ottawa.

N. C. Pilcher, General Manager, Sherbrooke Ry. and Power Co., has been gazetted provisional lieutenant in the Sherbrooke Regiment.

The Winnipeg Electric Ry. has completed two large open type cars, and has nearly completed a number of closed type cars at its shops.

The Toronto Ry. employes, at a meeting, June 10, instructed a committee to wait on the management and present a list of grievances, with a request for redress.

The Edmonton Radial Ry. has received two 28 ft. pay-as-you-enter cars, 44½ ft. long over all, mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa, Ont.

The Montreal and Southern Counties Ry. is being asked to deliver 800 shares of stock to the Bank of Quebec. Argument was heard June 19, and judgment reserved.

The Montreal Street Railway on July 1 made a voluntary increase of wages of motormen and conductors of 1c. per hour, making the wages 20, 21 and 22c., according to length of service.

W. Meredith, Consulting Engineer, British Columbia Electric Ry., Vancouver, has been chosen by the Victoria city council as engineer to supervise the construction of the Sooke Lake power plant.

The British Columbia Electric Ry. has organized a publicity department. This has been deemed necessary on account of the expansion of the railway in the past year, and in view of prospective development.

G. H. Millar has been appointed Master Mechanic in charge of shops and sub stations, London and Lake Erie Ry. and Transportation Co., London, Ont., vice C. Johns, who resigned on his appointment as Superintendent in charge of hydro-electric power plant at St. Thomas, Ont.

Joseph D. Evans has been appointed Superintendent of Construction and Supervising Engineer, Montreal Street Railway. He was for a number of years in the J. G. White Company's service, and recently was in charge of the Canadian Power Company's construction at St. Timothee, Que.

The British Columbia Electric Ry. has ordered two 45 ton 0-4-0 locomotives, with quadruple equipment, 301D interpole railway motors, arranged for forced ventilation, from the Westinghouse Co. Following are chief details: cab arranged for double end operation; adhesive weight 90,000 lbs. on driving wheels; diameter of driving wheels, 36 ins.; arched wheel base, 6 ft. 8 ins.; length between coupler knuckles, 31 ft. 1 in.; nominal ratings, each motor 150 h.p. on 500 volts; unit switch, electro-pneumatic, hand accelerating control; brake equipment, Westinghouse type E.L.; continuous tractive effort with blower, 6,800 lbs.; tractive effort at 17½ miles an hour, for one hour, 12,800 lbs.; maximum tractive effort up to 15 miles an hour, 20,000 lbs., with 500 volts at the motors; momentary tractive effort with sand, 26,000 lbs.; motors arranged for working voltage of 600; car ratio, 17:60.

Niagara St. Catharines and Toronto Railway Shop Devices.

The accompanying illustrations show four different labor and cost-saving methods devised by W. H. Horton, electrical engineer N., St. C. & T. Ry., St. Catharines, Ont., and used in the shops of that company. Fig. 1 is a commutator slotter made on the principle of a common slide rest. It carries a cutter made of an old file which is operated by a hand lever and link, as shown. With this slotter 99-bar commutators can easily be undercut in 15 minutes. Fig. 2 shows this device installed on the slide rest of a lathe.

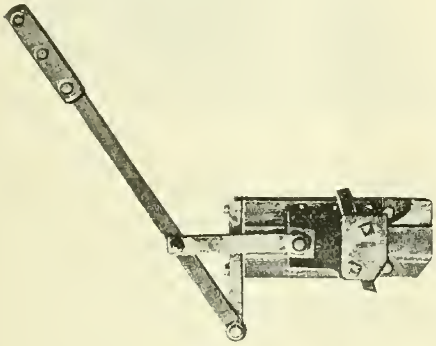

Fig. 1.—Commutator Slotter.

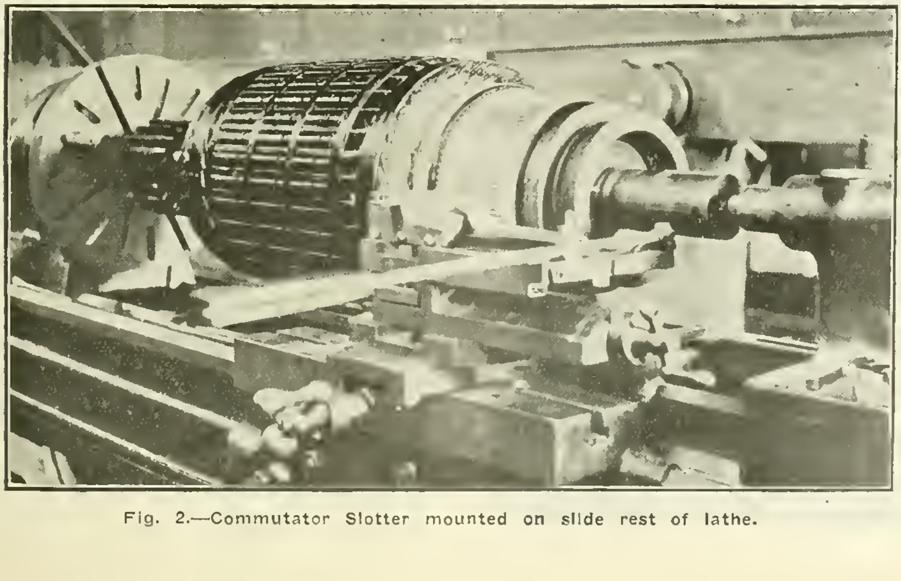

Fig. 2.—Commutator Slotter mounted on slide rest of lathe.

For boring armature and axle bearings the company uses a simple cylindrical chuck which is screwed on to the lathe spindle, as illustrated in fig. 3. This has proved a very satisfactory device since the bearing requires no centreing; all that is necessary is to push the bearing into the chuck and clamp it with the set screw. Bushings are used for odd-sized bearings, the single set screw passing through a clear hole in the bushing to clamp both the bushing and the bearing. No armature binding has been experienced with bearings bored in this chuck because the inner side, when bored, must be parallel with the outer side of the shell. One man can bore many bearings in a day with this chuck, as no time is lost in centreing. A large number of bearings can be bored, say 1-32 in. small, for stock, and when armatures require bearings the latter can be fitted with this chuck without disturbing the original alignment.

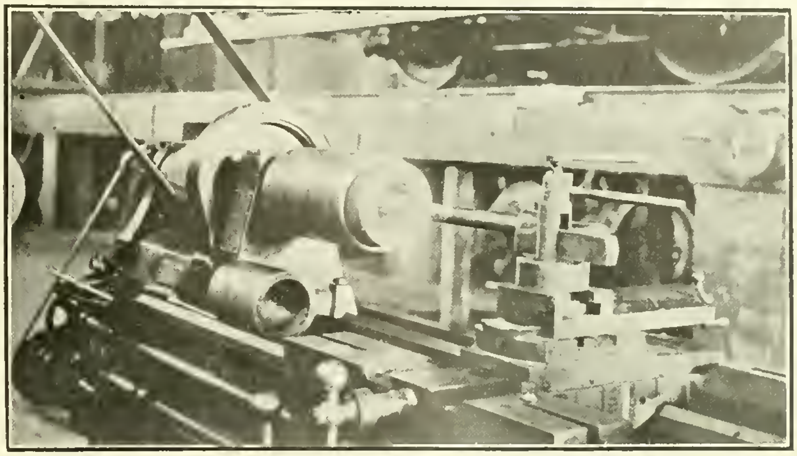

Fig. 3.—Armature Bearing Chuck.

Fig. 4 shows an armature bander which was made of a 15-in. diameter double-flange, cast-iron pulley, 1½ in. wide between the flanges. The banding wire is led from the spool seven or eight turns around the pulley, after which the wire is led in the right direction by the lower right-hand trolley wheel which serves for the sheave. A piece of trolley rope over the pulley is used for a brake. This rope is fastened to a bracket at one end and is kept taut by cast-iron weights at its free end. The tension of the wire is increased simply by adding more weight on the end of this rope. This banding outfit has been found efficient and simple and does as good work as more costly devices used for the same purpose.

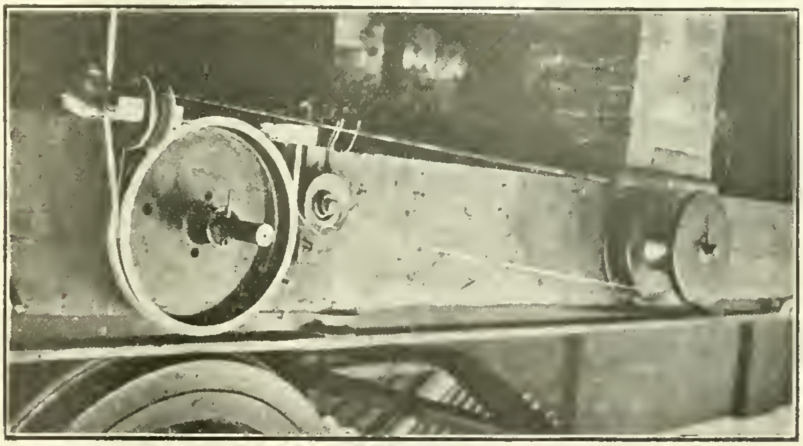

Fig. 4.—Armature Bander Wire Tighteners.

Fig. 5 shows a car wheel tire-heater consisting of a piece of 1½ in. pipe bent into a circle with ⅛-in. holes 1 in. apart drilled all around on the inside. Natural gas for heating is supplied through the valve on the left and air is furnished through the valve on the right from a forge blower driven by a 1 h.p. motor. The pipe circle rests on a 3-in. thick cast-iron ring which is surfaced on the upper side and ribbed on the lower side. The brick foundation has a large centre hole through which the water used for cooling the tire is drained away. A 2-ton chain hoist suspended from a trolley running on I-beams is used to lift the wheels and axles in position over the tire. When the tire is heated sufficiently the wheel is lowered into it and the tire cooled off. This apparatus has been found to be very satisfactory. For instance, four old tires have been taken off and four new tires put on for a total gas consumption of 830 cu. ft., the natural gas costing 30 cents per 1,000 cu. ft. The time taken to remove an old tire varied from 6 minutes 25 seconds to 10 minutes. The time taken to apply a new tire varied from 21 minutes 30 seconds to 25 minutes.

Statistics of Canadian Shipping.

The total number of vessels of all kinds on the Canadian register at Dec. 31, 1910, was 7,904, representing 750,929 tons, an increase of 136 vessels and 32,376 tons over the previous year. Of this number, 3,332 are steamers with a gross tonnage of 554,974. With an assumed average value of $30 a ton, the net registered tonnage of shipping on the register is valued at $22,527,870. The number of new vessels built and registered during 1910 was 294, measuring 22,233 ton net register, which at an estimated value of $45 a ton amount to $1,002,735. During the year 247 vessels were removed from the register for a variety of causes, details of which, with the vessels registered, we have published each month. The number of vessels and their tonnage, according to provinces, is as follows:—

	Sailing ships and steamers.	Steamers.	Gross tonnage of steamers.	Net tonnage of sailing ships and steamers.
Ontario	2,027	1,485	240,658	227,457
Quebec	1,499	479	124,573	189,945
Nova Scotia	2,054	267	34,217	149,737
Brit. Columbia	1,109	781	93,693	105,414
New Brunswick	951	198	46,201	59,637
P. E. Island	150	20	4,465	10,100
Manitoba	94	85	7,673	5,565
Yukon District	16	14	3,213	2,784
Saskatchewan	4	3	281	290
Totals	7,904	3,332	554,974	750,929
Totals, 1909	7,768	3,229	513,962	718,553

Ports of registry are distributed as follows: Ontario 18, Nova Scotia 21, New Brunswick 7, Quebec 6, British Columbia 4, Prince Edward Island, Manitoba, Saskatchewan and Yukon District one each. No provision has been made for the registry of vessels in Alberta, though several vessels have been built, and are operating on the provincial waters. The chief vessels thus operating are registered at Kenora, Ont. The ports having a net tonnage of 10,000 and over are as follows:—

	Vessels.		Net
	Sailing.	Steam.	tonnage.
Montreal	789	288	136,407
Victoria, B.C.	307	191	60,089
Toronto	344	277	52,324
Quebec	625	162	46,271
St. John, N.B.	332	105	43,933
Vancouver, B.C.	607	469	35,175
Ottawa	394	294	31,297
Windsor, N.S.	78	16	26,222
Lunenburg, N.S.	279	13	22,751
Halifax, N.S.	424	93	21,375
Kingston, Ont.	204	138	21,339
Parrsboro, N.S.	95	7	17,726
Yarmouth, N.S.	311	34	15,906
Collingwood, Ont.	81	76	15,770
Hamilton, Ont.	41	33	14,936
Midland, Ont.	30	25	11,879
S. S. Marie, Ont.	68	58	11,298
Charlottetown, P.E.I.	150	20	10,100

Of the 247 vessels which were removed from the register, during the year, 13 were sold to foreigners; 26 wrecked; 8 stranded; 10 lost; 85 broken up; 6 abandoned at sea; 1 lost in collision; 7 foundered; 17 burnt; 3 condemned; 11 transferred to Newfoundland; 7 transferred to Barbadoes; 46 reported out of existence; 1 sank, and 6 were dismantled. During the same period, the names of 34 vessels were changed by orders in council.

The new vessels built and added to the register during the year, according to provinces, are as follows:—

	Vessels.	Tonnage.
Quebec	58	7,012
Nova Scotia	82	5,572
British Columbia	84	5,177
Ontario	46	3,612
Manitoba	5	490
New Brunswick	17	397
Prince Edward Island	2	23
Totals	294	22,283
Totals, 1909	327	25,306

C.P.R. Steamship Princess Alice.

The s.s. Princess Alice, which is being built for the C.P.R. service between Vancouver and Victoria, B.C., and Seattle, Wash., was launched at Wallsend-on-Tyne, Eng., May 29, being christened by Mrs. Arthur Piers, wife of the Manager C.P.R. Steamships.

The Princess Alice is about 300 ft. long and 46 ft. broad. She is built to the highest class of Lloyds and in accordance with the Dominion Government's requirements for passengers in channel or Pacific Coast service. In many respects she is similar to several vessels previously built for the same and other owners for service on the Pacific Coast.

The main engines will be triple expansion, with four cranks balanced to eliminate vibration. The vessel is designed for a speed of close on 18 knots an hour. In addition to the ordinary coal bunkers, she will carry fuel oil and the boilers will be fitted with a complete installation of oil-burning apparatus.

The arrangements for the accommodation and comfort of the passengers have been planned so as to be second to none in a vessel of this class. Both the ventilation and lighting of saloons, corridors, staterooms, kitchens, and so forth have been carefully studied and lavishly executed. The various public rooms and also the staterooms will be handsomely furnished, particular care being taken that the upholstery and all fittings are of the finest quality. In addition to the commodious cabins extending the whole length of both the upper and promenade decks, there will be several suites of bridal chambers. On the main deck aft will be the dining room, panelled in beautiful Italian walnut and finished with decorations in white enamel and gold. Below the dining room will be a restaurant with seating accommodation for about a hundred persons at small tables. On the promenade deck forward will be the observation room with large plate glass windows on three sides. This will be a particularly comfortable apartment provided with couches and easy chairs, from which may be had an interrupted view of the magnificent scenery through which the vessel will pass. At the after end of the same deck will be the first class smokeroom furnished in fumed oak. This will be another handsome and comfortable room, with wide and lofty windows and surmounted by a stained glass dome. The oak walls are to be relieved with hammered copper panels beautifully designed and representing scenes of North American Indian life and various Canadian subjects. On the upper deck, both forward and aft of the engine and funnel casing, will be large social halls or musicrooms. The corridors of the promenade deck will be specially lofty and well lighted by having a coach roof extending over their full length. This will be designed with a celerstory, which will be finished with panels of stained glass.

Grounding of the s.s. General Wolfe.

Following is the judgment delivered by Capt. L. A. Demers, F.R.A.S., Wreck Commissioner, June 2, concurred in by J. Bartlett and Capt. T. McGough, assessors, relating to the grounding of the s.s. General Wolfe in Harrington Harbor, Saguenay, Que., Nov. 6, 1910:

The court finds the testimony given by the captain and A. Gagne, second mate, somewhat contradictory, and holds that Capt. Young in transmitting his orders to the mate and second mate failed to make them sufficiently explicit and his conduct is therefore deserving of criticism, all the more so in view of the admitted deficiency of the second mate, who was given charge of the deck, and the court further holds that he was somewhat lax when in finding fault with the mode of keeping the log book; he failed to insist upon what he considered a desirable change being made. On the other hand the court is of opinion that the captain acted in a commendable manner subsequent to the stranding and by his judicious actions saved the ship from incurring more serious injury than she sustained.

As regards A. Gagne the court holds that he failed to carry out explicitly the orders he received, but in view of the fact that these orders thesmelves were somewhat inexplicit it will confine itself to severely reprimanding him for his lack of duty and informing him that should he again appear before this court, his certificate will be dealt with. He is furthermore instructed, in view of the reports made regarding his defective eyesight, that he be subjected by Dr. Page to the three sight tests, the retention of his certificate depending upon his successfully passing these tests. Capt. Young is warned to exercise more discretion in future and to insist upon what he considers a needed reform on his ship being acted upon by his officers and actually put into effect, or as master of a ship he must recognize that he is responsible for the doings on board and the line of conduct of the men under his command.

The Vessel Toiler's Oil Engines.

A great deal has been written of late about vessels, both large and small, driven by oil engines. As a matter of fact, the number of oil engine propelled seagoing vessels probably does not as yet number more than two or three, and by far the largest of these is the Toiler, built in England for the Canadian lake trade, which has already been described in these columns, and which has recently completed a voyage from the Tyne to Calais, France, and back. She is fitted with two sets of oil engines, as the speed on the canals, being limited, engines of

relatively small power are sufficient to meet the requirements.

The Toiler is a twin screw vessel, 248 ft. p.p. by 42½ ft. beam by 19 ft. depth moulded, propelled by two sets of two-cycle reversible Diesel engines of a combined b.h.p. of 360, equal to about 400 i.h.p., working at about 250 revs.

On her voyage to Calais the Toiler was loaded with 2,650 tons deadweight of coal cargo, besides about 40 tons of oil fuel, fresh water and stores, a total deadweight of nearly 2,700 tons on a mean draft of 14 ft. She left the Tyne in very rough weather, notwithstanding which the engines are reported to have worked perfectly satisfactorily, and she completed her voyage to Calais at an average speed of 5.9 knots (or 6¾ miles). On her return voyage, light in ballast, the average speed was 8.2 knots (or 9½ miles). The consumption of oil fuel for the round voyage, including auxiliary compressor, was 6½ tons, say 1.65 to 1.75 tons per day.

It is claimed that in many ways the Toiler is more economical than a steam driven boat. She has a greater deadweight capacity, owing to the fact that the oil engines are much lighter than steam engines and boilers, the amount in this vessel being about 60 tons; the cubic capacity for cargo is also greater, as the boiler space is saved, and besides the oil fuel can be carried in the double bottom in place of water ballast, thus saving bunker space.

The consumption of oil is much less in weight than the consumption of coal for steam engines. In the Toiler the consumption at full speed does not exceed 1.75 tons per day of fuel oil of 18,000 b.t.u. calorific value, whereas with steam engines of equal power the consumption of coal would not be less than eight tons per day. The actual difference in cost depends, of course, upon the relative prices of coal and oil in the district where the vessel may be trading.

Not only is the economy of this vessel shown in the increased deadweight of cargo carried, the increased cubic capacity, and the low fuel consumption, but the staff on board to attend to the oil engines is less than the staff required for steam engines and boilers, the engine room staff being about the same, whilst firemen are not required.

The deck machinery and engine room accessories of the Toiler are driven by compressed air, being furnished by a compressor driven by a small oil engine. The electric light, with which the vessel is fitted, obtains its power from a small paraffin engine. The accommodation is heated by hot water, and the heat is obtained either from the exhaust gases of the main engine or by means of a coal fire. There is thus no steam on board the boat.

◆

Blue Book of American Shipping.—In issuing this standard marine directory the publishers announce that for the future it will be issued biennially instead of annually. While the volume aims at covering the marine interests of North America, and does so pretty thoroughly, it gives special attention to the marine interests of the Great Lakes. This field, which constitutes the largest feeders of the railways, and has an important bearing, particularly on the Atlantic Ocean trade, is thoroughly covered. This trade is of growing importance, and the statistics compiled in reference to it are of special value. The lists of vessels, owners, etc., and of shipbuilding and repairing yards, dry docks, and of the various interests connected with the owning and operation of vessels are complete. The Blue Book is published at $5 by the Penton Publishing Co., Cleveland, Ohio, and copies may be obtained from the Railway and Marine World Book Department.

Grounding of the s.s. Manchester Spinner.

An investigation into the cause of the grounding of the Manchester Liners, Ltd., s.s. Manchester Spinner on White Island reef, recently, was held at Quebec, June 16, before Capt. L. A. Demers, F.R.A.S., Wreck Commissioner, assisted by Capts. Clitt and Nash as nautical assessors. Following is the text of the judgment:

The court having fully weighed the evidence adduced finds that Pilot Lachance committed two errors of judgment, in the first instance by his neglect in concentrating his mind upon the location of the light ship, which he should have relied upon as a guide for his course, and secondly by his action in leaving such a wide margin between his vessel and the light ship, when he finally discovered his error and attempted to pass through the channel of half or three-quarters of a mile between the light ship and the reef, and the court holds that he should have kept in closer proximity to the light ship, thus permitting his vessel to pass clear of the reef, or that he shauld have starboarded his helm, turned his ship to the eastward and passed to the north and eastward of the light ship for the north channel, which, under the circumstances, would have been the most judicious course for him to have pursued. In view of the errors on his part above set forth, the court finds it incumbent upon it to condemn the pilot to a fine of $100, to be paid in two monthly installments, he, however, being allowed to retain his branch.

The court, furthermore, finds it necessary to issue a warning to Second Officer R. Stoker that he exercise better discretion in the future, and to realize that although there may be a pilot on the bridge that he is, nevertheless, the representative of the captain and as such assumes full responsibility for the happenings on the vessel throughout the period that he is in charge of the bridge.

◆

Great Lakes Wireless Telegraphy

With reference to the information on this subject published in our last issue, we are officially advised by the radio-telegraph branch of the Naval Service Department that it has been decided that the Dominion Government will install its own wireless telegraph system on the Great Lakes. There is already a station at Port Arthur, and other western stations will be established first. Sites have been secured at the following points, at which stations will first be built:—Sarnia, Midland, in the neighborhood of Cape Hurd, and at Sault Ste. Marie, Ont. Other stations will later on be established in the neighborhoods of Kingston, Port Colborne, and Port Stanley, and at Toronto. Tenders for the erection of these stations will be invited immediately. The stations will all be of the most up to date type and provided with duplicate apparatus.

The system, when completed, will form the western end of a chain of stations extending from Belle Isle Straits, Cape Race, or St. John, N.B., as the case may be, to Port Arthur, Ont. The chain will be a continuous one, and it will be possible to file a message in Port Arthur for delivery to a ship located anywhere between Port Arthur and 500 miles east of Cape Race or Belle Isle, the message being handled by wireless all the way.

We are officially advised that the C.P.R. intends to equip its steamboats on Lakes Huron and Superior with wireless apparatus, but that this will not be done until the necessary land stations are established.

Notices to Mariners.

The Department of Marine has issued the following:—

52. May 26. 127.—British Columbia, Clayoquot sound, Templar channel, Deadman passage, and Tofino, hydrographic information, uncharted rocks.

53. May 26. 128.—Ontario, Lake Ontario, Bay of Quinte, Telegraph narrows, shoal water in newly dredged channel, caution.

54. May 26. 129.—Nova Scotia, south coast, off Three Fathom harbor, gas and bell buoy established. 130. Nova Scotia, south coast, Petpeswick inlet, buoys established. 131. Prince Edward Island, south coast, Bedeque bay, Miscouche shoal, buoy established, change in color of gas and whistling buoy. 132. Prince Edward Island, North point reef, color of whistling buoy.

55. May 27. 133.—Newfoundland, east coast, Cape St. Francis, change in character of light. 134. Newfoundland, east coast, St. John's harbor entrance, Fort Amherst, change in character of light. 135. Newfoundland, east coast, Cape Spear, change in character of light. 136. Newfoundland, west coast, Flat island, non-existence of shoal westward of. 137. England, south coast, Needles channel, light buoy established.

56. June 2. 138.—Quebec, Gulf of St. Lawrence, position of telegraph cable between Great Fox river, Gaspe coast and southwest point Anticosti. 139. Newfoundland, Strait of Belle Isle, Flower island, explosive fog signal.

57. June 7. 140.—Quebec, Gulf of St. Lawrence, Magdalen islands, Alright island, Pointe Basse, light established on wharf. 141. Quebec, Gulf of St. Lawrence, Magdalen islands, Amherst island, Pleasant bay, Amherst, light established on wharf.

58. June 8. 142.—Ontario, Georgian Bay, Byng inlet, hydrographie notes, buoyage, day beacons, sailing directions.

59. June 13. 143. Prince Edward Island, south coast, Bedeque bay, Miscouche shoal, position of buoy. 144. Prince Edward Island, Northumberland strait, West reef, position of gas and whistling buoy. 145. Prince Edward Island, north coast, Cascumpeque harbor, Alberton, range lights not in operation. 146. New Brunswick, east coast, Northumberland Strait, Kouchibouguac bay, St. Louis gully, Kouchibouguacsis river, change in position of back range light.

60. June 14. 147. Quebec, River St. Lawrence, channel between Lachine Rapids and Victoria Bridge, shoal spot above Nuns Island. 148. Quebec, Ottawa river, Lake of Two Mountains, Pointe a Cadieux, light improved. 149. Quebec, River St. Lawrence, Lake St. Francis, St. Anicet, hand fog horn at light station. 150. Ontario, Georgian bay, Thornbury, temporary front range light. 151. Ontario, Georgian bay, Victoria Harbor, Flat point, color of buoy.

◆

An order in council has been passed granting permission to register the s.s. Scot, formerly registered at Southampton, Eng., at Toronto, under the name of Oceana. She is owned by the Bermuda Atlantic Steamship Co., Toronto, and has been purchased from the Hamburg-American Line, which acquired her from British owners in 1895. The name is to be changed again in a year if the Government require the company to do so.

A strike of British seamen in the early part of June caused a number of Canadian vessels to be held at British ports. C.P.R. and White Star-Dominion vessels were somewhat delayed. An increase of $5 a month was demanded, the C.P.R. compromising, June 15, on an increase of $3.75 a month.

Type Z left hand

Johnson Car Replacers

Straddles the rail—needs no spikes, clamps or fasteners.
Rests on rail both front and rear.
Adjusts itself to different heights of rail.
Forms a friction grip with rail during the operation.
Brings rails to gauge during replacement.
Distributes the load on the Rail, not one or two ties.
Special types for Steel-ties and Street Car Rails.

Richelieu & Ontario Navigation Co., Ltd.

The Dominion Parliament amended the company's act of incorporation recently by giving the shareholders power to increase the capital stock to an amount not exceeding $10,000,000 At a special meeting of shareholders on June 26 it was decided to increase the stock from $5,000,000 to $10,000,000, the new shares to be issued as decided by the directors. It was also decided to confirm the agreement made by the directors with the British Maritime Trust Co., Ltd., and others, providing for the purchase of a majority of the shares of the Northern Navigation Co., Ltd., and of the Inland Lines, Ltd., to be paid for by the issue of fully paid up R. & O.N. stock. Five additional directors were elected, the full board being: Hon. President, Lord Furness, of Grantley; President, R. Forget, M.P.; Vice President, W. Wainwright, Second Vice President, G.T.R.; G. Caverhill, Sir Henry M. Pellatt, E. Bristol, K.C., M.P.; W. Hanson, Jas. Playfair, C. O. Paradis, Hon. J. P. B. Casgrain, Hon. E. B. Garneau, H. M. Molson, C. A. Barnard, K.C.; A. H. Sims, J. R. Binning and W. G. Morden. The head office will remain at Montreal, and C. J. Smith will be retained as General Manager.

The Northern Navigation Co. of Ontario, Ltd., was organized in 1899, with a capital of $1,000,000, being an amalgamation of the Great Northern Transit Co. and the North Shore Navigation Co., and later the control of the Northwest Transportation Co. was obtained. A year or two ago the words "of Ontario" were dropped from the title. In the early part of this year, Jas. Playfair, President, Inland Lines, Ltd., made an offer, on behalf of himself and associates, chiefly the Furness interests, to purchase a controlling interest in the stock, and all but a small percentage of it was so acquired. The company has an agreement with the G.T.R. respecting traffic on the Great Lakes, and under this agreement, it has to build an additional steamship by the fall of 1912. Full details of the matters connected with the transfer of the stock, etc., were given in our Feb. and Mar. issues.

Inland Lines, Ltd., was incorporated under the Dominion Companies Act, May, 1910, with a capital of $3,500,000, and office at Hamilton, Ont., to take over the Inland Navigation Co., formerly operated under the name of R. O. and A. B. Mackay, together with the New Ontario Dock and Coal Co.'s wharf and coal business at Sault Ste. Marie, Ont.; R. O. and A. B. Mackay's wharf, cartage and coal business at Hamilton, Ont., and their wharf, shed and wharf privileges at Montreal; the property of the Midland Navigation Co., Midland, Ont., and the property of the Empress Transportation Co., Midland, Ont.

The R. and O.N. Co.'s combined fleet is now composed as follows:—Berthier, Belleville, Boucherville, Kingston, Longueuil, Montreal, Murray Bay, Quebec, Rapids King, Rapids Prince, Rapids Queen, St. Irenee, Saguenay (now en route to Canada, from England), Tadousac, Terrebonne, Trois Rivieres, Toronto, operated by the R. and O.N. Co.; Rochester, operated by the Richelieu and Ontario Navigation Co. of the United States; City of Midland, Doric, Hamonic, Huronic, Germanic, Ionic, Majestic, Waubic, operated by the Northern Navigation Co.; Donnacona, Dundee, Dundurn, Emperor, Empress of Fort William, Empress of Midland, Glenellah, Midland King, Midland Prince, Midland Queen, Neepawah, Rosedale, Stadacona, Strathcona, Wahcondah and Winona, operated by Inland Lines, Ltd.

Since the foregoing was put in type the s.s. Saguenay has arrived at Quebec.

Atlantic and Pacific Ocean Marine.

The Red Star Line s.s. Samland, which has been transferred to the Canadian Line, arrived at Montreal, June 3, on her first trip up the St. Lawrence.

The s.s. Sinbad, which recently arrived at Montreal, from Middlesbrough, Eng., with a cargo of scoria blocks, will, it is stated, be utilized in the Canadian river and lake trade. She is 538 tons register.

The Union Steamship Co., of New Zealand, which secured the Canadian mail contract recently, for a monthly service between Vancouver and New Zealand, is reported to be about to order the construction of an additional vessel of about 10,000 tons, for the service.

The Manchester Liners, Ltd., s.s. Manchester Spinner, ran aground at White Island, June 2, while on the way up to Montreal. She floated off with the tide and was taken to Quebec, where she was docked. Her tanks were found to be leaking badly, and repairs were made. An enquiry into the grounding has been held, and the judgment in the matter is given on another page.

G. M. Bosworth, Vice President, C.P.R., while in London, Eng., is reported to have stated that the C.P.R. had no intention of withdrawing from the North Atlantic Conference. The agreement expire June 30, and he saw no reason why it should not be renewed on the old basis. He continued that there were no serious differences between the various lines concerned and there was no likelihood of a rate war.

A press despatch from Rome, Italy, states that a parliamentary commission has reported favorably on the proposed law to establish a steamship service between Italy and Canada, and continues that Canada has offered a subsidy on condition that fast vessels of a certain tonnage be put into operation, and that certain ports be included in the route. It is expected that the line will be inaugurated this year, or early next.

Press reports from London, Eng., state that the Canadian Northern Ry. is moving towards the adoption of fast mail service between Great Britain and the Orient, by way of Canada, on the lines of what has become known as the all red route. It is also stated that as regards the Atlantic portion of the route, it has been well known for some time that vessels are under construction at Wallsend, which will cut down the time from land to land, to 3½ days.

Judgment in the cross cases of the C.P.R. as owners of the s.s. Montcalm, and J. Bryde, of Safuafjord, Norway, owner of the s.s. Kromprinz Olaf, each suing the other for damages sustained by the vessels, when in collision in the River St. Lawrence, Sept. 24, 1910, was delivered, June 13, to the effect that both vessels were in fault, and that damages arising out of the collision shall be borne equally by the two vessels, each party to the actions to bear their own costs.

G. M. Bosworth, Vice President, C.P.R., in an interview in London, Eng., early in June, stated nothing had been done regarding the building of any additional vessels for the Atlantic service, and as regards those for the Pacific service, he stated that although the contracts had not been definitely awarded, new vessels of from 14,000 to 15,000 tons would be ready for the Pacific in the early part of 1913. Each vessel will have accommodation for about 1,500 passengers, and be well adapted for the service.

C. M. Hays, President, G.T.R. and G.T.P.R., is reported to have stated recently that it is the company's intention to consider the question of establishing a steamship service on the Pacific Ocean in the near future, with Prince Rupert as the Canadian terminal point.

The Dominion Government has awarded a contract to Pickford and Black for one year from June 30, for a steamship service every 22 days from St. John, N.B., and Halifax, N.S., to the West Indies. A service between these points was previously operated on a joint subsidy by the British and Dominion Governments, but the former has now withdrawn.

The Cunard Line's s.s. Ascania arrived in Montreal, June 3, on her maiden trip, from Southampton, Eng. This vessel, which was acquired from the Cairn Steamship Line, recently, while it was under construction at Wallsend, Eng., under the name of Gerona, is of the following dimensions: Length, between perpendiculars, 466 ft.; beam, 56 ft.; depth to upper deck, 32 ft.; with a gross tonnage of 10,000. The machinery consists of triple expansion engines, with cylinders 26, 42 and 69 ins. diar., by 48 ins. stroke, of 4,400 i.h.p. There are four multitubular boilers. The equipment includes Marconi wireless telegraph apparatus, submarine signalling apparatus and complete electric lighting equipment. The vessel has been arranged for two classes only, and has accommodation for 200 cabin and 1,000 third class passengers.

At the Imperial Conference in London, Eng., early in June, it was proposed that it is desirable that Great Britain should be connected with Canada, and through Canada, with Australia and New Zealand, by the best mail service available, and that a mail service be established on the Pacific, between Vancouver, Fiji, Auckland and Sydney, of first class steamers of not less than 10,000 tons, capable of 16 knots, and in addition that fast service be established between Canada and Great Britain, the financial support for both purposes to be contributed by Great Britain, Canada, Australia and New Zealand in equitable proportions. A fast line of steamers was also proposed between Great Britain, Newfoundland and Canada, with a subsidy contributed on the basis of population, wealth and trade interests. After considerable discussion, the matter was left to be dealt with by a Royal Commission.

Maritime Provinces and Newfoundland.

The Department of Railways and Canals will receive tenders to July 20 for the construction of piers and sheds at Halifax, N.S.

The contract for the construction of a breakwater at Little Anse, N.S., at a cost of $21,500, has been awarded to T. D. Morrison, D'Escousse, N.S.

Browning Bros'. sealing steamer Aurora, which was built at Dundee, Scotland, in 1876, and has since operated out of St. John's, Nfld., has been sold to English parties.

The Labrador Whaling Co.'s steam whaler Cachelot, built at Christiania, Norway, to replace the vessel of the same name, wrecked at Belle Isle last year, arrived at St. John's, Nfld., June 6.

The Dartmouth, N.S., Ferry Commission, June 13, referred the matter of obtaining complete plans for remodelling the Halifax terminal to a committee, with power to make all necessary plans and specifications.

The British s.s. Ben Earn, under charter to the Dominion Coal Co., ran ashore on Half Moon ledge, off Baccarre Point, near Barrington, N.S., June 18, while bound from Sydney to St. John.

The Halifax Dry Dock Co. has filed plans with the Public Works Department for an extension of 50 ft., making 650 ft.

in all. It is stated that the work will be put in hand as soon as the plans are approved.

The Department of Public Works is calling for tenders for the construction of a breakwater, wharves, dry dock and shipbuilding plant at St. John, N.B., and for dredging and piling. The cost is estimated at from $6,000,000 to $8,000,000.

Hon. J. C. Crosbie, St. John's, Nfld., has ordered a sealing steamer to be built in Dundee, Scotland, for delivery by Dec. 31. She will be 175 ft. long, 28 ft. wide and 13 ft. deep, with accommodation for 50 saloon passengers, and space for 25,000 seals.

The Reid Newfoundland Co. has purchased the British s.s. Solway for use in its Labrador service. She was built in 1881, but has since been overhauled, and recently re-engined. She is 836 tons gross and 427 tons register, with a speed of about 12 knots an hour. She was expected to sail from Glasgow, Scotland, for St. John's, Nfld., June 20.

Job Bros., St. John's, Nfld., have placed an order at Wallsend, Eng., for the construction of a sealing steamer, to be called Nascopie. She will be equipped with electric searchlight, and be fitted with special hatches for the quick loading and discharging of cargo. The contract calls for completion by Dec. 31, so that she may reach Newfoundland in January, 1912.

The British s.s. Appenine, recently took to Portland, Me., from Dalhousie, N.B., what is stated to be the largest cargo of pulpwood ever landed there from any one vessel, being over 2,700 cords. She is under charter to the International Paper Co., and it is stated that another vessel is to be chartered to run in connection with her, from Chatham and Dalhousie, N.B.

The Reid Newfoundland Co's s.s. Bruce, which is under construction at Glasgow, Scotland, to take the place of the s.s. Bruce wrecked recently, will be of the following dimensions: length, 250 ft.; breadth, 36 ft.; depth, 18.3 ft., with accommodation for 75 passengers. W. D. Reid, President, while on a visit to St. John's, Nfld., June 10, stated that she would be in operation by Sept., or possibly earlier

The British Canadian Shipbuilding and Dock Co., recently organized to build a dry dock and shipbuilding plant at Sydney, N.S., is reported to have acquired 300 acres as a site, and will be prepared to start work at once, if, as is anticipated, it is successful in obtaining the contract for the building of vessels for the Canadian navy. Among those interested in the scheme are Sir Henry M. Pellatt, Toronto; Hon. J. M. Gibson, Lieut.-Governor of Ontario, and Sir Charles Ellis, chairman John Brown & Co., Clydebank, Scotland. It is also stated that the company proposes to establish a fast line of steamships between Sydney and Fishguard, Great Britain.

Province of Quebec Marine.

The Department of Railways and Canals received tenders June 27, for protection works on the Soulanges canal.

J. M. Nelson, Assistant Engineer to the Montreal Harbor Commission, has resigned after 22 years' service, on account of ill health.

The Department of Marine has issued an order that all vessels must slacken speed when passing the Quebec bridge site.

The Richelieu and Ontario Navigation Co., it is reported, is considering negotiations with a view to the adoption of oil as fuel on its vessels.

The Montreal Harbor Commissioners are erecting an electric hoist capable of lifting 15 tons, between sheds 7 and 8. The work is expected to be completed early in Aug.

During May over 6,500,000 bush. of grain in about 150 vessels passed through the Lachine canal, in addition to 4,704 cases of eggs, 580 packages of butter, and 15,270 packages of cheese.

The Richelieu and Ontario Navigation Co.'s s.s. Quebec was driven ashore during a windstorm at Sorel, recently, and her rudder was torn away and the steering gear disarranged.

The quarantine steamboat Polana, which the Government has had built at Kingston, for the service at Grosse Isle, has been delivered and placed in service.

The Montreal Harbor Commissioners recently received tenders for a number of improvements in the harbor, at an approximate cost of $1,000,000. The works include the erection of four piers, each 800 ft. long and 235 ft. wide.

An order in council has been passed granting permission to re-register at Quebec, the recently wrecked steamship King Edward, formerly registered at Hull, Eng., under the name of Laurentian, all the legal requirements having been complied with.

At a luncheon on the Cunard Line s.s. Ascania, June 6, on her arrived at Montreal on her maiden trip from England, it was stated that the day was not far distant when Montreal would be created a free port.

The Montreal city authorities have issued instructions to the assessors to assess for taxation property under the jurisdiction of the Montreal Harbor Commission, which has always been claimed to be exempt, as Government property.

The Lake Champlain and St. Lawrence Ship Canal Co. has filed plans with the Public Works Department for a proposed 12 ft. waterway between Montreal and New York, involving the construction of about 21 miles of new canal through Chambly, St. Johns and Laprairie counties, Que.

Work is reported to have been commenced at Barrow-in-Furness, Eng., on the floating dry dock which it is proposed to install at Montreal. A large force of men is engaged in preparing the site at Montreal, which, it is expected, will be completed during next year. The work is being carried out by Canadian Vickers, Ltd., recently incorporated for the purpose.

The Three Rivers Ferry Co., Ltd., has been incorporated under the Quebec Companies Act, with a capital of $49,000, and office at Three Rivers, to purchase the steamboat Glacial from the town of Three Rivers, and to own the steamboat Sorel, both of which it is intended to operate between Three Rivers, St. Angele de Laval, St. Francois du Lac, Nicolet and other points. The town of Three Rivers is paying an annual bonus for the service. The incorporators are F. J. Ritchie, L. P. Bellefeuille, M. Lewis, and C. Salva, Three Rivers.

Ontario and the Great Lakes.

The Department of Public Works has awarded the contract for dredging in the River Thames to W. E. Phin, Welland.

The Public Works Department will issue tenders to July 5 for the construction of a breakwater at Bare Point, Port Arthur.

The steamboat City of New York, owned in Cobourg, is reported to have been sold to Toronto parties for use in the sand trade.

The contract for dredging from the eastern channel into Ashbridge's Bay, Toronto, has been awarded to R. Weddell and Co., Trenton.

The Ontario and Quebec Navigation Co., Ltd., has been licensed to carry on its business in Ontario with B. H. Hepburn, Picton, as its attorney.

The Dundas board of works received tenders, June 25, for the dredging of the Desjardins canal, involving the removal of 27,500 cub. yds. of material, the work to be completed by Sept 1.

The Inland Lines steamboat Dunelm, which ran ashore towards the close of navigation last year, has been completely repaired and overhauled at Port Arthur, and left the dry dock June 8.

The Buffalo, Lockport and Rochester Ry.'s steamboat Olcott arrived at Toronto for the first time, June 3. She is making two trips daily between Toronto and Olcott Beach, connecting with the company's lines to Rochester and Buffalo, N.Y.

M. J. Haney has applied to the Toronto city council for an extension of his lease from 21 years from Oct. 1, 1908, of the waterfront property between Jarvis and West Market Sts., at an annual rental of $667.20. He proposes to add to the wharf, at a cost of $25,000.

The annual meeting of the Thousand Islands Steamboat Co. was held at Cape Vincent, N.Y., June 6. R. Crawford, President, was appointed also General Manager in place of W. J. Douglas, re-

Lake Grain Shipments

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William and Port Arthur, of the 1910 crop, from the close of navigation to May 31. The last two figures in each column represent lbs.

Destination	Wheat	Oats	Barley	Flax
Canadian ports:				
Depot Harbor	318,518.20	34,000.00	....	....

signed, and the other officers were reelected.

W. J. Douglas, heretofore General Manager, Thousand Islands Steamboat Co., and St. Lawrence River Steamboat Co., Kingston, is reported to have been appointed General Freight Agent, Southern Pacific Co.'s Steamship Department at Seattle, Wash.

The Trotter Wrecking Co., Amherstburg, has been awarded $7,500 for salving the Superior Charcoal Iron Co.'s steamboat Chauncey Hurlbut, after grounding near Amherstburg in 1906. The matter has been before the courts for some time.

The Public Works Department is reported to have purchased the lower end of Victoria Island, in the Ottawa River for the construction of a shipyard for building barges, tugs, etc., for its business on the Ottawa and St. Lawrence Rivers and the Great Lakes.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Lakeside has been sold to M. J. Hogan, contractor, Port Colborne. The price paid is said to be $10,000. She will be used for conveying supplies in connection with various lake improvement contracts.

The Montreal Transportation Co.'s steamboat George Davy struck on the lighthouse shoal near Clayton, N.Y., June 13, and sank in 50 ft. of water. The cargo of 50,000 bush. of grain has been pumped out, and the vessel is to be raised. Divers reported that several plates were pierced.

The Public Works Department has commenced surveys in reference to the proposed power development plants at Cedar Rapids and other points on the St. Lawrence. Data are to be collected and a commission appointed to report on the effect such plants will have on navigation generally.

The Toronto board of control had under consideration, June 7, the formation of a new Harbor Commission under the recent legislation. A number of names were submitted, but as it was stated that no work to improve the harbor could be undertaken this year, the whole matter was deferred.

Surveys are under way providing for a route for the proposed new Welland canal. It is proposed to deepen the waterway from Port Colborne to the height of land and then run west to the present canal along the ravine and through St. Catharines to Port Dalhousie. Plans and estimates are expected to be ready in the fall.

The Cornwall and Montreal Navigation Co.'s steamboat Filgate was destroyed by fire recently at Valleyfield, Que. She was built in 1879, and was originally used by the C.P.R. as a ferry between Caughnawaga and Lachine, and was later used between Montreal and St. Helen's Island. She was valued at about $25,000, and was insured for $5,000.

The Rainy River Navigation Co.'s steamboats Keenora and Agwinde commenced operations for the season between Kenora and Fort Frances June 17. The running of these vessels has been considerably interfered with during the past two years owing to low water at the mouth of the Rainy River, but a large amount of dredging has been carried out there recently.

The Lake Carriers' Association announced the opening of a new channel to relieve congestion in the main channel of the Detroit River during dredging. Masters of vessels are instructed not to exceed a draught of 15.5 ft. either up or down, over Ballard's reef, and to take the new channel, which is 200 ft. wide, east of the main channel, and marked by five spar buoys.

Muir Bros'. Dry Dock Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $90,000, and office at Port Dalhousie, to carry on the business of building, owning and operating dry docks and vessels of all descriptions. The incorporators are W. C. and J. F. Muir, Port Dalhousie; G. P. Muir, Gleichen, Alta.; R. M. Muir, Detroit, Mich.; A. B. Muir, New York City, and H. D. O. Kingstone, Montreal.

The Northern Steamship Co.'s s.s. North West, which runs between Buffalo, Chicago and Duluth, in conjunction with the s.s. North Land, was heavily damaged by fire while moored at her dock in Buffalo, N.Y., June 3. She was being overhauled for the season's business. Reports state that the interior was destroyed, leaving only the steel hull, and that the damage amounts to about $500,000.

The Department of Railways and Canals has awarded the contract for improving the Port Colborne entrance to the Welland canal to M. J. Hogan, Port Colborne. The work consists of widening the 22 ft. channel into the inner harbor, and the lengthening of the mooring dock west of the Government elevator. The widening of the channel consists entirely of rock excavation. The material taken out will be used to widen the piling at the rear of the west pier.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for May, as follows:—Superior, 600.90; Michigan and Huron, 579.70; Erie, 571.87; Ontario, 245.60. As compared with the average May levels for the past 10 years, Superior was 1.34 ft.. below; Michigan and Huron, 1.16 ft. below; Erie, 0.76 ft. below, and Ontario, 1.13 ft. below. During June it was anticipated that Superior would rise 0.3 ft., Michigan, Huron and Erie 0.2 ft., and Ontario 0.1 ft.

The Ontario and Quebec Navigation Co.'s steamboat Geronia was launched at Collingwood June 7. She is of the following dimensions: length, 219½ ft.; breadth, 42 ft.; depth, 11½ ft., and is of steel throughout, sheathed with rock elm at the bottom. The hull is divided into six watertight compartments The staterooms are all outside rooms, and the dining salon has seating capacity for 120. The machinery, which is located amidships, consists of quadruple expansion engines, supplied with steam by two Scotch marine boilers at 250 lbs. pressure, driving a screw.

The Dalhousie Navigation Co., Ltd., the incorporation of which we announced in our last issue, was formed for the purpose of owning the steamboat Dalhousie City, which will be operated under lease by the Niagara, St. Catharines and Toronto Navigation Co The companies mentioned are controlled by Mackenzie, Mann and Co., Ltd., Toronto.

The steamboat Dalhousie City, a detailed description of which was given in our last issue, was launched at Collingwood, June 24, the christening ceremony being performed by Miss Mary Hanna, daughter of D. B. Hanna, Third Vice President, C.N.R., and President, Niagara, St. Catharines and Toronto Navigation Co.

Manitoba, Saskatchewan and Alberta.

The Arctic Ice Co. is reported to have decided to build four or five large barges this year, each of about 400 tons capacity.

The Lake Winnipeg Supply Co. is building a wharf on the Red River, north of Broadway bridge, and is also building a second barge, with a third one under consideration.

The Hyland Navigation and Trading Co. renewed its complaint, June 18, to the Winnipeg board of control regarding the delay caused to vessels owing to the city not having men on the spot to open the bridges to allow vessels to pass. It was stated that the matter would be taken in hand at once.

Manitoba Quarries, Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $750,000 and office at Winnipeg, to carry on a general quarrying business, and in connection therewith to build and operate steamboats, tugs, barges, etc. The incorporators are, A. N. Williams, T. Kelly, G. N. Young, Winnipeg; J. Gunn, E. Williams and E. J. Williams, Stonewall, Man.

The Hudson's Bay Co. is operating vessels as follows, during the season:—Port Simpson, from Prince Rupert to Hazleton, B.C., captain, J. P. Bucey; chief engineer, R. Denniston; Peace River, on Peace River, from Vermilion to Hudson's Hope, Alta.; captain, J. Gullion; chief engineer, J. Sutherland; Inenew, on James Bay; captain, —. McGlashan; chief engineer, J. Love; Primrose, to and from points on Lake Athabasca, and Churchill, to Beaver River, Isle a la Crosse Lake, and Buffalo Lake. The steamboat Saskatchewan will not be operated.

B.C. and Pacific Coast Marine

Navigation on the Yukon River opened June 4, when the steamboat White Horse left White Horse for Dawson.

Capt. Jas. Gaudin, Victoria, has been appointed Nautical Commissioner and Examiner of Masters and Mates for British Columbia.

The G.T.P. Coast Steamship Co.'s s.s. Prince Rupert has been taken to Seattle, where her [illegible] are to be remodelled and forced draught put in.

G. R. Robertson, formerly captain of the G.T.P. Coast Steamship Co.'s s.s. Prince George, has been appointed agent, Department of Marine at Victoria, and commenced his duties, June 1.

The C.P.R. Coast Service s.s. Amur, which ran ashore at Wrangel Narrows, Alaska, recently, was built in Sunderland, Eng., in 1890, and is of 570 tons register. She is valued at £10,725.

A. A. Sears, master and part owner of the s.s. Iroquois which sank off Sidney, Apr. 10, and who was recently charged with manslaughter in connection with the disaster, was acquitted of the charge, June 8.

The material for the construction of a steel barge which the C.P.R. is to operate on the Kootenay Lakes, has arrived at Nelson, B.C., where it is to be put together. It was made by the Polson Iron Works, Ltd., Toronto.

The rock crushing dredge, which was recently built in Scotland, and shipped to Victoria, in sections, where it is being erected, was recently launched at Victoria. It was expected that she would be ready for operation by the end of June.

The Canadian North Pacific Fisheries, Ltd., s.s. Paterson, was launched at Seattle, Wash., June 10. She is about 100

THE ALGOMA CENTRAL AND HUDSON BAY RAILWAY COMPANY.

Tender for Railway Construction.

Sealed tenders for the construction of the Algoma Central Railway extension from [illegible] on the C.P.R. northerly to the National Transcontinental Railway at a point approximately 142 miles west of Cochrane, a distance of 101 miles, will be received up to noon July 15th, 1911.

The work includes all construction work to sub-grade and in addition track laying and ballasting, in accordance with plans, profiles, forms of tender and specifications at the office of the Chief Engineer, Sault Ste. Marie, Ontario.

All tenders to be marked "Tender for Construction," and to be addressed to R. S. McCormick, Chief Engineer, Algoma Central Railway, Sault Ste. Marie, Ontario.

The lowest or any tender not necessarily accepted.

DIVIDEND NOTICE

Niagara Navigation Company, Limited.

Notice is hereby given that an interim dividend of four per cent. (being at the rate of eight per cent. for the year) has been declared upon the Capital Stock of this Company, and the same will be payable on the 3rd of July, 1911.

The Transfer Books will be closed from June 15th to June 30th, 1911, both days inclusive.

By order of the Board.

B. W. FOLGER, General Manager.

ft. long over all, of steel construction, driven by oil fuel at a speed of 12 knots an hour. She will be registered in the U.S.

The paddle wheel steamboat La France, which recently struck a rock and sank in Lake Labarge, Yukon, was built at Lower Labarge, Yukon, in 1902. Her dimensions are: Length 99.8 ft., breadth 19.4 ft., depth 3.4 ft., tonnage 201 gross, 169 register.

The North Vancouver ferry committee, is calling for tenders for the construction of a wharf on the Vancouver side of the inlet, at an estimated cost of $27,000. The plans show 16 pontoons similar to those at the North Vancouver floating wharf.

The G.T.P. Coast Steamship Co.'s s.s. Prince John, formerly Amethyst, which is expected to arrive on the coast, early in July, was built last year, and subsequently purchased by the company She has seven water tight bulkheads with double bottom, and is equipped with triple expansion engines, designed for a speed of 12 knots an hour. There is accommodation for 150 steerage passengers and good first class accommodation, and capacity for 450 tons of cargo. She will be operated on the Queen Charlotte Islands route.

C. M. Hays, President, G.T.P.R., was in Prince Rupert during the first week of June, in company with E. F. Donnelly, to look over the site of the proposed dry dock there. It was announced that an agreement had been reached with the city, and a bylaw was being prepared for submission to the ratepayers. The plans for the dry dock, which have been prepared, allow for a lifting capacity of 20,000 tons, and built for later expansion, if necessary.

The dredge tender, which is being built at North Vancouver for the Dominion Public Works Department, has the following dimensions: Length over all 100 ft., molded beam 37½ ft., molded depth 15¼ ft., draft forward 11 ft., aft 12½ ft. She is equipped with fore and aft compound surface condensing engines, with cylinders 17 and 40 ins. diar., by 27 ins. stroke, built in Glasgow, Scotland. The boiler is of the Scotch marine type, 14 ft. diar, by 12 ft. long, fitted with Morison corrugated furnaces. The cost is about $65,000.

The Northern Steamship Co.'s s.s. British Empire, arrived at Vancouver, June 11, from Scotland, having taken 141 days on the voyage. She was immediately docked and overhauled, and placed on the run between Victoria, Vancouver and Prince Rupert. She was detained at St. Vincent, for some time owing to her engines breaking down, to wait for repair parts from Scotland. She was built at Garston, Eng., in 1902, and is of the following dimensions: Length 167 ft., breadth 26 ft., depth 11½ ft., tonnage 562 gross, 252 register.. She was acquired from T. J. Sharpe and Co., Liverpool, Eng., to replace the s.s. Petriana, which was sold to the Canadian North Pacific Fisheries, Ltd.

The Classification of the Graduation on Railway Construction.

By Professor B. J. Dalton.

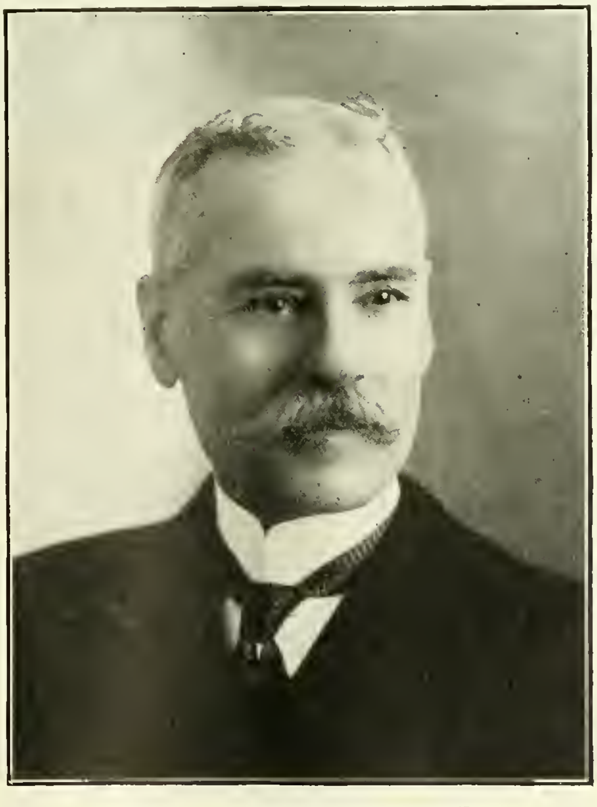
At the recent annual meeting of the Kansas Engineering Society, Prof. B. J. Dalton, of Lawrence, Kan., read a paper on this subject, a copy of which he has kindly furnished us, as follows:—

The classification is one of the most difficult problems for the young engineer. It is a subject that cannot be taught in the class room. A young man starting out for himself after graduation may, within the first year, work for two men, both working under the same specifications, yet their classification will be entirely different.

Several years ago, during the construction of a certain line of railway through this and adjoining states, a dispute arose between the contractor and the division engineer over the classification. The difference in their estimates amounted to $25,000 or $30,000. The chief engineer appointed a commission of three of the oldest and best engineers on the line to go over this particular piece of work and classify it. They were men of many years experience in railway construction, yet they differed greatly in their estimates, so finally allowed an average of the three classifications. There must be some reason for this difference, and I believe that it is due to the indefinite wording of the specifications, and each man's interpretation of them.

Here is a sample specification for solid rock used by a number of the large railway systems:—"Solid rock shall comprise rock in solid beds or masses in its original position, which may be best removed by blasting, and boulders or detached rock measuring one cubic yard or over." Even under these specifications I have seen indurated clay classified as solid rock, and I believe justly so.

The Santa Fe Rd. specifications are more explicit. They read:—"Solid rock shall comprise: First, rock in solid beds or masses in its original or stratified position. Second, boulders or detached masses of rock exceeding one cubic yard, and all other material which in the judgment of the chief engineer cannot be removed without continuous drilling and blasting, and which is as difficult and expensive to remove as solid lime or sand stone. The fact that blasting may be resorted to by the contractor, or be the most economical method of working a material, will not of itself entitle such material to be classified as solid rock." This specification leaves out soft sand stone which is too hard to be plowed, but which may be blasted and then taken out with wheelers. This material is classified by some men as solid rock, and by others as part solid rock and part loose rock.



Lacey R. Johnson, M.Can.Soc.C.E.,
Assistant Superintendent of Motive Power, C.P.R. Eastern Lines.

One specification for loose rock reads:—"Loose rock shall comprise all rock, which, in the opinion of the engineer, requires for its removal the use of steam shovel or pick and bar, without blasting, although blasting may be resorted to at the option of the contractors, and all detached masses of rock of more than one cubic foot, and less than 18 cubic feet."

Another one reads:—"Loose rock shall comprise all boulders or detached masses of rock, measuring more than one-fourth cubic foot and less than 18 cubic feet each; also indurated and cemented material, slate, shale, hardpan, soft and decomposed rock in ledges or masses, and boulder or gravel deposits or beds, which are so indurated or compactly united that, in the judgment of the engineer, such material cannot be plowed, as set forth under the specifications for earth, but which can, in the judgment of the engineer, be removed or loosened by a moderate use of explosives; but, if, in the judgment of the engineer, an unnecessary quantity of explosives is used, such fact shall not modify or influence his judgment in making the classification, or entitle the contractor to a higher classification."

All these specifications leave the classification entirely to the judgment of the engineer, and the result is that contractors, in bidding on work, bid more upon the reputation of the engineer in charge of the work than upon the specifications.

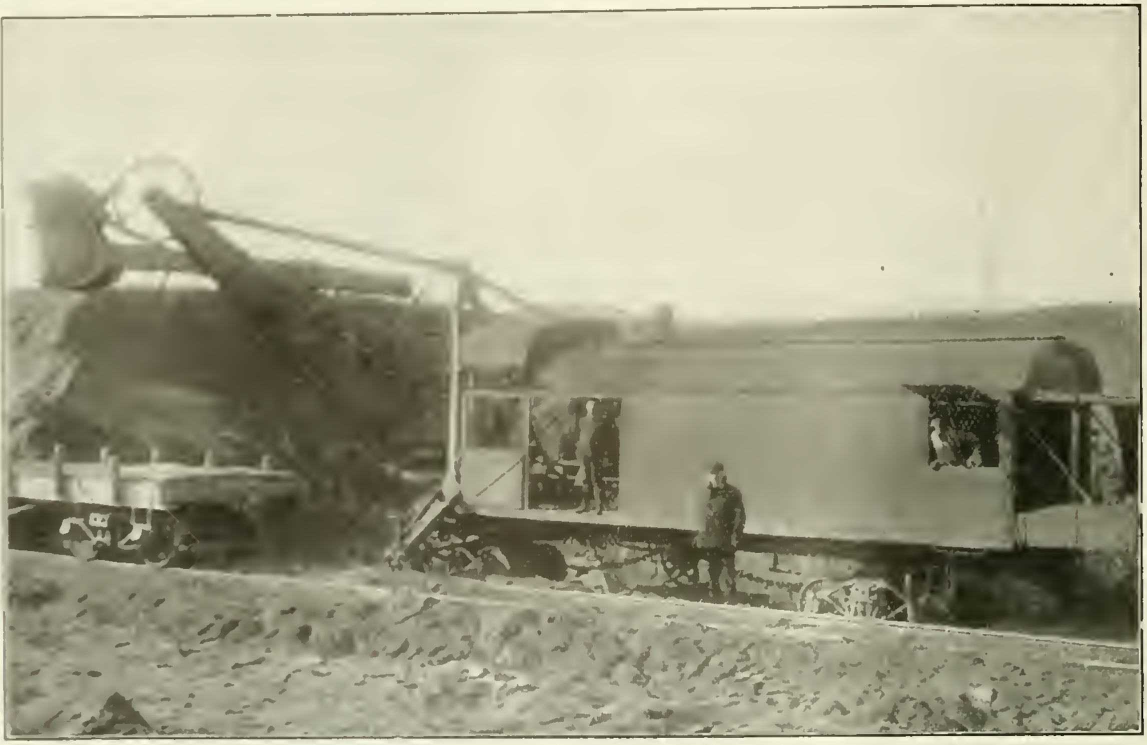
The material that the contractor actually receives loose rock classification for is any material that requires more than three teams on the plow, but which he does not have to blast. If it is too hard to plow it is blasted and classified as solid rock, or part solid rock and part loose rock.

All material that is not clsasified as solid rock or loose rock is called common excavation or earth excavation. Several specifications read:—"Common excavation shall comprise all other materials of whatever nature that do not come under the classification of solid rock or loose rock, or such other classification as may be established before the award of the contract."

Another one reads:—"Earth shall include any and all kinds of material which, in the judgment of the engineer, is not so compactly united or hardened as to prevent plowing or loosening with a 10-inch grading plow drawn by a well handled team of six good, strong, heavy horses or mules, with one strong, capable man at the plow handles and another one on the beam. It is understood and agreed that material shall not be classified other than earth because of its small quantity; or because of its position, or because rocks, stones, logs, roots or the presence of frost render plowing impracticable or inadvisable. Plowing is not intended to mean turning a furrow for any specified length; nor shall material be classified other than earth because plowing is not attempted or performed. Any material not clearly described as loose rock or solid rock shall be classified as earth." This last specification is entirely too rigid for earth. In many places cuts are composed of a mixture of clay and large boulders, so interwoven that the only practical way of removing the material is to blast it and then handle it as a solid rock cut. Although the earth may constitute as much as 25% of the whole mass, it must be handled exactly the same as the rock, and at the same cost, therefore it should be classified as solid rock.

In some places we find the rock in ledges separated by layers of earth. Under these circumstances the earth should be classified as solid rock. The classification should be made in accordance with the intent of the specifications, rather than with the exact wording. For instances, the specifications on a certain 50 miles of line, specified earth as sand, loam, clay, or a mixture of clay and boulders that measured one cubic foot in size, and that could be plowed

ATLANTIC STEAM SHOVELS



CLASS Y 45-16-2½ ATLANTIC SHOVEL.

ECONOMY IN OPERATION

Reduction in friction and boiler losses, with corresponding increase in pull at dipper, is the reason why the Atlantic shovel digs more at less cost than shovels of the chain type.

Wire rope hoist, found only in the Atlantic, exerts a direct pull on the dipper and substitutes friction of a rope with but one large sheave for that of a chain with from four to six additional small sheaves. The less power lost in the machine itself, the more you have left for digging.

Further economy in operation is secured by using a large boiler of the locomotive type, in which more of the heat is utilized and less is lost up the stack. This is possible only because of the removal of the hoisting engines from their usual position on the car body, to the boom.

The placing of the main hoisting engines at the foot of the boom reduces the power necessary for swinging the boom and removes the twist upon the car body when working on one side. With this construction the turntable centre and boom foot constitute the engine frame. One casting takes the place of four or more in the usual construction, reducing the total weight of the shovel, and the weight on the front trucks.

Spare parts are kept on hand at our Works at Longue Pointe, Montreal, Canada. Every part is made to gauges, and sure to fit.

MONTREAL LOCOMOTIVE WORKS, LTD.

OTTAWA BANK BUILDING, MONTREAL, CANADA

with three teams. The contract was awarded at 14 cents per cubic yard. Fully 60% of the material was a mixture of clay and boulders which ranged from about two to eight inches in diameter. The most of the material was plowed with two teams and none of it required more than three. Although it plowed easily, it could not be moved to advantage with either slips or wheelers. Even after the chief engineer abandoned his specifications and classified it as loose rock, the contractor was dissatisfied, and sued the company for $50,000. After the suit had run in the courts for a couple of years, the company and the contractor agreed to arbitrate, and let the court render a decision in accordance with the findings of the board of arbitration. In the arbitration agreement was a clause specifying that the classification should be made in strict accordance with the contract and specifications. The arbitrators rode over the line on a flat car, at the rate of 25 miles an hour, only stopping to examine one cut. They then took all the maps, profiles and note books to St. Louis, and after three or four months awarded the contractor one-half the amount he was suing for.

Therefore, I do not think it advisable to try to use specifications that differ very materially from the specifications used by the other roads. Consequently I wish to recommend the following specifications:—"Earth or common excavation shall include any and all kinds of material which can be plowed with a 10-inch grading plow drawn by a well handled team of six heavy horses or mules, with one strong man at the plow handles; and which, after plowing, can be moved with slips or wheelers fully loaded. By plowing it is intended that one plow shall be able to loosen enough material to keep at least twelve scrapers running.

"Loose rock shall include any and all kinds of material which can be plowed with either a 10-inch grading plow or a rooter, drawn by more than six mules or horses, or that cannot be moved with scrapers or wheelers fully loaded; also all detached masses of rock or boulders measuring less than 18 cubic feet each.

"Solid rock shall include all detached masses of rock or boulders measuring 18 or more cubic feet each, as well as all material which must be blasted, and is as expensive to remove as solid lime stone, or solid sand stone, which is hard enough to be used in first class masonry work. Any material that requires blasting, and may then be removed with scrapers or wheelers shall be classified as 50% solid rock and 50% loose rock."

It would be better to let all contracts unclassified. By this method the contractor would be given a profile of the line and would be permitted to make as many borings as he desired to determine the nature of the material. His price per cubic yard would then be based upon his own classification. This method leaves no room for disputes between the contractor and the company. Where this plan has been adopted it has proven very satisfactory to both the company and the contractors. Owing to the sharp competition between contractors the work does not cost any more than by the old method.

[Prof. Dalton's suggestions are of considerable interest and will, we hope, evoke discussion. We will be glad to have any of our engineering, contracting, or other readers write us their opinions on his suggested classifications for earth excavation, loose rock and solid rock, and also as to his recommendation to let contracts unclassified.—Editor.]

◆

Work in connection with the geodetic survey of Canada has been started on the Pacific coast, the headquarters being at Victoria, B.C.

Canadian Specifications for Classification.

In connection with the foregoing article by Prof. Dalton, we have obtained the specifications of various Canadian railways from the chief engineers, and give the following extracts—

ALGOMA CENTRAL & HUDSON BAY RAILWAY.

Excavations will be classified under the following heads, namely, solid rock, loose rock and common excavation, under the following definitions:—

All stones or boulders found in excavation measuring more than 27 cubic feet, or one cubic yard in volume, and a solid quarry stone requiring drilling and blasting in order to remove it, will be classified as solid rock.

All rock commonly designated stones or boulders individually measuring in volume from one cubic foot to one cubic yard will be classified as loose rock.

All other material not classified as solid rock or loose rock will be classified as common excavation.

The price for said excavation in all the several classes thereof will be understood to cover and pay for the entire expense of removal of material excavated by any method whatever, including loading, unloading, transportation and deposition in the manner prescribed in these specifications, and in the location designated by the engineer, provided the average haul of the material so transported does not exceed 500 ft., and beyond that distance one cent per cubic yard per each additional 100 ft. will be allowed when such over-haul is ordered by the engineer.

A PROMINENT ENGINEER'S OPINION.

J. G. Sullivan, Assistant Chief Engineer, C.P.R. Western Lines, writes from Winnipeg:—

"I consider the information in connection with orders, etc., of the Board of Railway Commissioners which are published in the Railway and Marine World, are alone worth more than the subscription price."

No rock excavation will be allowed for beyond the limits of the base and slopes as specified. All rock loosened by explosives beyond the slope must be removed at the expense of the contractors, but if required to make up the embankment, will be paid for at the price for common excavation.

CANADIAN PACIFIC RAILWAY.

Grading will be classified under the following heads: solid rock, loose rock, hard pan and earth.

Solid rock will include rock in solid beds or masses in its original position, which cannot be removed without blasting, and boulders or detached rock measuring one cubic yard or over.

Loose rock will include all detached rock or boulders measuring more than one cubic foot and less than one cubic yard, and all shale, slate, soap stone, disintegrated granite, and other soft rocks, which can be removed without blasting, though blasting may be occasionally resorted to.

Hard pan will include cemented gravel, hard pan, indurated clay or combinations of the same whose hardness is such that if in a suitable location could not be plowed by an average four horse team.

Earth will include all other material such as loam, clay, sand, quick sand, gravel, muskeg, angular rock fragments, and small boulders.

Material borrowed for embankment will not be classified higher than loose rock, without prior written authority of the engineer.

Material in slips, slides and subsidences extending beyond slope lines will not be paid for, unless such occurrences were beyond the control of the contractor and not preventable by the use of due care and diligence.

The classification of material from slides will be in accordance with its condition at the time of removal regardless of prior condition. Measurements of overbreak in rock cuts will be the space originally occupied by material before the slide occurred, regardless of the classification of same.

Measurements will usually be made in excavation. In prairie or level country, where the embankments largely exceed the excavations, measurements will be made in embankments.

GRAND TRUNK PACIFIC RAILWAY.

Grading will commonly be classified under the following heads: solid rock excavation, loose rock, and common excavation.

Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard, which in the judgment of the engineer, may be best removed by blasting.

All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock, whether in situ or otherwise, that may be removed by hand, pick or bar; all cemented gravel, indurated clay, and other materials, that cannot, in the judgment of the engineer, be plowed with a 10 in. grading plow, behind a team of six good horses, properly handled, and without the necessity of blasting—although blasting may be occasionally resorted to—shall be classified as loose rock.

Common excavation will include all other material of any character whatever, not classified as solid or loose rock.

Material in slips, slides and subsidences extending beyond slope in cuttings, will not be paid for, unless, in the opinion of the engineer, such occurrences were beyond the control of the contractor and not preventable by use of due care and diligence.

The classification of material from slides shall be made by the engineer, and will be in accordance with its condition at the time the slide is being removed, regardless of prior condition.

GRAND TRUNK RAILWAY.

All material excavated will be classified as solid rock, loose rock, common excavation, or such additional classifications of material as may be established before the award of the contract.

Solid rock shall comprise rock in solid beds or masses in its original position which may be best removed by blasting; also all detached masses of rock or boulders, each of which measures one cubic yard or over.

Loose rock shall comprise all detached masses of rock or boulders of more than one cubic foot and less than one cubic yard, and all other rock which can be properly removed by pick and bar without blasting; although steam shovel or blasting may be resorted to in order to facilitate the work.

Common excavation shall comprise all other materials of whatever nature that do not come under the classification of solid rock or loose rock, or such other special classifications as may be established before the award of the contract.

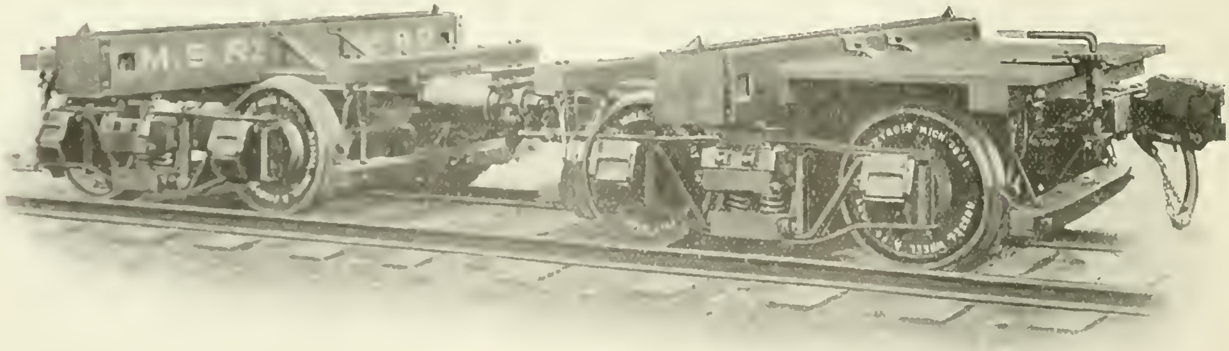
◆

D. C. Macdonald, Division Freight Agent, C.P.R., Regina, Sask., writes:—"I cannot afford to be without the Railway and Marine World."

A site has been purchased at Fort Francis, Ont., by Alexander Bruce and Co., upon which it is proposed to establish a plant for preserving railway ties. It is proposed to put up a plant capable of handling 1,000,000 ties a year.

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

Prevention and Cure of Hot Boxes and Economy of Proper and Efficient Oiling of Rolling Stock.

By J. Thos. Warde, Chief Clerk, General Car Foreman, C.P.R., Winnipeg.

The question of hot boxes is a serious one. The trouble is largely caused by the ignorance of the oilers, secondly, by the inferior brass used in the composition of the journal bearings, and, thirdly, by improper seating of journal bearings and wedges.

I will take up the question of the employe's ignorance. We take a laborer, as a general thing a "foreigner," (I do not say this in a discriminating way, as some of this element is among some of our best men), but what I want to point out is, that this man is taken simply because another man will not do the work unless he can possibly help it. The man selected is told to take his dope and as a rule his oil can. His instructions are simply to oil up. Follow the man around the train. What do you find? You find him forcing dope into a box already overcrowded, and you will also find him sloshing oil into a box already leaking on account of too much oil.

You cannot blame the man for this. The question is—Who is to blame? It is no use blaming the foreman. Probably the foreman knows no better than he does. The question arises—Find a remedy. The remedy consists in elevating the position, and in educating the man to fill it. But how? That is the question. My experience is that you cannot do this in a day. You have to get your man interested in his work, in place of the clock, and then you can teach him the why and the wherefore of oil economy and the prevention of hot boxes.

In the first place, teach him how to prepare the dope, and the average quantity of waste and oil required, which is on an average of about one gallon of oil to about 10 lbs. of waste. See that he has the proper receptacles for the making of it and storing it after it is made. My experience is that an average of a barrel of oil to about 100 lbs. of waste is required to soak it successfully, after which all can be drawn off less 10 gallons. My system was to have three tanks, one for steeping the waste in oil and one for draining. This was arrived at by having an engine stack netting drain board raised about one-third way up in the tank, and the next a storage tank which was covered. I steeped the waste in oil 24 hours, then drained it waste in oil 24 hours, then drained it 12 hours, and afterwards removed it to the storage tank for use. I found that I could as a general rule remove more dope than I put in boxes, but at this time there was no economy in saving the old waste, as all that could be done, was to pick out the cleanest and burn the rest, as we had no reclaiming plant at this time. What I found most successful at that time was to work up my dope in box, take out the surplus, if any, and work up well to cover the under part of the journal well back to the shoulder. This caused the oil to feed to journal, and certainly to a very large extent prevent a hot box. This is one question where the education of your oiler comes in.

The average amount of dope per box is 3½ lbs. Less is not sufficient, and more is too much for 30-ton cars.

Now for a system of systematic teaching. Get your tinsmith to make a standard journal box of heavy galvanized iron, having slide sides. Have a journal of hard wood turned and placed in box. Set your box in same position as it would be on the truck of a car, and have your man pack it with the ordinary dope and tools. Then carefully remove slide sides and replace by glass. You can then see how your box has been packed, carefully remove your wood journal model, and then you have it practically demonstrated how your box is packed.

The next question is—the material your journal bearing is composed of. As I am not a chemist I cannot explain the composition and the virtues of the various metals used in compiling the metals for a journal bearing, but my experience is that inferior metals have been and are used in their manufacture. You cannot blame your man for hot boxes, if at the same time you know you have an inferior brass composition for your journal bearings.

Then there is the question of unequal bearing of journal bearings and wedges. If any of the members will take the trouble and gauge these with the M.C.B. gauge they will readily see what I mean, and will find something perhaps to blame hot boxes for, both on passenger and freight cars, as you will find a large percentage of your bearings and also of your wedges that are unequal. I might say, though perhaps it is not altogether according to the rules, that I have many times fitted to journals old brasses, and have got good results from their use. In fact, when I was in the practical work, I always had on hand a half-round file, ground down for the purpose, and preferred using an old bearing to the placing of a new one. In road work I have many times treated hot boxes in this way, after the train men have set them out on account of running hot. My experience is that a box well packed and with everything favorable will make a trip of from 8,000 to 10,000 miles. As an instance I cite the following:—I cleaned out the boxes on a sleeping car, I think it was about 1895 or 1896, at Winnipeg, put back the old brasses and wedges and fresh cleaned dope (I might say that I was told this car would not go to Rat Portage on account of it not being flooded with oil) prepared as heretofore stated. I wired and sealed boxes, attaching a tag "Unless box is hot do not open." Car came back from Montreal O.K., went west to Vancouver, came back to Winnipeg with one box seal broken and on the tag was written "Hot box at Medicine Hat caused by broken wedge." The date was given, showing that box was opened on its outward trip west and brass changed. Had a new brass applied. Box was hot and caused delay again at Calgary. Brass was again changed. Brass was sent to Winnipeg and heating found to have been caused by unequal bearing. I opened the other boxes, on advice of our General Car Foreman, and they were found to be in a first class condition and could have run the trip over again. Still, what is feasible on passenger cars is not always to be arranged with freight cars. Take our ballast pits, for instance. With our old style of A 3 journal boxes and covers, it was almost an impossibility to keep these covers on. They would open and allow dirt and dust to gather, and cut journals were numerous. The material question of course crops up, even at a ballast pit, and I was sometimes up against it, especially for waste. When this happened I resorted to a trick. I washed pebbles out of the gravel and placed a very generous supply in the box and then put in waste. I found this scheme to work well, and I have no doubt it was o.k. for short trips.

The prevalence of hot boxes is no doubt due to several and various causes, but chiefly among these is the general ignorance of our average oilers. The quality of oil cannot be blamed, as the oil at present used cannot be compared to the old black oil we were using at that time as a lubricant. Neither can the general construction of the boxes and covers, as but few of the old style S.E. boxes and A 3 boxes are in evidence, but there is the car capacity and weight. It is reasonable to suggest it may be partly blameable, but it is provided for by the increase of the journal bearing to overcome the extra weight due to the demand for cars of larger capacity. Therefore if our bearings are uniform and our bearings of a mixture suitable to resist heat and hard, heavy service and wear, the question is answered by saying that the fault lies either in unequal bearings or in the ignorance of our oilers.

Before I close I want to say something of our system at the C.P.R. Winnipeg shops reclaiming plant, which consists of three tanks for the reclaiming of oil. Two of these are 3 ft. by 4¾ ft. by 9 ft. long, made of ¼ plate with wood covers, having hinged doors, and are placed end for end. No. 1 tank has a 2 inch angle riveted to side, inside, about 6 inches up at end next to no. 2 tank. A strainer made of smoke stack netting is placed on this angle for the distance of 2 ft., forming a clear chamber. This chamber is fitted with pipe ¾ in., having a fine wire mesh over its entrance. This pipe is connected with a man pump having a 2 inch barrel, by which means the oil is transferred to tank no. 2. These two tanks are raised about 6 ins. off the ground or floor. Beneath tank no. 1 are about 150 ft. of 1¼ in. steam pipe supplied with live steam. No. 2 tank is of the same capacity as no. 1, the difference being that the entire length is covered by smoke stack netting placed upon the angle iron. This tank is also fitted with piping beneath, but in addition, is also equipped with 50 ft. of 1¼ in. piping at the upper part of back. This is also fitted with a hand pump to remove the reclaimed oil from the waste. Also have a tank 2 ft. by 1½ ft. by 6 ft. for sorting dope. The old dope is placed in tank 1 and steam turned on to raise the temperature to about 100 degrees. This loosens up the dope. After a few hours it is forked over, and is then placed in the sorting tank and sorted over. The waste is then placed in tank no. 2, and subjected to a temperature of 90 to 120 degrees of heat. After being in this tank for a few hours it is forked over again and is then ready for use.

The oil drained from no. 1 tank is pumped over the dope in no. 2 tank, and the oil that gathers beneath the wire screen in no. 2 tank is pumped out of tank into barrels for use.

The waste that is of no value is placed in an air pressure cylinder subject to 80 lbs. pressure. The reclaimed oil ran into tank 2 and then it is ready for use. At stated intervals the tanks are cleaned out and all dirt removed out of the tanks and burned.

The average amount of oil reclaimed runs from 3,500 to 4,000 gallons a month. The average amount of waste reclaimed is from 450 lbs. to 500 lbs. a month, this being all prepared dope and ready for use.

It shows a net saving in oil of $95 to $100, and for dope about $50 to $60, or a saving of $150 per month.

This has been more than doubled during the past year, and the general saving at Winnipeg shops now is from $150 to $300 a month, according to the season, but $150 is the minimum.

The foregoing paper was read before the Western Canada Railway Club.

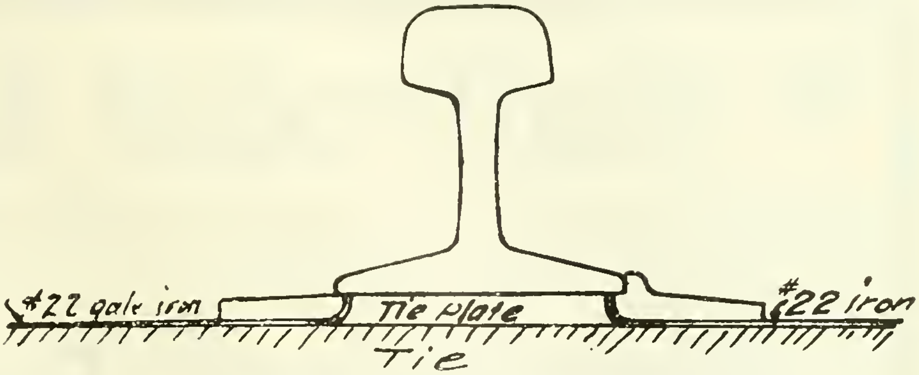
Fireproof Deck for Timber Trestles.

The Board of Railway Commissioners some time since exempted the Great Northern Ry. lines in Canada from having to comply with the order respecting the protection of timber trestles, etc., from danger of catching fire from sparks and cinders falling from locomotives. The reason for this exemption lies in the fact that the G. N. R. has, since 1908, been using a standard fire-proof deck for timber bridges on all its lines, both in the U.S. and in Canada; galvanized iron being the protective material employed. It is claimed that this plan eliminates the objectionable features ot a gravel deck protection formerly in use, while retaining all its advantages. The gravel deck protection was found to be unsuitable on account of the rotting of the ties and stringers, and because of the continual shaking out of the gravel, thus exposing the ties. It was also found, where bridges are on a curve, that the gravel worked down towards the lowest side. This condition was partially overcome by placing longitudinal strips at close enough intervals, so that the gravel could be levelled up without exposing ties. The gravel deck bridge was finally abandoned and the present galvanized iron protection adopted, with very satisfactory results.

The standard plan for fixing this fireproof deck shows that 22 gauge galvanized iron is used, the sheets being 6 ft. long by 28 in. wide for the space between the rails, and 30 in. wide on the outside of the rails. The sheets between the rails overlapp at the centre, and those outside are bent up against the guard rail, the lap and bent-up edge being made to suit. The sheets are matched to fit closely around tie plates and nailed to ties with 8-penny barbed car nails, 9 guage, each nail being provided with an 18 guage washer, ¼ in. hole, under head. Lining spikes are driven through the galvanized iron. On lines where electric signals are used, and have to be carried across timber bridges, the galvanized sheets, instead of being overlapped in the centre of the track, are bent up, onto a triangular strip of wood, which serves as insulation between the two rails. Eight sheets of each width cover 23 lineal feet of bridge, and 14 nails and washers are required for each lineal foot of bridge.

For the foregoing information and the accompanying plans on this page and pg. 713, we are indebted to A. H. Hogeland, Chief Engineer, G.N.R.



Great Northern Ry. Fireproof Deck for Timber Trestles. Sketch.

Transition Curves.

In the very interesting communication on this subject from J. Leslie, Roadmaster, National Transcontinental Ry., in our last issue, a line of type was misplaced in the lower portion of the second column, making it read incorrectly. We repeat the portion of the letter correctly as follows:—

I once knew an experienced foreman who had charge of a big yard, together with two miles of section, and on the section was a 3° curve. He surfaced and lined his curve as well as he knew how, and when it was completed he felt much elated, thinking it was the best piece of track on the system. To make sure that it was all it appeared to be, he went down the line to the first station and boarded a passenger train for the purpose of satisfying himself that the curve in question was all right. The train when reaching this curve had attained a high rate of speed, the descending grade being in its favor. He discovered, to his great surprise, that the curve in a couple of spots was not anything like the track he thought it was. Judging from the way it rode he thought the defective spots must be very conspicuous or easily detected, but when making an effort at improvement he could not detect the spots which were so very pronounced when riding on the train at a high speed. Now, in this case the defect was certainly in the alignment, and yet his experienced eye could not detect the slight variation. If he had tried the 62 ft. cord it would have pointed out the invisible spots, but this was in the days long before lining with a cord was thought of. Section foremen as a rule take great pains with their surfacing and lining, and what appears to them to be good track may be full of little imperfections. Their knowledge in general of how a train rides over their newly surfaced and lined track is very limited. Even a roadmaster might be deceived in this way, but his position gives him the advantage in knowing where the defective spot is located, and just what is wrong with it.

◆

The American Association of Demurrage Officers spent two days at Niagara Falls recently, in consideration of changes necessary in the Uniform Code of Demurrage Rules. The changes recommended are all in the direction of making the meaning of the present code clearer. A committee has been appointed to present the suggested changes to the American Railway Association, in time to be acted upon at the fall meeting of the latter organization, which is to be held in November. The changes affect principally the free time to be allowed on cars held for re-shipment and on cars held under bond, subject to Customs regulations. The Association will also ask for some modifications of the claim rule, under which allowances are made for weather interference and for the bunching of cars in transit resulting in their delivery at destination in accumulated numbers.

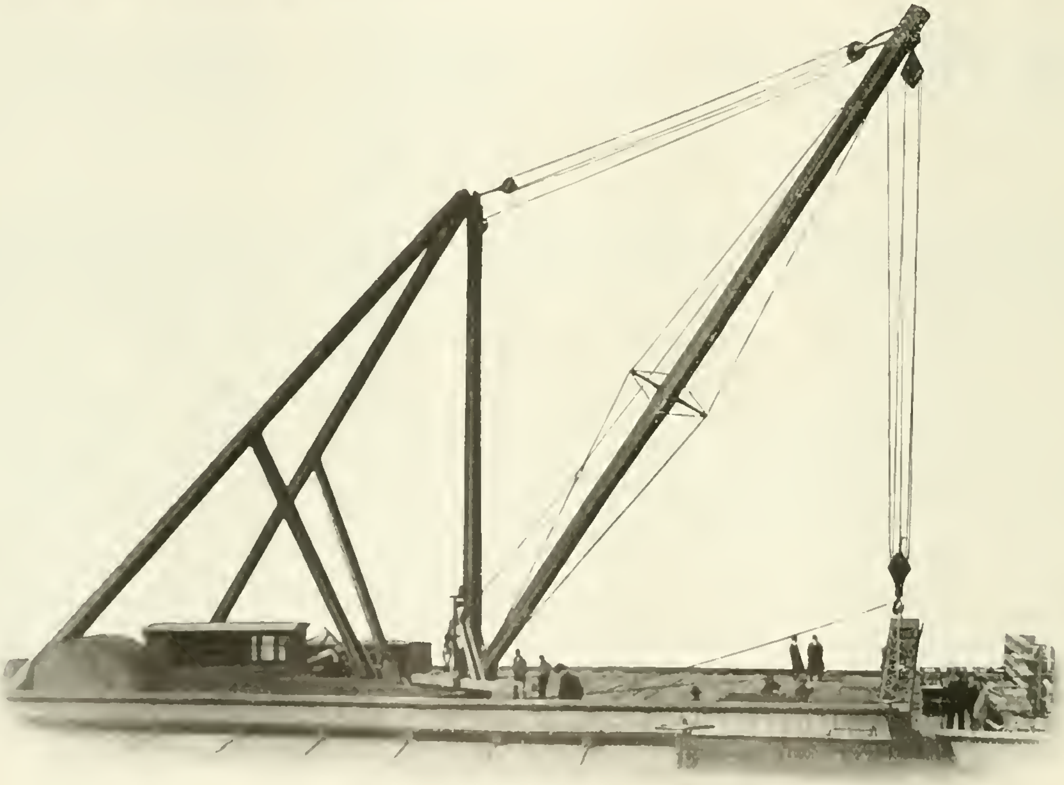
FOR Railroad Docks

Derricks must be safe, strong and smooth working. Every little jolt and jar of a heavily loaded derrick produces thousands of pounds of stress on certain parts.

"American" Derricks

For 30 years have stood the severest shocks and strains, besides being money makers for their owners.



The above is a 15 ton "American" Wooden Stiff Leg Derrick operated by an "American" Electric Hoist with slewing gear, for transferring material at the dock of the Canadian Pacific Ry., Vancouver, B.C.

WE BUILD DERRICKS OF EVERY DESCRIPTION.

LET US GIVE YOU AN ESTIMATE ON ONE.

Flange Lubrication on C. P. R. Western Lines.

The American Railway Master Mechanics' Association committee's report on flange lubrication published in our last issue, contained several references to the practice on the C.P.R. Western Lines. In response to our request, Grant Hall, Superintendent of Motive Power & Car Department, Winnipeg, has favored us with a copy of his replies to the circular sent out by the committee, which are summarized as follows, in some instances the question being given as well as the answer:—

We have flange wear on locomotive driver and truck wheels, tender truck wheels and steel passenger car and freight car wheels.

We have in service standard, Pacific, consolidated, and ten-wheel locomotives. The consolidated show the greatest wear.

The number of miles our locomotives give between driving wheel turnings for flange wear depends upon the nature of the district upon which they are operated. This is taken care of by shifting the tires around on wheel centre, which prolongs their life and usually wears them down on tread, so that grooving is necessary before turning for sharp flange.

When a locomotive is stopped on account of sharp flanges, how long is it out of service? We avoid shopping for sharp flanges as above.

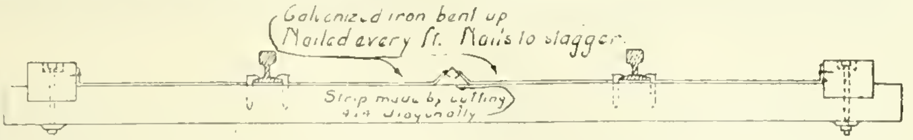
The loss per day on a locomotive shopped on account of sharp flanges depends upon the cost of the locomotive and its earning power.

The labor charge for changing tires on different types of locomotives is $2 per tire, which shifts them from one wheel centre to another.

The labor charge for turning tires for different types of locomotives,* that is the simple operation of turning off a pair of tires in the machine, is 75c.

The metal loss due to turning for vice from the different types of locomotives depends upon the wear of the flange. To build up some of the worn flanges would take half an inch.

If this metal did not have to be removed to form new flanges how many more miles would you get in actual service from the different type of locomotives?



G.N.R. Fireproof Deck. Cross Section of Ties when Electric Signals are used.

We figure on getting from 12,000 to 15,000 miles per 1-32 inch wear on the tire.

I do not believe that excessive flange wear has a tendency to cause hub wear.

How much lateral do you give your different types of locomotives? We give them ⅜ inch lateral.

If a uniform lateral could be maintained, due to the prevention of flange wear, it would be a saving to our locomotive machinery.

We have ten degree curves on our lines. The grades run up to 5%; a considerable portion of the mileage is 2.2%.

We have applied a number of flange lubricating devices to prevent flange wear but up to date (Feb. 16, 1911) have found nothing of material benefit. We have tried hard grease lubricators, also syphoning ordinary engine oil from a receptacle on the flange, but these have proved ineffective.

The flange lubricators are located on bracket on frame adjacent to wheel. They are blind feed depending upon the external flow for judging the feed.

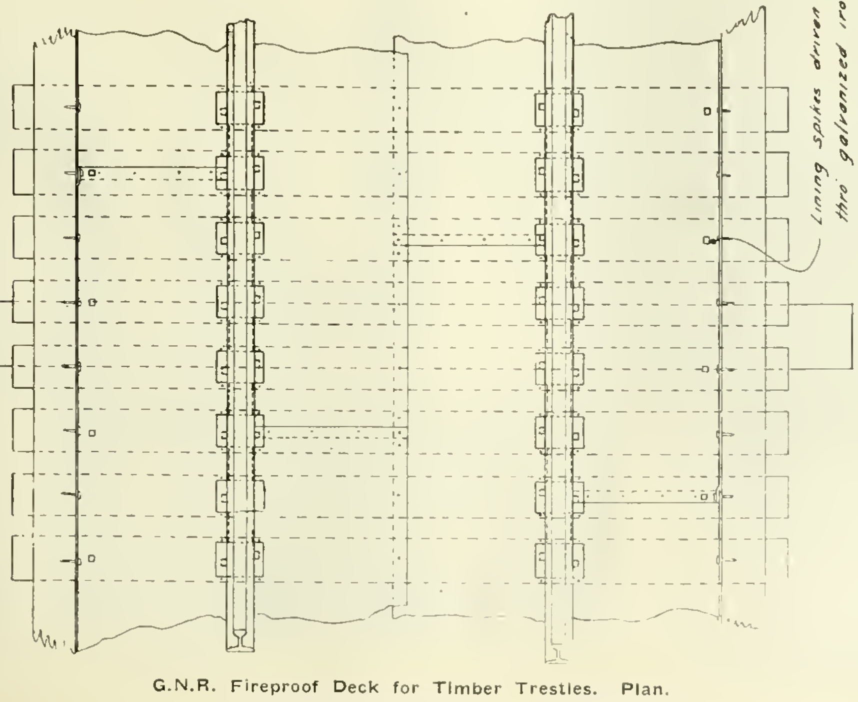
The flange lubricators deliver the oil to the flanges by gravity, flow feeding on shoe, which engages with flange. They do not deliver the oil to the flanges by means of a steam jet or air pipe feed from pipe or nozzle located near the flange.

We use no other method for delivering lubricant to flanges.

None of the flange lubricators we have in service are arranged so that the feed will be uniform in cold or freezing weather. In cold weather the oil becomes thick and will not feed, on account of the temperature.

We have applied flange lubricators to Pacific, consolidated and ten-wheel locomotives. They are as yet in the experimental stage. They are applied to the leading wheels.

Grease and engine oil have been tried without success. The lubricator we are going to try will feed fuel oil.



G.N.R. Fireproof Deck for Timber Trestles. Plan.

After applying the flange lubricators did your locomotives ride easier around curves, and did it prevent locomotives climbing the rails and getting off the track? It is to be expected that the lubricated flange will ride curves easier.

Since applying flange lubrication there is no noticeable difference in the locomotives hauling more tonnage or handling regular trains easier on curves.

I think a benefit would be derived in many ways from the use of flange lubricators.

We have not applied flange lubricators to new tires, removing the lubricator after tread has become worn, so as to depend upon shoulder worn on tread to protect flange.

What depth of tread wear is necessary to prevent flanges from being cut by rail? I consider that if you are going to get flange wear in a certain district you will get it from the start, and do not think there would be much advantage in having an engine track and wear evenly on the tread on a tangent and then expect that this would keep it away from the flanges if transferred on to a curvy section.

Poles used in Canada in 1910.

The Forestry Branch of the Department of the Interior has compiled statistics dealing with the poles purchased in Canada during 1910. The total number purchased was 782,841, an increase of 118% over 1909. The total value of these poles at point of purchase was $1,043,874, and the average price was $1.33, or less by 6 cents than the price per pole in 1909. Steam railways, telephone and telegraph companies used 95% of these poles, the remaining 5% being used by electric railways, power and light companies; 97% of the total consumption were cedar poles, which for their cost give better service than any other wood. At present none of these poles are treated or preserved by any method, in which respect Canada is far behind the United States, the latter country using in 1909, 3,738,740 poles at an average cost of $1.89, or at 50 cents more per pole than in Canada. It was found that it paid to use preservative methods. During the last three years the treatment of poles has advanced rapidly in the United States, so that in 1909 15% of the total number were treated by creosote or other methods. This is an increase of 67% over the number treated in 1908. At present the U.S has 87 pole treating plants, while Canada has none. It is to be hoped that this great inequality will soon be done away with, and that pole users in Canada may take up this cheap and rational method of securing greater service from the poles used and thus lessening the drain on the forest.

Recent Advances in Machine Tool Construction.

By Colonel Alexander Bertram.

In this paper it is the author's intention to speak more particularly of the early history of machine tool building as it has come under his personal observation, from his schooldays until the present time.

In 1861 there was in operation in the town of Dundas, Ont., a small jobbing shop conducted by Robert McKechnie, a young patternmaker, who graduated from the Dundas foundry of John Gartshore, and who had struck out for himself in a small way, to carve out an existence in the then growing Province of Ontario. In 1862 he was joined by a young Scotchman in the person of John Bertram, who had received a thorough training as a machinist, and these two founded the Canada Tool Works, or what is now known as The John Bertram & Sons Co., and started as builders of wood machinery, at the same time doing a jobbing trade with the local mills and factories. During 1863 the late John Bertram designed and built in that small shop what was perhaps the first engine lathe ever made in Canada, and from that date the designing and building of machine tools has been continuously carried on at the same place, but, of course, in much better fitted shops than the first small wooden building of those days. This first and somewhat primitive lathe had a swing of 12 in. over the shears, and, with a 6 ft. bed, weighed about 600 lbs. The difficulties under which the lathe was built were greater because of the fact that the small shops had nothing in the way of means of planing the bed. This difficulty, however, was overcome at the Gartshore Foundry, where, also, the leadscrew was cut. The planer in use in that shop was a Scotch-built machine, and, of course, had a table of sufficient length to plane this bed without a shift. This lathe was finished in about six months, and a large portion of the small turning was finished by hand tool turning, as at that time there were few self-acting lathes, and certainly none in this shop. All the gears had cast teeth made from wood patterns, and even the change gears for screw-cutting had cast teeth moulded up in the same manner. The castings for this lathe were made in the Gurney Foundry, Hamilton. From this small beginning the partners of that business were encouraged to develop their business, and others also embarked in the same line, with more or less success. John Bertram was a mechanic of advanced ideas, and was never satisfied unless the development of his designs and the organization of his shop were ever on the advance. He at once adopted standards for shop use, in the way of Whitworth standard threads for taps and dies, and also inaugurated male and female, or what are now known as plug and ring gauges, for sizing the bore of wheels and pulleys, and for the turning of shafts. He also saw the necessity of cutting gears, and finally designed and built a gear-cutter. This machine was of the most simple form, consisting of a bracket bolted to the shop wall, carrying a mandril and a dividing plate. A man was trained to feed the cutter slide up and down. During the operation he very often made a slip and spoiled the gear. In those early days Brown & Sharpe cutters were developed, and from that time until the present day B. & S. cutters have been in constant use there for gear-cutting. All key-ways at that time were cut by hand, and it was remarkable how well this was done, and the time taken for small keys was not as far away from the present-day methods, when setting up and preparing a machine to do the work is considered. To duplicate the key-ways in change gears for screw-cutting, a broaching tool was used. After the keyway was roughed by hand, the broach was driven through, thus producing a standard finish, which served the purpose.

His next step was to design a milling machine (fig. 1) for cutting keyseats in shafts. All the movements were by hand, and the machine and its cutters are herewith shown. Since this date, in the early sixties, many changes have taken place toward improving the turning lathe. Then it was considered satisfactory to furnish a 24 in. lathe with a flat shear bed, having single ribs connecting the ways together, a headstock having a four-step cone, with a 2½ in. belt and a gear ratio of about 5 to 1. The spindle front bearing, 1¾ inches diameter, running in cast-iron bearings, all the gearing having cast teeth; a carriage or saddle with no power cross-feed, and a front apron fitted with running gears of the most simple type; a leadscrew nut of babbit metal and tailstock fitted between the flat ways. Yet this was the condition under which the present high-speed machine was developed, and probably I am safe in stating that a greater improvement has been made in iron turning lathes than in any other machine tools in the large group of iron-working machinery. In order to fully illustrate the changes, we shall show three designs of standard iron-turning lathes.

Fig. 2 shows the type of lathe built by this firm until 1885. This lathe is better known to the trade as the flat shear-engine lathe—that is to say, the top of the ways of the bed are a flat surface. The carriage or saddle carrying the tool block is gibbed at both front and rear to the ways of the bed, on which it has its bearing. These ways were planed to an angle of 55 degrees. This lathe swings 24 ins. in diameter, and it will be clearly seen how limited the cone and gear power was as compared with the powerful high-speed machine of the present day. Mr. Bertram having had his early training among Scotch and English machine tools, the designs followed were naturally more of that type.

In the early seventies two types of lathe head construction were freely discussed among mechanics in Canada. The one favored largely by English practice, and termed the conical or solid bearings, appealed to many by reason of its easy adjustment for wear. One element, however, seemed to have been overlooked, and that was the expansion and contraction of the spindle with varying temperatures. This difficulty soon decided the fate of the conical bearings as at that time constructed, for although some English makers hardened and ground both the spindle and bearing, this could not remedy its seizing qualities, and, therefore, the present parallel front and back bearing in lathe head construction has been adopted by nearly all builders.

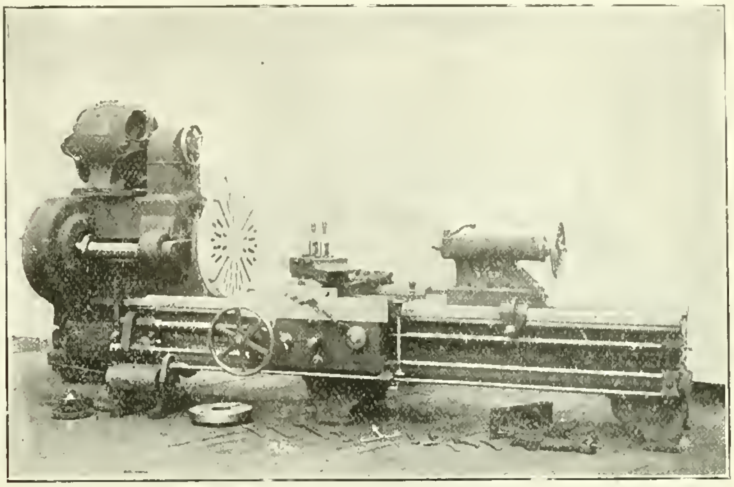

Fig. 4. Motor Driven Lathe.

lathe as manufactured by one of the United States builders. In this design it will be noted that the saddle and tailstock have separate bearings on inverted V's. This construction is favored for lathes of small size, but many leading United States builders favor a flat bearing for the tailstock, which, when provided with proper adjustment for maintaining its alignment, is much more easily kept clear of cuttings.

Fig. 4 illustrates one size of motor-driven lathe as built by the Bertram Co. today. In order to economize in the manufacture of this machine, the construction is such that any stock machines may be converted from belt to motor, or vice versa, as required, and for that reason it is termed the convertible type. The gear and cone ratio is such as to permit of the use of standard motors of variable speed, as made by all the electric companies, and when so arranged with motor drive attached to the running gear, the lathe head loses all semblance to that of the original machine, but it is fast superseding the cone-driven lathe in many of the leading machine shops. This is particularly so in the sizes running from a 30 in. swing and up.

There are many strong arguments favoring the motor-driven lathe. Several of the minor advantages may be noticed. First, the use of the motor does away with the overhead line-shaft and its maintenance. From the fact that belting and the line-shaft have been done away with, the machine may be placed to greater advantage in a shop, and in this way space may be economized. The range of speeds which are obtained by the variable speed motor through the drum type controllers enables the operator to arrange the cutting speeds to suit the material being machined. This arrangement of speeds is made possible by the fact that the operator, by moving the handle shown at the right-hand of the carriage, instantly controls the spindle speeds. This, of course, is a decided advantage over changing the belt on the steps of the cone-driven lathe. Again, in this, as in all motor-driven machines, the cutting speeds and feeds are very much increased, as the power delivered at the cut by the motor is from 50 to 100% greater than the power obtainable in a belt-driven machine, and the absence of belt pull on the cone gives a greater degree of accuracy to the work produced from the same lathe. In consequence, with the use of high-speed cutting steel, the output of the motor-driven lathe has been increased from 30 to 50%. It may be remarked that the tremendous increase in power in the running head has necessitated the re-designing of the lathe, making all the parts throughout proportionately heavier than the same sized lathe of ten years ago.

Fig. 5 shows another form of motor-driven lathe known as the "all-geared" type, driven by constant-speed motor or single pulley drive by countershaft. In this machine all changes of speed are effected by clutches, and no changes of belt, as on a cone, are necessary. For lathes of very large size this construction will commend itself to the user, although there are arguments against the number of gears made necessary to give the desired changes. On all large lathes of this type, separate motor for quick traverse of the saddle along the bed is provided. Movement of the tailstock by the same means gives greater efficiency or quicker adjustment of the tools to the cut.

The foregoing covers in a general way the advance in construction of the engine lathe. Another type of lathe which in recent years has received considerable attention, namely, those for locomotive and coach wheel turning, will now be considered. Fig. 6 shows this machine as originally designed by the Pond Tool Company, of Plainfield, N.J. As first built it was belt driven, having about 9 horse power, and a capacity of from 4 to 6 pairs of wheels per day of 10 hours. The special features of this machine are:

1. The central drive. It is known as the worm drive. The power is transmitted direct from the cone shaft, or as the machine is built today, from the motor, to a worm and a worm wheel, which is mounted on the end of the driving shaft. The end of this main driving shaft is a worm which in turn engages a large worm wheel in the centre of the machine. Both worms

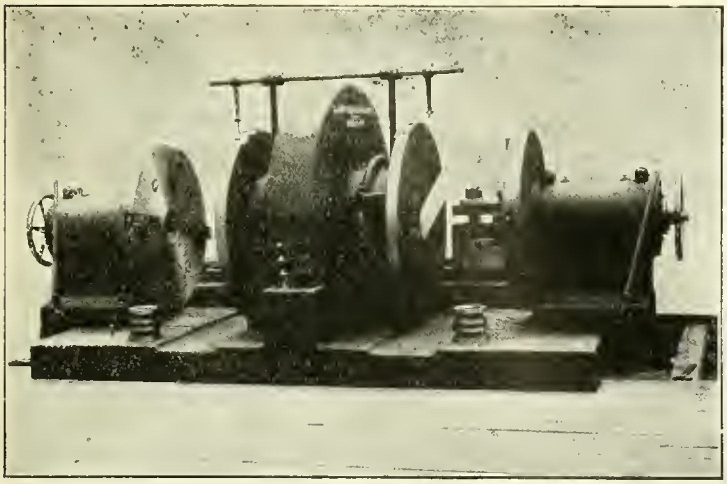

Fig. 6. Locomotive and Coach Wheel Turning Lathe.

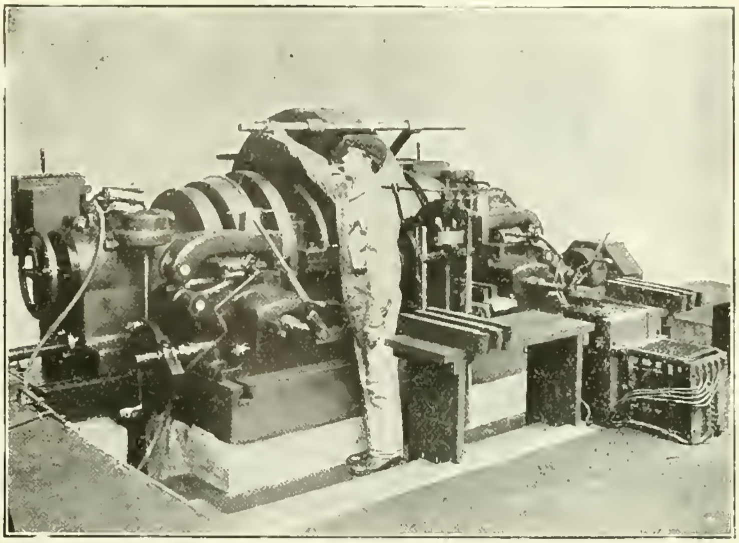

Fig. 7. Locomotive and Coach Wheel Turning Lathe.

and wheels run in oil tight cases, which ensures perfect lubrication. In this way the power reaches the machine midway between the wheels, and, in addition to securing uniform power, the central drive makes it possible to support the wheels on both sides. This is accomplished by means of self-centreing chucks, which grasp, or grip the axle journals, and chuck jaws engage the tires.

2. The compound rests, which carry the cutting tools, are mounted on the bed, and are held by four bolts in T-slots—in this way any springing tendency is prevented, and in consequence the heaviest cuts can be carried.

Fig. 7 shows the machine as built today by the John Bertram Co. The machine has undergone radical changes, these having been brought about by the introduction of high speed steel and the use, for driving power, of an electric motor directly attached. As already stated, the original machine was capable of turning from four to six pairs of tires per day, but upon the inthereby increased to 20 horse power, troduction of the motor, the power was and the output increased from six to eight pairs of wheels per day, with one man as operator, and one man as helper to roll the wheels in and out of the machine. For a number of years this was considered a standard day's work, but soon the energetic shop managers of the leading railway companies increased the horse power to 30, with the result that the output was increased to from 10 to 12 pairs of wheels per day, this necessitating an additional helper to roll the wheels in and out of the machine. Not content with this, however, the power was further increased to from 35 to 40 horse power, the output thereupon averaging 14 pairs of wheels per day, with two operators and two helpers. This undoubtedly demonstrated the possibilities of the machine, but it also demonstrated to the manufacturers the fact that labor-saving devices must be added, since the output had reached the limit of human endurance.

The latest achievement is clearly illustrated by fig. 8. It consists of a new design of tool block clamping device for holding the tool, and being operated by compressed air, facilitates the work of the operator. Power is also applied for both moving and clamping the heads on the bed.

In fig. 9 there is illustrated the segment in the central driving gear, which opens, closes, and locks automatically as the wheels are rolled in and out, this requiring no attention whatever from the operator. These labour-saving devices have so perfected this machine that the output has steadily increased, until, under a recent test, 33 pairs of wheels were turned in nine hours and thirty-three minutes.

The wheel lathe specially designed for turning the tires of locomotive driving wheels as used up to a few years ago, is illustrated in fig. 10. Those familiar with the modern machine will readily see that the construction is light in all its parts, particularly in the head and face plates. The power is limited, owing to the narrow belt by which the machine was driven, and the output was consequently limited to 1½ to 2 pairs of wheels per day. The top of the bed was a flat surface, and in consequence the pedestal carrying the tool blocks had to be of sufficient height to carry the tools to the centre. Owing to their length in a lathe of 80 ins., this was an extremely weak feature, as it was scarcely practicable to make them of sufficient size and strength to pre-

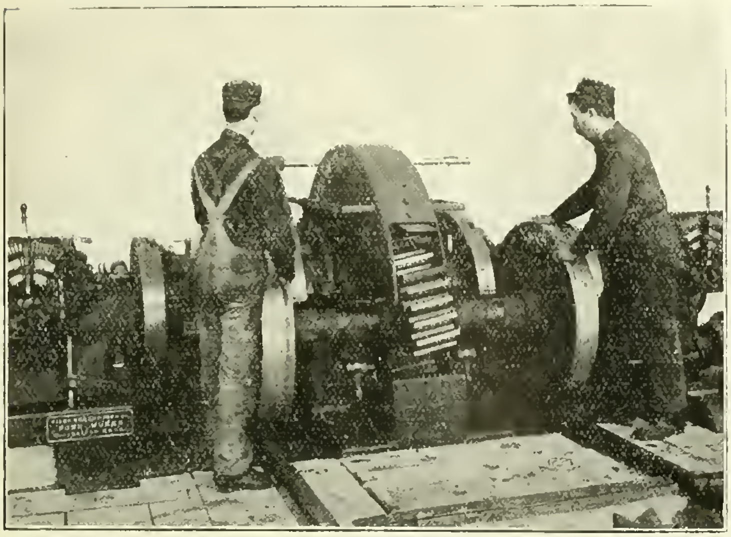

Fig. 9. Showing Segment in Central Driving Gear.

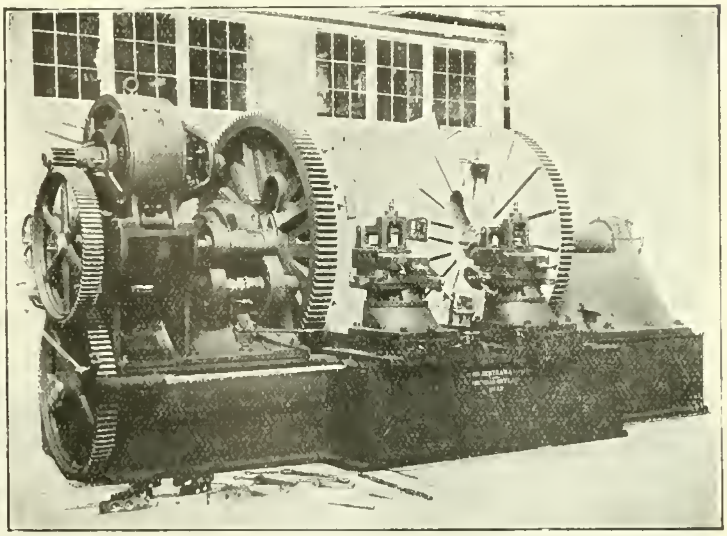

Fig. 11. Modern Driving Wheel Lathe.

vent springing. This, together with the weakness of the driving plates and the primitive method of holding and driving the wheels, accounts very largely for the small output obtained.

The modern 90 in. driving wheel lathe is illustrated in fig. 11. The machine has been designed throughout with a view to obtaining the greatest rigidity at the point where the greatest strain is imposed; this elevation also permits of the use of very short and stiff tool posts. The back web of the bed, not being subject to so great strain, is low; this facilitates the handling of wheels in and out. The tool blocks are equipped with a tool-holder, which renders easier the setting of the cutting tools. The operator is thus relieved of opening and closing four nuts each time the tools are set. The feeds are positive, being operated by connecting rods attached directly to the tool block feed shaft. The head is equipped with a 50 h.p. motor; the power is transmitted through a train of gears and a 7 in. shaft to the internal gears on the face plates. As the internal gears form wide flanges on the face plates, the plates are given great rigidity, and by the use of improved drivers, fig. 12, which hold the wheels perfectly rigid, the heaviest cuts can be carried with little or no vibration. In order to fully realize the improvement in the machine, it need only be stated that while the output of the old machine was from 1½ to 2 pairs of wheels per day, the average output is now 6 pairs of wheels per day, while, under special test, 10 pairs of driving wheels were turned in 9 hours 6 minutes. Fig. 13 shows a cut taken in the above test.

Fig. 14 illustrates a curiosity in wheel lathes from a photograph taken from a lathe in use on a branch railway in Mexico. The bed consists of square timbers, a main gear in halves, which is clamped to the axle at its centre, while the wheels and axle run in their own journal. Claim is made that a pair of wheels were turned in one week, which would scarcely fill the requirements of our large Canadian roads.

The subject of lathes should not be dismissed without a word on the boring and turning mill, another form of lathe construction, so arranged as to permit of the easy chucking of articles to the face-plate. This machine has also been brought to the stage of quick adjustment of rail heads and bars, all the surplus power and energy of the man being developed to increase the number of hours actually at the cutting point of the tool. Fig. 15 shows a standard boring mill, as built by the Bertram Co. for the Canadian market.

Fig. 16 shows a Bertram tire boring mill for coach wheel tires up to 42 in. diameter. The construction is especially for heavy duty.

Few machines which have to do with the production of the modern locomotive have undergone such changes in size, weight, and power as the frame slotting machine. This is due to the increased size and weight of the locomotive of today, as compared with that of a few years ago. This, of course, causes a corresponding increase in the size of the frame to be slotted. Fig. 17 shows the slotting machine, as built by the Bertram Co. until about 1898. The opening in the yoke was 34 in. wide and 12 in. high, and the bed had a length of 36 ft. The machine was capable of slotting one pair of forged frames in 60 hours.

Fig. 18 illustrates the standard three-headed slotting machine, as in use in the Canadian Pacific and other railway shops. The opening in the yoke is 48 ins. wide and 26 ins. high, and the length of the bed is 40 ft., giving the machine sufficient capacity to slot four of the largest sizes locomotives frames in from 32 to 34 hours.

In Fig. 19 is illustrated the largest type of triple head frame slotting machine which is known. It was installed in the Montreal Locomotive Works about three years ago, the dimensions of the machine being—opening in the yoke 61 by 34 ins., and the bed is 50 ft. long, maximum stroke of cutter bars 32 ins. The machine is capable of slotting six locomotive frames simultaneously, and has the power and rigidity necessary to do the work at the minimum cost under modern manufacturing conditions.

In common with most of the other large machine tools, the method of drive in the slotter has been changed and improved by the introduction of the motor. As will be seen in this plate, each head is driven by a 20 h.p. motor, from which the cutting bars are driven through powerful friction clutches, which permits the operators to have convenient control of the bars at all times. This improved method of drive has superseded the long shaft, which ran the entire length of the bed in the older machines, communicating the power to the cutting bars through a system of clutches. These facts will show that the slotting machine of today has three times the

CIRCULATION

Thousands of dollars are spent by advertisers each year in advertising in undeveloped publications.

The development of the circulation of the Railway and Marine World has been the **work of fourteen years,** and it is the only medium through which you can thoroughly reach the men who have to do with the purchasing of supplies for Canadian railways.

Are you taking advantage of this medium for placing your product under the eyes of the men who have this immense purchasing power?

THE RAILWAY
AND
MARINE WORLD
TORONTO CANADA

14
YEARS

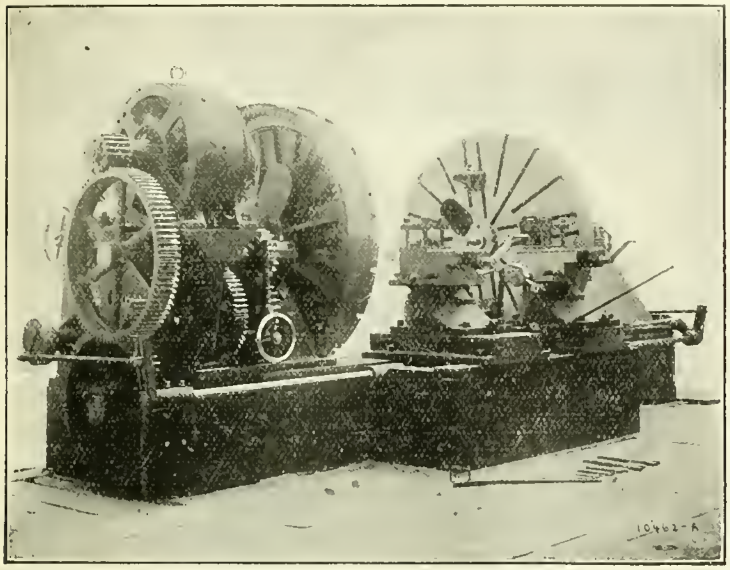

Fig. 12. Modern Driving Wheel Lathe.

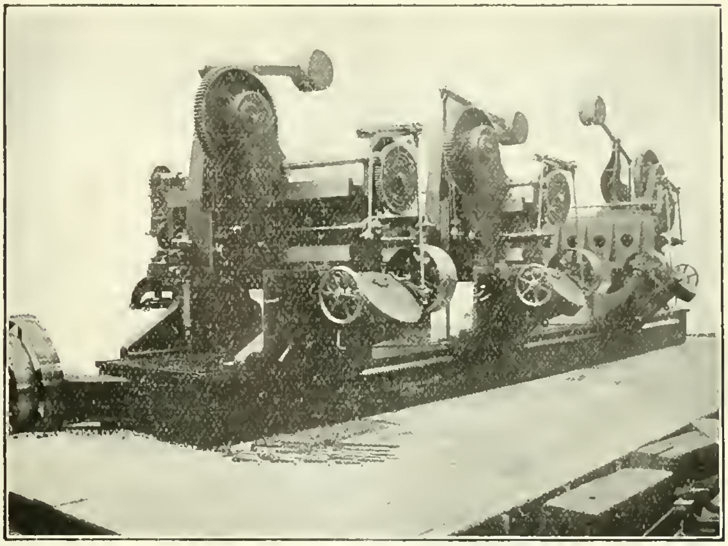

Fig. 18. Three headed Slotting Machine.

capacity of the machine manufactured a few years ago. In consequence a very great saving has been effected in the cost of slotting frames, for, as has been shown, in the earliest machine it required 60 hours to slot one pair of frames, the machine as next improved slotted four frames in 32 hours, while the latest improved machine averages six frames in 40 hours.

In passing rather hurriedly through an outline of machine tool improvements, a few words should be said on the subject of the drilling machine. In common with nearly all classes of machinery the drilling machine has of late years received its share of attention. The following plates will serve to illustrate the development of this type of machine tool, and render unnecessary an explanation of the improvements in detail.

Fig. 20 shows the first ratchet and drill brace used in the shops some 40 years ago. Fig. 21 is a very old illustration of a drill built in the United States. Fig. 22 illustrates a vertical drill, built in the Bertram Works about 1869. Fig. 23 illustrates the latest Bertram vertical drill. Fig. 24 shows a full universal radial drill. The first machine built from this pattern was exhibited at the Centennial Exposition at Philadelphia in 1876. Fig. 25 represents the latest production in full universal radial drills.

Time will not permit the discussion of the present-day drilling records, or to compare them with those of early days. Many articles on high speed drilling have appeared from time to time in engineering publications, and the wide variations in results obtained might be an interesting point for discussion at a subsequent meeting. Some of those present might then be able to give valuable information regarding personal experiences.

This paper should not be concluded without giving some attention to one of the most important machines, namely, the iron planer, and in doing so it should not be necessary to go into its past history further than to state that since 1694 little was accomplished in its development until early in 1800. As stated in the introductory remarks, there was a machine of this type in the Gartshore Foundry in 1863. This machine had a cutting speed of about 10 ft. per minute. The gearing was made with cast teeth, and the rack had a double section having the teeth staggered to give a smooth and uniform motion to the table.

Fig. 26 illustrates one of the first machines built in the Bertram Works in 1867. The power is delivered to the table by a single 3 in. belt running at a velocity of 512 ft. per minute, with a gear ratio of 6.25. giving an effective pull on the table of 3750 lbs. and a cutting speed of table 20 ft. per minute.

Fig. 27 represents a 36 in. planer, driven by two 3 in. belts, one of them being used as a forward or cutting belt, and the other for the reverse motion. A belt velocity of 1,000 ft. per minute and a gear ratio of 13.4 to 1 delivers an effective pull on the table of 8180 lbs., at a cutting speed of 20 ft. per minute.

From the above some idea is given of the gradual development of iron planers. In recent years modern shop construction demanded economy in space and a more convenient shop layout. This led to the adoption of an individual drive made possible by the improvements in electrical machinery, and for the past eight or ten years the usual plan of mounting the motor on top of the planer housing has been followed. This plan is more or less faulty, due to a liability of the machine producing defective work by reason of the natural vibration caused by the motor being placed in that position. To obviate this danger the use of pneumatic clutches was introduced, and a motor drive placed at the base of the housings.

Fig. 28 represents a motor drive mounted upon the housings of the machine, power being transmitted by four belts, two for cutting and two for reverse. This drive was developed to give increased belt pull without excessive belt shifting velocity. The increased pull wide single belt for both forward and reverse motions would demand double the shifting speed to obtain as prompt and uniform a return of table as the original narrow belt required. This increase of shifting speed was practically impossible, hence the introduction of the four-belt drive. With two narrow belts for each motion the required increased pull is obtained, and

the same facility of shifting remains as in the old two-belt drive without any increase in shifting velocity. In this construction by a gear ratio of 8.8 to 1, a belt velocity of 1,330 ft. per minute, an effective pull on the table of 10,000 lbs. is obtained at a cutting speed of 36 ft. per minute, at the same time maintaining a comparatively low belt speed and the use of a 5 in. belt for the cut and return.

We now reach the most modern drive applied to iron planers, and the following is quoted from a circular issued by the Niles-Bement-Pond Co., of Plainfield, N.J., where the improvements were designed and carried out. Fig. 29 represents the machine in question.

"In the Pond reversing motor planer is offered an entirely new method of driving and reversing at variable speeds. This system is the result of years of experimenting in this line, and has proven itself absolutely reliable under the most severe and adverse working conditions. It overcomes all the undesirable features of belt and gear-box drives, and does away with clutches, either pneumatic or magnetic, and all shifting belts. The reversing drive essentially consists of one motor, which acts as a generator at the instant of reversal. This result is accomplished automatically by a patent controller. On the controller are mounted two index scales or dials—one controls the range of cutting speeds and the other the return speeds. Each scale is provided with 13 graduations or divisions, by means of which an equivalent number of different motor speeds are obtainable by simply sliding the thumb piece on the scale. There are no dashpots in the system.

"The cutting speeds obtainable on the standard type of planers vary from 25 to 40 ft. per minute, and the return speeds from 60 to 100 ft. However, these speeds can be changed to suit individual requirements. The cutting and return speeds are entirely independent of each other, so that it is possible to use the slowest cutting speed and the highest return speed, or vice versa. The table is reversed by adjustable dogs,

which throw the controller into the dynamic position. the current which is generated at this instant bringing the motor to a stop. The motor, being directly across the main circuit, has at all times full field strength to brake on, regardless of the speed at which it is running. These conditions account for the quick action of the planer at the instant of reversal, as well as for the perfect electrical action of the motor, there being absolutely no sparking or other electrical strain.

"At the instant of reversal, in which the motor is being brought to a stop, the controller automatically reverses the main circuit to motor, which gives the reverse direction of rotation. The dynamic feature of the controller is absolutely dependent upon speed of the motor, and automatically takes care of the various speeds of rotation. At the end of the stroke a table dog throws over the pilot switch. This is the only mechanical motion in the entire drive. The pilot switch is entirely enclosed, and is placed in the same position on the bed as the mechanical lever of an ordinary belt-driven machine. The pilot switch operates with such ease that it is not necessary to use a wrench to secure the reversing dogs, the latter being quickly adjusted to any desired stroke by means of hand clamps.

"The kinetic energy stored in the work, planer table, armature, and other moving parts of the machine is absorbed by the braking action of the operating torque of the fields on the rotation of the armature, which is accomplished without the least shock, jar, or hesitation. The current generated by this action passes into the starting resistance, and then off as heat, the result accomplished being exactly the same as if some form of mechanical brake had been applied to motor to bring planer to a stop, with the difference, however, that the action is perfectly smooth, has no wearing or frictional surface to contend with, and needs no adjustment. The over-load on the motor at the instant of reversal is never over 50%. The entire drive of the planer is on the floor, or near the floor, where it is accessible. Owing to the absence of the usual belts, clutches, etc., the variable speed planer occupies a minimum floor space.

"The larger machines can be equipped on special order with a pendant switch, usually suspended from the arch, but which can be placed and operated from any point on the planer. With this feature the table can be advanced, reversed, or stopped from a position convenient to the cutting tool with the same ease and assurance as with the pilot switch. The pendant switch may be used regardless of position of the reversing dogs.

"Speed changes are made so easily, positively, and instantaneously that the operator can, if desired, slow down at any part of the stroke, returning at once to normal or increased speed. If a hard spot is encountered at one portion of the stroke, or if there is an extra depth of cut at any point, the operator can slow down to meet conditions. The most economical speed for different metals, such as steel, iron, bronze, or brass, is instantly available.

"The reversing is accomplished so positively that a stroke of 4½ ins. can be taken on a 96 in. machine."

The foregoing paper was read before the Canadian Society of Civil Engineers Mechanical Section recently.

Section Work on Railways.

When the Board of Railway Commissioners had under consideration recently the question of the length of sections to be worked by section gangs on railways and the number of men to compose the gangs, a very important announcement was made as to a change of practice on the C.P.R. eastern lines.

Complaint had been made to the Board that 22 C.P.R. section foremen had been laid off between Chalk River and Port Arthur, Ont., thus lengthening the sections about nine miles, and giving only two men to the increased length. There was also a complaint about the C.P.R. Owen Sound branch, where, it was claimed, a section gang had to look after eight miles or more of track.

E. W. Beatty, Chief Solicitor, C.P.R., contended that the Board had no power to say what number of men a railway company should employ per mile. The Board agreed with this contention and decided to rescind its order of Sept. 15, 1909, ordering the Brandon, Saskatchewan and Hudson Bay Ry. to employ a foreman and two men on each of its Boissevain and Minto sections.

J. W. Leonard, Assistant to the Vice President, C.P.R., in the course of the argument, in speaking of lines east of Fort William, said:—"I have no hesitation in saying that the system we have of section gangs has not been satisfactory, and I hope to get rid of it, and instead of section gangs there will be simply supervisors and inspectors. I am working with the object of doing a lot of our work by contract and the balance by extra gangs, outside of section labor as we know it. There are more men on the C.P.R. Pacific track today under maintenance than there have ever been at this season of the year before. As an example, over 80% of our tie renewals were in position on June 1. Last year by June 1st 62% were in position, and this is the big work of the spring. We are going to maintain our track, but we want the right to maintain it either by extra gangs or by contract, or whichever way we think we can get the best results. The section forces we hope to get down to simply inspectors or track walkers. We will get them down lower than what we have today and have what we call a section staff. We have put no restrictions of any kind on our superintendents as to the number of men they will employ, but we have said to them, 'For all the year round you must not employ less.' We put a minimum on them. They have the privilege of employing as many more as they think the conditions warrant. Prior to our last reorganization of our track force the minimum force that superintendents were authorized to use on eastern lines was at the rate of 2.19 miles per man; under the new organization it is 2.14. That is, they are told they must not employ less than that."

Great Northern Ry. Lines in Canada.

Midland Ry. Co. of Manitoba.—Notice is given in the name of the M.R. Co. of M., which is another name for the Midland Great Northern Ry., that application will be made to the Dominion Government, under the provisions of the Navigable Waters Protection Act, for approval of plans for a bridge across the Assiniboine River in Winnipeg.

Midland Great Northern Ry.—Subcontracts have been let to B. J. Egan for grading, and to Farrelly Bros. for excavation on the line to connect with the terminals between Ross and Pacific Avenues, Winnipeg. The site for the terminals has been cleared, and the work of grading, etc., is being proceeded with.

A subcontract was reported let to Powell and Webster for the subways between Tecumseh and Brant Streets, Winnipeg. R. M. Knox, Superintendent of Construction for A. Guthrie & Co., the general contractors, stated June 12 that satisfactory progress was being made with the work, and it was hoped to get the line finished by Nov. 1.

Regina, Sask.—Press reports state that an arrangement has been made with the G.T. Pacific Ry., under which the G.N.R. branch now terminating south of the International boundary at either Antler or Sherwood, N.D., will be connected with the G.T.P.R. branch now under construction from Regina, Sask., to the International boundary, and traffic interchanged. One report states that the G.N.R. will run its trains into Regina, and will build a line easterly to Winnipeg, connecting up on its way with the Brandon, Saskatchewan and Hudson Bay Ry.; and westerly to connect up with the Crow's Nest Southern Ry., and the Vancouver, Victoria and Eastern Ry.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—J. H. Kennedy, Chief Engineer, was in Vancouver July 3, after making a trip of inspection over the line. He stated that during 1910 there had been 15 miles of grading done from Princeton to Coalmount, on the Tulameen, and it was expected to have the steel laid on this early in Sept. He could not state when work would be started on the 41 miles from near Coalmount to the summit of Hope Mountain. The surveys were all completed from the east to the summit, which was 3,800 ft. above the sea level, but the surveys from the west had not been fully completed. A. H. Hogeland, Chief Engineer, Great Northern Ry., inspected the work to the Tulameen July 7, and it is said that track laying will be gone on with at once.

Near Hope connection will be made with the Canadian Northern Pacific Ry., and that company's track used for some miles. The Board of Railway Commissioners has approved of the revised location plans for the section from east line of sec. 15, tp. 16, to the west line of tp. 26, from mileage six to a junction with the Canadian Northern Pacific Ry. at mileage 13.3. The construction of the section of the line connecting the already existing lines at the coast with the C.N.P.R. is being gone on with, and is expected to be completed this fall. The principal piece of work on this section of the line is a trestle two miles in length at Abbotsford. (July, pg. 655.)

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - - 9.15 p.m.
Leave West Toronto - - - 9.30 p.m.
Arrive North Toronto - - - 9.40 p.m.
Leave North Toronto - - - 10.00 p.m.

Arrive Ottawa, 6.50 a.m.
Arrive Montreal 7.00 a.m.
Daily except Sunday.
Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

Change of Control of the Quebec Central Railway.

Press reports stated recently that the C.P.R. and the New York, New Haven and Hartford Rd. were about to assume control of the Quebec Central Ry. While no official announcements have been made with respect to the changed conditions under which the Q.C.R. will be operated, we have reason to believe that an arrangement has been made for the leasing of the railway for 22 years to the C.P.R., which is acting for itself and for the New York, New Haven and Hartford Rd. The rental to be paid under the lease will, we understand, be sufficient to provide for the payment of full interest on all the different classes of the company's securities, and the line will continue to be operated independently.

The Q.C.R. Co. was incorporated by the provincial Legislature in 1878, and the following lines built:—Sherbrooke to Harlaka Jct. on the Intercolonial Ry., five miles from Levis, 137.50 miles; Chaudiere branch—Beauce Jct. to St. Sabine, 58 miles; Angus branch—East Angus to Angus Mills, one mile; Tring Jct. to Megantic, 60 miles; a total of 256.50 miles. This brings the mileage of lines owned to 244.80 miles, or to 287.43 miles if the 42.63 miles of yard tracks, sidings and spur tracks are included. In addition the company operates over five miles of the Intercolonial Ry. from Harlaka Jct. to Levis.

For some years the company had a rather chequered career, and in 1886 the Quebec Legislature rearranged the company's finances, and named members of the bondholder's committee in London, Eng., together with three Quebec representatives as provisional directors of the reorganized company. At a later date the number of directors was fixed at six, of whom five represented the British interests, and one was appointed by the Quebec Government. Of the original British directors named in the act of 1886, three are still on the board, viz.:—E. Dent, President; A. Bremner, Vice President, and F. H. Norman. In 1889 the directors appointed F. Grundy, an old Manchester, Sheffield and Lincolnshire Ry. man, who had done good work in building up some small railway lines in South Wales, as General Manager. After some years of hard work the line was got into good shape, with the result that when trade conditions began to revive the company was enabled to meet its obligations. In 1900 its gross earnings had reached $2,526 per mile of road, the net earnings from operation being $796 a mile. For the financial year ended June, 1910, the gross earnings were $4,981, and the net earnings $1,560 per mile of line.

The line runs through the central section of the province, south of the St. Lawrence River, giving all the railway accommodation in the county of Beauce. It has materially assisted in the development of the asbestos mining industries in Megantic county; in fact 85% of the world's asbestos supply is carried over the Q.C.R. Valuable copper mines, lime quarries, brick works, pulp and paper mills are located along the line. The company's charter powers provide for the extension of the St. Chaudiere branch from its present terminus at St. Sabine to a junction with the Temiscouata Ry., and a line from Scotts to the south end of the Quebec Bridge.

The rolling stock at June 30, 1910, the latest figures available, consisted of:—Ten passenger and 13 freight locomotives. 13 first class, six second class, seven combination, two dining, and 10 baggage, express and postal cars for passenger service; 308 box, 325 flat, 74 stock, 25 coal, two tank and six refrigerator cars for freight service; with 46 cars in company's service.

The total receipts for the year ended June 30, 1910. were $1,105,866.77, and the total working expenses $759,555.75, leaving a net revenue of $346,311.02, which, with interest and amount brought forward, gave the directors $398,218 for distribution. After meeting interest on the $2,943,540.07 of 4% debenture stock, on the $1,644,933.33 of 3% debenture stock, and on the $1,644,933.34 of 7% income bonds, a dividend of 2% on the $3,381,603.33 of common stock was declared, and $46,593 was carried forward. The company holds in the treasury $601,277 of its capital stock. The earnings for the current year show an increase of about $108,000 over those for the last financial year, with an increase of about $40,000 in the net revenue.

J. H. Walsh,
General Manager, Quebec Central Railway.

The present General Manager, J. H. Walsh, has been connected with the line since 1881, in various positions, including Auditor, General Freight and Passenger Agent, and Traffic Manager. Since his appointment as General Manager, six years ago, the gross earnings have increased from $700,000 to over $1,200,000 a year, with a proportionate increase in net revenue. The other officials are:—Superintendent, J. Fortin; General Freight and Passenger Agent, E. O. Grundy; Engineer, J. T. Mockill Treasurer, W. S. Fry; Accountant, T. J. Maguire; Chief Despatcher, J. T. Reid; Master Mechanic, G. M. Robins; Storekeeper, M. A. Hawkins; Car Service Agent, A. S. Hobson; Car Accountant, W. S. Moy; Car Foreman, N. G. Price; General Roadmaster and Superintendent of Bridges and Buildings, J. Farquhar.

Railways Crossing International Boundary.

Replying to a question in the House of Commons recently, the Minister of Railways said east of Port Arthur Canadian railways cross the International boundary at 23 points, and United States railways cross at one point; while west of Port Arthur Canadian railways cross at eight points, and U.S. railways at 15 points. These points are as follows:—

CANADIAN RAILWAYS.

C.P.R.—Vanceboro, Me.; Debec Jct., N.B.; Aroostook, Me.; Loweltown, Me.; Massonville, Que.; Abercorn, Que.; Emerson, Man.; North Portal, Sask.; Kingsgate, B.C.; Huntingdon, B.C.

G.T.R. — Stanhope, Que.; Rouse's Point, N.Y.; Moores, N.Y.; Dundee, N.Y.; Niagara Falls, Ont.; Fort Erie, Ont.; Windsor, Ont.; Sarnia, Ont.

CANADIAN NORTHERN RY.—Lake of the Woods, Rainy River, Fort Frances, Ont.

ALBERTA RY. AND IRRIGATION CO.—Coutts, Alta.

CANADA SOUTHERN RY.—Niagara Falls, Fort Erie and Amherstburg, Ont.

HEREFORD RY.—Conans Mills, Que.

MASSAWIPPI VALLEY RY.—Stanstead Jct, Que.

RUTLAND AND NOYAN RY.—Noyan Jct., Que.

ST. LAWRENCE AND ADIRONDACK RY.—Near Kelso, Que.

QUEBEC, MONTREAL AND SOUTHERN RY.—Noyan, Que.

OTTAWA AND NEW YORK RY.—Cornwall, Ont.

UNITED STATES RAILWAYS.

WASHINGTON COUNTY RY. — Near Princeton, N. B., and passes over Canadian boundary for five miles.

GREAT NORTHERN RY.—Pembina, Man., Gretna, Man.; Wakeham, Man.; Bannerman, Man.; Gateway, Mont.; Beddington, B.C.; Waneta, B.C.; Laurier, B.C.; Carson, Wash.; Ferry, Wash.; Molson, B.C.; Chopeka, Wash.; Huntingdon, Wash.; Blaine, Wash.

The last seven lines mentioned under Canadian Railways are the names of the companies organized in Canada under which U.S. railways enter Canada. The New York Central and Hudson River Ry. owns the Ottawa and New York Ry.; and the St. Lawrence and Adirondack Ry.; controls the Rutland and Noyan Ry., and through the Michigan Central Ry. controls the Canada Southern Ry. The Maine Central Ry., which owns the Washington County Ry., referred to under U.S. Railways, also owns the Hereford Ry. The Boston and Maine Rd. operates under lease the Massawippi Valley Ry. The Delaware and Hudson Co., owns the Quebec, Montreal and Southern Ry.

MODERN DESIGNS FOR MOTOR CONNECTION

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.

THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED" The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

W. E. DAVIS, Passenger Traffic Manager, Montreal. G. T. BELL, Asst. Pass. Traffic Manager, MONTREAL.

H. G. ELLIOTT, Gen. Passenger Agent, MONTREAL

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Central Ry.—The Sovereign Bank shareholders decided, July 11, to accept the offer of International Assets, Ltd., to purchase the assets of the bank from the banks assisting in the winding up proceedings. The new company, which is composed entirely of shareholders of the Sovereign Bank, becomes the sole creditor. The assets include the Alaska Central Ry. and an interest in another U.S. railway, from which it is hoped in time to realize considerable profit. (Nov., 1909, pg. 835.)

Algoma Central and Hudson Bay Ry.—Tenders were received up to July 15 for the extension of the line from the C.P.R. transcontinental line at Hobon, Ont., northerly to a junction with the National Transcontinental Ry., 142 miles west of Cochrane, a distance of about 101 miles. Location surveys have been made, and a very feasible route has been secured. A gradient of 0.6% compensated for curvature, with maximum curvature of six degrees, has been secured. The height of land is crossed between Wabatougashene and Oba Lake at an elevation 89 ft. lower than the C.P.R. grade at Hobon. Towards the north end of Oba Lake the country is rough, and there will be considerable rock work, but northerly of the lake and on to the National Transcontinental Ry. there is very little rock excavation, the country in general being flat and interspersed with rolling clay ridges. There will not be any large bridges necessary on the extension as the line parallels the large waterways and crosses only small tributaries of the same. (July, pg. 645.)

Algoma Eastern Ry.—The Superior Construction Co. has sublet to Jackson and Goldie, Winnipeg, a portion of work on the section of the line it is building from Crean Hill to Whitefish Bay. Location plans from mileage 21 to 46.75 have been approved by the Board of Railway Commissioners. (July, pg. 645.)

All Red Line Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title, to build a railway from Montreal northeasterly to the Atlantic ocean, the Gulf of St. Lawrence or the Straits of Belle Isle. Davidson and Wainwright, Montreal, are solicitors for applicants.

Atlantic, Quebec and Western Ry.—We are advised that a lot of work is being done towards the completion of the line from Paspebiac to Gaspe, Que. Track has been laid upon 23 miles; the steel trestle at Anse a Beau Fils and the three span bridge over Barachois River have been completed. A steel trestle is being completed at Bois Brule, 15 miles from Gaspe. This leaves to be erected a large trestle at L'Anse a Brilliant, and the large bridge at Douglastown to complete the line into Gaspe. It is expected to have the steel work completed by the end of Aug., and to complete the entire line during Oct. A large force of men is at work, and the plan includes three steam shovels. (July, pg. 645.)

Brandon Transfer Ry.—Construction was started June 30, by the Great Northern Ry., upon the building of this line connecting up the different railway lines entering Brandon, Man. The contract for the grading was let to J. Bradley, Brandon, the G.N.R. doing the tracklaying. W. P. Stevenson, a G.N. Ry. engineer from Minot, N.D.., was in charge of the work. (July, pg. 645.)

Burrard Inlet Tunnel and Bridge Co.—Under the agreement it is proposed that the bridge across the Second Narrows of Burrard Inlet, B.C., shall be built by this company, and that the approaches, which are estimated to cost $200,000, shall be built by the Vancouver, Westminster and Yukon Ry. (July, pg. 645, and June, pg. 505.)

Cariboo, Barkerville and Willow River Ry.—Press reports from Vancouver, B.C., state that the company has made all necessary financial arrangements for immediate construction. It is proposed also to build at once a branch line to Bear River, in order to serve some coal properties being developed by J. Hepburn and associates. (July, pg. 645.)

Hudson Bay, Peace River and Pacific Ry.—A meeting of shareholders to elect directors and transact other business was called to be held at the company's offices, 408 McArthur Building, Winnipeg, July 24. The notice was signed by H. W. Adcock, Secretary-Treasurer. (July, pg. 645.)

Intercolonial Ry.—Tenders are under consideration for the erection of pier and sheds at the Deep Water terminus in Halifax, described in our last issue.

The cut-off line which it is proposed to build at Moncton, N.B., will leave the main line from Halifax at Sunny Brae, and will join the main line to Montreal at the new shops, a distance of 7,600 ft. This will save about 4,000 ft. in distance, but the main object is to prevent freight coming from the north, either over the I.C.R. or the National Transcontinental Ry.. when in operation, having to pass through the city of Moncton. It is contemplated that large yards will be built near the new shops, north of Moncton, where freight will be assorted and shipped to Halifax over this cut-off line to prevent its having to pass through the city. It will also cut off some of the grade out of Moncton station; but that is not the main object of this line.

The second track work between St. John and Coldbrook, N.B., was expected to be completed July 29. (July, pg. 645.)

Kaslo and Slocan Ry.—A bylaw is being prepared for submission to the Kaslo taxpayers, exempting the company's property from taxation, and granting a bonus of $5,000 towards the $25,000 fund for the operation of the line. (July, pg.. 647.)

Kettle Valley Lines.—Orders. have been issued by the Board of Railway Commissioners approving of deviations of the previously authorized plans between Westbridge and Wolverine Creek, B.C., and of the location plans for the line from mileage 35.3 to 45.6 north of Midway, B.C.

In a recent interview at Merritt, B.C., J. J. Warren, President, is reported to have said he was entirely satisfied with the general progress made with construction, and with the outlook for the future. The contract for an additional 30 miles to the summit was expected to be let early in August. (July, pg. 647.)

Michigan Central Rd.—We are advised that the company is not contemplating rebuilding the cantilever bridge across the Niagara River, at the Falls, as stated in recent press reports. The existing bridge is in good condition and adequate for the traffic. (July, pg. 649.)

The Mond Nickel Co., which has a line running from Victoria Mines station on the C.P.R. Sault Ste. Marie Branch, is now building another short line, leaving the C.P.R. at Coniston, to connect with the Canadian Northern Ry. for the purpose of serving the smelters. The exact length of this line, we are advised, is 13,500 ft. It will connect the smelter with the C.P.R. and the C.N.R. The line will be used for the shunting of cars of ore, coke, flux, etc. In addition to this line the company is building about 38,000 ft. of sidings at the smelter and roast yard.

New Brunswick and Prince Edward Island Ry.—The extension of the spur line to the freestone quarries has been completed, and freight is being shipped over it. Two sidings, each about 500 ft. in length, are being built at the quarry to facilitate traffic. (July, pg. 647.)

New Brunswick Coal and Ry. Co.—Traffic has been resumed on this line, the bridge destroyed by the fire at Washademoak, N.B., having been temporarily repaired. A permanent concrete substructure for the bridge is being built. (May, pg. 411.)

Pacific, Trans-Canada and Hudson Bay Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Edmonton to Athabasca Landing, Alta., on to Wabiska or Loon River, northeast of Lesser Slave Lake, thence northerly to the junction of Loon and Peace rivers, or toward Fort Vermillion, on Peace River, and on to Fort Smith on Slave River, a line from the junction of the Wabiska and Loon rivers easterly to Fort McMurray, thence easterly along the Clearwater and Churchill rivers through Saskatchewan to Fort Churchill or Port Nelson on Hudson Bay; a line from the junction of the Wabiska and Loon rivers, westerly to Peace River crossing, and thence westerly on the north side of the Peace River to Laurier Pass, and on to Prince Rupert or Portland Canal, on the Pacific coast. Smith and Johnston, Ottawa, are solicitors for applicants.

Port Hood-Richmond Ry. and Coal Co.—The colliery owned by the company at Port Hood, N.S., which is situated under the sea, has been flooded by the water breaking in at the bottom of the mine, 1,030 ft. below the tide level. H. Donkin, Deputy Commissioner of Mines, states that there is absolutely no hope of the mine. The company has power to build a railway from Port Hood to Port Malcolm, N.S., but has not done any construction. The directors, on the reorganization in 1910, were: S. Dyment, A. H. Dyment, H. Waddington, Toronto; Hon. R. Mackay, Montreal; G. D. Forbes, Hespeler, Ont. There is some litigation pending between the Royal Trust Co. and the Eastern Trust Co. respecting the company's bond issues. (Oct., 1910, pg. 829.)

Quebec and Saguenay Ry.—The contractors have over 1,500 men at work, and additional gangs are being added. (July, pg. 647.)

Queen Charlotte City to Masset Inlet.—In connection with mining development on Graham Island, one of the Queen Charlotte group off the British Columbia coast, it is reported that active preparations are being made for the building of a railway from Queen Charlotte City to Masset Inlet. Two companies have been incorporated by the British Columbia Legislature to build railways on Graham Island. (See Graham Island, Oct., 1910, pg. 825.)

Reid Newfoundland Ry.—The first of the branch lines to be built under the act of 1910, viz., that from Shoal Harbor to Bonavista, is nearly completed, and it is expected to have it opened for traffic in about a month. The second branch to be put under construction is that from the present West End branch by way of the South Shore to Trepassey. On this line a considerable amount of grading has been done and several miles of track are reported to have been laid. Surveys have been begun for a third line, starting from Carbonear, near Broad Cove, and extending to Heart's Content and Grate's Cove. (July, pg. 649.)

Sydney and Louisburg Ry.—Work was started June 29 on the new line from Monen Jct. to Birch Cove, N.S., about four miles. The work is being done by the company's own men. Feb., pg. 113.)

JAS. J. RILEY, JR.,
General Manager.

GEORGE RILEY,
Sales Representative.

Temiskaming and Northern Ontario Ry.—The branch line from Iroquois Falls to Porcupine, Ont., about 30 miles, was opened for traffic July 1, and considerable work has been done on the extension to Hollinger. (July, pg. 649.)

Detailed reports as to the fire in the Porcupine district show that very little damage has been done to the newly-laid track from Iroquois Falls to Porcupine Lake, and that traffic has been resumed. Considerable ballasting will have to be done to bring the branch up to standard. The construction camp on the extension from Porcupine to the Hollinger mine was burned out and J. L. Englehart, Chairman of the Commission. stated July 17 that the Chief Engineer had informed him that construction would be held up for two weeks in consequence.

Vancouver to Peace River.—A resolution passed at a recent meeting of the business men of Vancouver, B.C., sets out that it is a matter of paramount importance to the lower mainland and the coast cities, and in the best interests of the development of the province that a line of railway should be built from the coast northward to the Peace River district. A committee was appointed to bring the matter before other public bodies in the province and before the Government.

In an interview Hon. W. Templeman, Minister of Inland Revenue, stated that it was his intention to support the construction of such a line under Government guarantees.

Press reports state that an application for a Dominion charter is being made, and that the financial interests behind the proposition are represented by Lord Brassey and Norton Griffiths, M.P. of London, Eng. (July, pg. 649.)

Vancouver, Westminster and Yukon Ry.—W. McNeil, representing the V.W. and Y.R., informed the representatives of the municipalities interested in the building of a bridge across the Second Narrows of Burrard Inlet, Vancouver, July 10, that the company was then in a position to finance the construction of several miles of railway as approaches to the bridge. The rails would be laid from the company's property in the Hastings townsite to the south approach of the bridge, and from North Vancouver to the north approach by the time the bridge was built. The bridge is to be built by the Burrard Inlet Tunnel and Bridge Co., which is being largely bonused by the municipalities, aided by a Dominion subsidy which had been granted the V.W. and G. Ry. The agreement as to the bridge and approaches has been finally approved by all parties interested, and is ready for signature. (June, pg. 509, see also Burrard Inlet Tunnel and Bridge Co.)

Victoria, B.C.—The plans for the proposed harbor railway have been submitted to the city council. R. T. Elliott, K.C., informed the council that the provisional company was composed of property owners along the proposed route, and that there were no outside interests. Application had been made to the Provincial Government for approval of the plans. A bylaw granting a franchise for the railway is under consideration by the council.

The route of the proposed railway, as set out in the suggested agreement, is from the outer wharves, near Ontario St.. to Menzies St., along the shore line, under the Esquimalt and Nanaimo Ry., following Constance St. across Rock Bay to Bridge St.. and terminating at Selkirk water. Authority to build certain branch lines is also asked. (July, pg. 649.)

An increase of 2½ cents an hour from July 1 has been granted to machinists on the Canadian Northern Ry. west of Port Arthur, Ont.

August Birthdays.

Many happy returns of the day to—

H. H. Adams, General Manager, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Detroit, Mich., Aug. 13, 1876.

W. B. Way, Assistant Superintendent District 3, Eastern Division, C.P.R., Montreal, born at Bowmanville, Ont., Aug. 22, 1867.

E. H. Williams, Locomotive Foreman, Canadian Northern Ry., Brandon, Man., born at West Toronto, Ont., Aug. 26, 1884.

I. C. R. Work at Campbellton, N. B.

The reconstruction of the buildings and the rearrangement of the Intercolonial Ry. yards at Campbellton, N.B., rendered necessary after the destructive fire which practically burned out the whole town over a year ago, is being rapidly pushed forward. The work is being done under the supervision of the Construction Department. Following is a description of the work at present under way, and proposed:—

STATION BUILDING.—This structure is under contract and will be completed and ready for occupation before the cold weather sets in. It will be of brick faced with pressed brick, with sills, lintels, base, copings, etc., of cut free stone of a brown tint. The foundation and basement walls are to be of concrete. The main building will be 112 by 32 ft., one and a half stories high, with pitch roof covered with slates. A one story, flat roofed extension 44½ by 30 ft. will be built at each end of the main building, making the total length 201 ft. over all. The whole building will be surrounded by a 10 ft. verandah, the roof of which is to be covered with asbestos cement shingles. The basement, which will be the full size of the main building, will have a clear head room of about 10 ft. Part of this will be taken up by the heating apparatus, which is to consist of two 35 h.p. return tubular boilers, operating under 60 lbs. pressure. It is intended to heat the passenger cars at rest in the yard by this equipment, as well as the building, pressure reducing valves being used for the building. The ticket and telegraph offices will be located in the central part of the building, with men's waiting room, smoking room and lavatory at one end, and the women's waiting room, parlor and lavatory at the other end. The eastern one story extension will contain the baggage and express rooms, the western extension will be used for the trainmen, car checkers and mail. The second floor of the main building will be used as offices for the Superintendent and staff. The walls of the waiting room, parlor, smoking room and lavatories, to a height of 7 ft. above floor, will be tiled, the floors of the lavatories will also be tiled. The upper part of the walls and ceilings will be finished in wood paneling. The offices on second floor will also be finished in wood. All floors, except these tiled, will be of hard wood. The sanitary arrangements for the convenience of the public will be of the very best. The building is to be surrounded by a concrete walk, extending along the track front about 800 ft. The contractors are Woods and Co., St. John, N.B.

FREIGHT SHED.—After the fire last year a freight shed was constructed, at the then most convenient place; this building is 160 by 35 ft., and will now be moved to a new location to suit the rearrangement of the yard, and a new addition of 140 ft. built, making the total length of the finished shed 300 ft. Offices for the freight handling staff will be located in the eastern end.

REST ROOM.—A large and well equipped building will be erected for the accommodation of the engine men, near the new engine house erected last fall; the building will be divided into living, sleeping and cook rooms, and bath room fitted with lavatory basins and shower bath; the sleeping rooms are to be made

Stock Carried by Canadian Agents: MUSSENS LIMITED

Montreal Toronto Winnipeg Cobalt Calgary Vancouver large enough so that each will accommodate four persons. The heating will be by steam from the power house nearby.

UNDER CROSSING.—As the new station is being erected on the opposite side of the yard from that destroyed last summer, all traffic to and from the station to the business part of the town would be across the main line of railway. To obviate this, the main street is to be divided and a wide masonry subway built and the roadway carried under the tracks. This will be about 340 ft. east of the existing grade crossing, and will also be put under way this summer.

The new round house was fully described and illustrated in our last issue.

G.T.R. Betterments, Construction, Etc.

New England Lines Proposals.—Location plans have been filed at Providence, R.I., on behalf of the Southern New England Rd., for its branch line to tidewater in Rhode Island. The plans show terminal facilities near Kinsey Ave., and a tunnel under Capitol Hill, Providence. The line enters the State on the Massachusetts boundary in Woonsocket, and passes through Lincoln, Cumberland, North Providence, Pawtucket, Central Falls, Providence. and Cranston.

E. H. Fitzhugh, President of the S.N.E.R., and First Vice President G.T.R., was recently in Providence, discussing with the city authorities the question of wharfage facilities. New docks are under construction, both by the State and by the municipality, and the mayor stated that accommodation would be provided for the company at both of them.

An appeal is being made to the courts to declare that certain property in Woonsockett, R.I., on which the New York, New Haven and Hartford Rd. is building a freight shed, is necessary for the Southern New England Rd. It is alleged that as soon as the proposed route of the S.N.E.R. became known the N.Y., N.H. and H.R. Rd., expropriated the land in question and started building the freight shed.

The plans for the S.N.E.R. from Palmer, Mass., to the Rhode Island boundary, were approved by the Massachusetts Railroad Commissioners, July 12.

The courts issued an order July 17 directing the N.Y., N.H. and H.R. to suspend work on the freight shed at Woonsocket, which was being built on the right-of-way on which it was planned to build the S.N.E. Rd.

Lachine, Jacques Cartier and Maisonneuve Ry.—The Montreal board of control informed the company's representatives, June 29, that it would not agree to any more level crossings within the city. As a result of this the question of the approval of the route of the L., J.C. and M.R., which was adjourned to see if an arrangement could be made with the city, came again before the Board of Railway Commissioners, July 11. It was decided that the Board's engineer should confer with the City Engineer and the Chief Engineer of the railway, and bring about an understanding. The company states that it does not desire to cross any existing street on the level, but does not desire to have to build an elevated line in districts where there are no streets.

Ottawa Improvements.—The new coal chutes east of the Rideau car shops, Ottawa, are nearing completion. It is stated that owing to the delay in settling the railway entrance plans that work will not be started this year upon the erection of the additions to the shops.

Ottawa, Rideau Valley and Brockville Ry.—In an interview at Brockville recently G. E. Kidd, Ottawa, solicitor for the company, is reported to have stated that work would be started laying out the line as soon as engineers could be secured, and that applications were being made for municipal aid and for a Dominion subsidy.

Toronto.—While no official announcement had then been made it was stated on the authority of Sir Lyman Jones, President of the Massey-Harris Co., that the company's tender for the purchase of the Asylum and Central Prison grounds would probably be accepted by the Ontario Government. The company's tender was for 10 acres. The G.T.R. sent in a tender in conjunction with the Massey-Harris Co., and he believed the balance of the land would be sold to the G.T.R. If this statement is correct the G.T.R. will acquire 25 acres of the Asylum site, and the whole of the 23 acres forming the prison site.

Brantford, Ont.—Application is being made to the Board of Railway Commissioners for authority to build a line from the main line, westerly and southwesterly through the Holmedale district, to a connection with the Brantford and Tillsonburg branch on block 4, Kerr trail. (July, pg. 655.)

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canadian Car and Foundry Co. paid its regular quarterly dividend of 1¾%, July 25, for the quarter ended June 30.

The Baldwin Locomotive Works, Philadelphia, Pa., has issued its Record no. 70, very fully describing and illustrating Walschaert's valve gear.

The Goldschmidt Thermit Co.'s quarterly publication, Reactions, just issued, contains a number of interesting illustrated articles descriptive of the Thermit welding process as applied to locomotive and marine repairs.

The Standard Steel Works Co., Philadelphia, Pa., has issued a catalogue devoted to steel tires, giving in detail the specifications adopted by the American Society for Testing Materials. Illustrations, diagrams, and a facsimile for dimension blank orders are included.

Following the absorption of the Montreal Steel Works and the Ontario Iron and Steel Co. by the Canadian Steel Foundries, Limited, E. G. Jackson, heretofore Local Manager, Montreal Steel Works, at Toronto, has been appointed Sales Manager, Canadian Steel Foundries, Limited, with headquarters in Montreal.

The Baldwin Locomotive Works, Philadelphia, Pa., has issued its Record no. 69, devoted to Mallet articulated locomotives built for the Atchison, Topeka and Santa Fe Ry., the last order filled being for 40. They are in freight service on the Belen cut-off, where the maximum gradient is six-tenths of 1%. They are rated at 2,200 tons of cars and lading, but have actually handled 2,700 tons, maintaining a speed of 15 miles an hour on the grade mentioned.

The Flannery Bolt Co., Pittsburgh, Pa., has issued a well illustrated booklet on the breakage of staybolts, recommending the practice of flexible staybolt adjustment to the mechanical departments of railways. It also contains a paper on the inequality of expansion in locomotive boilers, and the possibility of eliminating the bad effects therefrom, by D. R. McBain, Superintendent of Motive Power, Lake Shore and Michigan Southern Ry.

Consequent on the reorganization of the Canadian Locomotive Company, Kingston, Ont., the following directors have been elected:—Hon. W. Harty, Kingston, President; J. L. Whiting, K.C., Kingston; Aemilius Jarvis, Toronto; Robert Hobson, Hamilton; F. G. Wallace, Pittsburgh, Pa.; W. Y. Soper, Ottawa, and J. Redmond, Montreal. C. Bermingham, who has been Managing Director for many years, has retired on account of ill health. The appoinment of a manager has not yet been made.

The Rudel-Belnap Machinery Co., Ltd., has been incorporated, with office in Montreal, to deal in electrical, mill, mine, machine shop, railway and contractors machinery and supplies, the principal shareholders being C. M. Rudel, who was sole proprietor of the Rudel-Yeates Machinery Co., and L. J. Belnap, who recently resigned from the service of Allis-Chalmers-Bullock, Ltd., after having been Manager of the Winnipeg office for four years, and subsequently Manager of the Montreal district office for a similar period. The new company will also have charge of the Canadian Crocker-Wheeler Co.'s eastern business.

Carr Lane Glasgow, who has been appointed Montreal district sales manager of Allis-Chalmers-Bullock, Limited, has had extensive experience in the construction of electric railways and the design of electric power plants. After leaving college he was in the employ of Westinghouse, Church, Kerr and Co. for five years, and was one of the engineers in connection with the construction of the Lackawanna and Wyoming Valley Electric Ry. and the Grand Rapids, Grand Haven and Muskegon Electric Ry., and the electrification of the Long Island Ry. Later he was engaged in the electrification of the West Jersey and Sea Shore Ry., and also with the Northern Colorado Power Co. He is a graduate of Cornell University in mechanical engineering.

A Railway to Hudson Bay.

The Dominion Government steamer Minto sailed from Halifax, N.S., July 8, on a surveying expedition to Hudson Bay. Her special business will be to determine the approaches to Fort Churchill and Port Nelson, as well as other possible harbors on the Bay. The selection of the terminus for the projected railway from Pas Mission, Sask., to the Bay, will be finally determined, it is said, upon the report presented to the Government by the officers of the Minto.

Captain Smith, of the Hudson Bay Co.'s steamer Pelican, stated in Montreal, July 11, as a result of his experience as a navigator in the Bay, that the conditions are far too uncertain to allow a profitable exploitation of the Bay route for ocean travel, but added that Port Nelson, and not Fort Churchill, would provide the best natural port in the Bay. (July, pg. 655.)

◆

A short time ago a press report stated that the C.P.R. was considering the installation of soda fountains on its transcontinental trains. In pursuance of our usual practice to verify matter of this sort before publication, we made enquiry, and were advised that it was only a rumor and not official, although it was not improbable that the innovation might be tried. We have since been officially advised that there was no foundation whatever for the report.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

CHICAGO

REMEMBER

When you require any new equipment in the line of Iron or Woodworking tools,—Williams & Wilson can furnish the most modern equipments. Here are a few of our Agencies:

CANADA MACHINERY CORPORATION,
Iron and Woodworking Machinery.
FOOTE-BURT CO., High Duty Drilling Machinery.
NEWTON MACHINE TOOL WORKS,
Cold Saws, Milling Machines, Etc.
BULLARD MACHINE TOOL CO.,
Rapid Production Vertical Turret Lathes.
AJAX MFG. CO., Forging Machinery for Smith Shop.
WARNER & SWASEY, Turret Lathes for Brass and Iron.
LANDIS TOOL CO., Grinding Machinery.
KEARNEY & TRECKER, High Duty Horizontal Millers.
AMERICAN TOOL WORKS CO., Radial Drills, Etc.
—And numerous others.

We will gladly send Descriptive Circulars or Catalogues of any of the above. Send us your inquiries.

Williams & Wilson, Limited, Machinery & Machinery Supplies

320 to 328 St. James St., MONTREAL

C.P.R. Betterments, Construction, Etc.

Windsor Street Station, Montreal.—The steel work on the extension of this building was reported completed July 8. The concrete and stone work is now going ahead rapidly. Work has been started on the excavation for the boiler house, on Mountain St., from which the new portions of the station will be heated.

Longue Pointe Branches.—The Board of Railway Commissioners is being asked for authority to build two additional branch lines in Longue Pointe Ward, Montreal.

Quebec Jct. to Ste. Agathe Second Track.—Unconfirmed press reports state that plans are being made for building a second track from Quebec Jct. to St. Agathe, Que., about 50 miles, and that work will probably be started on it next year.

In a recent interview D. McNicoll, Vice President, said there had been a considerable increase of traffic since there had been a double track line to Quebec Jct., and it was the company's intention to double track every portion of the Eastern Division wherever the traffic warranted.

Lachine Bridge.—Two abutments on the north side of the river, together with two land piers and ten river piers for the new bridge across the St. Lawrence at Lachine, have been completed. There are still seven river piers to be erected.

Guelph and Goderich Ry.—Application is being made to the Stratford, Ont., City Council for right-of-way through the city for the projected line to extend from Linwood, on the G. and G.R., to Embro, on the Tillsonburg, Lake Erie and Pacific Ry. The plan shows a route along the south of Victoria Lake, and through considerable valuable property.

Sudbury-Romford Jct. Second Track.—A second track is being built from Romford, mileage 72, to 76, Cartier subdivision. This has become necessary owing to the increased traffic since the opening of the Toronto-Romford line. A station and telephone office will be built at mileage 76, for the convenience of passengers and to facilitate the operation of trains. The two tracks from there east to Romford Jct. will be operated as independent main lines of the Cartier and Sudbury subdivisions, and the trains from mileage 76 to Sudbury will be handled by the staff system. The grading necessary involves several fairly heavy cuttings. The contract for the excavation has been let to M. McCormick, Sudbury, Ont., and the train filling is being done by the company's own forces.

Fort William Yards.—Engineers have been engaged in marking out the proposed new yard on No. 1 Island, Fort William, and it is expected that work on the grading for the six miles of track to be laid there will be started at once. Connection will be made with the new yard by way of the McKellar River bridge, and by the new Kaministikwia River bridge.

The general plans for the projected improvements at Fort William, Ont., we are advised, are not yet completed, and it will be some time yet before any decision will be reached as to what will be done.

Winnipeg Beach Branch.—The Board of Railway Commissioners has approved of plans for the diversion of the line in Winnipeg Beach, Man.

Royal Alexandra Hotel, Winnipeg.—The site upon which the addition to the Royal Alexandra Hotel, Winnipeg, will be built is immediately east of the existing building, on a portion of the present court. Press reports state that the addition will be built immediately.

Hamiota to Birtle.—The location plans for this branch line from sec. 7, tp. 14, range 23, west of the principal meridian, to sec. 12, tp. 17, range 12, west of the principal meridan, 32.67 miles, have been approved by the Board of Railway Commissioners.

Brandon Station.—A contract was reported let, July 12, to the Brandon Construction Co., for the erection of the new station at Brandon, Man. The contract calls for the completion of the building in Feb., 1912.

Western Lines Construction.—A branch is to be built from Boissevain, Man., to Lauder.

Engineers are laying out the route for the extension of the branch from Virden, from the present track end to McAuley, Man. Press reports state that construction is to be gone on with at once, and the line completed this fall.

Track laying was started July 10 from Imperial, Sask., southerly, and it is expected to have steel laid to Craven early in Sept. The ballasting of the line from Colonsay to Imperial has been practically completed.

The contractors have started grading on the new branch from Bassano, Alta., into the company's irrigation lands.

Construction on the branch from Irricana to Standard, 37 miles, is reported to have been completed, and it is expected to have it open for traffic shortly.

Saskatoon Industrial Spurs.—Application is being made to the Board of Railway Commissioners for authority to build three industrial spurs, 3,120 ft., 2,640 ft., and 2,736 ft. long, respectively.

FROM THE PASSENGER TRAFFIC MANAGER OF THE C.P.R.

C. E. E. Ussher, Passenger Traffic Manager, C.P.R., writes:—

"I look upon the Railway and Marine World as the paper which anyone interested in Canadian railway or marine matters has to take in order to keep posted.

"I would not be without it for considerably more than 'the price of admission.'"

Moose Jaw Yards and Shops.—A large addition is being made to the stockyards at Moose Jaw, Sask., and a new spur line is being built along the front of the entire yard. The concrete foundations are about completed for a new car repair shop.

Swift Current to Brooks Branch.—The location plans of the line from Swift Current to Brooks Branch, Sask., for 78 miles have been approved by the Board of Railway Commissioners.

Western Shops.—It is said that the question of the location of the new shops in Alberta or Saskatchewan was under consideration when Sir Wm. Whyte was in Montreal recently, and it is stated that a decision as to where they will be located will be reached shortly. Calgary, Medicine Hat, Lethbridge and Bassano have each pushed their claims to be favorably considered. These shops will be nearly, if not quite, as large as the Winnipeg ones.

Hotel and Station at Calgary.—Tenders for excavation on the site of the hotel at Calgary, Alta., are under consideration. The remaining portions of the old stone station building are being removed, and tenders are under consideration for the erection of the new station.

Lacombe Branch Easterly.—Revised location plans have been approved by the Board of Railway Commissioners for the extension of the branch from Lacombe, now terminating at Castor, Alta., easterly to a junction with the line now building from Moose Jaw. The revision is near mileage 147, and covers from sec. 26, tp. 37, range 14, to sec. 2, tp. 35, west of the fourth meridian.

Calgary and Edmonton Ry.—The Dominion Parliament is being asked to authorize the company to build a branch from near Sidgewick, southerly to the extension of the Lacombe branch in tp. 36, range 11, west of the 4th meridian, Alta.; and a branch from the above line north of the Battle River, north westerly to a junction with the Wetaskiwin branch in range 17, 18 or 19, west of the 4th meridian, Alta.

Wardner to Fort Steele, B.C.—Revised location plans have been approved by the Board of Railway Commissioners for the main line from mileage 0, on the British Columbia Southern Ry., south of Wardner to north of Fort Steele, B.C., and northerly from mileage 35.7, Kootenay district.

Kootenay Central Ry.—It is expected that track will be laid on this line to Fort Steele this season, and, if conditions permit, to complete the grading on 25 miles northerly from that point. The Board of Railway Commissioners has approved of the location of the line to Shuswap Indian reserve, north of Atherlinar tp., at mileage 62.54.

Kaslo to Three Forks, B.C.—At a public meeting held at Sandon, B.C., July 3, a resolution was passed asking the Provincial Government to approve of the building of this branch of the C.P.R., and not to aid the reconstruction of the Kaslo and Slocan Ry.

Wharf at Victoria.—Work was started July 10 on the 240 ft. addition to the wharf at Victoria.

Esquimalt and Nanaimo Ry.—We are advised that a contract has been let to Palmer Bros. and Hemming, Vancouver, B.C., to build 22 miles of branch lines in the Cowichan district. The longest branch will start from near Duncan and will run to Cowichan Lake, 18.5 miles, and the other branch will leave the main line near Westholme, and will run to tidewater at Osborne Bay, 3.5 miles. Construction will be started at once, and it is expected to have both branches opened for traffic in the spring.

Track laying on the extension to Port Alberni has been completed to the summit beyond Cameron Lake, and it is expected that steel will be laid into Port Alberni by Aug. 15. The wharf at the terminus is completed.

Reports from Victoria state that extensive deposits of iron have been discovered in the vicinity of the upper Quinsam Lake, on property held by United States interests. A deputation representing the mineowners waited on R. Marpole, Vice President, in Vancouver, July 10, with a view of having a branch built to serve the mines. It is said that an engineering party will be put in the field to locate a line from a point on the main line survey north of Comox, to Upper Quinsam Lake, about 15 miles. (July, pg. 657.)

Telephone Dispatching on the G. T. R.

The G.T.R. has been using the telephone for dispatching trains upon two sections for the past eighteen months, viz., from North Parkdale, via Allandale, to Burlington Jct, 140 miles, and from Allandale to North Bay, 185 miles, with satisfactory results. An unconfirmed report states that a decision has been reached to abandon the system of dispatching trains by telegraph on all lines and to use telephones instead, over the whole of the company's system. This, it is said, will require the installation of over 30 circuits at a cost of something like $500,000. The cost of installation is said to be about 75% greater than the telegraph, but a saving of about 50% in operation is effected.

Otis Cars on C.P.R. Coal Pile at Montreal.

OTIS DUMP CARS

AND THEIR USES

OTIS DUMP CARS CAN BE USED IN A VARIETY OF SERVICES

FOR COAL, COKE, ORE AND GENERAL SERVICE

Duluth, South Shore and Atlantic Ry.—Operating revenue for May, $262 615.28; expenses, $202,624.81; net revenue, $59 990.74, against $298,112.11 operating revenue; $223 999.76 expenses; $74 112.35 net revenue for May 1910. Aggregate operating revenue for 11 months ended May 31, $2,853,120.07; expenses $2,033,330.86; net revenue $799,789.21, against $2,999,166.48 aggregate operating revenue; $2 065,618.67 expenses; $933,547.81 net revenue for same period 1909-10. Approximate earnings for June, $291,206, and for week ended July 7, $67,856, against $301,887 and $63 162 for same periods 1910.

Mineral Range Road.—Operating revenue for May, $63 132.18; expenses $57,837.84; net revenue $4,394 34 against $63,899.54 operating revenue; $66 424 64 expenses; $2,525.10 net expenses for May, 1910. Aggregate operating revenue for 11 months ended May 31, $686,617.20; expenses $655 943.35; net revenue $30,673.85, against $763,762.09 aggregate operating revenue; $680,973.68 expenses; $82,788.41 net revenue for same period 1909-10. Approximate earnings for June, $60,287, and for week ended July 7, $12,901 against $65,278 and $11,116 for same periods 1910.

Minneapolis, St. Paul & Sault Ste Marie Ry.—Operating revenue for May, $1,075 621.59; expenses and taxes, $807,907.26; operating income, $267,624 33, against $1 196 049 50 operating revenue; $794,406.03 expenses and taxes; $401,643.47 operating income for May, 1910. Aggregate operating revenue for 11 months ended May 31, $12,034,211.11; expenses and taxes, $8,414 760.62; operating income, $3 619,450.49, against $14 068 812.18 aggregate operating revenue; $8 175 472.02 expenses and taxes; $5,893,340.16 operating income for same period 1909-10. Approximate earnings for June, $1 813 010, and for week ended July 7, $458,851, against $1,026,866 and $458,172 for same periods 1910.

Chicago Division.—Operating revenue for May, $700,057.92; expenses and taxes, $575,228 96; operating income, $124 828 96 against $798,060.82 operating revenue; $566,774.84 expenses and taxes; $231,285.98 operating income for May 1910. Aggregate operating revenue for 11 months ended May 31, $8 142 306.16; expenses and taxes $6,441 140.97; operating income $1,701 165.19 against $8,132,662.84 aggregate operating revenue; $5 680,835.93 expenses and taxes; $2 451,826.91 operating income for same period 1909-10.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for May, as compared with May, 1910:—

GRAND TRUNK RAILWAY.

	1911.	1910.
Earnings	$3,060,000	$2,850,200
Expenses	2,041,000	1,827,600
Net earnings	$1,019,000	$1,028,600

CANADA ATLANTIC RAILWAY.

	1911.	1910.
Earnings	$185,650	$176,600
Expenses	177,400	157,500
Net earnings	$8,250	$19,100

GRAND TRUNK WESTERN RY.

	1911.	1910.
Earnings	$528,300	$533,000
Expenses	485,200	445,100
Net earnings	$43,100	$87,900

DETROIT, GRAND HAVEN & MILWAUKEE RY.

	1911.	1910.
Earnings	$168,000	$165,900
Expenses	160,000	151,600
Net earnings	$8,000	$14,300

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to June 30:—

	1911.	1910.
Grand Trunk Ry.	£3,559,218	£3,318,809
Canada Atlantic Ry.	205.263	194.243
G.T. Western Ry.	656,543	642,384
D.G.H. & M. Ry.	206,581	195,843
Totals	£4,627,605	£4,351,279

◆

National Transcontinental Railway Shops at Transcona.

In our last issue general particulars were given of the shops, etc., to be erected at Transcona, near Winnipeg, for which the N.T.R. Commissioners invited tenders up to July 11. The following additional particulars are now available. The plans call for lumber sheds, scrap platform and storage bins, scrap-platform and machine shop, freight-car shop, planing mills, paint storehouse, coach paintshop, coach shops east and west, car-department office, and motive-power office, in addition to the indirect heating plant, the yard-crane runway, and sewer system. Contractors are asked to tender on the additions in bulk.

The freight-car shop will be 600 by 200 ft., with nine through tracks, having a capacity for 108 standard freight cars. In this building will be established a 20-ton electric traveling crane with a 5-ton auxiliary. The coach shop will be 115 by 260 ft. Along each side will be a balcony 16 ft. wide, with a light wall inclosing it from the floor of the balcony to the roof of the building. Material will be handled up to these balconies by large hoists, one at each corner of the building. The coach paint shop will be 87 by 340 ft., with a standing capacity for 16 standard coaches. The planing mill will be 100 by 300 ft., arranged so that standard cars of material can be run in at the east end and the material unloaded right at the machines.

The plans for the lumber shed call for a building 60 by 165 ft., and those for the wheel foundry show a building 70 by 150 ft., laid out on the straight-floor principle, with four floors for 25 wheels each, giving a capacity of 100 wheels a day. This building, like all others, can be extended when desired. There will be 32 annealing pits and 2 pitting cranes. The cupola room, core room, and charging floor will be at the north end of the building and equipped with pneumatic elevator scaleroom, pneumatic charging machine, blower, storage tracks, and all necessary details for operation. When the wheels leave the wheel foundry they will be taken to the wheel and machine shop, a building 70 by 160 ft. spanned by a 10-ton electric traveling crane.

The paint stores will be 30 by 40 ft., the scrap platform, constructed of wood, 30 by 300 ft., and the dry kiln 40 by 50 ft., divided lengthwise into two kilns. The coils for heating the kiln will be distributed on the concrete floor, which drains to a gutter. After the doors are shut the kilns will be controlled from a small cabinet at the west end, in which will be the steam and return control valves, lighting switches, and recording thermometers, the sensitive bulbs of which will be placed several feet along the wall inside the kilns. In this way after the kiln is closed a complete record of the process will be obtained in the control cabinet.

The motive power office building will be brick with a steel interior frame, 60 by 68 ft., with two stories and a basement for a large testing laboratory, lavatories, and storage. The ground floor will be for officials and clerks, with the drafting room, file room, and blue-printing room on the next floor. A vault will be carried up from basement to roof with vaults on each floor. The car-department office building will be similar to the motive power office building.

As there is no municipal sewer for drainage from the shops, a separate sewer system will be installed, and, as there is not sufficient fall from the shops to the Red River for a gravity flow sewer, a pumping station will be installed to force the sewage to the river. A gravity system of tile collecting pipes will run through the shops connecting with roof down spouts, sanitary sewers, and all drains. This sewer line will be arranged with manholes, surface drains, vents, etc., and discharge into a concrete sump, and will form the basement of the pumphouse. The next floor will carry the volute centrifugal pumps, of 15,000 gallons per minute capacity, with suction pipes running down into sump and shafts running up to the floor above, where the vertical shaft motors for driving the pumps will be located.

The details of the shop plant were developed, and the actual construction is to be carried out under the supervision of F. W. Walker, M.E., Superintendent of Terminal Shops for the N.T.R.

◆

The Quebec Bridge.

Work in connection with the rebuilding of the bridge across the St. Lawrence River at Quebec is being progressed with on both sides of the river. The work in progress is the demolition of the portion of the old substructure which is to be replaced. The caisson which was damaged last year, having been repaired, was recently put in position on the south shore and is being sunk into place, and it is expected to have it out of danger from ice during the winter. Caisson number two is being sunk at the site of the north main pier. Caisson number three was launched June 26, and is being sunk into position. Caisson number one is 180 ft. long by 55½ wide, 44 ft. high, and weighs with boilers and pumps 2,600 tons. The other two caissons are each 85 ft. long by 60 ft. wide and 55 ft. high. These are placed end to end and 10 ft. apart. The contractors expect to have the work well forward by the winter, and to have the substructure completed by the end of 1912.

◆

The C.P.R. has just completed the installation of a telephone train despatching system on its lines in New Brunswick.

The British Privy Council, London, Eng., gave judgment July 12 dismissing the appeal of E. A. Wallberg against the decision of the Supreme Court of Canada, in which $57,000 was awarded him for work done at the Intercolonial Ry. shops at Moncton, N.B., for which action was originally entered for $90,000.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Peoples Gas Building

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—We are advised that while the matter of the erection of shops at Limoilou, Que., has been under consideration for some time, no definite decision has been reached as to what will be done.

The matter of the company's terminals in Montreal is being widely talked of at present, owing to extensive purchases of land which have been made in the city, and between Montreal and the Back River by what is known at the Deayton-Shaw Syndicate. It is stated that these latter proposals will be developed for industrial plants along the route of the direct line of the C.N.Q.R. from Ottawa, and as sites for suburban residences. We are advised that it is proposed to obtain an entrance into the centre of the city by means of a tunnel under Mount Royal. The feasibility of this proposal is being investigated and plans are being prepared. So far as the laying out of terminals is concerned nothing has been decided, either as to whether the company will lay out terminals for itself or join with some other company, presumably the G.T.R.

Canadian Northern Ontario Ry.—The first section of the line from Toronto to Ottawa, viz., from Toronto to Trenton, 100 miles, has been completed with the exception of a few crossings of other lines, and it is expected to start a regular train service over it in August.

The Board of Railway Commissioners has approved the revised location of the line and station grounds in Belleville; of location of line through Camden tp., mileage 145.8 to 149 from Toronto, and near Yarker village, mileage 152.13 to 152.72 from Toronto, as well as for revised location between mileage 11.37 and 14 from Ottawa, and through two lots at mileage 50 from Ottawa.

Subcontracts are reported to have been let for grading between mileage 180 and mileage 200 from Toronto, by Ewen Mackenzie as follows:—P. W. MacLean, Brechin, 2.75 miles; P. Allan, Chaffee's Loch, half a mile; L. MacLean and R. MacIsaac, Brechin, 1.25 miles; D. J. O'Donnell, Toronto, A. O'Donnell, Beaverton, and S. Mackenzie, Toronto, four miles; Stewart and Hart, Portland, four miles; C. A. Cook, Brechin, four miles. Subcontracts are also reported let on other parts of the line:—McDonald and Chisholm, Hardman's Bridge to Rideau River; H. Christian, Rideau River at Hog's Back to Richmond; P. J. Brennan, from Richmond west to Smith's Falls.

The question of the location of the terminals in Ottawa is still unsettled, and it is said that nothing definite will be done in regard to them until some questions in connection with the route of the proposed Georgian Bay canal have been settled.

A contract has been let to the Northern Construction Co., and Foley Bros. for the construction of the line from Sellwood Jct. to Port Arthur, Ont., about 550 miles. This is the first section to be placed under contract of the line from Ottawa to Port Arthur, for the building of which the Dominion Parliament recently passed an act guaranteeing the company's bonds. The act also covers the building of a direct line from Ottawa to Montreal, which is already under construction by the Canadian Northern Quebec Ry., and a portion of the Canadian Northern Ontario Ry., already in operation in the vicinity of Sudbury. Work on the Sellwood Jct.-Port Arthur line is to be started at once, and the whole line is to be completed by the end of 1913.

After leaving the existing line at Sellwood Jct., the route follows the Vermillion River through a productive timber and mining district to its source, and then proceeds through a maze of lakes and rivers to the Hudson's Bay Co.'s Flying Post factory, and then enters what is known as the great clay belt of New Ontario. The route for about 250 miles is along the southern portion of this clay belt through a comparatively easy country for construction, and then works on to the southern shore of Lake Nipigon, reaching navigable water at Orient Bay. An abandoned outlet of the lake is followed to the present outlet at Cameron Falls, and then the route is laid out to the C.P.R., which is crossed near Nipigon station. The C.P.R. is paralleled into Port Arthur, and according to Port Arthur press reports the mileage between Nipigon and Port Arthur will be operated as a double track line jointly by the C.P.R. and the C.N.O.R. The route is laid out in the form of a wide curve crossing the height of land about 100 miles north of Lake Superior. The mileage through the territory north of the height of land is through well timbered country, from which considerable traffic will come, and as the land is cleared it will be open for settlement for agricultural purposes. The maximum gradient will be 6 ft. in the thousand against westbound traffic, and 5 ft. in the thousand against eastbound traffic. There will be a number of large viaducts and bridges along the line, with a good deal of rock work at the Nipigon, and a tunnel of 1,100 ft. at Lake Nipigon. The route followed will convey the line to the southeast of the Timagami forest reserve, and will be considerably to the south of the National Transcontinental Ry., gradually approaching it to the north of Long Lake, where the two lines will be about 20 miles apart. From this point the new line will run south to the south of Lake Nipigon, the N.T.R. going round the north end.

Plans and profiles of the route from mileage 280 to mileage 300 from Sudbury, in unsurveyed territory, have been deposited with the Registrar of Algoma at Sault Ste. Marie, Ont., and the Board of Railway Commissioners has approved location plans of the line in Nipigon, Lyon and Dorion tps., and through unsurveyed territory in Thunder Bay District, subject to certain conditions in connection with C.P.R. property.

Duluth, Winnipeg and Pacific Ry.—Contracts are reported to have been let to Bailey and Marsh, Minneapolis, Minn., for the erection of a 10-stall roundhouse, with machine shop, storehouse and office building at Duluth, Minn. (July, pg. 661.)

Canadian Northern Ry.—An extension of the Birds Hill branch to the beaches on the east side of Lake Winnipeg is under construction, grading work having been started July 4. General Manager McLeod stated that it had not been determined where the line would terminate, but it was not intended to carry it to Fort Alexander at present time.

Work has been started with a view of getting the Thunder Hill branch ready for traffic as far as sec. 36-34-6 this season, and it was stated by General Manager McLeod, July 11, that it was expected to have both the Thunder Hill line and the Rossburn extension ready for traffic as far as the main line this season.

The Hallboro branch, from Hallboro westerly to Beulah, Man., 75 miles, has been opened for traffic, and on the same day a train service was placed in operation on the Maryfield branch from Maryfield to Luxton, Sask., 68 miles.

A 10-stall roundhouse, with a machine shop and turntable, are under construction at Regina, Sask.

The company is laying heavier steel from Regina to Warman, Sask., on the old Qu'Appelle, Long Lake and Saskatchewan Ry.

Track is reported to have been laid on about 40 miles of the branch out of Delisle, Sask., and the remaining 10 miles was expected to be laid by the end of July.

The branch line from Vegerville, southerly in the direction of Calgary, has been opened for traffic to Munson, Alta. The Board of Railway Commissioners has directed the company to fence the right-of-way and provide farm gates along this line as far as track has been laid at once.

Plans for the entry of a branch line into MacLeod, Alta., came before the city council, June 30, and a preliminary agreement has been reached, under which the company will build its principal shops and headquarters for Southern Alberta there.

Revised location plans have been approved by the Board of Railway Commissioners through tps. 14-16, ranges 25-26, west of the 2nd meridian, Alta., mileage 70.81 to 84.25, and orders have also been issued authorizing the C.N. Alberta Ry. to join its tracks with those of the C.N. Western Ry. in sec. 33, tp. 54, range 2, west of the 5th meridian, Alta., approving of location plans from tp. 53, range 10.13, to tps. 53-52, ranges 18-23, both west of the 5th meridian, mileage 82.03 to 166.01, and approving revised location plans for the line through tp. 24, ranges 27-28, west of the 4th meridian, Alta., mileage 243.77 to 250.27.

General Manager McLeod, on his recent visit of inspection to the line being built to Athabasca Landing, Alta., stated that it was expected to have it completed this season.

Final location is reported to have been completed for the line to the boundary of British Columbia, which is reported to be under contract as far as Brule Lake, 74 miles west of Wolfe Creek, and it is said the grading gangs are working as far as 46 miles west of Wolfe Creek.

Surveys are reported to be in progress for a branch line from a point west of Edmonton into the Peace River country, E. M. Hill and J. P. McKenzie being in charge.

Canadian Northern Pacific Ry.—The 1,000 ft. wharf which is being built at Port Mann, B.C., is rapidly approaching completion. The low lying land along the river bank is being filled in, and a large area of land has been cleared. Track has been laid from the wharf to a junction with the Great Northern Ry. to facilitate the moving of construction material. This track will form a part of the yard tracks, for which the clearing is being done.

A considerable mileage of the grading for the line along the Fraser Valley has been completed and A. R. Mann, President, Northern Construction Co., the general contractors, made a trip of inspection over the route from Port Mann to Hope Summit, July 10. It is expected that track laying will be started at an early date.

Plans have been deposited with the Department of Public Works, Ottawa, showing location of proposed bridges over the Salmon and Sumas rivers in New Westminster district.

The 163 mile section of the line from Hope to Kamloops, B.C., for which a contract has been let to the Northern Construction Co., and Foley, Welch and Stewart, is about the heaviest piece of railway construction put under contract since the C.P.R. was built. This section of the line starts at Hope Summit, near mileage 70 from Port Mann, and keeps on the south bank of the Fraser River, the C.P.R. being on the north bank. The river and the C.P.R. are both crossed between Cisco and Lytton and the line continues to Kamloops north of the C.P.R., round Kamloops Lake, to the South Thompson River. This mileage covers the construction along the Fraser and Thompson River canyons, and in-

Proper Oil Storage
Pays Dividends

How many times have you thought the oil consumption was too great? Do you know how much oil is actually used? If so, does it equal the amount bought?

The Bowser Railroad Oil Storage System

keeps an account for you and prevents waste.

See the following report on page 141 in the proceedings of the twentieth convention of American Railroad Bridge and Building Association (1910): "We have the Bowser system of self-measuring and metering pumps at all points, and since their installation we have been able to show a slight overage in each of the different grades of oil. Prior to this time we were, at the end of each year, from one to three per cent. short."

Bowser Systems Saves Their Own Cost. Ask for Book No. 91.

Asst. General Passr. Agent,
Toronto.

George H. Shaw, General Traffic Manager, Toronto.

SIX DAYS TO LONDON

Three days, sixteen hours and five minutes from LAND to LAND. It is the ROYAL LINE to Bristol that makes this possible; and it is the ROYAL EDWARD which holds this Canadian Trans-Atlantic record. But there are other considerations besides speed which should induce you to travel by the

"ROYAL EDWARD" or "ROYAL GEORGE"

Not only are these twin ships the fastest triple screw turbine boats on the Montreal to London route, but their equipment is the finest on the Canadian service. They are driven by the newest type of turbine engines. Spacious social apartments, sheltered promenade decks, tasteful and artistic furnishings, splendid service, and ventilation by the thermo-tank system indicate the unusually high character of the appointments, comforts and conveniences of these boats.

For full particulars, rates, sailings, see nearest Steamship Agent, or write our General Agents at Toronto, Ont., H. C. Bourlier; Montreal, Que., Guy Tombs; Winnipeg, Man., A. H. Davis; Halifax, N.S., P. Mooney.

cludes considerable bridge work and heavy rock work, there being two tunnels, one at Yale, 2,000 ft. long, and one at Battle Bluff on Kamloops, 2,740 ft. long. The line is located on a 0.4% gradient, compensated for curvature, and the sharpest curve is one of eight degrees.

The headquarters for the construction is at Vancouver, and A. R. Mann, President of the Northern Construction Co., is in charge. Subcontracts have been let as follows:—

Palmer Bros. and Hemming, Vancouver, Hope to Yale, 14 miles;

Burns and Jordan, Spokane, Wash., Yale east, 14 miles;

G. Chew, Spokane, 5½ miles;

Geo. Cunningham and Co., Greenwood, B.C., 5½ miles to Boston, Bar;

W. P. Tierney and Co., Vancouver, 11 miles;

A. E. Griffin and James Welch, 19 miles to Lytton;

Grant Smith and Co., Seattle, Lytton to Spences Bridge, 23 miles;

Twohy Bros., Portland, Ore., Spences Bridge east, 41 miles;

Grant Smith and Co., 30 miles to Kamloops.

The contractors are getting in their supplies and establishing camps, and it is expected that active operations will be started on construction early in Aug. Owing to the topography of the country some difficulty will be experienced in securing camp sites. A majority of these camps will be located on the C.P.R. or on the opposite side of the river, which will be spanned at frequent intervals by wire suspension bridges to facilitate the delivery of equipment and supplies. Two years is the period assigned for the completion of this big undertaking. The contractors state that they expect to have 7,000 men along the grade before Oct.

A party in charge of W. I. Bassett is revising the location between the headquarters of the North Thompson River and the Yellowhead Pass.

Canadian Northern Eastern Ry.—The line constructed as the Portland Canal Short Line Ry., and extending from Stewart to Ward's Pass, B.C., was opened for traffic, June 24. The name of the company was changed to the C.N.E. Ry. Co. last session of the British Columbia Legislature. Hon. W. Templeman, a member of the Dominion Government, in a speech after the opening of the line, said: "If they come to me for a guarantee of their bonds for the railway from Stewart to Edmonton I would have no hesitation whatever in supporting it. I am speaking for myself and not for the Dominion Government. I think the Dominion is more able to do this than the provincial. The Dominion Government has very little to do with the public directly. All we can do is to aid railway construction, build public wharves and give you telegraphic communications."

Vancouver Island.—T. G. Holt, Executive Agent, C.N.P.R., visited Victoria, B.C., July 2, and in an interview said it was almost certain that the balance of the main line mileage on Vancouver Island would be put under contract by the end of the year. Engineers were engaged in checking and finally laying the location line from Cowichan Lake west and northerly to the towns and canal at Alberni. As soon as this work was completed the engineers would start on the surveys northerly from Alberin to the ultimate terminal of the line at the north end of the island. As regards the terminals in Victoria, if satisfactory arrangements could be made as to the late Songhees Indian reserve, the company would prefer to have them located there. The line would certainly be taken into the city.

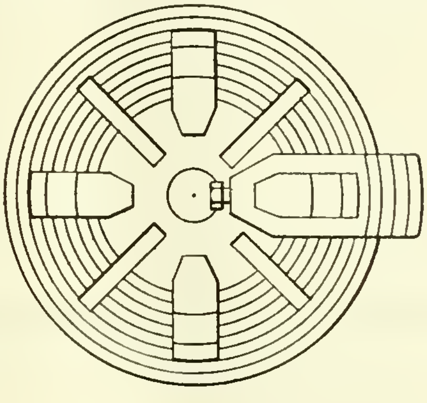
Satisfactory progress is being made on the first section out of Victoria, now under contract, and grading gangs are working as far out as Sarke Lake. F. G. Holt completed a trip of inspection as far as Sarke Harbor, July 10.

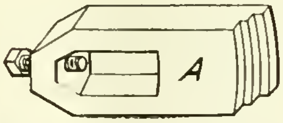
Wellington Colliery Co.—The approval of the British Columbia Government has been asked by the Canadian Collieries (Dunsmuir), Limited, for the carrying out of certain works on Puntledge River, by the Wellington Colliery Co. The company's works include a line of railway from near Fiddicks Jct. to Wellington, on Vancouver Island.

◆

Lathe Chuck Attachment.

The attachment shown in the accompanying illustration is in use at the C.P.R. Angus Shops, Montreal, and serves to increase the radius of usefulness of an ordinary lathe chuck of small dimensions. It consists of auxiliary jaws A that slip over the regular jaws and are held in place by set screws. The one shown is intended for holding piston rings or other hollow work that may be caught on the inside. It is evident, however, that a modification of the same arrangement having an overhang, may be applied, by which larger diameters may be chucked than would be possible with the regular chuck.—Railway Age Gazette.





◆

Canada's Great Expansion in Railway Construction.

The seventy-fifth anniversary of the completion of the first railway in Canada, viz., the Champlain and St. Lawrence Ry., extending from La Prairie, on the St. Lawrence River, to the Richelieu River, 16 miles, occurred on July 23 on this line the cars were drawn by horses during the first year of its operations. For eleven years this was the only railway in Canada, for it was not until 1847 that there was any increase. In that year 38 miles of line were added, and in 1850 an additional 12 miles were added, bringing the mileage up to 66 miles. From that date onward there was an annual increase, the mileage in 1855 having reached 1,414 miles, while in 1861 it had increased to 2,146. Since that year the new mileage brought into operation has gone on increasing, the figures for mileage in operation at the ten year periods following:—1871, 2,695 miles; 1881, 7,331 miles; 1891, 13,838 miles; 1901, 18,104 miles; 1911, 26,000 miles (estimated). The actual mileage in operation at June 30, 1910, the last date for which official figures are available, was 24,731 miles, and taking into consideration the rate of increase in mileage of recent years, when the figures for the year ended June 30 are made up, it will be found that the estimated mileage in operation of 26,000 is not very far out. These figures, however, do not include a considerable mileage of lines owned by collieries, logging companies, and other industrial concerns which are operated only for the company's own purposes. The present rate of increase in mileage, as it has been for some years past, has been proportionately greater in Canada than it has in any other country in the world, and from the contracts entered into, and the lines projected, it is likely that this state of affairs will be continued for some years to come.

There are over 2,000 miles of line in process of construction, and already this year contracts have been let for the building of over 2,000 miles additional, and contracts will shortly be let for the last 410 miles of the Grand Trunk Pacific Ry. The building of these lines means a vast capital expenditure spread over the next three years, and makes the Canadian railway construction field the most valuable market in the world for firms catering for that class of trade.

The total capital invested at June 30, 1910, was $1,410,297,687, of which $101,816,271 was invested during the financial year. The capital invested for the current year can hardly have been less than $125,000,000, and considering the amount of construction in progress and what is projected, it would appear that for some years to come Canada can look forward to the expenditure of about the same amount of money annually upon new construction. What this means to the country can scarcely be estimated. Within the last decade there have been developed in Canada the great steel rail making plants at Sydney, N.S., and Sault Ste. Marie, Ont.; a great locomotive building plant at Montreal, and the enlargement of the one at Kingston, Ont., and the car building plants in Montreal, to say nothing of the extensions of previously existing plants, and the erection of works for the manufacture of other supplies necessary for the building, equipment and operations of the lines.

The individual expansion of Canada is as yet in an early stage, and it is practically impossible to form any adequate idea to what extent it may have developed within the next half century. In 1861 there were 2,146 miles of railway in operation; in the half century that has since elapsed the mileage has increased twelvefold, while the industrial expansion of the country has been in proportion. Standing therefore at the beginning of the fourth period of 25 years, we find that Canada is in the forefront of the countries of the world in the matter of railway construction, and that with her increasing development, there is not likely to be any diminution in the rate of railway building for some years to come.

◆

Montreal-St. Lambert Tunnel.—Interest was revived in the proposals for the building of a tunnel under the St. Lawrence River at Montreal, by reports from that city, July 16, that considerable areas of land have been secured on the south shore and that a meeting of persons interested in the project was to be held in Montreal, July 26, for the purpose of discussing the project. It is said that D. McDonald and P. Dubee, of the Montreal St. Ry., and H. A. Dorsey, President, Dominion Park Co., and others have recently acquired considerable areas of land on the south shore of the St. Lawrence River, in St. Lambert, Victor and Longueuil, and that the project of connecting Montreal with the south shore is under consideration. It is said that in addition to the Montreal St. Ry., the Delaware and Hudson Ry. might also use the tunnel.

AMERICAN VANADIUM FACTS

is a monthly publication on the merits and uses of Vanadium as a component of steel and iron. It tells how the maker of steel uses "Masvan" or "Amervan" Ferro Vanadium in the molten metal —and how the finished steel is revolutionized in its qualities by the Vanadium. Vanadium Steel in its various types is the world's "Master Steel." You need Vanadium Steel. Let us tell you where to get it and how to use it. Let us also send you American Vanadium Facts. Write promptly—the issue doesn't last long.

National Transcontinental Railway.

The plans prepared under the direction of the Commissioners for the N.T.R. for the station building in Quebec have been approved by C. M. Hays, President, on behalf of the Grand Trunk Pacific Ry., and it is said that tenders will be asked for its construction at an early date. The building will be erected on the site of the old Champlain Market. The plans provide for a building 257 by 124 ft. It will be three stories high, surmounted by a cupola. The basement will be of concrete, and the upper part chiselled Deschambault granite. The ground floor will have a 17 ft. ceiling, and the other two stories will be 12 ft., while the rotunda under the cupola will be 63 ft. The layout of the train shed provide for the laying of six tracks at once, with the ultimate intention of laying five additional tracks. The building is expected to be completed by the end of 1912.

The Commissioners are receiving tenders to Aug. 3, for the erection of station and other buildings on the line as follows:—Seection 10, from Cochrane to Currie, Ont.; section 11, from Fraser to Grant, Ont.; section 12, from Superior to Dugald, Ont.

Tenders are also being received for the erection of a coaling station having a capacity of 1,000 tons, at Grant, Ont., mileage 232.7, District D.

GRAND TRUNK PACIFIC RAILWAY.

The Winnipeg City Council has refused to approve of a proposal of the G.T.P.R. to close 36 streets and lanes in Fort Rouge, along the right-of-way from Pembina Road to Oak Point Jct.

In connection with the proposed G.T.P. branch line into Brandon, Man., a plan has been submitted to the City Council showing an entry at the south east corner of the city boundary, passing north of the exhibition ground, and paralleling the Canadian Northern Ry. to a junction with the Brandon, Saskatchewan and Hudson Bay Ry., a Great Northern Ry. line.

The Board of Railway Commissioners has authorized the opening for traffic of the branch from Melville northerly to Canora, Sask., and of the Melville-Regina branch from Melville to Balcarres, Sask. The grading on this latter branch has been completed into Regina, and track laying is in progress. A bridge is under construction across Berry Creek, and this is expected to be completed in the fall. Work is to be started at once on the line from Regina to the International boundary, for which line the whole of the plans have been approved by the Board of Railway Commissioners. The line will terminate on the boundary in sec. 6, tp. 1, range 2, west of the second meridan. It is said that one of the Great Northern Ry. branch lines will be connected with this branch, and that G.N.R. trains will be operated over it into Regina. Grading is reported to be completed westerly from Regina, as far as Pasqua, in the direction of Moose Jaw.

The Board of Railway Commissioners has approved of location plans from mileage 20.3, at the east line of sec. 28, to mileage 40.01, at the west line of sec. 3, tp. 17, range 26, west of the second meridan, and also for a branch line from Moose Jaw, north westerly from the east line of sec. 36, tp. 16, range 27, to the west line of sec. 11, tp. 21, range 4, west of the third meridian, Sask., mileage 0 to 48.55.

The extension of the branch line from Young to Prince Albert, Sask., is expected to be completed this year. It will be 100 miles long, and 60 miles of track have been laid. Track laying is in progress on the remaining 40 miles.

From Biggar, Sask., a branch line is under construction to Battleford. Grading is reported to be practically completed and it is expected to have the track laid by Dec. 31.

The Board of Railway Commissioners has authorized the opening for traffic of the line from Biggar towards Calgary, mileage 0, to 19.97. A considerable mileage has been graded beyond this point, and tracklaying will be gone on with at an early date. It is intended that this line will effect a junction with the Tofield-Calgary branch, a few miles north of Calgary. Authority has been given by the Board of Railway Commissioners to run freight trains over this latter branch from Tofield to the crossing of the Red Deer River. This line is under construction to Calgary, but considerable difficulty is being experienced in obtaining a route, owing to the objections raised by the C.P.R. to the crossing of the irrigation ditches on its lands. The general route plan has been approved by the Board of Railway Commissioners, and the question of the crossing of the ditches was heard at a special session of the Board, July 18.

Route plans have been filed for a line from Calgary to Nanton and on to Lethbridge, Alta. Surveys are being made for an extension via Raymond to Coutts on the International boundary.

Grading on the main line west of Edmonton is reported to be well advanced as far as Tete Jaune Cache, to which point a contract has been let. Track has been laid to Athabasca River, 210 miles west of Edmonton, and less than 30 miles from Yellow Head Pass. The subcontractors are getting their plant on to the last 20 miles to be graded, and it is expected to have this completed by Dec. 31.

We are officially advised that tenders will be received to Aug. 15 for the building of the last portion of the main line, viz., the 410 miles intervening between Tete Jaune Cache to Aldermere, B.C.

A contract is reported to have been let to Foley, Welch and Stewart for a tunnel, about 0.25 mile in length, at mileage 44 from Prince Rupert, in order to avoid the construction of snowslides. The work is expected to be completed by Jan. 1, 1913.

We are advised that it is not proposed to do anything in the way of preparing plant, etc., on the company's projected dry-dock, shops and roundhouses at Prince Rupert until the agreement covering the tax assessment has been approved by the electors.

Collingwood Schreiber, Consulting Engineer to the Dominion Government, arrived in Vancouver, July 10, from Prince Rupert, B.C., having completed a trip of inspection over the coast section of the G.T.P.R. In an interview he is reported to have stated that owing to the decreasing mileage of railways under construction in the United States the contractors on the line had been enabled to secure practically all the men needed. The line was in operation for nearly 100 miles from Prince Rupert, and over 75% of the grading had been completed between Copper River and Hazleton. There had been some delay in the bridge work owing to high water in the river at Hazleton. It was expected that track would be laid to Hazleton by Dec. 31. From Hazleton to Aldermere the grading was well forward. (July, pg. 623.)

◆

The British Collieries (Brazeau), Ltd., has been incorporated under the Dominion Companies Act, with a capital of $5,000,000, and offices at Winnipeg, for the purpose of developing coal fields in the Brazeau River district of Alberta. The powers given include authority to build railways in connection with the collieries. The provisional directors are:—E. Brown, H. W. Hutchinson, D. C. Cameron, J. S. Hough, D. R. Dingwall, F. S. Harstone, Winnipeg; J. W. Hayward, M. J. Tobin, Vinton, Iowa.

Canadian Specifications for Classification.

Since the matter under this heading on pg. 707 went to press we have been furnished with the following additional information:—

CANADIAN NORTHERN RAILWAY.

43.—Excavation shall be classed under four heads, viz.:—Solid rock, loose rock, hard pan and earth; and shall be paid for according to the following definitions.

44.—All stones or boulders found in excavation measuring more than 27 cubic feet, and all solid quarry stone requiring blastings in order to remove it shall be termed solid rock.

45.—Loose rock shall include all kinds of shale rock, soap stone, and other rock which can be removed with pick and bar without blasting, also detached stones of less than one cubic yard and more than two cubic feet.

46.—Hard pan shall consist of all kinds of earth that are so hard that four horses on a plough cannot provide free shovelling or scraping material, or where powder has to be used to loosen.

47.—All other excavat'on of whatever kind shall be termed earth excavation.

The following alternative specifications are used by the C.N.R. for some contracts:—

43.—Excavations shall be classed under two heads, viz.:—Solid rock, and "all other materials"; and shall be paid for according to the following definitions.

44.—All stones or boulders found in excavation measuring more than 27 cubic feet, and all solid quarry stone requiring blastings in order to remove it shall be termed solid rock.

45, 46 and 47.—All other materials found in excavations other than solid rock as described in section 44 above, shall be termed "all other materials," and paid for at the schedule rate for "all other materials."

NATIONAL TRANSCONTINENTAL RAILWAY.

Grading will be commonly classified under the following heads: solid rock excavation, loose rock, and common excavation.

Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard, which, in the judgment of the engineer, may be best removed by blasting.

All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock, whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials, that cannot, in the judgment of the engineer, be ploughed with a 10-in. grading plough, behind a team of six good horses, properly handled; and without the necessity of blasting, although blasting may be occasionally resorted to, shall be classified as loose rock.

Common excavation will include all earth, free gravel or other material of any character whatever not classified as solid or loose rock.

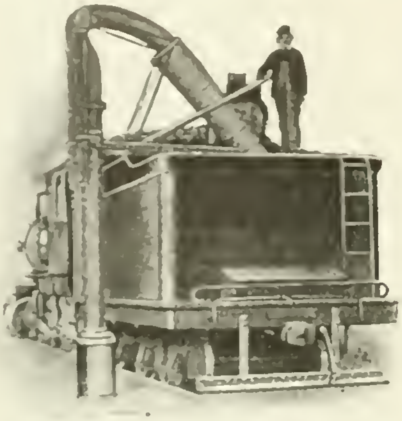
Scots in Canada.—J. Murray Gibbon, Advertising Agent in the C.P.R. European office, London, Eng., has written an interesting book, "Scots in Canada," in which he shows how large a place the sons of Scotland have had in the exploration and development of Canada. The book gives a lot of facts, historical incidents, and names, which are scarcely likely to be found in the more strictly historical books about Canada. One of the points emphasized in the book is the historic character of the C.P.R., showing how it has grown along the old trade route of the North West Company, and, most important of all, how five of the seven of the men who composed the original syndicate for building the line were Scotsmen.

Railroad Standpipes

Sheffield-Johnson, the Ideal Combination of Valve and Spout



Sheffield-Johnson Standpipe.

The Sheffield-Johnson Standpipe was designed to meet the demand for a greater range of drop required to serve the small yard engine and the large passenger and freight engines. It is a combination of the Sheffield valve, long recognized as the standard for this service, and the Johnson flexible upper works. Having no trolley arrangement, inside rods, or other internal mechanism, this pipe is specially adapted to the severe Canadian climate, as tests by leading roads have conclusively proved.

A UNIQUE CABLE

Mechanical Stokers.

The American Railway Master Mechanics' committee on this subject presented the following report at the Atlantic City Convention recently:—

Your committee feels fully justified in expressing the opinion that such progress has been made in the development of mechanical stokers to warrant railways installing a limited number upon large locomotives at least, and thus lend their aid in the perfection of a device which your committee has concluded is a necessary appliance to heavy tractive-power locomotives, when such locomotives are called upon to exert their full capacity for a prolonged period.

The large locomotives at present being constructed would unquestionably render service nearer their maximum capacity if the firing were mechanical, and your committee is of the opinion that it behooves the members of this Association to participate actively by utilizing such stokers as have been developed, and, by actual application, assist in the solving of the many problems which must naturally present themselves during practical operation.

The benefits to be derived might properly be again referred to, viz.: Utilization of the maximum boiler capacity of locomotives; reduction of black smoke, because of the possibility of maintaining a thin, level fire; application of coal in more minute quantities; improved life of flues and fire boxes; the reduced labor required should make the positions of firemen more attractive, which will carry therewith obvious benefits to the railways.

The requirements for mechanical stokers, as recommended by your committee, in brief, are:—That they should be capable of firing coal in excess of the maximum requirements of the locomotive; that the fire-box door be free of any attachment which would prevent the fireman from giving such attention as fires may require; be entirely mechanical from tender to grate; be capable of handling bituminous run-of-mine coal, which will include a coal crusher, mechanically operated, on the tender; distribute the coal in the fire box in such a manner as to call for no assistance from the fireman other than regulation of supply and possibly the adjustment of the mechanical appliances for distribution; maintain an ideal fire for economic coal consumption without emission of black smoke in objectionable quantities; reliability of service.

The committee then briefly described the various mechanical stokers and concluded as follows:

This report does not include any tests comparing efficiency of mechanical stokers to hand firing, as your committee believes that mechanical stokers must be made flexible and reliable mechanics before any prospects of improved economy in fuel consumption may be expected.

Tests comparing inferior fuel used with mechanical stokers to regular supply for hand firing, thus taking advantage of difference in present fuel values, should not be accepted as proof of economy, as such relations would not maintain with the extension to any appreciable number of mechanical stokers.

The progress during the past year has been sufficiently marked to lead your committee to believe that it can present a final report at the next convention upon at least several of the stokers which have already been developed sufficiently to perform actual continuous service.

Railway Finance, Meetings, Etc.

Algoma Eastern Ry.—An issue of $2,500,000 first mortgage 5% bonds, redeemable in 50 years, is being made on the London, Eng., market. The principal and interest is guaranteed by the Lake Superior Corporation. The issue price was 93%.

Brockville, Westport and Northeastern Ry.—A receiver was appointed for the company's affairs July 13, on the application of the trustee for the bondholders. A majority of the bonds is said to be held by Mackenzie, Mann & Co. interests, which also hold the majority of the common stock. It was ordered that no sale of the property be made before Sept.

Dominion Atlantic Ry.—A special general meeting of shareholders was held in London, Eng., July 12, to increase the number of directors from three to five.

Dominion Atlantic Ry.—Gross earnings for May, $97,100, against $87,143 for May, 1910. Gross earnings for June, $112,700, against $108,412 for June, 1910. Aggregate gross earnings for 12 months ended June 30, $1,250,400, against $1,325,726 for same period 1909-10.

Imperial Coal Co.—An order has been made for the sale of the mining property of the Imperial Coal Co. at Beersville, N.B., in connection with the winding up of the company in liquidation. The property will be sold at Moncton, N.B., Aug. 30.

The railway now known as the North Shore Ry., was originally chartered as the Imperial Coal Co.'s Ry.; its name being subsequently changed to the Beersville Coal and Ry. Co., and later on to the North Shore Ry.

London and South Eastern Ry.—The annual meeting was held at London, Ont., July 4. Following are the officers and directors for the current year:—President, W. J. Reid; Vice President, T. H. Smallman; Secretary and Treasurer, J. W. Little; other directors, J. Labatt, J. A. Campbell, M. Masuret, and the mayor of London, ex-officio.

Maritime Coal, Ry. and Power Co.—The National Trust Co., Montreal, received to July 17 offers of bondholders to sell the company's first mortgage bonds in accordance with the terms of the trust deed as to the investment of the sinking fund.

Quebec and Lake St. John Ry.—The bondholders' protection committee has announced that in anticipation of legislative sanction of the agreement of Feb. 16 between the Q. & L. St. J.R., the Railway Share & Trust Agency Co., and the Canadian Northern Ry., the Q. & L. St. J.R. has undertaken to pay to the bondholders' committee, interest to July 1 on the new 4% debenture stock, to which the committee, as holders of deposited bonds, will be entitled in accordance with the agreement on exchange of securities, the payment to be deemed to have been made on account of arrears of interest due on the deposited bonds should the agreement not be sanctioned.

Total earnings for June, $60,979.03, against $54,295.83 for June, 1910. Aggregate total earnings for six months ended June 30, $271,516.32, against $267,370.67 for same period 1910. The average earnings per mile for June was $213.66, and for the six months period, $951.11, against $190.25 and $948.31 for the respective period in 1910.

Quebec Central Ry.—Gross earnings for May, $115,346.87; expenses, $74,557.51; net earnings, $40,789.36, against $99,393.54 gross earnings; $64,555.88 expenses; $34,837.66 net earnings for May, 1910. Aggregate gross earnings for 11 months ended May 31, $1,078,232.44; expenses, $734,913.14; net earnings, $343,319.30, against $984,834.34 aggregate gross earnings; $677,437.90 expenses; $307,396.44 net earnings for same period 1909-10.

Quebec Oriental Ry.—Notice is given that a call of $10 a share, payable Aug. 14, has been made upon the holders of 1,250 shares. E. S. Elvey, 194 Temple Chambers, Temple Ave., London, Eng., is Secretary of the company.

Temiscouata Ry.—Profit on operation for May, $6,618, against $5,732 for May, 1910. Aggregate profit for five months ended May 31, $13,582, against $15,378 for same period 1910.

◆

Control of Pere Marquette Railroad.

The fact that D. B. Hanna, Third Vice President of the Canadian Northern Railway, went over the Pere Marquette lines, both in Canada and the United States, recently, with W. Cotter, President and General Manager of the latter company, gave rise to a report that the Mackenzie Mann interests were about to acquire the P.M.R.

We do not think that any such deal is likely to be made, at all events not in the near future.

◆

Railway Route Maps Approved.

The Minister of Railways has approved of the following route maps:—

Grand Trunk Pacific Branch Lines Co. July 7. First 14 miles of Cutknife branch. 7th July, 1911.

Montreal and Southern Counties Ry. July 7. From Victoria Bridge, southerly and westerly, to the Country Club, 1¼ miles.

Dearborn Treatment Overcomes All Bad Water Troubles

Because Scientifically Prepared to Suit Water Conditions

Boiler troubles such as scale, leaking, corrosion, priming and foaming, are caused by mineral salts in the water, and can be overcome only by the use of proper reagents for these salts. To this end the waters along the line must be analyzed, and specific treatment applied accordingly.

Gallon samples of the waters are required for analysis. When reports are completed, we are ready to prepare treatment, and will send an expert engineer to instruct in the proper handling of the material.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

13949. June 14.—Approving Central Vermont Ry. bylaw appointing D. T. Lawrence, G.F.A., to issue tariffs of tolls.

13949. June 14.—Approving bylaw of Hamilton Radial Electric Ry. authorizing G. E. Waller, G.F. and P.A., to issue tariffs.

13950. June 14.—Authorizing C.N.O.R. to cross public road in Loughborough tp.

13951. June 13.—Authorizing C.P.R. to build spur from its 8th Ave. spur in Regina, Sask.

13952, 13953. June 14. — Authorizing C.N.O.R. to cross three highways and to cross and divert highway in South Crosby and South Elmsley tps.

13954. June 12.—Approving Kettle Valley Ry. location from mileage 35.3 to 45.6 north of Midway B.C.

13955. June 12.—Approving deviation of Kettle Valley Ry. location between Westbridge and Wolverine Creek, B.C.

13956. May 22.—Authorizing G.T.P. Branch Lines Co. to cross highway on its Prince Albert Branch in n.w. ¼ sec. 4, tp. 43, r. 26, w. 2 m., Sask.

13957. June 12.—Authorizing C.P.R. to divert main line and cross four highways at Winnipeg Beach, Man.

13958. June 14.—Authorizing C.P.R. to build bridge 18.7 on its St. Gabriel subdivision, District 3, Eastern Division.

13959. June 15.—Authorizing C.N.R. to cross William St., Smiths Falls, Ont.

13960. June 14.—Approving drainage work to be built under G.T.R. in Woolwich tp., Ont.

13961. June 15.—Authorizing C.P.R. to build its Kipp to Aldersyde branch across two highways and divert same.

13962. June 15.—Authorizing C.P.R. to cross with its Weyburn-Lethbridge branch 22 highways in Saskatchewan and Alberta.

13963. June 15.—Authorizing C.P.R. to build its Kipp to Aldersyde branch across 47 highways in Alberta.

13964. June 15.—Approving Wells Fargo and Co. bylaw authorizing J. D. Ludlow and G. S. Lee to issue tariffs of tolls.

13965, 13966. June 15.—Authorizing G.T.R. to use eight bridges on its Ottawa Division.

13967. May 9.—Authorizing C.N.R. to cross with its Hallboro branch 11 highways in Manitoba.

13968. Mar. 28.—Approving location of C.P.R. Hamiota to Birtle branch from sec. 7, tp. 14, r. 23, northwesterly for 32.67 miles, to sec. 12, tp. 17 r. 12, w. p.m., Man.

13969. June 19.—Approving revised location of C.N.R. through tps. 14-16, rs. 25-26, w. 2 m., Sask., mileage 40.81 to 84.25.

13970. June 19.—Approving C.P.R. bylaw authorizing G. M. Bosworth, V.P., W. R. MacInnes, F.T.M., W. B. Bulling, A.F.T.M., Eastern Lines; W. B. Lanigan, A.F.T.M., Western Lines, and C. E. E. Ussher, P.T.M. to prepare and issue tariffs of tolls.

13971. June 19.—Authorizing C.P.R. to build under highway in cons. 4 and 5, Ops tp., Ont.

13972. June 19.—Authorizing C.N.O.R. to cross public road in lot 10, con. 5, and lot 10, con. 6, Nepean tp.

13973, 13974. June 19.—Authorizing G.T.P. Branch Lines Co. to cross with its Regina-Boundary branch, 27 highways between mileage 59 and 90, and five highways on its Prince Albert branch.

13975. June 19.—Authorizing city of Revelstoke, B.C., to erect wires across C.P.R. at Wales St.

13976. June 19.—Authorizing Seymour Power and Electric Co. to erect wires across C.P.R. wires in Hamilton tp., Ont.

13977. June 6.—Rescinding order 8111, Sept. 15, 1909, Board having no jurisdiction re length of section on Boissevain and Minto sections of Brandon, Saskatchewan and Hudson Bay Ry., and re increasing staff of sectionmen.

13978. June 19.—Approving revised location of C.N.O.R. at Fallowfield, Nepean tp., mileage 11.37 to 14 from Ottawa.

13979. June 19.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to build bridge 42.6 on south half of lot 8, con. 1, Mara tp., Ont.

13980. June 19.—Ordering G.T.R. within 90 days to install improved type of electric bell at Diltz Rd. crossing, Halton tp., Ont.

13981. June 19.—Approving location of G.T.R. station at Ash, Trafalgar tp., Ont.

13982. June 19.—Authorizing C.P.R. to cross with its Weyburn-Lethbridge branch four highways in Alberta.

13983. June 19.—Approving location of C.P.R. station at Colonsay Sask.

13984. June 12.—Approving revised location of C.N.O.R. through tp. 24, rs. 27-28, w. 4 m., Alta., mileage 243.77 to 246.26, and 246.57 to 250.27.

13985. June 14.—Dismissing application of residents of St. Stanislas, St. Prosper, and St. Severin de Proulxville parishes, Que., re alleged inadequate train service of C.N.Q.R.

13986. June 13.—Authorizing G.T.P. Branch Lines Co. to build spur to Dobell Coal Co.'s premises in sec. 35, tp. 50, r. 19, w. 4 m., Alta.

13987. June 12.—Authorizing G.T.P. Branch Lines Co. to divert roads in secs. 1, 2, 9 and 10, tp. 21, r. 13 w. 2 m., Sask.

13988. June 6.—Ordering V.V. and E. Ry. within 30 days, to build suitable culvert, sewer and drain under its line from Front St. to False Creek, Vancouver, B.C.

13989. June 12.—Authorizing C.P.R. to build spur to Moose Nose ballast pit across road allowance, in Springfield municipality, Man.

13990. June 12.—Authorizing G.T.P. Branch Line Co. to cross highway on its Prince Albert Branch, mileage 105, Hudson's Bay Co.'s Reserve, Sask.

13991. June 6.—Approving location of part of C.N.O.R. Sudbury-Port Arthur line through Nipigon, Lyon and Dorion tps. and unsurveyed territory Thunder Bay District, subject to certain conditions in connection with C.P.R. property.

13992. June 12.—Authorizing G.T.P. Branch Line Co. to close and divert road on its Yorkton branch, mileage 16.9, Sask.

13993. June 12.—Approving part of location of Lachine, Jacques Cartier and Maisonneuve Ry., subject to certain conditions with regard to streets, etc., in Montreal.

13994. June 12.—Authorizing Toronto and Eastern Ry. to cross public road at mileage 15.3, Oshawa, Ont.

13995. June 19.—Authorizing C.P.R. to build spur into Cranbrook Jobbers' premises, Cranbrook, B.C.

13996. June 19.—Authorizing C.P.R. to build spur to Maple Creek Light, Power and Milling Co.'s premises, Sask.

13997. June 19.—Authorizing C.N.R. to divert road on its Moose Jaw southeasterly line.

13998 to 14001. June 19-21.—Authorizing G.T.P. Branch Lines Co. to cross with its Regina-Moose JaJw branch seven highways; with its Prince Albert branch highways between secs. 20 and 29, and with its Battleford branch, 17 highways, in Saskatchewan, and with its Biggar-Calgary branch, 12 highways, in Alberta.

14002. June 20.—Approving G.T.P. Branch Lines Co. location of Moose Jaw northwest branch from east line of sec. 36, tp. 16, r. 27, to west line of sec. 16, tp. 19 r. 29, w. 2 m., mileage 0 to 24.43, Sask.

14003, 14004. June 20.—Authorizing G.T.P. Branch Lines Co. to cross with its Regina-Moose Jaw branch seven highways, and with its Moose Jaw northwest branch 19 highways in Saskatchewan.

14005. June 20.—Approving location of G.T.P. Branch Lines Co. Moose Jaw northwest branch from east line of sec. 17, tp. 19, r. 29, w. 2 m., to west line of sec. 11, tp. 21, r. 4, w. 3 m., mileage 24.43-48.55, Sask.

14006 to 14011. June 20. — Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to cross and close certain streets in Lindsay, and to cross road allowance in Manvers, Ops and Cavan tps., and King St., Bethany, Ont.

14012 to 14015. June 20.—Approving location of C.P.R. stations at Duval, Boharm, Pilot Butte, and Leslie, Sask.

14016. June 20.—Approving location of C.P.R. Swift Current to Brooks branch from sec. 3, tp. 20, r. 19, w. 3 m., at mileage 40 to sec. 7, tp. 22, r. 24, w. 3 m., at mileage 78, Sask.

14017. June 20.—Approving revised location of C.P.R. Lacombe easterly branch in sec. 26, tp. 37, r. 14, at mileage 85.77, to sec. 2 tp. 35, r. 5, w. 4 m., at mileage 147, Alta.

14018. June 20.—Approving C.N.O.R. location through Camden tp., mileage 145.82 to 149, from Toronto.

14019. June 20.—Authorizing Kettle River Valley Ry. to divert road northwest of Midway, B.C.

14020. June 21.—Ordering C.N.R. to build bridge over Serviceberry Creek, Alta., before July 8, under penalty of $25 a day.

14021. June 21.—Authorizing G.T.R. and Hamilton St. Ry. to operate over interlocking plant at crossing of King St. on G.T.R. Port Dover branch, Hamilton, Ont., speed not to exceed 10 miles an hour.

14022. June 21.—Approving revised location of V.V. and E. Ry., being part of section from east line of sec. 15, tp. 16, to west line of tp. 26, from mileage 6 to a connection with C.N. Pacific Ry. at mileage 13.3, New Westminster District B.C.

14023 to 14026. June 21.—Authorizing Kettle Valley Ry. to cross four highways and divert one northwest of Midway, B.C.

14027. May 30.—Approving plan of C.N.R. and C.P.R. joint station at Regina, Sask.

14028. June 21.—Authorizing C.P.R. to build spur to ballast pit across Government St., Dryden, Ont.

14029. June 21.—Approving revised location of C.P.R. main line from mileage 0, on B.C. Southern Ry. south of Wardner, to north of Fort Steele and northerly at mileage 35.7, Kootenay District, B.C.

14030. Apr. 1.—Authorizing C.P.R. to cross C.N.R. Beulah to Rapid City branch at mileage 9.3 from Hamiota, interlocker to be installed.

14031. June 21.—Authorizing C.P.R. to use bridges 33.3 and 34.4 on Schreiber Subdivision, Lake Superior Division.

14032. June 20.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to cross six highways in Manvers tp., Ont.

14033. June 21.—Approving location of portion of C.P.R. branch from Swift Current to Brooks, Sask., for 40 miles from main line.

14034. June 21.—Authorizing C.P.R. to build spur into premises of Cameron and Heaps and Peart Bros., Regina, Sask.

14035. June 20.—Authorizing C.P.R. to cross with its Kipp to Aldersyde branch, highway crossing at mileage 59.41, Alta.

14036 June 19. — Authorizing Kootenay Central Ry. (C.P.R.) to cross and divert highways and crossing of B.C. Southern Ry.

14037. June 12.—Authorizing C.N. Alberta Ry. to join C.N. Western Ry. in sec. 33, tp. 54, r. 2, w. 5 m., Alta.

14038, 14039. June 16.—Authorizing C.N.R. to cross with its Moose Jaw southeasterly line 26 highways in Saskatchewan.

14040, 14041. June 21, 19.—Authorizing G.T.R. to use bridges 50 and 1, at Holland Ave. and Preston St., Ottawa, Ont.

14042. June 21.—Authorizing G.T.P. Branch Lines Co. to cross with its Moose Jaw northwest branch, highway at mileage 25.9 Sask.

14043. June 21.—Authorizing G.T.P.R. to cross highway and divert same in s.w. ¼ sec. 27, tp. 22, r. 6, w. 2 m., Sask.

14044. June 21.—Approving location of G.T.P. Branch Lines Co. Regina-Moose Jaw branch from east line of sec. 28 to west line of sec. 30, tp. 17, r. 23, w. 2 m., mileage 20.3 to 23.32, Sask.

14045. June 21.—Authorizing G.T.P. Branch Lines Co. to cross with its Calgary Branch eight highways in Alberta.

14046. June 12.—Approving location of G.T.P. Branch Lines Co.'s Regina-Boundary branch from east line of sec. 32, tp. 3, r. 4, to International boundary, sec. 6, tp. 1, r. 2, w. 2 m. Sask.

14047. June 23.—Authorizing C.N.R. to open for traffic its line from Maryfield to Luxton, 68 miles.

14048. May 23.—Dismissing application of city of Toronto for order varying order 10169, Dec. 8, 1909, re Sunnyside and Keele St.

14049. June 21.—Approving C.N.O.R. location near Yarker, Camden tp., mileage 152.13 to 152.72, from Toronto.

14050, 14051. June 21.—Approving agreements between Bell Telephone Co. and La Compagnie de Telephone de St. Ours, and Howick Telephone Co. for interchange of business.

14052. June 23.—Authorizing South Ontario Pacific Ry. to take G.T.R. lands in Flamboro tp., Ont.

14053. June 21.—Authorizing G.T.P. Branch Lines Co. to open for freight traffic its Yorkton branch from Melville to Canora, Sask.

14054. June 21.—Approving G.T.P. Branch Lines Co. Biggar-Calgary branch from s.e. ¼ sec. 1, tp. 36, r. 15, to south line of sec. 31, tp. 34, r. 17 w. 3 m., mileage 0 to 19.97, Saskatoon District, Sask.

PROFESSIONAL CARDS.

The Railway and Marine World is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. The Railway and Marine World is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

14156. June 28.—Authorizing city of Toronto to rebuild bridge over C.P.R. at Weston Road.

14157, 14158. June 28, 29. — Authorizing Quebec Ry., Light and Power Co. to open for traffic eastbound track from its junction with main line near Beauport station to Montmorency Falls Park, 3.4 miles, and to build a double-track span over culvert at Beauport.

14159. June 15.—Ordering C.N.R. to raise its track on River Ave., Main St. and Belle Ave., Winnipeg, by Sept., 1912, 20 to be paid from the railway grade crossing fund, 30% of remainder by C.N.R., 30% by city of Winnipeg, 30% by city of St. Boniface, and 10% by Winnipeg Electric Ry.

14160. June 28.—Authorizing C.N.O.R. to build bridge over Napanee River at Yarker, mileage 153.44 from Toronto.

14161. 14162. June 30.—Authorizing C.N.R. to build across highways on its Vegreville-Calgary branch, Alta.

14163. June 28.—Approving Brandon, Saskatchewan and Hudson's Bay Ry. bylaw 8, authorizing H. A. Jackson, A.T.M., St. Paul, Minn., to prepare and issue tariffs of tolls.

14164. June 24.—Authorizing G.T.R. to build overhead bridge at Queen St., Palmerston, Ont., in lieu of subway.

14165. June 20.—Approving C.P.R. clearance plan of overhead structure at Weston Road, Toronto.

14166. June 28.—Authorizing G.T.P. Branch Lines Co. to divert road on its Prince Albert branch, Sask.

14167. July 6.—Authorizing C.N.R. to open for traffic its Vegreville extension from mileage 0 to 162.

14168. July 6.—Authorizing G.T.P. Branch Lines Co. and C.P.R. to operate trains over interlocking plant at Camrose, Alta., without stopping.

14169. June 30.—Approving location of C.P.R. Swift Current southeasterly branch from main line in sec. 30, tp. 15, r. 13, near Swift Current, 40 miles, to sec. 19, tp. 11, r. 10, w. 3 m., Sask.

14170. June 12.—Ordering that C.P.R. provide at Montfort Jct. a platform 250 ft. long, commencing at the diamond, work to be completed by Aug. 1, 1911, C.P.R. and C.N.R. to stop trains opposite the platform, and rescinding order 6084, Jan. 14, 1909.

14171. July 10.—Authorizing G.T.R. to build spur for Dominion Flour Mills, Ltd., Montreal.

14172. July 12.—Authorizing C.P.R. to rebuild bridge at mileage 74.6, Eastern Division.

14173. July 11.—Authorizing G.T.R. to build additional track across Walker and Edward Sts., Prescott, Ont.

14174. July 12.—Authorizing C.P.R. to rebuild bridge at mileage 97.2 on its Sherbrooke subdivision, Que.

14175. July 11.—Authorizing G.T.P. Branch Lines Co. to carry traffic over its Melville-Regina branch from Balcarres to Edgeley, Sask.

14176. July 12.—Authorizing C.P.R. to rebuild bridge 69.3 on its Toronto subdivision, Ontario Division.

14177. July 12. — Approving Standard Freight Tariff G.N.C.R.C. 799 of Vancouver, Victoria and Eastern Ry.

14178. July 12.—Authorizing Maine and New Brunswick Electric Power Co. to maintain high tension power line across C.P.R. in Andover parish, N.B.

14179. June 28.—Authorizing N.T.R Commissioners to take possession of certain lands of the Temiscouata Ry. in Edmunds-

14180. July 12.—Relieving C.P.R. from further protection of crossing at Dunner St., Norwood, Ont.

14181. July 12.—Authorizing C.N.O.R. to divert public road on part lots 33, 34, 35, Tyendinaga tp.

14182. July 12.—Ordering Dominion and Canadian Ex. Cos. to perform collection and delivery services for Burrell Rock Drill Co., Belleville, Ont., and that all express companies perform collection and delivery services upon both sides of all streets, fixing municipal boundary lines in which municipal collection and delivery services are established.

14183. July 13.—Authorizing C.P.R. to open for traffic its Forward branch from mileage 26 to 52.2, Sask.

14184. May 9, 10.—Ordering Bell Telephone Co. by Sept. 15, to make long distance connection with about eight applicant companies for interchange of business, etc.

14185, 14186. July 13, 12.—Authorizing C.P.R. to build spurs to Toronto Furniture Co.'s premises across Mowat Ave., Toronto, and in Peel county, one mile south of Cheltenham, Ont.

14187. July 12.—Authorizing C.P.R. to build extra track across road diversion in Ayr, Ont.

14188, 14189. July 13, 12.—Approving location of C.P.R. stations at Hosmer, B.C., and Canmore, Alta.

14190, 14191. July 13.—Authorizing G.T.R. to use bridges 21, 51 and 64 at mileages 76.02, 125.64 and 154.05, and bridge 122, St. George Viaduct, Middle Division.

14192 to 14194. July 14.—Authorizing C.P.R. to use bridges at mileages 75.3, 78.7, 37.4, 70.5, 84.1, 78.5, 40.3, 8.6, 7.4 and 42.1, on Toronto, London and Windsor Subdivisions, Ont.

14195, 14196, July 13.—Authorizing G.T.R. to use bridge 45 at mileage 116.19 and 115 at mileage 55.35, Middle Division.

14197. July 13.—Authorizing G.T.P. Branch Lines Co. to divert road on its Regina Boundary branch in s.s. ¼ sec. 29, tp. 9, r. 12, w. 2 m., Sask.

14198. July 13.—Extending to July 31, time for completion of C.P.R. spur into Horseshoe Quarry Co.'s premises.

14199. July 12.—Approving location of G.T.P.R. station at Druro, Sask.

14200. July 12.—Authorizing G.T.R. to change location of its spur to Sylvester Mfg. Co., Lindsay, Ont.

14201. July 12.—Authorizing Saskatchewan Government to carry road across C.N.R. in sec. 19, tp. 29, r. 2, w. 3 m.

14202. July 12.—Authorizing C.N. Alberta Ry. to cross road allowance between secs. 25 and 26, tp. 53, r. 8, w. 5 m.

14203. July 11.—Authorizing C.N.R. to open for freight traffic its line from Luxton to Ceylon, Sask., 89 miles.

14204. July 13.—Ordering C.N.O.R. to raise trestle across Lake St. Francois, near Newaygo station, by Aug. 15, under penalty of $50 a day.

14205. July 14.—Authorizing city of Ottawa to maintain 6 ft. sewer under C.P.R. between Merton and Pinhey Sts.

14206. July 14.—Authorizing C.N.O.R. to build bridge over Sucker Creek, Tyendinaga tp.

14207. July 14.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to rebuild bridge at mileage 67.9.

14208. July 14.—Authorizing Algoma Eastern Ry. to build bridge over West River crossing at mileage 55.96.

14209. July 14.—Ordering Napierville Jct. to file before Sept. 1, joint through freight tariffs to points on lines of N.Y., N.H. and H. Rd., and authorizing first named company to make refund to Lefebvre and Mahon, Howick, Que., in excess of lawful rate charged on carload of hay from St. Edouard, Que., to Worcester, Mass.

14210. July 14.—Extending for three months from July 18, time for completion of spur on Lauriston St., Saskatoon, Sask., without prejudice to complaint of A. Bowerman, the whole matter to be reheard at Saskatoon at next meeting of Board.

14211. July 14.—Ordering on application of Camrose, Alta., board of trade that plans be submitted for changes to interlocker plant for transfer work, to be completed by Sept. 1, and paid equally by the two railways.

14212. July 15.—Ordering G.T.R. to re-establish passenger service on trains 7 and 65, and 58 and 6, between Palmerston and Wiarton, record of passengers to be kept between Aug. 1 and 31, inclusive, and to be filed with Board by Sept. 15.

14213. July 18.—Ordering C.P.R. and G.T.P.R. to file joint tariffs of tolls on G.T.P.R. lines by shortest joint mileages via Camrose, Alta., Saskatoon, Sask., and Portage la Prairie, Man., on lumber, etc., said joint tariffs to apply from all shipping points from which tariffs of lumber, etc., apply to points east of Rocky Mountains on C.P.R. and C.N.R. Should any disagreement arise between companies full particulars of points in dispute to be reported to Board not later than Sept. 1.

Too Late for Classification.

Alberta Central Ry.—In an interview in Winnipeg, July 10, J. Carlyle Moore, Vice President, is reported to have stated that good progress had been made with the construction of the line. Up to that time the company had been grading with its own forces, and about 40 miles had been completed from Red Deer, Alta., westerly. A contract had been let to D. F. Macarthur for the grading of between 60 and 70 miles beyond the point to which the work is now in progress, and it was hoped to have steel laid on about 100 miles this fall. This mileage will open up the Brazeau River coalfields, but it is intended sometime in the future to extend the line to the Yellowhead Pass. The company has also power to build a line easterly from Red Deer to Moose Jaw and other points. (July, pg. 645.)

Since the above was put in type, we have been officially advised that a contract for the construction of the line to sub-grade, from Red Deer to Rocky Mountain House, 64 miles, has been let to D. F. Macarthur, of Winnipeg. The work is to be completed to the east end of the North Saskatchewan River at Rocky Mountain House by Nov. 30, the line into the Brazeau coalfields being an extension from Rocky Mountain House westward.

Kettle Valley Lines.—R. Smalles, a member of the contracting firm of L. M. Rice & Co., stated in Vancouver, July 12, that his firm had been awarded a contract for building a further section of 40 miles on this line. The first part under contract extends from Bull Creek to the summit near the headquarters of the west fork of the Kettle River. Work is to be started at once and pushed to completion as fast as possible. The contract held by the firm for grading, etc., on the section to Bull Creek has been completed and 20 miles of track has been laid on it. Work was started in Penticton, July 11, on the grading for the line in that town which will connect the wharf, now nearing completion, with the divisional yards which are to be laid out. President J. J. Warren is reported to have stated in a speech at the cutting of the first sod, that about $4,000,000 would be spent on construction in the town and its vicinity. Work is reported to be progressing rapidly on the section from the C.P.R. at Merritt to the headquarters of the Coldwater River near the Hope Summit. Track has been laid on this section for over 20 miles. (July, pg. 647.)

St. John Valley Ry.—Press reports from Fredericton, N.B., July 17, state that while everything is in readiness for the signing of the agreement for the building of the railway along the St. John Valley, as between the Provincial and Dominion Governments, and A. R. Gould, representing the St. John and Quebec Ry., there is some likelihood of a hitch occurring owing to some differences in regard to the specifications. (July, pg. 649.)

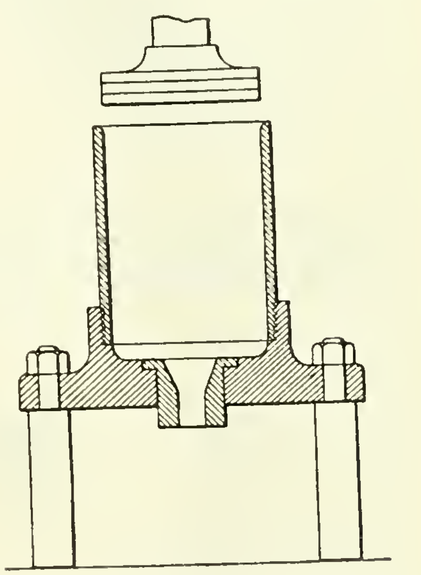
Great Northern Ry.—A committee was appointed by the Vancouver City Council July 12 to confer with the company's engineers as to industrial spur lines in the city, with a view of obtaining a consent order from the Board of Railway Commissioners.

Tenders were asked, July 12, for the erection of a pier 800 ft. long and 148 ft. wide, on the waterfront between Heatley Ave. and the sugar refinery. A freight shed 100 ft. in width will be built along the whole length of the pier, having a roadway of 24 ft. wide on each side. A. Stewart, Assistant Chief Engineer, stated that the work would be started within a month and completed as fast as possible. (July, p. 655.)

White Pass and Yukon Ry.—In an interview at Vancouver, B.C., July 12, on his return from the north, O. L. Dickeson, Vice President, said in the past month negotiations had been started whereby the copper regions near Whitehorse will be opened up, and that the question of the building of branch lines was under consideration.

A C.P.R. Grease Press.

A simple grease press in use in the C.P.R. roundhouse at Glen Yard, Montreal, is shown in the illustration. It consists of a 6-in. pipe that has been bored out and screwed into a cast iron base. This base receives the grease die which is slipped in from above. After the pipe is filled with the grease to be formed, the piston is forced down by air pressure, driving the grease out through the die in the base.—Railway Age Gazette.



Grain Elevators in Canada.

Following is a summary of the number of grain elevators, with capacity, throughout Canada:—

	Number.	Capacity. bush.
British Columbia	6	444,000
Alberta	249	8,764,500
Saskatchewan	904	26,465,000
Manitoba	707	21,813,800
Ontario (mills)	4	1,740,000
Ontario (terminals)	15	25,700,400
Eastern transfer	24	20,535,000
Totals	1909	106,462,700

Creosoting Ties for C.P.R.—The C.P.R. has made a contract for a term of years with the Dominion Tar and Chemical Co., Ltd., to treat about 1,000,000 ties a year. The plant is located at Transcona, near Winnipeg. The preservative used is creosote, a distillation of coal tar, or the heavy oils of tar. The treatment is to place the ties in cylinders, and, after closing the doors, apply a vacuum, subsequently filling the cylinders with creosote and subjecting the timber to an oil pressure, maintaining the same for as long a time as the class of the timber treated necessitates. The charge is then withdrawn and the operation is complete.

Grand Trunk Railway Grade Revision at Toronto.

The elimination of level crossings over the railways along the lake front of Toronto is being carried out by the G.T.R., in conjunction with the city council. The work is being done under orders of the Board of Railway Commissioners, and at present only the western half is being undertaken on the G.T.R.'s Toronto-Hamilton line. In order to carry out the plan it was found necessary to start work near the new roundhouses and yards at Mimico, consequently an agreement had also to be made with the township council of York. As a result the first section of the work covers about six miles, from the Bathurst St. Jct., in Toronto, to near Mimico.

The plan given on this page shows the portion of this section from the C.P.R. diamond, westward to Mimico, and it will be seen that there are shown the level of the existing track, the present ground levels, and the level at which the new track is to be laid. The existing tracks ascend westbound on a gradient of 0.7% for about 3,000 ft. west of the C.P.R. diamond, and then for 1,400 ft. with a 0.28% gradient, then descend with 0.96% gradient for 2,300 ft. Then for a distance of 1,100 ft. the tracks are level, followed by a descending gradient of 0.63% for 4,900 ft., and 800 ft. of practically level track. Then there is an ascending gradient of 0.26% for 1,500 ft., breaking to one of 0.45% for 13,900 ft.

The new line which is being built will have a dump wide enough to carry four tracks, and will start from near Bathurst St. Jct. with an ascending gradient of 0.40% for about 2,400 ft., followed by a descending gradient of 0.40% for 4,700 ft., then an ascending gradient 0.40% for 3,460 ft., a level stretch of 6,300 ft., then an ascending gradient of 0.40% for 6,450 ft., reaching the end of the revision with a 0.30% ascending gradient for 8,000 ft. At Dufferin St. the new rail level will be about 22 ft. lower than the existing rail level, and at Dunn, Jameson and Dowling Avenues, 25 ft. lower than the existing level. At these four points bridges will be built to carry the streets across the tracks, at practically the present street level.

The new rail level at Sunnyside will be 4½ ft. above the present rail level. After a lengthened fight it was decided to carry the road at Sunnyside across the railway by means of a bridge, and in order to pacify certain interests the G.T.R. is acquiring considerable waterfront property at Sunnyside. From near Sunnyside to Ellis Ave., the track will be raised to about 14 ft. higher than the present track level, and subways will be built under the tracks at Queen St., Indian Road, Howard Ave., Ellis Ave., Windermere Ave., Queen St. W. crossing.

The Humber will be crossed by a new four track steel bridge, for which a pier is sunk in the middle of the river. The building of the pier caused considerable discussion and an appeal to the Public Works Department, on the ground that it would be an obstruction to a navigable river.

The bank carrying the track west of Sunnyside will be faced on the lake shore road side by a concrete retaining wall, extending practically the whole way to Swansea. There will be a similar retaining wall along the exhibition grounds. The abutments of all bridges and for all subways are of concrete, and the superstructures of steel.

The biggest cutting is that near Sunnyside. This is made 140 ft. in width at the top, and 63 ft. at grade, where all fills are 67 ft. wide.

The train service is being carried on as usual, temporary tracks having been laid at some points where changes in the alignment are being made. The work is being done by the company's own forces, under the charge of D. McCooe, Superintendent of Grade Revision. J. R. W. Ambrose, Assistant Engineer, is in charge of the engineering work for the company, and E. L. Cousins represents the city's engineering department.

The second part of the work to be taken in hand will be the viaduct, which the Board of Railway Commissioners has ordered be built from just west of John St. to near Berkeley St. The plans for this viaduct are to be filed in Aug. Though not a part of this work, the building of the new Union Station has to be taken into consideration in connection with improvements on the lake front are being considered. This will probably be carried out along with the viaduct, and the whole may be completed in about three years.

Flange Lubrication on C.P.R. Western Lines.—Since the matter under this heading on page 713 went to press we have received a letter from C. H. Temple, Assistant Superintendent of Motive Power, C.P.R., Winnipeg, stating that a number of locomotives have been equipped with the flange lubricator, which was described in our July issue, page 605, and plan of which was given on page 611 of that issue. Mr. Temple states that the lubricator, which is using fuel oil, has shown satisfactory results. The oil is fed through a regulating valve from the cup to the feed pipe and flange shoe, which consists of a piece of rubber hose. The steam from the air pump exhaust pipe, passing through a coil placed within the oil cup, maintains the oil in fluid state.

Experiments with Longer Ties.—The Canadian Society of Civil Engineers committee on ties recommended at the last annual meeting in Winnipeg that experiments be made with 10½ ft. ties. We are officially advised that the society took no action and gave no instructions for carrying out experiments, nothing has been done. D. Macpherson, Assistant Chief Engineer, National Transcontinental Ry., who has been chairman of the committee for some time, tendered his resignation, but at the urgent request of the Society consented to retain the position for another year.

Quebec Central Ry. Officials.—There are a few slight errors in the list of Q.C.R. officials published on page 731. J. T. Reid is now Assistant Superintendent, and has been succeeded by C. K. Bartlett, as Chief Dispatcher.. The engineer is J. T. Morkill, not J. T. Mockill, and the Car Foreman is R. G. Price, not N. G. Price.

A. Gray, heretofore Resident Engineer, Ottawa Division, G.T.R., Ottawa, has been appointed on the Dominion Government engineering staff, in connection with the Upper Ottawa storage scheme, which is being undertaken as a part of the proposed Georgian Bay canal system, of which C. R. Coutlee is Chief Engineer.

MAINLY ABOUT PEOPLE.

Lord Strathcona has been admitted to the freedom of the city of Bath, Eng.

Mrs. John MacTaggart, eldest sister of Sir Wm. Mackenzie, died in Winnipeg July 22, aged 76.

W. H. Biggar, K.C., General Counsel, G.T.R., is in England, accompanied by his eldest son.

A. A. Maver, Master Mechanic, G.T.R., left Montreal, July 19, for a holiday trip to the southern States.

G. H. Shaw, General Traffic Manager, C.N.R., and Mrs. Shaw, returned to Toronto from Great Britain, July 20.

Sir Donald D. Mann, Vice President, C.N.R., returned to Canada, via New York, from England, at the end of June.

C. A. Hanson, of Coates, Son and Co., London, Eng., and Hanson Bros., brokers, Montreal, has been elected sheriff of London.

Sir William Mackenzie, President, Canadian Northern Ry., accompanied by Lady and Miss E. Mackenzie, returned from England, July 5.

G. D. Minty, a Winnipeg barrister, who died there suddenly July 3, was a son-in-law of N. Weatherston, formerly agent Intercolonial Ry. at Toronto.

H. E. Smith, Comptroller, Montreal Street Railway, underwent an operation about the middle of July and is reported to be convalescing satisfactorily.

Major J. F. Smith, who died at Barrie, Ont., July 10, was for 40 years G.T.R. station agent at that place. One son is in the C.P.R. service at Victoria, B.C.

Col. H. H. McLean, K.C., M.P., Vice-President St. John, N.B., Railway, who commanded the Canadian contingent at the coronation, returned to Canada July 9.

O. L. Dickeson, Vice President, White Pass and Yukon Ry., returned to Vancouver, B.C., July 12, from a trip to Alaska, in which he was accompanied by Mrs. Dickson.

W. T. Payne, Manager, C.P.R. Trans-Pacific Steamship service, arrived in Vancouver, July 9, on his way to Yokohama, Japan, after a holiday in Europe and Canada.

Col. Sir Henry and Lady Pellatt entertained the members of the Society of Knights Bachelor at the Cliffords Inn Hall and Garden, in London, Eng., June 28.

Peter Ryan, Registrar, eastern division, Toronto, who is interested in the Caraquet and Gulf Shore Ry., in New Brunswick, celebrated his golden wedding July 11.

G. Sterret, civil engineer on the G.T. Pacific Ry., construction staff on the Tete Jaune Cache section of the line, was married at Lindsay, Ont., recently to Miss R. McDiarmid.

Mrs. Arthur Spragge, of Toronto and Golden, B.C., was nominated as C.P.R. representative at the sixth annual meeting of the Alpine Club at the Great Divide camp, B.C., July 26.

G. M. Higginson, Trainmaster, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was presented with a hand bag and pipe, July 19, on starting for a holiday trip to Western Canada.

Sir Wm. Van Horne was awarded the grand championship for the finest boar, and obtained a large number of prizes in the classes for Yorkshire pigs at the Winnipeg exhibition recently.

W. H. Rosevear, of St. Lambert, Que., ex-General Car Accountant, G.T.R., was married at Montreal, July 12, to Miss M. I. Peebles, recently headmistress of the Practice School of Macdonald College.

W. R. McRae, Superintendent Truck and Motor Department, Toronto Ry., sailed from Montreal July 12, with his wife and family, on the s.s. Royal Edward, to spend two months in Europe.

Ralph Mojeski, M. Am. Soc. C. E., of Chicago, who is a member of the Quebec Bridge Board of Engineers, has been awarded the honorary degree of Doctor of Engineering by the University of Illinois.

H. R. Charlton, General Advertising Agent, G.T.R., returned to Montreal June 12, from a tour through the Jasper Park district of Alberta, which the G.T. Pacific Ry. proposes to develop as a tourist district.

F. H. McGuigan, formerly Fourth Vice President, G.T.R., is head of the firm of F. H. McGuigan and Co., of Toronto, which has secured the contract for the construction of the filtration plant at Montreal.

P. J. Myler, Vice President, Canadian Westinghouse Co., Hamilton, Ont., and H. H. Gildersleeve, Manager, Northern Navigation Co., Sarnia, Ont., have been elected directors of Travellers Life Assurance Co. of Canada.

A. M. Bennett, for four years chemist at the Montreal Steel Works, was presented with a loving cup, and an emerald and pearl pendant for Mrs. Bennet, July 6, on his leaving Montreal for England, for a similar engagement.

J. D. Altimas, Car Accountant, C.P.R., Montreal, was elected on the committee on office methods and accounting, for three years, at the recent annual meeting of the Association of Transportation and Car Accounting Officers at Cape May, N.J.

Lord Strathcona, who has held the position of High Commissioner for Canada, in London, Eng., for 15 years, has announced that on account of his age, and acting on the advice of his physician, he must relinquish the office at an early date.

Thomas Kinney, Track Superintendent, Sandwich, Windsor and Amherstburg Ry., died suddenly at Windsor, Ont., July 3. He had been in the company's service 16 years, first as trackman and for the past five years as track superintendent.

W. H. Jordan, chief clerk to General Freight and Passenger Agent, C.N.Q.R. and Q. & L.St.J.R., Montreal, was presented with a toilet outfit by the local staff on his leaving Montreal to take up the position of chief clerk to the General Traffic Manager, Canadian Northern Ry. at Toronto.

Col. Henry G. Prout, M. Am. Soc. C. E., First Vice-President and General Manager of the Union Switch & Signal Co., Swissvale, Pa., has been awarded the honorary degree of Doctor of Laws by the University of Michigan. In 1902 he received the honorary degree of Master of Arts from Yale University.

E. J. Brien, whose appointment as Trainmaster, District 2, Lake Superior Division, Schreiber, Ont., was announced in our last issue, was born at Carleton Place, Ont., Sept. 1, 1869, and entered C.P.R. service, Jan. 9, 1891, since when he has been, to June, 1911, switchman, brakeman and conductor, consecutively.

Sir Thomas, Lady and Miss Tait arrived in Montreal July 10, after a residence of eight years in Melbourne, Australia. Since retiring from office as Chairman of the commission managing the Victoria State Railways last autumn, Sir Thomas has been traveling leisurely from Australia, via India and Europe, with his wife and daughter.

R. A. Ross, E.E., and M. Can Soc. C.E., and H. Holgate, M. Can. Soc. C.E., who have been associated for many years as Ross & Holgate, consulting engineers, in Montreal, have dissolved partnership. In future the business will be carried on as R. A. Ross & Co. Mr. Holgate has been elected President of the Cedar Rapids Power Co.

A. R. Macdonell, railway contractor, formerly of Montreal, died July 15 at Frimley Park, Surrey, where he had lived for the past two years, having gone to England owing to failing health. He carried out a number of large contracts, one of the last being on the National Transcontinental Ry. in Northern Ontario, in partnership with M. J. O'Brien.

Sir Wm. Whyte, replying to a resolution of congratulation from the Victoria, B.C., Board of Trade, July 11, said: "The kind things that have been said to me during the past few days have touched me more than the honor itself, and it is my earnest hope that I may continue to merit the esteem and respect of my friends during the remainder of my life."

T. H. Curtis, who was President of the Master Car Builders Association for 1910-11, and who recently resigned as Superintendent of Motive Power, Louisville and Nashville Rd., has been appointed Mechanical Engineer of the commission to investigate smoke abatement in Chicago, which was appointed by the Chicago Association of Commerce.

Sir Wm. Whyte, Vice President, C.P.R., visited Montreal in the middle of July, to confer with the President on a number of matters relating to the Western Lines, which gave rise to press reports that he was about to retire. Though still an exceedingly vigorous man, Sir William has reached an age when he might, naturally, desire to be relieved of the immense responsibility he has carried for so many years and to enjoy a well-earned rest, but it is not thought that he will retire in the very near future.

A supplementary list of subscribers to the King Edward Memorial Fund, in Montreal, includes the Canadian Pacific Ry., $2,500; R. B. Angus, director, C.P.R., $1,000; Sir H. Montagu Allan, $1,000; N. Curry, President, Canadian Car and Foundry Co., $1,000; C. M. Hays, President, G.T.R., $1,000; C. R. Hosmer, director, C.P.R., $1,000; R. Meighen, director, C.P.R., $1,000; Sir Thos. G. Shaughnessy, President, C.P.R., $1,000; Sir William C. VanHorne, director, C.P.R., $1,000.

A. T. McKean, whose appointment as City Freight Agent, C.P.R., Winnipeg, was announced in our last issue, was born at St. John, N.B., Dec. 18, 1886, and entered C.P.R. service, June, 1903, since when he has been, to Apr., 1904, clerk in General Freight Department, St. John, N.B.; Apr., 1904, to Mar., 1906, stenographer and statistical clerk, same department; Mar. to Oct., 1906, stenographer to Master Mechanic, Winnipeg; Oct., 1906, to Dec. 31, 1908, stenographer, correspondence clerk, assistant chief clerk, Assistant Freight Traffic Manager's office, Winnipeg; Jan. 1, 1909, to June 15, 1911, Soliciting Freight Agent, Winnipeg.

W. H. Sample, whose appointment as Master Mechanic, Ottawa Division, G.T.R., Ottawa, was announced in our last issue, was born in Altona, N.Y., Aug. 20, 1864, and entered railway service July 20, 1882, since when he has been, to Apr., 1886, fireman, Central Vermont Ry.; Apr., 1886, to July, 1887, engineer, Central Vermont Ry.; July, 1887, to Aug., 1889, engineer, Atcheson, Topeka and Santa Fe Ry.; Aug., 1889, to Feb., 1901, engineer, Central Vermont Ry.; Feb., 1901, to July, 1906, road foreman, Central Vermont Ry.; July, 1906, to Mar. 15, 1911, Superintendent of Motive Power and Car Department, Northern Ry. of Costa Rica.

E. Eley, who has been appointed General Foreman, passenger car repair shops, C.P.R., West Toronto, was born

in London, Eng., in 1867, and commenced railway service with the Great Northern Ry., at King's Cross, London, Eng., June, 1888, and came to Canada in 1889. He entered C.P.R. service in the Bridge and Building Department, Mar., 1894, and was transferred to the Car Department at North Bay, Ont., Aug., 1894, and was, from Mar., 1902, to Jan., 1903, charge hand at Chapleau, Ont.; 1903 to July, 1906, leading hand at North Bay, Ont.; July, 1906, to Feb., 1907, Car Foreman at Quebec; Feb., 1907, to May, 1911, Car Foreman at Glen Yard, Montreal.

S. B. Clement, who has been appointed Chief Engineer and Superintendent of Maintenance, Temiskaming and Northern Ontario Ry., North Bay, Ont., was an honor graduate in civil engineering of McGill University, and has served as an engineer of construction, C.P.R., on survey work, T. and N.O.R.; Assistant Engineer, Ontario Hydro-Electric Power Commission, Assistant Engineer and Chief Engineer, T. and N.O.R.

F. L. Ellingwood, whose appointment as Superintendent of Building Construction, C.P.R., was announced in our last issue, was born at Eastport, Me., Aug. 6, 1863, and commenced engineering work in the early 80's, on construction, and later in the Bridge and Building Department, Burlington, Cedar Rapids and Northern Ry. He afterwards studied architecture in New York, and was in practice as such until 1905, in the latter part of which he was placed in charge of the drawings, etc., for the Pennsylvania Rd. terminal in New York City. On the completion of this work, he returned to private practice, and carried out the designing and construction of a number of large public buildings.

R. Meighen, President, Lake of the Woods Milling Co., which owns an extensive system of grain elevators in the north western provinces, died somewhat suddenly in Montreal, July 12. He was a director of the C.P.R., and of the Dominion Transport Co., and President of the New Brunswick Ry., which has large areas of land in New Brunswick, its railway being leased to the C.P.R. He was a brother-in-law of Lord Mount Stephen, one of the original incorporators of the C.P.R. The value of his estate has been quoted as about $7,000,000. The funeral held July 15 was largely attended, Sir Thos. G. Shaughnessy, President, and R. B. Angus, director, C.P.R., being among those present.

G. S. Cooke, whose appointment as Superintendent G.T.P.R. lines Winnipeg to Watrous, Sask., was announced in our last issue, was born at Montreal, Oct. 27, 1875, and entered railway service Apr. 1, 1890, since when he has been, to Oct. 1, 1896, clerk in stationery department, G.T.R., Montreal; Oct. 1, 1896, to Feb. 15, 1900, clerk in Superintendent and Trainmaster's office, G.T.R., Montreal; Feb. 15, 1900 to Oct. 16, 1901, chief clerk to Trainmaster, G.T.R., Battle Creek, Mich.; Oct. 20, 1901, to Mar. 1, 1905, chief clerk to Superintendent, St. Louis, Iron Mountain and Southern Ry., Mer Rouge, La., Van Buren, Ark., and Aurora, Mo.; Mar., 1905, to Jan., 1906, chief clerk to Superintendent, Chicago, Cincinnati and Louisville Rd.; Jan. to Aug., 1906, chief clerk to General Superintendent, same road; Aug., 1906, to Aug., 1907, Trainmaster, same road, Peru, Ind.; Sept. 1, 1907, to Oct. 15, 1908, chief clerk, Engineering Department, Grand Trunk Pacific Ry.; Oct. 15, 1908, to June 1, 1911, Trainmaster, G.T.P.R., Melville, Sask.

Geo. W. Torrance, Freight Agent for Ontario for the White Star-Dominion Line Steamships, with office in Toronto, who died in Montreal July 21, was one of the best known and best liked traffic officials in Canada. He had been ailing since last winter, when he had a severe attack of la grippe. Early in July he left Toronto for a rest and change of air, going to Montreal, and from there to Metis, Que., with his sister. They then went on to St. Andrews, N.B., but as he grew worse they returned to Montreal, where he went to Victoria Hospital, suffering from a complication of diseases to which he quickly succumbed. He was a son of the late David Torrance, some time President of the Bank of Montreal, and had been in Toronto for some 35 years, first as representative of the Dominion Line Steamships, and latterly of the White Star-Dominion Line. In his young days he was an excellent lacrosse player, and always took great interest in sports. For many years he was a director of the Ontario Jockey Club, and latterly was chairman of its executive committee.

Lacey R. Johnson, Assistant Superintendent of Rolling Stock, C.P.R., Montreal, whose portrait appears on the first page of this issue, was born at Abingdon, Berks, Eng., June 22, 1855, and educated at the Grammar School there. He entered railway service as an apprentice at the Great Western Ry. works, Swindon, June 1, 1870, and was Chief Engineer and Foreman of Mechanics at the Woolwich Arsenal, Jan. 1 to Aug., 1876, and fitter and erector, Sept., 1876, to Nov., 1878; Manager, Davis and Sons' engineering works, London and Abingdon, Nov., 1878, to Aug., 1879. In Sept., 1879, he went to India as draughtsman on the Scinde, Punjaub and Delhi Ry., and was subsequently foreman of machine and erecting shops there. He left India on account of health, Mar., 1882, and entered G.T.R. service at Montreal as draughtsman June, 1882, and joined the C.P.R., Nov. 2, 1882, since when he has been, to Nov., 1885, General Foreman at Carleton Jct.; Nov., 1885, to May, 1886, Assistant Master Mechanic, Eastern Division, Chapleau, Ont.; May, 1886, to Apr., 1901, Master Mechanic, Pacific Division, Vancouver, B.C., and from the commencement of the trans-Pacific service his jurisdiction extended over the engineering department of the vessels, during which time he spent three different winters in Hong Kong superintending alterations and repairs to the company's vessels; Apr. to Sept., 1901, on the purchase of the Canadian Pacific Navigation Co. by the C.P.R., he was Superintending Engineer of the combined fleets, which position was severad from the locomotive and car department; Sept. 1, 1901, he was appointed Assistant Superintendent of Rolling Stock at Montreal, which position he still holds.

The late George W. Torrance.

The Railway and Marine World's Mechanical Editorship.

Frederick H. Moody, B.Sc., has been appointed Mechanical Editor of the Railway and Marine World, and will enter on his duties at once. His career eminently fits him for this work. After passing through Harbord Collegiate Institute, Toronto, he entered the University of Toronto, and graduated, with honors, in mechanical and electrical engineering. He then took the post graduate course in mechanical engineering, receiving the degree of Bachelor of Applied Science, with honors, and was appointed Demonstrator in Thermo-dynamics at the University, instructing the third and fourth year students. He also had charge of a night class in steam engine design at the Toronto Technical School.

His practical work has been varied and thorough. He served the major portion of his time as machinist apprentice with the John Inglis Co., Ltd., engine builders, machinists, etc., Toronto, and his other practical work includes shop work on high tension transmission apparatus with the General Electric Co. at Schenectady, N.Y., designer of locomotive details with the American Locomotive Co. at Schenectady, N.Y., and designer of vacuum and marine pumps, largely for vessels for the United States Navy, with the Blake and Knowles Pump Co., East Cambridge, Mass.

Then he took up mechanical editorial work, and was for some time associate editor of the Maclean Publishing Co.'s technical papers, Canadian Machinery, The Power House, and the Canadian Foundryman, in Toronto. Latterly he has been one of the associate editors of Machinery, and of Railway Machinery, published in New York, which is said to have the largest circulation of any mechanical paper in the world. He is thus thoroughly equipped for the work he will have to do for the Railway and Marine World, and which will speak for itself. We confidently ask for him the cordial co-operation of railway mechanical officials generally, which, we are sure, he will receive, and in this connection we wish to extend our cordial appreciation for favors and support, for which we are indebted to very many of them, in the way of contributions of matter, information, hints, etc.

In pursuance of the policy announced at its inception, namely, to thoroughly cover every department of railway work, the Railway and Marine World has always devoted a considerable amount of space to mechanical matter, and, as a consequence, enjoys a most thorough circulation throughout the Dominion among steam and electric railway officials in the mechanical departments, reaching the superintendents of rolling stock, master car builders, master mechanics, locomotive foremen, road foremen of locomotives, car foremen, shop foremen, etc., as well as all other classes of railway officials.

The rapid increase in railway mileage, and the establishment of new and enlarged shops, which is going on, renders it desirable that still more space should be devoted to mechanical matters in future, and we, therefore, decided to increase our editorial staff, in order that the ground may be even still more effectually covered. We feel confident that our action will be appreciated by our readers.

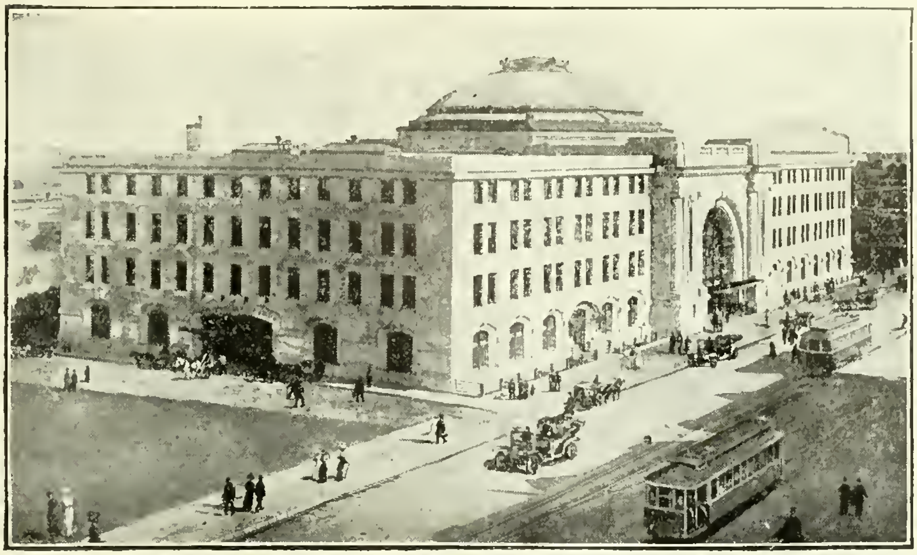
Fort Garry Union Station, Winnipeg.



Fort Garry Union Station, Winnipeg.

The union station which is being built at Winnipeg by the Canadian Northern Ry. for the joint use of itself and the Grand Trunk Pacific Ry., is rapidly approaching completion. The station and terminal yards occupy about 70 acres of ground, located very close to the centre of the city, and bounded by Water St. on the north, Main St. on the west, the Assiniboine River on the south, and the Red River on the east. On this site was originally located old Fort Garry, built in 1812 to protect the trading post previously established by the Hudson's Bay Company, and which was the original settlement of the city.

The Passenger Station Building is located on Main St., directly opposite Broadway, and is an imposing structure, built entirely of stone, having a length of 350 ft. along Main St., and a width of 140 ft. The larger portion of the building is four stories and basement, with an elaborate central portion, having great arched windows on all four sides, and surmounted by a massive dome 100 ft. high above street level. The centre of this dome is directly opposite the centre of Broadway. The main entrance is off Main St., at centre of building, beneath a great stone arch, having massive stone columns on either side projecting 10 ft. beyond the building walls. The main floor is at the street level, and will be devoted entirely to station facilities.

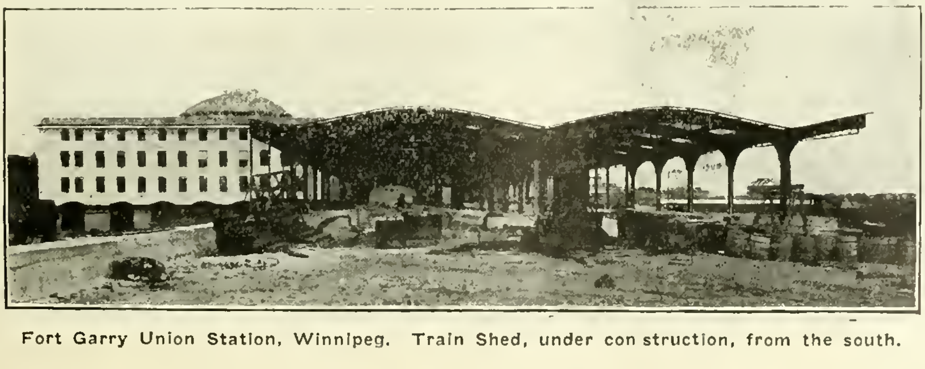
The main floor plan, for convenience to passengers, and facility of operation, represents the highest type of modern passenger station design. Passengers going through the main entrance will pass through a vestibule and arrive directly into the ticket lobby, a clear circular space 90 ft. in diameter, entirely unobstructed by columns, seats or booths of any kind. This lobby is directly beneath the great dome and is exceptionally well lighted by the great arched windows, one on each of the four sides. On the east and west sides these windows open through to the front and rear walls of the building, and on the north and south sides open directly out on the large open courts. The lobby is surrounded on the first story by balconies overlooking the main floor. These balconies run between the great arched ribs, which, rising from the main floor, taper away to the summit of the dome. The ticket booths are arranged on south side of lobby, and passengers after purchasing tickets will go directly to baggage checking counter at rear of booths. They may then pass out from lobby through rear vestibule direct to subway under tracks, from which ample stairways lead up to the train shed platforms overhead. On the north side of ticket lobby space is provided in each corner for telephone and telegraph booths and newspaper and book stands. Passengers who must wait for trains may pass through north side of ticket lobby into waiting room, which has an area of 9,000 sq. ft. By this arrangement of having the waiting room adjoining and separate from ticket lobby, a quiet and orderly waiting room is assured, as all passengers going to and from trains may pass directly through the unobstructed ticket lobby without entering waiting room. The confusion incident to having both moving and waiting passengers together will be effectually prevented by this arrangement.

Adjoining the waiting room on the west side and facing on Main St., is the lunch room, area 1,300 sq. ft., also the restaurant, area 2,200 sq. ft. Both of these rooms have a separate entrance off Main St., so that they are capable of handling local business direct. Adjoining the waiting room on the east side is the men's waiting room, area 1,800 sq. ft., and the women's waiting room, area 1,800 sq. ft., each provided with toilets and wash stands. On the north side of waiting room an exit is provided to a 50 ft. street on private property, which may be used exclusively for carriages. The central portion of the waiting room is covered over by an arched skylight 40 ft. wide by 100 ft. long, above which is an open court, thus providing the waiting room with excellent light. A special feature has been made of the construction of these skylights. They are composed of vault light in panels and made absolutely watertight, which, in a region of heavy snowfalls and extremes of temperature will prevent the annoying leaks and draughts incident to large skylights of ordinary construction in this climate.

The walls of waiting room are embellished with the coat of arms of each of the various provinces of the Dominion, executed in gold leaf and colors. The seats in this room are heavy oak benches of the movable type, these being generally considered as the most desirable for station purposes. Arranged around the waiting room are the usual concessionary booths for the sale of cigars, candy, souvenirs, etc. The interior of waiting room and ticket lobby has the effect of stone construction throughout, the wainscoting being of marble 6 ft. high, and the floors of terrazzo. This construction gives not only a very attractive appearance to the rooms, but has the advantage of being sanitary and readily cleaned. All stairways are of iron with marble treads.

The entire south wing of the main floor is occupied by the baggage room, area 8,000 sq. ft., and the express room, area 8,000 sq. ft. In the future, when more space is required, both the baggage and express will occupy space beneath the tracks and platforms adjoining rear of building, as described further on. The space at first occupied by them in the building may then be used for additional waiting room space, if considered desirable at that time, or for other station purposes. The central portion of this wing is covered by an arched skylight similar to that over the waiting room in the north wing, there being an open court in the interior of this wing also. A driveway for baggage and express waggons is provided at the south end of building. The level of this driveway is 3½ ft. below the level of main floor, and is reached by a short 5% grade down from Main St. The waggons will be loaded and unloaded on an 8 ft. platform outside of building wall, which spans the basement area away below. The baggage and express will be handled by hand trucks between the building and the train platforms, through trucking subways beneath train sheds, and by electric elevators from subways to each platform at either end of train shed.

The basement floor is 15 ft. below the level of Main St. The entire north wing of this floor will be devoted to immigrants. There is a waiting room, area 10,000 sq. ft., having a lunch counter on the north side, and a laundry and separate men's and women's bathrooms on the east side. Adjoining the waiting room on the south side is a separate men's smoking room, with toilets, area 3,000 sq. ft., also a women's waiting room with toilets, area 3,000 sq. ft. The immigrants will be conducted to and from waiting room and trains by means of a stairway at rear of building, leading direct from basement to passenger subway. A separate immigrants' entrance off Main St. is provided leading down from street to basement, partly by a stairway and partly by ramp. It will therefore be seen that immigrants will be well provided for, and will be han-



Fort Garry Union Station, Winnipeg. Train Shed, under construction, from the south.

Blau-Gas TRADE MARK

FOR WELDING PURPOSES

THE ROYAL LINE SS. ROYAL GEORGE

"At your request for a recommendation with reference to Blau-gas, I would say that we have used your Blau-gas and Oxygen for cutting out rivets and plates and have found it extremely satisfactory. It is much quicker than any other method of cutting I have seen used, also it can be used in places where hand work is impossible. I have much pleasure in recommending it to anyone requiring expeditious work of this kind."

THOS DAVIDSON MFG CO., MONTREAL

"We have your favor of the 31st ult., and beg to say that we have tested the boiler you welded for us, and found it perfect."

dled to and from both trains and the street without coming into contact with other passengers.

Fort Garry Union Station, Winnipeg. Waiting Room.

In the north wing of basement floor, at the southwest corner, a barber shop is provided, area 1,300 sq. ft., which can be reached by stairways from both Main St. and the main vestibule of building. The remainder of the west side of wing is occupied by the kitchen, area 6,000 sq. ft., which will supply the restaurant and luncheon rooms directly overhead. The remainder of this wing is occupied by the boiler and engine rooms, also heating and ventilating apparatus. There are four boilers of 130 h.p. each, provided for heating purposes. Under the central portion of building, the basement floor will be used for storage of sleeping and dining car supplies, and miscellaneous storage purposes. The basement is surrounded on all four sides by an open areaway 10 ft. wide, which supplies light and air to the basement rooms.

The second, third and fourth floors will be occupied entirely by the local and general Western Offices of the Canadian Northern and Grand Trunk Rys. These offices are to be on either side of a corridor, the interior row of offices in each wing facing on the open court. Each floor provides an available office space of 25,000 sq. ft., exclusive of corridors, stairway, elevators and toilets. Provision has been made in the design of foundations and steel structure for the future addition of five office floors, so that the building will then be capable of providing 200,000 sq. ft. of available office space.

The building is so designed that there will be no necessity for artificial lighting in any portion during the day. The electric lighting of the main floor has been artistically arranged. In the ticket lobby the lamps for the greater part are concealed, the interior of the vast dome being illuminated by the brilliant reflected light from these invisible lamps. In addition there is a large chandelier containing 150 lights, suspended above the centre of lobby. A special feature has been made of the heating and ventilating layout. The heat will be supplied by hot water system, using the indirect method on the main floor, and the direct method on the office floors.

The structure of the building is of the steel skeleton type. The column loads are supported at the foundations by concrete piles, each pile designed to carry a load of 40 tons. The character of the soil at the site is the blue clay common to Winnipeg, the supporting power of which cannot be relied upon to sustain a greater load than 3,000 lbs. to the square foot. The use of concrete piles was necessary, owing to the fact that they lie between the high and low water lines of the Assiniboine River, which is about 1,000 ft. from the building site.

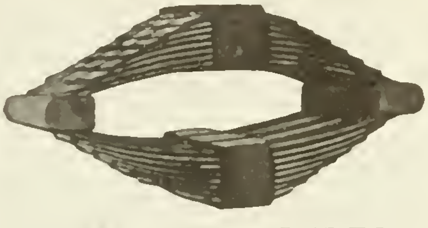
In the space allowed for the various rooms of the station, and also in the design of passenger track layout, ample provision has been made for the probable rapid growth of Winnipeg, and the consequent increase of requisite station facilities and traffic. The architects believe that the station as designed will meet all demands that will be made upon it for many years.

Fort Garry Union Station, Winnipeg. Waiting Room.

Passenger Yard and Train Shed.—The track layout for both the passenger and freight yards was developed after much study by the engineers and other officials of both railway companies in cooperation with the architects. Several preliminary layout plans showing the various types of passenger terminals were made and studied. It was finally decided that a layout of the through station type, with approach tracks elevated over the intersecting streets, and with tracks raised sufficiently above main floor of station to allow a passenger entrance subway beneath, was the most desirable, giving the greatest operating efficiency for the present and prospective traffic to be handled at Winnipeg, as well as providing the greatest convenience to passengers.

The maximum development of the passenger terminal layout will consist of eight through passenger tracks, with adjacent platforms, and two separate open running tracks at rear for through freight trains. The platforms will be 20 ft. wide, and can be made 1,650 ft. long. By means of this great length, and by the use of the double cross-overs, each track will be capable of handling two trains of 11 cars each during periods of heavy traffic. The total capacity of platforms will be 200 70 ft. cars. The platforms will be of reinforced concrete construction raised 12 ins. above base of rail. Between each pair of tracks there will be three lines of pipe for water, steam and gas. Passengers going to trains will pass from rear of ticket lobby into a 50 ft. wide subway, with head room of 10 ft., having 7 ft. wide stairways on each side, leading up to each platform. This subway will be so arranged by means of railings and gates that there will be no interference between passengers going to trains with those coming from trains. The subway will be heated in winter from the building. The elevation of tracks over the subway will be 10 ft. above level of main floor of station. A slight ramp down from rear of ticket lobby to floor of subway will allow a clear head room of 10 ft.

As already described, the baggage and



Railway Springs

A HISTORY OF THE PAY-AS-YOU-ENTER CAR
AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550· International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., [illegible]; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 26; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co. Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 5; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

THE FARLOW DRAFT GEAR
No Yokes, Yoke Rivets or Follower Plates

4 Malleable Iron Follower Blocks
4 Steel Side Links
6 Steel Draft Keys

Any Friction Device May Be Used in Combination with FARLOW Attachments.

THE T. H. SYMINGTON COMPANY
BALTIMORE ROCHESTER CHICAGO NEW YORK

express business will be handled for the present in the south wing of station building. In the future, however, these facilities will occupy space beneath the tracks, the tracks being carried overhead by steel viaduct construction. The south wing of station need then contain only a baggage checking counter for the convenience of passengers, with pneumatic tube connection with baggage room. The remainder of this wing will be used for any other station purpose desired. All the sheds beneath tracks will have a clear head room of 10 ft. They will be approached from a 50 ft. driveway, 3 ft. 6 in. below floor of sheds, with a 4% grade down from Main St., south of station building. On the south side of this driveway are the express sheds, one for each road, with an available floor space of 15,000 sq. ft. in each shed. On the north side is the baggage room, with an available floor space of 20,000 sq. ft., also the mail room, with 10,000 sq. ft. On both the express and baggage sides of drive there will be a row of electric elevators, one to each platform. These lifts will supply all trains departing for the west and south, and arriving from the east. The fact that the largest portion of all express business handled at Winnipeg arrives from the east and departs to the west, determined the location of sheds on this side of train shed. To supply the eastbound departing trains and the westbound arriving trains, the baggage and express will be handled through a 15 ft. trucking subway at rear of train shed to a row of elevators on north side of train shed. By these arrangements there will be no necessity for trucking of any kind being done on the train platforms, thereby affording the passengers the unobstructed use of the platforms, and avoiding all interference and confusion. This system of handling baggage, express and mail beneath tracks, with elevators to each platform, is in successful operation at some of the largest and most modern passenger terminals in the U.S., notably the union station at St. Louis, the Rock Island station at Chicago, the union station at Washington, D.C., and the Pennsylvania Rd. station at Pittsburgh. Similar systems of baggage and express handling are also successfully used in many of the large railway terminals in Europe.

Approaches to Passenger Terminal.—The west approach starts from the present main track on the north bank of the Red River, about 2,000 ft. west of Main St., and descending on an earth embankment at a maximum ruling gradient of 0.4%, passes over Main St. on a double track plate girder bridge, allowing an underclearance of 14 ft. for the street roadway. It then crosses the Assiniboine River on a new double track steel truss bridge 400 ft. long, one span of which is a swing bridge, as required by the Dominion Government. The east approach starts from the main line, near St. Boniface station, and rising on an earth embankment, with the ruling 0.4% gradient, crosses the Red River, on a new double track steel truss bridge 900 ft. long, containing one draw span, as required by the Government. It then crosses on steel plate girder bridges, the Winnipeg Transfer Ry., Mill St., Notre Dame Ave. and Water St. Each of the street roadways have at least 14 ft. clear head room. The base of rail is practically level from the Red River bridge to the Assiniboine River bridge at elevation 769.0, which is approximately 10 ft. above the level of Main St. At each end of the passenger layout there will be a signal tower, from which all signals, switches and crossovers will be controlled. The electro-pneumatic system of interlocking will be used. All track work is of first class construction, with 80 lb. rails and gravel ballast. While the Government requires all bridges across either the Red or Assiniboine Rivers to contain draw spans, only the Red River is navigable for any but small boats.

Due to the inevitable future development of the great fertile northwestern portion of Canada, Winnipeg will undoubtedly in time occupy the same important position as the railway centre of Canada, that Chicago now occupies as the railway centre of the United States. The officials of the joint railways and the architects have made this fact the leading consideration in the layout and design of both passenger and freight terminals. The plans were so drawn that the above described grand scheme of operation may be realized in the ultimate development, but necessitating the initial construction of only that portion necessary to handle the traffic presented by the requirements of the present and immediate future. The railway officials who co-operated for the construction of these joint terminals, and who personally rendered valuable assistance to the architects in their work of designing the terminals, are: Sir Wm. Mackenzie, President; Sir Donald Mann, Vice President; and M. H. McLeod, General Manager of the Canadian Northern Ry.; C. M. Hays, President; E. J. Chamberlin, Vice President and General Manager, and B. B. Kelliher, Chief Engineer, G.T. Pacific Ry. Warren and Wetmore, of New York City, are the architects who have had charge of the design, and who have supervised the construction of both the station building and the track layout of passenger and freight yards. Peter Lyall and Sons are the general contractors for the station building.

How to Organize a Railway Fuel Department, and its Relation to Other Departments.

By T. Duff Smith, Fuel Agent, Grand Trunk Pacific Railway.

When we consider that at least 8% of the earnings of our railways is spent on fuel, it must be plain to every thinking man that here we have a large item of expenditure which requires expert management and should be under the control of a department which should have its proper recognition in the departments of all railways.

The fuel department should consist of the fuel agent, his clerical staff and fuel inspectors also in cases where the railway company owns and operates its own coal dock, a dock superintendent and his staff. Taking them in the order named, we commence with the fuel agent. I do not believe in keeping the accounting separate from the purchasing and distributing parts of the work, so will state that the fuel agent should be held responsible for all fuel from the time it is purchased until it is finally accounted for to the audit department.

What are the necessary qualifications of a fuel agent and what are his principal duties? Before we can use any fuel it has to be purchased, and on this point there is a great difference of opinion as to who should purchase fuel. My own opinion is that it should be done by the fuel agent, under the direction of the general manager or general purchasing agent. He should have a thorough knowledge of all the different qualities and grades of coal on his own line and adjacent thereto, and should keep in close touch with all movements in the way of development thereon. It would also be proper to study the geological formation of all districts adjoining his line, so that he may know where to look for future supplies. To insure economical working he should be familiar with the capabilities of the different classes of bituminous coal, also hard, slack and lignites, by the use of which he may greatly reduce the cost of heating roundhouses, stations, etc.

The distribution of coal should be closely watched, so as to prevent congestion and avoid extra haulage. The actual office work of issuing orders for distribution and also tracing cars which have not reached destination in reasonable time should be assigned to one of the office staff designated fuel distributor.

The fuel agent should not spend too much time in the office where the routine work can be attended to by the clerical staff, but should be out on the line as much as possible, getting in close touch with the men who have the actual handling, master mechanics, road foremen agents, etc., and thus gain information which will enable him to make economies, probably only small ones, but which all tell in the year's work.

He should have a knowledge of the

Fort Garry Union Station, Winnipeg. Ticket Lobby.

different systems of handling coal, so as to be able to meet any contingencies and to keep the actual cost of handling at a minimum. He should so arrange his supplies that while amply protecting himself against any possible shortage by reason of unforeseen delays, bad weather, wrecks, wash-outs, etc., he may not have too much stock on dumps, thus causing extra cost by shrinkage, double handling and interest on money lying idle. He should have an all round knowledge of the accounting system, and have such reports sent in as will keep him in close touch with actual stocks and costs. The system of records should be such that it is absolutely impossible for any car, or, in fact, any fuel to remain unaccounted for. The actual charging for the fuel and distribution of charges should be done by the fuel accountant, who is on the fuel agent's staff.

He should keep in close touch with the general manager, purchasing agent or other officer to whom he directly reports, so that he may have immediate advice on questions of policy, etc., with general superintendents, so that they may facilitate movement of cars and also to get advance notice of any extra supplies required by reason of rush of traffic, opening pits or track laying. He should also consult them as to any alterations required to improve coaling tracks or plants, especially at temporary coaling stations. He should also have daily communication with the car service agent, so that a proper supply of equipment may be available at points required. On some lines as on my own, we have a heavy westbound movement during the early part of the navigation season, and a heavy eastbound movement during the fall months. Having to bring in our coal supply over the Great Lakes during navigation, it is most essential to keep well posted as to the car situation, so that we may load all cars west with coal and save light cars (in our case we have to use all box cars), and so make traffic both ways, thus saving equipment and power. This same principle will apply to all local conditions.

But the most important official to the fuel agent is the superintendent of motive power or master mechanic. Fully 90% of our fuel is used by this department, and it is only by the close cooperation of the two departments that the best results may be obtained. On a few roads they have a properly organized testing department, but with the majority all tests have to be made by the mechanical department, so that, to a great extent, the fuel agent has to rely on the result of their labors. Also where a performance sheet is compiled, it will not be possible to get any improved performances unless the two departments work closely together. In passing, let me state that I am not in favor of the "pooling" system, as under it you cannot place the blame on the actual man who is wasting or burning too much fuel.

The last man, but far from the least, to mention on the fuel staff is the fuel inspector. To fill this position I prefer a practical miner to any one else. He should, of course, be competent to judge whether the coal is up to the standard required by contract. His duties are, to see that all cars, before loading, are clean and in fit condition to carry coal, so that there will be no loss by leakage. To see that all cars are weighed both empty and loaded, noting any differences between actual and stenciled tare. To inspect all coal loaded, which should be done at the picking table, where he can see all the coal and detect impurities, and that the coal is properly cleaned. To report daily, by mail, if within one day's journey, otherwise by code wire, all cars loaded, giving car numbers, weights and destination, also reporting any local conditions at mine, such as variations in quality, opening new seams, car supply and labor conditions, especially when there is any friction between operators and employers, thus giving the fuel agent an opportunity to protect his stocks against any shortage caused by a possible strike or lock-out. As far as consistent, he should confer with operators when they have trouble with bad veins, etc., and try by practical advice to help improve matters. I have been receiving coal from one mine where, by our inspector's practical advice, the quality of the coal has improved fully 20% during the last six months. Operators, instead of objecting to such inspectors, are pleased to have them. Inspectors should have the power to absolutely refuse any coal not up to standard, and having given your inspector this power, trust him, and stand behind him and you will soon find that operators will tender you only the article you have purchased.

T. Duff Smith,
Fuel Agent, Grand Trunk Pacific Railway.

In conclusion, the fuel department, although generally looked upon as one of the minor departments of a railway, is really one of the most important, as we all know that, next to labor, fuel is the greatest expense in the railway budget. It is not an earning department like the freight or transportation departments, but in the hands of a competent fuel agent it does earn money, not by bringing it in but by saving, and the best fuel agent is the man who, while giving greatest efficiency in working will keep down the actual cost of his fuel and handling to a minimum, at the same time keeping watch to see that none of the fuel is being wasted by other departments.

The foregoing paper was read at the International Railway Fuel Association's annual meeting recently.

F. R. Glover, Assistant General Manager, British Columbia Electric Ry., returned to Vancouver, July 10, from a lengthened trip to England and Scotland.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Alberta Central Ry.—M. Neilson, until recently Consulting Engineer, Montreal St. Ry., has been elected Vice President and General Manager, A.C.R.

Canadian Northern Ry.—Following are the officials of the recently established District 6, at Brandon, Man.:—Superintendent, W. E. Roberts; Chief Dispatcher, W. I. Munroe; Trainmaster, G. A. Cunliffe; Bridge and Building Supervisor, T. Harris; Locomotive Foreman, H. Williams; Roadmaster, Portage la Prairie to Regina, Maryfield and Wawanesa subdivisions, all with offices at Brandon; Roadmaster, Brandon Jct. to Calder, Hallboro to Beulah, E. Cheetham, with office at Neepawa, Man.

Canadian Pacific Ry.—A. Rutledge, heretofore Assistant Superintendent, has been appointed Superintendent, Sleeping, Dining and Parlor Cars, and News Service, District 1, embracing the lines east of Toronto and Sudbury, Ont. Office, Glen Yards, Montreal.

E. Eley has been appointed Foreman Passenger Repair Shops, West Toronto, Ont., vice F. W. Perry, appointed Divisional Car Foreman, Toronto.

J. Sindall has been appointed Locomotive Foreman at Sutherland, Sask., vice J. McQuarrie, transferred.

R. Cooper has been appointed Assistant Car Foreman at Moose Jaw, Sask. This is a new position.

J. D. Muir, heretofore Locomotive Foreman at Red Deer, Alta., has been appointed Locomotive Foreman at Medicine Hat, Alta., vice A. Mallinson, transferred to Revelstoke, B.C.

F. McFarlane, heretofore Locomotive Foreman at Crowsnest, B.C., has been appointed Locomotive Foreman at Red Deer, Alta., vice J. D. Muir, promoted.

M. A. Cardell, heretofore shop foreman at Medicine Hat, Alta., has been appointed Locomotive Foreman at Strathcona, Alta.

H. W. McLeod, heretofore Trainmaster, District 3, British Columbia Division, Grand Forks, has been appointed Trainmaster, District 1, British Columbia Division, vice W. M. Ansley, transferred. Office, Revelstoke, B.C.

L. L. Ashton has been appointed Assistant Roadmaster, District 1, British Columbia Division, Revelstoke, vice J. Todd, resigned.

A. Mallinson, heretofore Locomotive Foreman at Medicine Hat, Alta., has been appointed General Foreman, with supervision over Car Department as well as Locomotive Department, at Revelstoke, B.C., vice W. Kennedy, resigned.

A. W. G. Clark, heretofore General Fuel and Locomotive Inspector, Western Lines, Winnipeg, has been appointed Trainmaster in charge of territory between Laggan and Field, B.C., including Field terminals, vice A. N. McIntyre, transferred. Office, Field.

W. M. Ansley, heretofore Trainmaster, District I, British Columbia Division, Revelstoke, has been appointed Trainmaster, District 3, British Columbia Division, vice H. W. McLeod, transferred. Office, Grand Forks, B.C.

A. N. McIntyre, heretofore Trainmaster, District I, British Columbia Division, Field, has been appointed Trainmaster, District 2, Vancouver to and including Kamloops. Office, Vancouver.

T. H. Crump, heretofore Trainmaster, District 2, British Columbia Division, Vancouver, has been appointed Trainmaster in charge of Vancouver terminals, Westminster Jct. and Westminster subdivision. Office, Vancouver.

Central Vermont Ry.—At a board meeting, July 27, E. H. Fitzhugh, here-

USE "DUNTLEY" ELECTRIC TOOLS

For drilling, grinding, and blowing. Our electrical drills, grinders and blowers are supplied arranged for standard voltages, indirect and alternating current. We have recently gotten out a new line of Universal Drills, which have the unique property of being capable of running interchangeably on direct or alternating current of 60 cycles or less. We have also a new line of electric drills for heavy duty, being heavier in weight than the light duty tools, but the increased weight has been distributed to the utmost advantage, and represents increased capacity, higher efficiency, longer life, etc.

tofore Vice President, was elected President, vice C. M. Hays, resigned.

Dominion Atlantic Ry.—At a board meeting in London, Eng., July 12, Sir Thos. G. Shaughnessy and D. McNicoll, President and Vice President, C.P.R., were elected as additional directors of the D.A.R.

Grand Trunk Pacific Ry.—R. D. Thomas has been appointed Assistant to General Superintendent, vice N. B. Walton. who was also Trainmaster, District 4, 5 and 6, promoted. Office, Winnipeg. The position of Trainmaster, Districts 4, 5 and 6, has been abolished.

A. MacNamara has been appointed Assistant to Master Mechanic at Rivers, Man.

E. Hacking has been appointed General Car Foreman at Rivers, Man.

N. B. Walton, heretofore Assistant to General Superintendent, and Trainmaster, Districts 4. 5 and 6, Winnipeg, has been appointed Superintendent, lines Watrous to Edmonton, inclusive. Office, Wainwright, Alta.

Dr. Traynor has been appointed District Surgeon at Kitselas, B.C.

Dr. C. A. Eggert has been appointed Division Surgeon. Office, Prince Rupert, B.C.

The following agents have been appointed:—Hinton, Alta., G. Mann; Mirror, Alta., P. L. Harper; outside agencies: Fort William, Ont., R. Street Co.; Red Deer, Alta., G. H. Lindsay; Lacombe, Alta., J. McKinley; Wetaskiwin, Alta., J. P. Johnston; Strathcona, Alta., H. L. Sandeman.

Grand Trunk Ry.—J. H. Corcoran, heretofore of the Intercolonial Ry. passenger department at Moncton, is reported to have been appointed Travelling Passenger Agent of the G.T.R. in the Maritime Provinces, with headquarters at Moncton.

W. Walker has been appointed Resident Engineer, Ottawa Division, vice A. Gray, who has been appointed Assistant Engineer. Upper Ottawa River Storage, Public Works Department, Ottawa. Office, Ottawa.

John Walker has been appointed Resident Engineer, Northern Division, Allandale, Ont., vice H. W. McAll, resigned.

E. C. Lee. heretofore yard foreman has been appointed General Yard Foreman at Depot Harbor. Ont.

The following agents have been appointed:—Compton, Que., J. A. Provencher; Bowmanville, Ont., E. H. Brown; Anson Jct., Ont., H. F. Ward; Brampton, Ont., W. E. Holwell; Beachville, Ont. W. A. Abray; Komoka. Ont. N. A. McCallum; Pinkerton, Ont. R. M. Sparling; Paisley, Ont., S. Young; Harriston, Ont. J. H. Fawcett; Ayton, Ont. V. Cavanagh; South Indian, Ont., W. Key; Pembroke, Ont., F. O. Parent; outside agency, Sault Ste. Marie, Ont., W. R. Thom.

Temiskaming and Northern Ontario Ry.—J. H. Black, Superintendent. North Bay, Ont., having resigned to become General Manager, Northern Ontario Light and Power Co. at Haileybury, Ont., the position of Superintendent has been abolished.

S. B. Clement, heretofore Chief Engineer, has been appointed Chief Engineer and Superintendent of Maintenance of Way and Motive Power Department. Office, North Bay, Ont.

W. A. Griffin, heretofore Traffic Accountant, has been appointed Superintendent of Traffic, and in addition to his present duties will have jurisdiction over dispatchers, station agents, operators, trainmen, enginemen, and other matters pertaining to transportation. Office, North Bay, Ont.

A. J. Parr, heretofore Freight and Passenger Agent, has been appointed General Freight and Passenger Agent, reporting direct to the Commission. Office, North Bay, Ont.

G. W. Lee, General Agent, North Bay, Ont., heretofore reporting to the Superintendent, will hereafter report direct to the Commission.

H. F. MacDonald, heretofore acting Accountant, has been appointed Accountant, reporting direct to the Commission. Office, Toronto.

The Railway as a Manufacturer.

By E. J. McVeigh Storekeeper G.T.R.
Ottawa Ont.

The railway must necessarily be a manufacturer, but the important question is where will it stop. Beyond doubt the place to stop at is the point where manufacturing does not pay. In other words, where the article can be bought cheaper in the trade than it can be manufactured by the railway. This would seem to be a self evident proposition, but to keep right in the matter, as in many others, requires eternal vigilance on the part of some one. Our railways are today manufacturing many articles that could be bought at less than they cost to make in our shops, and they go on doing this until some one happens to notice it, and that item is dropped. But what is every man's business, is no one's business, and what we require is a more systematic supervision of this branch of our work.

The supply department is much to blame in this matter. How often do we place orders on shops for certain items of material without first making sure that such items can be made there better and cheaper than it could be purchased for. Are such orders not often made with the idea of decreasing our bills payable without considering whether we are, or are not, saving money. It is good business to compare our own cost of manufacture with the price at which we may purchase, but it is not good business to manufacture without carefully making that comparison.

The shop people were not the first to sin in this matter. In fact, they have stood out against it in most cases, until forced to give in, and the bad example so set has led to much evil, for it soon became known that while it was difficult to get certain things by purchase, no one seemed to care about the same thing made in the shops, so it was just made and that was all there was to it. Thus the evil grew, until it got away beyond orders placed by the stores department, and when John Smith of the motive power department. had his requisition for a new desk returned cancelled by the head of his department. who considered that the old desk was good enough for a few years yet, John told his troubles to James Jones, of the car department, and Jim, being a good chap, and knowing that he would want something from the machine shop some day, got busy and made the desk for Smith. His men were not cabinet builders, they didn't have the material to hand, but they managed it all right. And what did it cost? Neither Jim Jones nor anyone else knows, but it is a safe bet that it was at least twice what such a desk could be bought for, and the railway paid, while the purchasing agent was pleased to see the item cancelled, and the head of the motive power department congratulated himself that time on having saved a few dollars.

Had we not encouraged this "make it in the shop" business, the evil would never have grown to its present proportions. We are all more or less to blame in the matter, and it is up to each one of us to help to put a stop to it. The violated principle here makes of this a very serious matter indeed. for our heads of departments no longer control expenditure. It is not the one desk that Jones of the car shop made for Smith of the motive power, but we all soon became Smiths and Joneses. A small leak can let in water enough to sink a ship if left alone, and a leak that grows is naturally much worse.

With our present organization it would be unfair to ask the storekeeper to act as a spy on his friends, Jones and Smith, in their little game of scratch my back and I'll scratch yours, and the fact of the matter is he won't do it. In the first place he won't act the spy because he does not like that kind of thing, and in the second place, he won't be held responsible anyway, and he expects to want his own back scratched a little some day. This is not a simple matter to be disposed of by a general order, and so long as we are human we will never get it just right, just as we never reach perfection in anything. But to hit anywhere near the mark, we must shoot in the direction of it, and to control this business, to any extent, we must have some one on the ground responsibe for it. Why is not the storekeeper the man? It is a question of supplies, and he is the supply man, and it comes back to the question of his extended jurisdiction.

The method that suggests itself is that it should be laid down as a first principle that nothing in the nature of supplies be manufactured in shops other than to storekeepers order. Then it is up to him to see that he does not place orders for items that can be purchased for less money than it will cost to make them; he to inform the purchasing agent on this point, and shop people to have the privilege of returning improper orders, when they can show that they are such. An inspector, or other official, going through the shop and noting work other than regular repairs, may call for stores order covering same. If order cannot be produced, he has found something to enquire into. If it can, and he is still not satisfied, the storekeeper must explain. This would have a tendency to make both shop people and storekeeper careful. Then when it is understood that the storekeeper is responsible, and must account for all such work done in shops, and he has a right to demand explanation, the shop people will have him, as well as other officials, to dodge when doing unauthorized work. This will give Jones a good reason for refusing to make that desk for Smith. Quite frequently he only wants a reason for refusing to do it anyway.

This is not offered as a "cure-all," but like the good doctor's prescription, it is intended to "assist nature," human nature in this case. The storekeeper will not act as a spy on his fellow employes, nor will be continue to "butt in" when he has no authority. But make this his business and he will do it to an extent that will greatly improve the present conditions.

It is not necessary to tell railway men that as soon as a railway becomes big enough it should manufacture its own bar iron, brass and grey castings, machine bolts, track bolts and spikes, frogs and switches, build its own cars, etc., etc. These are large matters that have been fully considered and decided on. But even in these matters we must be constantly on the alert to see that our cost does not go up, and our standard of quality go down. Because we beat all creation last year, we must not take it for granted that we are doing the same thing this year. Men outside who make their living by manufacturing some one of these items are constantly straining every nerve to beat us at the game. We must keep ahead, or, in our own interest, quit. Then conditions change, and where we were forced to manufacture a thing a few years ago because no one else manufactured it, we may find today that it is now made both better and cheaper than we can do it. We should not go on mak-

Railway Signal Service

Even if it costs more to buy and to operate and maintain, it would be up to every railway signal engineer to insist on the use of the Edison BSCO because of its reliability alone.

It does cost more than some batteries, *to buy*, but it costs so much less to operate and maintain and renew, that the difference in first cost between it and other batteries is negligible.

And the great economy that it effects, coupled with its unfailing reliability, leaves no excuse for any railroad being without Edison BSCO Battery Service.

We have some interesting information regarding the work of Edison BSCO Primary Batteries in the service of the big railroads in the country and our book gives full particulars of its construction and its big advantages over other railway signal batteries.

We will be glad to send this information, together with the book, if you'll write us.

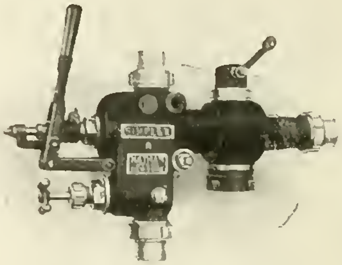
SIMPLEX TYPE "R"



Lifting Locomotive Injector is a self-adjusting and re-starting instrument designed to meet modern locomotive conditions. It will feed water at a higher temperature than ordinary service demands, and the delivering capacity increases with increasing pressure.

This injector works steadily, whether the engine is running fast or slow, and with heavy or light trains.

TITANIUM

The Wonder-Working Alloy

Cuts Out the Weak Spots in Rail Steel

To be sure of sound, healthy rails, free from brittleness, specify that the steel be purified by Titanium Alloy. This wonder-working alloy counteracts the harmful effects of phosphorus and sulphur. It frees the metal from slag and blowholes—makes it tough, ductile—removes the brittleness.

Open-hearth rails are being used in the United States with as high as 0.85 carbon by adding Titanium Alloy. They show unusual qualities of endurance and power to resist shock and impact. Increased cost ranges from $1 to $5 per ton.

Illustration shows Titanium Rails on Manhattan Elevated Railroad, New York City.

Booklet No. 30 will start you thinking. Send for it.

Titanium Alloy is made for Canadian consumption by Electro Metals, Ltd., Welland, Ont.

ing things just because we started to do so some years ago.

Then we must guard against the danger of putting up with an inferior thing because we make it ourselves, in the mistaken idea that we are not losing money by doing so. Take one item that most roads delight to make for their own use, the cold set used by our track men. Now one good cold set will cut 20 rails, and many cut 100. Twenty bad sets will not cut one rail. But it costs us as much to make the bad tool as it does to make a good one, yet we often let the poor article pass because it is made in our own shop, whereas, if we purchased this tool at the same price it costs us to make it we would return them to the seller for replacement, and we would insist, and rightly, that each set be a good one. This applies to many other items, as well as cold sets.

Some years ago one of our railway papers published an article highly commending a shop foreman for a great saving he was making for his company by manufacturing coal hammers out of the 12 in. waste ends of 1¾ in. square tool steel. I drew the editor's attention to the fact that a piece of 1¾ square tool steel 12 inches long, was not generally considered waste, and I figured out for him what a coal hammer so made would cost. It came to about $1.40, and I told him that we used a coal hammer that was quite satisfactory, and it cost us 12 cents. The editor asked me to excuse him from publishing my letters and figures, as he did not want to emphasize the fact that he was as big an ass as the foreman who had tried to gain a reputation for economical management on such a poor foundation.

My own experience leads me to believe that a railway shop designed and equipped for repairs to cars or locomotives cannot turn out special articles cheaply, and we will all agree that we should not make an article at a greater cost than it may be bought for. But is it not also true that we should buy rather than manufacture, when we can manufacture at a cost only equal to that at which we can buy? Do not we increase business generally by so doing, which must rebound to the benefit of the railway, but we make friends for the railways, and surely there never was a time in the history of the world, when a friend was a more valuable asset than today.

I would not attempt to lay down rules for all people to work to, but in this matter of manufacturing there are certain general rules that should be followed, these are:

1.—The factory should be under the charge of the general storekeeper when situated near his headquarters, or under the divisional storekeeper on the division where the factory may be situated.

2.—The factory accounts should be kept separate from store and shop accounts, and a regular monthly balance sheet got out for each factory, their raw material, new tools, and repairs, and their pay roll being their debit, while their credit would be the value of finished article turned out.

3.—Accept no man's word as to what it costs to make anything, find out for yourself. Then compare the cost, and the article with the same thing as it can be purchased, when the thing is of such a nature that it can be purchased.

4.—Have standards and stick to them.

It may or may not pay a railway company to manufacture. It is highly probable that it may not if the business is not closely looked after, and close attention is the only way to know the truth, and I am of the opinion that there are few roads that would not greatly benefit by a careful enquiry into this matter, and the establishing of a system whereby it could, and would, be watched carefully.

The foregoing paper was read before the Railway Storekeepers' Association recently.

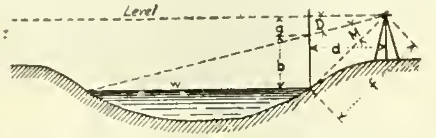
Some Methods of Finding The Width of a Stream.

By H. A. Kohnharst, Lexington, Ky.

Where it is desirable in surveying to find the approximate width of a stream of moderate size, without having to cross it, one of the following methods may be found of service. Existing formulas will probably be found more accurate for streams of considerable width, and the use of the proposed ones will be more or less limited, in consequence. The advantages claimed over other ways are, the short time taken, and the fact that only one set-up is required.

The operations are as follows: Set up a transit on the bank, at a convenient distance from the edge of the water. Level the telescope, and have the rodman hold the rod as close as possible at the edge of the water. Take the reading, which is a + b. Then depress the telescope and focus at the opposite edge of the water, and take the reading on the rod. Call this b. If the first formula is used, the horizontal distance from the plumb line of the instrument to the edge of the water must be measured. Call this d. Let w be the width sought. Then we have two similar right triangles if the rod has been held plumb, which should be done. From the proportion of the sides,



$$w = \frac{bd}{a} \quad \ldots\ldots\ldots\ldots\ldots (1)$$

This method may be used if only a level is available, although the determination of the horizontal distance d to the edge of the water may be found somewhat awkward.

Where the transit is used, take the angle of depression, D, the reading b as taken in the first formula, and use this formula:

$$w = b \cot D \quad \ldots\ldots\ldots\ldots (2)$$

A third method is to obtain the inclined distance f, from the pivotal centre of the telescope to the edge of the water, and then to read the two vertical angles, one, D, from the horizontal to the opposite side; the other, M, from the opposite side to the nearer edge of the water, if the bank does not interfere with the line of sight. This gives three quantities in a scalene triangle, and, by the law of sines,

$$w = \frac{f \sin M}{\sin D} \quad \ldots\ldots\ldots\ldots (3)$$

The accuracy of the first formula will be increased if the distance of the set-up from the water is nearly equal to the width of the stream, as then the two triangles approach each other in size. The second formula was found to be more accurate than the first, by actual test, across a 90-ft. stream, though it may not be in all cases. Conditions in a particular case will determine which of the three formulas is to be used.—Engineering News.

The Board of Railway Commissioners, July 18, granted leave to the White Pass and Yukon Ry. to reopen the case relative to its freight rates. The Board made an order for reduction in Jan., the operation of which has been suspended pending the rehearing, which has been set down for Oct.

Among the Express Companies.

Press reports from Regina, Sask., July 6, state that the Dominion Ex. Co. has abandoned its appeal against the recent judgment, which gave the city the right to tax the company's offices here.

The Board of Railway Commissioners has ordered the Dominion and Canadian Ex. Cos. to perform a specified collection and delivery service in Belleville, Ont., to perform similar services on both sides of all streets there, and to fix municipal boundary lines in which municipal collection and delivery services are established.

The Canadian Northern Ex. Co. has discontinued its service west of Kindersley, Sask., closing offices at the following places: Alsask, Fairmount, Fuller, Harwell, Merid and Pinkham, Sask. The office at Vandura, Sask., has also been closed, and waybill offices have been opened at Rosebank, Man., and Langbank, Sask.

In 1909 and succeeding years the Dominion Parliament voted sums for the purpose of promoting the development of a traffic in fish from the Maritime Provinces to inland points in Canada. The Minister of Marine stated in the House of Commons recently that the total weight of fish transported had been 7,276,847 lbs., of which 59,672 had been transported by freight in the financial year of 1907. The total weight carried in the three succeeding years by express and freight was as follows:—

	Can. Ex.	Dom. Ex.	Freight	Total
1908-09	190,691	173,028	213,723	577,442
1909-10	1,239,443	1,572,570	157,520	2,969,533
1910-11	1,599,958	1,837,932	1,837,932	3,670,200

The figures for 1910-11 are not complete, as the returns are not yet all in.

Telegraph and Cable Matters.

W. M. Thompson is reported to have been appointed local manager, C.P.R. Telegraphs at Saskatoon, Sask., vice Skatebol, resigned to enter private business.

Press reports from Regina, Sask., state that the C.P.R. has abandoned its appeal against the judgment which recently gave the city the right to levy taxes on the company's telegraph offices there.

B. S. Jenkins, General Superintendent, C.P.R. Telegraphs, Western Lines, was in Vancouver recently on inspection trip, and is reported to have stated that the rapid development of territory necessitated increased telegraphic facilities, and that two new lines would shortly be added to the system, between Field and Kamloops.

At the recent annual convention of the Association of Railway Telegraph Superintendents at Boston, Mass., F. E. Camp, Inspector of Telegraphs, C.P.R., Revelstoke, B.C.; E. A. Speer, Inspector of Telegraph Construction, C.P.R., Toronto, and E. M. Payne, Inspector of Telegraphs, C.P.R., Winnipeg, were elected as active members. A paper on some hints was read by W. J. Camp, Electrical Engineer, C.P.R. Telegraphs, Montreal.

J. T. Phelan, Superintendent of Government Telegraphs, returned to Prince Rupert, B.C., at the end of June, from an inspection trip up the river and into the Naas district. He reported that work was somewhat impeded in the latter district, but that the second gang, stringing wire from Alice Arm is progressing favorably from that point across the Naas River. He stated that the telegraph line to Stewart would be completed before the winter, as also would the line to Goose Bay.

Ferranti

TRACTION METERS

The demand for Car Meters has grown very rapidly and the economies effected by the installation of these instruments have more than justified their use.

The guaranteed accuracy of the Ferranti Traction Meter is 2½ per cent. from full load to 1/10th load.

Will stand 100 per cent. overload for ten minutes.

Railway Rolling Stock Notes.

The International Ry. of New Brunswick is reported to have purchased a locomotive from the Intercolonial Ry.

The G.T.P.R. has received two colonist cars, nos. 2028 and 2029, from the Canadian Car and Foundry Co., Montreal.

The Canadian Northern Ry., between June 15 and July 15, ordered 40 thirty ton flat cars, 150 box cars, 15 first class coaches, 10 second class coaches, and three dining cars, from the Canadian Car and Foundry Co., Montreal.

The Temiskaming and Northern Ontario Ry. has received one American railroad ditcher from the American Hoist and Derrick Co., St. Paul, Minn., and one parlor cafe care, the Sesekinika, from the Canadian Car and Foundry Co., Montreal.

Press reports recently stated that the Canadian Northern Ry. had placed an order for 20 consolidation locomotives. We are officially advised that this is not an additional order to those already mentioned in our columns. The order for 20 consolidation locomotives was mentioned in our Jan. issue, and details were given in our Feb. issue. These locomotives will be equipped with the Schmidt superheater.

The New Brunswick Coal and Ry. Co. has added to its equipment a combination first class smoker, baggage and postal car. It was built in Moncton, N.B., and is 55 ft. long, the exterior finished in Pullman green and gold leaf. The first class compartment is finished in light ash, the window sashes in cherry, and fitted with reversible seats upholstered in green plush. The smoke room is similarly finished with pantasote upholstering.

The Canadian Northern Ry., between June 15 and July 15, received the following additions to rolling stock: three second class coaches, two first class coaches, and 40 flat cars, from the Canadian Car and Foundry Co., Montreal; four second class coaches and 55 stock cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 30 Hart cars from the Hart-Otis Car Co., Montreal; six 10-wheel locomotives from the Montreal Locomotive Works, and 110 box cars from the Nova Scotia Car Works, Halifax.

The Intercolonial Ry. has ordered the following rolling stock: two Pacific and three 10-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont.; 230 thirty ton steel frame box cars, one refrigerator car, two baggage cars, 20 forty ton steel underframe platform cars, 25 Hart-Otis all steel dump coal cars, 50 tons capacity, from the Canadian Car and Foundry Co., Montreal; 50 forty ton steel underframe platform cars, 50 forty ton wood platform cars, two full postal cars, and two standard stock cars from the Nova Scotia Car Works, Halifax, N.S.

Following are the chief details of the refrigerator car which the Intercolonial Ry. has ordered from the Canadian Car and Foundry Co., Montreal:—

Capacity	60,000 lbs.
Length over end sills	36 ft.
Width over side sills	8 ft. 11 in.
Door opening	5 ft.
Bolsters	Simplex
Draft springs	M.C.B. class G
Couplers	Janney cast steel, shank 5 by 5 in., butt ends 8½ in.
Air brakes	Westinghouse K.C. 812
Trucks	Arch bar type

Following are the chief details of the 207 box cars which the Canadian Northern Ry. has ordered from the Canadian Car and Foundry Co., Montreal:—

Length inside body	35 ft. 10¾ in.
Width inside body	8 ft. 6⅛ ins.
Height top of floor to bottom of carlin	8 ft.
Length over end sills	36 ft. 9¾ ins.
Width over side sills	9 ft. ¾ ins.
Width at eaves	9 ft. 7⅜ ins.
Height over all	14 ft.
Truck centres	26 ft. 9¾ ins.
Door opening	7 ft. 6 ins. by 6 ft.
Bolsters and brake beams	Simplex
Draft springs	M.C.B. 6¼ by 8 ins.
Air brakes	Westinghouse K.C. 812
Trucks	Arch bar type
Journal boxes	M.C.B. cast iron
Axles	Steel
Wheels	Cast iron, 33 ins.
Brake shoes	Steel back

Following are chief details of 40 thirty ton flat cars, which the Halifax and South Western Ry. is having built by the Canadian Car and Foundry Co., Montreal:—

Length over end sills	36 ft. 9¾ ins.
Length over dead woods	37 ft. 9¾ ins.
Width over side rails	9 ft. ¾ in.
Width over decking	9 ft. 3 ins.
Width over stake pockets	10 ft. 1½ ins.
Height top of rail to top of floor	4 ft. 1 in.
Top of rail to centre of coupler	2 ft. 10½ ins.
Top of rail to top of brake mast	6 ft. 3 ins.
Body bolsters	Simplex
Couplers	R. E. Janney
Draft springs	6¼ by 8 ins.
Air brakes	Westinghouse K.C. 812
Trucks	Arch bar type
Truck bolsters	Simplex
Side bearings	Susemihl
Brake beams	Simplex
Journal boxes	Cast iron
Journal bearings	M.C.B.
Brake shoes	Steel back

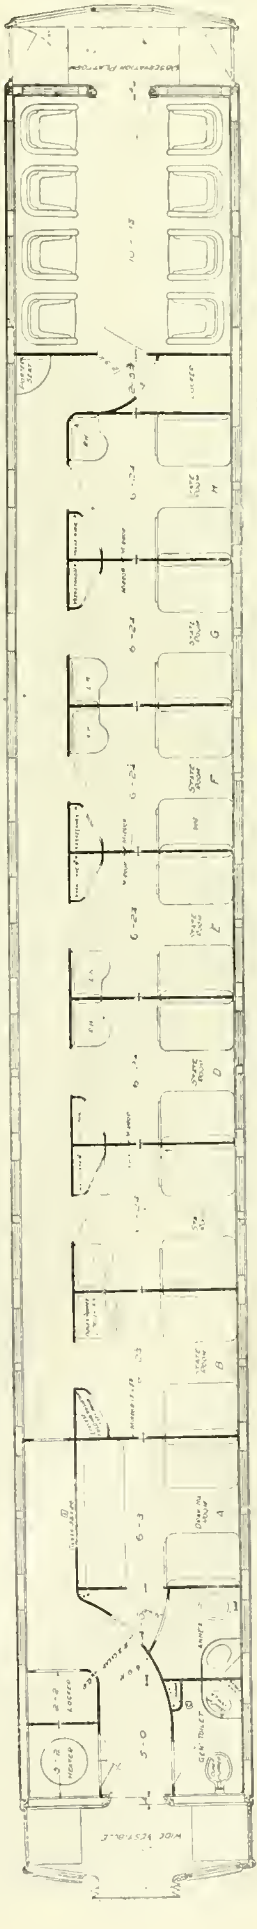
Following are chief details of the 13 steel underframe flat cars, which the C.P.R. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:—

Length between channel and sills	41 ft. ¼ in.
Length over dead woods	42 ft. 2 ins.
Width over frame	8 ft. 10 ins.
Width over sill pockets	9 ft. 7⅝ ins.
Width over decking	9 ft.
Height, top of rail to top of decking	4 ft. 2¾ ins.
Height of coupler from rail	2 ft. 10½ ins.
Wheel base of trucks	5 ft. 4 ins.
Draft springs	M.C.B. Class G
Air brakes	Westinghouse K.C. 812
Trucks	Arch bar type
Wheels	Cast iron, 33 ins., 695 lbs.
Axles	Steel M.C.B.
Journals	5 by 9 ins.
Journal boxes	McCord malleable
Springs	C.P.R. standard 40 ton
Brake beams and bolsters	Simplex
Side bearings	Susemibl
Journal bearing wedges	Drop forged
Brake shoes	Steel back

Following are the chief details of the 230 steel frame box cars which the Intercolonial Ry. has ordered from the Canadian Car and Foundry Co., Montreal:—

Capacity	60,000 lbs.
Length inside body	36 ft.
Width inside body	8 ft. 6½ ins.
Length between end sills	36 ft. 11½ ins.
Width over side sills	8 ft. 9½ ins.
Width at eaves	9 ft. 3½ ins.
Height top of brake mast	13 ft. 9½ ins.
Side door opening	5 ft.
Air brakes	Westinghouse K.C. 812
Couplers	Janney cast steel, shank 5 by 5 ins., butt ends 8½ ins.
Draft springs	M.C.B. Class G
Trucks	Arch bar type
Axles	Steel
Bolsters and brakebeams	Simplex
Side bearings	Susemihl
Journal bearings	M.C.B.
Journal boxes	McCord
Journal wedges	Drop forged
Wheels	M.C.B. 33 ins., cast iron

Following are the chief details of the 20 steel underframe flat cars, which the Intercolonial Ry.



Compartment Sleeping Cars being built by the Canadian Pacific Ry. For description see July issue, page 66.

has ordered from the Canadian Car and Foundry Co., Montreal:—

Capacity	40 tons
Length between end sills	36 ft.
Length over side sills	[illegible] ft. [illegible] ins.
Width over side stakes	9 ft. 7⅝ ins.
Centre to centre of trucks	26 ft. 1¾ ins.
Air brakes	Westinghouse K.C. 812
Couplers	Janney cast steel, 5 by 5 ins. shank, 8½ ins. butt ends
Draft springs	M.C.B. Class G
Trucks	Arch bar type, 80,000 lbs. capacity
Axles	Steel
Bolsters and brake beams	Simplex
Side bearings	Susemihl
Brake shoes	Steel back
Journal bearings	M.C.B.
Journal boxes	McCord
Journal wedges	Drop forged
Truck wheels	M.C.B. 33 ins., cast iron

The C.P.R., between July 13 and 24, placed orders for the following rolling stock, at its Angus shops, Montreal: 102 box cars, one ballast car, two flat cars, six stock cars, three vans and one flat express car.

The C.P.R. between July 13 and 24, received the following additions to rolling stock: 376 box cars, 288 stock cars, 46 refrigerator cars, eight tourist cars, 22 suburban cars, two sleeping cars, 23 vans, one snow plow, one stores supply car, six dining cars, two second class cars, 20 ballast cars, two observation sleeping cars, nine D.10 locomotives, and one Mallet locomotive, from its Angus shops, Montreal; five D.10 locomotives from the Canadian Locomotive Co., Kingston, Ont.; one Lidgerwood unloader from Allis-Chalmers-Bullock, Ltd., and one ballast spreader from the U.S.

Following are the chief details of the two Pacific and three 10-wheel locomotives which the Intercolonial Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont.:—

	Pacific.	10 wheel.
Weight on drivers	133,55[illegible] lbs.	126,000 lbs.
Weight in working order	19[illegible],550 lbs.	155,000 lbs.
Wheel base, rigid	12 ft. 7 ins.	11 ft. 1 in.
Wheel base, total, engine	31 ft. 6 ins.	24 ft. [illegible] ins.
Wheel base, engine and tender	57 ft. 10¼ ins.	51 ft. 4½ ins.
Length over all	67 ft. 3¼ ins.	60 ft. 8½ ins.
Heating surface, firebox	162 sq. ft.	165 sq. ft.
Heating surface, tubes	2,554 sq. ft.	1,885 sq. ft.
Heating surface, total	2,716 sq. ft.	2,050 sq. ft.
Driving wheels, diam.	72 ins.	63 ins.
Driving wheel centres	Cast steel	
Driving journals	9 ins. by 12 ins.	
Cylinders, diam. and stroke	21 by 28 ins.	20 by 26 ins.
Boiler type	Radial stayed, wide firebox	Radial stayed, ext. wagon top
Boiler pressure	200 lbs.	200 lbs.
Tubes, no. and diar.	232 2¼ ins.	27[illegible] 2 ins.
Tubes, length	19 ft.	13 ft.
Brakes	Westinghouse	American E.T.
Weight of tender loaded	122,2[illegible] lbs.	120,000 lbs.
Capacity, water	5,000 imp. gals.	5,[illegible]00 imp. gals.
Capacity, coal	10 tons	10 tons
Tank style	Water bottom	U shape
Truck style	4 wheel simplex bolster	4 wheel
Wheels, diar.	36 ins.	36 ins.
Wheel type	Wrought iron centres	Steel tires
Journals		5½ by 10 ins.
Brake beams	Simplex	Simplex

Vessels Removed from the Register.—The following vessels were removed from the register during May, for the reasons assigned:—Steam, Cheronea, St. John, N.B., 2,060 tons, sold to foreigners; [illegible], Windsor, N.S., 267 tons, lost at [illegible]. Sailing, Audley B., St. Andrews, N.B., 1[illegible] tons, lost at sea; D. Cronan, Quebec, 1[illegible] tons, out of existence; Evelyn, Charlottetown, P.E.I., 167 tons, transferred to Barbados; F. W. Pickels, Quebec, [illegible] tons, lost at sea; G. Walter Scott, St. John, N.B., [illegible] tons, broken up; [illegible], Quebec, 27 tons, broken up; Sarah Jane, Windsor, N.S., 17 tons, broken up; [illegible], [illegible], N.S., 79 tons, stranded.

J. [illegible] has been appointed [illegible] Manager, Canadian Northern Telegraph Co., [illegible]. He has lived in Calgary, Alta., for some time, and was for a number of years in the Great North Western Telegraph Co.'s service at Toronto.

O-B Extruded Trolley Ear

Sectional View.

O-B Extruded Ears are making some remarkable service records on large roads, under the most severe conditions. We believe they will do the same on your road.

It is as different from the ordinary cast ear as night is from day. The sooner you find out about them, the quicker you will reduce your ear maintenance expense.

Our new Supplement to Catalogues Nos. 8, 10 and 20 contains full description of this and many other important new devices, including Overhead Materials, Thermo Bonding Process, Car Equipment Specialties, O-B Hi-Tension Wall, Roof, Pin, Pillar Insulators, Suspension Clamps, etc.

Write for copy to-day. Our personal representative will call on request.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. The Use of Tee Rails in Street Railway Construction.

By F. G. Simmons.

Mr. Simmons, who is a Canadian by birth, and is Superintendent of Construction and Maintenance of Way of the Milwaukee Electric Ry. and Light Co., read the following paper recently before the Engineering Society of Wisconsin, of which he is President, and we are indebted to him for having furnished us with a copy of it.

The title of this paper refers solely to paved streets, as we think anyone with any knowledge of the subject will admit that where a street railway is built as an exposed track or in unpaved districts, there is no question as to the use of the type of rail commonly known under the designation "tee." The fact that the question is raised where tracks are to be laid in paved streets is, of course, the only reason for the preparation of this paper. Arguments are urged on both sides and it is the purpose of the author to present as many of these arguments both for and against the use of tee rail as he can find and with each argument to present the best counterbalancing argument he can find or devise.

No mechanical method or device is perfect and it is therefore the desire of a conscientious engineer in investigating any given problem, for the purpose of determining a course of procedure, to ascertain as accurately as possible all arguments for and against any particular method or device. That one which investigation shows to be supported by the best and most logical representation and arguments it is fair to assume is the most correct, and therefore the most desirable. In preparing this paper the author believes that in presenting and analyzing all the arguments he has found available he may make it easier for many busy engineers to determine upon which side lies the stronger argument and thus arrive at a decision more in keeping with experience and fact than might otherwise be possible.

Practically all engineers in charge of street railway work are unqualifiedly in favor of the use of tee rail and where an exception occurs it is always in one of the very largest cities of the country, the only cases that have come to the author's knowledge being in New York Philadelphia and Chicago. In these three cases the engineers all agreed that tee rail was preferable in such places, as the team travel was not too heavy on the track portion of the street, but that when a constant stream of vehicles was encountered on this space, a girder or grooved girder type of rail was preferable. We wish to urge in this connection that where the track portion of the street is so constantly occupied by vehicles as to make this argument tenable, it has become manifestly inadvisable to continue surface lines and the substitution of either elevated or underground means of transit has become imperative. Where surface congestion has become so great that the surface street cars are limited in their average attainable speed by a constant stream of vehicles, the transit provided is absolutely undesirable and should be replaced by some more efficient method.

One of the arguments most insisted on by those who oppose the use of tee rail is that the paving along the rail is subjected to extreme wear and ruts out with undue rapidity. Now, the undue wear on the street paving along the gauge line of the tee rail is undoubtedly caused, or has been caused in the past, by inadequate methods of laying the paving abutting this point. At no other point on the street can there be any difference in wear whether the rail is tee, girder, grooved girder or any other kind, providing you grant that you are not trying to create a skidway for teams in the constructing of a street railway track. The increasing demand for expeditious transit in our rapidly expanding cities would seem to make the team skidway idea ridiculous.

The paving used in conjunction with all track construction should undoubtedly be of the block or brick variety; the necessity for minor repairs to the track structure making a sheet variety of paving altogether inadvisable. It is the opinion of the author that any engineer urging the use of sheet asphalt paving in connection with street railway tracks is either inadequately educated as to the results to be obtained, wilfully oblivious to the interests of the street railway company or personally interested in the promotion of asphalt paving.

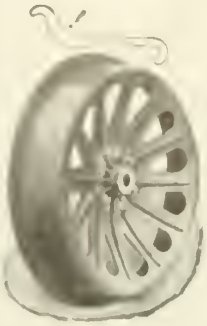
We think it is rapidly becoming apparent to all that asphalt paving in contact with or immediately adjoining the rails is not desirable and one of the great and ruling reasons therefor is this:—The rails being of steel, the vehicular traffic passing back and forth over and along them is bound to wear or scoop out the asphalt immediately adjacent to them. It has been considered advisable in the past to place rows of granite blocks or bricks on each side of the rails, but while this does to a large extent take up the minute vibration which is incident to the somewhat elastic foundation necessary, it only serves to transfer the undue wear to a point further from the rail itself and does not remove this objection. Many cities have and are requiring the use of a grooved girder rail, but the writer submits and maintains that this does not preserve the integrity of the abutting asphalt paving to any greater extent than in the case of the ordinary and more serviceable tee rail. In Minneapolis, where the street railway company maintains only that portion of the paving inside the rails of its tracks and the city maintains all the paving from the rail to the curb, they consider it advisable to pave in the tracks with granite or sandstone blocks, no matter what the character of the paving that is used for the remainder of the street, and when asphalt is used for the city's portion, the city places two rows of granite blocks against the outside rails, but, as argued above, this only serves to transfer the point of wear; it does, of course, not preserve the abutting asphalt from the disintegration set up by the rail vibration.

Other types of paving are numerous and the writer recommends for use on heavily traveled streets where street railway tracks exist, granite in the case of heaviest travel, or brick for business streets not heavily traveled. For residence streets where street railway tracks exist, we believe that with proper methods used, a satisfactory paving may be secured of either brick, creosoted block or some paving of similar characteristics. Asphalt, properly laid, has sufficient field on boulevards and residence streets where no street railway tracks are present.

Too much attention has been paid in the past to the contentions of the various contractors and supply-men, whose interests usually extended only to securing a market for their products. Arguments of this character should be absolutely ignored and a determination made only on the findings as to conditions and physical requirements. Petitions from property-owners should also be ignored except only as they can show a thorough knowledge of the subject. The writer has encountered cases where types of paving have been laid on certain streets at the solicitation of the abutting property owners when every expert and engineer possessing any knowledge of the subject whatever was aware that a mistake was being made, and we recall one case in Milwaukee, when a brick paving was laid in this manner on six blocks of street where the traffic was so heavy that the bricks—which were not first class to commence with—were worn through to the concrete foundation, in places, within six months of their installation.

When the evolution of the horse railway into the mechanically propelled street railway began, the first successful installations were those of the cable railways. In a number of the western cities no departure was made from the use of tee rail, a heavier section only being used. In many of the eastern cities, however, it was thought advisable to develop a tram-girder type of rail which later has been modified into a grooved girder. The original idea obtaining at that time was the accommodation of vehicular traffic. How erroneous this was many of us have since learned, the necessity for rapid transit having become so insistent that nearly everyone understands the importance of keeping the vehicles off the tracks in order that the great street car riding public may come and go at a rate much in excess of the slow moving horse tram-car. Many cities which a few years ago were demanding the installation of a tram or grooved girder rail are now convinced that a much better and more enduring type of construction may be obtained by the use of the so-called Shanghai tee rail, and we believe its use will soon be general.

The method of applying the paving adjacent to the gauge line of the rail has been, through the development of the various types of permanent paving, the most difficult one. A prejudice has existed, and in some quarters still exists, in favor of a groove, either moulded or cut in the blocks or bricks, and many arguments are urged in support of this method. We wish, however, to submit the fact that up to the present it has proven anything but satisfactory. In granite the best results are probably evident, but even here the difficulty of obtaining a smooth and even cutting of the hard material is a serious objection and there is no doubt but that in vitrified brick the result is absolutely disastrous, the sharp edge of the groove wearing away at once and the life of the material at this point is subjected to undue wear from the beginning. A new method of treating this gauge line proposition is coming to the fore and



Kalamazoo Reinforced Pressed Steel Wheels

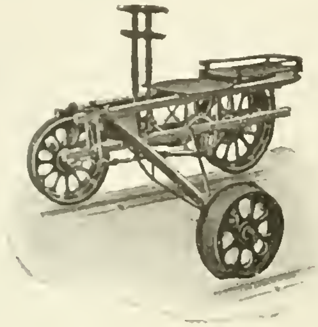
For Hand and Push Cars

They always wear much longer than others, giving fully 100 per cent. greater service than any other wheel of similar design or weight.

Kalamazoo Wheels are strongest where other wheels are weakest—in the throat of the flange (See sectional cut).

Made in three sizes, 16 in., 20 in., 24 in.

Twenty Styles of Kalamazoo Velocipedes



The Kalamazoo idea is to provide the proper velocipede for each different need. No difference what you want or for what purpose, we have it

rapidly gaining favor all over the West and Middle West. This consists simply in depressing the regular block or brick and extending it under the head of the rail at the gauge line, giving the paving a flat crown between the rails of the tracks. We have adopted this method in Milwaukee and find that it works very well indeed, after about four years of actual experience. It has been adopted in a number of other places with uniformly good results. Many people have objected to this type of construction on the ground that it offered too much obstruction to the team travel passing on the streets, but actual tests show that on the average the resistant forces are less for vehicles passing in all directions than when two grooves are to be overcome; and we wish to say again that the miles of this type now in place in Milwaukee are giving very satisfactory results.

It might be well to say at this time that the use of a 7 inch Shanghai tee rail for city track construction has been adopted and is recommended as best practice by the American Electric Railway Engineering Association, and this action has been concurred in by the Central Electric Association, and will undoubtedly secure the approval of all the local electric railway associations of the country, and I wish also to say to the large number of municipal officers present that any street railway corporation of any acumen whatever is just as desirous as you can possibly be to obtain the best results which can be achieved, both as to durability of paving and minimum resistance to vehicular traffic on account of the presence of the rails.

In discussing the gauge line question with a prominent municipal officer recently he urged that a narrow groove was permissible, because the era of the narrow tired vehicle was rapidly coming to a close and auto tires and auto truck tires would soon supersede all the old flat and narrow metal tires. The author believes this is so, but this would entirely do away with the arguments against the method of laying the paving under the head of the rail, as the skidding of vehicles is practically the only bad effect to be feared and this cannot occur in the case of auto and auto truck tires.

George Weston, of the Board of Engineers in control of the entire street railway situation in Chicago, speaking before the American Electric Railway Engineering Association at its session at Denver on Oct. 5, 1909, and discussing the recommendation of the committee on way matters said in part: "I believe every engineer who has studied track construction and has anything to do with its maintenance and its care would prefer a tee rail track, provided the pavement can be laid in a permanent manner that will withstand wagon traffic, abrasion, etc. We have laid very little of the tee rail track construction in Chicago up to this time, and where we have undertaken to install it we have met with serious objections from aldermen and other city officials, teamsters and citizens generally, who seem to object to the use of tee rail on account of the pavement. The street railway people believe the objection is due principally to prejudices based upon misinformation. The paving done in the tee rail track construction was brick, with a special nose brick to form a groove for a flangeway next to the rail. A great amount of heavy teaming exists on some portions of the streets on which this track was laid, resulting in the abrasion or breaking down of this groove or nose brick, and we have recently adopted a method of laying the track which is illustrated in the paper under discussion to-day, the ordinary paving brick being laid against the web of the rail and crowned in the centre. We believe from the experience we have had with the nose brick that this method of paving will be more satisfactory. We have not tried as yet the use of granite block, along the side of the rail, but I am favorably impressed with the advantage to be derived from the use of this superior wearing material."

Speaking in the same discussion at Denver, Mr. Cran, one of the prominent engineers connected with the electric railways of Connecticut, said in part, "We are thoroughly in favor of the tee rail, and while we have never made what might be called official standards, and promulgated them generally, we have adopted three types of tee rail. One is the 5-in. 80-lb. A.S.C.E. section, which we use for trunk line interurban work, and even for work in small towns we find that we can construct a 5-in. or even a 6-in. macadam roadway with that rail and have very good success with it. Then we use the 7-in. 95-lb. tee rail, Milwaukee section, such as Mr. Simmons provides, or section 273. The matter of a groove brick at the rail is a delusion, as far as my experience is concerned, and I do not believe in it. The groove wears out under team traffic and produces a rut there into which narrow tread wheels get."

Walter H. Evans, of the Indiana Union Traction Co., speaking at the same time, said: "In connection with the tee rail section, which is recommended by the committee, I have been connected with cities where there was absolutely nothing but tee rail, with the exception of what old rail it had not been found necessary to replace, and in connection with what Mr. Winsor has said complimentary to the city of Denver, I might just say that Denver was probably the first city in the country to adopt tee rails and they have used nothing else since. In my opinion the tee rail is largely responsible for the excellent track condition which you see here to-day."

Mr. Bong, of the Salt Lake City St. Ry. Co., discussing the same matter, said: "In regard to the remarks on tee rail construction, I agree with the ideas of the gentlemen who have spoken on that subject. I believe the engineers should stand solidly for the tee rail, and I believe that finally by fighting for it the municipal authorities will come to time, for as a matter of fact the best tracks maintained and operated are of tee rail construction. In Salt Lake City we use nothing but tee rail, and I believe today we have a very good construction. We know that Denver has used the tee rail for years, and it has proved a success. In Salt Lake City we have some girder rail construction which has not proved a success, but a failure. The ball wears and the wheels cut down to the flanges, which causes more friction and requires more power to pull the cars. It is claimed that the girder rail helps the teamsters, but I think that is a mistake, as they get into the ruts and cannot get out without breaking a wheel. That has been the experience in most cities."

G. G. Young, consulting engineer, of New York City, in a written discussion of the subject read before the Association at this same time also said in part: "Your committee on way matters has presented an interesting and valued report, and it is hoped that the discussion will result in some action in recognition of the advantages and adaptability of the use of tee rails in paved streets, and for all classes of traffic conditions. The companies and cities that have had the greatest experience with the use of tee rails in paved streets are its strongest advocates, and therefore their opinions must have the most weight. The question of the proper dimensions and type of rail has been heretofore so dependent on the types and kinds of paving that the two questions should be considered together, and as the question of economical maintenance is acknowledged by the committee to be of such serious importance it would seem most proper to consider the matter of economical maintenance concurrency with the question of the selection of the proper rail and paving. Where a suitable concrete base is used for both track and paving foundations there is no difficulty in laying a smooth top paving of a type suited for any vehicular traffic in connection with the use of a standard section of tee rail, and, if properly designed and constructed the pavement should not wear in ruts. Tee rails present much less metal on the street surface and therefore are better for street traffic, and can be made satisfactory for all classes of street traffic by adoption of the proper type of paving. Companies now using the flange tread type of girder rail would find that tee rail would be cheaper and more satisfactory, and the street traffic would not produce ruts along the rails if modern smooth paving on concrete base was used.

"In every case that has come under my observation and experience tee rail has been locally acknowledged as very much quieter, and its only objection is an assumed one of difficulty in paving, which does not exist, in fact, where pavements are properly laid on a suitable concrete base."

(*To be continued in Sept. issue.*)

Electric Railway Notes.

The British Columbia Electric Ry. has received two electric locomotives.

Four single truck cars for the Regina, Sask., Municipal Ry. have been received from England.

The Pay-As-You-Enter Car Corporation has declared a quarterly dividend of 1¾% on the preferred stock.

Charles Hugill has been appointed Track Superintendent, Sandwich, Windsor & Amherstburg Ry., vice T. Kinney, deceased.

The Moose Jaw Electric Ry. has received two 21 ft. electric cars, 31½ ft. over all, mounted on 21-E trucks, from the Ottawa Car Co., Ottawa, Ont.

The Port Arthur and Fort William Electric Ry. has received two 33½ ft. pay-as-you-enter cars, 46½ ft. over all, mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa, Ont.

The Sherbrooke St. Ry. has ordered two 18½ ft. single truck pay-as-you-enter cars, 29 ft. over all, complete, mounted on 21-E trucks, from the Ottawa Car Co., Ottawa, Ont.

The Temiskaming & Northern Ontario Railway Commission is said to have under consideration the purchase of some 30-ton interurban cars for the Nipissing Central Electric Ry., which it now controls.

The standard tariff of maximum freight rates between stations on the Vancouver, Fraser Valley and Southern Ry., a line owned by the British Columbia Electric Ry., connecting Vancouver and New Westminster, through Hastings township, has been approved by the Board of Railway Commissioners.

Under the municipal by-law governing the operation of the Hamilton, Grimsby and Beamsville Ry., the company's cars may be stopped anywhere to take up a passenger. As a result of a conference, 90 stopping places between Hamilton and Beamsville have been selected, and the Ontario Railway and Municipal Board is being asked to confirm the agreement.

The Kingston, Portsmouth and Cataraqui Electric Ry., which recently commenced operating a Sunday service, has declined to accede to the request of the Lord's Day Alliance to discontinue the service. The company's franchise allows the operation of cars on Sundays, and the management states that so long as the majority of the citizens desire it, the cars will be run.

Guelph, Ont., press reports state that Hilliard Foster, of Toronto, and formerly of Guelph, has been appointed Manager of the Guelph Radial Ry. and the Guelph waterworks, both of which are owned by the city, at a yearly salary of $1,300, to succeed J. J. Hackney, who has been appointed Manager of the Public Utilities at Port Arthur, Ont. Mr. Foster has recently been engaged on trunk sewer construction in Toronto.

The Montreal St. Ry. has ordered 10 steel street car bodies of the pay-as-you-enter type, of which the following are the chief details, from the Canadian Car and Foundry Co., Montreal:—

Length over end sills	32 ft. 3 ins.
Length over platform	45 ft. 8½ ins.
Width over side sills	8 ft. 3 ins.
Wheel base of car	20 ft. 8 ins.
Interior finish	Cherry
Head lining	Composite board
Ventilators	Garland, 8 per car
Seats	Rattan

J. J. Hackney, heretofore Manager the Guelph Radial Ry. and of the water works at Guelph, Ont., has been appointed Manager of Public Utilities at Port Arthur, Ont. The statement that he will have full charge of all public utilities, which in a year's time will include the electric railway, is incorrect, as the award of the Ontario Railway and Municipal Board, placing the management of the Port Arthur and Fort William Electric Ry. under a joint commission of the two cities, does not expire until Dec. 1, 1913.

◆

Projects, Construction, Betterments, Etc.

Birds Hill and Springfield Ry.—Application was made, July 14, to the municipal council of St. Paul, Man., for a franchise for the supply of electricity for power, light and heat purposes, to a syndicate which controls the B.H. and S. Ry. charter. The agreement includes a franchise for the operation of an electric railway. The provisional directors are:—N. McGregor, J. W. McKinley, S. R. Henderson, T. E. Meredith and A. E. Hosken. A similar application is being made to the municipality of Springfield.

The St. Paul's municipal council, July 15, declined to approve of the company's application for a franchise; but promised to consider a new proposition at the August meeting.

Brandon, Man.—The city council has under consideration a bylaw granting a franchise for the building of an electric railway in the city to J. D. McGregor, as representative of a syndicate. Mr. McGregor and the syndicate's engineer, H. E. Mole, discussed the matter with the council, June 30, and the matter is still under consideration. (July, pg. 683.)

British Columbia Electric Ry.—G. P. Norton, H. G. Brown and E. M. Harvey, directors of the company residing in England, completed an inspection of its various plants and interests, July 12, the trip ending at Victoria. The local managers of the company at Vancouver, New Westminster and Victoria, had charge of the party in their own districts. In an interview H. G. Brown said within the last year or so the company had expended over $1,000,000 on the Jordan River power development, and it was expected to have the plant in operation in Sept. The company was face to face with the necessity for the expenditure of $500,000 on relaying tracks in Victoria, and had undertaken the building of a line in the Saanich peninsular at a cost of about $600,000.

The plans for the Saanich extension show a line from the Victoria city boundary, along a private right-of-way to a point on Saanich Inlet beyond Union Bay. It was reported, July 5, that the purchase of the right-of-way had been completed and that a considerable amount of clearing had been done. Some grading has been done by the company's own men, and the rails have been ordered. It is expected that the city terminus of the line will be in the new yards on Douglas St.

Good progress is reported to have been made with the laying of a second track on the original interurban line from Vancouver to New Westminster, and it is expected that it will be completed in the fall.

Work has been started building a machine and car shop at Chilliwack for taking care of the cars on the Fraser Valley line.

Extensions of several lines in North Vancouver are being made.

The railway committee of the Vancouver city council had a conference with the visiting directors of the company upon the franchise question, and it is said that the negotiations which were broken off some months will be resumed. (July, pg. 683.)

Calgary Municipal St. Ry.—Track has been laid on the extension to Crescent Heights, and the line will be in operation early in Aug. Applications are being made for the extension of other lines, one of the proposals coming from a syndicate which purposes to build 11 miles of tracks to open up its property, and hand the line over to the city for operation. This latter proposition was referred to the commissioners for consideration July 4. (July, pg. 683.)

Dunnville, Wellandport and Beamsville Electric Ry.—Grading is reported to be completed between Dunnville and St. Anns, Ont. Ties have been laid and rails are being delivered. It is expected to have this portion of the line completed early in the fall. Surveys are being made for the line from Dunnville to Port Dover, and tenders are being asked for the grading on the first part of this section. A right-of-way has been granted through Walpole tp. for this line. R. T. Gough is Chief Engineer in charge of surveys and construction. (May, pg. 453.)

Halifax Electric Tramway Co.—The Dominion Government has agreed to allow an entrance into the park grounds at Halifax, N.S., at a rental of $5 a year. All that is now required in order to allow construction to proceed is the signing of the necessary agreement with the city council. (July, pg. 683.)

Hamilton, Ont.—The Colonial Engineering Co., of Montreal, has under consideration plans for the building of an electric railway from Hamilton to Galt, Guelph, Berlin and Waterloo, and another from Hamilton to Caledonia, Cayuga and Hagersville, Ont. F. L. Somerville, Toronto, has made some surveys for these lines, and it is said that proposals will be submitted to the Hamilton city council at an early date on behalf of the company. (See Hamilton to Galt, July, pg. 683, and Hamilton, Caledonia and Port Dover Ry., Feb, pg. 167.)

Montreal Street Ry.—Work was started, July 17, on the construction of a new line from St. James St. to Plateau Ave.

Application is being made to the courts by the city council to compel the company to extend certain of its lines under the agreement of 1892. (July, pg. 683.)

Moose Jaw Electric Ry.—A discussion took place at the meeting of the Moose Jaw city council, July 10, with regard to the slowness of construction of the electric railway. It was stated that the line was to have been completed Dec. 1, 1910; that the company had promised from time to time since then that the work would be completed in thirty days' time; and that on a visit to the plant a few days previously Alderman Small had been told that the engines would not be installed for five or six weeks. The city has offered to supply power for the operation of the line if the company would get the track in condition.

Meetings of shareholders was called to be held in Moose Jaw, July 31, for the purpose of organizing the company, and for the purpose of creating a bond issue of $250,000 to be secured by a mortgage of the company's undertaking. (May, pg. 455.)

Morrisburg and Ottawa Electric Ry.—A meeting of shareholders was held at Morewood, Ont., July 28, for the purpose of completing the organization of the company and electing a permanent board of directors. The notice calling the meeting was signed by W. H. Fetterley, President, and R. A. Bishop, Secretary of the provisional directors.

An Ottawa press dispatch, Jan. 19, states that it has been arranged to transfer the head office from Morewood to Ottawa, after the organization of the company, and that it is expected construction work will be started in the fall. (Mar., pg. 259.)

Nelson Street Ry.—A complete car service has been put in operation on the recently reconstructed and extended electric railway in Nelson, B.C. The system at present has a length of 5.5 miles, but it is contemplated to extend it along the valley. (May, pg. 455.)

Nipissing Central Ry.—The undertaking of the N.C. Ry. was taken over by the Commissioners of the Temiskaming and Northern Ontario Ry., June 21, and is vested in a company comprising the members and principal officers of the Commission. This is necessary owing to the fact that the N.C. R. is operated under a Dominion Act of Parliament, and has power to build lines in Quebec. It is proposed to extend the line to the waterfront at Haileybury, and to the T. and N.O. Ry. station at Cobalt, as well as to improve the existing line. (June, pg. 557.)

Ottawa, Smith's Falls and Kingston Ry.—An effort is being made to raise $100,000 to complete the surveys and to lay out this projected line, and meetings are being held at different places along the route to obtain local support. The route projected is along the west bank of the Rideau River from Ottawa to Smiths Falls, and then by the most convenient route to Kingston. At present, however, the provisional directors are only considering the building of the line from Ottawa to Smiths Falls. (May, pg. 455.)

Peoples Ry.—It is said that at the meeting of shareholders held in Berlin, Ont., July 17, a new board of directors was elected, and that resolutions were passed authorizing the prosecution of negotiations for the taking over of the company's property and franchises by the Mackenzie, Mann & Co. interests. (July, pg. 683.)

Port Arthur and Fort William Electric Ry.—Tenders are under consideration for the delivery of material along the track between McIntyre and Neebing rivers as follows:—900 cubic yards of fill material, 1,234 cubic yards crushed rock, and 450 ties. The extension of the line to Mariday Park was opened for traffic July 9. (July, pg. 683.)

Quebec Ry., Light and Power Co.—The Board of Railway Commissioners has authorized the company to open for traffic its eastbound track, from its junction with the main line near Beauport station to Montmorency Falls Park, 3.4 miles; and to build a double track span over the culvert at Beauport, Que.

Negotiations are in progress with the Limoilou council with regard to the route of the proposed line through that town. (July, pg. 683.)

Regina Electric Ry.—The first section of the electric railway in Regina, Sask., has been opened for traffic, and work is being pushed forward on the other sections as fast as possible. The city coun-

cil has under consideration proposals for the building of additional lines, and has decided to extend the Albert and Broad Street line to Sixteenth Ave., and the Scarth St. line south to Sixteenth Ave. and east to Broad St., and will give further consideration to a proposal to extend the Albert St. line northerly to the city limits. (July, pg. 685.)

Saskatoon, Sask.—The bylaw granting a franchise for the building of an electric railway to the Evans syndicate was passed by the electors of Saskatoon, Sask., July 6, by 472 votes to four. It is said that the company intends to start construction at once. (July, pg. 685.)

Sherbrooke Railway and Power Co.—It was reported at a special meeting of shareholders, July 13, that the old street railway system had been reconstructed, and that the greater part of the extensions in the city had been almost completed. Operations had not been started on the extensions owing to the city's delay in paving Wellington St. This has now been arranged for and the double track on that street laid. (July, pg. 685.)

Toronto Suburban Ry.—Plans were filed, July 7, showing an extension of the present line from Lambton along a private right-of-way, south of Dundas St., as far as the Etobicoke River, on the boundary line between York and Peel townships. The question of the approval of the plans came before the Ontario Railway and Municipal Board July 21. Notwithstanding the filing of these plans the company's engineers were engaged July 17 in securing options on lands within the same area north of Dundas St.

The company proposes to build a line from Lambton Mills, the terminus of the present line on Dundas St., to Guelph, passing through or near Islington, Summerville, Dixie, Cooksville, Erindale, Streetsville, Meadowville, Churchville, Huttonville, Norval, Georgetown, Glenwilliams, Acton, Milton, and Brampton. It has power to build an extension of its Weston line to Woodbridge and to extend its Davenport Road line to St. George St. in Toronto. It is proposed to build a terminal adjoining the North Toronto station of the C.P.R., and of the Metropolitan Division of the Toronto and York Radial Ry.

The officers and directors of the reorganized company are:—President, Sir Wm. Mackenzie; other directors:—R. M. Horne-Payne, London, Eng.; A. H. Royce, Major G. C. Royce, F. H. Phippen, K.C., and L. W. Mitchell, Toronto. (July, pg. 677.)

Operating Rules for Electric Railways

The committee appointed at the Canadian Street Railway Association's annual meeting recently, to compile a code of operating rules for electric railways, met in Toronto July 6, those present being the President, J. Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry., in the chair; E. P. Coleman, Manager of Railways, Dominion Power & Transmission Co.; P. Dubee, Secretary, Montreal St. Ry.; A. Eastman, General Manager, Windsor, Essex & Lake Shore Rapid Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; W. R. Robertson, Superintendent, Niagara, St. Catharines & Toronto Ry., and the Secretary-Treasurer, Acton Burrows.

In consequence of the oppressive heat in the city the meeting was held on one of the Royal Canadian Yacht Club's verandahs on Toronto Island, where the committee worked in comfort. The draft of a very complete code of rules was prepared, and the Secretary was authorized to submit the same to the Board of Railway Commissioners for approval.

Electric Railway Legislation in Nova Scotia.

Three acts were passed at the last session of the Nova Scotia Legislature affecting street railways and other public utilities within the province. Two affect existing companies, and the third provides for the granting of provincial aid towards the building of electric railways in parts of the province remote from steam railways, or where the traffic to be developed does not warrant the building of steam railways.

By an act amending the statute law, sec. 11, chap. 1, of the acts of 1909, is amended by adding "and make such extensions as may be required" after the word "facilities" in line 22, and by the addition of a new clause providing that the consent of the Public Utilities Commission is necessary before any public utility shall carry on business within the province.

Another act consolidates the acts affecting street railways, and provides for its application to all street railway or tramway companies. The Public Utilities Commission may make orders for extensions of lines, approve of regulations made by the companies, and make orders as to various matters in connection with the operation of cars. The companies may appeal to the Governor-in-Council from any orders made; the Attorney General is to be notified of any violation of the orders made, and the Supreme Court of the province is given jurisdiction in suits arising in consequence of any order made, and penalties are to be recoverable by civil action. Section 16 provides that "any provisions contained in the act of incorporation of any street railway, and the rules thereunder conferring upon any city, town or municipality powers which are by this act conferred upon the Commission, are hereby repealed"; and section 17 says: "This act shall apply to the Halifax Electric Tramway Co., Limited, only."

Under the provisions of the act granting aid to electric railways, the Government is authorized to grant a cash subsidy not exceeding $2,000 a mile; to loan to a company up to $8,000 a mile, or to guarantee the principal and interest of bonds on lines to be built in such districts as are approved. The lines to which aid is granted are to be built according to approved plans and specifications.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for May, $398,437; working expenses, $260,437; net operating earnings, $138,000; renewal funds, $29,770; net earnings, $108,230; approximate income from investments, $20,000; net income, $128,230, against $256,806 gross earnings $156,065 working expenses; $100,741 net operating earnings; $17,852 renewal funds; $82,889 net earnings; $16,500 approximate income from investments; $99,389 net income for May, 1910. Aggregate gross earnings for 11 months ended May 31, $3,839,170; net earnings, $1,464,709, against $2,728,437 aggregate gross earnings, and $1,147,106 net earnings for same period 1909-10.

The company, July 15, offered to shareholders £600,000 of new stock, including £200,000 of 5% cumulative preference stock, £200,000 of preferred ordinary stock, and £200,000 of deferred ordinary stock at a premium of one, two and four shillings a share respectively.

Calgary Municipal St. Ry.—A Calgary press report states that the street railway revenue for the first six months of this year was $149,437, and net earnings $49,705.

Halifax Electric Tramway.—Receipts for May, $17,198.82; for June, $23,702; for two weeks ended July 14, $10,966.89, against $15,673.97; $22,421.06, and $9,975.77 for same periods, respectively, 1910.

London St. Ry.—Gross earnings for June, $24,051.91; expenses, $16,841.63; net earnings, $7,210..28; deductions, $2,375.49; net income, $4,834.79. Aggregate gross earnings for six months ended June 30, $127.801.83; expenses, $94,193.01; net earnings, $33,608.82; deductions, $14,269.34; net income, $19,339.48.

Montreal and Southern Counties Ry.—A writ of mandamus has been issued by the courts directing the company to enter in its transfer books 800 shares now held by the Bank of Quebec.

Montreal St. Ry.—Passenger earnings for June, $419,347.46; miscellaneous earnings, $12,679.15; total earnings, $432,026.61; operating expenses, $227,217.47; net earnings, $204,809.14; city percentage on earnings, $43,836.06; interest on bonds and loans, $15,552.79; rent leased lines, $607.10; taxes, $5,000; total charges, $63,995.95; surplus, $140,813.19; expenses per cent. of earnings, 52.59, against $373,258.80 passenger earnings; $11,305.31 miscellaneous earnings; $384,564.11 total earnings; $198,848.62 operating expenses; $185,715.49 net earnings; $35,350.24 city percentage on earnings; $15,036.62 interest on bonds and loans; $552.90 rent leased lines; $4,000 taxes; $54,939.76 total charges; $130,775.73 surplus; 51.71 expenses per cent. of earnings for June, 1910. Aggregate total earnings for nine months ended June 30, $3,438,940.08; operating expenses, $2,015,139.33 net earnings; $1.-423,800.75; total charges, $403,885.42; surplus, $1,019,915.33; expenses per cent. of earnings, 58.60, against $3,091,799.56 aggregate total earnings; $1,806,291.83 operating expenses; $1,285,507.73 net earnings; $361,087.27 total charges; $924,420.46 surplus; 58.42 expenses per cent. of earnings for same period 1909-10.

A Montreal dispatch, July 18, says arrangements have been completed for the financing of the Montreal Tramways Co., and that a meeting of shareholders of the M.S.R. will shortly be held to arrange for the transfer of the company's property and franchises. It is stated that an issue of $9,000,000 of M.T.R. Co.'s 5% bonds will be sold to provide the cash to pay for the M.S.R. stock, and that there will also be issued additional bonds and about $20,000,000 of common stock.

Toronto Ry.—A special general meeting of the shareholders is called for Aug. 14 to sanction an increase of the capital stock by $4,000,000, making the aggregate capital stock $12,000,000.

Toronto Ry.—Gross earnings for May, $400,897; working expenses, maintenance, etc., $193,006; net earnings, $207,891, against $353,792 gross earnings; $172,433 working expenses, maintenance, etc.; $181,359 net earnings for May, 1910. Aggregate gross earnings for five months ended May 31, $1,833,391; net earnings, $879,029, against $1,656,842 gross and $786,460 net for same period 1910.

Winnipeg Electric Ry.—Sir Wm. Mackenzie is quoted as having said, July 13, that the company's offer to the city for the sale of the lines and franchises on the basis of $250 per share would not remain open very much longer. The matter was before the city council at a private meeting on July 13.

Winnipeg Electric Ry.—Gross earnings for May, $295,779; working expenses, $149,699; net earnings, $146,080, against $238,240 gross earnings; $117,812 working expenses; $120,428 net earnings for May, 1910. Aggregate gross earnings for five months ended May 31, $1,576,252; net earnings, $761,448, against $1,289,774 gross and $629.587 net for same period 1910.

The Ocamo-Yarmouth Collision.

Capt. L. A. Demers, Dominion Wreck Commissioner, gave the following judgment at St. John, N.B., recently, which was concurred in by E. C. Elkins and Capt. J. Hayes, assessors:—The court having carefully reviewed the evidence adduced, finds that had the captain of the Yarmouth exercised more discretion upon first entering the wheelhouse and observing the vessel at anchor, he would have noticed a volume of smoke escaping from her funnel—the unmistakable sign of a vessel getting under way—and would consequently have been more vigilant in his lookout. The pilot of the Ocamo, knowing as he did, the significance of the three blasts sounded by the Yarmouth, displayed reluctance to alter the course of his ship, through fear of experiencing difficulty in making his wharf as intended, which reluctance on his part the court interprets as carelessness in the navigation of the vessel he was piloting, for it is the court's opinion that the accident would have been avoided had the Ocamo been steered in midchannel, and not allowed to proceed on her port helm without taking into consideration the influence of the tide on her starboard bow, which naturally had the effect of drawing her closer to the Yarmouth and the wharf than intended. The master of the Ocamo, by his testimony, labored under the erroneous impression that the presence of a pilot on his vessel relieved him of responsibility as to the safe navigation of his ship, and the court holds that upon perceiving the injudicious course pursued by the pilot the captain should have remonstrated with the pilot and insisted upon an alteration in the course, thus affording a wider berth to the Yarmouth, and the captain of the Ocamo is consequently warned to be more assertive of his authority in the future, remembering always that he is master of his ship and therefore solely responsible.

The master of the Yarmouth is reprimanded for his failure in making sure that the harbor was clear within a safe navigable distance before casting off his lines, while the pilot of the Ocamo is severely censured for his action, and the court suggests that the matter be dealt with by the Commissioners as they deem fit.

It is the opinion of this court that the Yarmouth, by casting off her lines upon the approach of a vessel, and the Ocamo, by steering an injudicious course, contributed each to the collision, and both ships are therefore held to be responsible.

Notices to Mariners.

The Department of Marine has issued the following:—

61. June 19.—152. General Canadian list of lights and fog signals, new edition. 153. Quebec, Gulf of St Lawrence, Gaspe bay, Gaspe basin, O'Hara point, lights on wharf to be discontinued.

62. June 23.—154. Ontario, Canadian list of lights and fog signals, new edition. 155. Ontario, Lake Huron, westward of Cove island, whistling buoy replaced by gas and whistling buoy.

63. June 23.—156. British Columbia, Canadian list of lights and fog signals, new edition. 157. British Columbia, Charham sound, chart, Tree bluff to Kinahan islands, issued. 158. British Columbia, Queen Charlotte sound, Bremner island, rock reported northwestward of.

64. June 23.—159. Nova Scotia, Cape Breton island, Cape North lightstation, intended change in characteristic of fog alarm. 160. Quebec, Gulf of St. Lawrence, Magdalen islands, Bird rocks, intended change in characteristic of fog alarm. 161. Newfoundland, west coast, Cape Anguille, intended change in characteristic of fog alarm. 162. Newfoundland, southwest coast, Cape Ray, intended change in characteristic of fog alarm.

65. June 24.—163. Quebec, River St. Lawrence, Mille Vaches river, Sault au Mouton, hydrographic notes. 164. Quebec, River St. Lawrence, Mille Vaches bay, Mille Vaches, hydrographic notes. 165. Quebec, River St. Lawrence, north shore, Escoumains range, daymarks.

66. June 26.—166. Quebec, Magdalen islands, House harbor entrance, buoyage. 167. Quebec, Magdalen islands, Sandy Hook channel buoyed, buoy off Meule rock.

67. June 27.—168. Quebec, River St. Lawrence below Quebec, Empress shoal, gas buoy established. 169. Quebec, River St. Lawrence below Quebec, off Cape Tourmente, gas buoy placed temporarily for dredging purposes.

68. June 27.—170. Canada, Great Britain and Ireland, North Atlantic lane routes.

69. June 29.—171. Nova Scotia, Cape Breton island, east coast, off Neil harbor, whistling buoy established. 172. Prince Edward Island, east coast, Montague river, off French creek, buoy established. 173. Prince Edward Island, north coast, Cascumpexque harbor, Alberton, change in position of range lights. 174. Prince Edward Island, North point reef, position of whistling buoy.

70. June 29.—175. Ontario, Lake Erie, Rondeau harbor, wreck removed. 176. Ontario, Georgian bay, approach to Midland, Snake island, buoy established. 177. Ontario, Detroit river, ballard reef channel, new channel for light draught vessels.

71. July 3.—178. British Columbia, Vancouver island, southeast coast, Esquimalt harbor, Constance cove, mooring buoy placed. 179. Alaska, Revillagigedo channel, Spire island reef, change in character of light. 180. Alaska, Clarence strait, Stikine strait, south entrance, light established. 181. Alaska, Sumner strait, Beauclerc island, light established.

72. July 4.—182. Nova Scotia, south coast, Torbay, Charlo harbor, change in color of range lights. 183. Nova Scotia, south coast, Torbay, Cole harbor, change in color of range lights. 184. Quebec, River St. Lawrence below Quebec, north of Patience island, gas buoy placed temporarily for dredging purposes.

73. July 6.—185. Nova Scotia, Bay of Fundy, Minas basin, Cheverie, light established. 186. Nova Scotia, south coast, Eastern Points harbor, light established. 187. New Brunswick, Chaleur bay, Petit Rocher, change in position of lighthouse.

74. July 7.—188. Quebec, Gulf of St. Lawrence, entrance to Little Natashkwan harbor, buoys established. 189. Quebec, Gulf of St. Lawrence, Seven Islands bay, Pointe Noire, light established on Clark City wharf. 190. Quebec, River St. Lawrence, Ile Verte, light established on wharf.

C.P.R. Trans-Pacific Steamships.

G. M. Bosworth, Vice President, C.P.R., who returned from England, July 21, announced that contracts had been placed for the building of two steamships for the trans-Pacific service between Vancouver and Japanese and Chinese ports. These are to be delivered ready for operation in the spring of 1913, and the estimated cost of each is $2,500,000. They will be operated on a fortnightly schedule. He is also reported to have stated that one of the vessels now running on that route would be taken off and placed on another Pacific route.

The Grounding of the s.s. Stormount.

Capt. L. A. Demers, Dominion Wreck Commissioner, gave the following judgment in Montreal July 12, concurred in by A. F. Nash, and A. T. Haworth, master of the s.s. Manchester Importer at Athens, in the case of the grounding of the s.s. Stormount at Longue Pointe on May 6:—

The court having carefully studied and considered the evidence adduced by the various witnesses is of the opinion that the master and officers of the s.s. Stormount are exonerated from all blame for this accident, but wishes to point out that the master has full responsibility of the navigation of the ship; and whenever he perceives that the pilot, who is simply acting as his adviser as to local conditions, is doing wrongly, it is his duty to check or countermand any wrong orders which may have been given by the pilot; and moreover, the court regrets to say that in this case, owing to the peculiar position in which the master was placed, that he was unable to be on deck in the narrow places in the river St. Lawrence and to be on hand in case of eventualities. The fact of the master being obliged to be on deck from Fort William through the canals up to Montreal is to be greatly deplored, yet his absence from the deck in narrow stretches such as in the river St. Lawrence is censured.

The court is also of opinion that the pilot is wholly to blame for the grounding of this vessel, and he showed a certain amount of ignorance and lack of experience in the navigation of his first vessel. Therefore, in view of the foregoing and with the hope that this will be a lesson to him to exercise greater care in future and to make himself

thoroughly conversant with the conditions of the river, this court will suspend his certificate as pilot for the balance of this year, but will return to him his apprentice pilot's certificate, in order to enable him to acquire the necessary knowledge which all pilots should possess.

◆

Wreck of the s.s. Ben Earn.

The following decision was given by Capt. Demers, Dominion Wreck Commissioner, at Yarmouth, N.S., July 6, and concurred in by B. R. Hilton and J. W. Anderson, assessors, in regard to the wreck of the s.s. Ben Earn, on June 16, on the Salvage Ledge, off Point Blanche, somewhere in the vicinity of Braist Rock. The vessel eventually became a total loss:—

The court having carefully weighed the evidence adduced finds that the master placed too much reliance upon the casual soundings taken and that while they seemed to coincide with the courses steered, they were nevertheless insufficiently frequent to establish that the courses he had traced were being properly steered, as the chart shows that the depths actually found when soundings were taken, were obtainable on both sides of the course steered by the Ben Earn, and the court holds that if soundings had been taken every half hour that they would have undoubtedly discovered that the vessel was more inshore than they actually believed her to be. The court further holds that when the surf was sighted, the captain, instead of starboarding should have gone full speed astern, although his action in this respect would seem justifiable by the fact that the land was on his starboard side, but owing to the slow speed of the ship at the moment, it is held that if the ship had been put full astern when the whistling of the birds was heard, that the accident might have been avoided, although the court is not prepared to assume that it would have been avoided had such action been taken.

In view of the facts above set forth, and taking into consideration the good reputation of the captain, the court will not deal with his certificate, but cannot refrain from censuring him and advising him to exercise more caution, especially when navigating waters whose currents and influences he is unfamiliar with. The officers of the vessel are exonerated.

◆

Atlantic and Pacific Ocean Marine

The Newfoundland Premier, on his return from England, early in July, announced that his Government was prepared to subsidize a direct line of steamships between Newfoundland and Galway, Ireland.

The Harrison Line s.s. Centurion arrived at Vancouver, June 27, on her maiden trip, in the new service which this company has inaugurated with B.C. ports, from Great Britain by way of the Horn.

The British steamships Woolwich and Cromarty have been chartered by Pickford and Black, for the West Indies service, to replace the steamships Sobo and Luristan, the charters of which are about to expire.

The Hudson's Bay Co.'s s.s. Pelican was libelled at Montreal, July 16, on a claim by J. Gagne, diver, for $100 for his services. Bonds were immediately furnished by the company's agents and the vessel released.

A press report from Liverpool, Eng., states that in order to offset the increase of wages due to the recent strike of seamen, the passenger rates to Canada and the U.S. have been increased by from $1.25 to $2.50, and it is possible that an increase in freight rates will also take place.

The North Atlantic Shipping Conference decided, July 13, to continue the present agreement until Oct. 31, when it is anticipated that a new agreement will be signed. A special committee was appointed to consider a number of proposals made and to report to the full conference in October.

A proposal is under discussion in St. John, N.B., to incorporate a company with a capital of $2,000,000, to operate a steamship service between St. John, Cuba and Jamaica. It is proposed to commence with two vessels, suitable for both a freight and tourist trade. E. S. Kirkpatrick, formerly Canadian Trade Commissioner in Cuba, is chiefly responsible for the movement.

The International Mercantile Marine Co.'s report for 1910 shows gross earnings of $38,073,596, against $33,953,208 for the previous year. There was an increase in operating and general expense, and also in the fixed charges. There was a surplus of $4,849,581, against $1,182,335 for 1909. The report states that there are 124 vessels in service, to which must be added six, then under construction.

The Hudson's Bay Co.'s s.s. Pelican was at Montreal, during July, taking on stores for the company's stations throughout the Bay. This is the usual annual trip made by this vessel from London, Eng. The company has also chartered the s.s. Beothic for a similar purpose. Capt. Smith, who has had considerable experience of the Bay conditions, while in command of the Pelican, in response to questions as to the possibility of maintaining a trans-Atlantic service through the Bay to Fort Churchill, is reported to have said that he did not think that it would be possible for more than three months in the year.

The subsidy contract with the Union Steamship Co. of New Zealand, regarding the mail service between Canada and New Zealand, commencing in August, provides that the contract will be for five years, that the amount to be contributed by New Zealand shall be £20,000 a year, with exemption from harbor and dock dues, that permission be given the contractors to run from Auckland to Sydney, or Melbourne, and to retain any sum contributed by the Australian Government for such service, that the voyage between Vancouver and Auckland be made in 19 days, and that New Zealand shippers shall have the first refusal of all space so long as no subsidy is being paid by Australia.

Maritime Provinces and Newfoundland.

The Department of Public Works received tenders, July 26, for the construction of a breakwater at Brooklyn, N.S.

Capt. W. R. Lugar held an enquiry, at Halifax, N.S., recently into the causes of the stranding of the s.s. Morien, near Parrsboro, early in July.

An order in council has been passed changing the name of the ferry steamboat, which the St. John, N.B., city council has purchased in the U.S., from Newport to Governor Carleton.

The Marine Department is reported to be preparing plans for the building of a Customs protective vessel for the Atlantic and St. Lawrence waters. She will be 175 ft. long, and of about 900 tons, and the approximate cost is $225,000.

The Canada Atlantic and Plant Steamship Co.'s s.s. Halifax grounded on George's Island in Boston harbor, July 17, during a dense fog. She was released at high tide the same day, and on entering the harbor collided with the Dominion Atlantic Ry. s.s. Prince Arthur. The damage in both cases was slight.

Sir Henry M. Pellatt, who is chiefly interested in the project for the construction of a dry dock and shipbuilding plant at Sydney, N.S., by the British Canadian Shipbuilding Co., stated, July 17, that the company would not carry out such work unless it was awarded the contract for the building of vessels for the Canadian navy.

The Navigation Syndicate, Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $30,000 and office at Nordin, to build, purchase or otherwise acquire and operate steam and other vessels, and carry on a general navigation business. The incorporators are O. W. Nordin, J. Ander, H. Oquist, H. Tideman, Nordin, N.B., and A. Kulinder, Rexton, N.B.

A preliminary enquiry was held at Halifax, N.S., early in July, into the collision between the s.s. Cape Breton and the schooner Guide, but the evidence was not then completed owing to the non-appearance of the master of the s.s. Cape Breton on account of illness. The Cape Breton has been libelled on behalf of the schooner Guide, on a claim of $10,000 for damages caused by the collision on July 7. She was released on bonds.

The St. John River Steamship Co. is suing the Crystal Stream Steamship Co. for damages and loss for exclusion from the Victoria wharf at Indiantown, and for breach of agreement, through the latter company operating a steamboat on the Fredericton route. The amount of the damages claimed is the earnings of the Crystal Stream Steamship Co.'s steamboat Majestic, operated on the Fredericton route, and the company is being asked to produce its books and receipts for the season.

The Marine Court of Enquiry at St. John, Nfld., delivered judgment, July 7, in the matter of the loss of the Reid Newfoundland Co.'s s.s. Bruce on Mar. 24. It found that the vessel was well equipped and the compasses in good order, the errors known and corrections properly applied to the courses steered, and that the loss was caused by the master setting and steering an improper course, due to his failure to verify the vessel's position by taking reliable bearings of Scattarie light. The master, R. Drake, is the holder of a colonial certificate of service but not of a certificate of competency.

An order in council has been passed cancelling a previous order in council, which established the pilotage authorities of Hillsboro and Hopewell District and Moncton District, N.B., and establishing in their places the Shepody Basin District, comprising all the waters of Shepody Bay, Shepody Basin, Petitcodiac River and Memramcooke River north from a line drawn from the westernmost extreme of Cape Maringouin westward through the south point of Mary Island to the mainland of Albert county, south and east of the public bridge connecting Moncton and Coverdale, and south of the Upper Dorchester bridge on the Memramcooke River.

Province of Quebec Marine

The s.s. General Wolfe, which collided with the s.s. Aranmore, near Murray Bay, Que., June 29, and sank, has been abandoned as a total loss. Both vessels are owned by Holliday Bros., Quebec, and are registered in England.

The St. Lawrence Sand Gravel Dredging Co., Ltd., has been incorporated under the Quebec Companies Act, with a capital of $49,900 and office at Sorel, to dredge for sand, gravel and other material, and in connection therewith to own and operate steam tugboats, dredges, etc.

The Richelieu and Ontario Navigation Co.'s s.s. Saguenay, which recently arrived at Montreal, from England, was taken for a trial trip, after having been overhauled, July 6. A number of local transportation officials were the guests of the company on a short run to Tetraultville. She was placed on her regular run on the same day.

Capt. Riley, Superintendent of Pilots, conducted a preliminary investigation at Montreal, July 5, into the cause of the collision between the steamships Helvetia and Cascapedia about two months ago in the St. Lawrence a little above Quebec. It had not then been decided whether a further enquiry would be held.

The Montreal harbor revenue for June was $66,058.45, an increase of $7,277.02 over the revenue for June, 1910. There was a slight decrease in the exports. The number of vessels arriving was 241 of a tonnage of 732,810, being five vessels less and 77,655 tons more than in June, 1910. The total receipts from imports, exports and local traffic since the opening of navigation to June 30 were $118,999.45.

The Lake Champlain and St. Lawrence Ship Canal Co.'s plans which were recently filed with the Public Works Department at Ottawa, provide for a 12 ft. waterway starting at Fryer's Island, near St. John, tapping the St. Lawrence at Longueuil, 21 miles north. The canal will give Montreal a direct connection with Lake Champlain by way of the Richelieu River. From Lake Champlain to New York, the existing routes will be used. The canal will pass south of Chambly Basin, cross the Little Montreal River at St. Louis de Gonzague and pass across St. Francois de Borgia, Lange Gardien, Cote St. Lambert and Longueuil parishes.

Ontario and the Great Lakes.

Press reports state that the Hamilton Steamboat Co. and the Turbine Steamship Co. are contemplating the inauguration of a Sunday service between Toronto and Hamilton.

The Department of Railways and Canals will receive tenders to Aug. 4 for the lock gates and valve gates for the Holland River division of the Trent canal.

The captains of the Niagara Navigation Co.'s steamboats Chippewa and Corona were each fined $150 and costs, at St. Catharines, July 15, for breaches of the liquor license act.

The Rideau Navigation Co.'s steamboat Rideau Queen ran aground in the Rideau River, July 11, sustaining damage to her wheel and rudder. She was

Lake Grain Shipments

The following statement, preparedby F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William and Port Arthur, of the 1910 crop, from the close of navigation to June 30. The last two figures in each column represent lbs.

A new Detroit
Locomotive Lubricator

The new Detroit No. 22 Bullseye Locomotive Lubricator can be started and stopped instantly without even touching the feed adjustments.

One valve controls the admission of oil to all the feeds. This Oil Valve makes it easy to save oil without bothering to change the feed adjustment.

There are no removable tubes in the Detroit. Nothing to get out of order. Nothing to require repairs.

Write to-day for catalog U and full information.

released and taken to Kingston for repairs.

The Department of Railways and Canals has awarded the contract for the construction of an extension to the north mooring pier at the upper entrance to the Sault Ste. Marie canal to J. F. Body, Sault Ste. Marie, Ont.

The Lake Ontario and Bay of Quinte Steamboat Co.'s steamboat Caspian, while en route to Rochester, ran aground, July 12, and sustained considerable damage to her wheel and rudder. She was released, July 15, and taken to Kingston for repairs.

Co. Anderson, Chief Engineer, Department of Marine, recently completed a tour of inspection of the Trent canal with a view to reporting on the question of better lighting and the placing of a number of additional buoys.

The Northern Navigation Co. and the Inland Lines, the control of which has been obtained by the Richelieu and Ontario Navigation Co., continue to be operated under their respective names, and with the same officials as heretofore.

The plans for the improvement of the harbor at Port Stanley have been completed and forwarded to Ottawa for approval. The breakwater will be of the most modern construction and it is expected to be completed this summer, after which a new pier for unloading will be built.

The Montreal Star's London, Eng., correspondent stated, July 15, that arrangements had been completed for the Canadian lake merger in connection with Manchester Liners, Ltd., and that the capital involved in the Canadian part of the agreement was $20,000,000, covering 50 vessels.

The steamboat Norseman, owned in Belleville, and which was recently seized by the sheriff on claims by the crew for wages, was sold to a local syndicate for $1,000, July 11. She was built at St. Catharines in 1864, and was formerly named Gipsey. Her dimensions are: length 177.2 ft., breadth 28.4 ft., depth 12.2 ft., tonnage 620 gross, 400 register, and she is screw driven by an engine of 200 n.h.p.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for June, as follows—Superior, 601.34; Michigan and Huron, 579.98; Erie, 571.90; Ontario, 245.66. As compared with the average June levels for the past ten years, Superior was 1.20 ft. below; Michigan and Huron, 1.12 ft. below; Erie, 0.96 ft. below, and Ontario, 1.18 ft. below. It was anticipated that there would be a rise of 0.2 ft. in Lake Superior, and of 0.1 ft. in Michigan and Huron during July.

The Ontario and Quebec Navigation Co.'s steamboat Geronia, which was expected to be completed in readiness for service between Toronto and Quebec, July 20, was not delivered at Collingwood at that date. She left Toronto on her maiden trip in that service, July 27.

The Sault Ste. Marie Dry Dock and Shipbuilding Co. has communicated with the local council to the effect that J. O'Boyle, with whom the council made an agreement relating to the construction of a dry dock and shipbuilding plant at Sault Ste. Marie, has been relieved of any obligations under the agreement, and that all such are now binding upon the company.

The Mathews Steamship Co.'s steamboat Yorkton arrived in Toronto towards the end of July, with a cargo of scoria blocks from Middlesbrough, Eng. She was built at Sunderland, Eng., for the lake bulk and package freight trade, and will be operated by the owning company between Montreal and Fort William. She is of the single deck type, of arch construction, with no upright stanchions in the hold, and has three watertight compartments, with steel bulkheads and with double bottom. The captain's, owners', purser's and dining rooms are finished in mahogany, and the remaining quarters in oak. Her engines are triple expansion with cylinders 17, 28 and 46 ins. diar. by 33 ins. stroke, supplied with steam by two boilers, each 12 by 11 ft., under natural draught. There are six hatches, each 12 by 26 ft., and the general equipment includes electric lighting plant, steam heating, steam steering gear, windlass, capstans and winches. She has been built to class 100 A1 at Lloyd's, for a passage through the Welland canal with cargo of 80,000 bush., and of 100,000 bush. on deep draught, with a certificate for carrying freight to any part of the world. Her dimensions are: length, 257 ft.; beam, 42½ ft.; depth, 18½ ft.; tonnage, 1,771 gross, 1,136 register. She is practically a duplicate of the same company's steamboat Mapleton.

◆

Manitoba, Saskatchewan and Alberta.

The Pioneer Navigation and Sand Co., Ltd., of Winnipeg, is being voluntarily wound up, and tenders are being received for its land assets up to Aug. 4.

The steamboat Slave Lake, recently built at Athabasca Landing, Alta., and owned by V. Maurice, Grouard, left the Landing, June 29, on her first trip to the Lesser Slave Lake.

◆

B.C. and Pacific Coast Marine

Preliminary work is reported to have commenced for the G.T.P.R. dry dock at Prince Rupert. The dock will consist of three sections, each constructed that it can be used separately.

The sternwheel steamboat George E. Starr, owned in Seattle, Wash., is reported to have been sold to Vancouver parties for operation on the Fraser River.

The G.T.P. Coast Steamship Co.'s s.s. Prince Rupert resumed service, July 3, after having a thorough overhauling and cleaning, and having her boilers equipped with forced draught.

The steamboat Pauline, owned in Dawson, Yukon, while en route to Dawson from the Tanana River, July 1, struck a rock near Eagle and sank. She was built at White Horse in 1907, and was a paddle wheel vessel, with engine of 2 n.h.p. Her dimensions were: length 85.5 ft., breadth 15.5 ft., depth 3.5 ft., tonnage 145 gross, 91 register.

The Coast Steamship Co., Vancouver, has placed the s.s. Celtic on the route between Vancouver, Seattle and Tacoma, making two sailings each week. The Celtic was built at Vancouver in 1907, and she is screw driven with engine of 16½ n.h.p. Her dimensions are: length, 89.4 ft.; breadth, 24.5 ft.; depth, 8.6 ft.! tonnage, 239 gross, 163 register.

The steamboat Belfast, with a cargo of lime, bound from Texada Island to Seatte, struck on a rock, near Nanaimo, July 9, and catching fire was totally destroyed. She was owned in Vancouver, where she was built in 1904. Her dimensions were: length 91.3 ft., breadth 18 ft., depth 7 ft., tonnage 105 gross, 72 register, and she was screw driven by engine of 15 n.h.p.

The G.T.P. Coast Steamship Co.'s s.s. Prince John, which sailed from Glasgow, Scotland, early in July, is expected to reach Vancouver towards the end of August, when she will be placed on the Prince Rupert and Queen Charlotte Islands route. She was formerly known as Amethyst, and has a cargo capacity of 450 tons in addition to her bunkers. Her dimensions are: length 185 ft., breadth 30 ft., depth 13¼ ft., and she is built of steel and classed 100 A 1 at Lloyd's. There are seven water tight bulkheads with double bottom, affording ample ballast and fresh water storage, large bunkers, triple expansion engines, two multitubular Scotch boilers, suitable for a speed of 12 knots an hour.

The Dominion Government steam tug Point Ellice was launched at North Vancouver, July 11. She is to be used as a tender to the Government dredge Ajax. She is built to class 100 A 1 at Lloyd's, her dimensions being as follows: length over all 91½ ft., between perpendiculars 78½ ft., beam 20 ft., molded depth 12¾ ft. She has five water tight bulkheads extending from the floor plates to the main deck, and is equipped with fore and aft compound surface condensing engine with cylinders 16 and 34 ins. diar., by 24 ins. stroke, of 500 h.p. at 125 revs. per minute, for a speed of 12 knots an hour, supplied with steam by a Scotch marine boiler 12 ft. diar. by 11 ft. long at a working pressure of 150 lbs. to the square inch. The air pump, 12 by 12 ins., is driven from the low pressure cross head; the steering gear is direct acting and automatic, and she was built

to the designs of H. A. Bayfield, Government Superintendent of Dredges.

The North Arm Steamship Co. is reported to have made arrangements for the purchase of the steamboat Skeena from Foley, Welch and Stewart, for summer service on the North Arm. She was built at Vancouver in 1908, and is driven by a paddle wheel by an engine of 8 n.h.p. Her dimensions are: length 121.2 ft., breadth 26.8 ft., depth 5.6 ft., tonnage 515 gross, 310 register.

◆

Beeson's Marine Directory.—In issuing the 25th annual number of this indispensable directory of the marine interests on the Great Lakes, the publisher refers to the initial issues and the reception accorded them and adds: "Today, with a large Canadian following, in addition to our patronage in the States, it is as widely known and circulated as such a medium can be. . . . And I shall continue this publication and seek to make it of increased value to all concerned." The directory contains all the information about the Great Lakes marine to which owners and managers constantly need to refer, and this is arranged in a most convenient manner for reference. A special article on the Chicago Sanitary District and the proposed harbors is of interest to Canadian marine men, on account of the influence the Chicago Drainage Canal and its pos-

CANADIAN PATENT FOR SALE
A very successful specialty, five years on the American market, widely used, and of great merit and economy, both initial and maintenance. Light steel manufacturing. Can be bought on cash and royalty basis. Address Box 67, Railway and Marine World, 70 Bond Street, Toronto, Canada.

LARGE MARINE REPAIRS EXECUTED BY CONTRACT

We can usually execute the repairs without removing the broken sections from their position. All our appliances are light and portable and may be brought to the job. The only outside power required is a small supply of compressed air for the operation of the preheating torch.

Quotations promptly rendered on receipt of a blue print or sketch showing exactly what is to be done.

Write for Pamphlet No. 20-N, which gives full information.

"GOD SAVE THE KING"

KINGSTON AND PEMBROKE RAILWAY COMPANY.

Notice to Shareholders.

The Annual General Meeting of the Shareholders of this Company will be held on Wednesday, 9th day of August next, at the Head Office of the Company at Kingston, at eleven o'clock a.m., for the purpose of electing Directors and transacting of other business.

The Stock Transfer Books will close in New York on Saturday, 29th day of July, 1911, at 1 p.m. All books will be reopened on Thursday, 10th day of August, 1911.

A. McNAUGHTON, Secretary.
Kingston, Ont., July 5th, 1911.

NOTICE.

The General Railway Signal Company, the owners of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents, to the fact that it is prepared to sell and furnish, at short notice, all such devices, and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to the office of the company, Room 506, Eastern Townships Bank, 263 St. James St., Montreal, Que.

THE HISTORY OF SUPERHEATED STEAM

By Frederick H. Moody, B.A.Sc.

The subject of superheated steam is so well known, and the savings obtained through its use so well recognized on nearly all sides, that any further introduction of the subject is unnecessary. Very few complaints are on record where superheated steam has not done all that was expected of it where intelligently applied in lines defined by considerable experimental work on the part of the principal exponents of the subject. In marked contrast to the present development of superheating in Canada and the United States, is the reported disfavor into which superheating appears to have fallen in Germany, where it is stated that much more economical operation may be obtained through compounding rather than superheating. Consequently, there is a material decrease in the number of locomotives being built that are equipped with superheaters, the compound locomotives growing proportionately greater in number.

This, however, is digressing from the historical phases of the subject, which are many and varied, for while, as will be noted in the following, many attempts have been made to introduce superheated steam into use in both stationary engine and locomotive practice, nothing of practical value in that direction was accomplished until within the last few years.

EARLY ATTEMPTS.

The earliest recorded attempt at using the principles of superheating was made in 1828 by Richard Trevethick at the Birnie Down Mines in Cornwall, on a condensing pumping engine, making 8 revolutions per minute, with a boiler pressure of 45 lbs. per square inch. At this slow speed, and with such lagging materials as were in use in those days, the condensation was very great. Trevethick conceived the idea of reheating the steam in the cylinder to re-evaporate the condensation. To attain this end, the cylinder and piping were surrounded with firebrick and heated from a fire on a grate beneath. A remarkable saving was noted; ordinarily 9,000 lbs. of coal were consumed per day, whereas with a fire under the cylinder, only 6,000 lbs. were required, including the coal for the superheating grate. This led to further experiments by Trevethick, resulting in his tubular boiler and superheater in 1832, which, it is claimed, is quite modern in appearance.

The same year saw another superheater produced, this one being invented by I. Howard, of Bermondsey; an economy of 30% was obtained. In 1835, Dr. Haycroft, of Greenwich, advocated the use of superheated steam, and in experiments which he conducted, practically the same savings as those noted by Howard were obtained. It will thus be seen that at a very early date, it was realized that as steam expanded, in order to prevent condensation, it was necessary to add heat; this is the superheat.

The period from 1835 to 1848 furnishes no records of any work having been performed on the principles of superheating. In the latter year, the first superheater ever applied to a locomotive was introduced by John Cockerill, of Serang, Liege, Belgium, so that this date is, so to speak, a very important landmark in locomotive development. This superheater consisted essentially of a shell in the smokebox, with an annular space around the stack, and, while nothing is known of its actual operation, it has been inferred that from its nature and position, it cannot have done more than dry the steam, naturally affecting the economy but slightly. Several more modern attempts at obtaining economy have failed from the same cause.

J. H. Black,
Ex-Superintendent, Temiskaming and Northern Ontario Railway.

The next attempt made was by M. Moncheuil, for the Montereau and Troyes Railway, the types used being ones patented by M. A. De Quillacq in 1849. M. De Quillacq devised three types, all of which were used by M. Moncheuil. The first two types had the same principle, having flame flues containing the superheater tubes, the former, however, having only one flame-flue with coils for superheating, while the latter had several. These two kinds were applied to 2-2-2-type locomotives. The third kind was unique in design, consisting of a drum on top of the boiler, in the top of the firebox; part of the gases ascended through a damper-regulated opening, and through a large pipe in the centre of the drum to the stack. The pipe passing through the drum longitudinally, formed an annular space for the superheating of the steam.

The next type was that devised in 1852 by Mr. Haswell, of the Vienna Locomotive Works. It consisted of a coil located in the firebox for the superheating; it is doubtful if one was ever constructed. Shortly after, in 1855, M. Montety, a French engineer, devised a new type, consisting of a coil in a large flame-tube, similar to one of the Moncheuil types, with the exception that the coils were secured to steam reservoirs corresponding to headers of the modern types.

EARLY SCIENTIFIC INVESTIGATIONS.

About this period, superheating was being investigated scientifically by the Alsatian engineers, who are known in engineering history for their discoveries in thermodynamics, laying down many of the underlying principles that are now in common use. In 1857, Mr. Hirn, the leading light of this group, issued a report of trials and experiments made by him on the value of superheating, which showed that a large gain might be expected. The boiler pressure used by him was 55 lbs. per square inch, with a temperature of from 410 to 490 degrees F., obtaining economies of from 20 to 47%, which would seem to be greater than those at present. This, however, is due to the fact that saturated steam engines are much more efficient now than at that time.

This scientific investigation begun by Hirn, was continued by John Penn, who, in a paper on superheating, presented before the Institute of Mechanical Engineers, referred to several cases of superheating then in successful use. In 1860 a total of 5,000 horse-power had been equipped with superheating devices, the surface employed being from 2.25 to 2.75 square feet per nominal horse-power; most of the experimenters were agreed on this particular, and obtained about the same efficiency.

In 1860, also, Parsons and Pilgrim's method of superheating, as applied to steamboats on the Thames, was explained in an Institute of Mechanical Engineer's paper. Their method was the first to embody the present-day principle of placing the superheater as near the fire as practicable to obtain a high degree of superheat, for in this case the superheater consisted of iron pipes in, and forming part of the fire-grate. This was a radical change, for all other cases of marine superheating used the waste gases.

Mr. Haswell devised still another locomotive type in 1862, using the waste gases, the superheater being concentric with the stack. Still another change occurred in 1863, when a Mr. Crawford invented a new type, in which part of

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.

the boiler is partitioned off, as in the modern Clench type. However, nothing is known of its value in service. Hittorf, in 1869, introduced a new type, in which the superheater was in a drum on top of the boiler, as with one of the Moncheuil types mentioned before.

Compounding Superseding Superheating.

In 1865, compounding first came into prominence, and from that time on superheating was rapidly abandoned, for equally good results could be obtained with compounding, without the evil effects that at first attended the use of superheated steam. It was found that with steam at 400 degrees F. or over, which was the common practice, the animal fats, at that time the 'only ones procurable, it being before the day of the mineral product, became dessicated by the heat, leaving a hard product that not only scored the wearing surfaces, but also increased the friction. The attendant high pressures used in multiple expansion engines, was also a detriment to superheating from the same cause, owing to its high initial temperature, which, while normally high, is much greater by the superheating.

Nothing appears to have been done in America along the lines of superheating until in 1870 (when its use was being given up on the European Continent by all but Hirn and his followers), the Chicago, Burlington and Quincy Rd. applied a type of its own, like the modern Clench, to one of its locomotives. The trials showed some economy, but not sufficient to warrant its introduction into actual service, as the maintenance expenses were materially increased. For that reason it was abandoned.

Reasons for Recent New Life.

With the introduction of hydrocarbon, mineral lubricating oils, balanced valves and improved packing, the use of considerably higher temperature became possible, and in 1890, interest in the subject was again renewed by the results obtained in Germany by Gehre, Schwoerer, Uhler and others. Since that date, the progress in England and Germany in stationary practice has been very marked.

The first man of recent times to use highly superheated steam was Dr. Wm. Schmidt, who in 1892 used a small single-acting, stationary engine with steam at a temperature of 650 degrees F. The engine was purposely made single-acting, for it was at first thought that, as with gas engines, the temperatures would be detrimental to the materials of the engine; but Schmidt modified the details so as to use superheated steam double-acting without these deteriorating results.

This development by Dr. Schmidt was carried forward to such an extent that at present there are very few new plants of any pretensions that are not using superheated steam. The present development in the application of superheaters to locomotives is due to Tarbe and Muller, of the Prussian State Railways, who, in 1898, arranged to have two locomotives equipped with superheaters according to Dr. Schmidt's design. From that time on the spread has been very rapid, with the exception of the present compounding tendency in Germany, previously mentioned.

In America the revival of superheater locomotives was due to Roger Atkinson, Mechanical Superintendent of the Canadian Pacific Ry., who, in 1901, applied a Schmidt smoke-box superheater to a simple 10-wheel freight locomotive. So satisfactory did this prove that further locomotives were equipped, not only with Schmidt, but also with the Cole type. Numerous other roads, both in Canada and the United States, have tried superheater locomotives with varying degrees of success. It still remains, however, for the Canadian Pacific Ry., the pioneers in the field, to retain the supremacy, H. H. Vaughan, as is well known, being probably the strongest exponent of locomotive superheating in America. The type used by this road is the Vaughan-Horsey, designed by Mr. Vaughan and A. W. Horsey, formerly Mechanical Engineer, Locomotive Department, Angus shops, and now District Master Mechanic at Farnham, Que.

Recent history with regard to superheater practice on locomotives is so familiar to all that no further comments need be made on the subject. The one conclusion that stands out the strongest is the fact that when properly designed and operated a material net economy can be, and is, effected.

Of the other roads in Canada, the Canadian Northern is the only one that has adopted the superheater policy. This road has 20 now in service and 20 more on order. Neither the Grand Trunk nor Intercolonial have as yet had any locomotive equipped with superheaters.

◆

Selection of Length of Transition Curve.

By Frank H. Carter A.M. Am. Soc. C. E.

In fixing the alignment of a projected fast interurban electric railway, the writer was confronted with a dearth of information concerning either theory or practice for rigorously selecting proper lengths of easement or transition curves. The only line of thought or suggestion on the subject which could be found was that outlined by Prof. Talbot in his work on the transition curve, and that appeared to be more or less specially applicable to his particular spiral. As spirals of the Searles type had been adopted and were in use on the road in question, it seemed inadvisable to make any radical change in the type of easement curve. None of these standard easement curves, however, were of a length greater than 100 ft., while the theory which is presented herewith demands lengths up to and in some cases exceeding 300 ft.

MECHANICAL SUGGESTIONS.

It is a time-honored saying that "familiarity breeds contempt." Those few words sum up briefly the view held by many of our most valued readers, who have access to funds of invaluable information and data that would prove of great assistance to the railway fraternity if only disseminated through the medium of the technical railway press. What is in mind at present is the dearth of good shop information. Each shop, in addition to having the standard tools and equipment necessary to good production, has been compelled from time to time to exercise native ingenuity in devising ways and means in the form of tools, methods, etc., to cope with the problem in hand. Every shop is full of such ideas—ideas that would likely prove of value to others. Besides, we are willing to pay for them at a liberal rate. Send them in, whether or not you consider them worthy of publication, and we will make the necessary suggestions if they do not prove satisfactory.

While the writer was engaged in an attempt at a rigorous solution of the problem, there appeared a very creditable report of the Committee on Track of the American Railway Engineering Association (Bulletin 108) with a principle, new to the writer, from several of the roads; namely, a length of curve dependent upon the rate of rise of the outside of a train on a curve (at the rail) in inches per second.

The rate of rise of super-elevation on easement curves is largely, if not entirely, a question of its effect on passengers as to whether the rapidity of vertical rise of one side of the train produces a disagreeable sensation. An attempt to formulate the proper length of transition curve from the rate of rise of rail in inches per 100 ft., without regard to the speed of the train, is approaching the problem from the wrong standpoint. In any formula of type $l = C D V^2$ the constant C, as will be shown, fixes the rate of rise of super-elevation of rail; therefore, but one curve and one speed will satisfy this equation in regard to rapidity of rise of train in inches per second. All other curves or speeds will convey different sensations of ease of riding to the passenger. The average rate of rise of the outside of the train (at the rail) in inches per second should be the governing function for the determination of the length of transition curve, as will be discussed a little later. In fixing alignment, smoothness of riding is all important for comfort; hence, the same rate of rise of super-elevation on curves in inches per second should govern for the entire road, where a schedule can be predicted with any degree of certainty, a difficult matter, of course, in most cases for new roads, but almost always capable of realization in re-alignment, when time tables are established.

It appears to the writer that the provision that "the length of the curve should not be less than 30 times the elevation in inches for the ultimate speed" (literally meaning that no rise of super-elevation shall be greater than 1 in. in 30 ft.) is a wise one for places where the speed cannot be predicted, but that is not the best practice, in that the rate of rise of transition will not in that case depend upon the speed of the train.

The last clause of the paragraph for the Manual of Recommended Practice of the American Railway Engineering Association, concerning the length of easement curve: "that the curve should not be less than two-thirds the ultimate speed in miles per hour times the elevation in inches," places a more rapid rate of rise of the car in inches per second than has been considered best practice for steam roads, according to available information in the hands of the writer. By this rule the rate of rise would amount to about 2.17 ins. per sec., while practice appears to be from 1¼ to 1½ ins. per sec. rise.

The length of easement curves used on the Cleveland, Cincinnati, Chicago & St. Louis Ry. is apparently based on an assumed rate of rise of 1¼ ins. per sec., and the practice of the Delaware, Lackawanna & Western Ry. is given as 1½ ins. per sec.

It is true that cases may be cited where faster rates of rise have been used; notably, a local fast urban electric railway has several spirals where the rate of rise is 1 in. in 20 ft., corresponding to 2.20 ins. per sec. vertical rise at 30 m.p.h.

These curves are said to be easy riding from the standpoint of electric road practice, but jolts and roughness of riding which might be tolerated by passengers on an urban electric road or an elevated road, would not be considered good practice for steam roads.

The foregoing is taken from the appendix to the reports of the American Railway Engineering Association's committee on track, as presented at the last meeting.

The Principal Features of the Walschaerts Gear.

The Walschaerts valve gear, while in extensive use during the past half century or more in Europe, has only come into general use in America since 1905. Previous to that date, some few roads had made attempts at its use, the most notable example being that on the Boston, Revere Beach and Lynn Ry., a short narrow-gauged line. In this particular case the principal reason for its use was the cramped space due to the narrow gauge. The gradual evolution of the locomotive to its present gigantic proportions has developed the same cramped conditions that this narrow gauge road encountered in the early eighties, so that at present it is more generally employed than any other form of motion, especially for heavy road service.

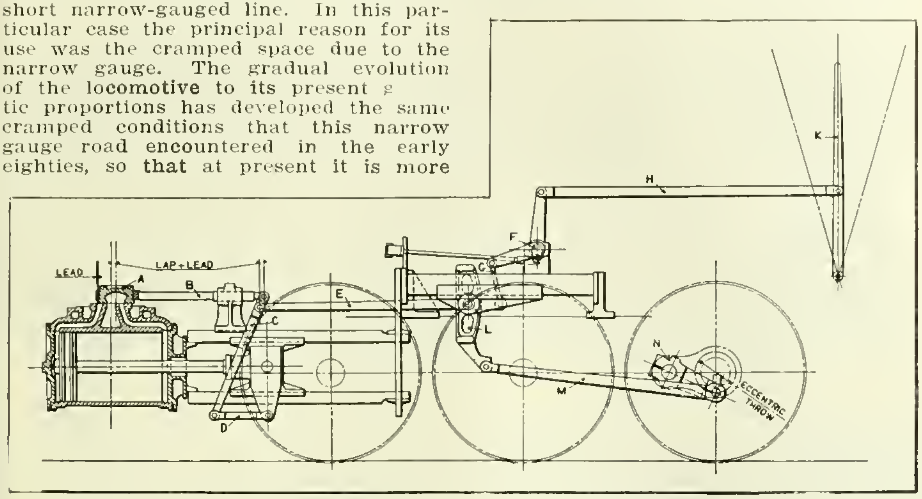

Fig. 1. Walschaerts Valve Gear for Outside Admission.

The principal advantage of this gear lies in the accessibility of its parts, placed as they are outside the driving wheels. This makes oiling, inspection, and cleaning simpler than with the Stephenson gear. Also, in heavy engines equipped with the latter gear, the eccentrics must be made of large diameter to give the desired throw, thereby increasing the rubbing surface velocity, causing the surfaces to heat and consequently wear. The Walschaerts gear, being entirely pin-connected, eliminates this difficulty.

Referring to figs. 1 and 2, it is seen the Walschaerts motion is of the radial type, employing a link L trunnioned at its middle point, this link being rocked by an eccentric rod M, actuated from a return crank N, secured to the main crank pin. The movement of the link is transmitted to the valve A by a radius rod E of the length of the link radius. This radius rod has a sliding pin connection in the link block, and can be raised or lowered by the reverse lever F, the upper position being for one direction of motion, while the lower is for another, as will be subsequently explained.

The eccentric return crank is set exactly quartering with regard to the main crank, so that if the radius rod were directly attached to the valve stem B, for the end position of the piston, the valve would be in its middle position. For middle position of piston, the valve should be displaced an amount equal to the steam lap plus the lead. In the Walschaerts gear the lead is given by a combining lever C, attached to both the valve stem and radius rod, and also connected through a suitable link D to the crosshead. The combining lever is so proportioned that if a point of its connection to the radius rod be kept a stationary fulcrum, and the piston moved a distance equal to the stroke, the valve will be moved a distance equal to twice the lap, plus the lead. This displaces the valve, the amount of load for the end position of piston.

For outside admission, the valve rod is connected to the combining lever above the radius rod connection; and the eccentric crank leads the main pin if the block is in the lower half of the link in forward gear, and vice versa.

For inside admission, the valve rod is connected to the combining lever below the radius rod connection, and the eccentric crank follows the main pin if the block is in the lower half of the link in forward gear, and vice versa.

Inasmuch as the position of the valve when the piston is at the end of its stroke is dependent on the combining lever only, it is evident that the lead given by the Walschaerts gear is the same for all points of cut-off. This is the principal feature which distinguishes this gear from the Stephenson motion as far as steam distribution is concerned. All parts of the Walschaerts motion should be correctly laid out and constructed from a diagram, and the gear designed to give the lead most desirable for the usual running speed. The parts having been correctly made, it is impossible to alter the lead without seriously deranging the motion. In this respect, the Walschaerts gear is less flexible than the Stephenson, but when the correct steam distribution is obtained it is less liable to derangement.

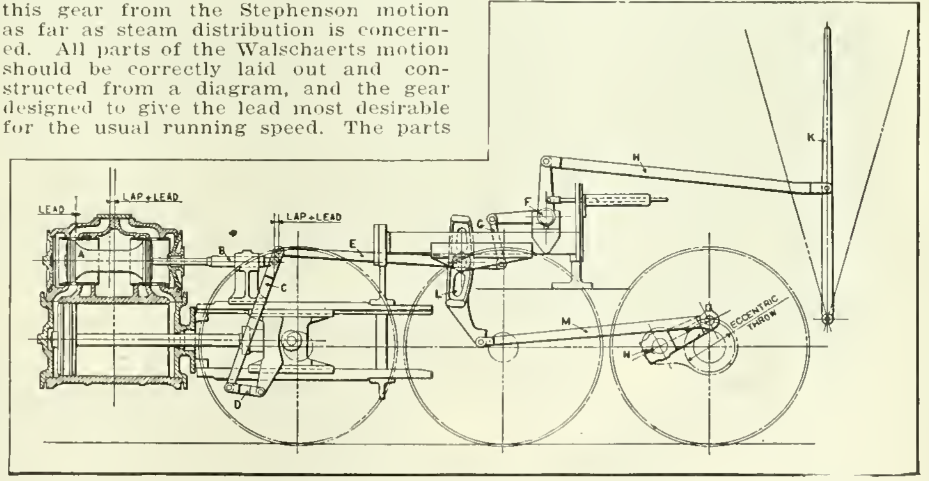

Fig. 2. Walschaerts Valve Gear for Inside Admission.

There are numerous possible arrangements of the gear, and many of these modifications of the original gear are in successful use. The general design of the engine influences to a large extent the arrangement of the motion.

As previously mentioned, all parts of the gear must be laid down on a diagram in order to insure correct steam distribution. If all the details could be made and assembled exactly to drawing, any further setting of the valves would be unnecessary. Such accuracy is impossible in practice, so that after assembling, some adjustment is necessary.

The information contained in this article is abstracted from Record no. 70, published by the Baldwin Locomotive Co., Philadelphia, Pa.

The Classification of the Graduation on Railway Construction.

By J. M. Shanly, M. Can. Soc. C. E; M. Am. Soc. C. E., Montreal.

Referring to the very interesting article on "The Classification of Graduation on Railway Construction," by Professor Dalton, published in your August number.

As Professor Dalton says, the question of classification of materials in excavation is one of the most difficult problems which the young, or indeed the old, engineer has to solve and it is also one of the most important, and no specification that has ever been written covers the whole matter. An engineer can define rock and earth in their strict geological sense without difficulty, but if he follows out such a classification strictly he will probably ruin most of the contractors who have the misfortune to work under him.

A specification can only be taken as a general outline on which to base the classification, and, while a court will no doubt take it in its literal sense, the engineer, if he is a fair-minded man, will vary its terms to suit particular conditions. The question is not to determine what is actually earth and what is actually rock, but what is the relative cost to the contractor of excavating the different kinds of material found in cuttings. I have seen soft clay and quick sand, which had to be loaded into carts with scoops, and would slop out like mortar, and which would cost as much or more than ordinary rock to handle, yet under the usual specifications this would be classed as earth. Hard pan and cemented gravel are also sometimes as expensive to handle as rock, but very often must be taken out as earth, if the terms of the contract are literally interpreted.

The young and inexperienced resident engineer cannot, of course, be allowed much latitude in classification, but he should endeavor to form a fair idea as to what it should be in justice to the contractor, and then give his chief the benefit of his observations and let him decide the doubtful points.

A man who keeps his eyes open can soon see whether a cut is being properly handled and can form a good idea as to what the moving of the material is costing. If he finds that under the strict letter of the specification the material is earth, while, judging by the cost to the contractor, it is loose rock, he should report to the chief that, in his opinion, the contractor is not receiving fair treatment and give his reasons for thinking so.

I cannot agree with Professor Dalton

that there should be no classification, as this would throw the whole burden on the contractor and would naturally force him to bid higher, in order to cover the risks taken. On the same principle the whole contract might be let for so much per mile, or even for a lump sum, to cover everything from right of way to ballast.

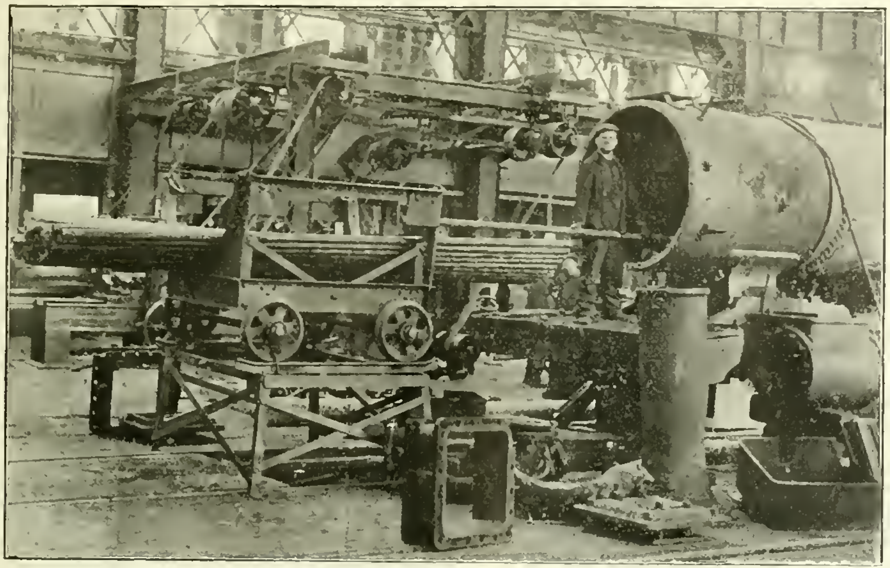

Fig. 1. Removing Tubes from Boiler for Putting on New Ends.

The contractor is as much entitled to his profits as the engineer is to his salary, and where there is a loss, unless, of course, it is due to bad management, he is simply furnishing so much capital to the company without any return, which is an injustice, even though it may be strictly legal under the terms of the specification.

Repairing Boiler Tubes at C.P.R. Angus Shops.

The C.P.R., in its Angus shops, Montreal, has developed ways and means for handling boiler tubes while in the shops for re-ending and cleaning, which is decidedly unique. At the same time they provide a means of expediting the work to a degree that would be impossible under old methods of handling and end-welding.

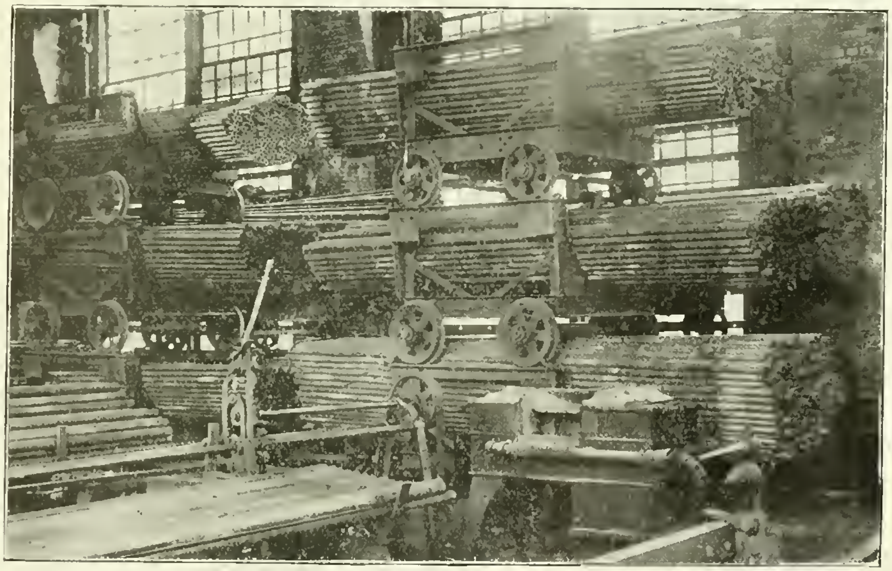

Fig. 2. Tube Storage in Rack Cars specially constructed for the Purpose.

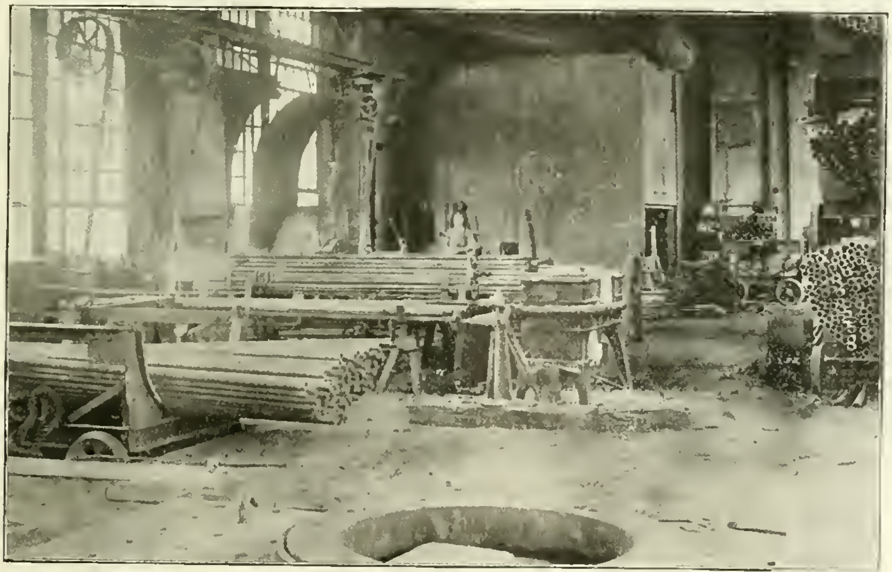

Fig. 4. Department where the Tubes are trimmed, New Ends welded on, and finally cut to Length.

As shown in fig. 1, the tubes on being removed, are placed in a specially formed truck, as indicated. This truck is in an elevated position to facilitate the handling, making it unnecessary to have an extra helper to whom the tubes would be handed. The truck stand has a special rail top of the truck gauge, the ends of the track being bent up to prevent the car running off. Hook bolts further hold the truck in position during the filling operation.

All the tubes from one boiler being removed, the holding truck is transferred to the storage space shown along the wall in fig. 2. This space is sufficient to accommodate 18 trucks, the practice being to pile them three high. To make this possible, examination of the truck in fig. 1 will show that the top has a track similar to that on the supporting truck, on which the upper trucks may be placed. The superiority of this method of storing is very apparent. The foreground of fig. 2 shows the end trimming and welding machines, which, however, are illustrated more advantageously in fig. 4, and in connection with the latter illustration they will be more fully described.

For cleaning the tubes, a machine made by J. T. Ryerson and Sons, Chicago, Ill., is used; this machine is shown in operation in fig. 3. The machine operates on the tumbler principle, the chains lifting the tubes up from the holding truck and when at a sufficient height, the chains pass over their sprockets, tumbling the tubes around, cleaning the tubes very effectually. The time required is materially less than by the old hand chipping process. The tubes throughout this process are handled entirely by mechanical means, being lifted up, cleaned and replaced without handling separately.

Fig. 4 is a view of the shop shown in fig. 2, taken from another position. Here the tubes are trimmed, new ends welded on, and finally cut to the requisite length in a manner similar to that described in the Nov., 1910, issue of the Railway and Marine World, which outlined the practice of the C.P.R. West Toronto shops. A neat weld is obtained by the method employed, the main feature in the process being the fact that two bevelled edges are brought overlapping to form the weld instead of merely flaring the end of the piece to be welded on, and slipping it over the tapered end of the main part of tube. The facilities provided for making the tubes easy to handle, are emphasized in this illustration, where the carrying truck is shown lowered into a cut-out in the ground, thereby keeping the tube clear for handling. Another view of the shop where the tubes are re-ended, is illustrated in fig. 5.

The information and illustrations in this article were obtained from Lacey R. Johnson, Assistant Superintendent of Motive Power, C.P.R., Eastern Lines.

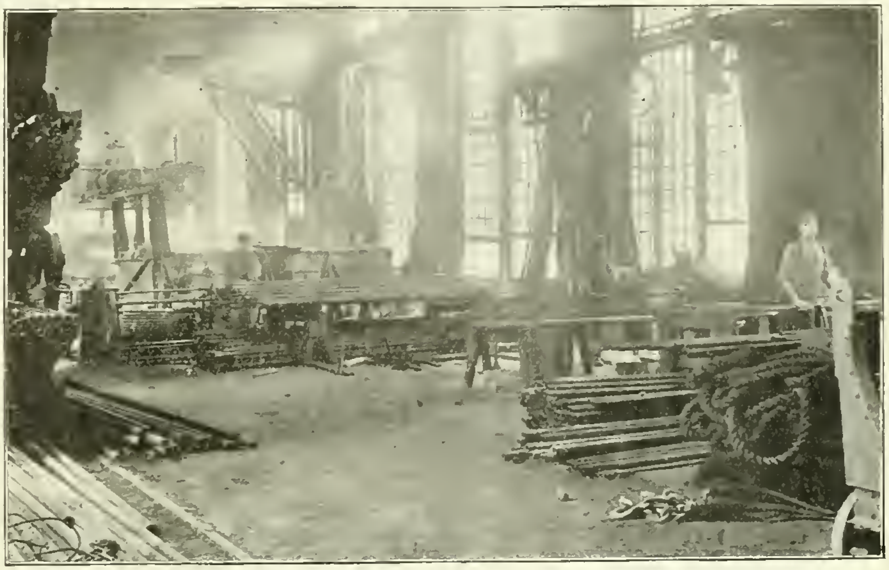
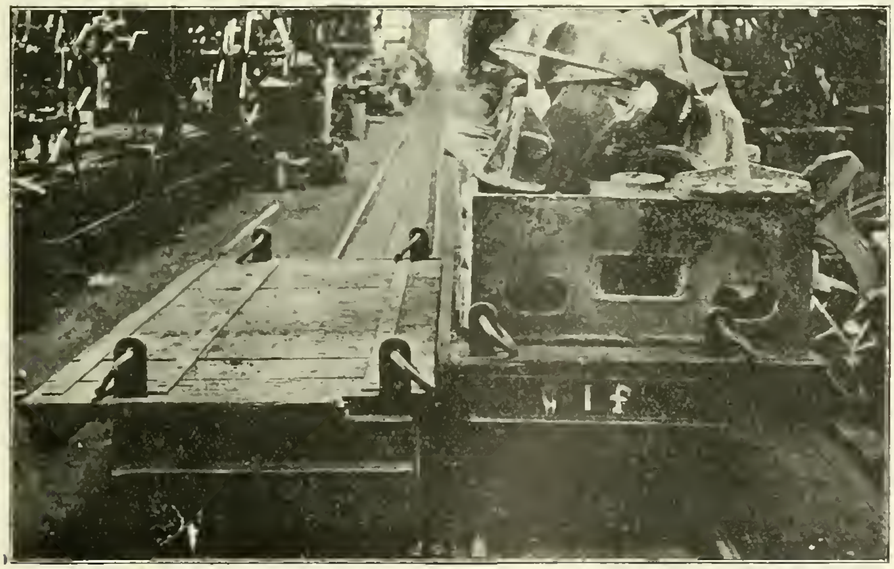
Ryerson Tube Cleaner in Operation. Fig. 3.



Another View of Tube Repairing Department. Fig. 5.



Shop Trucks used on the Industrial Railway in the C.P.R. Angus Shops.

The system of shop tracks in the C.P.R. Angus shops at Montreal, information concerning which has been obtained from Lacey R. Johnson, Assistant Superintendent of Motive Power, Eastern Lines, is particularly good, the main feature being its flexibility, made possible by the kind of car and arrangement of trackage.

The accompanying illustration shows the type of car used and the arrangement of trackage. A double narrow gauge track has been laid of such proportions that the two outer rails form a standard 4 ft. 8½ in. gauge. The inner rails are quite close together, just sufficient space being left to permit the journal boxes to clear. The outer edge of each truck is extended about a foot, giving an overhang, while the inner face is flush with the axle. This provides two fairly wide, offset cars, which may be operated independently or in pairs when so desired, for heavy loads. Singly, they are capable of handling castings and forgings of large proportions. Instructions have been issued concerning the extent of the loading and the direction of traffic on the two tracks, resulting in smooth operation.

At intervals throughout the shops, turntables and cross-tracks are provided, and on these cross-tracks all the loading and unloading is done whenever possible. This arrangement of cars and trackage has been found to be excellent for the handling of material in the shop, especially when it is necessary to transfer it from one department to another.

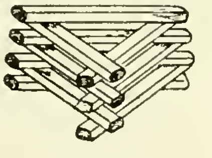
The Proper Care of Track Material and Tools.

Following is the report of the special committee on this question appointed by the Roadmasters' and Maintenance of Way Association of America:

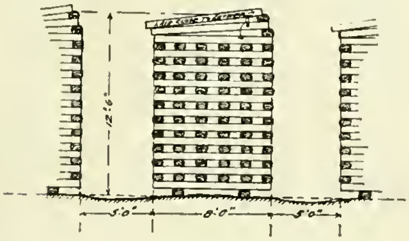
Untreated Track Ties.

Cross ties, when received in rude form direct from the forest, are to be stored in material yards or distributed on roadmaster's subdivision. As soon as unloaded they should be piled—suitable high ground with good drainage having been selected for this purpose. Two old ties or timbers should be placed next the ground as a foundation for the pile, which should be composed of cross tiers with no more than six or seven ties in each tier—the size of the ties would govern—but plenty of space should be allowed between the tiers to permit them to dry out and thoroughly season before being placed in the roadbed. The ties in the last tier should be placed close together to act as a roof over the pile and should have a pitch of about six inches, which can be accomplished by placing two ties under one side of the top tier and one tie under the other side. The last tier should slant away from the track. Ties should be peeled before piling.

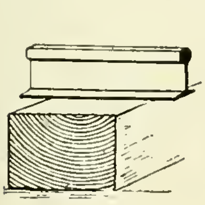
If the ties are unloaded along sections, the number of ties in each pile would depend upon the number of ties per mile required for renewals. If the ties required per mile should be from 200 to 300 we would pile from 25 to 40 ties in a pile; if the tie renewals should be light—say from 75 to 100 per mile—we would pile them in V shaped piles of about 15 ties each, so that the track men would not have to haul them too far on the dump car in distributing them.



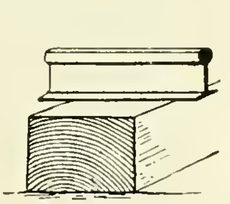
The sod should be removed from around the piles for a space of at least six feet and the grass should be mowed from the grass line to the edge of the right of way at least 50 ft. on each side of the piles to prevent fire from getting into them. In piling untreated ties of all kinds they should be piled with the heart side down and in placing them in the track the heart side should always be placed next to the road bed. The accompanying sketches will show the manner we would recommend for piling and placing in the track.



Note:—In piling ties for seasoning, they should be placed heart side down.



Tie not properly laid.



Tie properly laid.

Treated Track Ties.

Ties treated with solutions of zinc chloride should be piled in cross tiers similar to untreated ties and as openly as possible in order to bring about rapid evaporation of moisture from the ties before they are placed in the track. We believe in the theory advanced that the zinc chloride used in treating the zinc ties is an antiseptic and being forced into the tie renders it impervious to all animal or vegetable life which is the cause of all wood decay. Consequently, the drier the wood becomes, after treating the more thoroughly the wood becomes impregnated with the zinc chloride.

Now the zinc chloride, when pure, is practically insoluble in water and if the chloride could be introduced into the tie in an absolutely pure state, the effect of the tie being wet by rains while in track would be practically nothing. It does not get into the tie in a pure state, however, and the result is that the continual soaking and drying of the tie in the track does eventually wash away the chemical and as it wastes away, the various small animals and fungi find feeding ground in the outer surface of the tie which we then say has begun to decay. This washing away of the chemical treatment, be it either zinc chloride or the other processes of a similar nature, can be very materially reduced by proper ballast and a well drained road bed.

Ties treated with creosote should be piled just the opposite from those treated with zinc chloride. They should be piled in cross tiers, but just as compactly as possible so as to leave no air space between them. The reason for this is that the creosote disappears with some rapidity from the creosoted ties and every precaution must be taken so as to reduce the rapidity of evaporation as far as possible.

On the other hand, the process of treating creosoted ties is done along another line, in that the pores of the wood are filled with creosote oil. In treating these ties, the oil is forced into the wood as thoroughly as possible, rendering the tie waterproof. So long as the creosote oil remains in the tie, it will also keep out any animal or vegetable growth and prevent decay. But all oils are to a certain extent volatile, creosote oil is not an exception to this, but evaporates rapidly for a heavy oil. This can be noticed when a pile of ties is examined at the time of unloading and at a later date, say thirty, sixty, or ninety days after. When first received, the tie is very wet with oil, but later it becomes dry enough to be handled without soiling the hands and the color will have changed from black to a dark brown. This is the case with ties when piled in an open pile or with the outside ties in a compact pile, while the inside ties will still be black and will be almost as oily as when unloaded. This outside oil has not been absorbed by the ties since the oil was on the tie when it left the treating plant, where the pressure is very great and the temperature is raised to a point where the pores of the wood will best admit the oil.

Since we know that the creosote oil does evaporate and that the principle involved in this method of treating is to effectually seal the pores of the tie against the admission of water and air with their load of wood-destroying germs, we easily arrive at the conclusion that the better method is to get the creosoted ties into the track as soon after treating as possible, but in the event that this is impossible, as it usually is in the majority of cases, we would then use the best method we could to stop evaporation by piling them close together. We would go a step farther in the method of piling these ties and would recommend that a layer of fresh earth be placed over the top of the piles which would serve not only as an additional protection against sparks from passing locomotives, but would also be an additional measure of precaution to retard the evaporation of the creosote oil.

Switch Ties and Head Blocks.

When switch ties and head blocks are received, they should be distributed at once to the sections where needed and should receive the same good care in piling as track ties. Old ties or timbers should form the foundation and they should be piled in tiers with a two or three inch strip between each tier. Sufficient space should be left between the tiers or head blocks to permit them to dry out well and thoroughly season before being placed in the track and where a great quantity of this material is piled in supply yards, we would recommend that the different lengths be piled separately to avoid confusion in loading them up for distribution.

Crossing Plank and Fence Lumber.

This material should be piled the same as switch ties, in tiers with at least a two-inch strip between each. Different lengths of planks should be piled separately to avoid confusion and unnecessary handling when taking them for use. This class of material we would recommend be ordered once a year and used as soon as possible, after it has been well seasoned, except a small surplus which may be kept at division headquarters for emergency use.

Rails.

New and usable rails should receive great care in unloading to prevent them being bent or broken, and in piling great care should be taken in forming the foundation, which should be composed of old timbers. The foundation would depend upon the size of the pile, but in all cases it should be composed of old timbers strong enough to prevent the rails from becoming surface bent while in the pile. Rails should be piled in tiers and rails of equal lengths should be placed across each tier to form the sub-foundation of the next tier. The number of rails to be placed across the pile would depend upon the length of the rail in the pile and the number of tiers the pile contained, but not more than eight feet space should be left between rails placed across the pile.

Switch Material.

When switches or frogs or guard rails are kept in stock, they should be piled on skids or rail rests; but ordinarily, this kind of material should not be distributed along sections, but a sufficient amount of each kind, of the same pattern and weight as the rail in track, should be kept at division headquarters or in the larger yards, where it may be quickly secured when needed. Each kind and pattern should be separated to avoid confusion in loading it when called for. When railroad crossings, frogs or switches are kept in stock for any length of time, we would recommend they receive a coat of cheap dark paint and the bolts be well oiled to prevent rusting.

Rail and Joint Fastenings.

A small supply of joint fastenings, spikes and bolts and nutlocks should be given each section, which should be kept under cover in the tool house or under the roof where it will not become rusty. At division headquarters or the larger yards where it is necessary to carry a large amount of this material in stock, if no permanent shed is provided, it should be neatly piled up and a temporary roof of old boards should be placed over same. Track bolts should be closely watched and if necessary a little cheap oil be applied to prevent rusting.

Emergency Rails.

Each section should have a sufficient amount of emergency rails on hand to insure it answering the purpose for which it was intended, which will be governed to a large extent by the condition of the rails in track. If the rails are in good, healthy condition, one em-

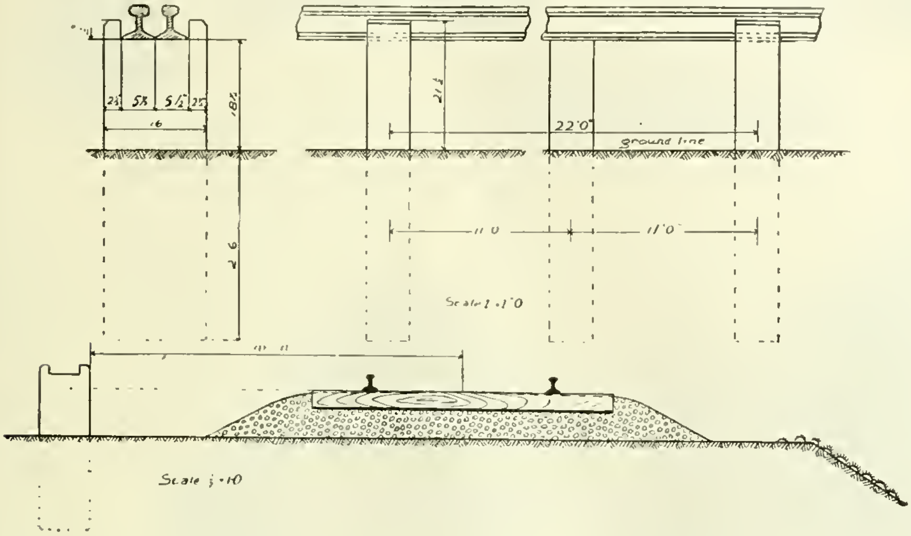
S. A. MEGEATH,

PRESIDENT

ergency rail each two miles will be sufficient, for single track. One pair of emergency angle bars should also be placed with each rail. These rails should be placed on suitable rail rests at or near mile posts.



Rail rests to be made of second hand trestle stringers.

Rail rests as per sketch we would recommend for this purpose.

TOOLS.

Each section should be supplied with a sufficient number of first-class tools, the very best that money can buy, as there is no greater waste of money than for a section crew to work with inferior tools. The number of pieces of each kind would be governed by the number of men in each crew. In addition, each section should have a few extra tools for use in case of emergency, but no more than absolutely necessary to properly care for the work. A monthly inventory of all tools on a section should be rendered by the section foreman. In general, for ordinary repair work, the foreman should make his requisition on the roadmaster for tools and material once every thirty days and the foreman should be furnished with a small surplus of tools and material blank on which he should enter all tools on his section which will not be used for the next thirty days; this blank should be pinned to his monthly requisition and forwarded to the roadmaster at the close of each month. This will enable the roadmaster to transfer tools and material from one section to another and thereby avoid making requisition for supplies which he has on his division available for use. A great deal of money can be saved each month by having a system of this kind or a similar one. All tools as soon as they become dull or out of repair so they will not do first-class work, should immediately be sent to the shops for repairs and they should be put in good shape and returned to the section from whence they came without delay.

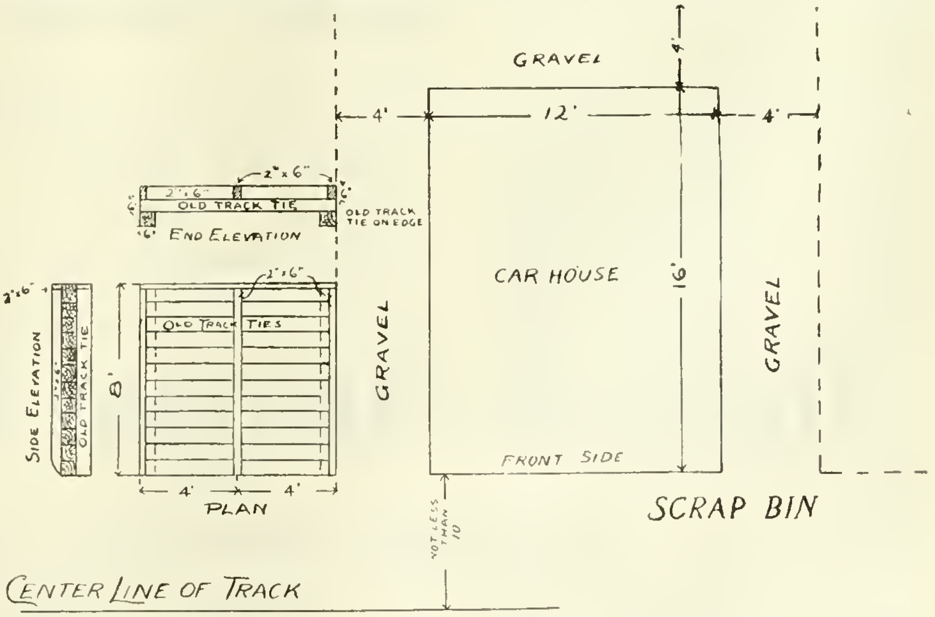
The hand car with a section crew should be the very best that can be obtained. It should be as light as possible but sufficiently strong to carry six or eight men and the necessary outfit of tools. There is no greater waste of money than to have a section crew running a poor hand car; thirty minutes in the morning and thirty minutes in the evening, day after day, on account of a poor hand car, runs into money very fast. The foreman should give his hand car very close attention; he should inspect it every morning before going to work and see that all bolts are securely fastened and that all bearings are clean and well oiled.

Motor cars have been in use on some entire divisions in the past year or so with good results and saving some money. We recommend this feature of the car question be given consideration.

Track tools of all kinds should never be used for any other purpose than that for which they are made. Track shovels should never be permitted to be used in holding up the end of ties while tamping, in pulling ties out of track or putting in new ones; nor should they be used for spacing ties in the track. Claw bars should not be forced under the head of a spike by hammering the heel with a spike maul; sufficient wood from around the head of the spike should be cut with an adze or sharp pick to permit the claw bar to grasp the spike head. Nor should they be used between the tie and rail to lift the rail. This will break the claw in a great many cases, especially in cold weather.

Lanterns should always be kept in first-class condition, ready for an emergency call, except that they should not be left standing or hanging up in the tool house with the cup filled with oil, as this will spoil the oil and rot the wick.

When through with the day's work, all tools should be conveyed to the tool house and locked up for the night. Track gauges and track levels should be tested frequently to ascertain if they are true and correct.



SCRAP.

All scrap should be picked up daily and placed with the other scrap where it can be secured by the scrap crew when required. We would recommend the scrap be picked up once a month. The scrap bin for small scrap should be provided at each section tool house with two compartments, each 4 ft. x 4 ft.; one compartment for small track scrap and the other for car scrap. We would recommend scrap bin as per sketch at every section tool house and all scrap should be picked up daily and placed in it at the close of the day's work. Whenever any old worn-out wooden cattle guards or other worn-out equipment of this kind is burned as rubbish, all the bolts, nuts, washers or other metal should be picked out and conveyed to the scrap bin. When old tie piles are burned, the ashes should be raked over and the old spike stubs, which in many cases are quite plentiful, should be picked up by the track men and saved as scrap. Its value will more than pay for gathering it up and it will educate the men on the matter of economy. Whenever any usable parts of cars or locomotives are picked up, such as draw bars, car doors, brake-shoes or any other usable material, they should be at once sent to the shops where they can again be made use of.

The results obtained in the care of track material and tools, depend in a larger measure than in any other part of their work, upon the interest taken in the matter by the foreman and his men and we believe the surest way to bring about the results desired is to create a sense of the value of property among the men by continually impressing upon them the fact that all tools and material should be cared for just as conscientiously as if they were their own personal property. This impression will go fully as far as the most careful instructions.

◆

C.P.R. and G.T.R. Shareholders.

The Canadian Pacific Ry. has about 24,000 shareholders, the number of Canadian holders being 2,500. Nearly all the 4% preference stock is held in Great Britain. Of the common stock, holders in Great Britain have approximately 65%, 15% being held on the Continent, while the remaining 20% is divided evenly between Canada and the United States.

Grand Trunk Ry. shares are held by 54,200 persons, against 52,900 a year ago. This puts the G.T.R. second only to the Pennsylvania Rd., which has 64,869 shareholders. The G.T.R. shares are almost exclusively held in England.

Telephone Train Dispatching.

By A Dwight Smith,

Train dispatching dates as far back as 1850, when the telegraph was first introduced by Superintendent Minot of the Erie Rd. Previous to that time, what was known as the "Time Interval System" was in use, that is, the ruling train had the right of one hour against an opposing train of the same class. Under this method of operation if one train was late, a great deal of time was lost by all of the other trains on the system. In order to make up part of the time lost, trains were advanced by what is known as the "Flag System." The train-man was sent ahead with a red flag and given about 20 minutes start, and then the train followed, and when the train-man became exhausted he would stop on enough straight track to make it safe, and then be taken aboard and a fresh man started out in the same manner. This method of advancing trains was slow and unsatisfactory and led to the adopting of the telegraph in 1850 by Superintendent Minot of the Erie Rd.

It was a very interesting incident, and is stated to have happened as follows:—Mr. Minot happened to be going over the road on a westbound day express, and under the rules then existing the train was to wait for an eastbound express to pass it at Turners, 47 miles from New York. That train had not arrived, and the westbound train could not proceed until an hour had expired, unless the eastbound train arrived at Turners within a short time. There was a telegraph office at Turners, and Mr. Minot telegraphed to the operator at Goshen, 14 miles further on, and asked him whether the eastbound train had left the station. The reply was that it had not yet arrived at Goshen, showing that it was much behind time. Mr. Minot then telegraphed as follows:—

"To agent and operator Goshen:
"Hold the train for further orders.
"C. Minot, Supt."

He then wrote this order and handed it to the conductor:—

"To conductor and engineer, day express:
"Run to Goshen regardless of opposing train.
"C. Minot, Supt."

The engineer refused to run on the order, and after using his verbal authority without effect, Mr. Minot climbed on to the locomotive and took charge of the train himself. He ran it to Goshen and then from Goshen to Middleton, and from Middleton to Port Jarvis on a similar order, and entered the yard from the east as the other train came into it from the west. An hour or more had been saved by the westbound train and the question of running trains on telegraphic orders was once and for all settled.

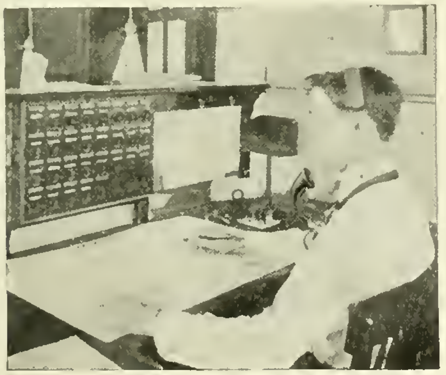

Fig. 1. Dispatcher's Office.

The telephone, being one of the older members of the electric family, the engineer, in his big, brotherly way, rather looks upon it as having settled down to a respectable middle-aged life. He expects nothing startling in the way of a development in telephony (when he actually reaches the expectant stage) rather, a steady growth in its uses and minor improvements in apparatus. It appears, however, that there is still some young blood in this versatile apparatus, and it is branching out in new and unconquered fields.

Telephone train dispatching is the latest commercial development and perhaps the most interesting. It is of very recent growth, practically all within the last three years, and even in this brief period, its strides forward have been wonderful, and the growth of its popularity is equally strong. The telephone has come into the railway field, which has always been the exclusive province of the telegraph, and it is there to stay, because of the numerous advantages it possesses peculiar to itself.

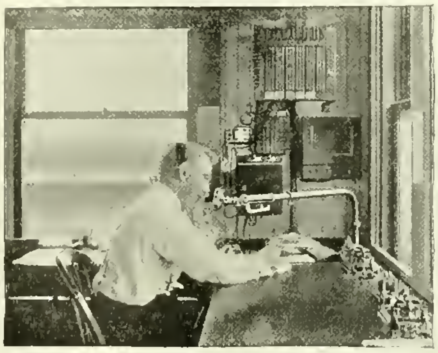

Fig. 2. Way Station Operator using Transmitter Arm.

There is no branch of railroading more carefully and conscientiously maintained at the uniform high level than the dispatcher's force (see fig. 1). On these men and their apparatus hang the lives of the many millions of travellers over the whole of this big country. They are men who must not make mistakes, because an error does not only mean financial loss, but is too frequently paid for by the loss of human lives. It is small wonder, then, that the railway's first requirement for anything connected with the dispatcher is safety—"absolute safety." The telephone has passed this requirement most satisfactorily, as is evidenced by its adoption on over 50,000 miles of railroad in Canada and the United States. Furthermore, the telephone's record stands clean. There is not a single accident that can be laid to its door.

The telephone method of dispatching trains is better than telegraphy, not only because the dispatcher can call a way station with one motion, and can "have the bell ring in the way station almost immediately," but also because it has been proved that the way station operators answer the bell more quickly than they ever did the sounder.

In addition to this, there is a gain in the speed of transmission. A good telegraph operator may be able to send at the rate of 50 words a minute, but in ordinary railway service this figure can quite safely be cut in two, owing to the grade of operators that have to be employed. With the telephone a man can talk at the rate of 100 words a minute, and this difference in time is gained on everything, excepting train orders themselves.

Train orders are very carefully handled. The adoption of the telephone has not changed them. The same order book is used by the dispatcher, and the same form by the way station operator. In giving an order the dispatcher calls the station required, the way station operator then comes in on the line, giving the name of his station. The dispatcher then says "31 order copy 1," or something of this nature, according to the type of order he is putting out. He then proceeds to write his orders in his order book, spelling all names and numbers, and repeating it to the way station operator as he writes. This regulates the speed to such an extent as to enable it to be readily copied by the operator. Now there is a double check on the correctness of this order. As soon as the operator has finished writing his order he repeats it back to the dispatcher as he has written and received it. The dispatcher underlines each word as it is repeated to him. When this is finished, the dispatcher gives the operator the sign, "complete 10.25," as the case may be.

It is very interesting to watch the change which comes in the personal feelings between the dispatcher and the way station operator. Because he can talk by word of mouth, the operator becomes more a part of the system. A cordial spirit of co-operation creeps in, discipline is improved, and so is the service. There is no more fighting for the use of the train wire. With the telephone the dispatcher has complete control of the wire, and yet more important, when the dispatcher is calling a way station he positively knows that he has rung the bell in that station. By means of an ingenious arrangement of the bell circuit, he can tell in every case whether or not the bell of the called station has actually rung. This is called the "answer back" and takes the form of a distinctive buzz in the dispatcher's head receiver. It can be produced only by the ringing of the bell. Now, the way station operator (fig. 2), knowing that the dispatcher has heard the bell ring in his station, is more liable to answer the call quickly than if he were listening to his call coming in over a Morse sounder.

Many way stations in this country have men who have to act in the ca-

Scotland, Sept. 15, 1843.

pacity of operators and agents. This means that they must necessarily leave their instruments to attend to the selling of tickets or handling of freight in a building which is very often some distance away. With a bell that can be heard several hundred feet, the station agent can be performing his duties out in the freight shed or away from the building and still be within sound of his selector bell. In order that the full advantage may be obtained from this feature, the dispatcher can control the length of the ring, in other words, if he does not get an immediate answer, he can ring the way station steadily until he does receive an answer, or as long as he wishes.

The use of the portable train set (fig. 3) is perhaps the most picturesque, and appeals forcibly to railway men. Substantial economies can be affected. Officials, inspectors, train crews, track, bridge and wrecking crews can have immediate access to the dispatcher. The portable set is used in the same way as any regular telephone. Every road which is dispatching by telephone is also employing portable telephone sets. The C.P.R. has adopted it to such an extent that all the vans and baggage cars now being built are wired and equipped with portable sets, regardless of what divi-

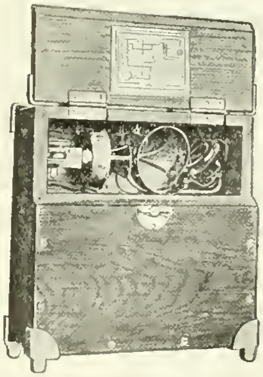

Fig. 3. Portable Telephone Set Open.

ATLANTIC STEAM SHOVELS

CLASSY 45-16-2½ ATLANTIC SHOVEL.

ECONOMY IN OPERATION

Reduction in friction and boiler losses, with corresponding increase in pull at dipper, is the reason why the Atlantic shovel digs more at less cost than shovels of the chain type.

Wire rope hoist, found only in the Atlantic, exerts a direct pull on the dipper and substitutes friction of a rope with but one large sheave for that of a chain with from four to six additional small sheaves. The less power lost in the machine itself, the more you have left for digging.

Further economy in operation is secured by using a large boiler of the locomotive type, in which more of the heat is utilized and less is lost up the stack. This is possible only because of the removal of the hoisting engines from their usual position on the car body, to the boom.

The placing of the main hoisting engines at the foot of the boom reduces the power necessary for swinging the boom and removes the twist upon the car body when working on one side. With this construction the turntable centre and boom foot constitute the engine frame. One casting takes the place of four or more in the usual construction, reducing the total weight of the shovel, and the weight on the front trucks.

Spare parts are kept on hand at our Works at Longue Pointe, Montreal, Canada. Every part is made to gauges, and sure to fit.

MONTREAL LOCOMOTIVE WORKS, LTD.

OTTAWA BANK BUILDING, MONTREAL, CANADA

sion they are destined for. The use of this apparatus is becoming more popular every day. It saves minutes and valuable time in case of emergency, and minutes on a railroad generally represent thousands of dollars. It has been found to be of estimable service in every day running of the road. If an engine blows out a stuffing-box, breaks an eccentric or valve gear, it is no longer necessary to keep a dispatcher fuming over what might have happened to that train and trying to patch up his schedules; now he can be told this on the spot by the conductor of the train (fig. 4). This has been very beneficial in many instances; because of our rugged winter climate, trains stalled in snow drifts can advise the dispatcher of the fact. This saves many a long wait and many a long tramp for the brakeman to the nearest station.

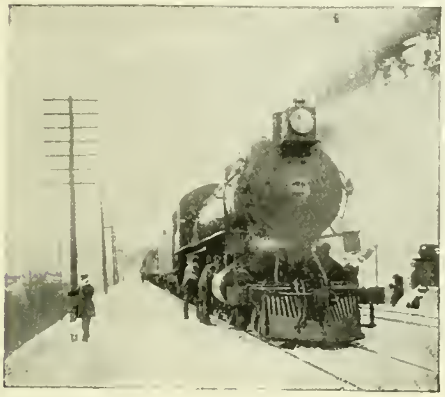

Fig. 4. Portable Train Set in Use by Conductor.

Portable train sets are connected to the line by what is known as a line pole (fig. 5). This pole is not unlike a fishing pole, and is generally in two sections for compactness sake. The top section is equipped with two contact clips, which give a firm contact, and in conjunction it has a flexible line cord by which connection is made. This cord is generally about 100 ft. long, and enables the train crew in most cases, if pole line is not far distant from the track, to speak from the inside of the van.

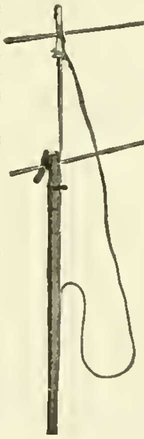

Fig. 5. Top Section Linepole Making Contact.

Another advantage peculiar to the telephone is the facility it gives for keeping trains on a division in close touch with the dispatcher by means of siding sets (fig. 6). The use of portable sets has already been mentioned. Siding sets perform the same function, only instead of being carried on trains they are permanently located at intervals along the railway. These sets can be placed in booths or pole shelters built on the line. In many cases a specially designed set is used and mounted direct on the poles. This latter set is an iron, weather-proof, rust-proof set (fig. 7), and is equipped with a standard switch lock, so that only train crews, or persons having authority, can get access to the train wire. Typical points where these sets show to advantage are blind sidings or loading points, water tanks and draw bridges.

Thus, in many ways the telephone has improved train dispatching; in small ways, perhaps, considering each phase by itself; in the aggregate, in a large ,broad, modern way. It is introducing economies, simplifying the work and making for better service in every way.

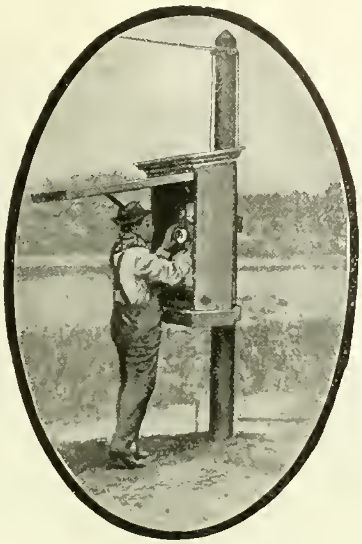

Fig. 6. Trainman Using Siding Set.

Transportation Men's Birthdays in September.

Many happy returns of the day to:—

G. W. Alexander, Local Treasurer, G.T.R. Western Lines, Detroit, Mich., born at Lightcliff, Yorks, Eng., Sept. 10, 1859.

H. Bailey, Bridge and Building Master, District 1, Lake Superior Division, C.P.R., Sudbury, Ont., born at Huntsville, Ont., Sept. 2, 1879.

W. B. Bamford, Division Freight Agent, Atlantic Division, C.P.R., St. John, N.B., born at Belleville, Ont., Sept. 10, 1863.

W. D. Barclay, General Manager, Canadian Northern Quebec Ry., Quebec and Lake St. John Ry., Halifax and Southwestern Ry., and Inverness Ry. and Coal Co., Quebec, Que., born at Campbellton, N.B., Sept. 23, 1852.

G. T. Bell, Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., General Counsel, G.T.R. and G.T.P.R., Montreal, born at the Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. R. Bremner, ex-Division Freight Agent, G.T.R., Ottawa Division, Ottawa, born at Toronto, Sept. 9, 1875.

M. H. Brown, Division Freight Agent, Ontario Division, C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

W. G. Brownlee, General Transportation Manager, G.T.R., Montreal, born at Lawrenceville, Ill., Sept. 9, 1858.

W. B. Bulling, Assistant Freight Traffic Manager, C.P.R. Eastern Lines, Montreal, born there, Sept. 16, 1858.

C. F. Burns, Auditor of Disburscments, Intercolonial Ry., Moncton, N.B., born at Clements Port, N.S., Sept. 10, 1854.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 20, 1864.

A. W. Davis, Locomotive Foreman, G.T.R., Stratford. Ont., born at Sittingbourne, Kent, Eng., Sept. 5, 1864.

A. S. Dawson, Chief Engineer, Irrigation Department, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

W. H. Estano, Traffic Auditor, Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Sept. 29, 1874.

C. B. Foster, General Passenger Agent, C.P.R. Western Lines, Revelstoke and east, Winnipeg, born at Kingston, N.B., Sept. 30, 1871.

J. P. Ferguson, representing Galena Signal Oil Co., Ottawa, Ont., born at Drummondville, Que., Sept. 12, 1856.

D. W. Hatch, Travelling Agent, Atchison, Topeka and Santa Fe Ry., Montreal, born at Bedford, Que., Sept. 1, 1841.

Jules Hone, Jr., railway and steamship ticket agent, Quebec, Que., born at Montreal, Sept. 8, 1874.

J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry., Ottawa, Ont., born at Brockville, Ont., Sept. 15, 1858.

W. H. Kelson, ex-General Storekeeper, C.P.R., Montreal, born at Bath, Eng., Sept. 5, 1850.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

V. Kistler, District Freight and Passenger Agent, Great Northern Ry., Grand Forks, B.C., born at Clyde, Ohio, Sept. 4, 1881.

R. E. Larmour, Division Freight Agent, British Columbia Division, C.P.R., Vancouver, born at Brantford, Ont., Sept. 26, 1868.

H. D. Lumsden, C.E., ex-Chief Engineer, National Transcontinental Ry., Ottawa, born at Belhaire, Scotland, Sept. 7, 1844.

J. Bruce Macdonald, Director, Niagara Navigation Co., Toronto, born at Glengarry, Ont., Sept. 19, 1850.

Central of Georgia Railway Oil House, Macon, Georgia

Railway Men Want Practical Things

That's why the

Bowser Storage Systems

have been adopted by more than one hundred and fifty railroads.

All the perplexing problems of oil storage, dispensing and expense are satisfactorily solved in a common-sense, practical way, by a Bowser.

The oil supply for shops, terminal stations and store rooms is placed on a money-saving basis by using a Bowser.

Just remember there is no phase of railroad oil storage that is not successfully met by a Bowser.

We have just published a book which covers this question fully. Let us send you one for your files. Ask for Book No. 6.

Schemes of Erection Proposed for the Quebec Bridge.

The design of a structure of exceptional size is likely to depend more upon erection questions than on problems of proportioning the parts with regard to their functions in the completed structure. This is pre-eminently true for a bridge like that to be built over the St. Lawrence River at Quebec. Accordingly, the recent competition of designs and bids (of which the principal designs were illustrated in the Railway and Marine World for May), was in part a competition of erection methods. The outlines of the designs do not therefore suffice to state the essentials of the competing plans. We take pleasure in supplementing them now by a summary of the erection projects of the more important bids.

The plans prepared by the Board of Engineers allowed of six modifications of its general design, the differences being in the length of anchor arm, design of suspended span, and manner of erection. Alternative designs were also permitted. There were four bidders (see Railway and Marine World, May), and some of them submitting proposals for different schemes of erection, there were 35 distinct bids.

ST. LAWRENCE BRIDGE COMPANY.

The St. Lawrence Bridge Co., in addition to tendering on each of the Board's designs, submitted seven different alternate designs, as follows:—

Design A.—This corresponds to the Board's design with respect to panel lengths, height over main pier, profile of bottom chords, and floor system. It has an anchor arm of twelve panels and a suspended span designed for floating erection, corresponding to the Board's design V. The Board's design has been departed from in respect to the type of web system, the substitution of built-up tension riveted members for eyebars, and as regards the outline of the top chord of the cantilever arm and the suspended span. There are also various changes in the design of many of the members.

Design B is the same as design A, with the exception that carbon steel instead of nickel-steel is used for the vertical posts in the cantilever arm, three panels away from the centre pier, as well as for all members in the anchor arm. The details of members and type of web system remain unchanged.

Design C is identical with design A, except that nickel-steel eyebars are used throughout, instead of built-up riveted tension members.

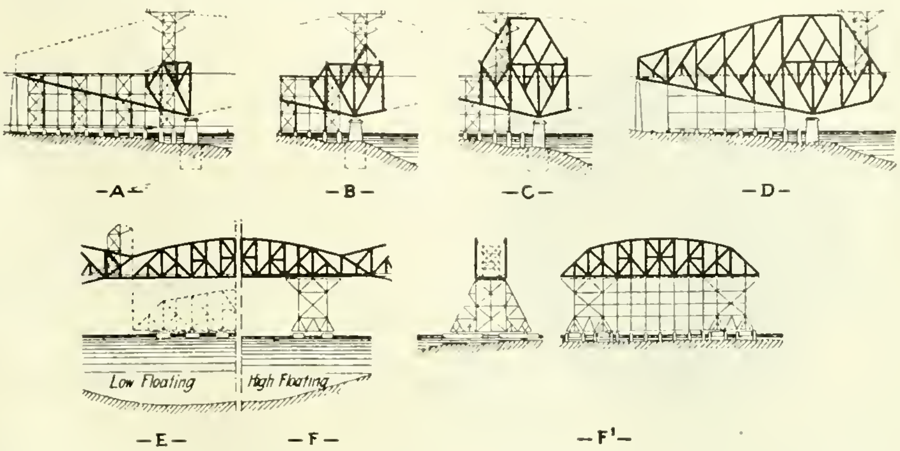

Fig. 2. Quebec Bridge. Scheme of erection, St. Lawrence Bridge Co., Board's Design.

Design M retains the single intersection of the Board's design, and follows very closely the general features of the design submitted by Maschinenfabrik Augsburg-Nuernberg. The anchor and cantilever arms are each 522 ft. long with a suspended span of 714 ft. In this design nickel-steel is used throughout. The details of the main members have been somewhat changed from those prepared by the Board. Pin bearings are employed throughout for all abutting joints of compression members.

Design N is identical in outline with design M, the only difference being that carbon steel is substituted for nickel-steel in a number of the members. This change was made with the idea of effecting a slight economy in design.

Design X, which was accepted, is similar in outline and general details to design A, but is intended to accommodate railway traffic only, the tramway and highway roadways being omitted. A 4-ft. walk is allowed for on each side for the use of inspectors, etc. Carbon steel is used for the anchor arm, members over the main piers, and for the vertical posts of the cantilever arm for three panels from the pier. Carbon steel is also used for the centre posts of the suspended span.

Design Y corresponds to design X as design C compares with design A. Here railway traffic only is provided for and nickel-steel eyebars are used instead of riveted built-up tension members.

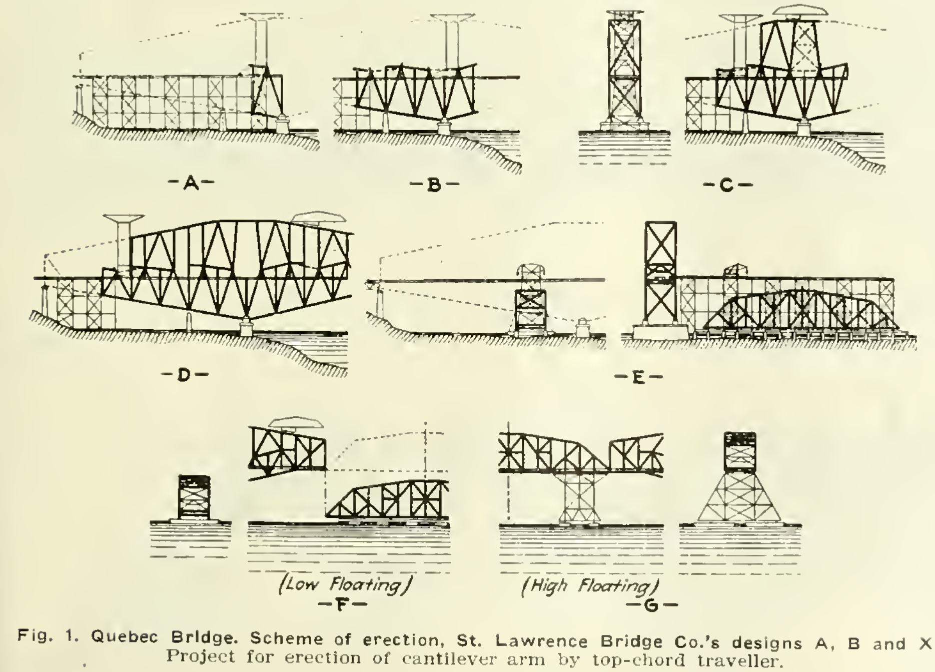

Fig. 1. Quebec Bridge. Scheme of erection, St. Lawrence Bridge Co.'s designs A, B and X. Project for erection of cantilever arm by top-chord traveller.

Scheme of Erection.—Several different schemes of erection are proposed, for the suspended span as well as the cantilevers. These schemes are in the nature of studies, the final choice being subject to the design upon which the contract might be awarded, and to approval by the Board. They include the following elements:—

(a) Erection of the anchor arm on steel falsework before starting the erection of the cantilever arm. In this scheme the anchor arm will be assembled and riveted up complete before moving ahead. An inside traveler is used and is operated from the floor level (see fig. 1). This scheme can be applied to both the Board's and the contractor's designs.

(b) Erection of the anchor arm and the cantilever arm concurrently. The first step in the erection is the construction of a high tower on piers between panel points AL12 and AL14. This tower has overhanging arms from which the trusses on either side can be reached. From this tower the anchor arm is erected up to AL10, under which point a temporary masonry pier is built, which acts both as a supporting pier and an anchorage (see fig. 2). After the floor has been put in place the tower is taken apart at the floor level, the upper part being used as an inside traveler, with which the remainder of the anchor arm is erected. The erection of the anchor arm is always sufficiently in advance of the cantilever arm to ensure that the centre of gravity is always between AL10 and the main pier. A falsework trestle for the handling of material connects the shore with the work under construction. This scheme of erection can apply either to the Board's design or the alternative designs.

(c) Erection of the cantilever arm by inside traveler, similar to that used for the erection of the anchor arm. In the case of erection scheme (a) the traveler used for the anchor arm is moved ahead on the cantilever arm and the erection proceeds, panel by panel, until this part of the bridge is entirely completed. In the case of erection scheme (b) the traveler for the cantilever arm is erected by the traveler used for the erection of the anchor arm when the erection of this arm has proceeded past panel point AL10, thus ensuring stability for the further progress of the work. From this point and to the end of the cantilever arm, the erection of schemes (b) and (c) are exactly similar.

(d) Erection of the cantilever arm with a top-chord traveler. This traveler is erected by the inside traveler of the

anchor arm. This scheme of erection is intended to apply to the Board's design only (see fig. 2).

(e) Erection of the suspended span by cantilevering. This erection is done with a small top traveler in practically the same manner as is proposed by the other bidders. This scheme of erection applies only to the Board's designs I and IV.

(f) Suspended span floated in on high falsework. The falsework for this scheme of erection is constructed on concrete piers and is located on the shore directly at the bridge site. The suspended span is laid down at right angles to the bridge proper and one end is hard up against the anchor arm at almost a point corresponding to AL10. A traveling crane takes the ma- as in the preceding, except that the span is erected directly on the piers. For floating, six pontoons are required, terial, both for the falsework and the suspended span, from the cars on the bridge and carries it to whatever point it is required. Eight pontoons 120 ft. by 36 ft. by 12 ft. deep are used. At high tide the falsework is lifted off the piers and towed into position.

(g) Suspended span floated in on low falsework. The erection of the suspended span in this case is carried out each 238 ft. by 38 ft. by 10 ft. deep. After being towed into place the suspended span is lifted into place by means of hydraulic jacks and wedges operated by power. Both schemes (f) and (g) can be employed for either the Board's or the contractor's designs.

Adopted Plan.—As already stated, design X is the one which was finally approved and contracted for. It provides for railway traffic only. The top chord and other tension members will be built-up instead of eyebar members. The channel span is 1,800 ft.

The anchor arm will probably be erected on falsework, and the cantilever arms by inside traveler. The suspended span will probably be built on high falsework and floated into place.

According to the specifications the Government will stop navigation on the river during the progress of floating in the suspended span and will furnish free of charge the motive power required for towing the span into position.—Engineering News.

Weighing Carload Traffic and Allowances from Track Scale Weights.

The question of special freight tariffs for weighing carload traffic and allowances from track scale weights was argued recently before the Board of Railway Commissioners, and judgment was subsequently given by the Chief Commissioner, Commissioners S. J. McLean and J. Mills assenting. The Chief Commissioner, after reviewing the special tariffs which have been in force regarding the weighing of carload traffic, said: "The railway companies filed new tar- of the same until a full presentation of the case could be made. . . . It will be seen by a comparison of the proposed The Board postponed the effective dates iffs, made effective May 1, as to traffic moving between points in Canada, and May 15, as to traffic from or to points in Canada to or from points in the United States. Against these latter tariffs many complaints came to the Board from various parts of the country, and the shippers requested a hearing before they were permitted to go into effect. new tariff with the old one that the proposal of the carriers now is to do away with allowances for blocking, dunnage and temporary racks used in connection with the bulk of the freight shipments in cars covered by these tariffs. This was strenuously objected to by the shippers. It seems to have been thought fair by the carriers in arranging their tariffs originally to make reasonable allowances from track scale weights to rectify any variation in the tare of cars, or increased weight thereof by reason of the absorption of moisture and the accumulation of snow, ice, and the like. These allowances have been in existence for many years, and the business of shippers has been adjusted in accordance therewith, and any change in these conditions naturally meets with objection. The point in the meantime, however, for consideration is whether it is fair that the carriers should modify these regulations in whole or in part, and whether the working thereof in the past has operated reasonably, or whether under existing conditions undue burdens are placed upon carriers by reason of these provisions."

The Chief Commissioner then reviewed the arguments and the evidence, as to the old regulations, and the proposed new ones, as well as the special conditions in force in British Columbia, notice of cancellation of which to date from Aug. 1 had been given by the C.P.R., and proceeded: "It seems to the Board that before it attempts, upon the material before it, to express an opinion as to what practice should be established and what allowance made, that the shippers and carriers should have a further conference in connection with these matters. . . . . The Board is of the opinion that these matters should all be fully exhausted between the parties interested, when, if the matters cannot be adjusted, the Board will, either upon the material now before it, or upon further hearing and evidence, dispose of all matters that the parties are unable to adjust. In expressing this opinion the Board has no hesitation in saying that, in its opinion, the track scale allowances made by the railway companies in the past have, so far as the evidence discloses, been upon a liberal scale, and without attempting to dispose finally of the matter, the Board will expect that the shippers will be prepared to deal liberally and fairly with the railway companies in any reasonable attempt made by the latter to put these track-scale allowances upon a fairer basis. Some arrangement must be made, however, with reference to allowances for snow and ice, other than suggested by the companies."

The same course is to be pursued in reference to the proposed change in the British Columbia tariffs, as radical changes of this sort should not be made, even if proper, without a longer notice to shippers. An order will be made postponing the going into operation of these proposed tariffs until after the conference between the companies and the shippers.

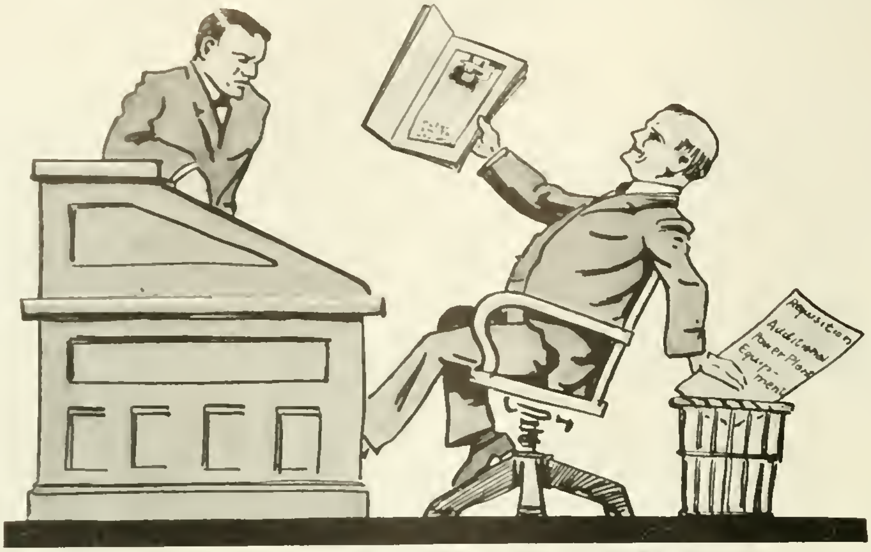
The International Railway Master Blacksmiths' Association held its annual meetings at Toledo, O., Aug. 15-17.



"We shan't need that new power plant equipment"

This electric railway manager has appreciated the lesson we've been trying to drive home—that before trying to relieve an overloaded plant by adding to your equipment, it is well to consider the heater question. Conservative estimates show that practically half the total output used for car operation is required for operating electric heaters at such times as they are turned on at their maximum capacity. A fair average for the winter is 20 to 30 per cent.

Make this output available for operation by substituting

Peter Smith Forced Ventilation Hot Air Heaters

The advantages are manifold.

You have your whole electrical output for operation—the Peter Smith outfit never need weigh more and often weighs less than the electrical heating equipment.

Your cars will be heated to a temperature of 60° in zero weather at a cost of less than 20 cents per day.

Your cars will be perfectly ventilated at the same time, and without added cost —280 cubic feet of fresh, pure, warm air enters your cars per minute and is properly distributed.

No overheated seats possible.

You will appreciate the enormous saving if you will ask us to send you a reprint of an article on electrical heaters which appeared in Electrical Railway Journal. last December.

Estimates on equipment to fit your needs and catalog are yours for the asking.

The Peter Smith Heater Co.,

Detroit, Mich.

Locomotive Tire Storage at C.P.R. West Toronto Shops.

Particularly where ground space is at a premium, is it necessary to have a systematic yard arrangement. It occurred to A. Dixon, General Foreman of the C.P.R. West Toronto shops, that with but little labor, the yard arrangement might be considerably improved. A sample of what was accomplished in one line is shown in the accompanying illustration.

Previous to this yard systematizing, locomotive driving-wheel tires were lying around the yards in nondescript piles, just as left by the laborers, arranged in each case without any regard to future convenience. This careless arrangement, besides being inconvenient to the workmen looking for new tires, required about twice as much space as the method devised.

A lot of old car sills were obtained from the car shops. These car sills, being of no value, entailed no expense in constructing the storage racks. The car sills, laid on sleepers, formed an excellent flooring. At the other end, as indicated in the illustration, posts were sunk, with cross-members, against which the tires were placed. Over each pile index boards were located, with tire sizes, making it convenient for the mechanic to select the required tire, and at the same time facilitating matters when taking inventory. The appearance of the yard is greatly enhanced by this arrangement.

Official Inspection of the G. T. R. and G.T.P.R.

A. W. Smithers, Chairman of the G.T.R. board of directors, London, Eng., accompanied by members of the staff of the English office, some shareholders, and a number of ladies, arrived in Portland, Me., via New York, Aug. 4, where they were met by C. M. Hays, President, and other members of the Montreal staff. After spending a couple of days at Mr. Hays' summer home at Cushing's Island, the party began an official inspection of the line, Aug. 7, reaching Montreal Aug. 8. In an interview Mr. Smithers said, in reference to the developments in the New England States, there was no thought of making Boston an ocean port for the system, and Providence was altogether out of the question as far as its ocean shipping facilities or possibilities were concerned. When the G.T. Pacific Ry. was finished Canadian seaports would be built up in accordance with the company's agreement with the Government. Portland would not be affected by the development of Canadian ports by the company. So far as the G.T. Pacific Ry. was concerned, satisfactory progress had been made during the past year, and the end of the great work of construction was now in sight. Labor conditions were now more satisfactory than they had been in the past, and there was every prospect that the line would be completed and have become a great factor in the development of the Canadian West within two or three years.

The party started from Montreal on a special train of five private cars, Aug. 8, visiting Ottawa, and proceeding via North Bay, over the Temiskaming and Northern Ontario Ry. to Cochrane, where the National Transcontinental Ry. crosses. Returning from the north the party visited important points on the G.T.R. in Ontario, and sailed from Sarnia on the Northern Navigation Co.'s s.s. Hamonic to Port Arthur, accompanied by Jas. Playfair, President, Northern Navigation Co., and Inland Lines, Ltd., and H. H. Gildersleeve, Manager, Northern Navigation Co. From thence the special train went on to Winnipeg, and the party set out on a trip over the G.T. Pacific Ry. as far as it has been completed west of Edmonton, Alta. The trip will be extended to Vancouver and Prince Rupert, B.C., and it is expected that the party will reach Montreal on the return journey Sept. 25.

The party comprises, in addition to A. W. Smithers, Chairman of the Board, and C. M. Hays, President, G.T.R. and G.T. Pacific Ry.: Mrs. Hays, F. and Mrs. Swanston, London, Eng.; Miss Gladys Jackson, London, Eng.; W. E. Davis, Passenger Traffic Manager; A. Butze, General Purchasing Agent; H. Deer, Assistant Secretary, London, Eng.; John Pullen, Assistant Freight Traffic Manager; D. E. Galloway, private secretary to the President; V. M. Payne, assistant secretary to the President.

Superheater Performance on Canadian Northern Railway.—An interesting superheater locomotive performance is reported by the C.N.R. locomotive 266, built by the Montreal Locomotive Works, and equipped with the Schmidt superheater, which ran 378 miles from Edmonton to North Battleford and back to Vermilion, with six or seven coaches on a total coal consumption of about eight tons, this efficiency being largely due to the superheater.

Telephone Train Dispatching on the Grand Trunk Railway.

By W. W. Ashald, Superintendent Telegraphs, Grand Trunk Railway.

The G.T.R. has the following sections of its line equipped with telephone train dispatching circuits:—One circuit between North Parkdale Jct. and Burlington Jct., via Allandale, a distance of 145 miles, the dispatchers located at Allandale, Ont., There are 22 stations on this line where regular operators are on duty. Another circuit between Allandale and Nipissing Jct., 165 miles, with 21 stations where regular operators are on duty. At sidings where there are no regular agents, emergency telephones are located in booths where trainmen can get in immediate communication with the train dispatcher and, if necessary, procure their own train orders.

These circuits have been in operation for 18 months and have proven the superiority of the telephone over the telegraph as a medium for dispatching trains. The management is so well satisfied with the results that it is the intention to equip the entire system with telephone train dispatching circuits in the near future.

The circuits are metallic and constructed of no. 9 gauge hard drawn copper wire weighing 210 lbs. per mile for each wire, or 420 lbs. per mile metallic.

Each station is equipped with a selector device and a 4-inch gong (bell), a head-band receiver, and a swinging arm transmitter which permits the equipment to be pushed to one side out of the way when not in use. The dispatchers' office equipment consists of a master selector, a separate calling key for each office, a head-band receiver and chest transmitter. The maximum time required to call any office is eight seconds. The system being selective, only the office desired is affected by the calling. The train dispatcher is constantly on the line and no other office can call except to speak direct to the dispatcher. When an office is called the operator immediately puts on his head-band receiver and answers by speaking the name of his station. The dispatcher receives an "answer back" signal the instant the station bell starts ringing and knows beyond the question of doubt that the station bell has responded to his call.

Through the medium of the telephone the train dispatcher is in direct communication with trainmen at all times and thus obtains information required by personal conversation, instead of through the medium of a third party, as is necessary by telegraph.

The telephone has come into general use on the larger railway systems, both in Canada and in the United States, for train dispatching purposes, within the past three years, and is being extended at the rate of about 1,500 miles each year.

The use of the telephone does not displace the telegraph operator, as the telegraph is still used for transmission of messages, reports, etc., as formerly, and the telegraph operator only uses the telephone for his train order work.

The cost of installing a telephone circuit exceeds the telegraph by about 8 per cent., but the saving in time, the improvement of traffic and the absolute safety of the system, appeals to railway managers, and they do not therefore stop to consider the cost of installation.

Rates on Grain and Grain Products to Maritime Provinces.

The Board of Railway Commissioners recently dismissed the application of the Dominion Millers' Association for an order suspending the operation of the C.P.R. tariff, C.R.C. no. E 2040, and the G.T.R. tariff, C.R.C. no. E 2285, applying on grain and grain products from Ontario to Eastern Quebec and the Maritime Provinces, which were to have become effective May 1, until the companies had justified the advanced rates in the tariffs to the Board's satisfaction.

Commissioner McLean gave the following judgment:—

The tariffs in question, which are the special and competitive joint freight tariffs on grain and grain products, in carloads, to points in the Maritime Provinces, were issued to be effective May 1, 1911. Before the effective date, and on complaint of the Dominion Millers' Association that these tariffs increased existing rates, the date for going into force was postponed, in order that after the hearing which took place in Toronto on April 25, the Board might have an opportunity of examining into the details of the tariffs.

The complaint of Mr. Watts, Secretary of the Dominion Millers' Association, who represented that Association at the hearing, was, in brief, one regarding the increase of existing rates. He also stated that Fort William, and not Chicago, should be the key to the situation in connection with these tariffs. The effect of the Chicago rate situation in this regard is considered later. As to this phase of the complaint, however, I think that the attention of the Board should be limited to the question of the increases in rates. If a different basing system for the tariffs in question is to be made use of, this must be developed as a separate matter.

At the hearing, the railways stated that in the tariffs in question were included three kinds of rates which might be denominated as: (a) special joint rates or "normal" rates; (b), competitive joint rates; (c), competitive joint "furtherance" rates.

By classification, grain and grain products in carloads have an 8th class rating. The C.P.R. has a class tariff to New Brunswick points on its system; the C.P.R. and G.T.R. have also joint class tariffs to points on the Intercolonial and its connections. The so-called "normal" rates are lower than these, and they cover the bulk of the rail points in the Maritime Provinces, either direct, or by addition of arbitraries of connecting railways.

The present basis of the "normal" rates develops from the arrangement arrived at between the railways and the Dominion Millers' Association somewhere about the beginning of 1905, the exact date being uncertain. It had been alleged that no equitable relation existed between the rates of the millers in the Canadian Northwest and those of the millers in Ontario; and that both of these were in strong competition in grain products in the Maritime Provinces. It was, therefore, decided that in the shipments east of Montreal on grain products from Ontario points, the same arbitraries should be applied from Montreal as are applied by the C.P.R. in arriving at through rates from Fort William. Considering that Toronto was entitled to a differential of 5c. below Fort William, a basing rate of 10c. was established from Toronto to Montreal; certain other points were included in the Toronto group, and west of these, arbitraries were added. To points east of Montreal, arbitraries were also added. It will thus be seen that in effect the "normal" rates are based on Fort William.

From the consideration of the circumstances attaching to the development of this arrangement, as well as from the specific terms of the agreement which recites inter alia, "Whereas heretofore there has been no equitable relation between the rates, those from Ontario being based on one set of arbitraries over Montreal, while those of the Northwest have been on an entirely different basis," it appears that this matter was concerned entirely with the basis of the so-called "normal" rates. The basis of the competitive joint rates and of the "furtherance" rates are to be found in an entirely different set of facts and conditions.

The more important "normal" rates have been checked by the Board's Chief Traffic Officer, and he finds that these are in accordance with the agreement which has been set out. The increases which have taken place fall within the groups which have been spoken of as competitive joint rates and "furtherance" rates, and it was frankly stated by the railways in the course of the hearing that the increases were due to lessened competition. In the case of the competitive joint rates, the competitive situation on which these are based is mainly that through the port of Boston. It is a combination of the Boston route and the New York rate, the latter rate applying to Boston; that is to say, the New York rate plus the vessel rate port charges and marine insurance make up a rail and water rate by Boston to such places as St. John, Halifax, Moncton, Amherst, Mulgrave and Sydney for local delivery. The all-rail Canadian route from Ontario can exceed this combination only in so far as it gives additional advantages, such as greater dispatch, etc. The rail haul from Windsor, Ontario, to Boston, is 731 miles, while to St. John it is 1,048 miles. To Halifax, the distance via Grand Trunk and Intercolonial is 1,306 miles, while via the C.P.R. and I.C.R. it is 1,324 miles.

A TRIBUTE FROM ENGLAND.

Canadian Pacific Railway Co.
Office of the European Manager,
62, Charing Cross, London. S.W.,
England, July 10, 1911.

Dear Mr. Burrows,—For many years past I have been a subscriber to The Railway and Marine World, which in my opinion is the best paper in existence devoted to the many varied interests for which it stands.

Its great feature is the accuracy always maintained in its columns, and next to that I should place the personal element, which provides a source of interesting reading amongst the world's transportation fraternity.

May your well-deserved success long continue.

Yours faithfully,

GEO. McL. BROWN.

The competitive factors above outlined have been decreasing in power. In the new tariff, the competitive situation affects the rate to the Sydneys. It is also effective so far as St. John is concerned, this being due to the short line mileage of the C.P.R. In general, it may be said that the decreased efficiency of the competitive factors has lessened the number of competitive joint rates. As to various points formerly covered by competitive joint rates, it is the "normal" basis which now applies. The "furtherance" rates apply to tide water ports on traffic going beyond to the out ports by vessel, or to Prince Edward Island points. These rates are really proportions. The "furtherance" rates, so far as the rail haul is concerned, are based on New York, or, more exactly, on the Chicago-New York rate. The Board, in order 586, July 25, 1905, dealing with the complaint of the Dominion Millers' Association et al, re rates on flour and other grain products for export, recognized the Chicago-New York basis, and fixed certain groups in the territory west of Kingston and Sharbot Lake to Windsor on certain percentage relationships to the Chicago-New York rate, these maximum percentages varying from 70% to 90%. While this order was concerned with export rates, the traffic moving under "furtherance" rates presents an analogous condition. In so far as it has to be transhipped at St. John, Halifax, or other ports to ocean vessels, it is subjected to transportation conditions similar to the export traffic moving to European ports. Further it must be recognized that this "furtherance" traffic will move from Ontario points through Canadian channels only when the Chicago-New York rate is taken as a maximum. For example, under the grouping provided under the order, Chatham is a 78% point and will therefore take the Detroit rate as a maximum. Further consideration of this order shows the different proportionate percentages fixed in different parts of Ontario, and attracts attention to the controlling effect throughout western Ontario on the Chicago-New York rate. The Board's Chief Traffic Officer advises that these "furtherance" rates in the new tariffs are uniformly based.

At the close of the hearing in Toronto, Mr. Watts took the position that the rearrangement of rates which had been made in the tariffs in question was discriminatory and contrary to the agreement reached in 1905. As the situation presents itself to me, the agreement reached in 1905 has no necessary relation to the competitive joint and "furtherance" rates, except in so far as it fixes a maximum. The competitive joint rates have been controlled by rail and water competition, which is of decreasing importance. The "furtherance" rates are also controlled by competitive conditions. Both as to the competitive joint rates and as to the "furtherance" rates, the competitive conditions in so far as they are effective are effective over lines of rail and water communications which are not subject to the control of the Board. It has been so often recognized that rail carriers may meet the efficient competition of water carriers without at the same time necessitating a readjustment of rates at points where such competition is not in effect, and that it is unnecessary to quote decisions of various regulative tribunals dealing with this matter. It is sufficient to say that this has been recognized by the Board, as well as by the Interstate Commerce Commission, and other regulative tribunals. In Canada, the competition of a boat line which is now owned, chartered, used, maintained, or worked by a railway subject to the jurisdiction of the Board, is exempt from the Board's control. It is recognized that on such a state of facts it is in the discretion of the railway to what, if any, extent it shall recognize this competition; and if competition forces the rates of a railway below its normal basis, it follows that when the competition is less effective the railway may bring its rates up more closely to its normal basis. What applies to a hypothetical competition, such as has been outlined existing in Canada, applies with equal, if not greater, force to a competition effective through a foreign country and on the high seas.

I am, therefore, of opinion that it is within the discretion of the railways to vary their competitive joint rates or their competitive joint "furtherance" rates within the limits fixed by the "normal" rates, subject, of course, to their meeting any attack made on any of the rates so changed on the ground that they are discriminatory. It, therefore, follows that the application to have these tariffs disallowed must fail, and the application must be dismissed.

United States Railway Statistics for Year Ended June 30, 1910.

The statements in this preliminary abstract are based upon compilations for the annual statistical report of the Interstate Commerce Commission, covering the fiscal year ended June 30, 1910, and revised returns may slightly affect some of these advance figures before final publication. Except where specifically mentioned, the following statements do not include data from reports of companies classed as switching and terminal.

MILEAGE.

On June 30, 1910, there was a total single-track mileage of 240,438.84 miles in the U.S., indicating an increase of 3,604.77 miles over the corresponding mileage at the close of the previous year. An increase in mileage exceeding 100 miles appears for the states of California, Florida, Georgia, Minnesota, Mississippi, Nevada, Oklahoma, Oregon, Texas, Washington, and West Virginia, and the Territory of Arizona.

Substantially complete returns were rendered for 240,830.75 miles of line operated, including 10,357.19 miles used under trackage rights. The aggregate mileage of railway tracks of all kinds covered by operating returns was 351,766.59 miles. This mileage was thus classified: Single track, 240,830.75 miles; second track, 21,658.74; third track, 2,206.39; fourth track, 1,488.78; yard track and sidings, 85,581.93. These figures indicate an increase of 9,415.35 miles over corresponding returns for 1909 in the aggregate length of all tracks, of which increase 3,205.30 miles, or 34.04%, represent yard track and sidings.

The number of railways for which mileage will be included in the report is 2,196. In addition, 301 switching and terminal companies reporting show a total mileage owned of 3,884.62 miles, of which 1,614.21 miles were assigned as main track and 2,270.41 as yard track and sidings.

During the year railway companies owning 8,614 miles of line were reorganized, merged, or consolidated.

EQUIPMENT.

There were 58,947 locomotives in the service of the carriers on June 30, 1910, indicating an increase of 1,735 over corresponding returns for the previous year. Of the total number, 13,660 were classified as passenger, 34,992 as freight, and 9,115 as switching, and 1,180 were unclassified.

The total number of cars of all classes was 2,290,331, or 72,051 more than on June 30, 1909. This equipment was thus assigned: Passenger service, 47,095 cars; freight service, 2,135,121; and company's service, 108,115. The figures do not include so-called private cars of commercial firms or corporations.

The average number of locomotives per 1,000 miles of line was 245, and the average number of cars per 1,000 miles of line was 9,510. The number of passenger-miles per passenger locomotive was 2,367,386, and the number of ton-miles per freight locomotive was 7,287,863.

The number of locomotives and cars in the service of the carriers aggregated 2,349,278, of which 2,301,260 were fitted with train brakes, an increase of 86,353 over the previous year, and 2,332,837 were fitted with automatic couplers, an increase of 72,060. Nearly all of the locomotives and cars in passenger service were equipped with both train brakes and automatic couplers. Substantially all the freight locomotives had train brakes and automatic couplers. Of the 2,135,121 cars in freight service, the number fitted with train brakes was 2,107,312, and the number fitted with automatic couplers was 2,120,750.

EMPLOYES.

The total number of persons reported as on the pay rolls of the steam roads was an average of 706 per 100 miles of line. As compared with returns for June 30, 1909, there was an increase of 196,597 in the total number of employes. There were 64,691 enginemen, 68,321 firemen, 48,682 conductors, 136,938 other trainmen, and 44,682 switch tenders, crossing tenders, and watchmen.

The total number of railway employes (omitting 95,328 not distributed) was apportioned among the six general divisions of employment as follows: To maintenance of way and structures, 504,979; to maintenance of equipment, 329,373; to traffic expenses, 21,652; to transportation expenses, 661,355; to general expenses, 53,385; and to outside operations, 33,348.

The total amount of wages and salaries reported as paid to employes during the year was $1,143,725,306.

The total number of persons reported by switching and terminal companies as on their pay rolls was 33,015. The total amount of wages and salaries reported by this class of companies for 1910 was $21,719,549.

CAPITALIZATION OF RAILWAY PROPERTY.

On June 30, 1910, the par value of the amount of railway capital outstanding, was $18,417,132,238. Of this, $14,338,575,940 was outstanding in the hands of the public.

Of the total capital outstanding, there existed as stock $8,113,657,380, of which $6,710,168,538 was common and $1,403,488,842 was preferred; the remaining part, $10,303,474,858, represented funded debt, consisting of mortgage bonds, $7,408,183,482; collateral trust bonds, $1,153,499,846; plain bonds, debentures, and notes, $933,966,704; income bonds, $290,951,276; miscellaneous funded obligations, $163,531,972; and equipment trust obligations, $353,341,578.

Of the total capital stock outstanding, $2,701,078,923, or 33.29%, paid no dividends. The amount of dividends declared during the year (by both operating and lessor companies) was $405,771,416, being equivalent to 7.50% on dividend-paying stock. No interest was paid on $790,499,252, or 7.94% of the total amount of funded debt (other than equipment trust obligations) outstanding.

PUBLIC SERVICE OF RAILWAYS.

The number of passengers carried during the year was 971,683,199. The corresponding number for the year ended June 30, 1909, was 891,472,425. The number of passengers carried 1 mile, or the passenger mileage, as compiled for 1910, was 32,338,496,329. The corresponding return for 1909 was 3,229,173,740 less. The number of passengers carried 1 mile per mile of road was 138,250.

The number of tons of freight carried (including freight received from connections), was 1,849,900,101, while the corresponding figure for the previous year was 1,556,559,741.

The ton mileage, or the number of tons carried 1 mile, was 255,016,910,451. The total ton mileage was 218,802,986,929; the increase in the ton mileage over the return for 1909 was 36,213,923,522. The increase in the number of tons carried 1 mile in 1909 over 1908 was 421,432,127; the number of tons carried 1 mile per mile of road for the year 1910 was 1,085,745.

The average receipts per passenger per mile were 1.938 cents; the average receipts per ton per mile, 0.753 cent. The passenger service train revenue per train mile was $1.30.396; the freight revenue per train mile was $2.86.218. The average operating revenues per train mile were $2.24.628. The average operating expense per train mile were $1.48.865. The ratio of operating expenses to operating revenues was 66.29%.

REVENUES AND EXPENSES.

The following figures under the heading of revenues and expenses exclude returns for a few small roads because of deficiencies in their reports. The operating revenues (average mileage operated, 236,986.51 miles) were $2,750,667,435; the operating expenses were $1,822,630,433. The corresponding returns for 1909 (average mileage operated, 232,981.11 miles) were: Operating revenues, $2,418,677,538; operating expenses, $1,599,443,410. The following figures show the operating revenues for 1910 in detail:

Freight revenue	$1,925,553,036
Passenger revenue	628,992,473
Mail revenue	48,913,888
Express revenue	67,190,922
Excess baggage revenue and milk revenue (on passenger trains)	14,733,680
Parlor and chair car revenue and other passenger-train revenue	4,412,973
Switching revenue	26,367,214
Special service train revenue and miscellaneous transportation-revenue	8,858,215
Total revenue from operations other than transportation	23,778,637
Joint facilities revenue .... Dr.	572,875
Joint facilities revenue .... Cr.	2,439,272
Total operating revenues	$2,570,667,435

The operating revenues stated above averaged $11,607 per mile of line.

Operating expenses, as assigned to the five general classes, were:

Maintenance of way and structures	$368,507,102
Maintenance of equipment	413,109,929
Traffic expenses	55,912,620
Transportation expenses	916,614,826
General expenses	68,485,956
Total operating expenses	$1,822,630,433

The foregoing operating expenses averaged $7,691 per mile of line.

◆

New Pere Marquette Railroad Locomotives.

The inability of the average newspaper reporter to correctly give technical railway matters was recently emphasized in a Detroit dispatch published in many Canadian papers. After proceeding to state that the Pere Marquette Rd., following the installation of a number of new compound locomotives, was conducting a series of tests with a new device which, it was believed, would effect a considerable saving in coal consumption, the report went on to claim that "by a new arrangement of engine valves, a steam pressure of 160 lbs. is expected to be sufficient to haul a full load, while an ordinary locomotive requires from 225 to 250 lbs. of steam."

This must indeed be a "fearfully and wonderfully made" arrangement of valves that would permit a much smaller steam pressure to perform an equal amount of work! In pursuance of the usual verification policy of The Railway and Marine World, W. Boughton, General Master Mechanic of the Pere Marquette Rd., was consulted. His reply in substance is as follows: "Evidently whoever wrote the article referred to, was very poorly informed. We have never used and are not buying any compound locomotives, and what is apparently referred to as a device which it is believed will effect a considerable saving in coal consumption by a new arrangement of valves, is a superheater." Mr. Boughton proceeds to state that the lower pressures usually carried on superheater locomotives probably occasioned the mistake in the press dispatch. It is wonderful what a mess a layman can make of a seemingly simple mechanical statement.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1,, 1910, with increases over, or decreases from, those of 1909-10:

	Earnings.	Expenses.	Net. Earnings	Net Increase.
July	$1,225,100	$876,900	$348,200	118,600
Aug.	1,093,000	830,000	263,000	58,600
Sept.	1,279,900	898,700	381,200	69,700
Oct.	1,627,800	1,047,300	580,500	99,800
Nov.	1,565,400	1,006,500	558,900	11,500
Dec.	1,255,400	896,200	359,200	24,800
Jan.	822,600	720,900	101,700	20,800
Feb.	803,100	667,300	135,800	4,300
Mar.	1,270,600	915,800	354,800	82,500
Apr.	1,345,400	984,300	361,100	29,900
May	1,445,600	1,042,400	403,200	34,600
June	1,465,600	1,147,400	318,200	25,400
	$15,199,500	$11,033,700	$4,165,800	$538,900
Inc.	$2,378,200	$1,839,300	$538,900	....

Following is a comparison of the gross earnings, expenses and net earnings for the years ended June 30, 1908, 1909, 1910 and 1911. The figures for 1911 show approximate increases of 67½% in gross earnings, and 65% in net earnings over those of 1908.

	Gross earnings.	Expenses.	Net earnings.
1908	$9,012,400	$ 6,528,400	$2,484,000
1909	9,668,900	6,873,500	2,795,400
1910	12,821,300	9,194,400	3,626,900
1911	15,199,500	11,033,700	4,165,800

Approximate gross earnings for July $1,475,950, and for two weeks ended August 14, $652,250, against $1,225,100, and $481,800, for same periods 1910.

The average mileage operated during the year ended June 30, was 3,383, against 3,179 for the previous year.

◆

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1909-10, from July 1, 1910:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease
July	$8,869,214.32	5,384,594.73	3,484,619.50	1,004,748.86+
Aug.	9,255,331.67	5,563,659.34	3,691,672.33	727,614.46+
Sept.	9,315,213.67	5,403,614.03	3,911,599.64	479,710.47+

Dec.	8,705,283.99	5,418,750.10	3,286,533.87	171,110.79−
Jan.	5,740,206.34	5,084,088.47	656,117.87	660,478.52−
Feb.	6,375,576.57	5,230,869.06	1,144,707.51	342,311.73−
Mar.	8,880,640.59	5,644,074.05	3,156,566.54	445,393.15+
Apr.	8,672,024 54	5,515,049,93	3,156,974.61	175,863 48+
May	9,312,057.17	6,367,972.41	2,944,084.76	387,820.61+
June	9,479,650.36	6,454,979.31	3,024,671.05	306,755 49+
	$104,167,808.21	$67,467,977.64	$36,699,830.57	$2,859,874.70+
Inc.	$9,178,311.88	$6,318,443.18	$2,859,874.70	....

Following is a comparison of the gross earnings, expenses and net earnings for the years ended June 30, 1908, 1909, 1910 and 1911. The figures for 1911 show increases approximating 46% in gross earnings and 68% in net earnings, over those of 1908.

	Gross earnings.	Expenses.	Net earnings.
1908 ...	$71,384,173.72	$49,951,807.70	$21,792,366.02
1909 ...	76,313,320.96	53,357,748.06	22,955,572.90
1910 ...	94,989,490.33	61,149,534.46	33,839,955.87
1911 ...	104,167,808.21	67,467,977.64	36,699,830.57

The net results of the company's operations for the year ended June 30, are as follows:—

Gross earnings		$104,167,808
Working expenses		67,467,978
Net earnings		$ 36,699,830
Net earnings of steamships in excess of amount included in monthly statements		1,118,350
Total net income		$ 37,818,180
Deduct fixed charges		10,011,071
Surplus		$ 27,807,109
Deduct amount transferred to steamship replacement account	$1,000,000	
Contribution to Pension Fund	80,000	
		1,080,000
Net revenue available for dividends.		$ 26,727,109
Surplus for year carried forward after payments of all dividends..		$ 11,873 242
Special income from interest on land sales and from other extraneous assets, not included in the above.		$ 6,602,205

Approximate earnings for July $9,291,000, and for two weeks ended August 14, $4,477,000 against $8,660,000 and $4,064,000 for same periods 1910.

Duluth, South Shore and Atlantic Ry.—Operating revenue for 12 months ended June 30, $3,148,818.16; operating expenses, $2,269,340.76; net revenue, $879,477.40; other income, $61,572.67; interest on bonds, taxes, etc., $1,161,515.47; deficit, $220,465.40, against $3,302,147.03 operating revenue; $2,269,247.84 operating expenses; $1,032,899.19 net revenue; $58,530.16 other income; $1,173,253.29 interest on bonds, taxes, etc.; $81,823.94 deficit for same period 1909-10.

Mineral Range Rd.—Operating revenue for 12 months ended June 30, $746,425.14; operating expenses, $707,587.49; net revenue, $38,837.65; other income $17,529.27; interest on bonds, taxes, etc., $151,684.11; deficit, $95,317.19, against $826,499.55 operating revenue; $738,669.21 operating expenses; $87,830.34 net revenue; $9,916.48 other income; $167,509.45 interest on bonds, taxes, etc.; $69,762.63 deficit, for same period 1909-10.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Operating revenue for 12 months ended June 30, $13,135,907.80; expenses and taxes, $9,215,301.12; operating income, $3,920,606.68, against $15,407,179.40 operating revenue; $9,026,601.21 expenses and taxes; $6,380,578.19 operating income for same period 1909-10.

Chicago Division.—Operating revenue for 12 months ended June 30, $8,836,669.98; expenses and taxes, $7,029,111.75; operating income, $1,807,558.23, against $8,928,224.58 operating revenue; $6,262,495.86 expenses and taxes; $2,665,728.72 operating income for same period 1909-10.

◆

Grand Trunk Ry. Earnings, Expenses, Etc.

Subject to audit, the accounts for the half year ended June 30, show the following results:—

Gross receipts		£3,561,200
Working expenses		2,628,200
Net receipts		£ 933,000
Income from rentals, outside operations and car mileage balance		22,400
Total net revenue		£ 955,400
Net revenue charges, less credits		511,000
Balance		£ 444,400
Deduct, Canada Atlantic Ry. deficiency for the half year	£41,700	
Detroit, Grand Haven and Milwaukee deficiency for the half year..	39,700	81,400
Surplus		£ 363,000

This surplus added to the balance of £9,100 from Dec. 1910 makes a total of £372,100 available for dividend, which will admit of payment of the full dividend for the half year on the 4% guaranteed stock, and first and second preference stocks, leaving a balance of about £11,700 to be carried forward.

The accounts of the G. T. Western Ry. for the year ended June 30, after providing for all fixed charges, including the balance brought forward from the previous year, show a deficit of £31,462. As this result has arisen owing to the unusual circumstances of the strike which occurred during the third and fourth weeks of July and the first week of August, 1910, it has been decided to carry the balance forward to the next year.

Following is a comparison of gross earnings, expenses and net earnings for the yeara ended June 30, 1908, 1909, 1910 and 1911. The figures for 1911 show approximate increases of 9½% in gross earnings and ½% in net earnings, over those of 1908.

	Gross earnings	Expenses	Net earnings.
1808	$32,543,288	$23,610,734	$8,932,554
1909	30,433,604	21,922,792	8,510,812
1910	33,868,415	25,368,317	8,500,098
1911	35,361,557	26,390,043	8,971,514

Approximate earnings for July $4,237,383, and for two weeks ended Aug. 14, $2,066,044 against $3,179,896 and $1,603,660 for same periods 1910.

Traffic Receipts of the System.

Aggregate from July 1 to July 31:—

	1911	1910
Grand Trunk Ry.	£685,677	£521,589
Canada Atlantic Ry.	36,513	25,887
G. T. Western Ry.	113,327	81,032
D.G.H. & M. Ry.	35,179	24,895
Totals	£870,696	£653,403

◆

Orders placed for Steel Rails,

As stated in our June issue, the Canadian Pacific Ry. had then ordered 107,200 tons of steel rails, by far the larger portion from the Algoma Steel Co. and nearly all the balance from the Dominion Iron & Steel Co. We are now officially advised that the company has ordered 30,000 tons of 65 lbs. steel rails in the United States for branch lines in the west.

The Government Railways Managing Board has ordered 7,000 tons of 80 lbs. steel rails from the Dominion Iron & Steel Co. for the Intercolonial Ry.

The Algoma Eastern Railway Co's Bond Issue.

An issue of £513,600 of 5% first mortgage bonds, due 1961, has been placed on the London, Eng., market through the Bank of Montreal, at 93%. The principal and interest of these bonds is guaranteed unconditionally by the Lake Superior Corporation.

The A.E. Ry. Co. was incorporated by the Dominion Parliament, with an authorized capital of $2,000,000 of common stock, $1,000,000 of 5% non-cumulative preferred stock, and $3,000,000 of 5% first mortgage 50-year gold bonds. All the common stock and $800,000 of the preferred stock, and the present is the first issue of bonds. With the disposal of these there will remain $500,000 of bonds unissued.

Under the old title of the Manitoulin and North Shore Ry., the company built and has in operation 22 miles of railway, between Sudbury and Crean Hill, serving the nickel mines of the Canadian Copper Co. and the Mond Nickel Co., and a short piece of line at Spanish River, operated by the C.P.R. The extension of the line from Crean Hill, via Spanish River to the shore of Lake Huron, at Whitefish Bay, is under construction, as is the section from Whitefish Bay to Little Current, on Manitoulin Island. The cost of these extensions, about 64 miles, including stations, terminal facilities and docks, and making provision for rolling stock, is estimated at £538,378. These extensions are expected to be completed by July, 1912. The total length of the line from Sudbury to Little Current is 86 miles, and subsidies in aid of construction have been granted as follows:—Dominion Parliament, a minimum of $3,200, rising to a maximum of $6,400 a mile for the whole distance; Ontario Government, a cash payment of $5,000 a mile for 53 miles north from Little Current; a land grant of 7,400 acres a mile for 66 miles between Whitefish River and Sudbury, and 10,000 acres a mile from Little Current to Whitefish River.

The net earnings from the existing 22 miles of line for the year ended Dec. 31, 1910, were £7,083, during which period the extension from the Gertrude Mine to Crean Hill had been in operation only five months; the net earnings for 1910 from this section are estimated at $12,000. With the line in full operation, and the completion of docks at Little Current for shipping, the output of the mines, it is estimated that the net earnings of the railway should amount to $29,000.

Part of the proceeds of the bond issue will be used to pay for $250,000 bonds of the Lake Superior Corporation, which have been cancelled in order to absolutely free the railway from all encumbrance, other than the first mortgage bonds now issued.

The directors are: T. J. Drummond, D. C. Newton, Montreal; J. F. Taylor, Toronto; H. M. Price, Quebec; W. C. Franz, Sault Ste. Marie, Ont.; W. K. Whigham, London, Eng.; R. L. Austin, Philadelphia, Pa.

◆

Minneapolis and St. Louis Rd., Iowa Central Ry.—New York press dispatches Aug. 15, state that the directors of these companies have elected N. Erb as President of both companies, and that the first named company will be extended to the Canadian border with a view of connecting with the Canadian Northern Ry. and the G.T. Pacific. A Winnipeg dispatch of the following day says, "The Canadian Northern Ry. has either acquired control of the Minneapolis and St. Louis Ry., or will work in connection with that company to secure terminals in Minneapolis and Chicago. Confirmation of the report cannot be secured."

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

MODERN DESIGNS FOR MOTOR CONNECTION

Grand Trunk Railway Betterments, Construction, Etc,

New England Lines Proposals.—The injunction restraining the New York, New Haven and Hartford Rd. from building on the right of way in Woonsocket, R.I., for which plans have been filed by the New England Southern Rd., is effective until Sept. 16, when the question whether the land is necessary to the N.E.S.R. or to the N.Y., N.H. and H. Rd., will be argued. One of the conditions upon which the injunction was granted was that the N.E.S.R. should put up a bond to indemnify the N.Y., N.Y. and H.R. from any loss should a final decision be given in its favor. A bond of $50,000 was put up Aug. 5.

A somewhat similar situation has arisen in Burlington, Vt., where the Rutland Rd. has filed track allowances on Lake St., which the Central Vermont Rd., the controlling company of the N.E.S.R. claims to own. E. H. Fitzhugh, President, and G. C. Jones, General Manager, C.V.R., are negotiating for a settlement.

The organization of the New England Southern Rd. in Massachusetts was completed in Boston, Aug. 17. The certificate states that $1,000,000 of capital has been subscribed, and $100,000 paid in. The company proposes to build a railway from Palmer, Mass., to Providence, Rhode Island. The entire capital is in the hands of officials of the Central Vermont Ry., which is controlled by the G.T.R.

Bonaventure Station, Montreal.—A. W. Smithers, Chairman of the Board, in an interview at Montreal, Aug. 8, said the company was busy working out its plans for the modernization of Bonaventure station, and that it would not be long before active work was begun upon its erection.

Ottawa Improvements.—A. W. Smithers, Chairman, and the directors' party visited Ottawa Aug. 11, and inspected the work in progress at the hotel and station building. He expressed himself satisfied with the progress made, but declined to say anything in regard to the plans for rearranging the entrance of railways into the city, as he had not given them serious consideration. The new station, President Hays stated, would be completed about Oct. 1.

A contract has been let to John S. Metcalf Co., Ltd., Montreal, for the concrete foundations for the train shed of the new passenger station at Ottawa, and for the erection of the concrete platforms for the same. The approximate expenditure under the contract is $50,000.

M. Donaldson, Superintendent, Ottawa Division, in a recent interview said the western end of Ottawa was the most advantageously placed industrial centre, and that the G.T.R. would do all that was possible to develop it.

Toronto Asylum and Central Prison.—Official announcement was made, Aug. 11, that the site of the Toronto Asylum, Queen St., and the Central Prison, King St., had been sold to the G.T.R. and the Massey-Harris Co. for $1,025,000. The G.T.R. assumes the whole parcel, but has entered into an arrangement by which the Massey-Harris Co. secures a portion of the Asylum grounds for an extension of the plant. Possession is to be given of such portions of the properties as the Government may from time to time be able to vacate. About eight acres of the Asylum site have already been handed over to the purchasers.

The plans for the laying out of the Asylum site have been submitted to the city council. The area acquired by the G.T.R. is to be laid out for yard accommodation, a new freight shed, and for factory sites. The northwest portion of the site is reserved for sites, while the freight sheds will be along the southern boundary of the property. There will be two freight sheds, with a 50 ft. wagon road between them, and a capacity of 108 cars. The yard area will be bordered by Queen St. on the north and Shaw St. on the east, and runs down to Armour St. at the southwest corner. At this point tracks will be run into the property, branching out into sidings, which will occupy all but the northwest portion. Altogether there will be 12 uncovered tracks, with accommodation for 496 cars. The company intends to give the public adequate protection on the streets, which border on the tracks. A space of 100 ft. will be left from the eastern side of Shaw St., while the sidings will end 90 ft. south of the south side of Queen St.

Mimico-Toronto Grade Revision.—H. G. Kelley, Chief Engineer, completed an inspection of the grade revision work on Lake Shore road, Toronto, Aug. 3. It is about half completed, and this rate of progress is considered to be satisfactory. The first section of the new track to be completed was put in operation July 25, when the eastbound traffic was switched over from the temporary tracks to the new ones.

Toronto Belt Line Spur.—Application is being made to the Board of Railway Commissioners for approval of plans of a spur track from the Toronto Belt Line Ry. at Windermere Ave. to the Steel Co. of Canada's premises, lot 28, first concession from the bay, York tp.

Guelph Improvements.—In connection with the laying out of the grounds and the other improvements at Guelph, consequent upon the erection of the new station, which was opened for traffic at the end of June, the track is being raised from the bridge over the Speed River westward. Subways carrying four tracks are being built on Huskisson St. and an adjoining street.

Stratford Freight Sheds, etc.—A new freight shed 100 by 46 ft. is to be built, and next year it is expected that a start will be made in carrying out the reconstruction of the yards. (Aug., pg. 737.)

Wyevale-Tiffin Branch.—The piece of line which has been under construction from near Wyevale, on the Penetang branch, to Tiffin, on the Midland branch, 8.90 miles, is practically completed. The only piece remaining to be finished is a fill of 2,000 ft. at McDonalds.

◆

Railway Ties Bought in 1910.

The Forestry Branch of the Department of the Interior has issued the following statistics with regard to cross-tie consumption: In 1910 there were 9,213,962 cross ties purchased by steam and electric railways at a cost of $3,535,228, a decrease of 35% from the number purchased in 1909. The average cost at the point of purchase was 38 cents a tie. Cedar, jack pine and hemlock furnished 77% of all the ties purchased. Cedar alone supplied 40% of the total consumption and its use is increasing yearly in proportion to other species. Oak, which makes an expensive tie, costing 74 cents each, was used principally by a United States company having mileage in Canada. Of the total number of ties purchased, 70% were hewn. The only important species which had a majority of sawn ties, was oak. Sawn ties cost on the average 36 cents each, and hewn ties 3 cents more. The steam railways used 95% of all the ties and they cost on the average 38 cents. The electric railways used 302,540 ties—an increase of 183% over 1909. They cost 41 cents each. Although on the average the electric railways use smaller ties, this excess of 3 cents in the cost is due not only to the disadvantages incident to contracts for smaller quantities of materials, but also the fact that the electric roads are more likely to purchase ties at points where the price includes transportation charges.

◆

The Quebec Bridge for the N.T.R.

Questions relative to the plans prepared by the Quebec Bridge Commission, and the plan submitted by the St. Lawrence Bridge Co., which has been accepted by the Government, were raised in the House of Commons shortly before its recent prorogation, and the Minister of Railways, in reply, stated that the official design provided for a railway, street railway, and roadways on the bridge, but tenderers were asked in addition to submit designs of their own, and alternative designs were submitted in addition to tenders on the official design by three companies, the British Empire Co. being the only company which did not submit an alternative design. A report, dated Oct. 26, 1910, was made by the three Commissioners, stating that a satisfactory bridge could be built on the official design or on either of the designs submitted by the St. Lawrence Bridge Co. The Commissioners were asked to supplement that statement by a more positive one, as to which of the designs they named was the best. A report was then made by R. Mojeski and C. Macdonald, recommending the adoption of one design submitted by the St. Lawrence Bridge Co., the Chairman, H. E. Vautelet, dissenting. Under the order-in-council appointing the board, H. W. Hodge and M. J. Butler were called in, and as a result a final report was made Feb. 11, recommending the acceptance of one of the designs submitted by the St. Lawrence Bridge Co. This design included all the accommodations for traffic provided in the official design. In this report attention was also called to the fact that the St. Lawrence Bridge Co. had among its tenders, submitted a design omitting the roadways, and stated that, if the Government desired it, the highways could be omitted without changing the above recommendation, or delaying the progress of the work. After a full consideration, the Government decided to build a railway bridge with footwalks, and on March 14, a report was signed by Messrs. Macdonald, Mojeski and Hodge, recommended that a contract with the St. Lawrence Bridge Co. for the superstructure of a bridge of this character, by which a saying of $2,600,000 could be made. This design is, in every way, similar to the design which was recommended by the Board, except that it provides only for the railway and footwalks.

The contract for the bridge was signed April 4. The total amount paid up to July 24 for salaries and expenses of the Board was $256,808.23.

Tenders are under consideration by the Department of Railways for the removal of the unused material delivered on the ground and intended for use in connection with the bridge which collapsed. (Aug., pg. 741.)

◆

Don Bridge, Toronto.—The new high level bridge across the Don River, at Queen St., Toronto, is expected to be completed Nov. 1. The cost will be about $200,000, of which 85% is being paid by the G.T.R., C.P.R., Canadian Northern Ry. and the Toronto Ry. The contract was let by the city council to the McGuigan Construction Co.

The Minister of Trade and Commerce has, pursuant to the authority of the act respecting the grain trade in the inspection district of Manitoba, declared that all elevators at Fort William and Port Arthur, Ont., are public terminal elevators, from Aug. 20 until further declaration.

National Transcontinental Railway Station at Quebec.

Tenders were received to Aug. 31 by the N.T.R. Commissioners for the erection complete of a terminal station in Quebec, in accordance with plans and specifications prepared under the direction of the Commission, and approved of by G.T. Pacific Ry. officers.

The plans and specifications, which were prepared by Marchand and Haskell, architects, provide for a building on the site of the old Champlain Market, to be used as a passenger station for the N.T.R., which is to be operated by the G.T. Pacific Ry. The plans show a building facing on the square, the terrace side being 257 ft. wide, with a depth of 124 ft. for the main building.

The main front shows a handsome elevation, the central portion being carried considerably above the rest of the building. The feature of this part is a well designed arch, flanked by pillars, and finished with capstone and pediment. Passing through the main entrance doors, a large vestibule is reached, off which are the elevators, stairway, and booths, which will be devoted to purposes not yet defined. From the vestibule entrance is obtained to the rotunda, which is surrounded by a dome 41½ ft. in diameter. Off the rotunda are arranged ticket offices, parcel office, Canadian Express bondroom, Canadian and U.S. customs officers, a large baggage room, with public area; telegraph office, etc. Another vestibule leads from the rotunda to the concourse, which extends the whole length of the building. Off the rotunda is the general waiting room in the centre of the building, and in the main front is the lunch counter and restaurant, while on the concourse side are the waiting rooms for men and women respectively, to each of which is attached ample toilet and lavatory accommodation. A vestibule leads to a platform 53 ft. wide between the station building and the train shed. Upstairs there will be two floors over the main building, which will be used by the G.T. Pacific Ry. as offices. The baggage room, extending the full width of the building, is on the harbor side. The plans contemplate 11 tracks, of which six are to be laid at once, alongside which will be platforms 650 ft. in length. We are advised that a train shed is not contemplated at present.

The main building is to be of Deschambault white stone. The building is estimated to cost about $750,000, and it is expected to have it completed by the end of 1912.

* * *

National Transcontinental Railway Construction, Etc.

At a meeting of the Moncton, N.B., city council, Aug. 8, the Mayor said the N.T.R. Commissioners had decided that freight yards and machine shops were necessary, and that work was to be started in providing them. The immediate expenditure would be about $500,000. A committee was appointed to meet the engineers and arrange as to the concessions asked for.

Press reports, Aug. 11, state that J. H. Corbett, of Corbett and Floesch, has arrived in Moncton for the purpose of starting work on the yards, etc., and that the necessary construction plant is on the way to Moncton. The plans are said to include the laying of ten miles of track in the yards.

Tenders are under consideration for the building of trainmen's houses at the following points:—Napadogan and Edmundston, N.B.; Laurier, St. Foye and Fitzpatrick, Que.; Cochrane, Graham and Redditt, Ont., and Transcona, Man.

A Moncton, N.B., press report, Aug. 14, states that a contract has been let to Dr. Murray and John Leah for the erection of station and other buildings on the line between Moncton and Beaver Brook, N.B., at an estimated cost of $150,000.

A contract is reported to have been let to J. H. Gignon, Quebec, for the erection of station buildings at 35 points on the Quebec section.

Steel is reported to have been laid 150 miles easterly from Cochrane, Ont., of which 50 miles have been laid this season. The contractors, Foley, Welch and Stewart, are ballasting and finishing up their contract.

It is said that as a result of a conference held at Ottawa, July 31, the G.T. Pacific Ry. will take over the section of the line from Winnipeg to the junction with its branch to Fort William, Ont., at an early date. This section of the line has been operated by the contractors for some months. It is said that the question of taking over the section of the line from the south bank of the St. Lawrence River to Moncton, which is now nearly completed, was also discussed, but that no decision was reached.

The Commissioners will receive to Sept. 4, tenders for the supply of 2,000 gross tons of 80 lb. steel rails, to be delivered at Moncton, N.B.

The yards at Transcona, Man., are being surfaced and lined up by the contractors, the J. D. McArthur Co. The storage capacity at present completed is for about 1,000 cars, and this will be considerably increased when the work is completed.

We are officially advised that a contract has been let to Haney, Quinlan and Robertson for the erection of the car shops at Transcona, Man., described on pg. 741 of our Aug. issue. This firm is completing the erection of the locomotive shops at the same place. (Aug., pg. 747.)

Grand Trunk Pacific Railway Construction, Etc.

The G.T. Pacific Ry. began operating its trains in and out of the new Union Station at Fort Garry, Winnipeg, Aug. 10.

Tenders were received to Aug. 15 for the erection of the Selkirk Hotel in Winnipeg. Some delay has been experienced in getting titles to all the property required for the hotel, but E. J. Chamberlin, Vice President and General Manager, states that the clearing of the property will be started at once, and that it is hoped to get the foundations in before winter. The excavation for the foundations will necessitate the removal of about 50,000 cubic yards of material.

Engineers were in Brandon, Man., Aug. 12, looking over the routes suggested for the entrance of the company's line into the city. A route map for the line in the city submitted to the Minister of Railways July 24 showed that connection would be made with the Great Northern Ry., and that its station would be used, but from what is being done by the survey party above referred to it would look as if the company proposed to lay out its own terminals near First and Richmond streets.

The Board of Railway Commissioners has authorized the carrying of traffic over the line from Melville, via Yorkton to Canora, 29.5 miles, at 16 miles an hour.

On the lines southerly from Melville, trains have been run into Regina, the first one being Aug. 9. This train service was only a temporary one for the Regina fair. A regular train service is in operation from Melville to Edgeley, and it will be extended to Regina as soon as the ballasting of the line has been completed. Grading has been completed for about 20 miles out of Regina in the direction of Moose Jaw. In connection with this branch there has been deposited with the land titles office at Moose Jaw a plan, profile and book of reference showing the location from the east line of sec. 25, tp. 17, range 24, west of the second meridian, to the west line of sec. 3, tp. 17, range 26, west of the second meridian, mileage 23.32 to 40.01.

In connection with the line under construction southerly from Regina to the International boundary, press reports state that it is proposed to build a branch line, starting 13 miles south of Regina, passing through Weyburn, and on to the Montana border, connecting there with a branch of the Great Northern Ry.

Plans have been sent to the Saskatoon, Sask., city council for a line leaving the main line west of the city, and coming in alongside the Goose Lake Canadian Northern Ry. line and crossing both that line and the C.P.R. about Ave. P and running north to the proposed G.T.P.R. station on 22nd street near the site of A. L. Brown's house Ave. P and 22nd street. From that point the line will strike off northwest to Battleford.

The Board of Railway Commissioners has approved of the location plans of the Cutknife branch from Battleford to the west line of sec. 29, tp. 43, range 18, west of the third meridian, mileage 0 to mileage 14.66.

Grading is reported to have been commenced on a branch from Moose Jaw northwesterly. This projected branch will be 81 miles long and will in time be extended to connect with the main line at Young. From this point a branch is under construction to Prince Albert. Authority has been given by the Board of Railway Commissioners to operate traffic on the branch from Young to mileage 45.5. Track has been laid to Wakaw, near the proposed crossing of the river, and grading has been completed from Prince Albert to the north bank. With the completion of the bridge and the laying of about 25 miles of track the branch will be completed. A start was made Aug. 8 building a roundhouse in Prince Albert, and in laying out a yard.

On the branch to Battleford about 62% of the grading is reported completed, and 11 miles are ready for track laying. The branch starts at Biggar, Sask., and will be about 45 miles long.

On the line being built from Biggar towards Calgary, about 55% of the grading has been done on the 50 miles under contract, and 10 miles are ready for track laying.

On the line from near Tofield, which is also heading for Calgary, track has been laid to the crossing of the Red Deer River, and the Board of Railway Commissioners has authorized the opening of this section for traffic. Five of the seven spans of the bridge have been completed, and it is expected that the other two spans will be finished by Sept. 1. Tracklaying will then be resumed towards Calgary. Some difficulties have been met with in building the line through the C.P.R. irrigated lands, but

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

a settlement has been arrived at and construction was resumed Aug. 7.

Press reports state that a start will be made at an early date near Edson for a branch line to the Peace River district. The surveys for such a line are reported to have been completed during the summer.

On the line under construction to the Pacific Pass and Brazeau coal fields, tracklaying has been started from the junction point just west of Edson. The branch will have a length of 56 miles and eight miles of track were reported to have been laid Aug. 10.

On the main transcontinental line a train service has been put in operation from Edson to Hinton, Alta., 55.6 miles. Track has been laid as far as the Athabasca River, where a bridge is being built. As soon as this bridge is completed, tracklaying will be resumed. It is expected to have track laid to Fitzhugh this season. At this point divisional yards and terminals will be laid out. Fitzhugh is 17 miles east of the summit, and in this distance there is a rise of 238 ft. The total height above sea level at Yellowhead Pass is 3,704 ft.

Press reports state that a contract has been let to Foley, Welch and Stewart for the construction of the line from Tete Jaune Cache, 50 miles west of Yellowhead Pass, to Aldermere in Bulkley Valley, B.C., a distance of 415 miles. This report was in circulation Aug. 2, but the date for closing the tenders was Aug. 15, so that the story was probably premature. It is not, however, unlikely that this firm will secure the contract, as it has the contracts westerly and easterly terminating at Tete Jaune Cache, and Aldermere respectively, both of which contracts are well advanced towards completion. An official confirmation of the letting of the contract is expected daily.

Working easterly from Prince Rupert, a train service is being operated to Vanarsdol, 100.9 miles, while track has been laid as far east as Hazleton.

The contractors are busy at work on the three tunnels in the canyon on the Skeena River, which is about 106 miles east of Prince Rupert. The length of the three tunnels are said to be 1,300 ft., 1,100 ft. and 800 ft. Work on these have been in progress for quite a long time now, with the result that all of them are nearly completed. (Aug., pg. 747).

Amendments to General Train and Interlocking Rules.

The Board of Railway Commissioners passed the following order 14271, dated July 20:—Re joint application of the Grand Trunk and Canadian Pacific Ry. Companies, under sections 29, 30, 268 and 269 and such other sections of the Railway Act as may be applicable, for an amendment to the General Train and Interlocking Rules approved by the Board, Order 7563, July 12, 1909: It is ordered that the said rules be amended by cancelling the rules following, marked "Rules to be Cancelled," and substituting therefor the following provisions, marked "New Rules to be Substituted":—

Rules to be Cancelled.	New Rules to be Substituted.
Home Block Signal and Station Protection Signal, and Train Order Signal.	
A semaphore arm 60 degrees from the horizontal or a disc withdrawn indicates "proceed." When this position at night a green light is displayed.	A semaphore arm 60 degrees below or 90 degrees above the horizontal or a disc withdrawn indicates "proceed." When this position at night a green light is displayed.
Distant Block Signal.	
A semaphore arm standing horizontal or a disc displayed indicates "proceed with caution, prepared to stop at the home signal." When this position at night a yellow light is displayed. A semaphore arm 60 degrees from the horizontal or a disc withdrawn indicates "proceed." When in this position at night a green light is displayed.	A semaphore arm standing 45 degrees above horizontal or a disc displayed indicates "proceed, prepared to stop at next signal." When in this position at night a yellow light is displayed. A semaphore arm 60 degrees below or 90 degrees above the horizontal or a disc withdrawn indicates "proceed." When in this position at night a green light is displayed.
Interlocking Signals—Home Signal.	
A semaphore arm 60 degrees from the horizontal indicates "Proceed." When in this position at night a green light is displayed.	A semaphore arm 60 degrees below or 90 degrees above the horizontal indicates "proceed." When in this position at night a green light is displayed.
Interlocking Signals—Distant Signal.

Railway Finance, Meetings, Etc.

Algoma Central and Hudson Bay Ry.—A meeting of shareholders has been called for Sept. 20 at Sault Ste. Marie, Ont., to receive the report of the directors for the year ended June 30, and to consider and ratify "all the acts and proceedings of the Board since the last meeting of shareholders." Notices for the holding of meetings of shareholders of the Ontario, Hudson Bay and Western Ry., and the Algoma Eastern Ry., on the same day, and for similar purposes, have been given. All three railways are owned by the Lake Superior Corporation.

Buffalo and Lake Huron Ry.—The report for the six months ended June 30 shows that after providing for interest on first and second mortgage bonds, the balance, including the amount brought forward from the previous half year, was £14,913 11s. 1d., which, after payment of the usual dividend of 5s. 3d. a share, leaves £1,128 17s. 10d. to be carried forward to the next half year's accounts. The railway is operated under lease by the G.T.R. The directors for the current year are, Chairman, M. H. Maxwell, Liverpool, Eng.; J. M. Synge, Westerham, and E. Ashton, Liverpool, Eng.

Canadian Northern Ry.—A duplicate of a confirmatory trust deed dated Jan 20, 1910, made between the company, the National Trust Co., the British Empire Trust Co., and the province of Alberta, supplemented to the deed of June 10, 1909, made to secure certain 4% guaranteed debenture stock or bonds issued or to be issued, was filed with the Secretary of State, Ottawa, Aug. 3.

Canadian Pacific Ry.—The directors have declared a 2% dividend on the preferred stock, and a 2½% on the common stock for the quarter ended June 30, payable Sept. 30, to shareholders of record Sept. 1. The common stock dividend is at the rate of 7% per annum from revenue, and 3% per annum from land sales, etc.

Dominion Atlantic Ry.—Gross earnings for 12 months ended June 30, $1,256,400, against $1,331,726 for same period 1909-10.

Grand Trunk Pacific Ry.—London, England, cables, Aug. 22, state that there has been listed on the Stock Exchange there £696,000 of a recent issue of 4% debenture stock.

Guelph Jct. Ry.—The revenue received by the city of Guelph, Ont., from the C.P.R. for the operation of this railway for the quarter ended June 30, was $8,897.37, against $8,066.09 for the same period 1910.

The directors on July 27 declared a dividend of 9% for nine months, the cheque amounting to $15,000, being made payable to the city of Guelph, which holds the entire issue of common stock.

Kingston and Pembroke Ry.—The annual meeting was held at Kingston, Ont., Aug. 9, when it was reported that the past year was the best in the company's history. Following are the officers and directors for the current year:—President, W. D. Matthews, Toronto; Vice President and General Manager, W. R. Baker, C.V.O., Secretary, C.P.R., Montreal; other directors, A. R. Creelman, K.C., H. P. Timmerman, Montreal; J. Oborne, Toronto; Hon. W. Harty, J. B. Walkem, R. Crawford and W. F. Nickle, Kingston, Ont.

New Brunswick and Prince Edward Island Ry.—The annual meeting was held at Sackville, N.B., Aug. 1. Following are the officers and directors for the current year:—President, C. W. Fawcett; Secretary, C. Pickard; other directors, M. G. Siddall, F. B. Black, H. E. Fawcett, H. M. Wood and F. C. Harris.

New Brunswick Ry.—At the recent annual meeting of shareholders, a dividend of 4% was declared for the year ended June 30. Following are the officers and directors for the current year:—President, F. S. Meighen; Vice President, W. T. Whitehead; other directors, Lord Strathcona and Mount Royal, Sir Thos. G. Shaughnessy, John Turnbull, Robt. W. Reford, Col. H. H. McLean, K.C., G. Ferrer and G. S. Cantlie.

Quebec and Lake St. John Ry.—Total earnings for July, $66,095.28, against $56,689.43 for July, 1910. Aggregate total earnings for seven months ended July 31, $337,611.60, against $324,060.10 for same period 1909-10. The average earnings per mile for July were $231.60, against $198.63 for July, 1910, and for the seven months ended July 31, they were $1,182.71, against $1,146.94 for the same period 1909-10.

Temiskaming and Northern Ontario Ry.—Gross earnings for June, $123,857.79; expenditure, $111,847.56; net operating earnings, $12,010.23; other income, hire of equipment, $3,132.93; less for outside operations, $310; net income, $14,833.16.

White Pass and Yukon Ry.—Gross earnings for six months ended June 30, $397,130, against $413,334 for same period 1910.

REMEMBER

When you require any new equipment in the line of Iron or Woodworking tools, —Williams & Wilson can furnish the most modern equipments. Here are a few of our Agencies:

CANADA MACHINERY CORPORATION,
Iron and Woodworking Machinery.
FOOTE-BURT CO., High Duty Drilling Machinery.
NEWTON MACHINE TOOL WORKS,
Cold Saws, Milling Machines, Etc.
BULLARD MACHINE TOOL CO.,
Rapid Production Vertical Turret Lathes.
AJAX MFG. CO., Forging Machinery for Smith Shop.
WARNER & SWASEY, Turret Lathes for Brass and Iron.
LANDIS TOOL CO., Grinding Machinery.
KEARNEY & TRECKER, High Duty Horizontal Millers.
AMERICAN TOOL WORKS CO., Radial Drills, Etc.
—And numerous others.

We will gladly send Descriptive Circulars or Catalogues of any of the above. Send us your inquiries.

THE HART-OTIS CAR CO., LIMITED, MONTREAL

The Canadian Northern Railway's Montreal-Port Arthur Line.

The line which is to be built by the Canadian Northern Ontario Ry. under the special act passed last session of the Dominion Parliament will complete the main transcontinental line from Montreal to Port Arthur. The first section of the line is described in the act granting aid to the railway as the mileage already in part built by the C.N. Quebec Ry. and the C.N. Ontario Ry. from a point in Quebec province opposite Hawkesbury, to Rideau Jct., west of Ottawa. The second section extends from Rideau Jct. to a junction with the existing Toronto, Sudbury-Gowganda Jct. line, in Capreol tp.; the third section carries the existing line from the junction in Capreol tp., to near Sellwood Jct., 10.6 miles, and the fourth section covers the remainder of the distance into Port Arthur.

The Ottawa-Sudbury or Ottawa-French River section, as it is often called, is in many ways one of the most interesting sections of the C.N.R. system. The Toronto and Sudbury lines come out of Ottawa together for some 5.5 miles to Rideau Junction, where they bend in opposite directions, the Sudbury line heading northwest for over 30 miles to the Ottawa River. The work is light, and the alignment very good indeed, the only interesting features being the two overhead crossings of the C.P.R. at Bells Corners, and of the G.T.R. at South March. At mileage 38 from Ottawa the line crosses the Ottawa River into Quebec province, at the outlet of the Chats Lake. The crossing is about 2,500 ft. long, with one span of 250 ft. and a number of shorter ones. All foundations are on rock, and never submerged more than a few inches below low water. Through the county of Pontiac the work is again light to Portage du Fort, where the Ottawa is again crossed. The river is narrower at this point, but the grade much higher (about 50 ft. above low water). There are three spans of 200 ft. each and a number of shorter ones, the deepest foundations being in 18 ft. depth at low water. The location as outlined above was the subject of considerable study and discussion, as it seemed quite unnecessary to cross the Ottawa twice and leave the towns of Arnprior and Renfrew to one side. It was found, however, that the location of the Canada Atlantic and the C.P.R. on the south side of the Ottawa, through both these towns, and of the latter along the immediate bank of the river, made it impracticable to secure a reasonable share of the traffic, and at the same time to get good alignment and grades, and two crossings of the C.P.R. would have been necessary, and there would also have been heavy crossings of the Mississippi, the Madawaska and the Bonnechere. As a government-aided road also it seemed in better taste to strike out into new territory and avoid direct competition with the older lines.

Crossing back into Ontario at Portage du Fort, the line passes through a very rich country centred in Forresters Falls, Beachburg and Westmeath, and, crossing the C.P.R. again overhead about three miles east of Pembroke, runs into the latter town at the 86th mile, where the Muskrat River is crossed, in the valley of which is a G.T.R. branch, necessitating a high bridge to clear it overhead. A mile further on the line crosses the Indian River, a comparatively small stream. The natural route from this west is, of course, the Ottawa River, but not only are the shores very bold and precipitous, but the C.P.R. fully covers the territory and the C.N.R. would again have laid itself open to the charge of unnecessarily paralleling the older road. The valley of the Indian River was therefore taken to its source, near Grand Lake, and then the Petawawa River valley. This occupies a great depression running parallel to the Ottawa, and generally about 25 miles distant. An enormous quantity of pine timber has come down this river in the last 40 years, and it is still coming. The route follows the river closely from Lac a Travers to the head of Cedar Lake, which is a great sheet of water 10 miles long and two miles wide, forming a collecting basin for the several branches. The northern one is followed past Cauchon Lake, the line going over a low divide to the Amable du Fond. Crossing Kioskoqui Lake, the line ascends to another low divide and reaches waters flowing into Lake Nipissing. Here is the greatest individual drop in the whole line, a descent of 300 ft. in less than 15 miles, which necessitates a grade of 26 ft. per mile, compensated for curvature. At the foot of this grade is Chisholm Jct., where the Georgian Bay branch leads off, while the main line goes on past Callendar to North Bay, 230 miles from Ottawa. The C.P.R is crossed for the third time at Nipissing Junction again over head, and the Temiskaming and Northern Ontario Ry., about one mile from North Bay on the level. The line now skirts Lake Nipissing for some 10 miles close alongside the C.P.R., and then takes the valley of the Sturgeon River, which it crosses near Sandy Falls. It then follows the Kapikotitwia branch, and over a very low summit to Timmins Brook, draining into the Wahnapitei River, crossing the latter below Island Portage. The river is ascended for nearly two miles, and the line goes through a narrow pass to the south bay of Wahnapitei Lake and thence by Massey Creek to a junction with the line from Toronto at a point in Capreol township, near Hammer station.

The heaviest grade on this long stretch of 300 miles is that mentioned above. In the opposite direction the standard is the same, but occurs only in short pieces. There are some few 6° curves and one or two 8°, but the standard is 4°, and is seldom exceeded. In the canyon of the Petawawa River below Cedar Lake and at one or two other points there is some heavy side hill work in rock. The most interesting features are the two bridges over the Ottawa, and the almsot complete avoidance of grade crossings of other roads. There are seven crossings of other railways between Rideau Jct. and North Bay, and in all but one (the T. and N.O.R.) grade separation is effected.

The Sudbury-Port Arthur line is sometimes referred to as the "missing link." The first title is somewhat of an error, as Sudbury will not be on the main line at all. The contract which has been let for the building of the line from Port Arthur to the existing line will terminate easterly at Gowganda Jct., 53 miles north of Sudbury Jct., and includes some grading and clearing done by Angus Sinclair. There are about 15 miles beyond Gowganda Jct. ready for tracklaying, and Gowganda Jct. is 30 miles north of Sellwood Jct.

The greater part of the work to be done is very ordinary construction. The most interesting section is the last 120 miles into Port Arthur, which includes some heavy side hill work in rock and a tunnel of 1,100 ft. along the shore of Lake Nipigon, and an expensive bridge over the Nipigon River, a diversion of the same and a viaduct 2,200 by 130 ft. across the Blende River Valley. The other more important river crossings are, from east to west, the Ground Hog, the Trout, the Kapuskasing, Missinabie, Kabinakagami, Morrison, Kenogami, Sturgeon, and Black Sturgeon.

The ruling gradients are against westbound trains 6-10 of 1%, and against eastbound 5-10 of 1% compensated, which have nowhere been exceeded between Montreal and Port Arthur, and in a very few instances lived up to. The ordinary standard is 1-10 less than this in either direction. The standard of curvature is 6°, which has been exceeded at only half a dozen places, and for some hundreds of miles on the interior plateau 4° is the rule.

We are indebted to H. K. Wicksteed, B.A. Sc., M. Can. Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann and Co., Ltd., for the details of the routes, etc., of the two sections of the line described.

The contract for the building of the line from Gowganda Jct. to Port Arthur has been let to Foley Bros. and the Northern Construction Co. The mileage covered by the contract is approximately 540 miles.

A sub-contract has been let to P. T. Walsh for the first 59 miles out of Port Arthur, and another to the Nipigon Construction Co. for the next 91 miles easterly, thus putting 150 miles under subcontract. Some smaller contracts have been let on the eastern end of the work. Foley Bros. and the Northern Construction Co. will do some of the work direct with their own forces.

The construction will be under the charge of E. T. Agate, Sudbury, and H. T. Hazen, Port Arthur, as District Engineers, for the company, while O. W. Swensen will represent Foley Bros. and Northern Construction Co.

The Nipigon Construction Co., which has its headquarters at Nipigon, Ont., has the following officers and directors: President, W. G. Chambers; Vice President, W. B. Russel; Managing Director, C. McQuigger; Superintendent, R. K. Russel; director, W. A. McCaffery. All of them have been engaged in railway construction work for some years, and have just completed some contracts on the National Transcontinental Ry.

Tenders for the building of this section of the line are under consideration, and contracts will probably be let early in Sept.

C. P. L. Fowler, who has been Manager for the Nelson-Jenks Coal Co. at Great Falls, Montana, is reported to have been appointed Purchasing Agent for Foley Bros. & Northern Construction Co. in connection with their Gowganda Jct.-Port Arthur contract on the Canadian Northern Ry. It is said his headquarters will be at Nipigon.

The following Division Engineers have been appointed on the western end of the work:—Division A, A. P. Wenzell, Port Arthur; Division B, E. L. Dorsett, Nipigon; Division C, R. H. McCoy, Nipigon; Division D, A. J. Isbester, Nipigon.

Canadian Northern Railway Construction, Betterments, Etc,

James Bay and Eastern Ry.—We are advised that a contract has been let for the line from Roberval westerly for 30 miles, to J. P. Mullarkey, Montreal. A sub-contract is reported to have been let to Peron and Co., Metabetchouan, Que., for the building of this 30 miles westerly from Roberval, Que., which is the terminus on Lake St. John of the Quebec and Lake St. John Ry. The new line will, it is said, proceed westerly through the parishes of St. Prime, St. Felicien and La Dore. The company is authorized to build a line from near Lake Abitibi, Ont., on the Canadian Northern Ontario Ry., easterly and southeasterly, passing south of Lake St. John to the mouth of the Saguenay River, Que. The interests formerly associated with the Q. and L. St. J. Ry. had a Quebec charter for the building of a line from Roberval to James Bay, and also a charter for the Trans-Canada Ry., under which charters surveys were made covering these 30 miles. ion subsidies have been voted for this mileage out of Roberval.

The Canadian Northern Montreal Tunnel and Terminal Co. has been incorporated under the Dominion Companies Act, with a capital of $50,000, and office at Toronto, for the purpose of laying out and operating railway, tramway and steamship terminals, transportation warehousing and storage facilities, tunnels and approaches, yards, stock yards, grain elevators, steamships, piers, docks, drydocks, ship basins, etc., and in connection therewith to carry on a number of other businesses, and to do whatever may be incidental or necessary to the carrying out of the company's main objects. The operations of the company to be carried on throughout Canada. The provisional directors are:—G. G. Ruel, S. P. Biggs, A. J. Mitchell, J. B. Robertson, F. J. Buller, all of whom are connected with the Toronto offices of Mackenzie, Mann and Co., Ltd.

Canadian Northern Quebec Ry.—Quebec press reports, Aug. 14, state that the company has purchased a considerable area of land at Limoilou, Que., for the purpose of extending its yards and terminals at Quebec. The land is situated behind the Q. and L. St. J.R. station in Limoilou, just across the St. Charles River from Quebec.

The Board of Railway Commissioners has extended until Sept. 15 the time for the completion of the C.N.Q.R. across Notre Dame St., Montreal, and the joining of the Montreal St. Ry. and the Montreal Harbor Commissioners' tracks.

With respect to the projected terminals in Montreal, press reports state that electricity will be used as a motive power for the traffic on account of the tunnel under Mount Royal. A. W. Smithers, Chairman of the Board, G.T.R., stated in Montreal, Aug. 8, that he had not heard anything of a proposal that the G.T.R. and the C.N.R. should join in the building of a big terminal station there.

The new short line between Montreal and Hawkesbury, Ont., will be finished this fall. The substructure for the bridge over the Back River at Montreal will be started at an early date. The contract for this work had not been let up to Aug. 20.

The Canadian Northern Montreal Land Co. has been incorporated under the Dominion Companies Act, with a capital of $2,500,000, and offices in Toronto, for the purpose of acquiring lands, wharves, docks, warehouses, etc.; to acquire land for townsites, and to develop the same; and to carry on in connection various businesses, including those of shipowners, wharfingers, forwarders, and agents. The provisional directors are: G. G. Ruel, R. H. M. Temple, A. J. Reid, S. P. Biggs, and R. P. Ormsby, all of Mackenzie, Mann and Co.'s offices, Toronto.

It is said that a purchase of 402 acres of lands made for $846,000 by J. Barbour, Toronto, Aug. 11, is in the C.N.R. interests. The total amount invested in land recently in the Cote des Neiges and St. Laurent districts recently is said to aggregate $5,000,000.

Canadian Northern Ontario Ry.—The erection of the steel superstructure of the bridge across the Trent River at Trenton has been practically completed, and the steel has been delivered for some small bridges between Cobourg and Trenton, Ont. An announcement of the date of opening this section of the line is expected daily.

The grading on the extension to Belleville has been completed to the city boundary, and is being progressed with through the city. The substructure for the bridge across the Moira River is well advanced, and a contract has been let to T. Manley for the building of a station on Church St., south of Dundas St., at a cost of about $22,000. A five-stall roundhouse is being built at Napanee, which, it is expected, will be completed in Nov. In connection with the building of the line on to Ottawa, a subcontract has been let to R. A. Girouard for a section of about nine miles from Jones' Locks, Smiths Falls to Otter Lake.

A spur has been completed at Ottawa, connecting the line from Montreal and Quebec, with the Ottawa and New York Ry.

The company is reported to have purchased 110 acres of land at Bowesville, near the concrete bridge being built over the Rideau River, at the point where it is expected the Toronto-Ottawa line will join the company's transcontinental line. This area will be used for shops, etc., according to the reports. Other reports state that options have been obtained on something like 2,000 acres of land on the Merivale road for the company's purposes.

Extended reference to the Montreal, Ottawa, and Port Arthur line will be found on another page.

Duluth, Winnipeg and Pacific Ry.—Press reports say that J. A. Johnson and H. Fawcett, Duluth, Minn., have been awarded a contract for building a 10-stall roundhouse and the shop buildings in that city, which previous reports stated had been let to Bailey and Marsh, Minneapolis, Minn.

Plans are being prepared for the building of a station at Virginia, Minn., the point where the D.W. and P.R. connects with the Duluth, Rainy River and Winnipeg Ry., thus making a through line from Duluth to Winnipeg, and Port Arthur.

Canadian Northern Ry.—Tenders are under consideration for the erection of a brick station at Fort Frances, Ont. The plans show a 2½ story building, 116 by 24 ft. The platform will be 500 ft. long.

The Winnipeg and Northern Ry. has deposited in several registry offices of the area covered, plans, profiles and books of reference of its projected line through river lots in the parishes of St. Paul, St. Andrews, St. Clements, and St. Peter, and through townships 14-17, and ranges five to seven east of the principal meridian. This is the line which is being built as an extension of the Birds Hill branch to the beaches on the east side of Lake Winnipeg. About four miles of grading has been completed in the vicinity of St. Paul, and several miles of clearing and brushing have been done beyond. A second construction camp has been started near East Selkirk.

A contract has been let for the first section of the line to T. R. Edwards, Winnipeg.

The Fort Garry union station, Winnipeg, was opened for traffic Aug. 8. The first train to leave was a G.T. Pacific Ry. one, while the C.N.R. ran the first inward bound train.

Considerable betterments are being carried out on the lines west of Winnipeg. The new station at Brandon is practically completed, and such progress has been made with the hotel at the same place that it is now expected to have it opened for business Jan. 1, 1912. New roundhouses are being erected at Neepawa, Regina, Humboldt, Saskatoon and Edmonton. At many points on the line additional ballast is being put in, and a good deal of ditching is being done.

The Board of Railway Commissioners has authorized the opening of the following lines for traffic:—From Shellbrook to Big River, 57 miles; from Shellbrook to Blaine Lake, 35 miles; from North Battleford to Edam, 38 miles; from Kindersley to Alsask, 44 miles.

Grading has been completed as far as the city boundary of Moose Jaw, Sask., on the branch from the Maryfield-Lethbridge line. The plans for the entrance into the city, with the exception of a short distance, in respect of which the city desires to have the G.T. Pacific Ry. plans before it, have been approved. The station will be built at the corner of Thirteenth and Stadacona streets, and the freight sheds will be located behind Athabasca St. It is expected to have the steel laid on the branch this season.

The Russell branch is reported completed as far as Canora; the grading of the Melfort branch is completed to Humbolt, and the grading is completed to the Saskatchewan River of a branch southerly from Delisle, Sask. Delisle is a station on the Goose Lake branch, which is now open for traffic to Alsask, 44 miles beyond Kindersley. This line will affect a junction near the Red Deer River, with the branch from Vegreville, and will then be continued to Calgary. Surveys are being made for a route for a line from Calgary to Lethbridge to connect up with the line from Maryfield. The Cowan Construction Co., having completed the grading to Moose Jaw, has removed its plant to New Warren, about 30 miles southeast, and has started grading westerly on the extension of the branch from Maryfield to Lethbridge.

Construction trains are being run on the extension from North Battleford to Meota, and it is expected to have a further distance of about 75 miles completed this year.

Starting from Camrose, on the Vegreville-Calgary branch, a line is being built to Strathcona, upon which considerable grading has been done. It is expected to have everything ready for tracklaying this year. From Stettler a branch has been completed to Red Deer, where a station is being built. The Northern Construction Co. has a large outfit at work, grading westerly from Red Deer towards Rocky Mountain House, and the Brazeau River coalfields.

The grading gangs on the line from Edmonton to Athabasca Landing have reached the Tawattinawa River, and track has been laid to mileage 60. D. Campbell of the company's construction staff, says it is expected to have track laid to the Landing by the end of the year.

Owing to the wet weather in the early part of the season grading on the line from Onoway has not progressed as rapidly as was expected, but the work is now going on much faster. The substructure for a 3,000 ft. bridge, 70 ft. above highwater level, is being put in at the crossing of the Pembina River, to which point it is expected to have track laid this year. Grading is being gone on with north of the Pembina to the Athabasca River, the crossing of which is 140 miles from Edmonton. Engineers are in the field beyond this point locating the line to the Peace River.

A. Laidlaw, Spokane, Wash., who is interested in mining properties in Jasper Park, in a recent interview said, the C.N.R. has been graded and track laid to 40 miles west of Edson, and only 85 miles east of the Yellowhead Pass, to which point it is expected to have track laid this fall. The C.N.R. parallels the G.T. Pacific Ry. for many miles to the summit of the Rockies. The company is reported to have acquired about 1,500 acres of land on the McLeod River, just south of Edson, for divisional yards and terminals.

Canadian Northern Pacific Ry.—F. G. Holt, Executive Agent, C.N.R., returned to Vancouver, B.C., Aug. 6, after a trip of inspection over the line to Kamloops, to which point the work is in the hands of the contractors. Tracklaying was started at Port Kells, July 31, and was reported to have been completed to the Salmon River. A ballast pit has been opened near Port Kells, and the ballasting gang is working close behind the

The Automatic System of Signals

is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Largest Producers of Vanadium Alloys in the World.

324 Frick Bldg., - PITTSBURGH, Pa.

tracklayers. Grading has been completed to the Popkum Indian reserve, nine miles east of Chilliwack. The substructure for a swing span bridge is being built at Chilliwack. Grading gangs are at work as far as Hope, and a number of the other plants have been removed east of Hope and on nearly as far as Kamloops. The work between Hope and Kamloops is being gone on with as fast as possible, but owing to the fact that the B.C. Government insists that "only white men" can be employed on the work, the number of men is not so large as would have been the case if the contractors had been able to engage Asiatics.

The company has withdrawn its application to the Board of Railway Commissioners for permission to parallel the C.P.R. tracks on C.P.R. right-of-way along the Fraser river from Lytton to Cisco bridge, where the C.P.R. crosses the river to the west bank. At the hearing last year the application was opposed by the C.P.R. on the ground that the applicant had no status, as it was a provincial corporation, the C.N. Pacific Ry., and therefore had no authority to expropriate C.P.R. right-of-way. It was also urged that the building of a line lower down the canyon would be a menace, owing to the danger of the C.P.R. embankment becoming undermined. A special report on the routes was prepared by C. E. Cartwright, and an amended plan providing for two additional bridges across the Fraser River, proposed.

Winnipeg papers of Aug. 15 stated that a contract had been let to the Northern Construction Co. and the Cowan Construction Co., jointly, for the building of the section of the C.N.P.R. from Kamloops to the Yellowhead Pass, about 250 miles. The estimated cost of the work is placed at $10,000,000, and the contract is to be completed within two years. The dispatch added that A. R. Mann, President of the Northern Construction Co., had gone to Vancouver to arrange for the immediate starting of work from the Kamloops end.

The wharf at Port Mann was reported completed Aug. 14, and machinery is being installed in order to facilitate the handling of the construction material which is being delivered in large quantities. The tracks at present laid in the yard have been connected up with the Great Northern Ry. line, which facilitates work considerably. Considerable progress has been made with the clearing of the townsite.

Canadian North Eastern Ry.—Track was expected to be laid to the Red Cliff mine, 13.5 miles from Stewart, B.C., Aug. 31. (Aug., pg. 743.)

Duluth, Winnipeg and Pacific Railway Construction.

This line was projected from Duluth to Virginia, Minn., connecting there with the Duluth, Rainy Lake and Winnipeg Ry., which extends from Virginia to Rainy River, and is connected by a bridge over the river with the Canadian Northern Ry. at Fort Frances, Ont. The two railways in Minnesota, together with the International bridge, are controlled by the Canadian Northern Ry. interests, and the completed line will form, with the Canadian Northern Ry., the shortest route between Duluth and Winnipeg, and will also give a short and direct railway connection between Duluth and Port Arthur, Ont.

The terminal points are the same as those of the Duluth, Missabe and Northern Ry., the route unavoidably lying through pretty much the same country, but there is absolutely no paralleling. The Duluth, Missabe and Northern is an iron ore road with an enormous business, which it carries on over grades of 6-10 of 1% against the ore traffic and 2% in the opposite direction. It was felt that the last was too low a standard to be accepted on the new line, and after an exhaustive examination a route was adopted giving a grade of 1.15% out of Duluth for some 10 miles, and then flattening off to a standard of 3-10 against southbound and 6-10 against northbound traffic, for the remaining 65 miles. This portion is all on the elevated table land north of Lake Superior, and there is nothing in the construction out of the ordinary, the grading alternates between clay and gravel, cuttings and muskegs and two or three moderately bad sink holes are the only interesting features.

The 500 ft. lift out of Lake Superior to the plateau is nearly all on a steep and very broken rock side hill. It includes a 500 ft. tunnel and some very heavy rock work, aggregating 150,000 cubic yards in a distance of about eight miles, also two or three bits of permanent trestle. The entry to Duluth is all elevated and grade crossing of streets has been practically eliminated. The Canadian Northern Ry. owns its own yard and water terminals in West Duluth, but it is proposed to run over the Northern Pacific Ry. tracks into Duluth proper, and also via the Grassy Point bridge into Superior.

We are indebted to H. K. Wicksteed, B.A.Sc., M. Can. Soc. C.E., Chief Engineer of Surveys for Mackenzie, Mann and Co., Ltd., for the foregoing information.

We were advised by H. T. Hazen, Chief Engineer in charge of construction, Aug. 19, that the grading on the line between Duluth and Virginia had been completed, with the exception of the 500 ft. tunnel at Short Line Park, which was expected to be finished in a week thereafter. Track has been laid from Virginia to the tunnel, 67 miles, and about 20 miles of this has been ballasted. This work is being done by Foley, Welch and Stewart. The bridge work is progressing very favorably, the bridges over the St. Louis and Cloquet Rivers and the Duluth, Missabe and Northern Ry. having been completed and the bridge at the crossing of the Spirit Lake Transfer Ry. being under way. Contracts have been let and work started on the 10 stall engine houses and machine shops at Duluth and Virginia. The station buildings, section dwellings, etc., have been completed at Harney, Simar, Twig, Bartlett, Peary and Eveleth. The whole work should be finished by Nov. 1.

A Railway to Hudson Bay.

A contract is reported to have been let to J. D. McArthur, Winnipeg, for the building of the first section of the Dominion Government railway to Hudson Bay. This extends from the northern bank of the Saskatchewan River at Pas Mission, Sask., to Thicket Portage, about 185 miles. The construction of a bridge across the river at this point, the contract for which was let over a year ago, to Mackenzie, Mann and Co., Ltd., is already well advanced. This bridge will enable the contractors to get in their supplies, etc., over the Canadian Northern Ry. branch here, now terminating at Pas Mission. Construction is to be started Sept. 12, and the contract calls for the completion of the work in two years.

The route of the line, for the whole distance, whether Port Nelson or Fort Churchill is selected as the Bay terminus, was described on pg. 97 of our issue of Feb., 1910. The estimated cost of the two routes, as made by J. M. Armstrong, Chief Engineer, were appended to the description of the routes. (Aug., pg. 747.)

Dominion Atlantic Railway Bridge Construction.

The first work of importance to be started on the Dominion Atlantic Ry. since it has passed under the control of C.P.R. interests, is the reconstruction of the bridges. We are officially advised that the present structures are to be replaced by steel superstructures on concrete or cribwork substructures. It is contemplated at present to undertake the reconstruction of the bridges at Bear River, Little Joggins, Big Joggins, Moose River, Allen's Creek, and Shubenacadie River. The plans for these bridges have been approved by the Board of Railway Commissioners. Following are details as to the various structures:—

Bear River Bridge.—Existing bridge 1,660 ft. long, maximum height 82 ft., made up of four Howe truss deck spans of 150 ft. each, one similar span with concrete swing pier (all spans on concrete piers), balance of wooden trestle. Existing wooden spans to be replaced with steel spans, the trestle with three deck plate girders of 103 ft. each and one deck plate girder span of 85 ft., balance to be filled in with earthwork protected with rock filled crib work against the tidal waters. The new work includes the putting in of two new concrete piers and two concrete abutments.

Little Joggins.—Length 690 ft., maximum height 43 ft., a trestle bridge with an 80 ft. deck Howe truss swing span on concrete pier at centre. To be filled in to an opening spanned by a 40 ft. plate girder span. Filling to be protected against tidal waters by rock filled crib work.

Big Joggins.—Length, 970 ft., maximum height 45 ft., a trestle bridge with an 80 ft. deck Howe truss swing span at the centre. This span is to be replaced by a 120 ft. deck plate girder swing span; balance to be filled in with earth work protected with rock filled crib work.

Allen's Creek. — Existing structure 710 ft. long, maximum height 65 ft., made up of one through Howe truss span of 100 ft., balance wooden trestle. To be replaced with one 150 ft. through truss span of steel, and two 85 ft. through plate girder spans, the balance to be filled in with earth work protected from tidal waters by rock filled crib work. The new work includes the putting in of two abutments and two concrete piers.

Moose River.—Existing bridge 935 ft. long, maximum height 66 ft., made up of four Howe truss deck spans of 150 ft. each, one swing span of similar construction 150 ft. long, balance timber trestle. To be replaced with three steel deck lattice spans of 150 ft. each, one deck lattice swing span of 160 ft., three deck plate girder spans of 75 ft. each, and one deck plate girder span of 65 ft. The new work includes the building of two new abutments of concrete, one concrete pier, and the raising to an additional height of 20 ft. six of the existing concrete piers. A small amount of earth work will go in to complete the length of the bridge.

Shubenacadie River Bridge.—A short lift span is to be replaced, making a wider channel for boats. A 130 ft. swing span will be put in, necessitating the building of a pivot pier, one new abutment, and concrete extensions to an existing pier. It will be necessary also to remove one of the existing piers.

The Alberta Government has been granted permission to appeal to the Imperial Privy Council against the decision of the Supreme Court of Canada in the case of the Crown against the Alberta Ry. and Irrigation Co., concerning the maintenance of bridges over irrigation ditches.

The Canadian Northern Railway

HAS ESTABLISHED

DOUBLE DAILY SERVICE

BETWEEN

WINNIPEG AND EDMONTON

Inaugurating the best train service given in the Western Provinces,

"THE CAPITAL CITIES EXPRESS"

AND

"THE ALBERTA EXPRESS"

A cool way to travel in this hot weather is by the Steamers on the Great Lakes and from Port Arthur by

"THE LAKE SUPERIOR EXPRESS"

On all these trains there is the best of everything in the way of equipment and a Dining Car Service, perhaps equalled, but never excelled on any railway.

For all information apply to

R. Creelman,
General Passr. Agent,
Winnipeg.

R. L. Fairbairn,
Asst. General Passr. Agent,
Toronto.

George H. Shaw, General Traffic Manager, Toronto.

SIX DAYS TO LONDON

Three days, sixteen hours and five minutes from LAND to LAND. It is the ROYAL LINE to Bristol that makes this possible; and it is the ROYAL EDWARD which holds this Canadian Trans-Atlantic record. But there are other considerations besides speed which should induce you to travel by the

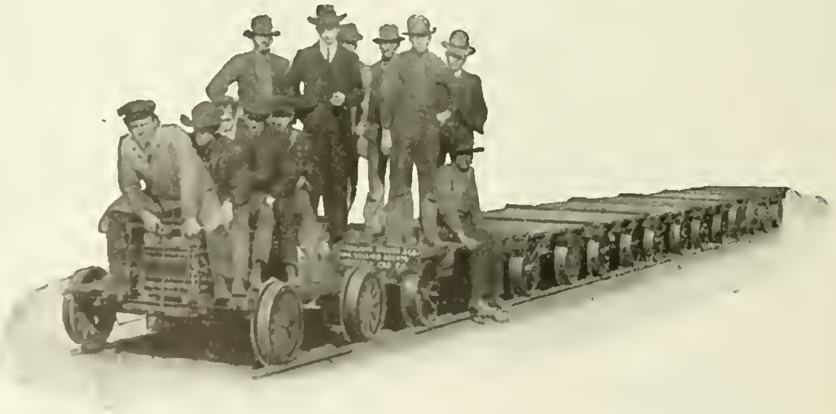
"ROYAL EDWARD" or "ROYAL GEORGE"

Not only are these twin ships the fastest triple screw turbine boats on the Montreal to London route, but their equipment is the finest on the Canadian service. They are driven by the newest type of turbine engines. Spacious social apartments, sheltered promenade decks, tasteful and artistic furnishings, splendid service, and ventilation by the thermo-tank system indicate the unusually high character of the appointments, comforts and conveniences of these boats.

For full particulars, rates, sailings, see nearest Steamship Agent, or write our General Agents at Toronto, Ont., H. C. Bourlier; Montreal, Que., Guy Tombs; Winnipeg, Man., A. H. Davis; Halifax, N.S., P. Mooney.

Railway Motor Cars

For Emergency Service



With a Fairbanks-Morse Motor Car, in your equipment, it is possible to start out a gang of men on an instant's notice.

They are also valuable for use on regular section work, increasing the territory covered by each gang with a saving in time and energy. Your men start to work fresh and do a hard day's work, for they can ride home without any further effort on their part.

Twenty minutes daily will keep the Fairbanks-Morse Gasoline Engine in first-class condition.

Send for descriptive bulletin.

Canadian Pacific Railway Construction Betterments, Etc.

Tobique Valley Ry.—The laying of the line from Perth to Plaster Rock, N.B., with heavier rails has been practically completed, and reballasting is in progress.

Orford Mountain Ry.—The operation of trains has been extended from Mansonville, Que., to North Troy, Vt., five miles, an extension which has lately been completed.

Windsor St. Station.—The stone facing of the additions to the Windsor St. Station is well on towards completion, and the concrete floors are being laid. Work in other departments is also being pushed forward. Adjoining the new boilerhouse will be a big chimney, 230 ft. high, of which the lower 90 ft. will be of concrete, and the top 140 ft. of brick.

Place Viger Improvements.—The wing of the Place Viger Hotel, extending over the new station annex, and reached by a bridge from the main building was opened Aug. 18. The wing contains 30 suites of apartments on either side of a balcony 225 ft. long.

Montreal-Quebec Jct. Second Track.—The Board of Railway Commissioners has authorized the operation of traffic over the second track of the gauntlet track across Bordeaux bridge, between Montreal and Quebec Jct.

Angus Shops Industrial Lines.—We are advised that plans have been filed for the building of an industrial spur at the east end of Montreal, extending from the crossing of the present main line near the crossing of the same with Forsyth St., through the town of Maisonneuve and as far as lot 394 in Longue Pointe parish, a distance of 4.85 miles. This line is referred to in press reports as being run from the Angus shops via Bout de l'Isle to the present Quebec line near L'Epiphanie, and having for its object the shortening of the line to Quebec.

Westmount.—The company has been ordered by the Board of Railway Commissioners to build a subway at Bethune Ave., Westmount, Que., within six months. The Dominion Railway Grade Crossing Fund will pay $5,000 towards the cost, the company and the city each providing one-half of the balance.

Western Junction near Montreal.—A Montreal dispatch of Aug. 22 says that the company is building near Western Jct, 10 miles out of Montreal, a new terminal headquarters, which consists of a 24-stall engine house, a machine shop, a turn-table, a coaling plant, a stores building, a rooming and lodging house, capable of accommodating 100 men, and a car-shunting and storage yard of 2,000 cars capacity. Eventually the new terminal will have a capacity of 4,000 cars. At the point chosen for the terminal the main line to Ottawa is joined by the tracks from the south across the Lachine bridge, which the company is at present double-tracking."

Sidings at Lachine, Que.—Application is being made to the Board of Railway Commissioners for authority to build a spur line from the Lachine Canal south bank branch to serve a number of industries.

Toronto Office Building.—The Toronto city council has at last authorized the issue of a permit for the erection of the office building at the corner of Yonge and King streets, Toronto. The building will be 15 stories high, and will be built as rapidly as possible. The site has been cleared for some months.

West Toronto Station.—The new passenger station is practically completed, and rapid progress is being made with the laying of the concrete platforms.

West Toronto Yard Extension.—Great changes are beginning to be apparent at the western end of the yards. A large area of land on either side of the track right on to Lambton is being levelled and laid with sidings. At Jane and Elizabeth streets subways are being put in. The contract for the concrete abutments for these subways has been let to Wells and Gray, Ltd., Toronto.

South Ontario Pacific Ry.—The Board of Railway Commissioners has approved of a revised location on this line from Guelph Jct. to Hamilton, so as to permit it to connect with the Toronto, Hamilton and Buffalo Ry. at Hamilton.

London Improvements.—Work was started, Aug. 10, by the Canadian Bridge Co., of Walkerville, Ont., on the erection of a new bridge across the Thames, west of London. It will consist of three spans of 150 ft. each. Work at the new roundhouse is being proceeded with, and work on the new coal shed is expected to be completed early in Sept. Grading for the additions to the yard is completed and track laying is in progress.

Port Arthur and the Company.—A vote was taken at Port Arthur, Ont., Aug. 17, for the purpose of confirming an agreement made May 29, between the company and the city council, settling various matters in dispute. Under the terms of the agreement the city grants exemption from taxation on all C.P.R. property in Port Arthur, except for school and local improvement purposes, no such exemption being recognized in the case of property leased by the railway to others; acceptance and execution of a lease of the water frontage from the C.P.R., for the use of the municipal docks; exemption from taxation of any property which the C.P.R. may convert into a park, land within three years, when required by the C.P.R. for the erection of a union passenger station for the C.P.R., C.N.R., and G.T.P.R., and the company agrees to withdraw all claims for damages arising out of the Current River washout in May, 1908; to build a passenger dock and freight shed at a cost of about $200,000; to grant an entry to the Grand Trunk Pacific Ry.; to provide a union passenger station for the three transcontinental railways, and to provide a park, on certain land provided. We were officially advised, Aug. 20, that the plan for these several works had not been definitely prepared.

Yard at Mission Island, Fort William.—Engineers have been engaged since Aug. 14 marking out the boundaries, etc., of the proposed new yards on Mission Island no. 1, Fort William. Connection will be made with the new yards by means of the bridge now about completed over the Kaministikwia River. It is stated that work will be started almost immediately with the grading for the tracks on the new yards.

Boissevain to Lauder.—Plans have been prepared for a 40 mile branch from Boissevain, northerly and westerly to Lauder, Man., and connecting there with the lines running from Souris through Nepinka, and with the branch line running westerly to Alida. While the plans have been prepared the route may be slightly changed before it is built.

Virden to Macauley, Man. — The branch line from Virden, now terminating at Three Creeks, is being extended to Macauley, Man., about 30 miles, where it will join the Pheasant Hills Branch from Kirkella. The contractor is P. Lamb, Winnipeg.

Winnipeg Hotel and Station.—Plans are under consideration for the enlargement of the hotel and station building. These include the addition of two stories to a wing of the station; a subway beneath the tracks to connect with a four-story building, north of the tracks; a subway beneath Main St. subway, to connect with a new building on the west side of Main St.; a new first-class waiting-room for travellers, on the ground floor of the Royal Alexandra annex. The plans for these works are not yet definitely settled.

Winnipeg Subways.—The contract for building a subway under the C.P.R. tracks at Broad St. has been let to the Parsons Construction Co. The city is contributing $120,000 towards the cost.

A bylaw is to be voted on in Dec. to provide $200,000 for the building of a subway under the C.P.R. tracks at Princess St.

Station Buildings, Manitoba Division.—The Brandon Construction Co. has made considerable progress with the demolishing of the station at Brandon. The company will also build the new station. The contract price is about $60,000, and the work is to be finished in Feb., 1912. In connection with this work the company is laying out a new freight delivery yard.

Tenders are under consideration for the building of new stations at Broadview and Souris, Man.

Weyburn-Forward Branch.—An extension of this line from Forward to Ogema, Sask., was opened for traffic Aug. 15. The branch is being further extended and it is intended that it will ultimately connect up with the company's lines at Lethbridge, Alta.

Lanigan-Humbolt Line.—Press reports state that engineers are locating a line from Lanigan, via Humbolt, to near Rosthern, where a junction will be made with the line projected from near Sutherland to Prince Albert, Sask.

Regina, Sask.—In connection with the erection of the union station in Regina, it is said that the track in the yards will be rearranged, and that the yard itself will be largely added to. Plans for the new trackage system are said to have been prepared.

North Portal, Sask.—The Board of Railway Commissioners has authorized the building of an additional track northeast of the present main line along the International boundary at North Portal, Sask.

Branches from Wilkie.—Considerable progress has been made on the three branch lines under construction from Wilkie, Sask. Grading has been completed southerly to Anglia on one branch and tracklaying was started Aug. 1. Fourteen miles of grading has been completed in the direction of Kerrobert on the second branch, and the work on the branch northerly into the Cutknife district is being rushed. Survey parties are in the field beyond the end of the location on the Cutknife branch, and are reported to have got beyond Vermillion, Alta., working in the direction of Peace River.

Moose Jaw-Lacombe Line.—Two of the piers for the big bridge across the Saskatchewan River at Outlook, Sask., on this line have been completed, and work was started, Aug. 8, in filling up the foundations for two other piers.

Medicine Hat to Calgary.—The Southern Alberta Land Co. states that it has been informed by Sir William Whyte that it is the C.P.R.'s intention to start work this year on a new line from Medicine Hat to Calgary, Alta. It is said that the line will follow the river for about 50 miles, and then proceed across country through the irrigation belt, and joining up with the main line near Shepherd.

Irricana to Standard, Alta.—The new line extending from Irricana to Standard, Alta., 36.7 miles, in the company's irrigated lands, was opened for traffic Aug. 1. It runs easterly from the Langdon-Acme branch.

Calgary Station—Tenders are under consideration for the building of a west

wing and an addition to the present east wing of the station at Calgary, Alta.

Western Shops.—F. W. Peters, Assistant to the Vice President, in an interview at Calgary, Alta., Aug. 17, said nothing had been settled at that date about the proposed new shops in Alberta, which Calgary and several other places are anxious to have located within their boundaries.

Western Hotels.—The excavation for the foundation for the C.P.R. hotel at Calgary, Alta., was started Aug. 10. The Ross Cartage Co. was given the contract for the work, which also includes the excavation for the foundation of the west wing of the station. The contract for the foundations and superstructure is expected to be let at an early date.

F. S. Swales, London, Eng., in company with W. S. Painter, Chief Architect, C.P.R., is visiting Canada in connection with the company's plans to increase the accommodation at its hotels in the Rocky Mountains, and to build additions to the hotels at Vancouver and Victoria. It is proposed to start construction of the main section of the Hotel Vancouver, at an early date, and to begin work for the addition of a wing to the hotel at Victoria, within a few weeks. Messrs. Swales and Painter were in Vancouver Aug. 5, and in Victoria Aug. 8, looking over the present buildings and the sites for the extensions.

Edmonton to International Boundary.—Press reports state that surveys are being made for the building of a line from near Edmonton, Alta., southerly and easterly, via Swift Current to the International boundary, about 100 miles west of North Portal, where it will meet a line to be built from the Minneapolis, St. Paul and Sault Ste. Marie Ry., northerly from the big bend in the Missouri River.

While this is a press report, the C.P.R. has under construction branches running northeast and southwest from Swift Current.

Strathcona-Edmonton Bridge.—It is expected that the concrete work for the high level bridge across the Saskatchewan River between Strathcona and Edmonton, Alta., will be completed in Sept. A spur track has been laid to the bridge site, for bringing in the steel for the superstructure. It will take about a year to erect the steel and complete the connecting lines.

Three Forks to Lucky Jim Mine.—A contract has been let to W. P. Tierney, Nelson, B.C., for building a spur line from Three Forks to the Lucky Jim Mine, at Bear Lake, B.C., about five miles. Work was reported to have been started Aug. 12, and it is expected to have it completed Dec. 31.

Bridges, Mission to Vancouver.—A contract is reported to have been let to Mueller and Taylor, Vancouver, for the building of 13 small concrete bridges and bridge abutments on the line between Mission Jct. and New Westminster, B.C. The bridges are to be built of sufficient width to carry a double track line.

Vancouver Improvements.—An agreement has been reached between the Coquitlam council and the C.P.R. in regard to the establishment of railway yards in the neighborhood of Pitt River. The agreement will be submitted to the Coquitlam voters for their approval as soon as the necessary bylaw can be prepared. The agreement is that the C.P.R. must expend $250,000 within the next two years on the construction of yards, roundhouses, machine shops and all other equipment that goes with them, and that the work must be started within 30 days after the ratification of the agreement by the Coquitlam electorate. In return for this the company is granted a flat tax rate of $1,530 on their land for a period of 10 years, exclusive of school taxes, which they must pay.

Esquimalt and Nanaimo Ry.—Tenders are under consideration for the erection of a roundhouse and station building at Alberni, the terminus of the branch line now being completed. A station and chalet are being built at Cameron Lake, and it is expected they will be completed by Nov. 1. The ballasting gang are working a few miles beyond Cameron Lake, towards Alberni, and it is expected that the ballasting will be completed by Oct. 1.

Work was started Aug. 1 on the Duncan-Cowichan Lake branch line, over 300 men being employed. (Aug., pg. 739.)

◆

Great Northern Ry. Lines in Canada.

Midland Great Northern Ry.—The Winnipeg city council has approved of a temporary alteration of the route of the line in the city in the vicinity of the crossing of the Assiniboine River and the erection of a timber bridge. The application was made on account of difficulty in procuring material for a steel bridge. The route as originally proposed is to be followed when the time arrives for the grade separation provided for in the agreement.

A permit was issued Aug. 3, for the building of freight sheds and an office building on Ross Ave., between Isabel and Sherbrooke streets. The building will be 400 by 50 ft., and the estimated cost is $45,000. The contract has been let to the J. McDiarmid Co., Winnipeg, the work to be completed by the end of the year.

Satisfactory progress is reported to have been made with the grading of the line into the station, and the building of the subways.

L. C. Gillman was in Winnipeg, Aug. 17, inspecting the work in progress on this line. About 60% of the grading is completed, and considerable progress has been made with the erection of the freight shed. It is expected that the line will be opened for traffic Dec. 31.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Tracklaying and bridge building have been started on the section of this line from Princeton northwesterly to Tulameen, B.C. The grading was completed in 1910 by A. Guthrie and Co., which firm, it is reported, has been given a contract for the grading of the line from Tulameen to the Hope Mountains. The distance on which track is to be laid is about 14 miles. There are six bridges on this mileage, and the work of erecting these has been given to A. Guthrie and Co.

West of the Hope Mountains the line is being built from Abbotsford to Chilliwack, and the grading to this latter point is expected to be completed by Sept. 30. Near Chilliwack the line will connect with the Canadian Northern Pacific Ry., and this company's line will be run over to near Hope Summit, from which point a separate route will be followed to a junction with the line being built westerly, which has now reached Tulameen.

Two survey parties were reported to be in the field Aug. 10, working between Hope and the Summit, in an endeavor to find an easier route between these two points than any hitherto surveyed. W. H. Burns and —. Butler are in charge of the parties, and —. Amburn is superintending the work. The best gradient hitherto secured between Hope and the Summit is 2½%, while between the Summit and Tulameen, the gradient is just slightly over 1%.

Vancouver Terminals.—The Vancouver terminals of the G.N.R. lines are under construction at False Creek. The area acquired for the construction of these terminals includes 160 acres on False Creek, and 100 acres abutting on the creek. A union station, for the use of the G.N.R., the Canadian Northern, and the G.T. Pacific Ry. is to be erected on Park Lane, about 100 ft. from Westminster Ave. In close proximity will be built freight houses, roundhouse, freight yards and car yards. These buildings will be erected on the north side of False Creek, adjoining the area reserved for the city. Across this reservation will be located the storage tracks. Entrance will be obtained to the station building over the land which is to be reclaimed. It will take about 3,500,000 cubic yards of material to fill in the flats, and of this about 1,500,000 cubic yards has already been dumped in from the cut on Fifth Ave. The old cut nearby is to be widened and deepened, and Park Lane will be increased from 40 ft. to 100 ft. in width. The dock, which is under construction, will be 800 by 148 ft., and on this will be built a warehouse 100 ft. wide and the full length of the dock. Tracks have been laid connecting this dock with the terminal site on False Creek.

M. J. Costello, General Traffic Manager, G.N.R., was in Vancouver, Aug. 10, and in an interview stated that the final plans for the terminals were being passed upon, and the work now being done was in preparation for the carrying out of the whole scheme. Three docks are to be built between the present city wharf and the B.C. Sugar Refinery, of which one will be built at once, and the others when required. The total expenditure to be made for terminal purposes in Vancouver is estimated at nearly $10,000,000. (Aug., pg. 729.)

◆

Carillon and Grenville Railway acquired by Mackenzie Mann & Co.

Reference was made in our June issue, pg. 501, to press reports which stated that interests connected with Mackenzie, Mann and Co. had acquired the Carillon and Grenville Ry. We are now officially advised that these interests have purchased the railway, and are now in possession of the property. The line extends from Carillon to Grenville, Que., 13 miles, connecting at either end with the Ottawa River Navigation Company's steamers. It has a gauge of 5½ ft. and is the only broad gauge line remaining in Canada. It was built in the Ottawa River Navigation Co.'s interests, and was operated by that company during the season of navigation only. The gauge of the line will probably be changed to standard, and a portion of it used as a part of the main line of the Canadian Northern Ry. between Montreal and Hawkesbury, and consequently as a part of the company's main transcontinental line. It may, however, be found necessary to build a new line, in which event a portion of the present right of way may be used.

The new owners of the C. and G.R. have not acquired the charter rights of the Carillon and Grenville Ry. Co., but only the physical property of the railway between Carillon and Grenville, nor have they bought the Ottawa River Navigation Co.

According to the prospectus of the Central Ry. Co. of Canada, referred to on another page of this issue, the C. and G. Ry. is one of the properties said to have been acquired by that company. This is a matter respecting which an explanation will be awaited with interest.

◆

That the C.P.R. was preparing to ship coal in large quantities from the B.C. coal fields to the U.S. is a newspaper report, which we are officially advised is without foundation.

The Central Railway Co. of Canada's Prospectus.

There has been placed on the London, Eng., market, through Parr's Bank, Ltd., an issue of £1,000,000 of first mortgage 5% bonds of the Central Ry. Co. of Canada. Of this issue £400,000 was stated to have been taken up in Canada and in Paris, France, the remaining £600,000 being offered at 95%. The issue is to be secured by a first mortgage on about 164 miles of railway, comprising a line of 110 miles from Montreal to Ottawa, and 54 miles of branch lines, which are at present partly built, together with the equipment, and a land grant of about 1,300,000 acres of land in the valley of the Ottawa River, to which the company will be entitled "under 19 and 20 Vict., chap. 112, and 24 Vict., chap. 80. The proceeds of the bond issue will be utilized for the purpose of paying the balance of about £40,000 due on the purchase of the Ottawa River Navigation Co. and the Carillon and Grenville Ry., owned by it; the payments to C. J. Wills and Son, under their contract for building the line from Montreal to Ottawa, the provision of rolling stock, the defraying of legal and other expenses, and the balance to making surveys, etc., for extensions. The officers and directors are: President, Hon. A. Campbell, Toronto; Vice President, Hon. W. Owens, Montreal; other directors, Hon. A. Desjardine, E. G. Penny, H. W. Raphael, F. S. McLennan, Montreal; W. F. Tye, Toronto; J. A. C. Ethier, K.C., St. Scholastique, Que.; Sir R. Gresley, Burton-on-Trent, Staffordshire, Eng.

Accompanying the prospectus is a lengthy statement dated May 3, over the signature of Hon. W. Owens, the Vice President, and a map showing the district which will be served by the projected railway. This statement sets out that the main line will extend from Montreal to Midland, on Georgian Bay, 344 miles, and that legislative authority has been obtained to extend the line from Midland to St. Thomas, Ont., and other points, and to make connections, not only with Canadian railways, but with U.S. railways at the International boundary. The total length of main line and branches is stated as 660 miles. The present issue will provide for the completion of 164 miles of line, viz., the main line from Montreal to Ottawa, and two branches. The main line, Senator Owens says, "includes the Carillon and Grenville Ry., 13 miles, constructed and in operation," and the main line of the Central Counties Ry. from Hawkesbury to Ottawa; while the branch lines include the St. Agathe branch, 47 miles, "of which the seven miles already constructed are to be brought to standard, and 13 miles are partly constructed." The second branch to be built will be one of seven miles, to Ste. Rose. Out of the proceeds of the bond issue the company proposes to acquire the Carillon and Grenville Ry., the Central Counties Ry., the Ottawa Valley Ry. and the Ste. Agathe branch, as well as the Ottawa River Navigation Co.

The plans for the railway have been reported upon by J. M. Shanly, C.E., Montreal, and an agreement has been made for connection with the projected terminals in Montreal of the Montreal Central Terminal Co.

A contract has been entered into with C. J. Wills and Sons, 28 Victoria St., Westminster, London, Eng., for the construction of the line from Montreal to Midland, and 37 miles of branch lines, by Dec. 31, 1913, the section from Montreal to Ottawa to be completed Nov. 1, 1912. The contract provides for a high standard of construction, with low gradients, light curvature, bridges and culverts of stone, concrete and steel, and 80 lb. rails. We are advised by the representative of the contractors in Canada that it is more than likely that a portion of the work will be sublet, but that no instructions have been received to go ahead with the work. A contract, states the prospectus, has been entered into for the construction of the branch from St. Andrews to Ste. Agathe, the contract price being $21,400 a mile.

The Ottawa River Ry. was originally incorporated by the Dominion Parliament in 1903, to build a railway from near Grenville to Montreal, with branches from St. Andrews to St. Come, up the River Rouge to Lake Rouge, and to connect with the Canada Atlantic Ry. near Hawkesbury, Ont. H. W. Rapheal and J. A. C. Ethier are the only two of the original directors who are now associated with the company. It obtained power to build additional lines in succeeding years, and in 1905 was authorized to change its name to the Central Ry. Co. of Canada, and was given power to amalgamate with various other railways. In 1904, the company obtained an act of incorporation from the Ontario Legislature as the Ottawa River Ry., and extensions of time have been granted by both the Dominion Parliament and the Ontario Legislature to both companies.

The Ottawa Valley Ry. was incorporated by the Dominion Parliament in 1892, to build a railway from St. Andrews to Carillon, and from Grenville to near Calumet, on the C.P.R., and in 1894 all the rights of this company were authorized to be transferred under an agreement to the Atlantic and Lake Superior Ry.

The Prescott County Ry. was incorporated by the Dominion Parliament in 1897. A further act was passed in 1889 changing its name to the Central Counties Ry., and amending acts were passed from time to time with respect to extensions of time for construction, arrangement of bond issue, etc. The company built a line from Glen Robertson to Hawkesbury, and from South Indian to Rockland, Ont., together 38.49 miles, which lines are leased to the Canada Atlantic Ry., the company maintaining a separate existence, and having power to build certain other lines.

The Carillon and Grenville Ry., to which the prospectus says the 1,300,000 acre land grant attaches, was incorporated by the pre-Confederation Parliament in 1840-41, and the acts quoted as covering the land grant were passed in 1857 and 1861 respectively. The railway was built under a subsidy granted by the Dominion Parliament in 1894.

In connection with the statement in the prospectus and in the letter of Senator Owens, Vice President, that among other properties acquired is that of the Carillon and Grenville, 13 miles constructed and in operation, and that this line is to form part of the company's main line from Montreal to Ottawa, it should be noted that the physical property of the C. and G. Ry. has been sold by the Ottawa River Navigation to interests associated with Mackenzie, Mann and Co., but we are advised that this sale will be contested. With respect to the land grant of 1,300,000 acres, which is mentioned as an asset, Sir Richard W. Scott, ex-Secretary of State, who was one of the directors of the original company, is quoted as saying that the grant was made in 1854 for the building of a railway between Quebec and Lake Huron. In 1861 the Canada Central Ry. was formed to build a line between Ottawa and Carleton Place as a part of the project, but it was found impossible to float the bonds for construction. The 1854 charter was allowed to lapse, but the Canada Central Ry. charter was kept alive and the line was built in the seventies, and is now part of the C.P.R. The Ontario Government maintained that the land grant had lapsed at Confederation, and after an action in the courts a settlement was effected, and an act was passed by the Dominion Parliament in 1874, confirming the settlement. Sir Richard adds:—"The prospectus, said to have been issued in England, claiming an asset of 1,300,000 acres of Ontario land, is not based in legal substance."

The Dominion Government started the policy of voting cash subsidies in aid of the building of railways in the session of 1882, the first payments being made in the financial year 1883-84. In J. E. H. Currier's Index to Railway Legislation, 1867 to 1905, is the following statement: "There have to be added the following exceptional subsidies," and then appears: "The Canada Central Ry. paid between 1878-83, $1,525,250." As the company built 120 miles of line, which now forms part of the C.P.R. system, the subsidies received amounted to $12,700 a mile.

The solicitor of the Central Ry. Co. of Canada advises us that the land grant referred to in the prospectus is intact, and that the company is acting upon the advice of eminent counsel in Canada and England.

Railway Entrance to Ottawa

The question of a general entrance into Ottawa for all railways was dealt with Aug. 18, at a conference between a special committee of the city council, N. Cauchon representing D. McNicoll, Vice President C.P.R., who was unable to attend owing to indisposition; and Sir Donald Mann, Vice President, and W. H. Moore, Secretary, Canadian Northern Ry. The plan proposed over a year ago for bringing in the railways by a tunnel along a portion of the Rideau Canal, the closing of which would be necessary, was discussed at length, and it is said that while the city approved of the proposed tunnel approach, the abandonment of a portion of the Rideau Canal is not looked upon with any degree of favor. The canal might be narrowed, and a portion of the driveway reserve might be utilized for the tunnel, giving room for six tracks. The tunnel would extend from opposite the Central Station across the city to the Union Station.

The G.T.R. is not favorable to the proposition, and will probably oppose it when application is made to the Dominion Government for the approval of the plans.

Ferranti

TRACTION METERS

The demand for Car Meters has grown very rapidly and the economies effected by the installation of these instruments have more than justified their use.

The guaranteed accuracy of the Ferranti Traction Meter is 2½ per cent. from full load to 1-10th load.

Will stand 100 per cent. overload for ten minutes.

TITANIUM

The Wonder-Working Alloy

Increases Toughness—Decreases Brittleness

Open-hearth steel purified by Titanium Alloy is not simply *tough*—it is ductile, durable; hard but *not* brittle. That is why rails made from such steel are practically unbreakable, and have double the life of standard rails. That is why the leading electric and steam railways of the United States use Titanium rails. The Lehigh Valley R. R. recently ordered 21,000 tons of 0.85 carbon open-hearth rails Titanium treated. These rails show most unusual qualities of endurance and power to resist shock and impact. Increased cost ranges from $1 to $5 per ton.

Illustration shows Black Diamond Express on Titanium open-hearth rails, near Mauch Chunk, Pa., U. S. A.

Valuable information in Booklet No. 30. Send for it.

PROFESSIONAL CARDS.

The Railway and Marine World is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. The Railway and Marine World is the only medium through which all these important classes can be reached.

EDISON BSCO
PRIMARY BATTERY

Reliability at any cost is the first requisite of a railway signal battery. Economy, as far as reliability will permit, is the second requisite.

The Edison BSCO is the *most* reliable, *as well as the most* economical railway signal battery made. It's slightly higher first cost is far more than counterbalanced by its low operating cost and the reduction in attending labor cost.

Edison BSCO Renewals fit all standard caustic soda primary battery jars, and besides increasing the efficiency and dependability of other cells in service, they will give higher effective capacity than any other type of the same rated capacity.

Write for prices stating the type of cells now in use.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Central Ry.—The Board of Railway Commissioners has extended the time for the completion of the line to Rocky Mountain House, Alta.

Grading outfits began reaching Red Deer, July 25, and were rushed out along the route, all available men being sent out. The contractors, D. F. McArthur and Co., have orders to push work as fast as possible, and it is hoped that the first 100 miles of the line will be completed this year. The company's forces had practically completed the grading on the first 40 miles out of Red Deer before this contract was let. Perhaps the most difficult piece of work on the contract is the draining of Burnt Lake, a shallow lake on the right of way. (Aug., pg. 757.)

Alberta Pacific Ry.—A local correspondent, referring to the projected railway building in the vicinity of Pincher Creek, Alta., by this company (formerly the Pincher Creek, Cardston and Montana Ry.), says:—"The time has gone past when the Alberta Pacific people could have demonstrated to the neighborhoods through which its proposed route would run that their intentions were genuine from the go-in. They have had about a two years' innings at the job, and are not much further ahead than when they started. Upwards of $15,000 has been expended by them on preliminary work."

Lethbridge papers, Aug. 16, state that W. Skouson, a Montana contractor, has brought in a large grading outfit and is preparing to start work at once at Pincher Creek, grading towards the International boundary. Additional men are being hired locally to reinforce the gang which brought in the plant.

Algoma Central and Hudson Bay Ry.—A contract has been let to the Superior Construction Co., of which T. J. Kennedy is President, to build an extension of the line from Hobon, on the C.P.R. transcontinental line, to a junction with the National Transcontinental Ry., 142 miles west of Cochrane, Ont., a distance of about 101 miles. The estimated cost of the work is placed at between $3,000,000 and $4,000,000. This extension will run well into the clay belt of Northern Ontario, and will carry the company's line to within about 150 miles from Hudson Bay. The Superior Construction Co., which is at present building the Crean Hill-Whitefish Bay extension of the Algoma Eastern Ry., proposes to sublet the contract in sections. Its headquarters are at Espanola, Ont.

Tenders are being asked for the building of a new station at Sault Ste. Marie, Ont., estimated to cost $65,000.

We are advised that the estimated cost of the grading, tracklaying and ballasting on the line from Hobon to the National Transcontinental Ry., for which the Superior Construction Co., Sault Ste. Marie, Ont., has the contract, is $1,670,000, and that the cost of the extension complete for operation will approximate $3,000,000.

The Board of Railway Commissioners has approved of location plans of the Josephine branch at mileage 17.08 from Michipicoten, to the Magpie mine, 9.16 miles. This branch has already been built. (Aug., pg. 733.)

Atlantic and Lake Superior Ry.—Some confusion has arisen in regard to the name of this and allied companies. The old Atlantic and Lake Superior Railway from Matapedia to New Carlisle, 98 miles, is now known as the Quebec Oriental Railway. It connects at the latter point with the Atlantic, Quebec and Western Railway, which is already open to Grand River, 54 miles and is also under construction beyond that point to Gaspe. C. R. Scoles is General Manager of both lines, but they are entirely separate in their organization though a joint through train service is run between Matapedia and Grand River.

Mr. Scoles is also contractor for the completion of the Atlantic, Quebec and Western Railway to Gaspe, which we are officially advised will be an accomplished fact by the end of this year. (See Atlantic, Quebec and Western Ry., Aug., pg. 733.)

Brandon Transfer Ry.—Track has been laid on the line connecting the C.P.R., the C.N.R. tracks and those of the Brandon, Saskatchewan and Hudson Bay Ry. in Brandon, Man., and ballasting is being done. The earthwork is fairly heavy, there being a number of cuts and fills along the route. Victoria Ave. and Princess Ave. are crossed on the level. It was expected to have the line in operation by Aug. 20. (Aug., pg. 733.)

British Columbia Ry. and Development Co.—An action has been entered in New York by the assignee of M. Van Gender to recover $80,000 from the British Columbia Ry. and Development Co., and the promoters of the company, Jean Wolkenstein and R. Conklin, the writ alleging a conspiracy to defraud.

The B.C.R. and D. Co., in its advertising literature stated that it had acquired the British Columbia and Alaska Ry. Co.'s charter. A number of the directors of the B.C.R. and D. Co. are also provisional directors of the B.C. and Dawson Ry. (See B.C. and Dawson Ry., July, pg. 645, and B.C. and Alaska Ry., April, pg. 319.)

Burrard Inlet-Tunnel and Bridge Co.—See Vancouver, Westminster and Yukon Ry.

Caribou, Barkerville and Willow River Ry.—A survey party is reported to be running preliminary lines for this projected railway. The route as laid down is from Barkerville, almost directly north to the mouth of the Willow river, about 35 miles east of Fort George, where it connects with the main line of the G.T.P.R. It taps the Hepburn coal properties on Bear River, besides giving access to the rich placer fields north of Barkerville. W. H. Dunphy, one of the provisional directors, is quoted as having stated that construction will be started next spring. (Aug., pg. 733.)

Chicago, Milwaukee and St. Paul Ry., Chicago, Milwaukee and Puget Sound Ry.—Press reports state that plans are under construction for the building of a line from Fargo, N.D., to Winnipeg, Man., and that A. J. Earling, the President of the C.M. and St. P. Ry., on his recent visit to Canada, was looking into the matter. The C.M. and St. P.R. is associated with certain charters for railway construction in Alberta and British Columbia, and is said to have secured options on considerable property in the vicinity of Lipton St., just south of Portage Ave., Winnipeg, for terminal purposes. The Lipton St. property will, it is said, be utilized for freight terminals and running rights will be sought into the Fort Garry union station for passenger traffic.

The C.M. and P.S. Ry., the company building the extension of the C.M. and St. P. Ry., to the Pacific coast, is reported to have completed preliminary surveys for a line from Moncton, Wash., to Vancouver, B.C. A. W. Nase, the company's commercial agent in British Columbia, is quoted as having stated that when the main line is completed into Everett, Wash., a branch will be built from Seattle into Vancouver as quickly as possible. (July, pg. 645.)

The Crow's Nest and Northern Ry. Co. was incorporated by the British Columbia Legislature in 1908 to build a railway from the C.P.R. Crowsnest Pass branch to the summit near Michie Creek, and at the last session of the Legislature the company was granted an extension of time for construction. A meeting of shareholders was held at Crowsnest, B.C., August 8, to elect directors, and also, press reports state, to make arrangements for building the line. (April, pg. 319.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has authorized the rebuilding of the bridges at Big Joggins, and Allans Creek, and those over the Shubenacadie and Bear rivers, N.S.

P. Gifkins, General Manager, in an interview at St. John, N.B., Aug. 15, is reported as saying that heavier rails are being laid on the line, that the rolling stock is being increased, and that the possibility of a big car ferry across the bay to handle freight traffic is being seriously considered. The great difference between high and low water is one of the difficulties in the way of establishing such a service, but it is quite probable some plan for overcoming it will be evolved. (May, pg. 409.)

Essex Terminal Ry.—The Board of Railway Commissioners has authorized a deviation of the line in Windsor, Ont., crossing, Tecumseh road, Peltier St., Crawford and Wellington avenues. (July, pg. 645.)

Grouse Mountain Scenic Incline Ry.—The preliminary work on the first section of this projected railway at Vancouver, B.C., was reported to have been completed Aug. 11. Engineers are now laying out the second section of the work, which includes the precipitous portion of the ascent of the mountain, and is said to embrace a number of interesting engineering features. (July, pg. 645.)

High River and Hudson Bay Ry.—High River, Saskatchewan and Hudson Bay Ry.—The first title is that given by the Alberta Legislature, and the second is that given by the Dominion Parliament to the same interests for building a railway from the International boundary in Alberta to Hudson Bay, the provincial charter covering only the Alberta section of the line. The estimated length of this section is 250 miles, while the extension through Saskatchewan covered by the Dominion charter is estimated at 425 miles, making 675 miles of main line. It is estimated that there will also be about 200 miles of branches. The main line, it is proposed, will start at the western boundary of Alberta, connecting there with United States lines, and will run as straight as possible to Pas Mission, Sask., where connection will be made with the projected Dominion Government line to Hudson Bay. We are advised that a consulting engineer has been appointed, and that it is proposed to have location surveys completed within as short a time as possible. The surveys will probably not be started until the fall. If the company's plans are realized it is hoped to begin construction within a couple of years and to have the line completed by the time the Government line is completed. By this projected route Portland, Ore., and Tacoma, Wash., would be brought within 1,750 miles of Port Nelson, on Hudson Bay.

Following is the executive of the company: Chairman, C. C. Short; Treasurer, H. N. Sheppard; Secretary, F. Crandell; other members, Dr. T. E. Le Claire and W. P. Walker. With the exception of Messrs. Crandell and Walker, who live at Calgary, the members are at High River, Alta. (June, pg. 505.)

Intercolonial Ry.—Tenders are under consideration for the supply of ties and switch ties.

Following the completion of the inspection of the line by the members of

Dearborn Treatment Overcomes All Bad Water Troubles

Because Scientifically Prepared to Suit Water Conditions

Boiler troubles such as scale, leaking, corrosion, priming and foaming, are caused by mineral salts in the water, and can be overcome only by the use of proper reagents for these salts. To this end the waters along the line must be analyzed, and specific treatment applied accordingly.

Gallon samples of the waters are required for analysis. When reports are completed, we are ready to prepare treatment, and will send an expert engineer to instruct in the proper handling of the material.

will prevent cracking of rubber cover and deterioration due to climatic changes. Easily applied.

the Managing Board, it was announced that it had been decided to recommend the carrying out of considerable improvements. These will include the building of a second track at leading points, and particularly the stretch between Chaudiere Jct. and Levis, Que., and the building of subways at various points, particularly in St. Flavie, Que., and in Moncton, N.B. The details of the recommendations will probably be announced in the near future.

The new wing which is being built to the general offices at Moncton, N.B., will be three stories high, with a basement, its outside dimensions being 139 by 57 ft. The building will conform in style to the main block, and is to be of concrete to grade; rockfaced ashlar masonry to the first floor, and the remainder of pressed brick with cut stone sills, lintels, etc. In the basement there will be fire-proof rooms for storing documents, plans, etc. The ground floor will be given over to the car mileage department, the second is the engineering department, and the accounting and auditing department, which now occupies the third floor of the present building, will be given the third floor in the new one. The rooms to be vacated on the first and second floors of the present building will be given to the management and to the traffic department, respectively. The addition is expected to be completed by Mar. 31, 1912.

A contract is reported to have been given to H. Ryan and Son for the erection of a new station at Fredericton, N.B., to cost about $20,000. Tenders are under consideration for the building of a stone passenger station at Truro, N.S

Tenders will be received by the Department of Railways for the building of the following lines of railway:—From Guysboro to Country Harbor Crossroads, and from the latter point to Deepwater, Country Harbor, and from Dartmouth to Deans, all in Nova Scotia. (Aug., pg. 733.)

Michigan Central Rd.—It is expected that a contract will be let early in Nov. for the erection of the proposed new station in Detroit, Mich. The building, which will be 14 stories high, will have its main entrance at the northeast corner of the intersection of Dalzell and Sixteenth streets, and will be laid out on the lines of the New York Central and Hudson River Rd. station in New York city. The details of the plans have not been fully worked out. The building will cost about $3,000,000, and will be completed in about three years. (Aug., pg. 753.)

Midland Continental Ry.—The company behind this ambitious proposal for the building of a railway from Winnipeg to the Gulf of Mexico, as one section of a great north and south railway, is reported to have organized the Midland Construction Co. The officers of this latter organization include F. K. Bull, Racine, Wis., as President, with C. V. Weston, President of the South Side Elevated Rd., Chicago, and H. S. Duncombe, Vice President, Colorado Midland Ry., as engineers. Reports further state that the company has secured control of the route of an old line extending from Norfolk, Neb., northward to the Missouri River, and on to Yankton, S.D., about 100 miles. The company is reported to have completed the grading for the line between Edgely and Jamestown, N.D. These are the main features of recent reports, and are given as such, merely because of the proposal to connect up with Winnipeg, Man. (Dec., 1910, pg. 1015.)

New Brunswick Coal and Ry. Co.—After having been closed for some time, pending the erection of a concrete bridge at Washademoak, N.B., the old Central Ry. of N.B. section of this line was reopened for traffic, August 1. The new bridge was built under the superintendence of T. Sefton, formerly bridge inspector, Intercolonial Ry. (Aug., pg. 733.)

Prince Edward Island Ry.—Good progress is reported on the Elmira branch, and it is expected to have it completed by Sept. 30.

Press reports state that construction will be started on what is known as the New London and North Shore line as soon as the engineers can prepare the specifications. (June, pg. 507.)

Quebec and Saguenay Ry.—Plans and profiles showing the line to be built from mileage 78.5 to 85, have been deposited in the Registry Office of the Saguenay District of Charlevoix County, and with the Department of Public Works at Quebec.

H. Doheny, one of the contractors, in a recent interview, stated that the entire line under contract, from St. Joachim to Murray Bay, was well covered with men, over 2,000 being at work. There were about 15 sub-contractors on the line and all of them were getting well ahead with their work. (Aug., pg. 733.)

Quebec Central Ry.—The Quebec Public Utilities Commission recently approved plans for an under-crossing at Thetford Mines, to enable the Bennett & Martin Mining Co. to work its mining property. (Feb., pg. 113.)

Reid Newfoundland Ry.—The completing of the ballasting, lifting, ditching, building stations, wire and snow fences, cattle guards, etc., on the Bonavista branch is now in progress, the work being in charge of H. Burton.

Track has been laid on the Trepassey branch for 16 miles, and the work is still going on, A. Graham being in charge of construction, with headquarters at Cape Broyle, 40 miles from St. John's. (Aug., pg. 733.)

St. John Valley Ry.—The Provincial Secretary for New Brunswick recently stated that an agreement had been reached between the Provincial and Dominion Governments as to the building of this line along the St. John River valley, and that it was hoped to have the preliminary work of construction in hand by the end of the current season. In connection with this line, Hon. J. K. Fleming, added, it is planned to build a line from Quebec across the State of Maine, which would connect with the St. J.V.R. near Centreville, N.B. A charter for the building of this line as the Aroostook Valley Ry. is held by A. R. Gould. This company, however, proposes to operate its line by electricity. (See St. John and Quebec Ry., July, pg. 649.)

Salisbury and Albert Ry.—Press reports state that the Dominion Government has notified the company that legislative authority will be sought as soon as the new parliament meets with a view of taking over the line on the payment of $120,000, or of leasing it on a basis proposed by officers of the company at a recent conference with the Minister of Railways. The offer of the Government is conditional upon the company agreeing at once to make sufficient repairs to enable the line to be operated for its entire length.

Sydney and Louisburg Ry.—The branch now under construction to the new Birch Grove Colliery will be 2.5 miles long. It leaves the main line at Morien Jct., about midway between Sydney and Louisburg, N.S. There are no bridges and nothing in the way of important engineering features. The curvature is light and the gradient against the loaded traffic in no case exceeds 25 ft. per mile. The line is intended purely for coal traffic, and is being built by day labor under the charge of the company's own officers. C. M. Odell is Resident Engineer. (Aug., pg. 733.)

Temiskaming and Northern Ontario Ry.—J. L. Englehart, Chairman of the T. and N.O.R. Commission, stated in an interview Aug. 16, that it was very likely an early arrangement would be made by which the G.T.R. or G.T.P.R. will secure running rights over the T. and N.O.R. from Cochrane to North Bay on a wheelage basis. While negotiations were in progress, no definite conclusions had been reached on any point.

A number of sidings to mining properties have been completed in the Porcupine district, and the freight congestion as a result of the recent fire has been relieved. Several surveys have been made with a view of building a line of about 50 miles into the Gowganda district. (Aug., pg. 735.)

Toronto, Hamilton and Buffalo Ry.—Application is being made to the Brantford city council for the right to lay eight tracks on Newport St., and to make some extensions to the freight shed. (July, pg. 649.)

Vancouver to Peace River.—An organization known as the Peace River Pacific League has been started in Vancouver and district to promote the building of a railway from that city to the Peace River district. At a meeting at New Westminster it was pointed out that the Grand Trunk Pacific Ry., the Vancouver, Westminster and Yukon Ry., and the Howe Sound and Northern Ry. at present hold charters for the building of such a line as is proposed, and that provincial aid could be given only to one company. The League is holding meetings at different points to stimulate public interest prior to making application for aid to the Provincial Government. (Aug., pg. 735.)

Vancouver, Westminster and Yukon Ry.—The agreement between the several municipalities interested, the Burrard Inlet, Tunnel and Bridge Co., and the V. W. and Y. Ry., with respect to the building of a bridge across the second narrows of Burrard Inlet, Vancouver, B.C., has been signed. The municipalities are providing a large proportion of the funds necessary for the building of the bridge, and are represented on the directorate of the B.I.T. and B. Co., while the V.W. and Y. Ry. has been voted a subsidy for the building of a bridge at this point. Under the agreement all these interests are joined, and while the bridge will be built by the B.I.T. and B. Co., the approaches and connecting railways will be built by the V.W. and Y. Ry.

We are advised by the B.I.T. and B. Co. management that the preliminary work of location has been done, and that test holes are being sunk for foundations. It is expected to have the work of putting in the substructure under way this year. D. Cameron is Chief Engineer. At a recent meeting of the municipal delegates with the B.I.T. and B. Co. J. A. L. Waddell, Consulting Engineer, produced estimates as to the cost of the proposed bridge. The cost of a lift span bridge about 1,800 ft. in length, not including wooden approaches and fill, with a lift clearance of 150 ft. and a horizontal clearance of 220 ft., would be in the neighborhood of $1,341,000. He placed the additional cost of having a lift clearance of 190 ft. at about $16,000, and for making provision to carry water pipe across $50,000. He thought this structure could be finished in about two years.

J. Hendry, Vancouver, is President, and W. McNeill, a director of the V.W. and Y. Ry., the latter representing the company in the negotiations. (Aug., pg. 735.)

Victoria Harbor Ry.—Notice is given under the provisions of the British Columbia Ry. Act. 1911, that the V.H.R., having submitted a map showing the general location of a proposed line of railway at Victoria Harbor, and having made application for approval of the same, the Minister of Railways for the

province has issued a certificate of approval of the general route, with the exceptions noted on the map submitted with the application.

The Victoria city council has given a first reading to a bylaw granting the company a franchise for a railway around the harbor, with branches to connect with the various railways and industrial spurs. Among those interested in the company are: A. H. Mitchell, H. A. Ross, J. O. Cameron, A. E. Todd, R. Hall. The bylaw will again come up for discussion before the council as soon as detail plans are submitted to the council. (Aug., pg. 735.)

Wolfe, Megantic and Lotbiniere Ry.—Representatives of Paris, France, financial houses made a trip of inspection over the route of this projected railway, recently, and looked into the mineral resources of the tributary territory. They were accompanied by Messrs. Tobin, McCrae and Begin, who hold the charter for the building of the line. The same interests are also associated with the Lotbiniere and Megantic Ry., and also in a charter under which these two lines may be amalgamated as the Quebec Eastern Ry., and extended. (See Quebec Eastern Ry., Oct., 1909, pg. 745.)

◆

Large Additional Railway Construction Contracts Awarded.

The current year will long be remembered in railway construction circles as having witnessed the letting of some of the largest single contracts and the largest total mileage of railways put under contract in any one year in Canadian history. In our July issue we gave particulars of contracts for new lines given out this season, showing that upwards of 1,400 miles had then been put under contract. Since that time the following important contracts have been let:—

Alberta Central Ry.—Between Red Deer and mileage 100, west (about 40 miles grading partially completed), 100 miles, D. F. Macarthur, Winnipeg.

Algoma Central and Hudson Bay Ry.—From Hobon, Ont., to junction with the National Transcontinental Ry., about 115 miles, Superior Construction Co., Sault Ste. Marie, Ont.

Canadian Northern Ontario Ry.—From near Sellwood Jct. to Port Arthur, 550 miles. Foley Bros. and Northern Construction Co., Nipigon, Ont.

Canadian Northern Pacific Ry.—Hope to Kamloops, B.C., 163 miles, Northern Construction Co. and Foley, Welch and Stewart.

Kamloops to Yellowhead Pass, about 270 miles, reported to be let to Northern Construction Co.

Grand Trunk Pacific Ry.—From Tete Jaune Cache to Aldermere, B.C., 410 mile, reported let to Foley, Welch and Stewart.

Hudson Bay (Dominion Government) Ry.—From Pas Mission to Thicket Portage, about 185 miles, the J. D. McArthur Co., Winnipeg.

James Bay and Eastern Ry.—Roberval, Que., westerly for 30 miles, J. P. Mullarkey, Montreal.

The contracts above enumerated cover over 1,518 miles of railway, thus making altogether about 3,000 miles of line put under contract this year. At the present time there are under consideration tenders for the Ottawa-Sudbury section of the Canadian Northern Ry., and for two lines of considerable length in Nova Scotia for the Dominion Government.

◆

The Victoria and Sidney Ry. and the Victoria Terminal Ry. and Ferry Co. have appointed H. A. Jackson, St. Paul, Minn., Assistant Traffic Manager, Great Northern Ry., to prepare and issue tariffs of tolls under the British Columbia Railway Act, 1911. The bylaws making the appointment have been approved by Provincial Minister of Railways.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Intercolonial Railway has received an American railway ditcher from the American Hoist and Derrick Co., St. Paul, Minn.

The Tallman Brass and Metal Co., Hamilton, Ont., announce that owing to the increase in business it is erecting an addition to its foundry, and also building a large addition to its finishing department.

The Ohio Brass Co., Mansfield, Ohio, has issued catalogue supplement no. 2, containing important additions and improvements to the various materials listed in its railway, mine, catenary and high tension insulator catalogues.

The Robb Engineering Co., Amherst, N.S., has received an order from the Sturgeon Lake Development Co., Toronto, for two Robb-Mumford boilers 54 in. by 18 ft., and one stack 48 ins. in diameter and 80 ft. high, with smoke connection.

The Canadian Locomotive Co. has been granted a license to do business in Ontario under the Act respecting extra-provincial companies. The capital to be employed is not to exceed $3,500,000 and J. S. Lovell, Toronto, is appointed attorney.

The Titanium Alloy Manufacturing Co., Pittsburgh, Pa., has issued "Titanium, the best rail ever rolled," a handsomely illustrated booklet containing facts, figures and illustrations, to show that titanium has solved the rail problem. It states that three years ago the Titanium rail was merely being tried on two or three roads, while now it is in service on more than 50 steam railways and on many important electric lines.

The Vulcan Iron Works, Wilkes-Barre, Pa., has published a new catalogue of locomotives which is ready for distribution. It is rarely that one comes across such a well arranged catalogue, for, not only does it advertise the company's product, but it also contains about 40 pages of valuable railway data that should prove useful to all connected with the motive power department. A large variety of locomotives are illustrated and described, those shown being principally contractors' and industrial types.

Jas. J. Riley, Jr., has been appointed Second Vice President and General Manager of Curtis's & Harvey (Canada) Limited, manufacturers of explosives, with office at Montreal, and as the explosive business now takes up so much of his time he has resigned the Vice Presidency of the Canadian Railway and Contractors Supply Co. His brother, Geo. C. Riley, has also resigned as Secretary of the Supply Company to devote his entire time to the sales department of the explosive business. Robert Wall, who has taken over the Messrs. Riley's interests will continue the business of the Canadian Railway and Contractors Supply Co.

The Canadian Fairbanks-Morse Co., Ltd., which has been incorporated with a capital stock of $2,600,000, and head office at Montreal, has acquired the businesses of the Canadian Fairbanks Co., Ltd., Montreal, the Fairbanks-Morse Canadian Manufacturing Co., Ltd., Toronto, and the subsidiary companies, the Dominion Safe and Vault Co., Ltd., of Farnham, Que., and the E. and T. Fairbanks Co., Ltd., of Sherbrooke, Que. The officers are, President, H. J. Fuller, heretofore President of the Canadian Fairbanks Co.; Vice President, F. C. Brooks, heretofore President of the Fairbanks-Morse Canadian Manufacturing Co.; Vice President and Secretary, T. McMillan; Treasurer, E. R. Whitehead.

◆

Canadian Ticket Agents' Association.

The 25th annual meeting will be held at Sault Ste. Marie, Ont., on October 4, 5, and 6, on the invitation of the Town Corporation and the Board of Trade. Features of the business meeting will be addresses from representatives of the American Association of General Passenger and Ticket Agents and of the American Association of Passenger Agents. The entertainment features will comprise a visit to the Lake Superior Corporation's steel plant and other works, a trip on the St. Marys River and a trip on the Algoma Central and Hudson Bay Ry. to the end of the track, where there will be a camp or bush dinner, the Association being the guests of the railway company. There will also be an evening reception at the boat club, a theatre party, a smoker, etc.

◆

Total	6,536.57

DEPARTMENT OF RAILWAYS AND CANALS.

BRANCH LINE OF RAILWAY FROM DARTMOUTH TO DEANS.

SEALED TENDERS addressed to the undersigned and endorsed "Tenders for Branch Line, Dartmouth to Deans," will be received at this office until sixteen o'clock on Friday, September 15th, 1911.

Plans, profiles, specification and form of contract to be entered into can be seen on and after the 15th instant at the office of the Engineer of the Department of Railways and Canals, Ottawa; at the office of the Chief Engineer of the Intercolonial Railway Moncton; and at the office of the Board of Trade, Halifax. Forms of tender may be procured from the Chief Engineer of the Department of Railways and Canals or from the Chief Engineer of the Intercolonial Railway.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labor, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $150,000.00made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order.
L. K. JONES,
Secretary.
Department of Railways and Canals.
Ottawa, August 12th 1911.

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

14214. July 15.—Authorizing G.T.R. to rebuild the lost channel bridge at mileage 49.20, Ottawa Division.

14215. June 29.—Ordering C.P.R. to build station at Cap St. Martin, Que., and stop one passenger train in each direction daily, except Sunday, on flag.

14216. July 17.—Authorizing W. M. Sedgwick, Nova Scotia Steel and Coal Co., to prepare and issue tariffs of tolls.

14217. July 13.—Authorizing Dominion Atlantic Ry. to rebuild its Big Joggins bridge, Digby county, N.S.

14218. July 17.—Authorizing Essex Terminal Ry. to cross Tecumseh Road, Peltier St., and Crawford and Wellington Aves., Windsor, Ont., for deviation of its line.

14219. July 18.—Authorizing C.N.R. to open for traffic its line from Shellbrook to Big River, Sask., 57 miles; speed limited to 18 miles an hour.

14220. July 17.—Authorizing C.N.R. to build across public road between secs. 29 and 20, tp. 8, r. 1, w. 2 m., Sask.

14221. July 15.—Authorizing C.N.R. to open for freight traffic its Goose Lake line from Kindersley to Alsask, Sask., 44 miles; fencing and crossing signs to be completed within 60 days under penalty of $25 a day.

14222. July 17.—Authorizing C.N.R. to cross with its Hallboro branch public road between secs. 31 and 32, tp. 13, r. 18, w.p.m., Man.

14223. July 17.—Amending order 14091, June 26, re crossings on C.N.R. Hallboro branch, Man.

14224. July 17.—Extending to Sept. 15, time for completion of C.N.R. across Notre Dame St., Montreal, and joining of Montreal St. Ry. and Montreal Harbor Commissioners' tracks.

14225. July 17.—Authorizing C.P.R. to slightly change its line at bridge 39.49, North Bay subdivision.

14226. July 15.—Authorizing C.P.R. to open for traffic that portion of its Montreal-Quebec Jct. second track of the gauntlet track across Bordeaux bridge.

14227. July 15.—Authorizing C.P.R. to cross with its Waldo branch six highways in Kootenay district, B.C.

14228, 14229, July 12, 13.—Approving location of eight G.T.P.R. stations in western provinces, and six on Lake Superior branch, Rainy River district, Ont.

14383. July 27.—Removing speed limitations of 10 miles an hour on C.P.R. trains St. Antoine municipality, Riviere du Loup, Que.

◆

Quebec Central Ry.—In the article on the change of control of this line, in our August issue, page 731, it was stated that it was to be leased for 22 years to the C.P.R. Co., acting for itself and the Ry. The proposed lease is for 99 New York, New Haven and Hartford years. A Montreal press report of Aug. 24 states that the agreement has been executed. It is subject to the ratification of the holders of Q.C.R. securities and to legislative approval. It is said that the English directors will be replaced by a Canadian board.

During June, 10 employes were killed and 11 injured in the course of their work in connection with the construction and operation of Canadian railways. Of the fatalities, four were due to collisions, three to being struck by locomotives, two to being run over, and one to a derailment.

Lewis Gleason, travelling expert for the Galena Signal Oil Co., with headquarters at Chicago, who is well known in railway circles throughout Canada, wrote recently: "I must compliment you on your excellent publication. The Railway and Marine World grows better as it gets older, a good indication that it is prospering, as it undoubtedly deserves."

Reports as to the use of cars show that for the 11 months ended July 31, nearly 100,000 cars were used to haul grain from the Canadian Northwest to lake ports. These cars were handled as follows:—C.P.R., 59.6%; Canadian Northern Ry., 31.8%; Grand Trunk Pacific Ry., 7.3%; Great Northern Ry., U.S. Lines, 1.3%.

Railway Rolling Stock Notes.

The Intercolonial Ry. has received 15 tank cars, from the Canadian Car and Foundry Co., Montreal.

The G.T. Pacific Ry. has received two colonist cars from the Canadian Car and Foundry Co., Montreal, and four consolidation locomotives from the Montreal Locomotive Works.

The New Brunswick Coal and Ry. Co. has recently added to its equipment a combination first class smoker, baggage and postal car, which has been built at Moncton. It is 55 ft. long.

The locomotive which the International Ry. of New Brunswick recently purchased from the Intercolonial Ry., as mentioned in our last issue, is, we are advised, a freight one with a boiler pressure of 140 lbs., and cylinders 17 ins. diar. by 24 ins. stroke.

The Canadian Northern Ry., between July 15 and Aug. 15, ordered 25 first-class cars, 57 box cars, 10 second class cars and three dining cars from the Canadian Car and Foundry Co., Montreal; and 250 box cars from the Crossen Car Manufacturing Co., Cobourg, Ont.

The city of Toronto, in connection with the construction of its proposed street car lines, has purchased one Marion shovel and 40 four yard dump cars from F. H. Hopkins and Co., Montreal; and another steam shovel, some cars and six saddle tank locomotives in the United States.

The C.P.R., between July 25 and Aug. 17, ordered the following rolling stock: 83 box cars, nine stock cars, three refrigerator cars (freight), four first class cars, two second class cars, two mail and express cars, one baggage and express car. 10 D.10 locomotives, 10 D.4 locomotives, one T.2 locomotive and one tank switcher locomotive, from its Angus shops, Montreal; 14 D.4 locomotives from the Montreal Locomotive Works, and one coal car in the U.S.

The Canadian Northern Ry., between July 15 and Aug. 15, received the following additions to rolling stock:—30 flat cars, 110 box cars, five second class cars and two first class cars from the Canadian Car and Foundry Co., Montreal; seven refrigerator cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 105 box cars from the Nova Scotia Car Works, Halifax, N.S., and 10 switching locomotives from the Montreal Locomotive Works.

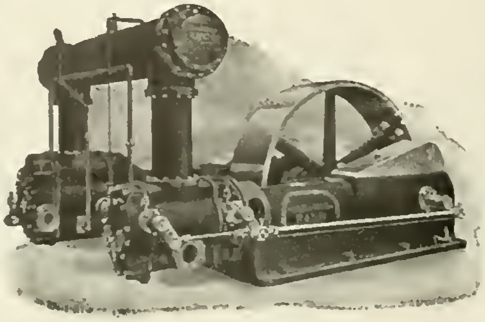
The C.P.R., between July 25 and Aug. 17. received the following additions to rolling stock: 372 box cars, 20 stock cars, 13 vans, 16 freight refrigerator cars, one suburban car, two tourist cars, three second class cars, 10 baggage and smoking cars, one dining car, two buffet-parlor cars and six D.10 locomotives from its Angus shops, Montreal; 352 steel frame box cars, 27 steel flat cars, from the Canadian Car and Foundry Co., Montreal, and two N.3 locomotives from the Canadian Locomotive Co., Kingston, Ont.

The G.T.R. has ordered 10 Richmond compound consolidation locomotives from the American Locomotive Co. for use on its U.S. lines. They will be built at Shenectady, N.Y. Following are the chief details:—

Cylinders	22½ and 35 by 32 ins.
Driving wheels, diar.	63 ins.
Boiler type	Extended wagon top, wide firebox
Boiler pressure	210 lbs.
Tubes, no. and diar	353 2 ins.
Tubes, length	15 ft.
Heating surface, firebox	168.2 sq. ft.
Heating surface, tubes	2,757.1 sq. ft.
Grate area	50.62 sq. ft.
Tender, type	Water bottom
Capacity, water	7,000 U.S. gals.
Capacity, coal	14 tons
Tractive power	36,000 lbs.

Two of the new parlor-buffet cars, which the C.P.R. recently built at its

RAND DUPLEX POWER-DRIVEN **COMPRESSORS**



In buying Rand Compressors, you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

MANUFACTURED BY

B. J. COGHLIN COMPANY, LIMITED
MONTREAL, - - - CANADA.

Angus shops, and of which a floor plan was given in our last issue, have been placed in service between Montreal and Ottawa. The car is divided into two main compartments, the observation end being for smokers, the other end, which is the larger, being the general room. The buffet and toilet accommodation is located between. The interior is finished in mahogany, with arched ceiling in dull gold; the chairs are upholstered in green velvet plush, and in black leather in the smoking compartment. Lighting is by electricity from large dome lights along the centre, and individual reading lamps affixed to the walls.

Following are the chief details of the 25 Otis dump cars, which the Intercolonial Ry. has ordered from the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue, and which will be built under license from the Hart-Otis Car Co., Montreal:—

Length over end sills	38 ft. 9 ins.
Length inside	36 ft. 9½ ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	5 ft.
Height from rail to top	9 ft. 4 13-16 ins.
Height from rail to floor	4 ft. 4 13-16 ins.
Truck centres	26 ft.
Wheel base of truck	5 ft. 6 ins.
Wheel base of car	31 ft. 6 ins.
Number of doors on each side	Six
Width of door opening	2 ft. 2 ins.
Bolsters and brake beams	Simplex
Side bearings	Sosemihl
Couplers	R. E. Janney
Air brakes	Westinghouse K.C. 1012

Following are the chief details of the 25 first class cars which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:

Length over end sills	72 ft. 6 ins.
Width over side sills	9 ft. 10½ ins.
Width over all at eaves	10 ft. 2¾ ins.
Width between deck sills	5 ft. 6 ins.
Height top of sill to bottom plate	6 ft. 8½ ins.
Platform	Standard Coupler Co.
Body bolsters	Double cast steel
Inside finish	Mahogany
Vestibule finish	Birch
Seats	Walkover type corrugated backs.
Lighting	Commercial Acetylene Co.
Heating	Gold Duplex, Frumveller heater
Hoppers	Duner Co.
Water system	C.N.R. standard, air pressure.
Air brakes	Westinghouse P.M. 1612
Truck wheels	36 ins. steel tired, cast steel centres.
Axles	M.C.B. standard 4¼ by 8 ins.
Bolster springs	36 ins. double elliptic.
Equalizer springs	8⅛ by 10 ins.
Brakebeams	Simplex high speed
Journal boxes	McCord Malleable
Journal bearings	M.C.B. bronze
Wedges	M.C.B. Malleable
Pedestals	M.C.B. cast iron
Side bearings	Roller

The G.T.R. is building, at its Montreal shops, 20 baggage cars and 15 coaches. Of the baggage cars, five are fitted with end doors in one end only, each door divided in the middle, and made to fold again, thus making a four section door. The end door opening of these cars is 7 ft. 6 ins. wide by 6 ft. 11¼ ins. high. They are also fitted with four side doors, two of which will be 8 ft. by 6 ft. 2 ins. and two 5 ft. by 6 ft. 2 ins., one small and one large door on each side of the car. They are to be used for automobile traffic. Following are the chief dimensions:—

Baggage Cars.

Length over end sills	60 ft. 10 ins.
Length inside	60 ft.
Length over buffers	63 ft. 2½ ins.
Width over side sills	9 ft. 8 ins.
Inside width in clear	8 ft. 10½ ins.
Height over all	14 ft. 4½ ins.
Side doors	Four, 5 ft. wide
End doors	Two, 2 ft. 3 ins. wide

Coaches.

Length over end sills	67 ft. 6 ins.
Length inside	66 ft. 7 ins.
Length over buffers	75 ft. 6¼ ins.
Width over side sheathing	9 ft. 9⅝ ins.
Inside width in clear	8 ft. 9 ins.
Height over all	14 ft. 4½ ins.
Seating capacity, car body	60
Seating capacity, smoke room	9
Bolsters	Double cast steel

R. K. Scarlett, C.P.R. passenger agent, Nelson, B.C., was married there, July 25, to Miss C. B. Barnes, of Vancouver.

Traffic Orders by the Board of Railway Commissioners.

Summaries of other orders are given on another page, under "Orders by the Board of Railway Commissioners:—

RATES FROM QUEBEC PROVINCE TO NEW ENGLAND STATES.

14209. July 14. The application of Lefebvre & Mahon, of Howick Station, Que., exporters of lumber, hay, and grain, complaining of the rate of 27c. per 100 lbs. charged on a carload of hay from St. Edouard, Que., on the Napierville Junction Ry., to Pawtucket, Rhode Island, it is hereby declared that the rate which should have been charged on the said shipment from St. Edouard to Worcester, Massachusetts, was 18c. per 100 lbs., in accordance with the tariff of the Napierville Junction Ry. C.R.C. 4 and 5, lawfully published and filed, plus the arbitrary or proportional rate of the New York, New Haven and Hartford Rd. from Worcester, Mass., to Pawtucket, R.I., stated to be 4c. per 100 lbs., making in all, a joint through rate of 22c. per 100 lbs., and that the Napierville Junction Ry. is hereby authorized to refund to the applicants the amount charged in excess of the lawful rate; and it is ordered that the Napierville Junction Ry. publish and file not later than September 1, joint through freight tariffs to points on the New York, New Haven and Hartford Rd., by such reasonable and practicable and cheapest routes as may be available, as has been done by the Quebec, Montreal and Southern Ry.

LUMBER RATES FROM B.C. TO G.T.P.R. POINTS.

14213. July 18. Re complaint of Mountain Lumber Manufacturers' Association of Calgary, Alta., that they are unable to obtain joint through rates on lumber, shingles, and other forest products in carloads, from the shipping points in the interior of British Columbia, on the C.P.R., to points on the G.T.P.R., it appearing from letters from counsel for the C.P.R. and G.T.P.R. on file with the Board that the G.T.P.R. has refused to concur in joint through rates on lumber, etc., from the points of shipment in British Columbia to points on its lines until it is able to receive the traffic from the C.P.R. at or near Calgary, Alta., it is ordered that the C.P.R. and G.T.P.R. do agree upon and publish and file a joint tariff, or joint tariffs, of tolls to all points on the G.T.P.R., by the shortest joint mileages via Camrose, Alta., Saskatoon, Sask., and Portage la Prairie, Man,; the said joint tariff, or tariffs, to apply from all the shipping points from which the tariffs on lumber, etc., apply to points east of the Rocky Mountains on the C.P.R. and Canadian Northern Ry., and to include all the articles enumerated therein. And it is also ordered that in compiling the said joint tariff, or tariffs, should any disagreement arise between the companies which the companies are unable to settle themselves, full particulars of the points in dispute shall be reported to the Board not later than Sept. 1, 1911.

WHITE PASS AND YUKON RAILWAY RATES.

14385. July 18. Re application of British Yukon Ry. Co., British Columbia Yukon Ry. Co., and the Pacific and Arctic Ry. and Navigation Co., for a rehearing, pursuant to the Order of the Governor-in-Council, dated June 16, of the Board's order dated January 18, it is ordered that the applicant companies, and the Dawson Board of Trade or other shippers affected, if they so desire, be afforded an opportunity of supplementing their case by such evidence, facts or figures as they deem proper; and that the applicant companies be relieved from filing the joint tariffs prescribed under said order, and are permitted to restore the joint tariffs disallowed by the said order, until such case can be disposed of.

ALLOWANCES FROM TRACK SCALE WEIGHTS, CARLOAD TRAFFIC.

14389. July 25. Re special freight tariffs governing the weighing of carload traffic and allowances from track-scale weights; and re application of the Canadian Manufacturers' Association, and the Mountain Lumber Manufacturers' Association of Calgary, Alta., for an order directing that the operation of the said tariffs put in force by the railway companies in Western Canada in the beginning of May, 1911, be delayed until after the applicants shall have had an opportunity of being heard, it is ordered that the special tariffs of the railway companies operating west of and including Port Arthur, Ont., showing the allowances from track-scale weights of carload traffic, as in effect immediately prior to May 1, be restored until the applicants and shippers shall have an opportunity of presenting their views to the Board, or until the matters in dispute shall have been adjusted between the parties at a conference which shall be had between the railway companies and shippers, or their representatives.

The Retirement of Sir William Whyte.

A Winnipeg press despatch of Aug. 28, says: The retirement of Sir Wm. Whyte, Vice President of the C.P.R. in control of Western lines was officially announced here to-night by Sir Thos. Shaughnessy at a dinner at the Manitoba Club, given in honor of Sir William by the President, at which about 125 of the leading citizens of Winnipeg were present.

In expressing regret at the severance of Sir William's active connection as an official of the company, Sir Thomas said that three years Sir William reached the age, when under the rugulations of the company, he should have retired, and that it was only at his (the President's) personal solicitation that he consented to remain in office for a few years longer. A short time ago Sir William had notified him that the time had arrived when he must insist on being relieved of his duties. Sir Thomas rejoiced to be able to announce that the company was not altogether losing the benefit of his experience, as he would continue his connection with the company as a director, having been elected to the board at its last meeting.

Sir William's retirement takes effect on Sept. 30. It is said that his future plans are indefinite, but that he will continue to live in Winnipeg.

turned to Quebec from Ste. Agathe, where he went to recuperate, towards the end of August.

The following ticket agents have joined the Canadian Ticket Agents' Association recently:—W. S. Davis, C.P.R., Oakville, Ont.; A. P. Potter, C.P.R., Tottenham, Ont.; W. J. Leonard, C.P.R., Plattsville, Ont.; G. E. Walker, G.T.R., Guelph, Ont.

Sir William Mackenzie left Toronto early in August for a trip through the west, remaining some time in Winnipeg both on the outward and homeward trips, in connection with the city's proposal to purchase the Winnipeg Electric Ry.'s properties.

Hon. R. Lemieux, heretofore Postmaster-General, has been appointed Minister of Marine and Fisheries in succession to Hon. L. P. Brodeur, appointed to succeed th late Hon. D. Girouard as a Puisne Judge of the Supreme Court of Canada.

Lieut.-Col. H. H. McLean, of the 28th New Brunswick Dragoons, and Vice President of the St. John Railway, has been granted the rank of Colonel in the Canadian Militia, in special recognition of his services in commanding the Canadian contingent at the coronation.

L. O. Armstrong, Colonization and Industrial Agent, C.P.R., started from Montreal, Aug. 3, on a lengthy trip to investigate the possibilities of developing tourist and fishing resorts in territory tributary to the C.P.R., on the north shore of Lake Superior.

John Callaghan, who has been appointed Division Engineer, G.T.P.R., at Fitzhugh, Alta., was, up to the time of his appointment, with Foley, Welch and Stewart, contractors, as Superintendent and Engineer. Prior to that he was a Division Engineer of Construction on the C.P.R.

P.H. Walsh, Superintendent, Kootenay Ry. and Navigation Co., and of the Kaslo and Slocan Ry. for the Great Northern Ry., U.S.A., and Mrs. Walsh, were the principal guests at a dinner and dance given at Kaslo, B.C., Aug. 3, in connection with their approaching removal from the town.

D. B. Hanna, Third Vice President, Canadian Northern Ry., appealed recently to the Toronto Court of Revision against the assessment of his house, Thornliebank, Castle Frank Avenue, at $55,000. The evidence showed the total cost to be $45,000 and the assessment was reduced to $42,000.

D. B. Lindsay, Secretary, Temiscouata Ry., Riviere du Loup, Que., died suddenly at Moncton, N.B., Aug. 7, aged 75. He had been connected with the railway for 22 years, and since Jan., 1901, as Secretary and General Manager, resigning the latter position, Oct., 1909, on account of ill health and advancing years.

N. S. Reeder, M. Am. Soc. M.E., Vice President of the Western Steel Car & Foundry Co., of Chicago, Ill., and formerly General Manager of the Canada Car Co., Montreal, has been elected Second Vice President of the Pressed Steel Car Co., of Pittsburgh, Pa. He will continue to make his headquarters in Chicago.

Lord Strathcona celebrated his 91st birthday in London, Eng., Aug. 6, and received numerous congratulations from various parts of the world. He subsequently joined his yacht and, with Lady Strathcona and Dr. and the Hon. Mrs. Howard, spent some time at Colonsay, his island home in the Western Hebrides.

J. C. Sheppard, who has recently been in charge of construction work on the G.T. Pacific Ry., on the Alberta-British Columbia boundary, for the contractors, has been transferred to a similar position on the Copper River-Aldermere contract. The contracts on both divisions are being carried out by Foley, Welch and Stewart.

B. B. Kelliher, Chief Engineer, G.T. Pacific Ry., was thrown out of a vehicle in which he was driving, on the route of the railway on the British Columbia-Alberta boundary, July 27, owing to the horse bolting. Mr. Kelliher escaped serious injury, but was compelled to abandon his inspection trip and to return to Winnipeg for rest and treatment.

F. G. Cromar, who has been appointed Assistant Superintendent, District 2, Lake Superior Division, C.P.R., North Bay, Ont., was born near Owen Sound, Ont., Nov. 4, 1873, and entered C.P.R. service Nov. 5, 1889, since when he has been consecutively, office boy, operator, terminal agent and general yardmaster at various points east of Fort William, latterly at North Bay, Ont.

George Eade, American Manager for Thos. Cook & Son, tourist agents, died recently in New York City after an illness of several months. He was born in London, Eng., in 1851, and was for some time in the service of the White Star Line at Liverpool. He came to America in 1886, as Manager of Thos. Cook & Son's business in the United States and Canada.

A. MacNamara, whose appointment as Assistant to Master Mechanic, G.T.P.R., Rivers, Man., was announced in our last issue, was born at Toronto, Mar. 4, 1884, and entered railway service in 1901, since when he has been in various capacities in the Master Mechanics' offices, G.T.R., Toronto and Montreal; June, 1908, to July 1, 1911, chief clerk to Master Mechanic, G.T.P.R., Rivers, Man.

E. T. Agate, C.E., M. Can. Soc. C.E., who has been appointed District Engineer for the construction of the Canadian Northern Ontario Ry., between Gowganda Jct. and Nipigon, is a graduate of Cornell University, and was connected with the C.P.R. engineering department for nine years. During the past two years has been Canadian Manager at Vancouver, B.C., for L. M. Rice & Co., railway contractors, Seattle, Wash.

M. B. Carlin, ex-General Manager of the Columbia River Lumber Co., Ltd., and now a member of the firm of Grant Smith & Co., which has a contract for building a portion of the Canadian Northern Pacific Railway on Vancouver Island, is President, and J. D. McArthur, railway contractor, Winnipeg, is a director of the Canadian Pacific Lumber Co., Ltd., which recently made an issue of £350,000 six per cent. 1st mortgage bonds in England. Accompanying the prospectus was a report on the Columbia River Lumber Co.'s property by F. W. Jones, ex-director of that company and formerly assistant to the Manager, C.P.R. Western lines.

W. B. Bulling, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, who has been obliged to retire temporarily from active service owing to ill health, was born at Montreal, Sept. 16, 1858, and entered G.T.R. service there in 1872. He resigned in 1880 to enter the Chicago and North Western Ry. service in Chicago, where he only remained a short time, returning to the G.T.R. He was appointed chief clerk, General Freight Department, C.P.R., Montreal, in 1883; District Freight Agent in 1889; General Freight Agent, Eastern Division, in 1892, and Assistant Freight Traffic Manager, Eastern Lines, in July, 1901.

E. N. Todd, who has been appointed Division Freight Agent, Eastern Division, C.P.R., Montreal, was born at Huntington, Que., Oct. 17, 1879, and entered C.P.R. service May, 1896, as junior clerk, Foreign Freight Department, since when he has been, from June, 1899, to May, 1900, chief import clerk, same department; May, 1900, to Aug., 1901, in service with the Franco-Canadian Steamship Line; Aug., 1901, to 1904, chief correspondence clerk, Foreign Freight Department, C.P.R.; 1904 to Jan., 1909, Export and Import Freight Agent, C.P.R., Toronto; Jan., 1909, to Sept. 1, 1911, Export Freight Agent, C.P.R., Montreal.

J. A. Carroll, who has been appointed Road Foreman of Locomotives, District 1, Canadian Northern Ry., was born at Chilton, Wisc., Dec. 14, 1865, and entered railway service in 1885, since when he has been, to 1887, fireman, Wisconsin Central Ry.; 1887 to 1888, fireman, Atlantic and Pacific Ry., now part of the Sante Fe System; 1888 to 1900, locomotive engineer, same road; 1900 to 1907, Traveling Engineer, Albuquerque Division, same road; 1907 to Aug., 1908, Locomotive Foreman, C.P.R., Outremont, Que.; Aug. 1908, to Aug., 1911, District Master Mechanic, District 2, Lake Superior Division, C.P.R., White River, Ont.

J. H. Hughes, who was recently appointed Superintendent, District 2, Lake Superior Division, C.P.R., White River, Ont., was born at Georgetown, P.E.I., October 7, 1865, and entered railway service, October 1885, since when he has been, to August 7, 1886, brakeman, Intercolonial Ry.; August 7, 1886, to January, 1888, freight brakesman, C.P.R., North Bay, Ont.; January, 1888, to October 1, 1902, conductor and Rule Instructor, C.P.R.; October 1, 1902, to March, 1907, Trainmaster, District 1, Lake Superior Division, C.P.R.; March 1, 1902, to May 6, 1911, Assistant Superintendent, and latterly Acting Superintendent, same district.

W. H. Allison, who was recently appointed District Freight Agent, C.P.R., Saskatoon, Sask., was born at London, Ont., July 22, 1885, and entered C.P.R. service, August 1, 1901, since when he has been, to November, 1901, shed boy; November 1, 1901, to May 7, 1906, messenger, billing clerk, abstract clerk, rate clerk and chief clerk, successively, London, Ont.; May 7, 1906, to March 15, 1907, correspondence clerk, Freight Department, Regina, Sask.; March 15, to May 1, 1907, export clerk, General Freight Office, Winnipeg; May 1 to June 1, 1907, claims clerk, same office; June 1, 1907, to January 1, 1909, chief clerk to General Freight Agent, Winnipeg; January 1, 1909, to June 15, 1911, City and Travelling Freight Agent, Regina, Sask.

J. H. Black, whose portrait appears on the first page of this issue, was born near Smiths Falls, Ont., July 8, 1874, and entered railway service, Feb. 16, 1896, since when he has been, to Sept., 1896, feright checker, C.P.R.; Sept., 1896, to July, 1898, telegraph operator, C.P.R.; July, 1898, to Jan., 1902, agent, C.P.R. Sharbot Lake; Jan., 1902, to Nov., 1904, Auditor, Kingston and Pembroke Ry., Kingston, Ont.; Nov., 1904, to Aug. 1, 1911, General Freight and Passenger Agent, Superintendent and Traffic Manager, and Superintendent, successively, Temiskaming and Northern Ontario Ry., North Bay, Ont. He resigned the last named position, Aug. 1, to become General Manager, Northern Ontario Light and Power Co., Haileybury, Ont.

Hon. E. B. Garneau, who died in Quebec, Aug. 18, after a short illness from typhoid fever, was a director of the Richelieu and Ontario Navigation Co., and of the Quebec Ry., Light, Heat and Power Co., and was associated with other transportation interests having Quebec as the centre of their operations.

Press dispatches from Kansas City, Mo., Aug. 31, stated that A. F. Dillinger, formerly assistant chief operating officer of the Board of Railway Commis-

sioners. Ottawa, had been placed under arrest there, under a warrant issued at Des Moines, Iowa. A Mrs. Rose Morgan, in whose company he was, was arrested under a similar warrant at the same time. Mrs. Dillinger, who had travelled from Ottawa, was present at the arrest. Nothing further has transpired, and Ottawa papers state "the inference is that Mr. and Mrs. Dilinger have effected a reconciliation."

W. M. Kirkpatrick, who has been appointed Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, is a son of the late Sir Geo. Kirkpatrick, at one time a director of the C.P.R. He was born at Kingston, Ont., Oct. 8, 1874, and entered C.P.R. service, Mar. 7, 1892, in the Vice-President's office, and up to July, 1899, he filled various positions in the Chief Engineer's office, Foreign Freight Department, Montreal, and General Freight Agent's office, Toronto; July, 1899, to Dec., 1902, clerk in Fourth Vice President's office, Montreal; Dec., 1902, to Apr., 1905, Assistant General Freight Agent, Pacific Division, Vancouver, B.C.; Apr., 1905, to Feb., 1907, Export Freight Agent, Montreal; Feb. to Dec., 1907, General Freight Agent, Atlantic Division, St. John, N.B.; Dec., 1907, to Apr., 1911, General Freight Agent, Through Traffic, Ontario Division, Toronto; Apr. to Aug. 21, 1911, General Freight Agent, Eastern Lines, Montreal.

A. W. Wheatley, who has been appointed General Manager, Canadian Locomotive Co., Kingston, Ont., was born at Ashford, Kent, Eng., and served an apprenticeship as machinist in the South Eastern Ry. shops there. In 1892 he went to the U.S., since when he has been, to 1894 in Northern Pacific Ry. service at St. Paul, Minn.; 1894, same service at Staples, Minn.; 1895 to 1900, Roundhouse Foreman, same place; 1900 to 1902, General Foreman, same road, Livingstone, Mont.; Dec., 1902, to June, 1903, Master Mechanic, same road, Yellowstone Division, Glendive, Mont.; June, 1903, to Mar., 1904, General Master Mechanic, same road, St. Paul, Minn.; Feb., 1905, to Mar., 1906, Shop Superintendent, Chicago, Rock Island and Pacific Ry., Moline, Ill.; Mar., 1906, to June 1, 1907, Assistant Superintendent of Motive Power, Union Pacific Rd., Omaha, Neb.; June 1 to Oct., 1907, General Inspector, American Locomotive Co., Schenectady, N.Y.; Oct., 1907, to Nov., 1910, Manager, Montreal Locomotive Works, Ltd., Montreal; Nov., 1910, to Aug., 1911, Manager, American Locomotive Co., Dunkirk, N.Y.

Charles E. Morgan, City Passenger & Ticket Agent, G.T.R., Hamilton, Ont., died there, August 20, aged 69, after having been in failing health for some time. He was born in Hamilton and lived there all his life, with the exception of a few years spent in Guelph, Ont. After leaving school he went into the banking service and then became Great Western Ry. ticket agent, with offices in Hamilton and Toronto. On the absorption of the G.W.R. by the G.T.R. he gave up his Toronto office and confined himself to the Hamilton business. He also had a number of steamship and other ticket agencies and did a large and successful business. He is survived by one son, Charles R., and two daughters, Mrs. W. F. Robinson and Mrs. W. E. Daniel. The funeral at Hamilton was largely attended by railway and steamship officials. E. de la Hooke, Secretary, representing the Canadian Ticket Agents' Association, of which Mr Morgan waws a member for many years and in which he served as a member of the executive committee as Vice President and as president. C. R. Morgan will continue his father's business and has already been appointed ticket agent of many of the most important steamship lines.

A. R. Macdonell, whose death in England on July 15 was mentioned in our last issue, was born at Williamstown, Glengarry county, Ont., Dec. 20, 1855. He commenced his railway career on the Intercolonial Ry. in the seventies, and then, in partnership with his father in 1879, took a contract on section B of the Canadian Pacific Ry. east of Winnipeg. After finishing that work, he went east to Port Arthur and took some heavy contracts on the C.P.R. Following that, in partnership with M. J. Hogan, of Montreal, he constructed the Baie des Chaleurs Ry. The next contrast he was connected with was in partnership with his father-in-law, J. Ryan, on the Soulanges canal. Following this, he took the contract for the construction of the Temiskaming and Northern Ontario Ry. from North Bay practically to Cochrane. This contract, with the exception of the National Transcontinental Ry. contracts, was the heaviest work he undertook. In 1907, in partnership with M. J. O'Brien, he took a number of contracts on the National Transcontinental Ry., amounting in all to some 400 miles, of which something over 300 had been completed at the time of his death. He went to England on the advice of his physician, who thought the change would be beneficial to his health, and he had expected to return to Canada next autumn.

H. T. Hazen, Chief Engineer, Duluth, Winnipeg and Pacific Ry., Duluth, Minn., who has also been appointed District Engineer, Canadian Northern Ontario Ry., Port Arthur easterly, was born at Truro, N.S., Mar. 14, 1870, and commenced his railway career on survey work on the Hants Central Ry., Truro, N.S., since when he has been, to 1893, roadman and Resident Engineer on location and construction, Ottawa and Gatineau Ry.; 1893 to 1894, Locating Engineer, Restigouche and Victoria Colonization Ry.; 1894, Locating Engineer, New Brunswick Trunk Line Ry.; 1894 to 1895, on topographical survey of Riviere du Lievre; 1895 to 1896, Resident Engineer, St. Lawrence and Adirondack Ry.; 1896 to 1897, Resident Engineer, Cobourg, Northumberland and Pacific Ry.; 1897 to 1898, Resident Engineer, Montreal and Ottawa short line, C.P.R.; 1898 to 1899, Resident Engineer, C.P.R. double-tracking; 1899, Assistant Engineer, Great Northern Ry. of Canada; 1899 to 1900, Assistant Engineer, Ottawa and Gatineau Ry.; 1900 to 1904, Assistant Engineer, Grand Trunk Ry.; 1904, in charge of Exploration surveys, Midway and Vernon Ry.; 1904, Superintendent and Engineer for contractor, Ragged Rapids dam on Severn River; Jan. 1, 1905, to Oct., 1909, with Canadian Northern Ry. as Division Engineer, location Parry Sound to Sudbury, Division Engineer of construction, Parry Sound to French River and Key Branch, and Engineer in charge Garneau to Quebec, St. Jerome-Montfort Branch and St. Jacques Branch; Oct., 1909, he was appointed Chief Engineer, Duluth, Winnipeg and Pacific Ry., and since July, 1911, has also been District Engineer, Canadian Northern Ontario Ry., Port Arthur easterly for about 275 miles.

◆

F. S. Darling, M. Can. Soc. C.E., formerly of the C.P.R. Engineering Department, is now Assistant of the Chief Engineer, Boston & Maine Rd., at Boston, Mass.

The Government Railways Managing Board announced at Moncton, N.B., Aug. 21, that increases of wages aggregating nearly $40,000 a year would be granted to the clerks in its employ.

Robert Gardiner, Locomotive Foreman, Grand Trunk Pacific Ry., Melville, Sask., writes:—"I have read the Railway and Marine World for the past four years and would not like to be without it."

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us

Canadian Northern Ry.—J. A. Carroll, heretofore District Master Mechanic, C.P.R., White River, Ont., has been appointed Road Foreman of Locomotives, District 1, C.N.R. Headquarters, Rainy River, Ont.

Blau-Gas
TRADE MARK

FOR WELDING PURPOSES

THE ROYAL LINE SS. "ROYAL GEORGE.

"At your request for a recommendation with reference to Blau-gas, I would say that we have used your Blau-gas and Oxygen for cutting out rivets and plates and have found it extremely satisfactory. It is much quicker than any other method of cutting I have seen used, also it can be used in places where hand work is impossible. I have much pleasure in recommending it to anyone requiring expeditious work of this kind."

THOS DAVIDSON MFG CO., MONTREAL.

"We have your favor of the 31st ult., and beg to say that we have tested the boiler you welded for us, and found it perfect."

THE BLAU-GAS COMPANY OF CANADA, LIMITED
27 McGILL COLLEGE AVE., - - - - MONTREAL.

L. D. Cole has been appointed Assistant Foreign Freight Agent at New York City, vice F. G. Frieser, transferred to Montreal. Office, 1 Broadway.

G. A. Walton, heretofore General Agent, Passenger Department, Spokane, Wash., has been appointed General Agent, Passenger Department, Chicago, Ill., vice A. B. Calder, resigned to enter private business in Winnipeg, Man.

Central Vermont Ry.—C. M. Hays, President, G.T.R. and G.T.P.R., who resigned the Presidency of the C.V.R. recently, as announced in our last issue, has been elected Chairman of the Board.

Fort Garry Union Station, Winnipeg.—J. Bannerman, heretofore in charge of Canadian Northern transfer service at Winnipeg, is reported to have been appointed station master, Fort Garry Union Station, Winnipeg.

Grand Trunk Pacific Ry.—J. Birse has been appointed Road Foreman, with territory from Westfort, Ont., to Transcona, Man., vice D. Miller, acting Road Foreman, assigned to other duties. Office, Westfort, Ont.

I. A. Macpherson has been appointed Assistant to the General Superintendent, vice R. D. Thomas. Office, Winnipeg.

F. G. Adams, heretofore Travelling Freight Agent, G.T.R., Winnipeg, Man., has been appointed Commercial Agent, G.T.P.R., Regina, Sask., vice W. E. Mann, resigned.

W. B. Cronk, formerly Superintendent, District 2, Lake Superior Division, C.P.R., White River, Ont., has been appointed Superintendent, G.T.P.R., with jurisdiction over the Melville-Regina, Regina-Boundary and Regina-Moose Lines. Office, Regina, Sask.

John Callaghan, heretofore Superintendent and Engineer for Foley, Welch and Stewart, G.T.P.R. contractors, has been appointed Division Engineer, G.T.P.R., at Fitzhugh, Alta.

The following agents have been appointed:—Redditt, Ont., L. W. Graham; Hinton, Alta., H. J. Toby.

In announcing the appointment of outside agents at Fort William, Ont., in our last issue, the name was given as R. Street Co., instead of the Ray Street Co.

Grand Trunk Ry.—J. H. Corcoran, heretofore in Intercolonial Ry. Passenger Department, has been appointed Travelling Passenger Agent. Office, Moncton, N.B.

W. Mewing, heretofore in General Freight Department, G.T.P.R., Winnipeg, has been appointed Travelling Freight Agent, G.T.R., vice F. G. Adams, appointed Commercial Agent, G.T.P.R., Regina, Sask. Office, Winnipeg.

The following agents have been appointed:—Compton, Que., R. F. Findlay; Doon, Ont., W. D. Harris; Pottersburg, Ont., T. H. Lashbrook; Copetown, Ont., E. H. Vrooman; Thorold, Ont., W. J. Meredith (acting); Seaforth, Ont., W. R. Plant. Outside agencies—Holland Landing, Ont., J. L. O'Brien; St. Marys, Ont., A. Willard; New York City, International Sleeping Car Co.

Great Northern Ry.—H. A. Noble has been appointed General Passenger Agent, vice S. J. Ellison, resigned to engage in other business. Office, St. Paul, Minn.

Intercolonial Ry.—W. P. Mills, heretofore acting Roadmaster, has been appointed Roadmaster, Cape Breton Division, vice S. Fraser, deceased. Office, Sydney, N.S.

John Savage has been appointed acting Roadmaster, Windsor and Dartmouth Branches, vice John McLellan, superannuated. Office, Windsor, N.S.

A. Astle, heretofore acting Roadmaster, has been appointed Roadmaster, Canada Eastern Division, vice A. W. Grass, resigned. Office, Fredericton, N.B.

New York Central Fast Freight Lines, Merchants' Despatch.—Carl Howe, Manager, has removed his office from Buffalo, N.Y., to 632 La Salle Street Station, Chicago, Ill., to which address all correspondence is to be sent, except that in connection with the tracing of cars. The Car Department, handling tracing of all cars, will continue at 708 Brisbane Building, Buffalo, under the supervision of F. B. Hannis, Car Accountant, to whom such communications should be addressed. The following lines are under Mr. Howe's jurisdiction:—Red Line, White Line, Blue Line, Canada Southern Line, West Shore Line, Nickel Plate Line, North Shore Despatch, Merchants Despatch-Dairy Line, Rutland-Michigan Central Line, Jersey Central-Lake Shore Despatch, Jersey Central-Michigan Central Despatch, Merchants Despatch-Pere Marquette Line.

Northern Navigation Co.—W. R. Burgin has been appointed Travelling Freight and Passenger Agent, to cover the territory west of Toronto including the G.T.R. Northern Division. Office, Sarnia, Ont.

S. Hewitt has been appointed Traveling Freight and Passenger Agent for the city of Toronto, and other special work. Office, Union Station, Toronto.

Quebec Railway, Light, Heat & Power Co.—H. G. Matthews, heretofore Secretary-Treasurer of the Marconi Wireless Telegraph Co. of Canada, has been appointed Assistant to the President of the Quebec Railway, Light, Heat & Power Co., with office at Quebec. We are advised that this appointment was made owing to the President, Rodolphe Forget, being unable to spend any time in Quebec, in consequence of his diversified interests.

Quebec, Montreal and Southern Ry.—G. F. Lavesque has been appointed Master Mechanic, vice A. C. West, resigned. Office, Sorel, Que.

Union Pacific Rd., Southern Pacific Co., Oregon Short Line Ry., Oregon-Washington Rd. and Navigation Co. G. W. Vaux, heretofore Travelling Passenger Agent, Toronto, has been appointed Canadian Passenger Agent. Office, Toronto.

White Pass and Yukon Route.—F. B. Wurzbacher has been appointed General Agent at Seattle, Wash., with jurisdiction over traffic matters in the Vancouver office, vice I. W. Dudley, resigned.

White Star-Dominion Line.—M. A. Overend, heretofore Travelling Freight Agent, Toronto, has been appointed Freight Agent for Ontario, vice G. W. Torrance, deceased. Office, Toronto.

Telegraph and Cable Matters.

Alex. E. Reoch has been appointed Secretary-Treasurer, Marconi Wireless Telegraph Co. of Canada, at Montreal, vice H. G. Matthews, resigned to enter Quebec Ry, Light, Heat and Power Co.'s service.

W. Marconi, of the Marconi Wireless Telegraph Co., arrived in Montreal, Aug. 14, by the White Star-Dominion Line s.s. Laurentic. It was reported that during the trip he carried out a number of experiments with wireless telegraph apparatus, which enabled him to keep in communication with the wireless telegraph station at Poldhu, Cornwall, throughout the entire voyage.

The Ottawa city council is planning the construction of conduits for the carrying of underground wires. Estimates recently considered cover the building of conduits for the high and low tension wires on a number of streets, for $45,000. It is stated that the work will not be undertaken until the spring, and in the meantime the objections of the C.P.R. Telegraphs and will form the subject of a conference.

The C.P.R. has opened telegraph offices at Chelsea, Hebert, Ivry and Timiskaming, Que.; Bobs, Dorion, Espanola, French, Moffat and Point au Baril, Ont.; Bredenburg, Candahar, Hume, Luseland, Salvador, Secretan and Trossachs, Sask.; and has closed its offices at Clarenceville, Eastman, Henryville, L'Ange Gardien East, Mount Johnson, Noyan Jct., Rougemont, St. Aime, Ste. Angele, St. Barnabe, St. Damase, St. Judes. St. Louis, St. Robert and Sabrevois, Que.; Hurkett and Rutter, Ont.

The bill which has been introduced into the British House of Commons to extend the Pacific Cable Act, 1901, also authorizes a submarine cable to be laid between Australia and New Zealand, as already sanctioned by the contributing Governments, and any other extensions, connections or rearrangements in, or near the Pacific Ocean, which, in the opinion of all the contributing Governments, are necessary or expedient for the improvement of the Pacific Cable Board's undertaking. The contributing Governments are those of Great Britain, Canada, Australia and New Zealand.

Among the Express Companies.

The Canadian Northern Ex. Co., which was recently fined $1,000 for contempt of court in connection with the delivery of certain papers referring to the last Manitoba elections, has withdrawn its appeal against the judgment, and has paid the fine.

E. A. Wellwood, route agent, Canadian Ex. Co., between Port Huron and Detroit, Mich., and Toronto, pleaded guilty to a series of thefts at Port Huron, Aug. 16, and was later sentenced for an indeterminate period from two to five years in Iona prison.

The Dominion Ex. Co. is objecting to the extension of the limits for delivery in Calgary, Alta., on the ground that if compelled to make free deliveries to isolated portions within the city limits, a greater expense would be involved than would be covered by the amount received for carriage of the goods.

The Canadian Ex. Co.'s return to the U.S. Interstate Commerce Commission for May 31st shows total receipts from operation, $236,710; net operating revenue, $26,487, against $184,476 total receipts from operation and $8,847 net operating revenue for May, 1910. The aggregate total receipts from operation for 11 months ended May 31 were $2,414,761; net operating revenue, $235,137, against $2,235,086 total receipts from operation and $224,652 net operating revenue for same period 1909-10. The mileage operated over for the 1910-11 period was 7,362 on steam railways, and 162 other lines, against 6,520 steam and 2,792 other lines, for the 1909-10 period.

The Wells, Fargo and Co. express service was put into operation over an additional 16,000 miles of territory, Aug. 1. Included in the lines now operated over is the Wabash Ry., divided as follows:—from Detroit, Mich., to Buffalo, N.Y., not including Buffalo, nor Niagara Falls, and Milan to Detroit, Mich., is included in District 2, E. B. Thomas, Route Agent, with headquarters at Detroit, Mich.; from State Line to Roanoke, and Attica to Covington, Ind., included in District 3, G. E. Mikesell, Route Agent, with headquarters at Huntington, Ind.; from Hammond, Ind., to Monclova. on Fort Wayne, mond, Ind. to Monclova, and Fort Wayne, Ind., to Whitehouse, O., included in District 4, F. E. Brownell, Route Agent, with headquarters at Hammond, Ind. The report that the Pacific Ex. Co. had been taken over is incorrect. This report is accounted for by the fact that Wells, Fargo and Co. had purchased some of the Pacific Ex. Co.'s material and property at certain points.

A HISTORY OF THE PAY-AS-YOU-ENTER CAR

AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

USE "DUNTLEY" ELECTRIC TOOLS

For drilling, grinding, and blowing. Our electrical drills, grinders and blowers are supplied arranged for standard voltages, indirect and alternating current. We have recently gotten out a new line of Universal Drills, which have the unique property of being capable of running interchangeably on direct or alternating current of 60 cycles or less. We have also a new line of electric drills for heavy duty, being heavier in weight than the light duty tools, but the increased weight has been distributed to the utmost advantage, and represents increased capacity, higher efficiency, longer life, etc.

Write us for prices and general information.

The Use of Tee Rails in Street Railway Construction.

By F. G. Simmons.

(CONTINUED FROM AUGUST ISSUE.)

The author wishes to call particular attention to this New York engineer's words when he says, "There is no difficulty in laying a smooth top paving of a type suited for any vehicular traffic in connection with the use of a standard section of tee rail, and if properly designed and constructed the pavement should not wear in ruts." This is the meat in the nutshell. It can be done and that without difficulty, but it does call for co-operation between the railway and the municipal engineers.

L. W. Rundlett, Commissioner of Public Works of St. Paul, Minn., wrote the committee as follows: "Instead of answering the questions exactly as given, I would say in relation to the rail section to be used for street car traffic that, in my opinion, the tee rail best suits all conditions. In the first place, I think it is the best rail that can be put down, looking at it from the street car standpoint, and I am of the opinion that in paved streets the pavement can be so laid that it gives equally satisfactory results, as far as the city is concerned, as the grooved rails, and on unpaved streets it causes no more obstruction than the grooved rail, although it is evident that teams can be driven along the line of the grooved rail better than on the tee rail; but that is not the result desired by a city, as, at present, what we expect of the street car companies is rapid transit, and we do not wish to invite any team traffic along the tracks to obstruct them. As the tracks are laid in this city on the paved streets, I will say that we have never experienced any trouble and I have never received any complaints either from teamsters or from the public in general, and I do not think there is any particular difference whether the traffic is light or heavy. The construction of the pavement between the tracks and on the outside of same must be first class when the tee rail is used, and the same thing might be said of any rail. In regard to the height of the rail, it must be sufficient to give ample room to put in the pavement on paved streets, and the 7-in. 91-lb. standard rail which is used by the street car company at the present time is perfectly satisfactory. On streets where there is no pavement, a 4-in. rail has been found sufficient."

City Engineer Andrew Rinker, of Minneapolis, Minn., also wrote the committee to the effect that Minneapolis considered the tee rail the best for use in city streets.

Here are the responsible city engineers of two of our most prominent cities placing themselves on record as unqualifiedly in favor of tee rail, and as these cities have had many years experience with it, their opinions may be considered incontrovertible. Minneapolis in particular is today, in the opinion of the author, nearly, if not quite, the best paved city of any considerable size in the United States.

At a meeting of the Southwestern Electrical and Gas Association at El Paso, Texas, on May 7, 1908, Mark Lowd, of the Stone & Webster Engineeering Corporation, in a paper on track construction, had the following to say: "It is the intention of this article to deal briefly with tee rail construction in paved streets, this being the type of construction which the writer believes to be the best for the operating companies from the standpoint of first cost and economy of operation. In many cities the type of rail is designated by ordinance, which unfortunately in most cases specifies grooved rail. These ordinances were largely the result of a lack of attention and inexperience on the part of the railway companies in the early days of electrical traction. Emerging from the days of the horse car to the heavier electric car, the railways were confronted with the problem of securing a rail suitable for the new conditions confronting them. The old strap rail, the light tee rail, and the light girder rail were all found inadequate, it being impossible to maintain either a satisfactory rail or a well kept pavement. The manufacturers gave us the girder rail of greater height and weight, in various forms, and the grooved rail, also of greater weight. It is probable that the first good results in paved streets were obtained by the use of the girder and grooved rails, and this is the principal reason that so many cities demand the use of such rails. With the increase in weight and height of the tee rail occasioned by the needs of the steam railways for heavier rail to meet the requirements of high speed and greater weights, there came an opportunity to demonstrate that the tee rail could be used in any kind of paved street with excellent results, both in regard to car operation and maintenance of roadway. The tee rail has many advantages over either the girder or grooved types, and no disadvantages that are known to the writer. It is preferred for the following reasons:

FROM THE PRESIDENT OF THE CANADIAN STREET RAILWAY ASSOCIATION.

James Anderson, General Manager, Sandwich, Windsor and Amherstburg Railway, writes from Windsor, Ont., as follows:

"I take pleasure in saying that your paper gives more reliable and up-to-date news of the railways and railway men than any other publication of its kind. What is true of the railway side, must also be true of the marine interests, and you are deserving of the patronage of both classes."

"It is designed on better mechanical lines; there is no eccentric loading as in the case of the grooved rail.

"There is no excessive waste of metal when heavy traffic and large wheel flanges are to be considered. In many cities grooved rails weighing from 125 lb. to 150 lb. per yard have been used, where an 80 lb. or 90 lb. tee rail would have been sufficient.

"The flangeway is always ready for an increase in size of wheel flanges of the local cars, or for the interurban car with the large flanges necessary for high-speed work.

"The tee rail is not as noisy.

"Car wheel maintenance is less.

"The tee rail has a longer life, particularly at the joint, which is the vital point of any rail.

"It is more easily handled, and high-priced shop curves are unnecessary.

"A good vitrified brick or paving block makes a most satisfactory form of pavement, especially in the south and southwestern country. If asphalt or bitulithic pavement is used, do not under any circumstances permit the asphalt or bitulithic to be laid against the rail. Use a brick or stone liner against the rail. This will not only permit the tightening of a joint-bolt or the renewal of a bond without disturbing the adjoining pavement, but will also make a more durable job. The use of the special or nosed brick is unnecessary and rather unsatisfactory. The regular brick laid as shown in the accompanying cross-section of tee rail construction will give far better results. This construction has been used with great success in Milwaukee and other cities. A rich cement grout makes the most satisfactory filler for brick or stone pavement."

W. A. Heindle, Superintendent of Construction for the Tri-City Ry. Co., in the cities of Davenport, Rock Island and Moline, Ill., says: "We are limited in our Davenport work to a 7-in. tee rail, while we are compelled to use a 7-in. girder rail on the Illinois side of the river. All things considered the high tee rail will be found most suitable and serviceable provided a satisfactory form of pavement be installed. The selection of paving materials rests principally with the city authorities. While asphalt presents the neatest appearance, it is hardly suitable for track work, as it disintegrates under vibration and water. Where asphalt must be laid, however, it is advisable to lay longitudinally, three or four courses, or a toothing course of brick, adjoining the rail. Creosoted wood block is coming into extensive use, and is very satisfactory paving material, but somewhat expensive. With care the wooden block can be laid so that any swelling due to moisture will not affect the track gauge All things considered, vitrified paving brick seems to afford the best material for the purpose. The use of tee rail may require special brick for forming the flangeway. Where vehicles use the railway right-of-way, these special bricks will cut out in the course of two or three years and the pavement will become unsightly. Better workmanship can be secured by using beveled stone blocks for forming the flangeway or by using standard brick, starting the first course entirely beneath the rail head and giving the pavement the proper crown. This is satisfactory, provided the depth of wheel flange is not greater than the depth of rail head."

The city of Detroit, which was formerly a firm advocate of the girder type of rail, sent out a committee two years ago to investigate the merits of tee rail construction. This committee consisted of members of the city council and the Assistant City Engineer. They visited Grand Rapids, Milwaukee, St. Paul and Minneapolis. Upon their return they reported the result of their investigations to the city council and after reciting the subject matter obtained while on the trip, they said: "We therefore recommend that the Commissioner of Public Works grant the company permission to

reconstruct the tracks on Jefferson Ave. from Woodward to Beaufact Avs. on the express condition that the company use a 60-ft. 7-in. tee rail weighing from 91 to 97 lbs., using granite blocks between tracks and 18 inches outside." This recommendation was confirmed, the tee rail was laid and Detroit is now enthusiastically in the tee rail column.

In summing up the concensus of opinion over the country it seems that the chief opponents of the use of tee rail in city streets are the municipal officers and other engineers in the cities where practically no experience has been had and that practically all those officers and engineers who have had anything like a comprehensive experience with this type of construction are strongly in favor of it. Proper results are often prevented through the methods employed by the municipalities in laying the paving. I can illustrate this to you more clearly by telling you how this work has been done in Milwaukee. Under the laws now in force there the kind of paving to be used is finally determined through petition of the property holders, and it is a sad fact that they rarely select the type of pavement best suited to the conditions. The arguments of paving contractors, material supply men and others are brought to bear and the result usually obtained is political and not mechanical.

(*Continued in October issue.*)

Electric Railway Notes.

The British Columbia Electric Ry. is converting all its old cars into the multiple unit system, and is building 25 steel frame single end cars.

The Calgary Municipal St. Ry. has received two single truck pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont.

The Port Arthur and Fort William Electric Ry. has received two double truck pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont.

The Ottawa Electric Ry. has received four 33½ ft. electric pay-as-you-enter cars, 45 ft. long over all, mounted on 27-FE-1 trucks, from the Ottawa Car Co., Ottawa.

The Edmonton Radial Ry. has received two 30½ ft. long overall. mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa, Ont., and two singe ended cars from the Preston Car and Coach Co., Preston, Ont.

The population of London, Ont., which it was anticipated would reach the 50,000 necessary before a vote on the question of the operation of street cars on Sundays can be taken, has been announced as only 47,968.

Press reports recently stated that D. A. Gordon had been elected President, Chatham, Wallaceburg and Lake Erie Ry., succeeding the late G. W. Kipp, but we have been officially advised that no appointment has been made, nor will it be taken up until the annual meeting in September.

J. A. Marsh, who was recently appointed Trainmaster, British Columbia Electric Ry., New Westminster, was born at Dresden, Ont., Aug. 16, 1876, and entered B.C. Electric Ry. service in 1903, since when he has been to May 1, 1911, three years as conductor on the interurban lines and five years as agent at Vancouver.

The Montreal Street Ry. applied for a writ of prohibition, Aug. 16, to prevent the board of arbitration, recently appointed under the provisions of the Lemieux Act, to investigate some differences between the employes and the company from acting. The application alleges that the Industrial Disputes Investigation Act of 1907 is unconstitutional.

H. G. Matthews, heretofore Secretary-Treasurer of the Marconi Wireless Telegraph Co. of Canada, has been appointed Assistant to the President of the Quebec Railway, Light, Heat and Power Co., with office at Quebec. We are advised that this appointment was made owing to the President, Rodolphe Forget, being unable to spend any time in Quebec in consequence of his diversified interests. Mr. Matthews, who is 33 years of age, is a native of Montreal.

E. Sterling, who was recently appointed Division Trainmaster, B.C. Electric Ry., New Westminster, was born at Thornbury, Ont., Oct. 3, 1875, and entered railway service, May, 1891, since when he has been, to Oct., 1896, operator and agent, C.P.R.; Oct., 1896, to Mar., 1897, train dispatcher, C.P.R., Smelter Jct., B.C.; Mar., 1897, to July, 1909, conductor, C.P.R.; July to Oct., 1909, acting Trainmaster, C.P.R., Nelson, B.C.; Oct., 1909, to May 1, 1911, Chief Dispatcher, B.C. Electric Ry.

Following are the chief details of the two combination passenger and baggage cars which the G.T.R. is building at its Montreal shops, for the Montreal and Southern Counties Ry.:—

Length over buffers	49 ft. 4 ins.
Outside width over sheathing	8 ft. 1½ ins.
Height outside over all	12 ft. 6½ ins.
Length inside passenger compartment	18 ft. 6 ins.
Length inside, smoing compartment	10 ft. 6½ ins.
Width inside in clear	7 ft. 4 ins.
Seating capacity, passenger compartment	28
Seating capacity, smoing compartment	16
Baggage door, one each side, width	3 ft. 6 ins.
Motorman's door, width	2 ft.
Motors, each car	Four 40 h.p.

Patrick Dubee,

Secretary, Montreal Street Railway, and Vice President, Canadian Street Raillway Association.

F. R. Glover, heretofore Assistant Manager, British Columbia Electric Ry., has been appointed General Executive Assistant. The circular announcing this appointment states: "While the directors regret that this appointment will sever Mr. Glover from active participation in the operating end of the company's business, they are glad to think that he will now have more time to devote to giving them the benefit of his experience and advice on those questions of policy which are constantly arising. They also take this opportunity of publicly acknowledging the valuable services which he has rendered to the company for so many years."

Patrick Dubee, whose portrait appears on this page, was born in Montreal, March 4, 1876, and was educated at the Christian Brothers School and at St. Patrick's Academy. He started as office boy with the Montreal St. Ry. Co., July 9, 1890, two years before the electrification of the road, and has remained in its employ ever since, occupying various positions in the Secretary, Comptroller, and Manager's office until May, 1901, when he was appointed Assistant Secretary at the time that W. G. Ross was appointed Secretary-Treasurer. In Dec., 1903, Mr. Ross having been elected Managing Director, Mr. Dubee was appointed Secretary. In 1903, when the Montreal St. Ry. Mutual Benefit Association was organized, the details in connection with the organization were left in his hands. He was subsequently elected a Director and Secretary-Treasurer of the Association and has occupied those positions continually since. This Association is recognized as the most successful of its kind in America. In 1901, when the Montreal St. Ry. Co. acquired control of the Montreal Park & Island Ry. Co., he was appointed Secretary of the latter company. In 1904, on the organization of the Suburban Tramway & Power Co., he was appointed Secretary-Treasurer, and in 1909 he was appointed Secretary-Treasurer of the Longueuil Tramways Co., all of which positions he still holds. He has taken a very active part in the Canadian Street Railway Association's proceedings since its inception in 1904, having been a member of the executive committee for several years, and this year being Vice President.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for June, $387,664; working expenses, $252,819; net operating earnings, $134,845; renewal funds, $29,770; net earnings, $105,075; approximate income from investments, $20,000; net income, $125,075, against $253,180 gross earnings; $159,095 working expenses; $94,085 net operating earnings; $17,852 renewal funds; $76,233 net earnings; $16,500 approximate income from investments; $92,733 net income for June, 1910. Aggregate gross earnings for 12 months ended June 30, $4,226,834; net earnings, $1,589,784, against $2,981,617 gross and $1,239,839 net for the same period 1909-10.

Dividend at the rate of 5% per annum has been paid on the 5% non-cumulative preferred ordinary stock, for the half year ended June 30, together with an additional dividend at the rate of 1% per annum for the same period.

Calgary Municipal St. Ry.—The official figures for the operation of the electric railway for the six months ended June 30 show:—Receipts, $153,446; working expenses, $103,275; net earnings, $50,171. Expenditure during the six months on extensions, etc., $324,693; amount authorized by bylaw for extensions, $486,604.

Earnings for July, $39,147; operating expenses, $15,187; net earnings, $23,960. After making provision for fixed charges, there remains a surplus for the month of $16,000.

Edmonton Radial Ry.—The revenue for the first six months of the year was $106,655, against $67,906 and $35,297 for the same periods of 1910 and 1909, respectively. The number of passengers carried during the first six months of this year was 2,534,358, against 1,566,816 during the same period in 1910, and 806,988 in 1909.

Halifax Electric Tramway.—Receipts for July, $23,821.28, and for week ended Aug. 7, $5,641.11, against $22,176.80 and $5,071 for same periods 1910.

London St. Ry.—Gross earnings for July, $24,066.19; expenses, $16,384.32; net earnings, $7,681.87; deductions, $2,-

450.65; net income, $5,231.22, against $24,248.90 gross earnings; $16,556.08 expenses; $7,692.82 net earnings; $2,441.75 deductions; $5,251.07 net income for July, 1910. Aggregate gross earnings for seven months ended July 31, $151,868.02; expenses, $110,577.33; net earnings, $41,290.69; deductions, $16,719.99; net income. $24,570.70. against $141,513.59 aggregate gross earnings; $103,154.76 expenses; $38,358.83 net earnings; $16,698.65 deductions; $21,660.18 net income for same period 1910.

Montreal St. Ry.—Passenger earnings for July, $421,666.94; miscellaneous earnings, $16,104.20; total earnings, $437,771.14; operating expenses, $231,068.27; net earnings, $206,702.87; city percentage on earnings, $51,436.56; interest on bonds and loans, $15,043.91; rental leased lines, $607.10; taxes. $5,000; total charges, $72,087.57; surplus, $134,615.30; expenses per cent. of earnings 52.78, against $383,371.70 passenger earnings; $15,475.22 miscellaneous earnings; $398,846.92 total earnings; $215,224.22 operating expenses; $183,622.70 net earnings; $39,200.82 city percentage on earnings; $14,705.50 interest on bonds and loans; $552.90 rental leased lines; $4,000 taxes; $58,459.22 total charges; $125,163.48 surplus; 53.96 expenses per cent. of earnings, for July, 1910. Aggregate total earnings for 10 months ended July 31, $3,876,711.22; operating expenses, $2,246,207.60; net earnings, $1,630,503.62; total charges, $475,972.99; surplus, $1,154,530.63; expenses per cent. of earnings, 57.94, against $3,490,646.48 aggregate total earnings; $2,021,516.05 operating expenses; $1,469,130.43 net earnings; $419,546.49 total charges; $1,049,583.94 surplus; 57.91 expenses per cent. of earnings for same period 1909-10.

Sherbrooke Ry. and Power Co.—Gross earnings for three months ended July 31, $12,711.97, against $9,579.05 for the corresponding three months of 1910. Passengers carried in July 119,449, against 85,470 in July, 1910.

Toronto Ry.—Gross earnings for June, $398,685; working expenses, maintenance, etc., $191,973; net earnings, $206,712, against $362,371 gross earnings; $180,089 working expenses, maintenance, etc.; $182,282 net earnings, for June, 1910. Aggregate gross earnings for six months ended June 30, $2,232,005; net earnings, $1,085,741, against $2,019,213 gross, and $968,742 net for same period 1910.

At a special general meeting of shareholders in Toronto, Aug. 14, the capital was increased by $4,000,000, to be disposed of as follows:—$2,000,000 to be issued to shareholders of record, Aug. 25; $1,000,000 to be divided among the shareholders as a stock dividend, and $1,000,000 to be retained in the treasury. The capital is now $12,000,000.

Toronto Suburban Ry.—A mortgage trust deed in favor of the British Empire Trust Co., securing an issue of £540,000 of 4½% first mortgage debentures. has been deposited with the Ontario Railway and Municipal Board, Toronto.

Winnipeg Electric Ry.—Gross earnings for June, $305,353; working expenses, $141,251; net earnings, $164,102, against $242,420 gross earnings; $117,128 working expenses; $125,292 net earnings for June, 1910. Aggregate gross earnings for six months ended June 30, $1,881,605; net earnings, $925,550. against $1,532,195 gross and $754,880 net for same period 1910.

The matter of the purchase of the Winnipeg Electric Ry. on the basis of $250 a share by the city of Winnipeg has been under consideration by the city council for some time. A committee was appointed, July 31, to negotiate an agreement for the transfer of the property, and to arrange for the submission of a bylaw to the taxpayers sanctioning the purchase. Sir Wm. Mackenzie, President of the company, personally attended several meetings of the committee to discuss the matter, and it was reported, Aug. 14, that the negotiations had fallen through. This, however, was denied Aug. 22.

Guelph Radial Railway Electric Locomotive.

The Guelph Radial Ry. has recently received an electric locomotive which is illustrated on this page. It is of the double truck industrial type, and is built for standard gauge track. The trucks are of the equalized pedestal type, with cast steel rigid bolsters and inside hung motors. The wheels are steel tired. with cast iron centres. The frame is built of 10-in. steel channels with cast iron bumpers. The longitudinal sills are four in number, and they are strongly braced transversely. A radial draw-bar is used at each end, and the couplers are of the M.C.B. automatic type.

The cab is centrally located, and has large side and end windows. An efficient hand brake is fitted, as well as the Westinghouse automatic air brake. The equipment throughout is most complete for a locomotive of this type. It was built by the Baldwin Locomotive Works. Following are the general dimensions:—

Motors, four, No. 101-B-2	500 volts.
Wheel base, rigid 6 ft. 0 ins.	18 ft. 0 in.
Diameter of Drivers	33 in.
Journals,	3¾ in. x 7 in.
Width,	8 ft. 0 in.
Height,	12 ft. 6 in.
Length	23 ft. 0 in.
Weight	54,000 lbs.

Electric Railway Projects, Contructions, Betterments Etc.

Alberta Electric Ry.—Press reports state that surveys are being made for the building of an electric railway from Banff to Calgary and other points in Alberta. (June, pg. 555.)

Birds Hill and Springfield Ry.—The Springfield, Man., municipal council has ratified the bylaw granting franchise for the building of an electric railway by this company. (Aug., pg. 783).

British Columbia Electric Ry.—The question of the unification of the various franchises held by the company for lines in Vancouver and vicinity, in conjunction with the plans for the enlargement of the city boundaries is still under discussion. If the idea is carried through, the company will surrender its existing franchises, which have varying terms of years to run, and will be given a new franchise with conditions covering greater Vancouver, and provided with arbitration clauses, covering terms.

A contract has been let to D. Matheson for the erection of a new freight shed, 167 by 38 ft., at the foot of Carroll St., Vancouver.

The Board of Railway Commissioners has authorized the Vancouver, Fraser River and Southern Ry. to open for traffic its line from Park Drive, Vancouver, to Eight Ave., New Westminster.

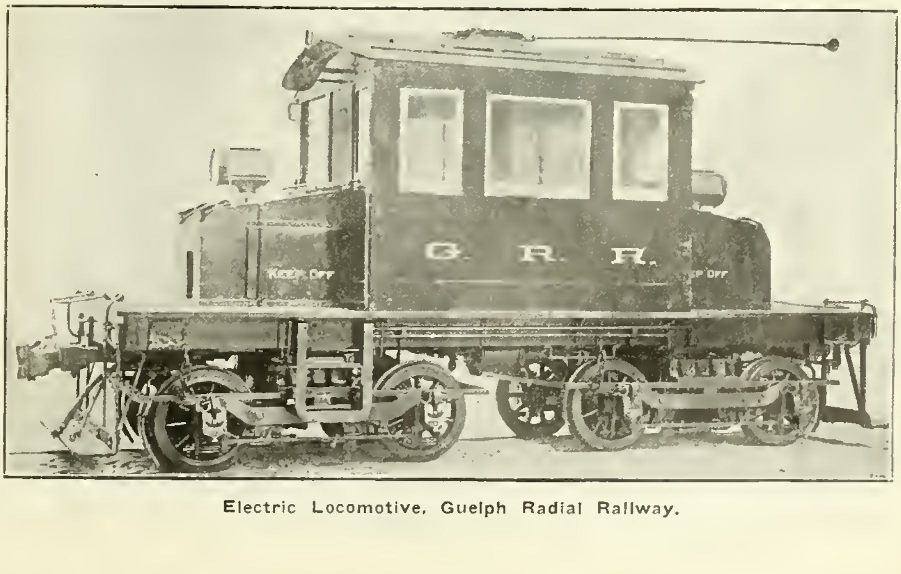
The question of the construction of lines to Blaine, at the International boundary, the Delta district, to Columbia. and to Sunnyside, are under consideration. It is stated that a decision has been reached that the New Westminster-Millside line and the Point Grey lines are to be built at once. (Aug.. pg. 783).

Calgary Municipal St. Ry.—The Shoredice Park extension is expected to be ready for operation by Aug. 27. Good progress is being made with other extensions. Propositions are under consideration for the building of extensions to South Calgary and to Manchester subdivisions; a line on Eighth Ave. will not be built at present, and a proposal to build a private line, 11 miles in length, has been withdrawn.

The City Commissioners had under consideration, Aug. 15, the recommendations of T. McCauley, Superintendent of the railway, recommending the building of a second track on certain streets, the extension of other lines, and the purchase of additional equipment and rolling stock. The estimates show $114,140 for work inside the city, $49,980 for extensions outside the city, and $156,000 for additional equipment and rolling stock.

Edmonton Radial Ry.—Strathcona Radial Ry.—An agreement has been reached between the municipal councils of Edmonton and Strathcona, Alta., by which the city of Strathcona will be absorbed into the city of Edmonton. One of the conditions of the amalgamation is that a low level traffic and railway bridge be built across the Saskatchewan River at the foot of Fourth st. by the city of Edmonton. The city of Edmonton owns the electric railway system in that city and controls that in Strathcona. The agreement, which now awaits final sanction of the citizens, lays down a basis for the operation of the existing lines in both places, and for the building of extensions. (May, pg. 453.)

Gatineau River Valley.—Press reports state that a company is being organized in Ottawa to build an electric railway from that city along the valley of the Gatineau River. The idea is to make the line serve all the summer resorts between Ottawa and Farm Point, Que.



Electric Locomotive, Guelph Radial Railway.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog **now.**

Halifax Electric Tramway. — The Point Pleasant Park extension was opened for traffic Aug. 10. (Aug., pg. 783.)

Lake Erie and Northern Ry.—Plans and estimates for the first section of this projected railway are reported to have been completed by W. P. Kellett, Chief Engineer. This section extends from Port Dover, on Lake Erie, via Simcoe, and Waterford to Brantford, Ont. (July, pg. 683.)

Lethbridge, Alta.—In connection with the plans for paving the streets, the Lethbridge, Alta., City Council has directed its engineer to investigate the street railway systems at Calgary and Edmonton, with a view of preparing the streets for tracklaying. (Mar., pg. 257.)

London and Lake Erie Ry. and Transportation Co.—It is proposed to erect a new passenger station and an addition to the freight shed in London, and a new transformer station and freight shed in St. Thomas, Ont. An extension of the line from Port Stanley to Erie Rest, at the western extremity of the municipality, is under consideration. (June, pg. 555.)

Lunenburg Electric Ry.—The Nova Scotia Legislature has incorporated a company with this title to build an electric railway within the municipalities of Lunenburg and Chester, the provisional directors being:—F. G. Nichol, Mahone Bay, N.S.; W. Duff, F. Powers, H. H. McIntosh, F. Matheson, Lunenburg, N.S.; W. H. McDonald, J. D. Lohnes, Riverport, N.S.

Press reports stated that surveys are being made under the direction of F. G. Nichol, for an electric railway 12 miles long from Lunenburg to Riverport. (June, pg. 555.)

Moncton Tramways, Electricity and Gas Co.—We are advised that during the past few months the company has been directing its work chiefly towards the completion of the natural gas installation in Moncton, N.B., and that it is expected to have the gas in use in a month or so. Progress in connection with the building of the proposed electric railway has, therefore, been slow. As a fact, however, the company has erected poles for stringing the overhead wires over the entire route, and it is intended making a start with the track work in the course of a few weeks. Orders have been placed in the United States for the rails and it was expected that delivery of the same would be begun by Aug. 30. The company issued advertisements for men and teams for grading Aug. 15. W. G. Ritchie is resident engineer. (June, pg. 557.)

Montreal and Southern Counties Ry.—We are advised that work was started Aug. 1 on an extension of the line in St. Lambert, Que., on a private right of way, from Front St. to the Country Club, 1.25 miles. As this will be the first section of the main line through Laprairie, Huntington and Chateauguay counties, the line will be of heavy construction and laid with 80 lb. steel. It was expected to have this extension completed Aug. 30.

CITY OF TORONTO, CANADA.

Underground Subway Construction.

It is the intention of the City of Torono to call for tenders for construction of double track underground subways, approximately three miles in length, on or about September 15th.

Intending bidders please be governed accordingly.

G. R. GEARY, Mayor.

City Hall, Toronto, August 25th, 1911.

Application was made, Aug. 15, for an injunction to restrain the company from continuing to have its tracks on certain streets in St. Lambert. Judgment was delivered, Aug. 18, dismissing the action on the ground that the matter under litigation had already come up before the Board of Railway Commissioners, and that the decisions of the latter body, on questions of fact, were final. As to the competency of the commission in regard to questions of law, the matter is now pending an appeal taken before the Supreme Court.

The Montreal board of Control is considering an application from the company to extend its lines on the following streets:—McGill, St. Paul, Lagauchetiere, Cathedral, Metcalfe, Burnside, Stanley, Osborne, Mountain, Albert, Inspector and Chaboillez Square. (April, pg. 365.)

Montreal Street Ry.—The company notified the city council, Aug. 4, that it was intended to start construction of car lines on the following streets:—Plateau, St. Elizabeth, and Portugal, in Notre Dame du Grace Ward. A conference is being arranged with a view of deciding on other extensions as to which there is some difference of opinion between the council and the company. The final settlement of the differences as to the track space on Commissioner St., between the company and the Harbor Commissioners is likely to be made by the city providing space for the street railway tracks, which are now partly on the Harbor Commissioners' property. (Aug., pg. 783.)

Moose Jaw Electric Ry.—The meeting held at Moose Jaw, Sask., July 31, was a formal gathering for the purpose of closing out the affairs of the Moose Jaw Electric Ry. Co., Ltd., and transferring the assets and liabilities to a new company, with a similar title, incorporated by the Saskatchewan Legislature. The meeting of shareholders to ratify the transfer was held in Victoria, B.C., in which province the original company was incorporated.

About six miles of track has been laid, the overhead work is completed, and everything is about ready for operation. The power house is practically completed. The first section of the line was placed in operation Aug. 17. It is intended to complete seven miles of track this year. No plans, we are advised, have been arranged as to future extensions. (Aug., pg. 783.)

Morrisburg and Ottawa Electric Ry.—Following are the officers elected at the organization meeting held Aug. 3:—President, Jas. Oliver; Vice President, Alderman W. J. Campbell; Secretary-Treasurer, R. A. Bishop.

Press reports state that arrangements are being made to have surveys made at once so that some construction may be done this fall. (Aug., pg. 783.)

Nanaimo, B.C.—A letter was read from Stewart and Rogers, at the meeting of the city council, Aug. 3, refusing to agree to the amendments made by the council to the proposition for the building of an electric railway in the city. The council passed a resolution informing Stewart and Rogers that unless the amendments were agreed to the negotiations would be called off. (July, pg. 683.)

Nipissing Central Ry.—The question of the route for the extension from Cobalt to Liskeard, Ont., is said to be practically agreed upon, and a start is expected to be made with construction at an early date. (Aug., pg. 783.)

North Midland Ry.—A. E. Welch told the St. Marys, Ont., town council, Aug. 10, that arrangements had been made to build an extension of the projected line into St. Marys and Stratford, and that provided all conditions were satisfactory, construction would be started this fall. (Feb., pg. 169.)

Ottawa Electric Ry.—The company, it is said, has refused to consider the building of the proposed cemetery extension through Beechwood Ave. The route favored by the company is that via Cumming's bridge. (July, pg. 683.)

Ottawa, Smith's Falls and Kingston Ry.—At a recent meeting of directors in Ottawa arrangements are said to have been completed for the commencement of field work, and for an early start at construction. It was expected to have location work started by Aug. 30. Capital stock is being subscribed locally, and arrangements are being made for the financing of the construction in England. The survey work is in charge of — Upson, C.E., and R. W. and S. E. Farley, were reported Aug. 11, to be in charge of parties at work in the field. The centre of the survey work is at Manotic, one party working towards Ottawa and the other towards Smiths Falls. (Aug., pg. 783.)

Ontario West Shore Ry.—A correspondent of the Goderich Star says he recently went over the route for this railway and that from appearances the work is anything but progressive or promising for early completion. (June, pg. 557.)

Quebec Ry., Light and Power Co.—The President and other directors recently inspected the country in the direction of Lorette, Que., and it is stated that arrangements are being made with a view of extending the line in that direction. (Aug., pg. 783.)

Regina Municipal Ry.—A car service was started on two routes Aug. 14, and others will be started as soon as other lines are completed. Cars were started running over the lines July 25, and the formal opening of the line for traffic took place July 27, but it was not until Aug. 14 that a regular schedule was put in operation.

Construction on other lines is being pushed as fast as possible, and the city council has propositions under consideration for the extension of the lines to other parts of the city. (Aug., pg. 783.)

Toronto Civic Lines.—Assistant City Engineer Powell stated, Aug. 17, that about 10 miles of the civic street railway had been completed out of the 15 miles proposed to be laid. The question of the operation of these lines by the Toronto Ry. is under consideration.

Work was started, Aug. 10, on the line on Gerrard St. east, under the charge of E. L. Cousins, the city's railway engineer. (July, pg. 685.)

Winnipeg Electric Ry.—Extensions of lines are being built on Sargent and Ethel Avenues, and on Donald and Garry Streets, and other extensions which it is expected will be built this year are:—Selkirk and McPhillips Street joining with Logan Ave., and lines via Brant St. bridge and Notre Dame Ave. West. The question of extensions in other parts of the city was under discussion by the city council Aug. 9, and was held over for further reports by the City Engineer. (July, pg. 685.)

Quebec Railway Light, Heat and Power Company's Organization.

The chart on this page shows the old organizations of the five companies which have been merged into the Quebec Railway, Light, Heat and Power Co., namely, the Canadian Electric Light Co., the Jacques Cartier Electric Co., the Quebec Railway Light and Power Co., the Quebec Gas Co., and the Frontenac Gas Co., and also the organization of the new or consolidated company. Under the re-organization there is one general manager instead of five as before, and the heads of departments have been reduced from 25 to 10. The salaries for management and superintendents formerly amounted to over $73,000 a year. At half the cost under the consolidation better salaries are paid and it is claimed that better men are obtained. There is also, of course, a large saving in directors' fees, auditing, solicitors, medical advisers, etc. This is merely one phase of the advantages of consolidation, which, sooner or later, means better service to the public and reduction in rates they have to pay.

Before the consolidation it was not unusual for the consumer to have three meters, one for electric power supplied by the Quebec Railway Light and Power Co., one for electric light supplied by the Jacques Cartier Electric Co., and one for gas supplied by either the Quebec Gas Co. or the Frontenac Gas Co. Where formerly this consumer was troubled three times a month by three different meter readers, representing three different companies, and had to keep track of three different accounts payable at three different dates, since consolidation this consumer is only visited by one meter reader, who reads all three meters on the same date, and all three accounts are rendered on the one bill, which simplifies the matter very materially. Where formerly it was not uncommon to have an accident on a transmission line, necessitating the shutting down of the individual plant until repairs could be made, thus leaving the consumer of the company in darkness, since consolidation, with these three electric light plants tied together, such a thing as a shut down and leaving any portion of the city in darkness would be almost impossible.

◆

The Quebec Public Utilities Commission and Electric Railways.

In November, 1910, the Commission ordered the Montreal Street Railway to remove the fenders and to equip all cars with automatic drop wheel guards, also to equip all cars over 30 ft. long, and weighing 25,000 lbs. and over, with air brakes, in addition to hand brakes and sanding apparatus. The order was also made applicable to all other electric railways subject to the Commission's jurisdiction, unless cause to the contrary is shown. The Quebec Railway, Light, Heat & Power Co., which was served with the order, objected on the ground that it was not a public utility, but was in control of the Quebec Railway, Light & Power Co., which had been declared subject to Dominion authority. The Commission recently decided in favor of the company's contention.

A. K. S. Hemming complained recently to the Commission that the Montreal St. Ry.'s crossing of the G.T.R.'s four tracks at Guy St., Montreal, was dangerous and that it should be removed further west, where the G.T.R. has only two tracks. He also asked that the M.S.R. service between Centre St. and Notre Dame St., along Seigneurs St., be changed, and complained that a corner of Seigneurs St. near the Montreal Woollen Mills, was dangerous, owing to the narrowness of the street, and asked that the city be ordered to widen the street. The M.S.R. Co. questioned the Commission's jurisdiction, and the Commission decided recently that as the change of crossing suggested would involve the M.S.R. crossing the G.T.R. at another point, and as the G.T.R. is subject to Dominion jurisdiction, the Commission had no authority to make such an order, and that it has no jurisdiction to order the city to widen a street.

◆

The Winnipeg Electric Ry. has added 30 new cars to its rolling stock during the present year, and a number of additional cars are being built at the company's shops, Fort Rouge, Winnipeg.

J. J. Hackney, who recently resigned the position of Manager, Guelph Radial Ry., on his appointment as Manager of Public Utilities at Port Arthur, Ont., as announced in our last issue, was, prior to leaving Guelph, presented with a gold fob and an address by the railway employes.

The Toronto Railway Co. recently transferred its found articles department from the head office building, corner of King and Church Streets, to the new Lansdowne Avenue car barn in the west part of the city. The matter was taken up by the city council, on the ground of inconvenience to the public, an alderman suggesting that legislation be obtained entrusting all found articles to the city. The Company's General Manager, R. J. Fleming, at once wrote the Mayor that it would be a pleasure to hand over to the city daily all articles found by the conductors, and suggested that the council appoint an officer to make arrangements to carry out the proposition. No doubt other managers would like to make similar arrangements with municipal authorities, as such a plan would save the companies considerable trouble and expense.

The Collision Between the s.s. General Wolfe and the s.s. Aranmore.

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. McGough, Deputy Harbor Master, and Capt. F. X. Pouliot, of the C.G.S. Montmagny, held an investigation at Quebec, Aug. 8, into the collision which occurred off Murray Bay in the river St. Lawrence early on June 28, between the s.s. General Wolfe and the s.s. Aranmore, which resulted in the foundering of the General Wolfe and the damaging to a limited extent of the Aranmore. Following is the judgment:

Thomas Young, captain of the General Wolfe, set forth that she was a schooner rigged, single screw, steel built vessel, of 385 net tonnage and 774 gross, carrying a crew of 23, that he and the first officer were properly certificated, and that 31 passengers, many of whom were women and children, were on board when the ships collided. The General Wolfe was bound for Quebec, the final call having been made at Godbout at 8 a.m. on June 27. Throughout the evening of the 27th the weather was intermittently clear and foggy and the sea remained calm under the light southwest breeze that was blowing. The vessels having passed Cape Salmon, the captain absented himself from the bridge, and upon his return he observed a light on the starboard side of his ship, and although the chief officer, who was on watch, designated it Goose Cape light, the captain observed it more closely and concluded that it was the mast head light of a ship, whereupon he issued the order hard a starboard, and kept proceeding at full speed. At this juncture, he declares the fog was thick and low, but he nevertheless issued no signal to warn the approaching ship, and while still on his starboard helm and with engines full ahead, the ships crashed together, the Aranmore striking the General Wolfe abaft the engine room, whereupon the master of the Wolfe, seized by fright, according to his own admission, abandoned his ship, and all on board, and leaped to the deck of the Aranmore, and is consequently ignorant of what transpired on the Wolfe subsequent to the impact. Odilon Fortin, chief officer of the General Wolfe corroborated in the main the testimony given by the captain as regards the weather conditions, adhering rigidly to the statement that the fog was thick prior to and at the moment of the impact. The light, which in reality was the mast head light of the Aranmore, was construed by him to be the Goose Cape light, and when the ships struck he also ignored the first duty of an officer, and sought refuge on the Aranmore. Although unseen at the moment by him, he learned subsequently that the wheelsman had also abandoned his post, following which the General Wolfe, with a deserted bridge, still under her starboard helm and her engines going full ahead, described a complete circle and plunged into the port bow of the then receding Aranmore, fortunately inflicting but slight injury. The second officer of the General Wolfe, Fournier, was awakened by the shock, and hastening to the deck ordered the boats to be launched, and participated in the work of rescue, assisting the crew who put out from the Aranmore.

The master, John Hearn, declared that the Aranmore is an iron built vessel, registered number 499, gross tonnage 1,169, and that her crew numbered 27. She is properly equipped with navigating instruments and lifeboats, and carries passengers and freight, as well as being a subsidized mail carrier between Quebec and North Shore points. Subsequent to her departure from Quebec, being outward bound, the Aranmore encountered varying weather conditions, and although he was compelled to anchor, owing to fog on the evening of June 27, he proceeded as soon as it lifted, and for some time prior to the collision the atmosphere was perfectly clear, the various lights being discernible at a considerable distance. He was on the bridge and distinguishing the mast head light of a vessel nearly end on, he forthwith ordered the helm to port, declaring that he sounded no signals, there being no indication whatever of fog. With his helm to port he approached the other ship, and when in very close proximity, or a moment before the impact, he order full astern. The green light of the General Wolfe was then exposed to the red light of the Aranmore, and with the latter's helm still to port, the vessels came together. Immediately following the impact, Captain Hearn ordered the boats to be launched and ordered his crew to the rescue of those on board the disabled ship, which work, fortunately aided by propitious weather conditions, was performed in a thoroughly practical manner, so much so that not a single life was lost. The ill-fated General Wolfe gradually filled with water, and as she sank below the surface and finally disappeared, the Aranmore rode over the vortex prepared to render assistance if need be, but fortunately the lifeboats had already completed the work of rescue. The witnesses from the Aranmore corroborated the statements made by the captain, and positively declared the lights were clearly visible prior to the collision and that there was no indication of fog.

The Court finds that while it commends the seamanlike action of Captain Hearn in directing the work of rescue following the collision, he should, upon perceiving the erratic course of the General Wolfe, have reduced the speed of his vessel and gone full astern, and although he issued this order it was too late to prove effective, for it was almost simultaneous with the impact. In his tardiness in this respect, he was guilty of negligence, and the court therefore finds it incumbent to reprimand him, and to remind him that it is owing to his previous unblemished record and commendable action following the collision that he is not more severely dealt with. Capt. Young and First Officer Fortin, who threw to the winds what has been the proverbial duty of sea-faring men from time immemorial, to stand by their ship, are guilty of base cowardice, and their action in leaping to safety and leaving to perish if needs be those entrusted to their care, cannot be denounced too strongly. Young and Odilon Fortin are in the court's opinion unworthy to be numbered among mariners, whose bravery has ever been proverbial, and therefore they shall be struck from the list, their certificates being cancelled forever.

Floating Dry Dock for Toronto.

The Dominion Government has passed the plans for the floating dry dock to be built at Toronto by the Polson Iron Works, Ltd., and has granted aid in its construction, consisting of 3% per annum on a capital expenditure of $900,000 for 20 years. The dock when complete will be of sufficient capacity to handle the largest vessels at present operating on Lake Ontario, and will be built in three sections, which when coupled together will be 600 ft. long and 100 ft. wide. It is anticipated that two of these sections will be completed early in 1912, so that vessels can be docked there in the spring. The lifting capacity of these two sections will be 4,500 tons in all. When the third section is completed, the lifting capacity will be increased to 9,000 tons.

The dock will be equipped with the most modern machinery and the pumps will be operated by electricity. On account of being built in sections each section can be used as a separate dock and the first two sections will each be able to accommodate vessels up to 175 ft. Where larger vessels are to be accommodated the two sections will be coupled together. Dredging, piling and concreting will be done to furnish a basin with sufficient draught of water for operating the docks, and new steel sheer legs of 100 tons lifting capacity will be installed. The dock will be situated just west of the company's present property, sufficient land having been leased from the city for the purpose. This will be blasted to a depth of 28 ft. to accommodate the floating dock. In addition to the foregoing works, land has also been acquired on the east side of the works, where accommodation will be made for vessels coming to dock for repairs, providing ample accommodation for all vessels which may be waiting their turn for using the repair dock. A new boiler shop is also being added to the plant.

Vessels Removed from the Register.—During June, the following sailing vessels were removed from the Canadian register for the reasons assigned:—Alkaline, Parrsboro, N.S., 626 tons, stranded; Evelyn, Charlottetown, P.E.I., 167 tons, transferred to Barbados; J. W. Mills, Lunenburg, N.S., 76 tons, sunk in collision; Jennie May, Lunenburg, N.S., 88 tons, stranded; Maple Leaf, Lunenburg, N.S., 26 tons, transferred to Newfoundland. No steam vessels were removed from the register during the same period.

An order in council has been passed defining the limits of the public harbor of Shediac, N.B. as, all the waters inside or south of a line drawn due north astronomically from Bouleaux Point, the latter limit coinciding with the west limit of Cape Bald harbor.

The Stranding of the s s. Morien.

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by N. Hall, Port Warden of Halifax, and J. W. Harrison, Marine Superintendent of the Furness Withy Line, held an investigation into this matter at Halifax, N.S., July 25, the following being the judgment:

The Morien is a steamer of 490 tons register, 834 gross, steel built, employed in carrying coal from Parrsboro, N.S., to Portland, Me., carrying a crew of 19 men; mate holding certificate, second mate no certificate, engineer holding appropriate certificate. This steamer is owned by the Home Steamship Co., Capt. Burchell registered owner.

The evidence goes to show that on July 4, at about 8 p.m. the light at Digby Cut was seen and a bearing taken and another bearing taken from another point of land which was not exactly defined by the evidence of the master. The ship was then bound for Parrsboro. The weather was very thick and the ship going at full speed. At midnight, a sounding was taken and 37 fathoms obtained. This sounding was obtained by a deep sea lead, which was used at subsequent times when the soundings were taken, although there is on board a sounding machine of a make not mentioned, but by which Lord Kelvin's tubes are used. At 12.30 another sounding was taken, giving 32 fathoms. From that on till the stranding, he took no further soundings. The ship was then put at half speed and kept at half speed up to the time of the casualty. Cape d'Or and Cape Spencer were seen when the fog cleared up for about a quarter of an hour. Presumably a bearing from the sound of the foghorn at Cape d'Or was taken, but the evidence as to whether this was done or not, was not very clear. The course was changed when Cape Spencer was abeam, in such a way as to bring her to pass midway between Cape Split and the mainland. Relying on the casual observation of Cape Spencer to establish his position from the land, the master kept on navigating his vessel without taking any further precaution to ascertain whether this casual observation would be verified.

The ship stranded about 3.55, when the engines were put full speed astern and kept full speed astern for 20 minutes when the ship floated off, not with the engines, but with the flood tide. It was then found that the vessel was making water in several compartments. The course was shaped for Parrsboro, where she entered and anchored.

The evidence of the other witnesses corroborated, in part, that of the master.

The court finds that the master certainly neglected to take ordinary precautions which a careful navigator applies in the navigation of his vessel, and that he relied upon approximate observations and two soundings in the course of eight hours, and in view of the fact that the ground he was navigating was fraught with certain danger, owing to the changes of currents, and as it has been given out that eddies exist in the proximity of the Coves, the court is of the opinion that the master is in default for not taking ordinary precautions by using the lead, especially as he had on board a sounding machine whereby positive accuracy could be ascertained without stopping his vessel or losing any time.

Again, looking at it from a different point of view, the court is of opinion that owing to the thick weather experienced during the last eight hours, that it would have been preferable for the master to anchor his vessel and lose a tide rather than risk the property in his care.

In view of these conclusions the court cannot but severely censure the master

for neglecting, first the use of the lead, and secondly, for not anchoring in view of the uncertainty of the position of his vessel at such a time.

The court exonerates the officers from all blame in this casualty.

Montreal Harbor Elevator Facilities

It was stated in Montreal, Aug. 3, that, as a result of the congested condition existing at the port, the Harbor Commissioners would shortly announce that in future no grain would be received at their elevators which was not destined for immediate shipment to trans-Atlantic ports. It was also stated that the 20 days free storage would be discontinued. D. Seath, Secretary to the Harbor Commission, is reported to have stated that Montreal was not intended to be a storage port, but was only suited as a quick transit centre.

In response to a request from Detroit for information on the point as to whether Montreal was unable to accommodate more grain, it was reported, Aug. 9, that the Commission had replied that the statement as circulated at certain lake ports to that effect was untrue, as no grain was allowed to remain unloaded longer than was necessary. On Aug. 9, it was stated that 15 vessels were waiting to discharge grain into elevators, but that there was no accommodation, the Commissioners' elevator and the G.T.R. elevator both being filled to capacity.

The Commissioners state that the fault does not lie so much with the port as with the grain dealers, who, in spite of the fact that they are well aware that every available foot of space in the elevators is occupied, continue to ship grain by thousands of bushels, without troubling about the fact that there are no storage facilities for it.

The Commissioners' new elevator will not be completed until the spring, but they have decided to enlarge it by providing for a further 850,000 bush., making the total capacity 2,600,000 bush. John S. Metcalf Co., Ltd., Montreal, are the designing and constructing engineers.

Notices to Canadian Mariners.

The Department of Marine has issued the following:—

75. July 13, 191. Ontario, Detroit River, Limekiln Crossing channel, light vessels again in position. 192. Ontario, Georgian bay, Midland bay, Tiffin, range lights established. 193. Ontario, Georgian bay, Victoria harbor, Port McNicoll, lighted beacon, buoys, sailing directions.

76. July 13, 194. Lists of Government stations for communication with shipping on the eastern coasts of Canada.

77. July 18, 195. New Brunswick, south coast, Bay of Fundy, St. John harbor, Partridge Island, lighthouse tower increased in height. 196. New Brunswick. Chaleur bay, Petit Rocher, buoy established. 197. Nova Scotia, Bay of Fundy, Hall harbor, lighthouse established. 198. Nova Scotia, Bay of Fundy, Hampton, lighthouse established.

78. July 19.—199. New Brunswick, south coast, Bay of Fundy, Musquash, intended change in character of light. 200. Nova Scotia, Bay of Fundy, Minas basin, Cobequid bay, Highland village, description of light. 201. Prince Edward Island, south coast, Northumberland strait, Egmont bay, entrance to Percival river, buoy established.

79. July 21.—202. New Brunswick, east coast, Northumberland strait, Richibucto harbor entrance, change in position of lights on south beach and north beach.

80. July 25. 203. Nova Scotia, Bay of Fundy, Lurcher shoal, lightship to be removed from her station temporarily for repairs.

81. July 26. 204. British Columbia, Vancouver island, Victoria harbor, Selkirk water, rocks off Halkett island, buoy. 205. British Columbia, Queen Charlotte islands, Graham island, Hecate strait, Skidegate inlet, Deadtree point, wireless telegraph station established.

82. July 27. 206. Quebec, Ottawa river mouth, Lake St. Louis, shoal in Dowker channel, temporary buoy. 207. Ontario, Detroit river, Ballard reef channel, bulletin board established. 208. Ontario, Lake Superior, east end, Batchawana bay, Corbeil point, name. 209. Ontario, Lake Superior, Thunder bay, Port Arthur, wireless telegraph station established.

83. July 27. 210. Quebec, Gulf of St. Lawrence, Gaspe coast, L'Anse a Beaufils, light established. 211. Quebec, Gulf of St. Lawrence, Magdalen islands, Grindstone island, wireless telegraph station established. 212. Quebec, River St. Lawrence, Portneuf-en-bas, new lighthouse. 213. Quebec, Saguenay river, Riviere du Moulin, change in front range light. 214. Quebec, River St. Lawrence, Barrett ledges, west buoy changed in position.

84. July 28. 215. Nova Scotia, Atlantic coast, Petpeswick inlet, positions of spar buoys. 216. Nova Scotia, Northumberland strait, Caribou channel, beacons.

85. July 31. 217. British Columbia, Strait of Georgia, Malaspina strait, Powell river, hydrographic notes, buoys established. 218. British Columbia, Nepean sound, Otter channel, reported rock northwestward of Campania island not found.

86. Aug. 1. 219. Nova Scotia, south coast, submarine bell buoy moored near Egg island gas and whistling buoy for experimental purposes. 220. Nova Scotia, Cape Breton island, south coast, L'Ardoise, storm signal station established. 221. Nova Scotia, Cape Breton Island, east coast, storm signal stations established. 222. Nova Scotia Cape Breton island, north coast, Bay St. Lawrence, storm signal station established. 223. Quebec, Gulf of St. Lawrence, off Fame Point, submarine bell buoy moored for experimental purposes.

87. Aug. 2. 224. Quebec, Gulf of St. Lawrence, Gaspe basin, paddy shoal lighthouse, color of pier, light to be changed. 225. Quebec, Gulf of St. Lawrence, Gaspe Basin, Jauvum shoal, lighthouse, color of pier, light to be changed.

88. Aug. 3. 226. Nova Scotia, Bay of Fundy, Brier island lightstation, intended change in characteristic of fog alarm. 227. Nova Scotia, west coast, Cape Fourchu lightstation, intended change in characeristic of fog alarm. 228. Nova Scotia, south coast, Halifax approach, Chebucto head, intended change in characteristic of fog alarm. 229. Nova Scotia, south coast, Halifax harbor, Mauger beach, intended change in characteristic of fog alarm. 230. Nova Scotia, southeast coast, Cranberry island, intended change in characteristic of fog alarm. 231. Nova Scotia, Cape Breton island, south coast, Louisburg harbor, intended change in characteristic of fog alarm. 232. Nova Scotia, Cape Breton island, east coast, Scatari island, northeast point, intended change in characteristic of fog alarm. 233. Nova Scotia, Cape Breton island, east coast, Flat point lightstation, intended change in characteristic of fog alarm. 234. Newfoundland, south coast, Cape Freels, intended change in characteristic of fog alarm. 235. Newfoundland, southeast coast, Cape Race, intended change in characteristic of fog alarm.

89. Aug. 8.—236. Ontario, Georgian bay, Byng inlet, additional buoys.

90. Aug. 10.—237. Nova Scotia, south coast, telephone cable laid from Chebucto head to Sambro island. 238. Prince Edward Island, north coast, Tracadie, change in position of range lighthouses. 239. Quebec, River St. Lawrence below Quebec, north of Patience island, gas buoy removed. 240. Quebec, River St. Lawrence below Quebec, West narrows, West Sand spit, can buoy replaced temporarily by gas buoy.

91. Aug. 11.—241. British Columbia, Vancouver island, west coast, Clayoquot sound, Fortune channel, Mosquito harbor, Plover point, light discontinued. 242. British Columbia, Vancouver island, west coats, Clayoquot sound, Village channel, lighted buoys. 243. British Columbia, Vancouver island, southeast coast, Esquimalt harbor, Constance cove, position of mooring buoy. 244. British Columbia, Strait of Georgia, Discovery passage, Cape Mudge, buoy established. 245. British Columbia, Seymour inlet, Wawatle bay, uncharted rock.

92. Aug. 12.—246. Ontario, Great Lakes and River St. Lawrence, dates to which lights will be kept in operation.

93. Aug. 14. 247. Quebec, Gulf of St. Lawrence, Cape Rosier, intended change in characteristic of fog alarm. 248. Quebec, Gulf of St. Lawrence, Cape Magdalen, intended change in characteristic of fog alarm. 249. Quebec, Lake St. John, mouth of Peribonka river, range lights established. 250. Quebec, Lake St. John, back range light on Riviere a la Pipe wharf. 251. Quebec, River St. Lawrence below Quebec, eastward of Orleans Island, gas buoys placed temporarily for dredging purposes.

Maritime Provinces and Newfoundland.

The town of Campbellton, N.B., has deposited plans and description of a wharf to be built on the Restigouche River there.

An order in council has been passed, making compulsory, the payment of pilotage dues, within the pilotage district of Shepody Basin, N.B.

The Department of Marine is receiving tenders, to Sept. 5, for four third order 10 ft. iron lanterns for lighthouses situated in the Maritime Provinces.

W. N. Reinhardt, owner of the schooner Guide, is suing the Steamship Cape Breton Co., owner of the s.s. Cape Breton, for damages due to the collision between the two vessels.

The Dominion Government s.s. Montmagny left Quebec, Aug. 15, for the Lower St. Lawrence, the Straits of Belle Isle and Labrador, with provisions and construction materials for various stations there.

Hon. E. Bowring, announced at St. John's, Nfld., at the recent celebration of the centenary of the firm of Bowring and Co., that the directors had decided to give as a centenary memorial, $10,000 a year for five years, and in addition, the regular employes were each to receive one month's wages.

The Halifax Trading and Sealing Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $85,000, and office at Halifax, N.S., with powers, among other things, to carry on a general shipping business, and to build, purchase, or otherwise acquire, and operate vessels of all kinds.

The Dominion Coal Co. has entered into a contract with Furness Withy and Co. for the carrying of coal from Sydney, N.S., for seven years. In order to carry out this agreement, Furness Withy and Co. have ordered in Middlesbrough, Eng., two specially designed vessels, with a carrying capacity of 7,600 tons each.

Tenders were received by the Public Works Department, Aug. 10, for the construction of a dry dock at St. John, N.B., and for dredging and other harbor works there, which it is proposed to

carry out at Courtenay Bay. It is said that tenders have been received from some of the well known British firms specializing in this class of work.

The s.s. Amethyst, which was recently wrecked at Mutton Head, near Trepassey, on the southeast coast of Newfoundland, was built at Stockton-on-Tees, Eng., in 1878, and was formerly named Santiago de Cuba. She was screw driven, with engine of 120 n.h.p. Her dimensions were: length, 240.5 ft.; breadth, 32.2 ft.; depth, 16.6 ft.; tonnage, 1,495 gross, 894 register.

The Port Hood Richmond Railway Coal Co.'s s.s. John Irwin, which recently foundered at sea, under unknown circumstances, during a heavy storm, was built at Paisley, Scotland, in 1897. She was screw driven, with engine of 68 n.h.p. Her dimensions were: length, 140 ft.; breadth, 23.1 ft.; depth, 9.7 ft.; tonnage, 303 gross, 80 register. Of the crew of 11, one only was saved.

The Minister of Public Works, while in St. John, N.B., Aug. 9, is reported to have said that as soon as the transfer of the lots on the west side of the harbor from the city to the C.P.R. is completed, tenders will be called for the construction of an extensive wharf and sea wall, and possibly for the extension of the present breakwater to Partridge Island, for the protection of the harbor.

A steamboat, named Robert G. Cann, was launched at Shelburne, N.S., recently, for Hugh Cann and Son, for operation on the Canso and Mulgrave route, replacing the steamboat John L. Cann. She was subsequently towed to Yarmouth, where her machinery will be installed. Her dimensions are: length, 124 ft.; breadth, 25 ft.; depth, 9 ft. The hull has been built exceptionally strong and sheathed with galvanized iron about the water line, as she will be in operation during the winter.

The Government has received eight tenders for the building of vessels for the Canadian navy. Of the chief firms tendering, it is reported that Cammel, Laird and Co. were the lowest, and stated that its plant would be located at St. John, N.B. Swan, Hunter and Wigham Richardson, the second lowest tenderer, named Halifax, N.S., as their proposed location; the British Canadian Shipbuilding Co., of which Sir Henry M. Pellatt is the head, named Sydney, and Vickers, Limited, named Montreal.

The joint commission appointed by Canada and the U.S. recently to enquire into the feasibility and desirability of further improving the navigation of the St. John River, by the construction of storage dams and other works, has sent in an interim report, describing the work done up to the present, and stating that enough data has been secured to justify them in carrying out the study of the problems which will form the basis of their final report, which, it is expected, will be submitted in the fall.

Province of Quebec Marine.

The Montreal Harbor Commission's steam tug Sir Hugh Allan, arrived at Montreal, from Barrow-in-Furness, Eng., at the end of July, having taken 15 days on the voyage.

The Montreal Harbor Commissioners have awarded contracts for the construction of two concrete sheds, each 400 ft. long, on the Tarte pier. At first the sheds will be built one story, but provision will be made for the addition of another at any time.

A notice has been issued to all vessels to reduce their speed to a minimum when passing a point in the St. Lawrence River, at Quebec, between the Allan Line wharf and the market dock, where the National Transcontinental Ry. Commissioners have a scow at work with deep water boring apparatus.

The C.P.R. has installed a fire pump on its Atlantic service tug Cruizer. It was made in London, Eng., is operated in conjunction with the tug's boilers, and is capable of sustaining a pressure of 160 lbs. A recent test proved the capabilities of the apparatus and its usefulness in case of fire.

The Dominion Government has entered into a contract with Canadian Vickers, Limited, Montreal, for the construction of a dry dock at Montreal, to be of the floating type, and of the first class, for which a subsidy will be paid of 3½% per annum for 35 years, on an investment up to $3,000,000. The dock will be built in England and towed to Montreal.

The Montreal harbor revenue for July was $57,381.71, against $56,456.68 for July, 1910. From the commencement of navigation to July 31, the revenue was $176,380.73, against $169,296.73 for the same period 1910. There was a slight decrease in receipts from imports. Since the commencement of navigation, 372 ocean-going vessels, with a tonnage of 1,112,609, entered the harbor, against 351 vessels, with a tonnage of 1,041,721 for the same period 1910.

Ontario and the Great Lakes.

During July, there were 1,249,935 bush. of grain received at Kingston, and transhipped to Montreal by river barges.

The Northern Navigation Co.'s s.s. Hamonic was recently docked at Port Arthur, to have a propeller blade replaced.

The Department of Public Works will receive tenders to Sept. 11 for the construction of a breakwater at Thessalon, in the Algoma district.

The Department of Railways and Canals received tenders, Aug. 21, for the construction of a turning basin at Thorold, on the Welland canal.

The Department of Marine steamboat Lambton, grounded on Pancake shoal, near Whitefish Point, Aug. 6, and was subsequently released with minor damages.

The Niagara Navigation Co.'s steamboat, Chicora, was towed to Toronto by the same company's steamboat, Cayuga, Aug. 21, having broken her intermediate shaft.

The Department of Public Works has awarded contracts for dredging at Big Island to R. Weddell and Co., Trenton, and at Kingsville, to the Windsor Dredging Co., Windsor, Ont.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Dalhousie City, has been placed in service between Toronto and Port Dalhousie, making two trips daily.

The Ontario and Quebec Navigation Co.'s s.s. Geronia, while entering the C.P.R. wharf at Brockville, Aug. 22, collided with the ferry steamboat Bigelow, considerably damaging her upper works.

The Canadian Storage Corporation, Ltd., proposes to build storage warehouse docks at Port Arthur, each 800 ft. long, with concrete buildings, seven stories high, each costing about $400,000.

The Marine Department is placing a buoy on the Minnie Blakley shoal at Point Anne, near Belleville, where the Lake Ontario and Bay of Quinte Steamboat Co.'s steamboat Caspian recently grounded.

The ferry steamboat Sirius, operating between Cornwall, Ont., and Massena, N.Y., and owned in the latter place, capsized, Aug. 1, shortly after leaving the New York shore, seven of the passengers being drowned.

A steam tug, named John R. Stover, built for Eddy Bros., Bay City, Mich., was launched at Collingwood recently. She is built of steel throughout, her dimensions being: length, 75 ft.; breadth, 18 ft.; depth, 9 ft.

Capt. Williams, commodore of the Toronto Ferry Co.'s fleet, was removed from the steamboat Trillium, Aug. 13, on account of sudden illness. His place was taken by Capt. Jennings of the steamboat Primrose.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat, Dalhousie City, left Collingwood, Aug. 14, for Toronto, where she arrived, Aug. 21, when she was placed on her route between Toronto and Port Dalhousie.

The Gereral Realty Corporation, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $500,000 and office at Port Arthur, with power among other things to build, own, deal in and operate steam and other vessels.

The Niagara Navigation Co.'s s.s. Cayuga, which lost a blade from one of her propellors, Aug. 7, had the damage repaired at Toronto by the use of the specially designed cofferdam, which was fully described and illustrated in our June and July, 1908, issues.

SAULT STE. MARIE CANALS TRAFFIC

DEPARTMENT OF RAILWAYS AND CANALS.

Branch Line of Railway From Guysborough to Sunny Brae Through Country Harbor Crossroads with an Extension from Country Harbor Crossroads to Deep Water of Country Harbor.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Guysborough County Harbor Line," will be received at this office until 16 o'clock, on Friday, September the 15th, 1911, for section No. 1, of the above line of railway, comprising that portion extending from Gnysborough to Country Harbor Crossroads and from the latter point to Deep Water Country Harbor.

Plans profiles specifications and forms of contract to be entered into can be seen on and after the 15th instant at the office of the Chief Engineer of the Department of Railways and Canala, Ottawa, at the office of the Chief Engineer, of the Intercolonial Railway, Moncton; and at the office of the Board of Trade of Halifax. Forms of tender may be procured from the Chief Engineer of the Department of Railways and Canals or from the Chief Engineer of the Intercolonial Railway.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labor, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $100,000 made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines enteriog into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES.
Secretary.

Department of Railways and Canals.
Ottawa, August 12th 1911.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

The Canadian Pacific Railway Co.

DIVIDEND NOTICE.

At a meeting of the Board of Directors, held this day, the following dividends were declared:—

On the Preference Stock two per cent. for the half year ended 30th June last.

On the Common Stock two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from interest on the proceeds of land sales and from other extraneous assets.

Both dividends will be paid on September 30th to shareholders of record at the closing of the books in Montreal, New York, and London, at 3 p.m. on Friday, 1st September next.

All books will be re-opened on Thursday, October 5th.

By order of the Board.
W. R. BAKER,
Secretary.

Montreal, 14th August, 1911.

During June, four employes were killed, and one injured, in the course of their work in connection with the navigation of Canadian vessels. Of the fatalities, two were due to falls from vessels and drowning, and one each to being crushed between lock gates and vessel and to a fall overboard and striking a log.

The Cornwall and Montreal Navigation Co.'s steamboat Filgate, which was burnt recently at Valleyfield, Que., has been raised and the hull taken to Cornwall, where it has been docked. It is stated that the vessel will, in all probability, be rebuilt, and be ready for further service next season.

Press reports from Windsor, state that the residents of Pelee Island have subscribed the necessary funds for the building of a steamboat to ply between the island and the main land. The proposed vessel, it is said, will be larger than any of those now on this service, which are considered too small for rough weather.

Traffic on the Canadian canals for July shows considerable falling off in the tonnage passing through. The total is 17,143,060, against 21,457,752, a decrease of 4,314,692 tons. The decrease is chiefly due to the Sault canals, where about 4,500,000 tons less of ore was handled this year than in the same month of 1910.

The Merchants Mutual Line steamboat, H. M. Pellatt, was seized, Aug. 14, at Montreal, on a claim for $10,000 for damages sustained by the U.S. yacht Cignet, in a collision in the canal, Aug. 12, for which it is alleged the H. M. Pellatt is responsible. The vessel was released on bonds furnished by G. E. Jaques and Co., agents.

The Keystone Transportation Co.'s steamboat Key West ran into the head gates of lock 21 on the Welland canal, Aug. 20, opening them and thus causing the carrying away of the gates and some damage to the vessel itself. The replacing of the gates was accomplished in very short time, and locking was resumed the following day.

The Midland Towing and Wrecking Co.'s barge Albatross foundered in Georgian Bay, near French River, Aug. 21, those on board being saved after spending the night and day drifting in small boats. The barge was in tow of the Midland tug C. C. Martin, which was also lost, together with her entire crew.

W. R. Burgin has been appointed Travelling Freight and Passenger Agent, Northern Navigation Co., to cover the territory west of Toronto, including the Northern Division of the G.T.R., with office at Sarnia, Ont. S. Hewitt has been appointed Travelling Freight and Passenger Agent for the city of Toronto, and other special work, with office at the Union Station, Toronto.

The steamboat Mary Louise, owned in Kingston, was reported to have sunk in the Rideau River, near Dog Lake, Aug. 12. She was built at Portland, Ont., in 1902, as a sailing vessel, her dimensions being: length 77.2 ft., breadth 18.6 ft., depth 4.2 ft., tonnage, 60 gross, 30 register, and she was equipped with engine of 3 n.h.p. driving a screw.

The Ontario and Quebec Navigation Co.'s s.s. Geronia, while en route from Quebec to Toronto, Aug. 9, lost one of her propellors, and had to be docked at Kingston to have it replaced. It was estimated that the company would lose about $10,000 on account of the mishap, as the vessel was booked to capacity, the route having proved exceedingly popular.

The following is a list of members of the Toronto Harbor Commission, created by the recent legislation, re-modelling the previous commission, and extending its powers. Appointed by the Dominion Government, F. S. Spence; appointed by the city, T. L. Church, R. H. Smith and L. V. Clarke; appointed by the Toronto Board of Trade, R. S. Gourlay.

Press reports recently stated that the new lake freighter Toiler, which is equipped with internal combustion engines, and of which we have given full description, was on her way across the Atlantic to take up her service on the Great Lakes. We are officially advised that she is not on her way to Canada, and it is not likely that she will come out this season.

The Reid Wrecking Co.'s steam tug Winslow was burnt at Meldrum Bay, while on its way to Georgian Bay, Aug. 21. She was built at Cleveland, O., in 1865. Her dimensions were: length 120 ft., breadth 19 ft., depth 10 ft.; tonnage 353 gross, 193 register. She was equipped with engine of 150 n.h.p. driving a screw. The loss is put at $25,000 with insurance of $20,000.

Press reports state that the Buffalo, Lockport and Rochester Transit Co.'s steamboat Olcott, operating between Toronto and Olcott Beach, N.Y., will be lengthened, during the winter, by 30 ft., making her 204 ft. over all. The increase in size will enable her to accommodate about 1,400 passengers. It is also stated that a new boiler will be installed in place of the present two small boilers.

The Ontario and Quebec Navigation Co.'s steamboat Geronia left Toronto, on her maiden trip to Quebec, Aug. 3. This route will be continued for the remainder of the season, the following ports being called at each way: Charlotte, N.Y., Brighton, Trenton, Belleville, Deseronto, Picton, Kingston, Gananoque, Prescott, Brockville, Iroquois, Morrisburg, Cornwall, Montreal and Quebec.

The Calvin Co.'s s.s. Chieftain III., which was sunk in collision with the s.s. Hero, Aug. 20, in the St. Lawrence River, near St. Antoine, was built at Garden Island, Ont., in 1906. Her dimensions were: length 142.4 ft., breadth 39.4 ft., depth 9.3 ft., tonnage, 355 gross, 147 register, and she was equipped with engine of 48 n.h.p. driving a paddle wheel. Four of the Chieftain's crew were lost.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for July, as follows:—Superior, 601.64; Michigan and Huron, 579.88; Erie, 571.75; Ontario, 245.54. Compared with the average July levels for the past 10 years, Superior was 1.10 ft. below; Michigan and Huron, 1.33 ft. below; Erie, 1.13 ft. below, and Ontario 1.33 ft. below. It was anticipated that during August Superior, Michigan and Huron would rise 0.1 ft., and Erie and Ontario 0.2 ft.

The Lake Shippers' Clearance Association held its annual meeting in Winnipeg, Aug. 22, when the report for the past year showed that 82,065,629 bush. of grain were loaded, against 74,440,421 for the previous year. The association was organized two years ago to facilitate the handling and shipping of grain from the head of the lakes, and has headquarters at Winnipeg, with a branch at Fort William, Ont. There was an excess of revenue over expenditure of $11,731.38. The officers for the current year are:—President, J. Fleming; Secretary, A. C. Ruttan; Treasurer, A. K. Godfrey; Directors, G. Tilt, P. N. Baird and F. W. Young.

Following a tour of inspection of the works in progress in Toronto harbor by the newly appointed Harbor Commission, and others, J. G. Sing, Government Engineer said, Aug. 15, there is no reason why vessels up to 600 ft. long should not come into the harbor, but in order to make it safe for them to do so there should be a depth of water of 28 ft. The chief work inspected was the new western channel, which has been made 400 ft. wide, with two piers of stone and re-inforced concrete, about 30 ft. wide, the longer pier being 2,500 ft. long. The work on the city dock at Ashbridge's bay has been commenced, a considerable amount of piling having been done.

The U.S. Department of Labor and Commerce issued a circular, Aug. 17, calling attention to the law forbidding Canadian vessels from carrying excursion passengers from U.S. ports to Canadian ports and back. This law provides a penalty of $200 for each passenger so carried. On Aug. 21 the Assistant Secretary of the department stated in a letter that the situation had been brought to the Department's attention through the case of the Turbinia Steamship Co.'s s.s. Turbinia, which left Charlotte, N.Y., July 9, with a party of excursionists for Presqu'Ile Bay, on the Canadian side, and return. When the vessel arrived at Presqu'Ile, the channel was blocked and she returned to Charlotte. A fine of $183,000 was imposed, which was reduced to $500, and later, after the explanation of the owners of the Turbinia, to $50. He also is reported to have stated that Canadian vessels for some years had taken large excursions parties from Charlotte to Cobourg, Ont., and other Canadian ports, and in many instances the tickets provided specifically that passengers should not go ashore at any place until the vessel returned to Charlotte. This, he said, is a distinct violation of the law.

The Department of Marine has issued a notice that all Canadian lights and fog alarms in Lake Superior will be kept in operation until Dec. 15, or later if the season of navigation will permit, with the exception of the lights at Caribou Island, Otter Island, Michipicoten Island, Gargantua, Michipicoten harbor and Corbeil point, from which stations and keepers may be removed at any time after Dec. 1. The lights and fog alarms in Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie and Lake Ontario and connecting waters will also be kept in operation to Dec. 15, except southeast shoal lightship, Lake Erie, which may be moved from her station not earlier than Dec. 5, and Lonely Island light, Georgian Bay, which may be closed Dec. 5. All lights in the River St. Lawrence will be kept in operation as long as navigation is open, and all gas buoys, both on the river and the Great Lakes, will be kept at their stations as long as ice conditions will permit, and where it is necessary to remove the buoys before the close of navigation, spar markers will be laid down if possible. Light keepers are cautioned to maintain their lights until the dates specified for their respective districts and later if navigation remains open.

Hon. Rodolphe Lemieux, heretofore Postmaster General, has been appointed Minister of Marine and Fisheries, in place of Hon. L. P. Brodeur, who has been appointed a judge of the Supreme Court.

The Canadian section of the International Waterways Commission, recently created under the new treaty between Canada and the U.S., consists of Sir George Gibbons, London, Ont., Chairman; A. Geoffrion, K.C., Montreal, and A. P. Barnhill, St. John, N.B.

In referring to the proposal of Cammell, Laird and Co., naval contractors, of England, to establish dock and shipbuilding works in Canada, the Canadian Gazette of London, Eng., stated, Aug. 10:—"To this firm has fallen the high distinction of receiving from the Canadian Government the contract to build the fleet of war vessels which the Canadian authorities have decided to construct." Among the tenders recently sent in for the construction of the proposed vessels, it has been stated that Cammell, Laird and Co.'s was the lowest, but on Aug. 28 we were officially advised that the contract had not been awarded.

THE CANADIAN PACIFIC RAILWAY COMPANY.

Notice to Shareholders.

The Thirteenth Annual General Meeting of the Shareholders of this Company for the election of Directors to take the places of the retiring Directors, and for the transaction of business generally, will be held on Wednesday, the 4th day of October next, at the principal office of the Company at Montreal, at Twelve o'clock noon.

The Common Stock transfer books will be closed in Montreal, New York and London at 3 p.m. on Friday, the first day of September; the Preference Stock books will be closed in London at the same time.

All books will be reopened on Thursday, the fifth day of October.

By order of the Board.
W. R. BAKER,
Secretary.

Montreal, August 14th, 1911.

The Niagara Navigation Co.'s steamboat Chicora was taken out of service, Aug. 19, for the remainder of the season, on account of damage to her machinery. She was berthed for the winter at Toronto and an examination made, when it was found that her main shaft crank was broken and that the [illegible] bed plates had given way. It is reported that the vessel will probably be sold and that a new vessel will be purchased for next season's traffic.

The Red River Navigation Co., Ltd., recently incorporated at Winnipeg, with a capital of $1,000,000, will, it is reported, commence operating on the Red River, on a large scale, in the spring of 1912.

The Hudson's Bay Co.'s Edmonton manager, on his return there recently from a trip to the Peace River and Athabasca districts, is reported to have stated that next year a full schedule would be put in force for all boats on the northern rivers and lakes, and proper connections established. It was anticipated that a trip could be arranged from Athabasca Landing to Grand Rapids, thence to Fort McMurray and continued by Lake Athabasca, and tributary streams to the Mackenzie River, and thence to the Arctic circle, about 3,600 miles.

Meetings are being arranged in Grand Forks, N.D., with a view to seeing what steps can be taken to improve the conditions on the Red River, so that navigation may be undertaken with safety, to Winnipeg. Suggestions will be made that the channel be deepened, and that, among other things, lock dams be constructed at various points. In 1884 the steamboat Grand Forks navigated the river from Grand Forks to Winnipeg, and in 1909 the same vessel repeated the trip, but the conditions were found to be unfavorable, on account of low water at various points.

At a recent meeting of the joint committee on wharfage and dockage of the Winnipeg and St. Boniface councils, Col. Ruttan, City Engineer of Winnipeg, was instructed to go to Ottawa to secure the information necessary to establish a harbor commission, and to submit plans for proposed temporary docks, etc. A bylaw is being prepared for submission to the ratepayers at an early date, for the purpose of supplying the necessary funds for the erection of temporary docks and shipping facilities.

B.C. and Pacific Coast Marine

The Progressive Towing Co., Vancouver, is applying for authority to change its name to the Progressive Steamboat Co.

During July, vessels with a registered tonnage of 153,914 entered Vancouver harbor from foreign ports, against a tonnage of 116,965 for July, 1910.

Greer, Coyle and Co.'s steamboat Aluvia, recently built at Lulu Island, has been taken over by the owners for operation on the Upper Fraser River, in the freight trade. She is 100 ft. long, by 25 ft. beam.

The C.P.R. Arrow Lake steamboat Bonnington, which was launched at Nakusp, in May, has been completed and placed on her route. She is a four-decker with accommodation for about 600 passengers.

The North Arm Steamship Co. has leased additional property on the waterfront to the west of the ferry wharf at Vancouver, for one year, and will erect passenger offices and a warehouse there, on account of increased business.

The Queen Charlotte Fishing Co., Ltd., has been incorporated under the British Columbia Companies Act, with a capital of $100,000, and office at Vancouver, to carry on a general fishing business, and with power to own and operate steam and other vessels.

The All Red Steamship Co., which operates the s.s. Selma to ports on the Powell River, is reported to be negotiating, in England, for the purchase of another vessel, to enable a daily service between Vancouver and the Powell River, instead of a tri-weekly one, as at present.

H. H. H. Lonsdale and J. P. Fell, of Vancouver, have applied to the Governor in Council for approval of construction of certain works, consisting of dredging, filling in and making of wharves on the foreshore in front of district lot 265, group 1, New Westminster District.

The steamboat Skeena, recently purchased by the North Arm Steamship Co. from Foley, Welch and Stewart, as mentioned in our last issue, is being placed in service to North Arm ports. She has passenger accommodation for about 400, and was formerly used in the passenger and freight service on the Skeena River.

A number of Puget Sound steamship companies are reported to have amalgamated under the name of the Sound Packet Lines, with the intention of operating between all Sound ports of importance, including Victoria and Vancouver. The vessels affected are given as Edith, Transport, Fidelago, Neptune and Dredger no. 2.

The G.T.P. Coast Steamship Co.'s s.s. Prince John, arrived at Victoria at the end of July, from Glasgow, Scotland, having taken 71 days on the voyage round the Horn. After a cleaning and overhauling, she will be placed on the Islands run, relieving the s.s. Prince Albert, which will take the place of the s.s. Henriette.

Judge Grant, at Vancouver, recently decided a case where an employe sued the C.P.R. for wrongful dismissal, for refusing to handle cargo from a vessel on a Sunday, by dismissing the claim, holding that the company was within its contract rights, but ordered that the employe be paid an amount deducted from his pay wrongfully.

Investigations into the causes of the wrecks of the steamships Princess May, owned by the C.P.R., and Belcarra, owned by the Sechelt Steamship Co., were opened at Vancouver, Aug. 18. The former vessel struck on the north reef of Sentinel Island, near Juneau, Alaska, Aug. 5, 1910, and the latter sank in the Agamemnon Channel, Jervis Inlet, Sept. 17, 1910.

Work is progressing on the G.T.P. Coast Steamship Co.'s wharf at Victoria. The site is at the foot of Main St., and the old Albion Ironworks and other buildings there have been removed. About 160 piles have been placed, and a considerable portion of the wharf has been built. The plans for the erection of a warehouse, had not, at the time of writing, been passed.

The auxiliary schooner Tuladi, after having been thoroughly overhauled and repaired, has been licensed to carry passengers, and has been placed on the route between Victoria and Sidney and the islands. She was built at Vancouver in 1908, and is equipped with a gasolene engine of 4 n.h.p., driving a screw. Her dimensions are: length, 49.3 ft.; breadth, 14.3 ft.; depth, 6 ft.; tonnage, 32 gross, 21 register.

The Nelson board of trade is preparing statistics of the cost of making the Columbia River navigable, on the Canadian side of the International boundary. A commission has been appointed in the State of Washington, to deal with the river on the U.S. side, and arrangements are being made with a view to joint action being taken to lay the matter before both the Dominion and Federal authorities, and to obtain funds for the carrying out of complete surveys.

Balfour, Guthrie and Co. are reported to have stated that work will be commenced shortly on the construction of their new dock at Vancouver, which will be built in connection with the C.N.R. and the Great Northern Ry. The plans, which have been deposited with the Public Works Department at Ottawa, show a dock about 750 by 100 ft., situated between the sugar refinery and Heatley Ave. Large sheds will be erected, which will be without pillars or other obstructions, and it is hoped to have the work completed by November.

The directors of the North Vancouver Ferry Co., at a recent meeting, ordered the issue of 80,000 fully paid up, non-assessable shares to the city of North Vancouver, under agreement of purchase, made in March. A discussion also took place regarding the equipment of the ferry no. 1, with a new boiler, preferably one with a pumping attachment, so that the vessel might be used as an auxiliary in case of fire. A contract for the installation of a new boiler in ferry no. 2, has been awarded to McDougal and Jenkins, North Vancouver, for $1,700.

The Union Steamship Co.'s s.s. Chelohsin, which was recently launched at Dublin, Ireland, is of the following dimensions: length between perpendiculars, 175 ft.; breadth molded, 35 ft.; depth to awning deck, 22½. She has three complete decks, with shade deck running almost from end to end, above which are located a number of state rooms, smoke room, pilot house and officers' quarters. She is fully equipped with electric light, steam heating, electric fans, and all modern appliances for the comfort and convenience of passengers. The machinery consists of triple expansion engines of about 1,500 h.p., capable of a speed of 14 knots an hour when loaded to capacity.

The C.P.R. is reported to have purchased the steam tug Colima, which has been utilized in connection with harbor works at Manzanillo, and it is stated that she will be used in connection with the steam tugs Nanoose and Czar, in the car ferry service. She was built at Philadelphia, Pa., in 1904. The hull is of steel, and she is of the following dimensions: length, 95¼ ft.; beam, molded, 22½ ft.; draught, 11¼ ft. She is equipped with fore and aft compound engines, with cylinders 16 and 32 ins. diar. by 24 ins. stroke, supplied with steam at a working pressure of 150 lbs. by boiler 12½ ft. diar. by 10¾ ft. long. The auxiliary machinery includes wrecking pumps, steam capstans, steam steering gear, electric light equipment, etc.

Atlantic and Pacific Ocean Marine.

M. A. Overend, heretofore Travelling Freight Agent, has been appointed Freight Agent for Ontario for the White Star-Dominion Line, with offices at Toronto, in place of the late G. W. Torrance.

Elder Dempster Co.'s s.s. Sobo, which has been under charter to Pickford and Black, for the past three years in the West Indies service, having completed her charter, sailed for England, Aug. 5, returning to her owners' service.

On the arrival of the Allan Line s.s. Victorian at Montreal, Aug. 11, 57 stewards were arrested for refusal to obey orders. The charges were all subsequently dismissed, it being held that the arrests had been illegal. The men all returned to their work.

The Dominion Government has presented a binocular glass to Capt. J. G. Croach of the British steamship Bardistan, in recognition of services rendered to the crew of the schooner H. J. Logan, of Parrsboro, N.S., which was abandoned at sea in Dec. 1910.

R. Jones, shore captain, White Star-Dominion Line, Montreal, for the past 10 years, died there, Aug. 4, aged 65. He had been connected with trans-Atlantic shipping for several years, having commanded vessels of the Dominion Line and Elder Dempster Co.

Referring to recent press reports that the G.T.R. was about to acquire steamships for the establishment of a trans-

Atlantic service, we are officially advised that while such a policy is likely to be decided on in the future, there is no immediate probability of an Atlantic service being acquired, nor until the completion of the G.T. Pacific Ry.

The Cunard Line s.s. Laconia, which was launched at Wallsend-on-Tyne, Eng., Aug. 3, is the first vessel to be operated on the North Atlantic service with a series of anti-rolling tanks, designed to keep vessels on an even keel during varying conditions of weather. The company also has under construction, the s.s. Aquitania, which, it is stated, will be the largest vessel in the world when completed.

The C.P.R. s.s. Empress of China struck on a sunken rock off the Japanese coast, at the end of July, and reports stated that she was in such an exposed position, and the damage so extensive that it was impossible to save her. The passengers and mails were landed safely. She was built at Barrow, Eng., in 1891, her dimensions being: Length, 455.6 ft.; breadth, 51.2 ft.; depth, moulded, 33.1 ft. Salvage operations are said to be in progress, but no information is available at the time of writing.

NOTICE TO SUB-CONTRACTORS.

Contract has been awarded for the construction of the Algoma Central & Hudson Bay Railway, from Hobon, on the Canadian Pacific Railway, to a point on the National Transcontinental Railway, a distance of approximately 101 miles, to Superior Construction Co., Limited. Sub-contractors desiring to secure sections of this work should communicate with the above contractors at Espanola, Ont.

SPECIFY CARBONLESS FERRO TITANIUM FOR YOUR TITANIUM STEEL RAILS

If you are not Familiar with the Advantages of the Carbonless Alloy, write for our Pamphlet No. 20 N.

It is not possible to give here all the advantages to be derived from the use of carbonless ferro-titanium in iron and steel, in preference to the alloy containing carbon. We have prepared a special pamphlet on the subject, however, and it will surely pay you to write for it, if you are at all interested in the subject of titanium steel.

Your name on a postal card asking for pamphlet No. 20-N, will bring you a copy by return mail.

The Deputy Minister of Trade and Commerce, while in St. John, N.B., in connection with the proposed service between St. John, Halifax and the West Indies, is reported to have stated that he was simply investigating the local conditions and receiving recommendations, and that he did not think any change would be made in the subsidy arrangements. The previous subsidy paid was $135,000, of which Great Britain paid one half, and as Great Britain has withdrawn from the arrangement, the Canadian Government, not feeling justified in making up the difference, would arrange the best possible service for half of the previous subsidy.

The two steamships which the C.P.R. has ordered at Glasgow, Scotland, for its trans-Pacific service, as mentioned in our last issue, will be about 15,000 tons register, 570 ft. long, and have a speed of 18 knots an hour. They will be a little larger than the Atlantic Empresses, and will have accommodation for 200 first class passengers and 6,000 tons of freight. The engines will be of about 16,000 h.p., and it is stated that oil will be used as fuel, but that coal burning equipment will be installed for emergency use. The saloon accommodation will be arranged in suites, and single and double berth cabins, and there will be increased protection of the shelter and promenade decks from wind and spray. They will cost about $2,500,000 each.

◆

A deputation from New Westminster waited on the Provincial Government recently to urge that a direct steamship line be inaugurated between New Westminster and Victoria, instead of, as at present, shipping freight to Vancouver by rail and thence to Victoria by vessel.

Type Z left hand

Johnson Car Replacers

Straddles the rail—needs no spikes, clamps or fasteners.
Rests on rail both front and rear.
Adjusts itself to different heights of rail.
Forms a friction grip with rail during the operation.
Brings rails to gauge during replacement.
Distributes the load on the Rail, not one or two ties.
Special types for Steel-ties and Street Car Rails.

The Johnson Wrecking Frog Co.
CLEVELAND, OHIO, U.S.A.
F. H. Hopkins & Co., Montreal, Selling Agents

THE BULLDOZER IN THE CAR REPAIR SHOP.

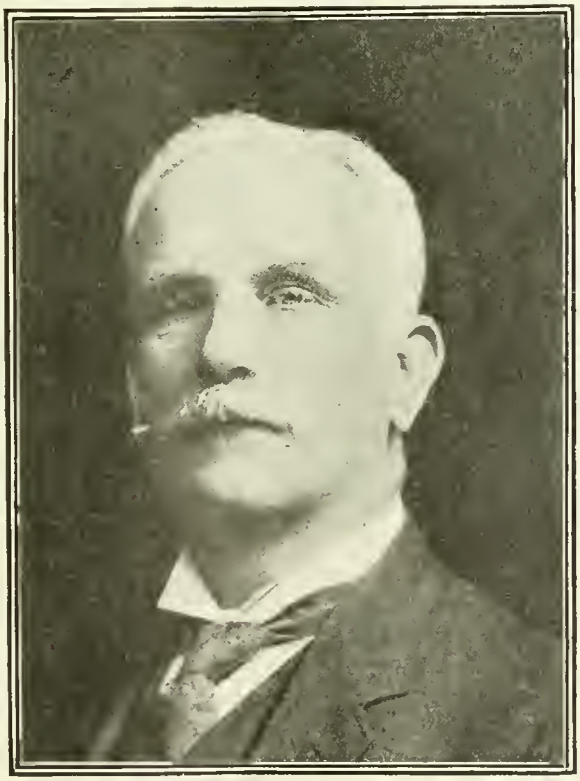
By Frederick H. Moody, B.A.Sc.

The bulldozer occupies a practically indispensable position in the railway shop, particularly in the car department, where so much bar stock must be bent into various shapes to form the car members. A few of these are the car coupler pockets, car step, brake stand, truck frame and many other parts that are of a uniform shape, or which on cars of similar types, are practically the same in size and shape. Were it not for the question of multiple production, and that all parts for the same purpose are alike, it would, of course, be more profitable to produce the shapes by the standard old-time methods on the hand forge, or possibly under the steam hammer. But where similar parts are to be produced in quantities, even though those quantities be comparatively small, it is more economical to make dies for the purpose.

Another factor must be considered in this matter; that is the matter of how many different kinds of parts are to be produced, for, if the number of different kinds were not sufficiently great, it would naturally be an unprofitable proposition to instal a bulldozer even though several entirely different pieces had to be produced in more or less large quantities. This is a question which local conditions alone can determine, and a comprehensive study of the situation must be made to decide if such an installation would be warranted.

In a repair shop, the chances of a bulldozer being used are much less than in the main construction works of a railway. In the larger repair centres, however, it has been found an economical proposition to make an installation. Such is the case with the Michigan Central Rd. in its St. Thomas shops. There all the repairs on the Canadian division of the line are handled. These shops, in charge of W. H. Flynn, Master Mechanic, are quite extensive and are equipped to handle all kinds of repairs to rolling stock. The Canada Southern division of the M.C.R. passes through a fairly productive territory, producing considerable freight and passenger traffic, but the major portion is through traffic, the through-freight from the western states to the main lines of the New York Central and Hudson River Rd. being particularly heavy. Added to this, there is a heavy through-passenger service between Chicago and New York. These heavy conditions have made necessary extensive and well-equipped shops to handle the repairs incidental to a great volume of traffic, especially as it is necessary for all the repairs of the Canadian division to be made in Canada. As a typical repair shop where good examples of work might be obtained, these shops were considered to be first class, so were selected for obtaining the necessary data on the use of a bulldozer in a general railway car repair shop.

The car shops at St. Thomas, under Neil Marple, General Foreman, are well equipped from a repair-shop standpoint, and many ingenious methods have been developed for producing work where standard equipment was lacking. Also, many devices for use with standard equipment have been produced. Prominent among these are the dies for use with the bulldozer in the blacksmith shop, of which Henry Batiste is foreman. The dies to be described in this articles are for the most part quite ingeniously designed, and, in common with most of the dies used, contain features quite different from those found in similar shops under like conditions. These features are for the most part, improvements on existing methods, and contain points which will undoubtedly appeal to the reader, especially if he is interested in car shop production.



A. H. N. Bruce, M. Can. Soc. C.E.
Chief Engineer Quebec and Saguenay Railway.

Fig. 1. shows the bulldozer used in these shops. In this view, it is shown set up with the necessary dies for producing small car-coupler pockets. The female part is attached to the ram, the arms of the coupler pocket bar stock being bent around the male section which is stationarily attached to the platen of the machine. The action of the bulldozer being familiar to all, it is unnecessary to describe its operation.

Four good examples of bulldozer work are illustrated in fig. 2, and as they are all produced in an interesting manner, the dies and successive steps of production will be described in some detail. A is the standard size of rounded-end car-coupler pockets as made for freight car use; B, a freight brake-rod stand, the lower arms of which are bent at a right angle and attached under the end of the car, the brake rod fitting down into the hole shown in the rounded section; and C and D are freight car steps, the former being straight, while the latter is offset to accommodate the different types of construction followed by builders in standard freight cars.

The production of the part A of fig. 2, will be described first. This piece needs seven strokes of the machine, the bulldozer requiring two different settings for the purpose. These operations are: bending inward the two big ends of the bar stock; trimming these lugs to size; punching the two end bolt holes adjacent to the lugs; and finally bending to a U-shape. All operations but the last are performed in one setting, with a final setting for the U-bend.

The set of dies illustrated in figs. 3 and 4, are set up in one battery on the bulldozer. The first operation, which is performed on the two ends, is that of bending the lugs to form the inwardly projecting lugs E, fig.2. The bar stock of the required section, is cut off a little longer than the finished length of the coupler to allow for trimming in the second operation. The stock, with the end heated to a working heat, is secured in the clamp A, fig. 3; this clamp is bolted to the platen of the bulldozer. The vise feature of the clamp consists of concentric cam sleeve B, which, when the attached lever is depressed, mounts on the corresponding stationary projections, clamping the stock. The stock is allowed to project a distance slightly in excess of the lug depth beyond the face of the inserted piece C, around which the lug is bent. The part D, with the projecting lug E, is attached to the ram of the bulldozer. This part D is so arranged that the nearer face of the lug F, passes down alongside the inserted piece, C, leaving an intervening space equal to the thickness of the stock. This operation bends the lug, but leaves the projecting face rough requiring trimming.

As before mentioned, the dies in fig. 4, are attached alongside those in fig. 3, making a rapid sequence of operations possible, so that the three operations may be completed in one heat. The second one of the three, is the trimming of the inwardly projecting lug. The end, still hot, is placed on top of the stationary part A, as indicated, and the lug brought back against the inserted shear knife B. The moving part C with a corresponding inserted shear blade D, on moving forward in its stroke, trims the lug, the blade D being so placed as to just pass under the blade B. This

shearing operation has a tendency to lift the front end of the stationary part A on account of the long overhang of the latter, so to avoid this, the latter is bolted down to the bulldozer platen by bolts through the bolt holes shown.

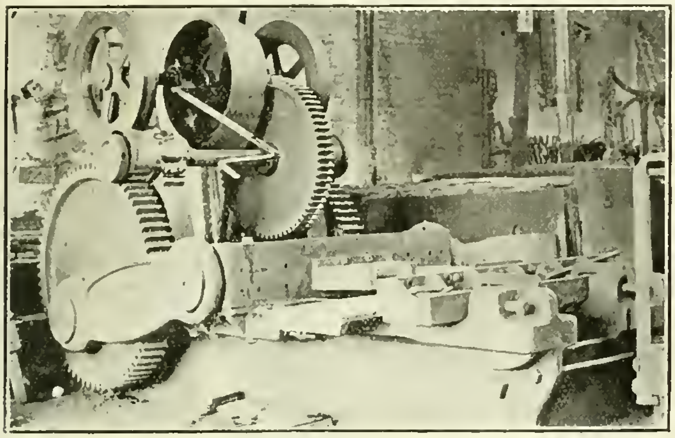

Fig. 1—Typical Bulldozer Installation with Dies attached.

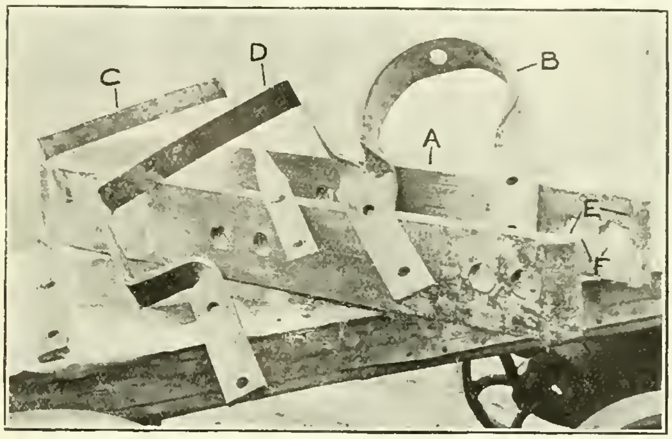

Fig. 2—Four Good Examples of Bulldozer Work.

Following this end trimming operation, the coupler has its cross bolt holes punched, the dies for the purpose being shown in fig. 4, behind those just described. Two punches E are attached, as indicated, to a head F bolted to the bulldozer ram. Corresponding dies in a die-plate G on the bolster H are secured to the stationary plate of the machine. This die plate is provided with plenty of stock around the punch holes so that there will be no tendency for that part to break under the spreading strain. Reference to fig. 2 will show that the holes to be punched, F, are close up to the inwardly projecting lug. This precludes the possibility of using the edge of the lug as a guide against the edge of the die, for if such a course were followed but little metal would be left along one side of the nearer die hole—not more than about ½ inch—in this case, which is insufficient. Some other means of locating these holes is thus required. A guide piece I, with a handle J has two holes located in it the same distance from its outer end as the holes of the coupler pocket are from the lugs. This piece then can be used as a guide, placing it in front of the stock to be punched, holding against the shoulder formed by the lug. The stock and guide can then be located in their proper position by the operator in front of the punch. The loops K serve as strippers for clearing the punches for the work after the operation. This operation completes the work on the one end, the three steps having been made successively in one heat. The other end is then heated and the three operations repeated on that end.

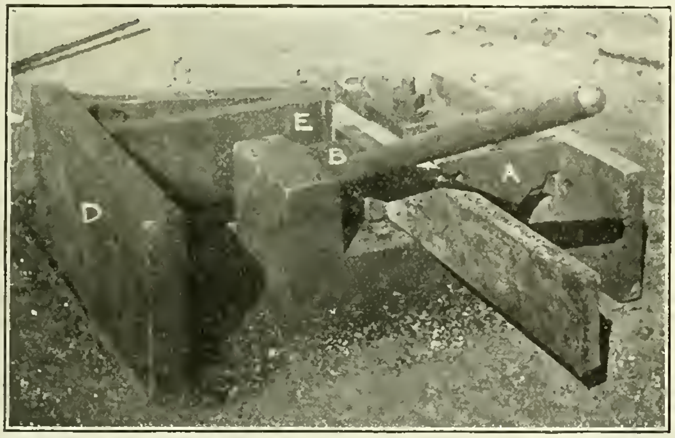

Fig. 3—First Operation of Bending the Lugs on a Car-coupler Pocket.

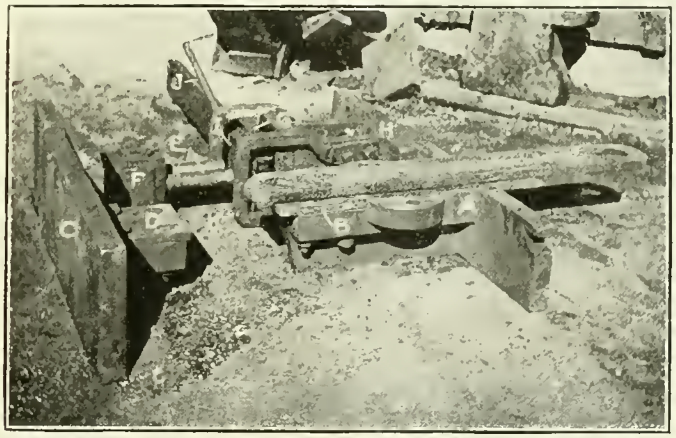

Fig. 4—Second and Third Operations of Trimming and Punching the Ends of the Car-coupler Pocket.

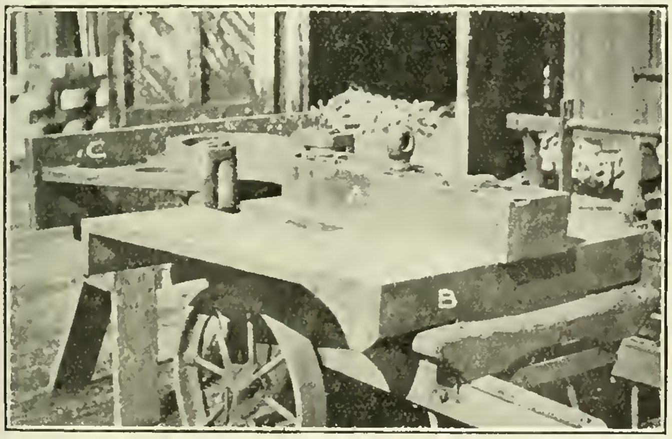

Fig. 5.—Final Operation of Bending Car-coupler Pocket to a U-shape.

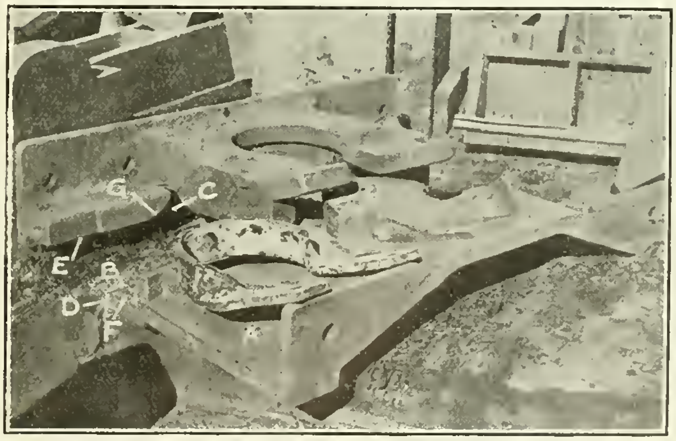

Fig. 6.—Bulldozer Dies for Brake-rod Stands.

The final operation of bending the coupler pocket to the U-shape is performed by the dies shown in fig. 5. A small hole is punched in the straight stock, midway between the lugged ends. The central portion that is to be bent, is then heated to a working heat, and placed in the bulldozer against the end of the part A of the die, a tit on this outer end fitting into a hole in the coupler strip, thereby locating centrally. This part A, has its base B, bolted sta-

tionary to the platen of the bulldozer. The part C bolted to the bulldozer ram, has projecting roller arms D, which force the ends around the die A, the rollers being so located as to just pass over the stock as it forces up against the body of the die. This operation completes the coupler pocket, only seven strokes of the bulldozer and two die settings being necessary for its completion.

The brake rod stand shown resting on its forming punch in fig. 6, is another interesting bulldozer operation, requiring but two strokes and one setting to complete. The flat stock, cut to the required length, has the central and two end holes punched previous to the bulldozer operations. The heated stock is then located centrally by its centre hole on a dowel in the front face of the stationary member A. The strip rests on its edge on the bulldozer platen. The height of the edge is so designed that the amount the stock projects above it is equal to the stock thickness. The lower portion of the moveable jaw is cut out as at C, so that when the stock stands on its edge against the face D of the stationary die, the edge E of the moveable one folds the ends over this on to the horizontal ledge F, the curved portion G of the moveable die forming the bent section. This leaves the central portion in its original position with the ends twisted through little more than a right angle. The twisted stock is then turned upside down and placed in front of the curved face H. A corresponding form on the moveable die closing over the stock in this position bends the stock to the shape shown, only two strokes of the ram being required, changing from the lower to the upper position between strokes. To add to the complexity of the piece, the front face of the curved portion H is inclined slightly to the vertical to form the horizontal face when in position on the car.

The bending dies in figs. 7 and 8 are similar, with the exception that the former is for a plain car step, while the latter is for an offset one; samples of each are shown at A alongside each die. The same lettering applies to both. The previously punched and heated stock is placed in position in the space between blocks B and C and clamped there by the eccentric pin D bearing on the back of B. These blocks, B and C, may be changed at will for varying drops of car steps; the one pair of blocks will accommodate three different drops by changing their relative locations. Two arms E, actuated by roller projections F on plate G, which is bolted to the bulldozer ram, force the stock around the shape on the body H, which is bolted to the platen. (In the case of the offset step, the swinging arm is also shaped to give the offset). Near the rear of the stationary part, there are two U-shaped pieces I, pivoted at the lower part of the U on the projecting pins J in a slot in the body H. The outer end of the swinging arm has a wedge shaped rise at K, so that as the arms swing around into their final position when the lower point L of the rise strikes the underside of the pieces I, the latter swing upward about their centres. This raises the lower arm of the U, and as this gives an outward as well as an upward motion, the lower edge of the stock is forced out. At the same time, the face M of the swinging arm forces inward the upper part of the stock, the combined action twisting the stock through a complete right angle into the shape indicated. To keep the arm from lifting, the guiding piece N is provided, keeping the arms down while the lifting action due to the twisting, is operative.

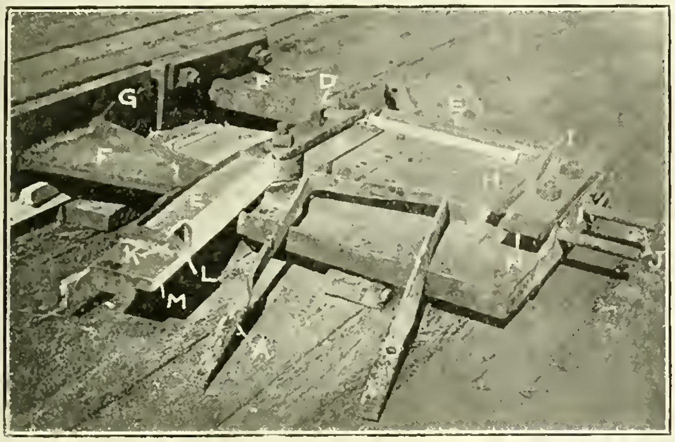

Fig. 7—Bulldozer Dies for Plain Car Step.

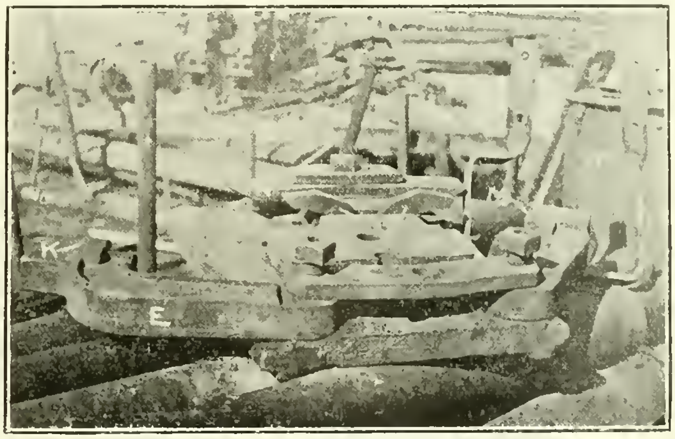

Fig. 8—Bulldozer Dies for Offset Car Step.

Method of Making Driving Wheel Brasses at the Pere Marquette St. Thomas Shops.

The customary method of making new thrust brasses for locomotive driving-wheels, is, as all railway mechanical men know, to machine a thin brass disc of the required dimensions, saw in two, rivet in position on the drivers, and finally finish off the thrust face in the lathe when the tires are being turned down. This method, while almost universally used, is very expensive and at the same time has inherent disadvantages which, in such a construction, cannot be overcome.

The method adopted by the Pere Marquette in its shops at St. Thomas, Ont.—a method used in other shops on the same road—is to cast the bearing into place in a manner similar to that of casting bearings. Fig. 1 shows the method used for that purpose. The bearing face of the driving wheel is dovetailed by taking a rough hogging cut, undercutting at the outer edge. A depth of ¾ inch is claimed to be all that is necessary, but greater depths are being regularly cast on wheels originally made for the type of brass mentioned earlier. The wheel, when thus prepared, is turned on end and placed flat on the rails over one of the locomotive pits in the erecting shop floor. The rails being approximately perfectly level, automatically level up the wheels for the pouring.

The lower part of the bearing is protected from the hot metal by a piece of asbestos paper A tied around the axle as indicated. To accommodate the different sizes of brasses to be cast, retaining rings of various diameters within the limits of the commoner sizes of brasses, have been made. These rings, indicated at B, are similar to piston rings, only

in order that they may be easily placed in position, they are made in three sections, the different sections being held up to place by weights C. With these preparations, the wheel is ready for pouring.

Bearing brass is melted in a crucible in an open-top oil furnace. This part of the process is slow, requiring several hours to melt a crucible full; but several brasses may be cast in one heat. When melted, the crucible is carried to the wheel and the brass poured as at D. The molten brass penetrates to every crack and crevice if sufficiently fluid, these fins and spines forming retaining projections to hold the brass in place. The main grip is at the keyway; the key holding wheel to axle seldom projects all the way through, so that a projecting spur of brass acts as a dowel to hold the bearing in position.

The subsequent cooling of the brass sets up strains in the metal, which before normal temperature has been reached, are sufficient to radially break the disc of brass in one place. This, however, has a beneficial effect, as the broken brass acts the same as a spring piston ring, the brass bearing out on the dovetailed edge, securing the brass tightly in place. This crack, which for a wheel of the size shown will be from 1-16 to ⅛ inch in width, is filled with molten babbit, to fill up flush with the rest of the surface.

Following the filling of the break with babbit, the bearing surface is finished off to the required size in the lathe when the wheel tread is being turned up. The finished wheel with its brass is shown in fig. 2. The simplicity and economy of the method must be apparent to all railway mechanical men.

◆

Ashpit Mechanism, at the C.P.R. West Toronto Roundhouse.

An ashpit for accommodating the ashes removed from a locomotive after it has been taken off a run, can be made a very simple arrangement, all that is necessary being a pit into which the ashes may be scooped from the locomotive; the particular difficulty lies in the manner of disposal of all these accumulated ashes. Nearly all roads have different arrangements, and even the same road at its various roundhouses has probably a different arrangement at each, the designs being generally devised by the local authorities. In the majority of cases very satisfactory arrangements are worked out.

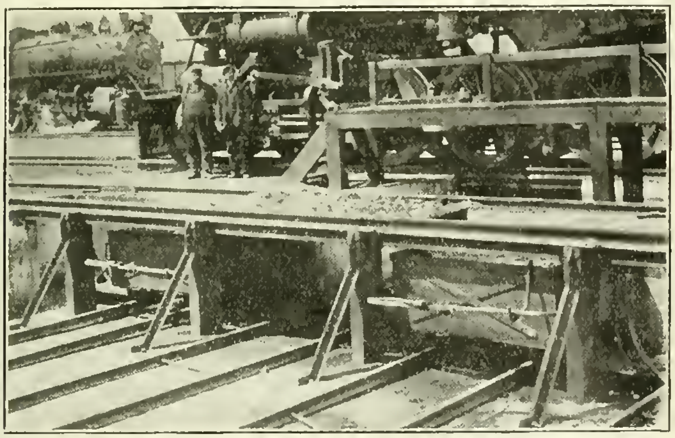

Fig. 2.—Discharging Ashes to Ash Cars.

The arrangement in use at the C.P.R. West Toronto roundhouse is a particularly simple and good design for the rapid handling of ashes where a too expensive equipment, such as deeply submerged cinder-car tracks beside the ash emptying track, is not desired. This C.P.R. mechanism is shown in the accompanying figs. 1 and 2. Two ash-removing tracks are provided as indicated in fig. 1, the locomotive in the photograph in the operation of removing ashes being on the second track over. In the immediate foreground there are three depressed narrow-gauge tracks, in a pit, the central one running to the further ash-removing track. Under the nearer ash-removing track, this central cross-track space is covered, as a protection against clogging up with ashes.

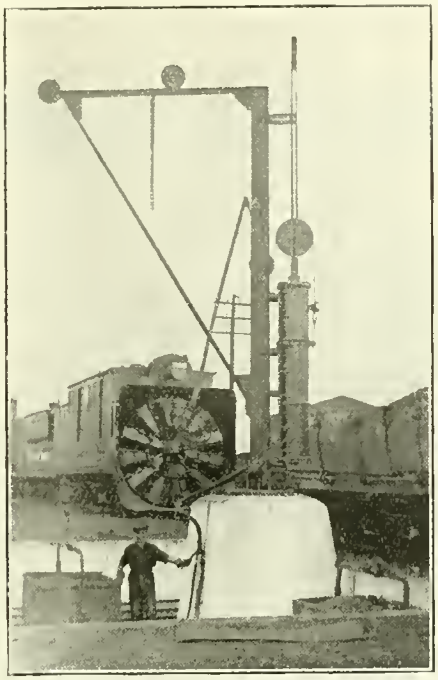

Fig. 2.—Radial Air Hoist for Raising Loaded Ash Cars.

On these narrow-gauge cross tracks are three little ash trucks of the form shown, which, when filled, are run out from under the locomotive, where they may be picked up by the radial crane shown in fig. 2, and swung up over the cinder car to the right, in the picture, and tripped. Like most improvised mechanisms around railway repair shops and roundhouses, the radial crane is operated by compressed air, acting through a cylinder vertically attached to the frame of the crane as indicated. A plunger moving vertically in the guides provided, draws the steel rope over the several sheaves, raising the bucket to a position where it may be swung around and dumped.

The pit is constructed of concrete throughout, all the locomotive rails being supported on the concrete walls, with the exception of the inner rail which is supported on I-beam sections, the rail being braced by an inverted rail to which it is rivetted.

There are four main tracks leading to the roundhouse, so that in order to provide each track with means for removing ashes, the arrangement shown is duplicated on the far side.

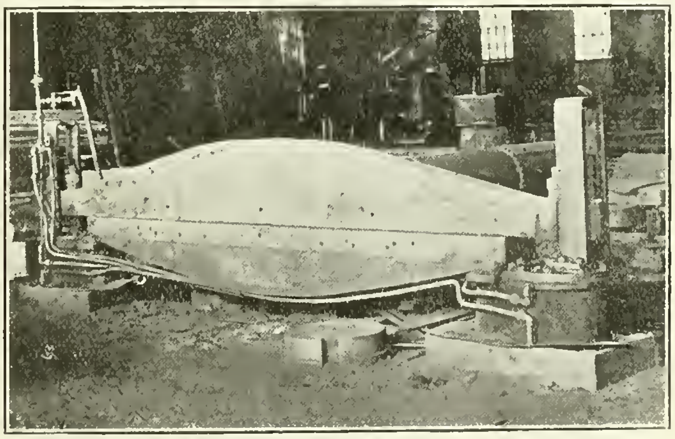
◆

Flanging Press at the Michigan Central Railroad St. Thomas Shops.

The uses to which air may be put around a railway shop are many and varied, as anyone familiar with railways knows The accompanying illustration of a flanging press as used by the M.C.R. in its shops at St. Thomas, Ont., affords one more example of its adaptability, another means of usefulness in this field.

The usual flanging press is essentially the same as the one shown, only the clamping is effected by square-threaded screws at each end bearing down on the upper clamp. This makes an effective means of clamping, the plate to be flanged being very securely held; but where it failed was in its slow action, it being necessary to slowly release the ends by their respective jack screws, then insert the plate and finally clamp down. All this took time and labor, a very important factor.

The press shown, being operated by air, is very quick-acting. The upper, or moveable jaw, instead of doing a moveable jaw, instead of having a jack-screw action, is attached by pistons to plungers in the air cylinders at each end. These two air cylinders have air connections from the same valve making their operation simultaneous. The cylinders being of ample proportions provide a good holding grip on the plate to be flanged, at the same time making it possible to quickly release when desired. This quick-action is especially essential when inserting, on account of the heat in the thin plate as it comes from the flange fire quickly dissipating. Clamping pressure and release are both obtained by air in the respective ends of the cylinders, two double valves providing for this double action.



Flanging Press Actuated by Air.

◆

Steel Passenger Cars.—The rapid change from wood to all-steel construction passenger cars is pointed out in a recent issue of the Railway Age Gazette. At the beginning of this year there were about 3,000 passenger cars of this type in service, which, out of a total of 54,600 cars of all kinds, gives a percentage of 5.3 of the total. Of the cars constructed and contemplated for this year, 62% will be all-steel construction, so that at the end of this year, fully 9.3% of all passenger cars will be of steel, while 3.5% have steel underframes. An estimate given by our contemporary places the cost of substituting all the wooden for steel cars at about $630,000,000. These figures do not seem to have been reckoned with by the principal advocates of the change.

Dumping Box Cars for the Canadian Pacific Railway.

From time to time, attempts have been made by railways, car builders, designers and inventors towards the production of a practical dumping box car that would be equally well adapted to carrying either bulk freight like grain, coal, coke, ore, etc., or general merchandise; in other words, an endeavor has been made to produce a car that would be at the same time both a box car and a gondola. Traffic conditions have created this demand, for there are many points on every railway from which nothing but commodities that must be put in box cars are shipped in but one direction, the car returning to that point empty, while the conditions in the opposite direction are probably just the reverse, the main traffic in that direction being such as to require gondolas. This means that empty box cars are travelling in the same direction as loaded gondolas, and vice versa. Such conditions exist on the C.P.R., where grain is brought east and coal is shipped west over the same line. As a general rule, the railways have been compelled to use box cars very extensively for as many kinds of commodities as possible in order to do away with a lot of the empty car haul.

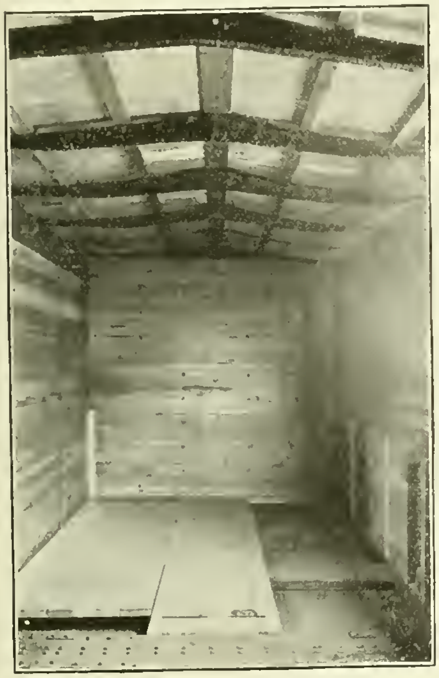

Fig. 1.—Interior View of Car with Convertible Door on One Side Open.

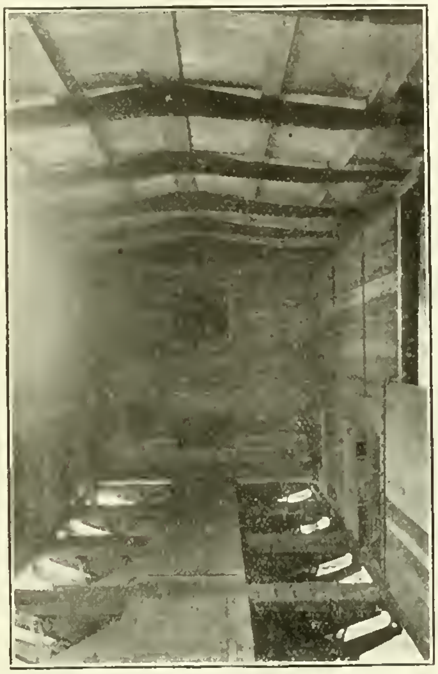

Fig. 2—Interior View of Car with both Convertible and Dumping Doors open.

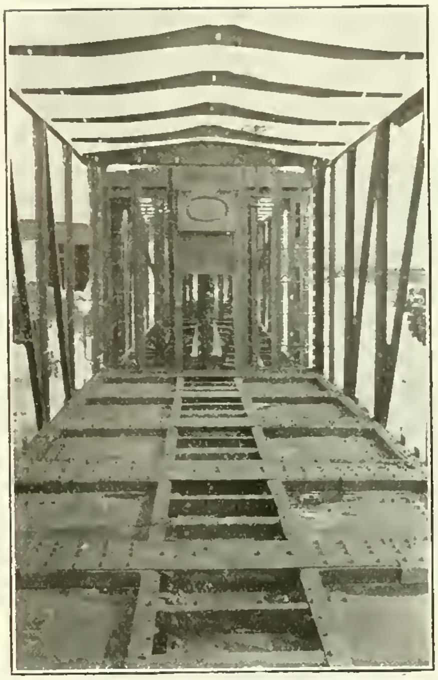

Fig. 3—Skeleton of Car before the Woodwork has been added.

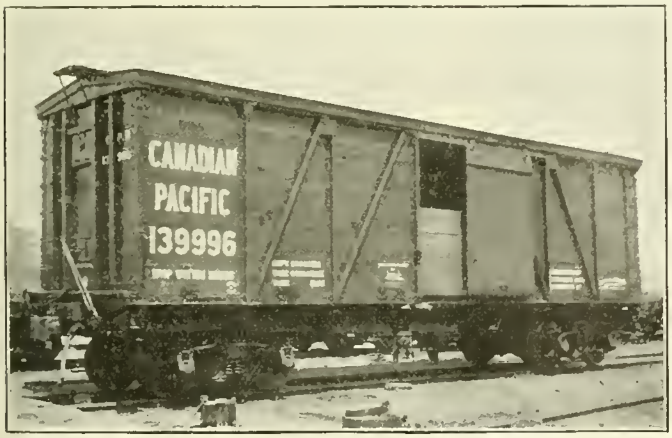

Fig. 4—Exterior View of Completed Car with Dumping Doors open and Grain Door up.

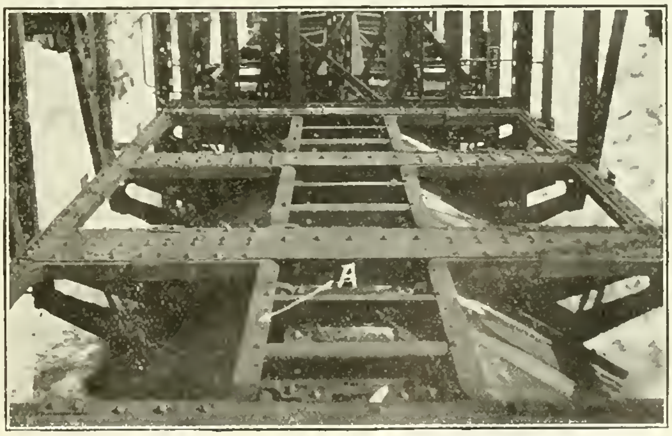

Fig. 5—Framework of Car before Woodwork has been added, showing Dumping Doors open.

The factor of unloading is another point commonly overlooked. By the use of dump cars, much of the unloading time is saved, necessitating fewer cars to carry a given volume of traffic between two points. For instance, it takes two men about 10 hours to unload 30 tons of coal from a box car on a trestle at a cost of from 8 to 10 cents a ton, whereas the same two men could unload 50 tons from a dump car of the Otis type at the same point in 10 minutes at a cost of only 1½ cents a ton.

Recently, the C.P.R. had an experimental car built of the dumping box car type, illustrations of which are shown herewith. This car was built to the design and patents of the Hart-Otis Car Co. by the Canadian Car & Foundry Co. and has a floor and underframe construction of a modified design of the Hart-Otis dump car made while the superstructure is that of the standard C.P.R. steel frame box car. The doors of this car are specially designed with a view to making them tight for carrying grain, making it possible to come east with grain and return to the west laden with coal. The car being of the dumping type gives the users all the advantage of a gondola.

The interior arrangement of the finished car is shown in figs. 1 and 2. To the left, in the former illustration, one of the wooden convertible doors is shown closed. The convertible door to the right is in its open position. It will be noticed that this door sets into a recess in the wall, leaving no space for bulk freight to accumulate. The convertible doors at the centre of the car, opposite the side doors of the car, are made large enough to extend half way across the car when lowered. They act as grain doors when raised into the position indicated to the right in fig. 2. When the car is to be used as a dump car, the convertible doors are raised; and when used for merchandise, lowered, forming a regulation box car with a solid floor. The dumping doors are of themselves a sufficient flooring; thus, if required, the end convertible doors may be dispensed with, leaving only the centre ones for grain doors. These centre doors and middle portion running lengthwise between the end convertible doors, form a runway for trucks when loading merchandise. Dispensing with the end convertible doors would mean a saving in weight of about a ton.

Figs. 3, 5, 6 and 7 give detailed views of the car construction, and fig. 4 shows an exterior view of the completed car

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

USE

Galena Railway Safety Oil "B"

in Marker and Classification Lamps, to secure Efficiency of Service, Maximum Candle Power, Clearness of Light.

Galena Long Time Burner Oil

for use in Switch and Semaphore Lamps, and all lamps for long time burning, to avoid smoked and cracked chimneys and crusted wicks.

Tests and correspondence solicited.

S. A. MEGEATH,

PRESIDENT

with one section of the drop bottom lowered. The half-opened side door shows one of the centre convertible doors raised into position to act as a grain door. Fig. 3 is practically the same view as that in figs. 1 and 2, only no woodwork has been added. The flooring, it will be noted, is very like a flat gondola dump car.

The drop bottom construction in its dump position is clearly shown in fig. 5, and fig. 6 shows the operating gear at close range. As will be noted in fig. 5, there is an angle-iron edge, extending all around the opening, one leg projecting downward. Over this, the upturned edge of the door fits, making a tight joint. This edge of the door is indicated at B in fig. 6. The front edge of the door has no flange, so that no interference may be offered to the flow of the material in the car while dumping. When closed, this edge without a flange is protected by the hinged piece A in fig. 6, swinging up into place at the outer edge of the door, forming a tight joint at that point. This hinged piece is operated by the door closing mechanism.

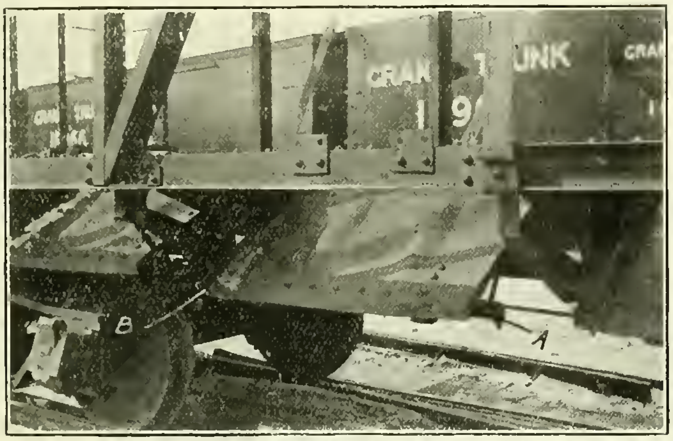

Fig. 6—Near View of Dumping Door, showing Sealing Hinge for Outer Edge.

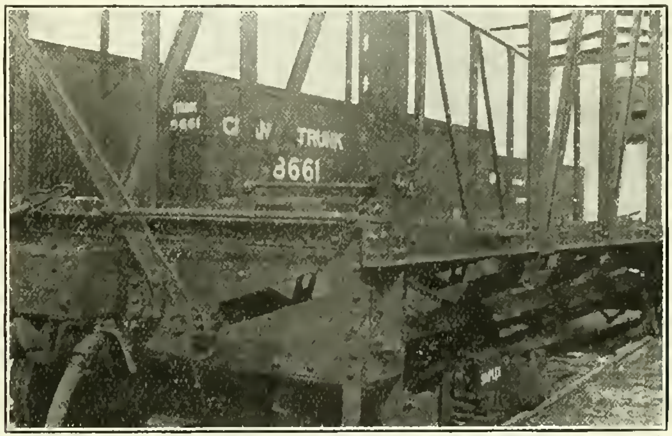

Fig 7—Near View of Operating Gear and Drop Bottom Construction.

The door closing mechanism is shown at close range in fig. 7. A shaft passing along each side of the car is confined in its motion to move along inclined ways in the cross-beams of the car. These guiding ways are clearly shown. The hinged doors rest on this shaft, and the position of the ways is so arranged that as the shaft moves outward, the doors are gradually closed. In its outer position, the shaft comes up under the hinged piece A of fig. 6, securely locking the door and making a tight joint.

In a recent test, the bottom of the car proved perfectly tight, meeting the expectations held for it. The designers and builders have every confidence for its future success.

Is It Economy to Use Soft Ties for Switches, Switching Leads and Track?

At the Roadmasters' and Maintenance of Way Association's recent annual convention at St. Louis, Mo., the committee on this subject presented the following report:—

Classification of Hard and Soft Ties.—Under the classification of soft ties we deem it proper to consider cedar, pine, gum and similar woods while under hard wood we have in use as ties, oak, beech, hickory, hard maple, ash, pecan, honey, locust, etc. Perhaps the best examples of the different classes are seen in the cedar in the soft wood and the white oak in the hard wood. There is much to be said for all the different woods in both classes but to confine our report to one line we will consider only the cedar and white oak and eliminate all consideration of tie treatment to prolong the life of the wood.

Safety the First Consideration.—The safety of the track outside of the grade is assured by three things, line, surface and gauge, while there are three elements that produce them, the ballast, ties and rail. From the ballast we get the surface, from the rail the line and from the tie the gauge, each, of course, being in a manner influenced by the other. In the main track, with heavy traffic and modern equipment, we are striking at the very foundation of the safety of our track in attempting to use soft ties, no matter what their relative cost to hardwood ties, for the reason that one train may turn over many rails in apparently sound ties.

Under safety we must think of other tracks as well as the main track, since damage to equipment is a matter of concern to us as well as loss of human life, and no side track of general use should be so constructed that engines of the heaviest class cannot use it without perfect safety. This is especially true of ladder racks and switching leads in important yards, and passing tracks along the main line where a derailment may mean a yard blocked for an indefinite time and the whole system hampered by one weak link in the chain.

On nearly every railway freight business has reached a state of development far in advance of the track facilities of the terminal yards. We have been slow to awake to the fact that perishable freight is not the only freight that is advertised to leave a given point one night and be at a given destination the following morning. A very small delay in either yard is enough to delay the delivery, which often repeated will eventually give the business to a competing line. One railway connecting many points in the northwest advertises over a score of points where all classes of merchandise will be delivered on almost passenger schedule. The yards where this freight is loaded and unloaded must be equal to the standard set for them, or the system would fail.

Cheap Ties on Branch Lines.—We hear much of cheap ties on new branch lines, where the argument is presented that the traffic is light, and the cedar tie on account of its long life, will give all the service that is necessary for years to come, when, if the line proves profitable and new business is developed, a more permanent construction can be furnished. This argument is good if it were given to the management to foresee what each branch line will do in the coming 10 or 20 years. But railway business is at best a variable quantity and the line that sees but one local train each way a day when built, may in a year be the only outlet to coal or oil fields undreamed of when built. Your committee investigated among other cases one track 34 miles long that was built of gravel ballast, cedar ties and 65 lb. rail that answered every purpose for 13 years, when almost in a night a stone field was developed, coal was diverted from another line and merchandise runs were sent over this line on account of better grade than the old line. One hundred thousand capacity steel cars and the heaviest engines replaced the little coal train and the cedar ties were found entirely inadequate to the demand put upon them. The first means of improving conditions was to replace 1,500 cedar ties with oak ties the first year and to change out the balance as fast as they could be reached each year. The gravel ballast stood the strain as well as the light rail and after five years of heavy traffic the same rail is still in service and in good condition. At the time the cedar ties were taken out they were as sound on top as when put in, although slightly decayed from the bottom. Under the rail they were crushed from one inch to half way through and cut to pieces with spikes where they had been driven to restore the spreading gauge. At the time this line was built the soft ties cost 50c. each and oak ties were worth only 35c. each, the cedar ties being selected because they were known to be of long life and there was no apparent reason why they should not give all the services that would be demanded of them for 25 years. When built all the ties in the track were protected by light tie plates, which were the heaviest plates on the market at the time. These tie plates proved of very little benefit when the heavy traffic was put on the line.

Soft Ties for Repair Tracks.—In repair yards we have conditions that are ideal for the soft ties. Here we have nothing heavier than a switch engine and low speed on all tracks. The long life of the tie is a matter of economy both in first cost of the tie and the greater expense in renewing the tie in the hard ground where it has been packed down by the men working in the yard. We also find good use for the soft tie in empty tracks at coal mines, storage tracks and similar tracks where the traffic is light enough that we are justified in using light rail and inferior ballast.

Summary.—Local conditions and not good engineering have made the soft tie a factor in railroad construction, where it serves its time until pushed out by its hardier brother. When fast trains and heavy trains follow the converted switch engine, and freight must move on schedule time to arrive at growing terminal points, there is no place for a weak unit in the machine of railway operation and if the use of soft ties in switches, switching leads and track means the making of an inferior tie one of the links in the construction of an up-to-date railway, it is not economy and its use is not recommended.

Schemes of Erection Proposed for the Quebec Bridge

In our last issue we gave the schemes of erection proposed by the St. Lawrence Bridge Co., for its accepted and other designs. Following are schemes proposed by other tenderers:—

BRITISH EMPIRE BRIDGE CO., LTD.

This company tendered only on the Board's design, but proposed three different schemes of erection of the suspended span: (a) cantilevering out; (b) floating in on high falsework; and (c) floating in a special truss to be used as stage or falsework upon which the suspended span proper will be afterwards erected.

The method of erection of the cantilever and anchor arms is naturally the same for all three cases (fig. 3). The work is started by first building a high steel tower ,two legs of which will rest on the main pier, while the other two are on special concrete pedestals. These towers will be slightly higher than the top chords of the bridge. On top of the tower will be erected the two travellers to be used for the erection of the bridge itself, one to be used on the top chord of the anchor arm and the other on the top chord of the cantilever arm.

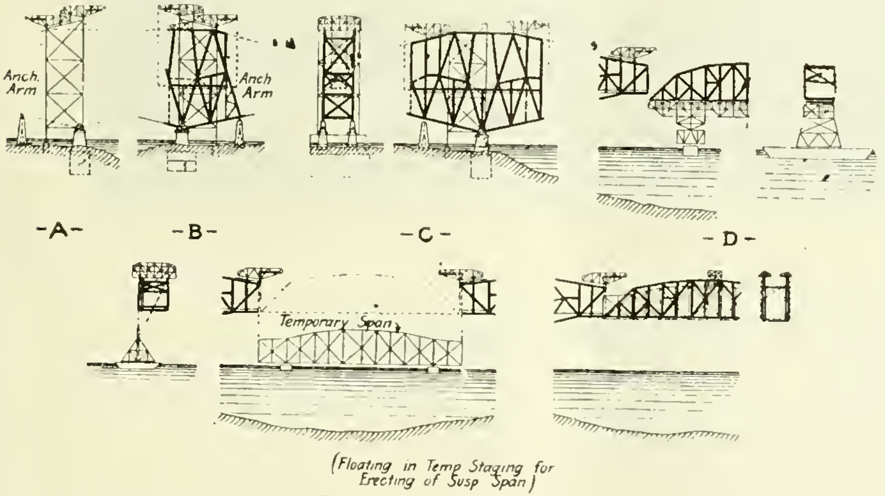

Fig. 3.—British Empire Bridge Co., Board design. (This proposal includes a scheme for erecting the suspended span on a temporary span floated in.)

A portion of the material is to be delivered by water and a portion by rail-the material delivered by water will be erected by the travellers standing on the top of the tower and the erection will be carried forward by water and far as convenient. Afterwards the material will be delivered by rail. For this purpose a trestle will be erected between the land and the portion of the steelwork already erected.

To obtain stability during erection a temporary concrete pier will be built under panel point AL10. This pier will have eyebars built into it, to which the truss may be anchored. During erection the member AU12—AL10 will be reinforced so as to act as a compression member. After the travellers have done all the erecting possible from their position on the towers, they are transferred to special tracks on the top chords from which position they proceed with the erection, panel by panel. As both the cantilever and anchor arms are erected as cantilevers the stresses during erection are the same as in the completed bridge, and all joints will be riveted up complete as the erection proceeds.

Suspended Span Cantilevered.—When the cantilever arms are completed the same top-chord travellers can proceed with the erection of the suspended span to junction at the centre. The adjustment at this point is controlled by adjustable members between the suspended span and cantilever arm.

Suspended Span Floated in.—Floating the suspended span into place permits of work on this part of the structure to be pushed ahead at the same time as the other parts of the bridge. In the case of the high floating erection, the falsework is to be erected on concrete piers at Sillery, about three miles below the bridge site. The falsework consists of a long truss supported on two towers, the foot of each tower being carried on a pontoon 225 ft. long. 45 ft. wide and 30 feet deep. The panel-points of the supporting falsework correspond to the panel-points of the suspended span, permitting the use of eyebars in the bottom chord of this span. The falsework is not transferred to the pontoons until the suspended span has been completed and everything is ready for towing to the site. It is built high enough so that at extreme low tide there is no chance of the suspended span putting any load on the supporting cables attached to the cantilever arm, during the operation of coupling up. The falsework is securely attached to the pontoons, but the span itself is supported on special bearings, preventing any side or lateral movement prevents any chance of the weight of the falsework and pontoons being taken on the structure. The pontoons are fitted with pumps and valves so that the level of the steelwork can be controlled at all times. The pontoons are held in position under the bridge by the tugs supplemented by anchors and moorings attached to winches on the adjacent shores. Navigation on the river would have to be stopped during the operation of floating in.

Stage Erection.—The third scheme for erecting the suspended span proposed by this company is by means of a special temporary span which is floated in and suspended between the two arms of the cantilever arms, and upon which the permanent span is finally erected.

In general, this supporting stage consists of two main trusses spaced 64 ft. c. to c., each main truss being made up of two independent trusses spaced 9 ft. c. to c., the two being securely braced together so that they would act as a single truss. The construction of the stage is made as light as possible, wire cables being used for all tension members, the compression members being of nickel-steel. The weight of each double truss is about 510 tons. The spacing of the vertical posts and diagonal bracing is arranged so as to give free access to joints and connections of the permanent but leaving the falsework free to descend below the span when required. This span to facilitate driving of pins, riveting, etc., and the top and bottom chord are either above or below the corresponding chords of the suspended span. The floor of the stage is as shallow as possible, so as not to interfere with the clear headway required for navigation. The floorbeams are attached to the side trusses by a knuckle bearing between the trusses, thus ensuring equal distribution of load.

In erecting the stage it is intended that each double truss will be hoisted in place separately by means of the top-chord travellers and slung from the end of the cantilever arms. To ensure stability during hoisting and until the floor system and bracing was put in place the particular form of truss used was decided upon. Until the wind bracing is put in, the trusses are guyed to the ends of the travellers overhanging from the end of the cantilever arms.

The suspended span will be built on the stage floor outside the temporary girders. When this truss is completed it will be hung in its proper place, being attached, however, to the temporary truss to prevent lateral motion or stress from wind. The floor and bracing will then be put in place, the dead load of which will be carried by the permanent structure, the temporary staging being required to carry only the dead load of two main trusses. Special adjusting devices are placed under the panel-points of the suspended-span trusses during construction, to correct whatever deflection may take place in the temporary staging under the constantly increased load.—Engineering News.

(To be Continued.)

The Use of Manganese Steel for Frogs and Crossings.

The committee on this subject, appointed by the Roadmasters and Maintenance of Way Association, presented the following report at the recent convention at St. Louis, Mo., based on the personal experience of members of the committee, and close examination of such frogs and crossings in use on the various railways in and around Chicago and other points:

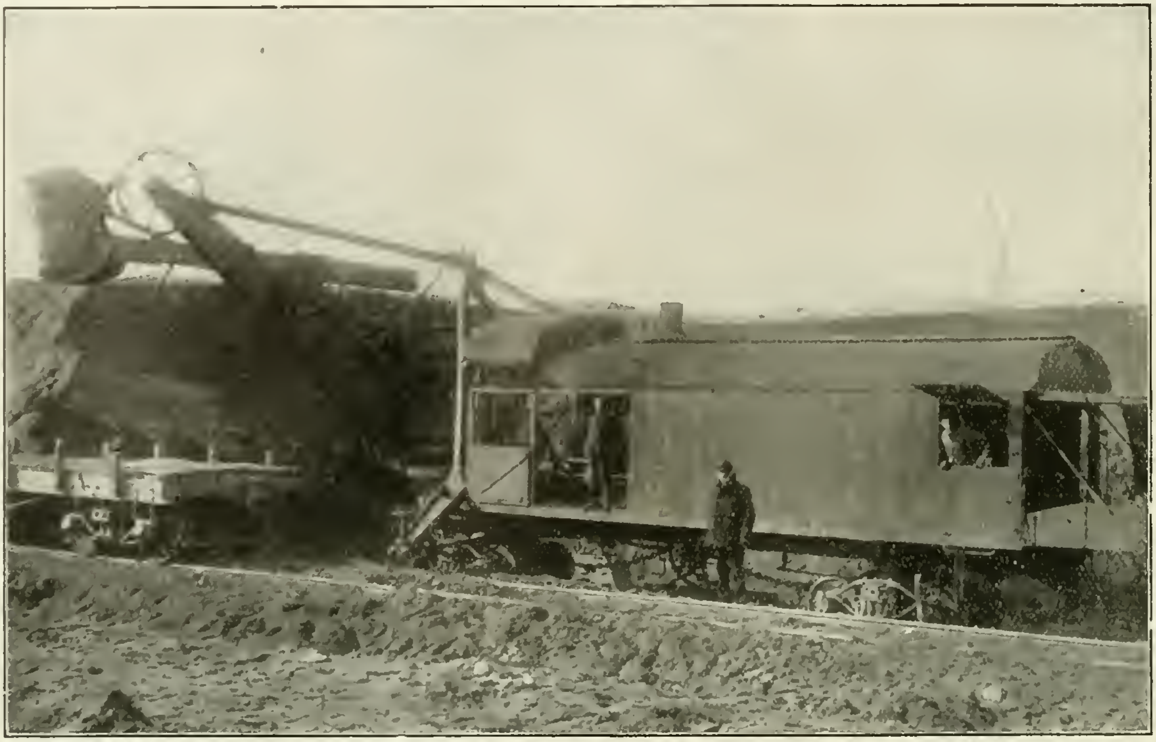
We find at points where such material has been in use for a number of years, as far as we have seen and have been able to obtain information, that manganese frogs and crossings have proven a success.

We have found that by use of such material the maintenance of frogs and crossings has been greatly reduced by eliminating cost of bolts which are ordinarily used in the Bessemer rail frogs and crossings. Another advantage is a big saving in frogs and crossing timbers which are ordinarily ruined, due to respiking and rail cutting.

One of your committee had installed two no. 10, 85 lb. manganese frogs which have been in service under the heaviest kind of traffic on switching lead since Dec. 8, 1908. One of these frogs is still in the track and will wear one more year. The other frog was removed Feb. 1, 1911, on account of toe and heel of Bessemer rail being flange worn. The manganese part of frog is still in good condition and would wear out another set of rails.

At the point where those frogs are in use the traffic is of the heaviest kind—continuous switching on this lead night and day. The longest service obtained from the ordinary Bessemer rail frog at this point was 30 days. In the time that the manganese frog has been in the track it would have worn out 26 Bessemer rail frogs, each costing about $29

ATLANTIC STEAM SHOVELS



CLASS 45-16-2½ ATLANTIC SHOVEL.

ECONOMY IN OPERATION

Reduction in friction and boiler losses, with corresponding increase in pull at dipper, is the reason why the Atlantic shovel digs more at less cost than shovels of the chain type.

Wire rope hoist, found only in the Atlantic, exerts a direct pull on the dipper and substitutes friction of a rope with but one large sheave for that of a chain with from four to six additional small sheaves. The less power lost in the machine itself, the more you have left for digging.

Further economy in operation is secured by using a large boiler of the locomotive type, in which more of the heat is utilized and less is lost up the stack. This is possible only because of the removal of the hoisting engines from their usual position on the car body, to the boom.

The placing of the main hoisting engines at the foot of the boom reduces the power necessary for swinging the boom and removes the twist upon the car body when working on one side. With this construction the turntable centre and boom foot constitute the engine frame. One casting takes the place of four or more in the usual construction, reducing the total weight of the shovel, and the weight on the front trucks.

Spare parts are kept on hand at our Works at Longue Pointe, Montreal, Canada. Every part is made to gauges, and sure to fit.

MONTREAL LOCOMOTIVE WORKS, LTD.

OTTAWA BANK BUILDING, MONTREAL, CANADA

while the cost of the manganese frog was about $94. In addition to this there was no cost in maintaining manganese frogs up to date. You all know there would be, with the ordinary Bessemer rail frog at least in the way of rebolting.

Your committee would recommend extensively solid boltless manganese frogs and crossings for heavy switching leads and all other points where traffic is heavy and crossing for high speed main line tracks.

From the committee's experience and personal observation they recommend that such frogs be of solid boltless construction, and in their judgment it would be great economy for any railway company to adopt their use.

Transportation Men's Birthdays in October.

Many happy returns of the day to:—

R. A. Burford, cashier, C.P.R. ticket office, New York City, born at Brooklyn, N.Y., Oct. 4, 1878.

Railway Lands Patented.—Letters patent were issued during July, covering Dominion railway lands to the C.P.R. on account of grants, 1,324.36, on account of stations and grounds, 124.09 acres.

Lifting a G.T.R. Locomotive out of the Welland Canal.

In an accident at Port Colborne, Ont., July 21, Grand Trunk locomotive 638 dropped 33 ft. into 19 ft. of water in the Welland Canal and turned a complete somersault. The tender was broken loose, which proved a great advantage. It was not found practical to take the locomotive out where it went in, and as the canal was blocked and immediate removal was necessary, a powerful dredge was employed, pulling one end at a time, and the locomotive was dragged clear of the new canal and left 40 ft. from shore in 18 ft. of water. Tenders were asked for taking the locomotive out, and ranged from $6,000 to $8,000. As these were considered very excessive, it was decided to do the work with the company's own forces.

Lifting a G.T.R. Locomotive out of the Welland Canal.

Two of the company's 100 ton derricks and a supply of two-inch wire and cables and heavy clevises were secured and on Aug. 7 the locomotive was moved close up to the stone wall of the canal. It was felt certain that this wall was not strong enough to stand the lifting of the locomotive with one derrick, so, in order to prevent any possibility of an accident, two were used, placed 30 ft. apart, parallel with the canal, and far enough back so that the outrigging rested on the wall. As the blocks would not reach far enough to raise the locomotive at one lift, it had to be anchored half way up. This was done by cables from the boom, and the blocks lowered for the second lift, after which it was landed on the track on August 8, without a hitch of any kind.

The whole work was most successfully carried out under the charge of Thos. Rodgers, car foreman, Hamilton, the diver employed being Williams, of Port Colborne. It is said that the total expense of raising the locomotive was only about $1,700, of which some $700 was paid the diver.

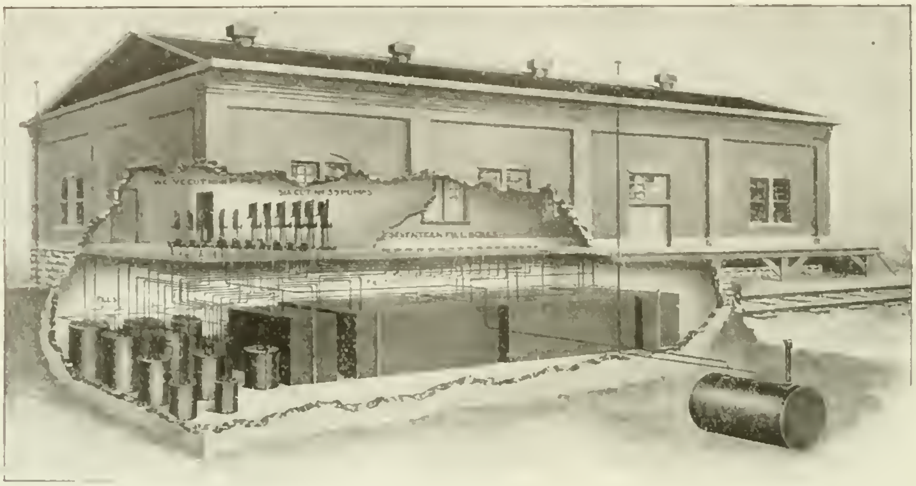
Calgary Elevator.—The John S. Metcalf Co., Limited, Montreal and Chicago, is drawing plans for additional machinery installation for the Globe Elevator Co., Calgary, Alta., to consist of 10,000 bush. shipping leg, 2,000 bush. scale, shipping spout and appurtenances. This machinery is to go in the 250,000 bush. elevator built for the company two years ago by the John S. Metcalf Co., the business having already outgrown the elevator.



Central of Georgia Railway Oil House, Macon, Georgia

Railway Men Want Practical Things

That's why the

Bowser Storage Systems

have been adopted by more than one hundred and fifty railroads.

All the perplexing problems of oil storage, dispensing and expense are satisfactorily solved in a common-sense, practical way, by a Bowser.

The oil supply for shops, terminal stations and store rooms is placed on a money-saving basis by using a Bowser.

Just remember there is no phase of railroad oil storage that is not successfully met by a Bowser.

We have just published a book which covers this question fully. Let us send you one for your files. Ask for Book No. 6.

Telephone Train Dispatching.

By A. Dwight Smith.

[This, the second of a series of articles, by Mr. Smith, deals with dispatchers' and way station equipment.]

One can now occasionally walk into a dispatcher's office where the telephone is installed and see the dispatcher with his feet on the desk, his train order book in his lap, and the long green telephone cord from his chest transmitter and head receiver connecting him officially to business, while formerly when using the telegraph for the movement of trains, the same man was working at a nerve-straining rate. Perhaps it is needless to say that the dispatchers like the telephone; anything which will make the operator down the line answer his call quickly, with no work for the dispatcher, is certainly to be appreciated at the dispatcher's end of the line.

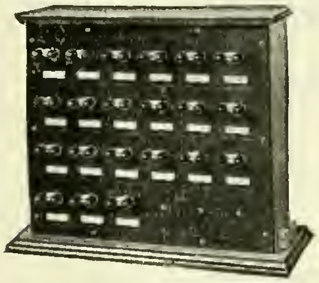

Fig. 1.—Dispatcher's Calling Key Cabinet.

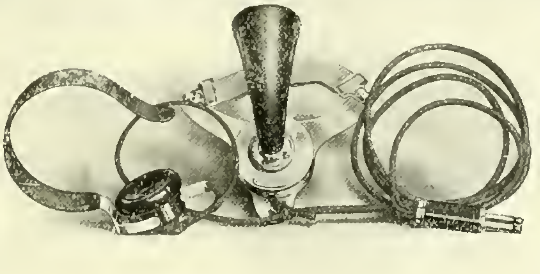

Fig. 4.—Dispatcher's Telephone Set.

Generally, when the telephone is installed, it is given over to the dispatcher and way station operator to become familiar with, before being officially cut over for train order work. It is interesting to see how the dispatcher starts in using the apparatus upon his own responsibility. The dispatcher will be calling a station on his Morse wire for five minutes without getting a glimmer of a response; then he will go over to his telephone sending key cabinet and ring the office up on that; the bell is always answered at once and the things the dispatcher says in telling the man to go over and answer his Morse usually need expurgating.

Practically all dispatchers start in hostile to the innovation of telephone train dispatching. They are used to the telegraph from years of association. They take to it grudgingly, but inside of a month are swearing by the telephone, and if anything happens to put the line out temporarily, they are hot after the telephone inspector until the trouble is removed. This does not happen in one or two cases, but has happened everywhere, and will until all the dispatchers in the country have the luck to be reformed to the good natured way of handling trains.

A circuit for handling trains should be under the control of one man. This is accomplished in the use of the telephone, and the dispatcher has absolute control. He does all the calling, and if a way station wishes to talk to another way station, he can only reach him with the dispatcher's permission who does the calling. Formerly, it was not a rare occasion for two operators to want to use the wire at the same time and start fighting for it; they would sometimes leave the key open for a few minutes in hopes that the other man might leave the wire. In railway message work, the circuit as above designed, with special signalling apparatus, will allow one way station to call another as readily as a dispatcher can summon an operator.

In standard telephone train dispatching lines, there is what is known as the "sending key cabinet" equipped with the required number of individual sending keys (one allotted to each station) and placed before the dispatcher. These keys are noiseless and are mounted in a highly polished oak cabinet as shown in fig. 1, and with their black japanned faces and white designation strips give this part of the equipment a very attractive appearance. Any individual key can be removed from the cabinet without disturbing any other or breaking the circuit.

If the dispatcher wishes to call a given station, he selects the key in his cabinet allotted to this office, gives it a quarter turn and lets go. This sets a train of gears in motion by means of a small spring motor, which operates through a local battery a main line relay, which in turn, because of a certain operation of the sending key, sends out on the line a predetermined number of direct current impulses which operate the selector at the station required, the contact of this station is closed and the bell rung. This can can be completed in from a fraction of a second to four seconds, regardless of the distance, but according to the number given to the selector at the way station (this selector will be described more fully in a later article).

Fig. 2 is a diagrammatic sketch of the apparatus located at the dispatcher's office. A battery (of dry cells usually) is installed here, whose voltage may run from 50 to 300 volts. This is for sending the signalling impulses out on the line and the voltage depends on the length of the line and the number of way stations on it.

The contacts of the sending keys are not designed to carry heavy current, so this battery is connected to the line through the contacts of specially designed telegraph relays. Three retardation or "choke" coils are also employed in series with the telephone line, and across these condensers of 6-microfarads capacity are placed. These are for the purpose of absorbing the noise of the signalling impulses and permit calling the way station and a conversation to be carried on at the same time. If some means were not provided for taking care of the thump due to the high voltage sending battery, this would be impossible. As it is, it is absorbed by the coils and condensers. The 250-ohm resistance across the line on the back contact of the relay absorbs the condenser discharge.

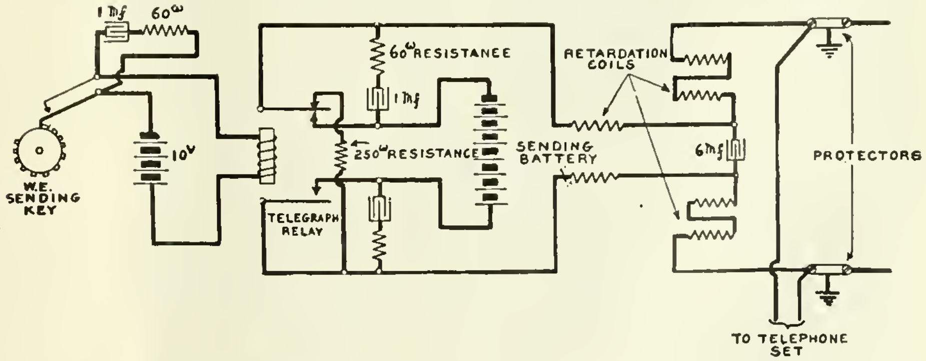

Fig. 2.—Wiring Diagram of Dispatcher's Apparatus for Signalling Stations.

The condensers and resistances around the telegraph relay contacts are for eliminating sparking and greatly increase the life of the relay. A similar arrangement is used on the sending keys.

The circuit above described, with a few unimportant modifications, is what is used on practically all standard individual call systems.

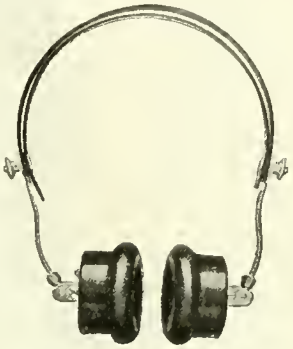

Fig. 3.—Dispatcher's Double Head Receiver.

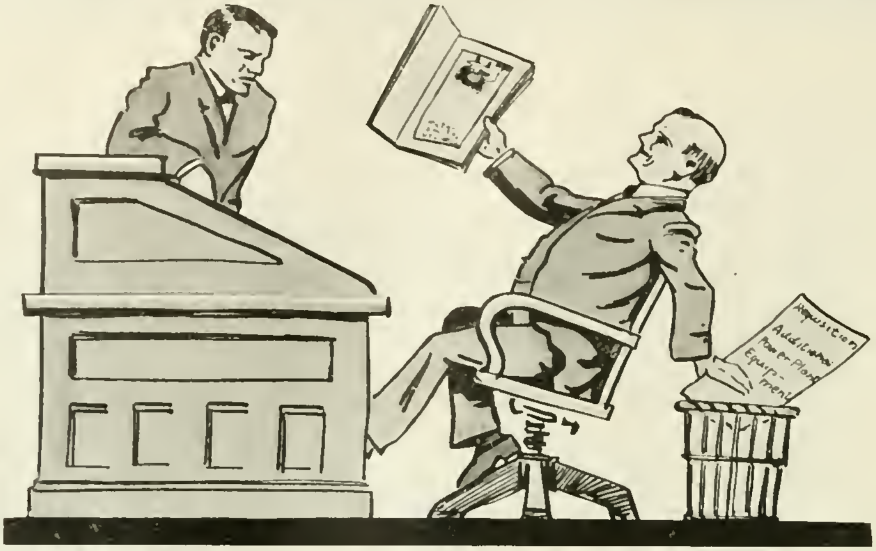
The dispatcher is supplied with similar telephone equipment to that used by the switchboard operators at central office exchanges, consisting of a chest transmitter and head receiver (either double or single, figs. 3 and 4), and connected to the line by means of the six or eight foot telephone cord and plug. This gives him ample room to move around and manipulate his train sheet. He is supposed to be connected in on the circuit all the time he is working his trick, so apparatus light and easy to wear is provided. A key is also wired in the transmitter circuit so that the dispatcher's transmitter can be cut off the line when he is listening, or does not want the way station operator to hear any conversation that might be going on in the office. Fig. 5 shows the wiring of the dispatcher's equipment.

In addition to this, if a division is equipped with more than one telephone circuit, whether it is to be used for train dispatching or not, by means of a key switching device he is able to shift from one line to the other using the same telephone equipment.

We have now covered the function of the dispatcher's apparatus. At the way station the equipment is equally interesting. There are a great many types of telephones developed to meet conditions that arise on different roads, but the apparatus manufactured today has been so standardized that it takes care of them in most cases.

It is quite a problem in telephone engineering to have a pair of wires 250 miles or longer and have 50 way stations distributed along this distance, and to be able to call these stations selectively and at the same time permit them to listen in simultaneously; yet it has been



"We shan't need that new power plant equipment"

This electric railway manager has appreciated the lesson we've been trying to drive home—that before trying to relieve an overloaded plant by adding to your equipment, it is well to consider the heater question. Conservative estimates show that practically half the total output used for car operation is required for operating electric heaters at such times as they are turned on at their maximum capacity. A fair average for the winter is 20 to 30 per cent.

Make this output available for operation by substituting

Peter Smith Forced Ventilation Hot Air Heaters

The advantages are manifold.

You have your whole electrical output for operation—the Peter Smith outfit never need weigh more and often weighs less than the electrical heating equipment.

Your cars will be heated to a temperature of 60° in zero weather at a cost of less than 20 cents per day.

Your cars will be perfectly ventilated at the same time, and without added cost —280 cubic feet of fresh, pure, warm air enters your cars per minute and is properly distributed.

No overheated seats possible.

You will appreciate the enormous saving if you will ask us to send you a reprint of an article on electrical heaters which appeared in Electrical Railway Journal. last December.

Estimates on equipment to fit your needs and catalog are yours for the asking.

The Peter Smith Heater Co.,

Detroit, Mich.

done. You can go to any standard installation now in service and listen at any place you may select. If you can persuade the dispatcher to call all stations and keep them in on the circuit, you can have offhand a pretty severe test of the transmission efficiency of the circuit, and you will not notice any loss in transmission, but will be able to hear the operator at the end of the line as well as the station next to you. You can have the dispatcher call a way station while you are listening, but beyond being able to distinguish the signals faintly, you would not be aware of it. You can hear the buzz of the "answer back" signal at the station called when the bell rings, and then you hear the operator come in and answer perhaps 200 miles away, but sounding as if he were in the next room.

How is it done? Very simply, as far as actual apparatus is concerned, and simplicity obtained after long years of skilful and careful designing and experimenting. To explain this, we will have to refer to transmission values, and it might be well to explain the units used.

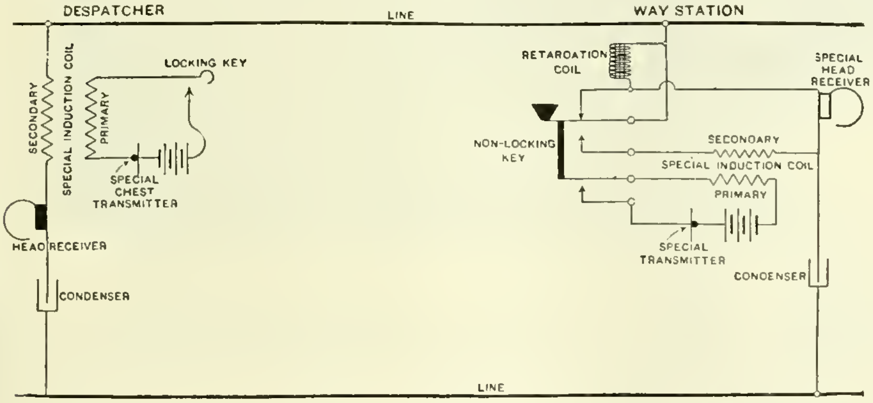


Fig. 5.—Diagram of Dispatcher's and Way Station Telephone Apparatus.

In giving the value of a certain quality and volume of transmission, it is said to be equal to a certain number of miles of cable. This means that a number of miles stated is such that when standard telephone instruments are used for this distance over no. 19 gauge telephone cable of 0.06 microfarad capacity per mile, the value of transmission would be the same. It is considered that the commercial limit of good transmission is 30 miles of cable. This value can be equated in terms of any other kind of circuit: one mile of cable loss is equivalent to a loss sustained in 16 miles of no. 9 B. & S. copper, and this is generally the standard size of wire used on dispatching circuits.

It will be seen that the line may be 480 miles long before the so-called commercial limit is reached. This is considerably longer than any of the circuits now in use, there being but few over 250 miles in length. There is, however, a surplus of transmission available which can be taken advantage of in arranging circuits to permit a number of operators to listen in at the same time. The loss caused by the selector bridges is almost negligible, the impedence to talking frequency of the Northern Electric Selector being about 50,000 ohms.

For the benefit of those who are not familiar with the term "impedence," it may be stated that in this case it means the opposition which the bridged apparatus offers to high frequency altering voice currents, and it is obtained by the use of iron in the bridged apparatus. This, represented in loss value when 40 selectors are across the line, is equivalent to about one mile of cable.

In the first few installations of telephone train dispatching, the talking circuit was the standard local battery circuit, which is schematically shown in fig. 6. It will be seen that during a conversation the condenser, receiver and secondary of the induction coil are in series across the line. The resistance of the receiver is 70 ohms and of the induction coil 20 ohms—a 2 microfarad condenser used in series. The total impedence of this circuit to talking frequency is about 600 ohms, about 300 of which are active for receiving purposes. It is obvious, therefore that when a number of sets are bridged across the line at the one time, the joint impedence is very low and the transmission correspondingly difficult between widely separated stations.

The first step toward overcoming this difficulty was to raise the impedence of the bridge by using a different induction coil wound with a low primary winding and a high resistance secondary. This improved matters somewhat as higher resistance bridges produced more even distribution and gave a better outgoing transmission from way stations. Although the dispatcher's voice current was undoubtedly better distributed by the use of this later method, still, due to the fact that the bulk of the impedence was in the secondary of the coils, the receiver having a resistance of only 70 ohms, the transmission gained was very slight.

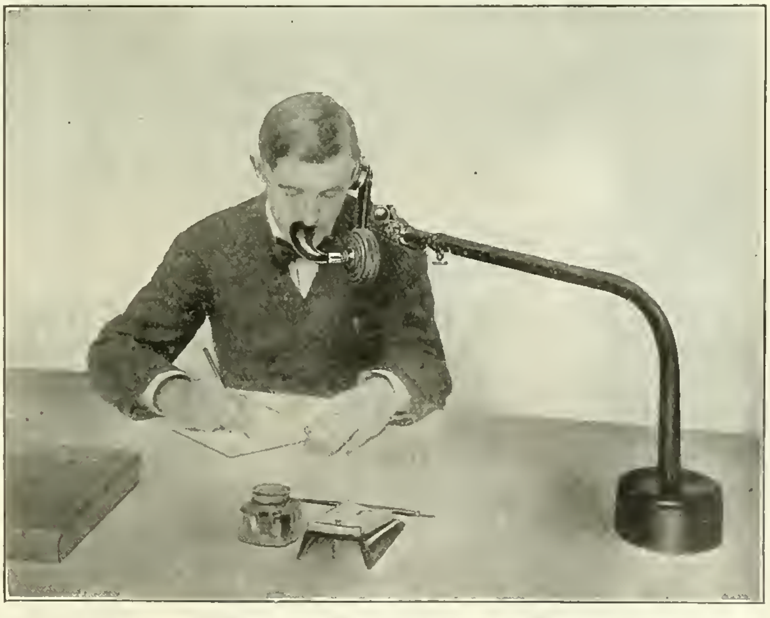

Fig. 7.—Van Aiken Transmitter Arm.

The next method was to maintain the high impedence in the bridge and place as much of this as possible in the receiver. In doing this, however, the high impedence receiver in series with the secondary of induction coil reduced the outgoing transmission to a great extent. It was then decided that the best results, both for receiving and transmitting, would be attained by the installing of a switching arrangement at the way station, so that when the switch was in one position, it offered the best conditions for receiving, and when in the other, the best conditions for transmission.

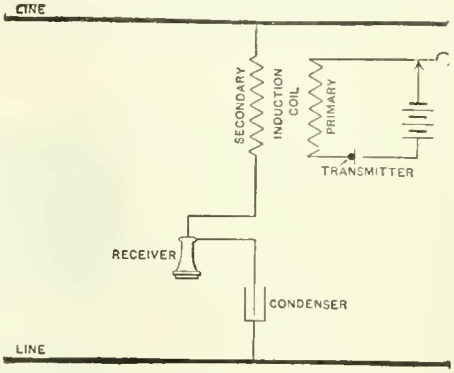

Fig. 6.—Wiring Diagram of Original Method.

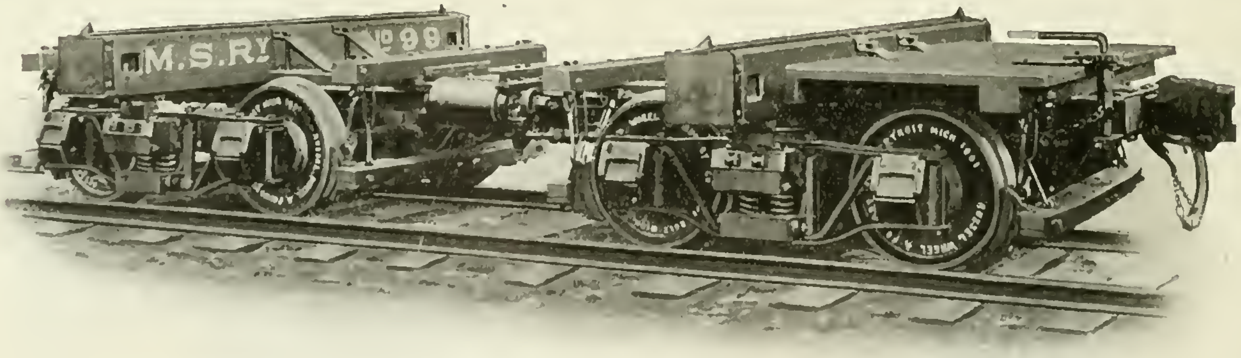
By referring to fig. 5, it will be seen that there is a non-locking switch device located at the way station and in its normal position. The bridge across the line consists of a 700-ohm receiver and 1-M.F. condenser. The impedence of this receiver, is about 2,500 ohms, and as the total impedence of the bridge is all in the receiver, it is effective for receiving purposes. When the way station operator wishes to talk, he depresses the switch apparatus, which in some cases is in the form of a non-locking key on his table, and in other cases a foot switch resting on the floor. This operation closes his transmitter battery and connects the secondary of his induction coil to the line. The voice currents have a path directly across the line in series with the condenser. In addition to this operation, there is also a retardation coil shunted in series with the receiver. This retardation coil has about 6000-ohms impedence and is placed in series with the receiver, in order that the dispatcher may break in if it is necessary for him to interrupt the operator while talking.

By referring back to fig. 5, it will be noticed that the dispatcher's circuit is somewhat different from that used at the

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

Detroit, Mich., U.S.A.

way stations. He must be on the line at all times, and the transmission and receiving of his set must be as good as possible, without resorting to the non-locking push button for talking and listening, as his time is too fully occupied to permit him to use this device. A 70-ohm receiver is used in series with the secondary of the same type induction coil and a 1-microfarad condenser, the impedence of this bridge being 650 ohms, and is the lowest bridge on the line. This arrangement also permits good transmitting.

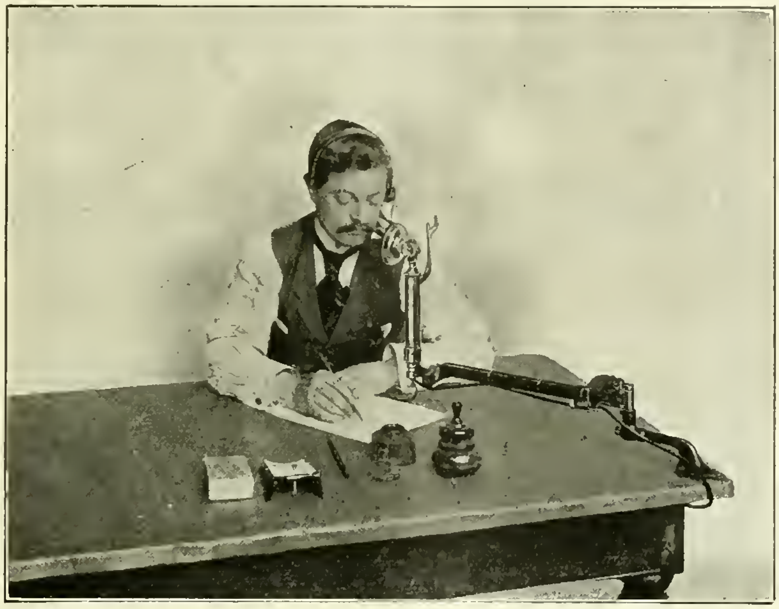

Fig. 8.—Northern Electric Flexiphone Arm for Way Stations.

It may be well here to attempt to describe some of the standard types of telephones used at the way stations, as stated conditions change with each installation and different superintendents of telegraphs have different ideas as to the best apparatus to be used.

In Canada the Canadian Pacific Ry. has adopted the telephone for the movement of trains to the greatest extent, and has approximately 4,500 miles of track operated by telephone. In 85% of its installations it uses the Van Aiken arm. This transmitter was invented by S. L. Van Aiken, of the New York Central Lines, and is so arranged that the transmitter and receiver are fixed on the arm, and the operator upon placing his ear to the receiver has his mouth in line with the transmitter. This arrangement permits the operator to have free use of both hands (fig. 7). The transmitter arm is arranged with an adjustable mouthpiece on transmitter, and adjustable receiver to allow for the different positions it might be placed in. There is a commutator arrangement on this arm so that when the arm is moved to talking position, certain springs cut it in for use. When shoved away from the operator, it is cut off the line entirely.

A foot switch (fig. 11) is generally used to close the transmitter battery. This is used to prevent waste of battery and all unnecessary noise entering in on the line, and also carries out the above stated high efficiency transmission scheme.

On a few of the C.P.R. western circuits, what is known as a flexiphone transmitter arm is used. To cite one instance. There is a line from Moose Jaw to Broadview, dispatcher located at Moose Jaw, a distance of 130 miles, with 18 way stations equipped. This set, fig. 8, consists of a desk stand stem attached to the arm which can be raised or lowered so that it can be used seated or standing, and in addition can be rotated in a horizontal plane.

The Northern Electric no. 1020 type arm, fig. 9, is another transmitter arm which is very simple, and is equipped with a head receiver, thus giving the operator free use of both hands to copy his train orders.

A key operated by hand is usually provided to close or open the transmitter battery, and if this is not desired a foot switch can be used. This type of arm is installed by the Grand Trunk Railway on two circuits on its Northern division, viz., North Parkdale to Burlington Jct., dispatcher located at Allandale, a distance of 145 miles, with 23 way stations equipped. Also Allandale to Nipissing, dispatcher located at Allandale, a distance of 160 miles, with 22 way stations equipped. The Michigan Central Rd. has also adopted this arm and has one circuit in Canada equipped from Windsor to St. Thomas.

The desk stand, fig. 10, arranged for a head receiver, has also been used, principally because of its low price. It has, however, the objection of being subject to injury by being knocked off the desk, but again has the advantage of being located so as to be convenient to a number of persons.

The apparatus used at way stations and dispatcher's office having been described, and in the next article the operation and construction of the various selectors will be taken up.

A Railway to Hudson Bay.

The contracting plant of the J. D. McArthur Co., of Winnipeg, has been moved from the Winnipeg-Lake Superior Jct.. section of the National Transcontinental Ry. to Pas Mission, Sask.. and work has been started on the northern bank of the Saskatchewan River, on the line towards Hudson Bay. The section under contract extends from Pas Mission to Thicket Portage, 185 miles.

Tenders will be received by the Department of Railways to Oct. 15, for 30,000 tons of 80 lb. steel rails, together with the necessary fastenings for the same. (Sept., pg. 843.)

Canadian Pacific Railway Co's Annual Report.

Following is the 30th annual report addressed to shareholders over the signature of the President, Sir Thos. G.

The accounts for the year ended June 30, show the following results:—

Gross earnings		$104,167,808.21
Working expenses		67,467,977.64
Net earnings		$ 36,699,830.57
Net earnings of steamships in excess of amount included in monthly reports		1,118,349.87
		$ 37,818,180.44
Deduct fixed charges		10,011,071.44
Surplus		$ 27,807,109.00
Deduct amount transferred to steamship replacement account	$1,000,000,.00	
Contribution to pension fund	80,000.00	
		1,080,000.00
		$ 26,727,109.00
From this there has been charged a half yearly dividend on preference stock, of 2%, paid April 1.	$1,112,333.33	
And three quarterly dividends on ordinary stock of 1¾% each, paid Dec. 31, 1910, Apr. 1, and June 30, 1911	9,450,000.00	
		$ 10,562,333.33
		$16,164,775.67
From this there has been declared a second half yearly dividend on preference stock, payable Sept. 30,	$1,141,533.31	
And a fourth quarterly dividend on ordinary stock of 1¾%, payable Sept. 30,	3,150,000.00	
		$ 4,291,533.31
Leaving net surplus for the year		$11,873,242.36

In addition to the above dividends on ordinary stock 2½% was paid from special income.

DETAILS OF SPECIAL INCOME FOR YEAR.

Interest on cash proceeds and on deferred payments for land sold	$1,688,170.70
Interest on deposits and loans	1,030,377.88
Interest on C.P.R. 1st mortgage bonds acquired	61,003.66
Interest from Minneapolis, St. Paul & Sault Ste Marie Ry. bonds	159,720.00
Interest from Duluth, South Shore & Atlantic Ry. bonds	150,000.00
Interest from Mineral Range Ry. bonds	50,160.00
Interest from Toronto, Hamilton & Buffalo Ry. bonds	10,840.00
Interest from Kingston & Pembroke Ry. bonds	9,345.00
Interest from Dominion Government bonds	182,500.00
Interest from Ontario Government bonds	48,000.00
Interest from British consols	116,544.28
Interest from Montreal & Atlantic Ry. bonds and on other securities	139,922.40
Dividend on St. John Bridge & Ry. Extension Co. stock	50,000.00
Dividends on Dominion Express Co. stock	160.000.00
Dividends on Minneapolis, St. Paul & S.S.M. Ry. common stock	736,071.00
Dividends on Minneapolis, St. Paul & S.S.M. Ry. preferred stock	368,039.00
Dividends on Alberta Ry. & Irrigation Co. stock	86,162.50
	$5,046,856.42
Transfer of balance of interest from land surplus at June 30, 1910	1,555,348.78
	$6,602,205.20
Less—payments to shareholders in dividends: October 1, 1910 to June, 30, 1911	3,9000,000.00
	$2,702,205.20
From this a dividend has been declared, payable Sept. 30, 1911	1,350,000.00
Leaving net surplus carried forward	$1,352,205.20

The working expenses for the year were 64.77% of gross earnings, and the net earnings, 35.23%, as compared with 64.38 and 35.62% respectively in 1910.

Four per cent. consolidated debenture stock to the amount of £1,263,667 was created and sold, and of the proceeds £745,489 was applied to the construction of authorized branch lines; £194,178 to the acquisition of St. Maurice Valley Ry. Co. bonds, the interest on which had been guaranteed by your company; £134,000 was used to acquire a like amount of your company's first mortgage 5% bonds, and with the balance, £190,000, the outstanding Canada Central second mortgage 6% bonds were purchased and retired.

Four per cent. preference stock to the amount of £300,000 was created and sold, the proceeds being used to meet capital expenditures.

Your guarantee of interest was endorsed on 4% consolidated bonds of the Minneapolis, St. Paul and Sault Ste. Marie Ry. Co., to the amount of $3,600,000, issued and sold to meet the cost of constructing 180 miles of railway added to that company's system.

The sales of agricultural land during the year aggregated 650,874 acres for $9,558,427.17, being an average of $14.69 an acre. Included in this area are 19,097 acres of irrigated land, which brought $33.63 an acre, so that the average price of the balance of the land was $14.11 an acre.

The Hudson's Bay Co. had parcels of land scattered throughout the irrigation belt, and, in order that you might control the entire belt and thus receive the full advantage of your expenditures on irrigation, it was decided to acquire these lands, about 102,174 acres, at $13.50 an acre. All these lands will be sold at a substantial profit.

Believing that it would be in the interest of everybody concerned, your directors proposed to the Alberta Ry. and Irrigation Co., in which you owned a controlling interest, an arrangement whereby, in consideration of a lease of their railway lines and a transfer to your company of their coal mines, lands and other assets, your company would guarantee the interest on its outstanding debenture stock ($3,250,000), and an annual dividend of 6% on its share capital during the life of the lease, and coupled with this proposed arrangement was your company's offer to purchase all of the outstanding shares of the Alberta Company's capital stock at 150 and accrued dividend. The proposition was accepted, an agreement and lease were approved by the shareholders of the Alberta Company, and will be submitted for your sanction. Since the agreement was made a large part of the outstanding stock has been acquired, and you now hold all the shares excepting about 2,000 out of a total of 32,500 shares. Worked in conjunction with your system, this line will not only be profitable in itself but will be useful in connection with future extensions in southern Alberta.

By the construction of a railway 16.2 miles long between Hamilton and Guelph Jct., Ont., the distance from Hamilton to points on your lines in western Ontario will be shortened very materially, and, therefore, subject to your approval, an agreement has been made with the South Ontario Pacific Ry. Co. for the construction of the line, and for a lease of it to your company on its completion for 999 years at a rental equivalent to 4% per annum on the bonds of the South Ontario Pacific Ry. Co., issued with the consent of your company.

In order to provide transportation facilities for incoming settlers it is very desirable that the following branch lines in Saskatchewan and Alberta should be constructed without unnecessary delay; Moose Jaw southwest, 35 miles, Kerrobert northeast, 25 miles, Weyburn branch extension, 21 miles, Estevan branch, 55 miles, Swift Current southeast, 45 miles, Swift Current northwest, 35 miles, Wilkie northwest 32 miles, Wilkie, southeast, 31 miles, Kininvie branch extension, 37 miles, Bassano to Kininvie Jct., 36 miles, Kipp branch extension, 27 miles, and you will be asked to authorize the sale of a sufficient amount of 4% consolidated debenture stock for the purpose.

An order has been placed with the Fairfield Shipbuilding Co., of Glasgow, for two steamships, 570 ft. long and 68 ft. beam, with a speed of 18 knots an hour, to supplement the fleet now engaged in the Pacific trade between Vancouver, Yokohama and Hong Kong. The approximate cost will be £440,000 each and they will be delivered early in 1913.

During the year 103 locomotives, 204 passenger cars and 3,808 freight cars were added to your rolling stock equipment, at a cost of about $9,000,000, and there are orders outstanding for cars and locomotives to the value of $7,000,000 that are expected to be available for the autumn traffic.

The work of enlarging your terminal yards and buildings, providing additional shops and machinery, laying many miles of new passing tracks, extending your telegraph lines, and of generally improving the standard of your property and operating facilities to meet the requirements of the traffic, continues to have the earnest attention of your directors, the amount expended for these purposes during the year aggregating $18,000,000.

The double track between Winnipeg and Brandon is nearing completion, and it is evident that a second track must be laid on some portions of the main line between Brandon and Calgary in the near future.

You will have observed that in this annual report the earnings and expenses of your railway and steamship lines are shown together, and that the revenue from other sources is given in a separate statement. This is in accordance with the policy outlined by your directors in the circular letter of March 15.

Your directors report with sincere regret the death at Nice in April, of their esteemed colleague and friend, Hon. L. J. Forget. He had been a member of the board since 1906, and always displayed a keen and intelligent interest in the company's affairs. H. S. Holt, of Montreal, was elected a director to fill the vacancy caused by Senator Forget's death.

The undermentioned directors will retire from office at the approaching annual meeting, and are eligible for reelection: Sir William C. Van Horne, R. B. Angus, E. B. Osler, H. S. Holt.

CONDENSED BALANCE SHEET..

ASSETS.

Railway and equipment		$343,595,230.24
Ocean, lake and river steamships		19,679,673.54
Acquired securities (cost):		75,979,653.19
Properties held in trust for company		6,180,692.76
Deferred payments on land and town site sales		34,116,420.82
Advances to lines under construction		8,996,903.63
Advances and investments		9,637,202.18
Material and supplies on hand		11,191,254.01
Current assets:		
Agents' and conductors' balances	$2,367,534.47	
Net traffic balances	261,049.38	
Miscellaneous accounts receivable	5,421,315.51	
		8,049,899.36
Temporarily invested in Government securities		10,088,734.86
Cash in hand		34,371,550.98
		$561,887,215.57

Note.—In addition to above assets, the company owns 7,061.184 acres of land in Manitoba, Saskatchewan and Alberta (average sales past year $14 69 an acre), and 4,427,811 acres in British Columbia.

Dominion Equipment and Supply Company
Canadian Sales Agents,
45-46 Canada Life Bldg. WINNIPEG, MAN.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto	9.40 p.m.	Daily except Sunday.
Leave North Toronto	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service.

How to Conduct a Ticket Office.

By W. R. Russell, Agent, Canadian Northern Ry., Humbolt, Sask.

The three essentials, important in the highest degree, necessary for the proper conducting of a ticket office, are, first, courtesy; second, accuracy; third, cleanliness. The question, "How to Conduct a Ticket Office," is perhaps one of the most difficult questions for passenger traffic officials to solve at present. Railways are classed as public servants, and rightly so, and I am sorry to say too many ticket agents do not realize this important fact, by not being courteous to all who are patrons of the company they represent. No doubt many ask what we consider very foolish questions, but we should remember that we have the experience, which they have not, and should therefore try and give them a courteous reply, which would not convey the idea that the question was considered foolish or at all out of the ordinary. Nothing will turn a prospective traveller away more quickly than a crusty reply, or being uncivil. They have feelings as well as we have. Put yourself in their places.

Accuracy. See that you have the correct fare made up before you give your passenger the rate. It is annoying to you as well as to them if you have to change the rate later on when you find you have made a mistake. Get your time cards down, study them, get the route from the passenger, the way he or she requires to travel; then get busy and give the particulars as to changing and time of trains on the different lines, and any other information that would naturally come up on the route. No doubt you have travelled; give them the benefit of your experience. Finally, if you are issuing coupon tickets, go over it very carefully before it is handed to your passenger. If necessary go over each coupon separately to see that you have included transfers where necessary and in the proper place.

Cleanliness is one of the very best assets you can have in your office. Have your counter clean, your pen and ink wells spotless; do not use blotting paper until it will not absorb the ink, and, above all, keep yourself as clean as you possibly can. Dress well, it counts in the end, and don't forget it.

I will give you a few points as to how a ticket agent can assist the freight traffic. If you have followed the first part of this article, namely, courtesy, you can do so, in this way: A commercial traveller comes to the wicket; you know he is a commercial traveller by the certificate he presents for the ticket. While you are getting his ticket ready bring it around in a casual way as to how he finds business, then if prospects are good, bad or indifferent ask him as to the routing of the goods he has taken orders for. If he is prejudiced against the company you are working for, ask him to give you the routing, and also assure him that you will use your best efforts to get the freight over the road, and give the home company the long haul. After this has been done, refer the matter to the freight agent, if you are in a city, where ticket and freight agents are different men. If you are the freight agent as well as the ticket agent, lose no time in advising your general freight agent, giving him name and address in full of consignor, and consignee, and also probable amount of freight to be moved. It may be small, but if handled properly it will probably increase. The general freight agent will appreciate your efforts; it means increased revenue for his department. Finally, make your railway one to be envied for courtesy, Hang this motto up in the office: "A soft answer turneth away wrath."

Courtesy is a valuable asset for any railway. See that your line has it.

I would like to see all ticket agents who sell coupon tickets become members of the ticket agents' associations, namely, the Canadian Ticket Agents' Association and the International Ticket Agents' Association. I will be pleased to give any prospective member particulars or refer them to the secretaries of the associations.

[We may add that the Secretary of the Canadian Ticket Agents' Association is E. de la Hooke, London, Ont., who will always be pleased, on application, to send full particulars in regard to membership. —Editor.]

W. E. DAVIS, Passenger Traffic Manager, Montreal. G. T. BELL, Asst. Pass. Traffic Manager, MONTREAL.
H. G. ELLIOTT, Gen. Passenger Agent, MONTREAL

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

14384. July 22.—Authorizing C.N.R. to build across public road between secs. 8 and 7, tp. 5, r. 6, w. 2 m.

14385. July 18.—Authorizing British Yukon Ry., British Columbia Yukon Ry., Pacific and Arctic Ry. and Nav. Co., and the Dawson Board of Trade or other shippers affected, to supplement their case by such evidence, etc., as they deem proper; and relieving said companies from filing joint tariffs prescribed under order 2, Jan. 18.

14386. May 16.—Declaring upon application of British American Oil Co., that the legal rate chargeable by C.P.R. on carload shipments of crude oil from Stoy, Ill., to Toronto, was fifth-class joint through rate.

14387. May 16.—Declaring, upon application of Canadian Oil Companies, that the legal rates chargeable on petroleum and its products, in carloads, from certain Ohio and Pennsylvania points to Toronto and other Canadian points were fifth-class joint through rates.

14388. July 27.—Authorizing C.P.R. and G.T.R. to operate interchange track in St. Marys, Ont.

14389. July 25.—General order re track scale weights.

14390. July 15.—Approving locations of eight G.T.P.R. stations in western provinces.

14391. July 27.—Approving C.N.R. standard plan of overhead farm road bridge for its eastern lines.

14392, 14393. July 26.—Authorizing G.T.P. Branch Lines Co., to build its Calgary Branch across highway in s.w. ¼ sec. 18, tp. 31, r. 23, w. 4 m., and across six other highways in Alberta.

14394. July 27.—Approving G.T.P.R. plan showing interlocking signalling system to be installed on bridge over Kyax River, B.C.

14395. July 24. Approving revised location, G.T.P.R. station at Elie.

14396. July 25. — Approving location G.T.P.R. station at Oban, Sask., and rescinding order 13928, in so far as it relates to approval of said station.

14397 to 14399. July 25-15-24.—Approving location of 12 G.T.P. Branch Lines Co.'s stations in western provinces, and of station at Nestor, sec. 13, tp. 48, r. 14.

14400. July 25.—Authorizing Vancouver Power Co. to cross New Westminster and Southern Ry. and Vancouver, Victoria and Eastern Ry. in district lots 2 and 3, group 2, New Westminster district.

14401. July 24.—Approving C.P.R. station at Bridgeford, Sask.

14402. July 27.—Approving revised location of C.P.R. main line, Waldo Branch, between mileage 9.7 and 11.33, lot 132, Kootenay district, B.C.

14403. July 24.—Approving revised location of C.P.R. station at Val Morin, Que.

14404. July 25.—Approving change in location of C.P.R. station at Long Swamp, Que.

14405. July 26.—Authorizing C.P.R. to build spur for J. A. Lougheed in block 65, n.w. of corner of Second St., W., and Ninth Ave., Calgary, Alta.

14406. July 27.—Authorizing Georgian Bay and Seaboard Ry., (C.P.R.) to divert road allowance between Eldon and Mariposa, tps. Ont. at mileage 59.94; and to build across same.

14407. July 27.—Authorizing South Ontario Pacific Ry. to carry its Guelph Jct. to Hamilton Line, at mileage 15.37 from Guelph Jct., across G.T.R. Hamilton to Sarnia Line.

14408. July 27.—Authorizing C.N.R. to open for freight traffic its line between Delisle and MacRorie on its Delisle branch.

14409. July 27.—Approving revised location of C.N.O.R. Toronto-Ottawa Division, east of Sydenham, mileage 164.31 to 165.56 from Toronto.

14410. July 27.—Authorizing C.N.R. to open for freight traffic its line from Calder to Rhein, and limiting speed of trains to 18 miles an hour.

14411. July 27—.Approving revised location of C.N.O.R. Toronto-Ottawa Division, at Buck Lake, Storrington and Bedford tps.

14411 to 14419. July 27-19.—Approving standard mileage tariffs of United States, Canadian, American, National and Pacific Ex. Cos., also tariff for Alberta Ry., and Irrigation Co., and standard mileage tariffs of Great Western, Dominion and Canadian Ex. Cos., to take effect Sept. 1.

14420. July 26. — Authorizing G.T.P. Branch Lines Co., to cross with its Melville Regina branch, C.P.R. main line in east half sec. 23, tp. 17, r. 20, w. 2 m., Sask., interlocking plant to be installed.

14421. July 31.—Relieving Windsor, Essex and Lake Shore Rapid Ry. from speed limitation at North Talbot Road crossing, Sandwich South tp., and from providing watchman there.

14422. July 28.—Authorizing G.T.R. to rebuild its most southerly track crossing Seventh Line Road, Oakville, Ont.

14423. July 27.—Approving location and detail plans of G.T.R. proposed station at Winona, Ont.; authorizing it to build additional track across public road between lots 4 and 5, Saltfleet tp., Ont., and a branch from its yard at Winona, to Hamilton, Grimsby and Beamsville Electric Ry spur

14424. to 14426. July 28.—Authorizing G.T.R. to build sidings into premises of W. S. Morrison, Parry Sound, Ont., J. P. Dupuis, Montreal, and C. C. Morrison, Norwich, Ont.

14427. July 31.—Authorizing G.T.R. to use bridges 15 and 16 over St. Lawrence River at mileage 55.63 and 54.12.

14428. July 28.—Authorizing G.T.R. to build additional track across St. Annes and Bourdages Sts., St. Hyacinthe, Que.

14429. July 31.—Authorizing G.T.R. to rebuild bridge over Trout Creek, near St. Marys station, Ont.

14430 to 14433. July 25.—Temporarily approving agreements of Bell Telephone Co. with Dr. E. J. Foster, La Compagne de Telephone de Beauce, Laurentide Telephone Co., and La Compagnie de Telephone St. Maurice et Champlain,

14434. July 25.—Approving C.N.R. location mileage 255.73 to 260.03 Alta.

14435. July 28.—Authorizing C.N.R. to build across public road between secs. 2 and 11, tp. 60, r. 26, w. 4, m., Alta.

14436. July 27.—Approving C.N.O.R. plan of station building at Shannonville,

14437. July 27.—Approving C.N.O.R. revised location through McGregor and McTavish tps, mileage 15.75 to 24.75, east from Port Arthur and 552.6 to 543.6 from Sudbury.

14438. July 28.—Authorizing C.N.R. to build across public road between secs. 11 and 14, tp. 60, r, 25, w. 4 m., Alta.

14439. July 29.—Approving C.N.O.R. plan of freight yard at Trenton.

14440. July 28.—Authorizing C.N.R. to build across and divert east and west road allowance, secs, 10 and 15, tp. 65, r, 22, w. 4 m., Alta.

14441. July 28.—Authorizing C.P.R. to build bridge 27.34, Cartier subdivision, Lake Superior Division.

14442 to 14445. July 24-31.—Authorizing C.P.R. to build two spurs for city of Winnipeg on lot D.G.S. 50, St. John, spurs for F. B. Hartney, West Toronto, Ont. Nicholson and Bain, and Provincial Lumber and Supply Co., Calgary, Alta.

14446. July 31.—Authorizing C.P.R. to close portion of road allowance along south boundary of sec. 27, tp. 32, r. 17, w. 2. m., Sask., and replace by road diversion, and cross same at mileage 46.01.

14447. July 29.—Authorizing C.P.R. to build bridge at mileage 31.2, Elmira, Ont.

14448. July 31.—Approving plan of clearance between C.P.R. main line and no. 1 track at overhead bridge, Brown St. West, Fort William, Ont.

14449, 14450. July 29-31.—Authorizing C.P.R. to build spurs for city of Toronto, between Perth and Symington Aves., and for Dominion Bridge Company, lot 5, Gloucester tp., Ont.

14451. July 28.—Authorizing C.P.R. to build bridge 62.8 over Thames River, Windsor subdivision, Ontario Division.

14452. July 31.—Authorizing C.N. Alberta Ry., to build across and divert north and south road allowance between secs. 32 and 33, tp. 54, r. 1, w. 5 m.

14453. July 31.—Approving Crows Nest Southern Ry. by-law 7.

14454, 14455. July 24.—Authorizing South Ontario Pacific Ry. (C.P.R.), to cross York Road by undercrossing, at mileage 15.77, Hamilton, to build its Guelph Jct., to Hamilton branch across highways at mileage 0.42 and 1.39, and to divert highway at mileage 1.31, Nassagaweya, tp., Ont.

14456 14457. July 24.—Approving G.T.P.R stations at Exira and Lerose.

14458. July 27.—Authorizing G.T.R. to build connection between its main line from Orillia to Midland and its Wye Bridge cut off, at junction near Old Fort station, Ont.

14459 to 14461. July 29-28.—Approving bylaws of New Westminster Southern Ry., Victoria Terminal Ry. and Ferry Co., and Victoria and Sidney Ry.; authorizing H. A. Jackson to prepare tariffs of freight tolls.

14462. July 11.—Ordering on complaint of St. Pierre village, Que., that foot crossing at St. Alexandre St., over G.T.R. and Montreal Park and Island Ry., to be open for pedestrians only; that foot path from Canadian Car and Foundry Co.'s works be closed; that farm crossing at Second Ave., Lachine parish, and that Simplex St. be made regular highway crossings; that town of Lachine have leave to convert Tenth Ave. into a public crossing, and that crossing at Notre Dame St., Lachine, be converted into regular highway crossing.

14463. Aug. 1.—Authorizing G.T.R. to build bridges at Jameson, Dunn and Dowling Aves., Toronto.

14464. Aug. 1.—Authorizing G.T.R. to build sidings into Golden Lake Lumber Co.'s premises on lot 10, South Algoma tp., Ont.

14465. July 29.—Ordering C.N.O.R. to make certain changes in respect of bridge in East Whitby tp., so as to allow for road traffic and free flow of water of creek.

14466. July 17.—Authorizing C.P.R. to build spurs for A. Bowerman and Cushing Bros., Saskatoon, Sask.

14467. Aug. 3.—Approving G.T.P.R. Cutknife branch, mileage 14.66, to 41.45.

14468. Aug. 3.—Authorizing G.T.P. Branch Lines Co., to carry traffic over its Melville-Regina branch from Edgerly to Regina.

14469. Aug. 4.—Approving C.N.R. location, mileage 49.94 to 60.45, tps. 50-51, r. 20-21, w. 3 m., Sask.

14470. Aug. 2.—Authorizing C.P.R. to build bridge at mileage 95.15, Lake Superior Division.

14471. July 31.—Approving C.N.R. location through tps. 60-66, r. 25-22, w. 4 m., mileage 46.68 to 93.40, Alta.

14472 to 14474. Aug. 2-1.—Authorizing C.N.O.R. to build across public road between lots 361 and 360, con. 1, Chatham tp., Que.; across Point Anne Road, lots 20-21, Thurlow tp., Ont., and across public road beween lots 430 and 436, con. 1, Chaham tp. Que.

14475 to 14478. Aug. 1-2.—Authorizing C. N. Alberta Ry. to build its St. Albert Westerly line over two crossings on Lac Ste. Anne trail, and two public roads.

14479. Aug. 1.—Extending to Oct. 31, time within which interlocking plant be installed by G.T.R. west of Fergus, Ont.

14480, 14481. Aug. 2.—Authorizing G.T.P. Branch Lines Co., to cross 14 highways with its Prince Albert branch, in Saskatchewan, and seven highways with its Calgary branch, in Alberta.

14482.—This order has not yet been issued.

14483. Aug. 2.—Authorizing G.T.P. Branch Lines Co., to build its Cutknife branch across 10 highways between mileage 1 and 14.7, Sask.

14484. Aug. 2.—Authorizing G.T.P.R. to build spur for Edmonton Portland Cement Co., secs, 6 and 7, tp. 53, r. 19, w. 5 m., Alta.

14485. Aug. 2.—Authorizing G.T.P Branch Lines Co., to divert three highways on its Prince Albert Branch, at mileage 78.3, 94.6 and 107.3.

14486, 14487. Aug. 2.—Authorizing G.T.P. Branch Lines Co., to build its Moosejaw branch across highway mileage 1.1 to cross and divert highway, mileage 2.1; and cross nine highways, mileage 3.1 to 11.2, Sask.

14488. Aug. 9.—Approving location of C.P.R. Kerrobert Northeasterly branch for 20 miles from Kerrobert, Sask.

14489. Aug. 1.—Amending order 13880, June 10, approving location of G.T.P. Branch Lines Co., Calgary branch, and ordering that new plans to be subject to clause 20 of agreement between C.P.R. and G.T.P.R. be filed.

14490. Aug. 1.—Approving revised location of G.T.P Branch Lines Co., Calgary Branch mileage 163.5 to 181.74 South Alberta, District, subject to agreement to cross C.P.R. irrigation ditches.

14491. Aug. 1.—Authorizing G.T.P. Branch Lines Co., to occupy C.P.R. lands for its Tofield-Calgary branch location, mileage 150 and 190, and revised location, mileage 163.97, subject to agreement between the companies.

14492. Aug. 3.—Rescinding order 14215, June 29, requiring C.P.R. to stop its morning and night trains at Gauthier's siding, Que.

14493. July 28.—Approving G.T.R. plan of clearance for its standard round house doors.

14494. Aug 3.—Approving C.N.O.R. revised location, mileage 1.81 to 7.85 from Hawkesbury.

14495. Aug. 4.—Approving Supplement 2 to Canadian Classification 15, on application of Canadian Freight Association.

14496. July 18.—Approving temporary station location at mileage 9.4 from Ottawa, on C.P.R. Ottawa-Prescott branch.

The Canadian North-Eastern Ry.'s standard passenger tariff, standard freight tariff and standard passenger and wharf terminal have been approved by the British Columbia Minister of Railways, under the provisions of the B.C. Railway Act, 1911. The tariffs are signed by N. McL. Curran, Managing Director.

Master Mechanics and Master Car Builders Committees.—Announcement has been made of the appointment of committees for the American Railway Master Mechanics Association and the Master Car Builders Association for the current year. On the Master Mechanics Committee are the following Canadian officials: H. H. Vaughan, Assistant to the Vice President, C.P.R., on Consolidation, and on Maintenance of Superheater Locomotives; W. D. Robb, Superintendent of Motive Power, G.T.R., Montreal, on Safety Valves; L. R. Johnson, Assistant Superintendent of Motive Power, C.P.R. Eastern Lines, Montreal, on Steel Tires; R. W. Burnett, General Master Car Builder, C.P.R., is on two of the Master Car Builders committees, namely, Car Wheels and Car Trucks.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Central Ry.—The Board of Railway Commissioners has approved of location plans of the line from mileage 120 to 160 easterly from Red Deer, Alta., and has authorized the building of bridges on the line under construction westerly from Red Deer to Rocky Mountain House, Alta., at mileage 20. 29, and 29.8. (Sept., pg. 853.)

Alberta Ry. and Irrigation Co.—The Board of Railway Commissioners has authorized the opening for traffic of the Kimball branch, which runs from Raley, Alta., to Wolford, about eight miles. The route was described in our issue of Oct. 1909, pg. 743, at which time the grading was being done, and track was laid in the same year.

The provincial government has decided to appeal to the Imperial Privy Council as to the construction of bridges across the irrigation canals. The company disputes its liability to build bridges on road allowances on which there was regular travel at the time of the building of the canal, and the decision of the courts endorsing this view is being appealed against. (July, pg. 645.)

Algoma Central and Hudson Bay Ry.—The Board of Railway Commissioners has approved of the revised location plans of the connection with the C.P.R. transcontinental line at Hobon, Ont., and has authorized the building of the extension from Hobon to the National Transcontinental Ry. across the Canadian Northern Ontario Montreal-Port Arthur line at mileage 80.94, at which point an interlocking plant is to be installed. The starting point of this extension is at Hobon, mileage 194.5 north of Sault Ste. Marie, and the route will follow the east side of Oba lake and river to the National Transcontinental Ry., 142 miles west of Cochrane, a distance of about 102 miles. The maximum gradient will be 0.6% and the maximum curvature six degrees. Following are some details stated to have been supplied by an officer: On the first 50 miles the average quantities per mile are as follows; excavating solid rock, 5,238 cu. yds.; loose rock, 5,760 cu. yds.; common excavation, 14,625 cu. yds., and overhaul, 36,850 cu. yds. The balance of the work will average per mile: solid rock, 93 cu. yds.; loose rock, 610 cu. yds.; common excavation, 16,330 cu. yds., and overhaul 35,480 cu. yds. There will probably be two steel bridges in the future. The present construction work calls for putting up 25 pile bridges. There will be a number of stations, water tanks and a coaling plant. (Sept., pg. 853.)

Algoma Eastern Ry.—The Board of Railway Commissioners has authorized the building of bridges over the Whitefish River and over the Spanish River at mileage 66.23 and 42.80 and over the trunk road in Merrit tp., at mileage 47.38. (Aug., pg. 733.)

Atlantic, Quebec and Western Ry.—Track has been laid on the extension of this line into Gaspe, Que., and C. R. Scoles, the General Manager, arrived there Sept. 4, in his private car.. It is expected that a regular train service will be put on early in Oct. (See Atlantic and Lake Superior Ry., Sept., pg. 853.)

Blomidon Ry.—The provisional directors named in the act of the Nova Scotia Legislature incorporating the company are: A. S. Burgess, H. Bigelow, A. M. Covert, Canning, N.S.; H. H. Wickwire, Kentville, N. S.; L. S. Macann, Ottawa. The line authorized is to start from Canning on the Cornwallis branch of the Dominion Atlantic Ry., and will extend to Cape Blomidon via Woodside, North Corner, Upper Pereaux and Delhaven; with a branch to Cape Split, via Scotts Bay, and from Wolfville to Canning via Port Williams, Starr's Point and Canard. (Mar., pg. 409.)

Brandon Transfer Ry.—The Board of Railway Commissioners has granted the application of the city of Brandon, Man. for a transfer track between the C.P.R. the Canadian Northern Ry., and the Brandon, Saskatchewan and Hudson Bay Ry., (Great Northern Ry.) and has directed the filing of tariffs covering the interchange charges.

British Columbia and Alaska Ry.—Officers of the company visiting Fort George, B.C., recently said the company was not ready to announce plans for construction but hoped to be able to give out definite information in a short time. The plans for the route between Vancouver and Fort George, have been deposited with the Provincial Department of Railways at Victoria. (See B.C. Ry. and Development Co., Sept., pg. 853.)

A Canada-Siberia Railway.—Russian engineers, cables state, are again considering the question of constructing a tunnel under Behring Strait, with a view of connecting up the Trans-Siberian Railway with Alaska, and consequently with Canadian and United States railways. The Trans-Siberian Railway can be extended to East Cape, and the Alaskan lines to Cape Prince of Wales, between which points the strait is 26 miles wide, and has an average depth of water of about 180 ft. About midway across the strait are two islands which would divide the tunnel into two sections.

C. Erlund, who was engaged on the construction of the Trans-Siberian Railway, was in Vancouver at the end of Aug. looking over the proposition for the building of a railway from Vancouver to the Peace River.

Chicago, Milwaukee and St. Paul Ry. Chicago, Milwaukee and Puget Sound Ry.—Press reports state that the C.M. and St. P. Ry. has under consideration plans for the extension of one of its North Dakota branches into Sackatchewan.

Another report credits the C.M. and P.S. Ry. with negotiating for the Indian reservation just north of Surrey, Wash., and with being engaged in locating a route for a line parallel with that of the Great Northern Ry., from Everett, Wash, to Vancouver, B.C. (Sept., pg. 853.)

Delaware and Hudson Co.—The Board of Railway Commissioners has ordered the Napierville Jct. Ry., one of the lines owned in Canada by the D. and H. Co., to file plans for a station building at Nelson Jct., by Oct. 19. (July, 1910, pg. 547.)

Edmonton to Peace River.—Recent press reports state that J. D. McArthur, railway contractor, Winnipeg, has acquired the Edmonton, Dunvegan and Peace River Ry Co.'s charter, and that survey parties are being placed in the field to locate a route for the first section of the work, from Edmonton to Dunvegan, Alta.

There is probably some error in this item, particularly as to the title of the company. The Edmonton, Dunvegan and British Columbia Ry. was incorporated by the Dominion Parliament in 1907, to build a railway from Edmonton to Dunvegan, thence via the Peace and Parsnip river valleys to Fort George, B.C., the provisional directors being: J. B. MacDonald, Winnipeg; J. A. Sandgreen, Edmonton, Alta.; C. Pringle, Ottawa; T. G. Gallagher, Spokane, Wash. An extension of powers was granted in 1908, and an extension of time for construction in 1910. (See Edmonton, Dunvegan and British Columbia Ry., July, 1910, pg. 547.)

Essex Terminal Ry.—The Board of Railway Commissioners has authorized the line to be carried by an overhead crossing over the Detroit River Tunnel tracks at Windsor, Ont. (Sept., pg. 853.)

Ha Ha Bay Ry.—Senator Choquette, President, has made an inspection of the branch line to Laterriere village, Que., seven miles in length, which is practically completed. It is expected to have it opened for traffic early in Oct. (Mar., pg. 205.)

Intercolonial Ry.—Tenders will be received by the Department of Railways and Canals to Oct. 12, for the building of a branch line from near Alba to Baddeck, N.S., 22.7 miles. A description of this line was given in our July issue, pg. 647.

Tenders are under consideration for the building of the Hampton spur line, extending from Hampton station to Hampton village, N.B. This will not be a very important piece of construction, as the sum voted by the Dominion Parliament for it is only $15,000. Tenders for the construction of the projected line from Guysboro to deep water at Country Harbor, 72 miles, and the line from Dartmouth to Deans, 43.2 miles, are also under consideration. (Sept., pg. 853.)

Tenders are also being asked for the construction of the Moncton yard and cut-off.

Joliette and Lake Manuan Colonization Ry.—Press reports state that a contract has been let to a New York firm in conjunction with an Ottawa contractor, and that R. F. H. Bruce, Ottawa, the chief engineer, went to Joliette, Que., Sept. 7, to arrange for the immediate starting of construction on the first 60 miles of the line.

Following are the directors for the current year elected at the annual meeting, held in Montreal, Sept. 6, Senator Belcourt, who was subsequently elected President; S. G. Lemoque, R. Chevrier, L. C. Morrisette, R. Ritchie, K.C., Ottawa; E. S. Daniel, De A. Laredo, London, Eng. (July, pg. 647).

Kaslo and Slocan Ry.—The Premier of British Columbia is reported to have informed the mayor of Kaslo, Sept. 4, that the reconstruction of the K. and S. Ry. would be taken in hand by the new owners at once, and that the aid promised by the Government would be available as soon as the company was in a position to claim it. (Aug., pg. 733.)

Kettle Valley Lines.—The line under construction from Midway via the Hope Mountains to the Fraser River is making rapid progress. About 20 miles of track is reported to have been laid northward along the west fork of the Kettle River, and 10 miles of additional grading has been done. Further up the stream grading is going on on a 35-mile section, which has its westerly termination at Kettle Valley summit, about 45 miles from Penticton. At this place it is proposed to build a four mile spur to Dog Lake, and preliminary surveys are reported to have been made for a branch towards Summerland. J. J. Warren, President, and A. McCullough, Chief Engineer, are negotiating with the local authorities as to the building of the lines in the vicinity of Penticton.

A contract has been let to L. M. Rice and Co., Inc., Seattle, Wash and Vancouver, B.C., for the construction of a 40 mile section of the line from Penticton ,along the west side of Okanagan Lake to Trout Creek, and along Trout Creek to Osprey Lake summit. The maximum curvature is 10 degrees and the maximum gradient 2%. There is considerable rock work on the construction all along being classed heavy,

FLANNERY BOLT COMPANY, Frick Building, Pittsburgh Pa.

It is reported that a sub-contract has been let to McLean and Mitchell, Spokane, Wash., for a section of this mileage, and that their grading outfits have already started work. From Osprey summit to Otter summit, the distance is 75 miles, and from Otter summit to Merritt, 30 miles. Track has been laid on the first 20 miles out of Merritt, and the grading on the remaining 10 miles to Otter Summit is well advanced. The line is to be extended from the Otter summit across the Hope Mountains to Hope, where a bridge will be built across the Fraser River to afford a connection with the C.P.R. transcontinental line.

The Board of Railway Commissioners has approved location plans of the line from mileage 0 to 5, and plans for bridges crossing the Coldwater and Kettle rivers.

The Spokane and British Columbia Ry., which is the Washington end of the K.V.R., is fighting in the U.S. law courts with the Great Northern Ry. over a right of way through the Colville reservation grant, in connection with its projected railway from Republic to Spokane, Wash. A Spokane dispatch says if the S. and B.C.R. succeeds in its contention, the line will be at once built, the C.P.R. doing the financing, and the whole of the Kettle Valley Lines being taken over. (Aug., pg. 733.)

Kingston and Pembroke Ry.—It is proposed to carry out a number of improvements and repairs, other than ordinary maintenance, on the line during the current year. These works include the relaying of 30 miles of track with new 65 lb. steel rails, a considerable expenditure on ballasting and ditching, bridging and culverts, new fencing and buildings, besides work at the Y's at Sharbot Lake and Renfrew, Ont.

Kootenay and Alberta Ry.—The crossing of 15 highways in Alberta by the company's projected railway has been authorized by the Board of Railway Commissioners. (July, pg. 647.)

Lingan Coal Co.—The Atlantic Coal Co. was incorporated by the Nova Scotia Legislature in 1902 to carry on coal mining in Nova Scotia, and in connection therewith to build railways. The provisional directors were A.C., H. and H. S. Ross, of Sydney, N.S. The Legislature last session changed the name of the company to the Lingan Coal Co.

The Liverpool and Caledonia Ry. Co. was incorporated at the last session of the Nova Scotia Legislature, to build a railway from a shipping point in Queen's county, to Caledonia, and thence to a shipping point on the Bay of Fundy in Annapolis county, with branches to make connections with other lines, etc. The company may operate the line by steam, electricity or any other power. The provisional directors are D. H. Foresman, V. J. Paton, Bridgewater, N.S.; J. M. Hastings, Pittsburgh, Pa.; C. O. Shepherd, New York. (May, pg. 411.)

London and Port Stanley Ry.—In connection with the approaching termination of the lease of this line to the Pere Marquette Rd. (as successor to the Lake Erie and Detroit River Ry.,) the London city council, which owns the line, is considering the question of electrifying it. It was reported to the council that the P.M.R. has been doing the minimum of repairs and that the roadbed is deteriorating. (Feb., pg. 111.)

Minneapolis and St. Louis Rd.—Iowa Central Ry.—W. G. Baird, Vice President, is quoted as having recently stated that there is to be no merger of the Minneapolis and St. Louis Rd. and the Iowa Central Ry., consequent on the appointment of N. Erb as President of both companies, and that there is no foundation in the report that the companies' lines will be extended to the Canadian boundary so as to connect with the Canadian Northern and G.T. Pacific railways. Notwithstanding this, the New York Financial World, states that N. Erb represents interests associated with the Canadian Northern Ry., and the G.T. Pacific Ry. and that the Minneapolis and St. Louis Rd. will build 250 miles of line from its present terminus in South Dakota, to connect at the international boundary with C.N.R. and G.T.P.R. lines. Later reports state that the Iowa Central Ry., will be extended to St. Louis, Mo., and that there would thus be formed a through connection between the Canadian lines and St. Louis, the Mississippi River giving water connection with the Gulf of Mexico.

Another report states that connection will be made with the Canadian lines by a line to be built from either Leola or Watertown, S.D., and that another line will be built from St. Paul, Minn., to Winnipeg, Man. (Sept., pg. 829.)

Pacific Trans-Canada and Hudson Bay Ry.—Application will be made next session of the Dominion Parliament for an act incorporating a company with this title to build a line from Edmonton northerly to Athabasca Landing, thence north westerly, northeast of Lesser Slave Lake to Wabisca or Loon River, thence northerly to the confluence of the Loon and Peace rivers, or that of the Red and Peace Rivers, near Fort Vermillion, thence northerly to Fort Smith, with a branch from the crossing of the Wabisca or Loon rivers easterly to Fort Murray, and on to Fort Churchill or Port Nelson, on Hudson Bay, and another from the same starting point westerly via Laurier Pass to Prince Rupert or Portland Canal, B.C. Smith and Johnston, Ottawa, are solicitors for applicants.

Prince Edward Island Ry.—Tenders are under consideration by the Department of Railways for the construction of a branch line from O'Leary to West Point, and tenders have been asked for building of a line from Stanley Bridge to New London, P.E.I. and for a line from Clifton highway bridge to Stanley bridge, about 3.75 miles. Votes on account of the construction of these lines were made last session of the Dominion Parliament. (Sept., pg. 855.)

Quebec and Saguenay Ry.—We are advised that the section of the line from Point a Pic wharf to the Chutes, (where there is a large pulp mill under construction by the East Canada Pulp Co.) will be completed this fall. A 65-ton locomotive and 12 flat cars have been delivered for ballasting the line and transporting the machinery from the wharf to the mill site. The Bishop Construction Co., Montreal and Toronto, has the contract for this section of the work. It is expected that surveys for the continuation of the line from the Chutes towards Cape Charles, at the mouth of the Straits of Belle Isle, will be started this fall. (Sept., pg. 855.)

Quinze River and Ottawa Ry.—The Dominion Parliament will be asked next session to incorporate a company with this title to build a railway from near Kipawa, connecting there with the C.P.R. Kipawa branch northwesterly to the Quinze River. Smith and Johnston, Ottawa, are solicitors for applicants.

Reid Newfoundland Ry.—W. D. Reid, President, made a trip of inspection over the Bonavista branch line, Sept. 9, preparatory to its being opened for traffic. (Sept., pg. 855.)

St. John Valley Ry.—The Provincial Secretary of New Brunswick, in a recent speech said he expected that within a few weeks the Government would receive information from England that the necessary funds for financing construction would be forthcoming. A contract between the St. John and Quebec Ry. and the Provincial Government for the building of the line from St. John to Grand Falls, N.B., had been agreed to, and another for the operation of the line by the Intercolonial Ry. had been prepared. As soon as the Government's financial agents in London, Eng., approved of these, the starting of construction would be arranged. (Sept. pg. 855.)

The Shelburne and Bear River Ry. Co. was incorporated at the last session of the Nova Scotia Legislature, to build a railway from Shelburne to Bear River, with branches to any shipping point in the counties of Digby or Annapolis. The provisional directors are: J. A. McElwain, C. J. Prescott, S. King, Boston, Mass. V. J. Paton, Lunenburg, N.S. (May, pg. 413.)

Sydney and Louisburg Ry. Co.—The Nova Scotia Legislature has authorized this company to acquire the railway, rolling stock and terminals of the Dominion Coal Co.

Sydney, Waterford and East Bay Mono Rail Ry.—The company is authorized to build a railway or monorail line in Cape Breton county, from Sydney to East Bay, and from Sydney to New Waterford, N.S. The company is also authorized to acquire other railways already built in the county. The provisional directors are: D. McQuaig, J. P. Joy, J. B. McCormack, D. A. Cameron, Sydney, N.S. (May, pg. 413.)

Temiskaming and Northern Ontario Ry.—The Commission has laid out a townsite at Iroquois Falls, Ont. the starting point of the branch to the Porcupine district. A passenger service has been started on the branch to South Porcupine, and the spur line to the Dome, with a branch to Dome extension has been completed. The extension of the Porcupine branch to Pearl Lake is being proceeded with. The proposed terminus of the extension is the Campbell veteran claim, west of the Hollinger mine. (Sept., pg. 855.)

Vancouver, Westminster and Yukon Ry.—Test holes are now being driven on the site proposed by the V.W. and Y. Ry. for the bridge to be built jointly with the Burrard Inlet Tunnel and Bridge Co., across the Second Narrows of Burrard Inlet. The trestle work is also being erected on the site. (Sept., pg. 855.)

Elgin and Havelock Railway.

The report for the year ended June 30, presented at the annual meeting at Halifax, N.S., Sept. 6, shows assets consisting of plant and equipment, of $96,959.96, and liabilities of $107,203.73, made up as follows: capital account, $44,900; accounts payable $521.53; cash, $1,807.21; bond interest, $9,974.99; bond account, $50,000.

PROFIT AND LOSS ACCOUNT.

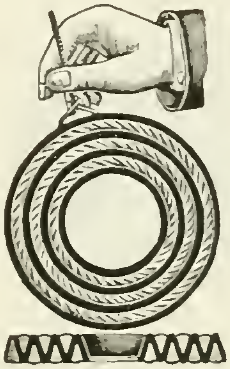
Have You Tried These?



☜ This one—

World-Goetze Elastic Corrugated Copper Gasket

with Asbestos Lining No. 2—is for flanged joints. It makes such joints tight when nothing else will—it makes them permanently tight and one in a joint is enough.

Why not try them on a few of your most troublesome joints? Why not try them *now* and pass up your flanged joint troubles for good.

This one—☞

"Victor 200" Copper Valve Disc

"VICTOR 200"
VALVE DISC

is for valves of Jenkins or similar types.

These Discs not only ensure longer life to *new* valves, but enable you to renew the life and usefulness of many an old valve—and besides they save a lot of time in renewals.

Being made of copper and asbestos they have just enough "give" to make an absolutely tight joint, without going to pieces like rubber or composition discs.

If you haven't received a copy of our Catalogue listing these Gaskets and Discs, we shall gladly send you one.

T. McAVITY & SONS, Ltd., - ST. JOHN, N.B.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Great Northern Railway Lines in Canada.

Midland Great Northern Ry. or Midland Ry. of Manitoba.—While all the negotiations respecting the location of what are known as the "Midland" terminals have taken place between the Winnipeg city council and representatives of the Great Northern Ry., there is some speculation as to what interests are really behind the matter. The Midland Ry. Co., of Manitoba's charter originally obtained primarily in the interests of the Northern Pacific Ry., but the two lines already built under it, were built by the G.N.R., and are being operated by it. The Midland Great Northern Ry. was incorporated with power to take over the Midland Ry. of Manitoba, and in the negotiations sometimes one name was used and sometimes the other. Local papers of recent date state that the Northern Pacific Ry. has an interest equal to that of the G.N.R. in the line now being built into Winnipeg, and in the terminals being laid out, whatever may be the ownership of the lines, to Portage la Prairie, and to Morden.

Track laying has been started on the line in Winnipeg, and it is expected to have most of it done this year. Work is being rushed on the subways, and about half the work on the freight sheds has been completed.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—J. L. Kennedy, chief engineer, is reported as saying that the final survey to the summit of the Hope Mountains has been made and that contracts will be let for construction in the near future. Track will be laid from Princeton to Coalmount on the Tulameen River this fall, and then the section to the Summit will be gone on with. Survey parties are on the field locating a route from the Summit to Hope, near where connection will be made with the Canadian Northern Pacific Ry. Between Hope and Chilliwack the Canadian Northern Pacific Ry. will be used, and into New Westminster the company's existing line will be used. The Board of Railway Commissioners has ordered the company to file plans for the proposed shunting tracks at Sapperton, and the company promised to proceed with the erection of a new station at New Westminster at once.

New Westminster Southern Ry.—Plans for the construction of a new station at New Westminster, were laid before the city council, Sept. 12. The site will be on block M., which was deeded to the city by the provincial government for station purposes for $1 a year on a 99 year lease. The city in transferring the property stipulates that other railways shall be entitled to use the building.

Vancouver Terminals.—The steel for the new bridge over the big cut at Park Drive has been delivered, and it was expected that the erection would be completed Sept. 29.

A contract is reported let to the Dominion Creosoting Works, Vancouver, for the provision of piles necessary for the erection of the new wharf at False Creek, and it is said that W. H. Chase, also of Vancouver, has been given the contract for driving the piles. There will be 3,000 piles to be driven.

A. H. Hogeland, Chief Engineer, G.N.R., St. Paul, Minn., after a recent inspection of the works in progress, stated that the company's plans for the development of its interests in Vancouver were practically completed, and the work would be put in hand as speedily as possible. (Sept., pg. 847.)

The Board of Railway Commissioners has authorized the C.P.R. and the G.T.R. to operate an interchange track in St. Marys, Ont.

Central Railway of Canada.

In connection with the issue of bonds for the construction of this railway, it would appear that the original grant of land was in favor of the Carillon and Grenville Ry. Co., and that the Canada Central Ry. Co. was one of a group of railway companies incorporated with a view to carrying out the project, and entitled to participate in the land grant. The company is advised by eminent counsel, not only in Canada but in Great Britain that "no legislation has affected the rights of the Carillon and Grenville Ry. Co., and the right of that company to call for the land grant remains in force."

A legal action as to the land grant was tried in 1873 and 1874, and is reported in 20 Grant's Chancery reports, pg. 273, the decision dealing with the land grant and the method of distribution among the several railways entitled to it. The Canada Central Ry. Co. succeeded in regard to about 360,000 acres of land in respect to the 28.5 miles of line between Ottawa and Carleton Place, Ont., and it is said that this was afterwards commuted for a cash subsidy of about $13,000 a mile. The payments made to the Canada Central Ry. Co. as an "exceptional subsidy" amounted in all to $1,525,250, and as the company built 120 miles of line this would work out to over $12,700 a mile. The contention is that the agreement with the Canada Central Ry. Co., only affects that company and the mileage constructed under its charter, and that the land grant is still available for any company building the balance of the line under the charter of the Carillon and Grenville Ry. Co., or its successors. The Railway Act of 1903 gives a purchasing railway the right to a land grant attached to a purchased railway, and this right is claimed to be fully protected by secs. 152 and 153, of the Railway Act in the Revised Statutes of Canada of 1906. The land grant available for the company originally would be about two-thirds in Ontario and one-third in Quebec. With reference to the sale of the physical property of the Carillon and Grenville Ry. to the Canadian Northern Ry. or allied interests, it is contended that neither company has power to sell to the other, and that the sale has not been properly ratified. The proceedings which it is proposed to take will set this matter right.

So far as the old Ottawa Valley Ry., which is the charter upon which the Central Ry. of Canada has been built up, is concerned, we are advised that seven miles of the line has been graded, and we are also advised that the C. Ry. of C. owns the charter of the Central Counties Ry., which covers the equity in the constructed lines leased to the Canada Atlantic Ry., and now operated by the G.T.R. The annual meeting of the shareholders was held in Montreal Sept. 6, C. Ross Dobbin, Guardian Bldg., Montreal, being the Secretary.

At a meeting of the directors of the Central Ry. Co. of Canada, held in Montreal, Sept. 4, W. D. Hogg, K.C., Ottawa, was elected a director.

We are advised by a representative of the contractors, C. J. Wills and Sons, London, Eng., and Montreal, that it is intended to start work on the main line from Montreal to Ottawa immediately, and a director of the railway is reported to have stated in Ottawa, Sept. 13, that the work would be started at Hawkesbury, that grading would be completed easterly and westerly for a total distance of 40 miles, by the end of the year, but that track laying would not be started until the spring, when grading on the Ottawa-Midland section of the line would be started.

Meetings of the shareholders of the Ottawa River Navigation Co., and of the Carillon and Grenville Ry. have been called to be held in Montreal, Oct. 18, "to authorize and confirm the sale and transfer of the company's charter, and all rights, properties and franchises thereof to the Central Ry. of Canada, and to do all such things as may be necessary to carry out and complete the said transfer."

Intercolonial Railway Harbor Terminals at Halifax.

The contract for the construction of the first section of the new deep water terminals for the I.C.R. at Halifax, N.S., has been let by the Department of Railways to the Nova Scotia Construction Co., Sydney, N.S. at a cost of approximately $915,000.

The layout of the present I.C.R. deepwater terminals, which are situated along Tidewater St., includes four piers. In the new layout, plans for which have been prepared by J. Kennedy, Consulting Engineer, Montreal, no. 1, pier will not be interfered with, but it is proposed to remove piers 2, 3 and 4, and to replace them by longer and broader structures, with more extensive shed accommodation thereon, and with deeper water alongside. The work proposed to be carried out under the present contract, involves the construction of what is known as the new pier and shed no. 2. This pier will be 808 ft. long, and 235 ft. wide, and will be provided with a two-story shed. The other three piers will be similar in size and construction, and there will be a depth of 34 ft. alongside each pier, with a width of 280 ft. between each pier.

The contractor for no. 2 pier, is called upon to clear the site of the existing buildings, deepen the basins on either side of the pier, protect the existing cribwork and pile the foundation of the Immigration Building and other work incidental to the construction. The pier will consist of a bulkhead at the shore end, and the pier proper will be built on concrete trestles, braced, and facings and deck. The bulkhead is to be built in cribs or blocks reaching up to about 2 ft. above low water; above that level the crib work is to be built continuous, and finished with a coping of two 12 in. square creosoted timbers laid side by side. The cribs are to be filled with stone to at least 15 ft. high above the bottom, and above that to rail level with earth or other good filling. The pier itself is to be built on reinforced concrete piles, calculated to stand a load of 85 to 90 tons on each pile, driven to rock, stayed as they are driven, and the brace piles are to be moulded on such a curve as to make a uniform stress throughout the cross section of the pile under a compressive load of 80 tons on the pile head. The flooring will be of reinforced concrete, with granolithic surfacing, and the pier above low water will be protected with creosoted timbers. The contractor will lay the railway tracks on the pier, all the steel and fastenings being supplied by the I.C.R. Two hundred feet of the pier floor is to be completed by Feb. 15, 1912, that progress may be made with the shed construction. The shed is to be built entirely of reinforced concrete, the flooring of the second story being surfaced with granolithic. The doors at the side and east end of the shed are to be of steel frames plated with iron, and carried on rollers running on bottom tracks and girded on the top. The windows are to be of wired glass. At the west end of the building there will be offices for the staff. The roof of the shed will be finished with tar and gravel. The entire work of building the pier and shed is to be completed by Oct. 15, 1912.

Vanadium Alloys made by this Company have been specified in the manufacture of steel forgings and castings for the Panama Canal.

American Vanadium Company

324 Frick Building, - PITTSBURGH, Pa.

The Canadian Northern Railway

HAS ESTABLISHED

DOUBLE DAILY SERVICE

BETWEEN

WINNIPEG AND EDMONTON

Inaugurating the best train service given in the Western Provinces,

"THE CAPITAL CITIES EXPRESS"

AND

"THE ALBERTA EXPRESS"

A cool way to travel in this hot weather is by the Steamers on the Great Lakes and from Port Arthur by

"THE LAKE SUPERIOR EXPRESS"

On all these trains there is the best of everything in the way of equipment and a Dining Car Service, perhaps equalled, but never excelled on any railway.

Asst. General Passr. Agent,
Toronto.

George H. Shaw, General Traffic Manager, Toronto.

SIX DAYS TO LONDON

Three days, sixteen hours and five minutes from LAND to LAND. It is the ROYAL LINE to Bristol that makes this possible; and it is the ROYAL EDWARD which holds this Canadian Trans-Atlantic record. But there are other considerations besides speed which should induce you to travel by the

"ROYAL EDWARD" or "ROYAL GEORGE"

Not only are these twin ships the fastest triple screw turbine boats on the Montreal to London route, but their equipment is the finest on the Canadian service. They are driven by the newest type of turbine engines. Spacious social apartments, sheltered promenade decks, tasteful and artistic furnishings, splendid service, and ventilation by the thermo-tank system indicate the unusually high character of the appointments, comforts and conveniences of these boats.

For full particulars, rates, sailings, see nearest Steamship Agent, or write our General Agents at Toronto, Ont., H. C. Bourlier; Montreal, Que., Guy Tombs; Winnipeg, Man., A. H. Davis; Halifax, N.S., P. Mooney.

National Transcontinental Railway Construction, Etc.

The plans for the entrance of the N.T.R. into Quebec, are divided into two sections, the first showing the double-track line between the bridge over the St. Lawrence River, and the terminal yard, and the second the general arrangement of the tracks and buildings in the terminal yard. There will be one yard with four sets of tracks, parallel with Champlain St., along the harbor front between some existing ice houses, and near Lampson's Cove; while the real terminal yards and terminal buildings will extend from near the Allan Co.'s pier, to the boundaries of the Champlain market site. The whole area between Champlain St. and the protection wall will be covered with tracks, and provision is made at the waterfront for a freight shed 500 ft. by 80 ft. Provision is also made for other buildings at convenient points in the yard. The station site is 200 by 100 ft., with a 50 ft. concourse. The platforms 608 by 15 ft. will extend from the concourse to near the existing Queen's wharf, three platforms being shown on the plan. Tenders for the erection of the station building, a description of which was given in our last issue, are under consideration.

Contracts are reported to have been let to C. A. Murphy and J. A. Lea, Moncton, N.B., for the erection of buildings on the line between Moncton and Beaver Brook, N.B., at an estimated cost of $150,000. Tenders will be received to Oct. 2, for the erection of a trainmen's house at Cochrane, Ont.

We are advised that it is not contemplated that any change will be made at present in the operation of the N.T.R. from Winnipeg to Lake Superior Jct. The G.T. Pacific Ry. began to operate its trains on the section in Oct., 1910, but under the contract with the Government, will not take over any part until the whole line is completed through between Winnipeg and Moncton.

Rapid progress is being made with the laying out of the yards at Transcona, near Winnipeg, the site of the principal western shops. About 125 carloads of gravel a day have been dumped round the buildings for filling in, and levelling and tracklaying is being proceeded with. The J. D. McArthur Co. is doing the work. The erection of the buildings by Haney, Quinlan and Robinson, is making satisfactory progress.

We were advised Sept. 20, that a contract has been let to J. King, for the construction of station and other buildings on the line between Cochrane and Superior Jct., Ont. Press reports state that portions of the work have been sublet to C. Masher, A. Haequoil, and J. Lavoie.

Grand Trunk Pacific Railway Construction, Etc.

C. M. Hays, President, G.T.R. and G.T.P.R., accompanied by several directors and officers of both companies, returned to Winnipeg, Sept. 16, from a trip of inspection over the entire line. The President expressed his satisfaction with the progress being made; there was plenty of labor, and the general conditions of weather, etc., had been favorable, to the advancement of the work.

A contract has been let to the George A. Fuller Co., Montreal, for the erection of the company's hotel at Winnipeg, the Selkirk. Preliminary work on the site is in progress and the contractors expect to start on actual building operations immediately. The building is to be completed by the end of 1912.

The Board of Railway Commissioners has approved location plans for the projected Brandon branch, mileage 0 to 18.36. The branch starts from the main line near Harte, and work was reported to have been commenced at that point Sept. 1, by Rigby, Hyland and Plummer, a member of which firm is reported as stating that a contract had been awarded them for grading 28 miles from Harte, and the five miles from Brandon, which will complete the branch. The mayor of Brandon informed the city council, Sept. 6, that it was expected to have the branch completed this year, but this would depend on whether rails could be obtained or not.

The Board of Railway Commissioners has authorized the company to connect its Yorkton branch with the Canadian Northern Ry. at Canora, Sask.; to carry traffic over the entire line from Melville to Regina, rescinding the previous orders. Under this order a regular passenger and freight service was inaugurated Sept. 7, there being one train each way on alternate days between Melville and Regina. The freight sheds being built at Regina are not expected to be ready until the end of Oct., meanwhile the old Allan house is being used as a temporary freight and passenger station. The passenger traffic will ultimately be accommodated in the new union station being built by the C.P.R.

It is expected that about 25 miles of steel will be laid on the line from Regina towards the international boundary this fall. About 30 miles of grading has been completed.

We are officially advised that there is no present intention of building a line starting from a point 13 miles out of Regina, on the branch now under construction, passing through Weyburn to the international boundary as stated in press reports.

With respect to the line under construction from Regina towards Moose Jaw, local reports, Sept. 10, state that it is extremely improbable that any steel will be laid this year. About 30 miles of grading has been completed, and work on the remaining 15 miles is well advanced. The biggest piece of work on this section is the trestle bridge over the Grand Coulee, in which there is about 1,500,000 ft. of timber. Rigby, Hyland and Plummer have the contract for this line.

Rigby, Hyland and Plummer also have the contract for the line being built from Moose Jaw, westerly, which will ultimately be connected with the line now under construction from Tofield to Calgary, Alta. Fifty miles of the line has already been placed under contract, and grading over this distance is practically complete.

We are officially advised that it has not been contemplated to build a line from Moose Jaw northwesterly to Young, Sask., as stated in press reports.

The question of the terminals in Moose Jaw is under consideration. The company desires to purchase 6.05 acres from the city for right of way across the city, and there is considerable opposition to the sale.

We are officially advised that there is no present intention of building a branch from Saskatoon to Battleford, Sask.

The Board of Railway Commissioners has approved revised location plans for the Prince Albert Branch, mileage 105.04 to 109.01. Press reports state that work on this branch is being rapidly pushed forward; that steel has been laid as far as Waka, 68 miles from the main line, and that grading has been completed to within 24 miles of Prince Albert.

Grading is reported to be practically completed on the first 50 miles of the line from Biggar, Sask., towards the Tofield-Calgary branch. The Board of Railway Commissioners has approved the location plans of a fourth section of the branch.

The Board of Railway Commissioners has approved location plans of the Cutknife branch from mileage 14.66 to 41.45.

The bridge across the Red Deer River is reported to have been completed, and tracklaying on the Tofield - Calgary branch has been resumed. Following the agreement with the C.P.R. respecting the building of the branch through that company's irrigated lands, the Board of Railway Commissioners has authorized the preparation of new plans, the occupation of C.P.R. lands between mileage 150 and 190, the crossing of the C.P.R. Langdon branch, and certain revised location plans.

During the recent visit to Edmonton, Alta., of C. M. Hays, President, and other directors and officers, the city ciuncil was informed that as soon as the necessary legal steps had been taken by the city to close certain streets, work would be started upon the proposed hotel.

Construction is reported to have been started on the erection of car shops at Edson, Alta. The shops will be 200 by 60 ft., with a machine shop adjoining. The plans for this latter shop are reported to be in preparation.

Considerable difficulties are being met with, according to reports, in the construction of the branch from Bickerdike, near Edson, southerly to the coal fields. The branch will be 56 miles long, and the work includes the crossing of a summit 500 ft. higher than the Yellowhead Pass; considerable tunnelling along the Embarras River, and the building of a bridge across that river at a point where the banks are high, and where there is a good deal of quicksand in the river bed.

There is no present intention, we are offificially advised, of building a line from west of Edson, Alta., into the Peace River country.

Steel was reported to have been laid, Sept. 1, to Fitzhugh, in Jasper Park, Alta., 1,027 miles from Winnipeg, and it is expected to have the track laid for about a further 60 miles to Tete Jaune Cache this season. It is expected to have a train service in operation to Fitzhugh, early in October.

President C. M. Hays made the definite announcement, during his recent trip over the line, that the contract for building the line from Tete Jaune Cache to Aldermere, B.C., 415 miles, had been let to Foley, Welch and Stewart, the firm having at present the contracts terminating at the two points named. Construction gangs are being sent in as fast as the work is completed east of Tete Jaune Cache, and clearing work is reported to be in progress at various points as far west as Fort George. At this point the reversionary interests of the Indians in the reservation are being acquired by the company, the agreement having been signed by the chiefs, Aug. 31. At the western end of the contract, a report states that M. Sheady & Co. have been given a sub-contract for the clearing of 50 miles out of Aldermere.

The agreement between the city of Prince Rupert and the company was practically unanimously approved by the vote of the citizens, Sept. 2. The agreement provides that the company is to pay $15,000 a year taxes on its lands for ten years, give the city 3,200 ft. of water frontage; several sections of land for park purposes, 60 acres for a cemetery site; to build a dry dock at a cost of $2,500,000, and to erect station, car and machine shops, and a roundhouse at a cost of $1,000,000. The plans for the different buildings have been prepared, and preliminary construction work has been started.

Fairbanks Track Scales

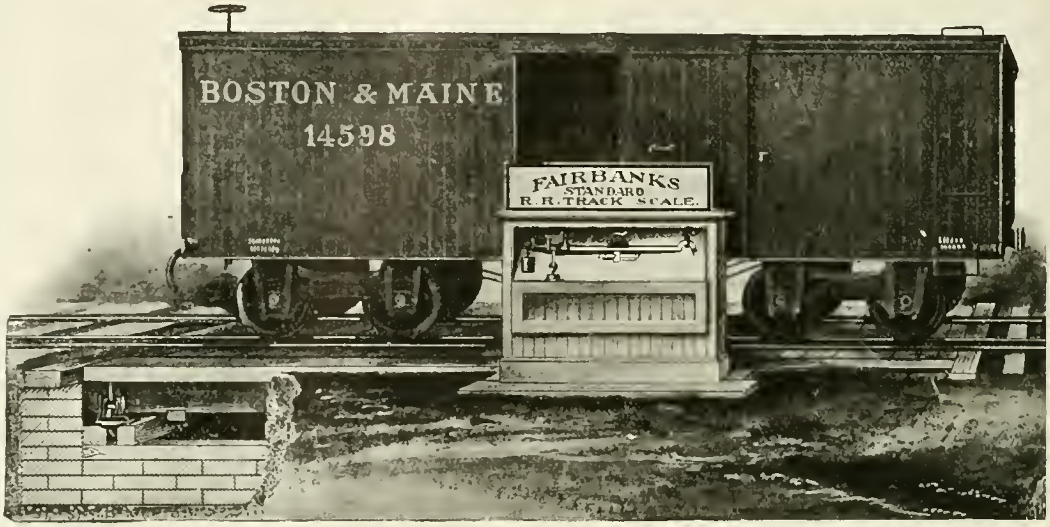
A HIGH GRADE INVESTMENT

FOR ACCURACY AND SERVICE

Valuable information that vitally concerns every manufacturer, can be obtained by the use of Fairbanks Track Scales.

You should have absolute evidence of delivery of **Quantity** as well as **Quality**—and there is no reason why you cannot secure it by the proper use of our Scales.

In our Suspension Platform Track Scales the shock is absorbed in the suspension bearings, and the Type Registering Beam absolutely eliminates all possibility of error in reading the weight. They meet the most exacting demands for a modern weighing machine.



The Canadian Fairbanks-Morse Co., Limited

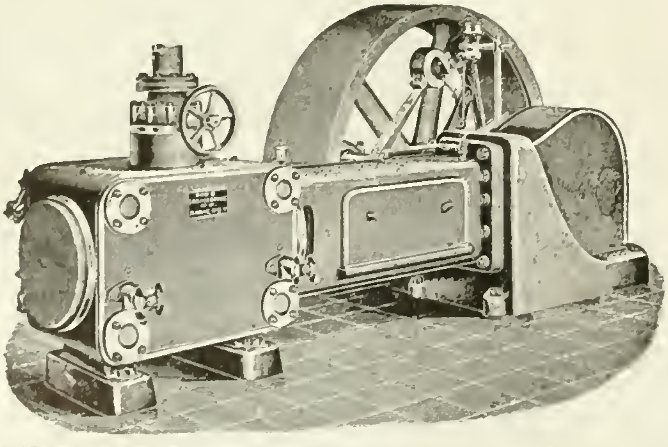
Montreal, Ottawa, Toronto, St. John, N.B., Winnipeg, Saskatoon, Calgary, Vancouver.

CORLISS ECONOMY WITH A POSITIVELY DRIVEN VALVE GEAR

By eliminating the springs, dashpots, latches and detachable parts of the usual forms of Corliss gear

ROBB CORLISS ENGINES

ARE SAFE because there's no governor belt to break, no releasing gear to fail to trip and allow the engine to "run away."



ARE SIMPLE because there's only about one-half as many parts and wearing surfaces in the valve gear.

ARE OF HIGH SPEED, the valves closing quickly and positively instead of depending upon the springs and dashpots of releasing gears. 200 revolutions per minute a safe speed.

Railway Finance, Meetings, Etc.

Dominion Atlantic Ry.—The head offices of this company have been changed from London, Eng., to the C.P.R. Windsor St. station, Montreal, where the annual meeting of the shareholders will be held Oct. 13.

Gross earnings for July, $160,600, against $148,432 for July 1910.

Grand Trunk Pacific Ry.—The annual meeting of the shareholders, which was to have been held in Montreal, Sept. 19, was postponed, until after the return of C. M. Hays, President, from his western trip.

London and Port Stanley Ry.—The question of the future of this line is again occupying the attention of the citizens of London, Ont. The present lease to the Lake Erie and Detroit River Ry., (which is owned by the Pere Marquette Rd.) expires in about two years, and it is stated that the P.M.R. has no desire to renew it.

Maritime Coal and Ry. Co.—The Nova Scotia Legislature has authorized the company to issue, with the approval of the shareholders, 10,000 preferred shares of $100 each, bearing 7% interest.

Massawippi Valley Ry.—The annual meeting was held at Stanstead, Que., Sept. 6. The following officers and directors for the current year: President, J. G. Foster; Vice President, C. W. Cate; other directors, J. W. Dunklee, C. H. Kathan, C. D. White, F. N. McCrea, E. O. Grundy, H. N. Turner and J. H. Williams.

New Brunswick Ry.—The report for year ended June 30, shows gross earnings from stumpage, $192,437; from sundries $466; total earnings $192,903; expenses including taxation, management, etc., $29,798; surplus from previous year $24,088, total surplus at June 30, $187,194. At the recent annual meeting a dividend of $4 a share was declared, absorbing $120,000, leaving $67,194 to be carried forward.

Quebec Central Ry.—Gross earnings for June, $129,359.06; expenses $84,228.34; net earnings $45,130.72, against $121,032.42 gross earnings; $82,117.85 expenses; $38,914.58 net earnings for June 1910. Aggregate gross earnings for 12 months ended June 30, $1,208,948.88; expenses $820,803.12; net earnings $388,145.76, against $1,105,866.77 aggregate gross earnings;; $759,555.75 expenses; $346,311.02 net earnings for same period 1909-10.

Subject to audit, the gross receipts for the year ended June 30, including interest, were $1,217,255 working expenses, $820,803; net receipts, $396,452; interest on first and second debenture stock $165,873; balance $230,579, less full interest on 7% income bonds $115,545, leaving a balance of $115,434, from which the directors recommend a dividend of 3%.

Quinze and Blanche River Ry.—At the recent annual meeting in Ottawa, Ont., the following officers and directors were re-elected for the current year: President, Hon. E. H. Bronson; Vice President, F. P. Bronson; other directors, W. G. Bronson and H. W. Cole; Secretary Treasurer, L. rannell.

Temiscouata Ry.—Profit on operation for June, $7,592, against $6,450 for June 1910. Aggregate profit for six months ended June 30, $21,174, against $21,828 for same period 1910.

Victoria and Sidney Ry.—The Victoria, B.C., city council contends that the V. and S.R. owes $170,000. The Great Northern Ry. interests have taken over the line, and it is said made an offer of $29,000 in liquidation of the debt, that amount being stated to be in excess of income over operating expenses. A special committee of the council has the matter under consideration, and is hoping to secure a satisfactory arrangement by which the whole amount will be recovered.

White Pass and Yukon Ry.—Gross earnings for seven months ended July 31, $539,110 against $627,679 for same period 1910.

Grand Trunk Railway Construction, Betterments, Etc,

New England Lines Proposals.—A special act passed last session of the Vermont Legislature, gave power to the Public Service Commission to arange for the building and operation of a union station by the railways entering Burlington. The Commission sat there Sept. 6, to hear the views of the Central Vermont Ry., and the Rutland Rd., as to which of them should build the station. The C.V.R. has presented a plan for the building of a station to be owned and operated jointly, and for the separation of all grade crossings in the city. The plans is generally approved by the citizens, and the hearing was adjourned until Oct. 24, with the object of enabling the two railways to agree on plans and terms so that a consent order can be made.

Press reports, Sept. 15, state that the G.T.R., through allied interests, has secured control of two trolley lines which will give it a through connection from Portland, Me., to Boston, Mass.

Tracks, Bridges and Buildings.—The Board of Railway Commissioners has authorized the company to build an additional track across Ste. Anne's and Bourdages streets, St. Hyacinthe, Que.; to build an additional passing track at Thedford, Ont.; to rebuild its most southerly track crossing Seventh line road, Oakville, Ont.; to build an additional track across the public road between lots four and five Saltfleet tp., Ont.; to build a branch from its yards at Winona, Ont., to the station of the Hamilton, Grimsby and Beamsville Electric Ry.; to build a branch at Nipissing Jct., Ont., crossing the C.P.R., and connecting with the Temiskaming and Northern Ontario Ry., an interlocking plant to be installed.

The Board has authorized the use for traffic of bridges 15 and 16, over the St. Lawrence River at mileage 55.63 and mileage 54.12, the use of five other bridges on the Eastern Division, and the building of the following bridges: at Brooker's Crossing, Front tp., Ont.; at milepost 89.39, or 9.63 miles south of Richwood station, Ont., at Patton St., Grimsby Ont., and at Front Creek, near St. Marys, Ont.

The Board has approved location and detail plans for stations at Thorndale, Ont., and Winona, Ont., and authorized the building of a station and dwelling at Manilla Jct., Ont.

Kingston, Ont.—The company is reported to have purchased 400 acres of land at Kingston Mills, four miles from the city. Local reports state that it is the intention to remove the station at Kingston Jct. to Kingston Mills, and make that point the connection for its Toronto-Ottawa line via Smiths Falls. The present line from Kingston Mills to the city and outwards to the west is in the form of a loop. For some time the company has had under consideration the straightening of its line from the Mills to Collins Bay, whereby two miles in distance would be saved and two gradients eliminated. No official communications have passed between the company and the civic authorities as to any proposed changes.

Toronto Grade Elimination. — The Board of Railway Commissioners has authorized the building of bridges at Jameson, Dunn and Dowling Avenues, Toronto along the line of this work. The track at the Queen St. subway, Sunnyside, has been tunnelled under, and the abutments are being built. In connection with this work the Sunnyside bathing beach is being expropriated together with some adjoining property. The centre pier of the new bridge over the Humber river is approaching completion. The work of building this pier was a difficult one, as a cofferdam 30 ft. deep had to be built before the 65 ft. piles could be driven for the foundation work. The other work along the whole section to Mimico is well advanced.

Lansing, Mich.—We are officially advised that there is no foundation for the press reports that the erection of a large warehouse equipped with the latest mechanical appliances, is under contemplation for the company's business at Lansing, Mich. (Sept., pg. 831.)

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Goldschmidt Thermit Co., has issued pamphlet 20, showing the advantages of metals and alloys produced by its Thermit process.

The Northern Electric and Manufacturing Co., Ltd., Montreal, has increased its capital stock from $1,000,000 to $5,000,000, by the issue of 40,000 shares of $100 each.

Roland Yeates, formerly of the Rudel-Yeates Machinery Co., Montreal, is now handling the London Machine Tool Co.'s products, with office at 607 Canadian Express Building, Montreal.

The Safety Car Heating and Lighting Co.'s monthly pamphlet, Safety Heating and Lighting News for September, contains a number of interesting items relating to heating and lighting railway cars.

Butterfield & Co., Rock Island, Que., have issued an illustrated catalogue of taps, Reece's and Derby screw plates, stocks and dies, hand and machine reamers, taps and dies for all purposes and tools for engineers and steam fitters, copies of which may be obtained on application to them.

The American Vanadium Co.'s monthly publication, American Vanadium Facts, for September, contains a number of concentrated comments by users of Vanadized metals, chiefly Vanadium steel, together with an article on the epoch of alloys and description of various works in progress where Vanadium steel has been specified.

The Canadian Westinghouse Co., Hamilton, Ont., has issued circular 1028, describing its rotary converters; circular 1190 describing its engine driven alternating-current generators, type E, and folders illustrating its watt-hour meters, types C and OA, the latter for residence loads, and A.C. and D.C. switchboard meters.

◆

During the twelve months ended Aug. 31, the following number of cars were used for the transportation of grain from the Prairie provinces; C.P.R., 57,615, or 60% of the total number; Canadian Northern Ry., 30,677, or 32% of the total number; G.T. Pacific Ry., 6,970 or 7% of the total number, and Great Northern Ry. 1,199, or 1% of the total.

Canadian Pacific Railway Construction, Betterments, Etc.

Atlantic Division.—D. McNicoll, Vice President, visited St. John, N. B., Sept. 13, and in the course of an interview, is reported to have said that the extension work at West St. John would be undertaken as soon as possible, most probably in the spring of 1912. The company's plans for the development of the coal areas in Queen's county were not sufficiently defined to enable any announcement to be made. The plans are said to include the building of a line from Fredericton to Minto.

The Board of Railway Commissioners has authorized the building of a bridge at mileage 27.4 on the St. Stephen, N.B., branch; the closing of a crossing at the station and a diversion of the highway along Munquart River near Bath, N.B.; and the rebuilding of seven bridges on the Edmundston, N.B. subdivision.

Montreal to Ste Therese.—A contract is reported to have been let to M'Donald and Macdonell, Montreal, for the building of a double track bridge at Ste. Rose, on the line from Montreal to Ste. Therese, Que. The bridge is a steel structure of three spans, 158 ft. each, on masonry piers and abutments. The press reports add that the tourist traffic in the Laurentian Mountains this summer has been so heavy that it has been decided to lay a second track to Ste. Therese in time for next season's business.

Land Purchases in Montreal.—Transfer was registered recently of two blocks of land at Longue Pointe, to the C.P.R., the purchase price being $81,042.75. An area of 434,775 square feet adjoining the Glen yards has also been purchased by the company, with a view to providing for further extensions of the yards and station facilities.

The first of these purchases has to do with the new industrial lines which the company is laying in that district. The Board of Railway Commissioners has authorized the building of a bridge on the line from the Angus shops to Mile End quarry road, and the building of a third track on the north side of the present tracks between the Angus shops and Mile End.

The board of control informed the C.P.R., Sept. 19, that the plans for the new line from Place Viger station to Longue Pointe could not be approved as they involved additional level crossings. The company will submit modified plans.

Western Jct. near Montreal.—The contract for the works proposed to be carried out at Western Jct, near Montreal, to which reference was made in our last issue, has been let, so far as the building construction is concerned, to C. E. Deakin. The rest of the work will be done by the company's own forces. The locomotive house will be of steel and concrete construction and will have a mill roof. The boiler house will be equipped with 200 h.p. boilers, and the coaling plant will serve two tracks.

Ottawa Entrance Plans.—D. McNicoll, Vice President, had an interview with the Ottawa city council Aug. 29, in reference to the plans for the proposed new entrance of railway lines into the city.

Ottawa-Prescott Branch.—The Board of Railway Commissioners has approved of the temporary location on this branch at mileage 9.4 from Ottawa.

Montreal-Toronto Second Track.—In connection with the second track construction now in progress between Smiths Falls and Bathurst, Ont., the Board of Railway Commissioners has authorized the second track to be carried across Erwin St., Perth, and a number of highways.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the company to build across a number of highways, and road allowances, and to divert a number of road allowances.

Victoria Harbor, which will be the terminus of the line, on Georgian Bay, will on the opening become an important point for the interchange of lake and rail traffic. The company is spending considerable sums upon providing proper facilities for the handling of traffic. Fourteen miles of track has been laid in the yards, and grading for an additional 11 miles has been completed. The buildings, etc., being erected, include a 6-stall locomotive house, with machine shop attached; machine shop, equipped with a 72 in. and a 36 in. lathe; shaper, bolt-cutter and radial drill; oil and storehouse, with 12 oil tanks in the cellar, from which oil is pumped to the store above; bunk house; 70 ft. turntable; two track ashpit; two track coaling plant; laundry, ship stores and office; icehouse; freight shed, 750 ft. long; flour shed, 300 ft. long; 2,000,000 bush. elevator; eight cottages; large boarding house; two boarding houses to accommodate 150 men; and 8,400 lineal feet of wharfage. All the buildings are to be lighted by electricity, and the company is installing its own fire, water and lighting systems.

Nothing definite has been announced as to when the upper lake steamboat service will be transferred from Owen Sound to Victoria Harbor.

A contract was reported let Sept. 20, to G. T. Martin, Smiths Falls, Ont., for the construction of all stations, freight sheds, water tanks, and other buildings on the line.

In a recent interview, D. McNicoll, Vice President, is reported to have stated that when the line was completed, the company would have a dead-level track all the way between the Georgian Bay and Montreal, in addition to having a route shorter by many miles than any other possible connection. As a result the company would use Victoria Harbor as a transfer point to and from Upper Lake steamboats, instead of Owen Sound, as at present.

Toronto Office Building.—A contract is reported let to the Geo. Fuller Co., for the erection of the new office building at the corner of Yonge and King streets, Toronto.

Campbellford, Lake Ontario and Western Ry.—In a recent interview, D. McNicoll, Vice President, is reported to have stated that several parties of engineers were preparing for construction on this line, which is to run from near Smiths Falls, to the lake shore and then on to Toronto via Port Hope.

South Ontario Pacific Ry.—We are advised that good progress is being made with the construction of the line from Guelph Jct. to Hamilton, Ont. The Toronto Construction Co. has the contract for the whole work, and has had a steam shovel at work since June 20, in cemented gravel at mileage 15.7 to the junction with the Toronto, Hamilton and Buffalo Ry. at mileage 16.28. The Toronto Construction Co., is doing all the concrete work itself, and expects to have it completed by Oct 31. The work from Guelph Jct., mileage 0 to Progresston, mileage 6, has been sublet to C. J. Price, who had previously been carrying out some railway work at Cobalt, Ont. J. Baskin, Norwood, Ont., has the sub-contract for grading from mileage 6 to 10.5; no sub-contract has been let for the work from this point at mileage 13, although it is expected to let one at an early date; Taylor and Love, Waterdown, are the sub-contractors for the next mile, on which they have two gangs at work; and L. W. Reade, Hamilton, is grading from mileage 14 to 15.7. The Price and Baskin contracts are expected to be finished this fall, and it is expected to have five or six miles of track laid from Guelph Jct., southerly, by the end of the year.

The Board of Railway Commissioners has authorized the building of the line across a number of highways, to divert certain others, to cross the G.T.R. in West Flamboro tp., and to build a bridge to carry Dundas St. in Waterdown over the line. It has approved detail plans for the bridge over the line at mileage 15.77.

London Improvements.—Work has been started on the new bridge over the Thames at Oxford St., London, Ont. This bridge will be of the solid truss type, and the old link and pin bridge, which it replaces, is being removed to Mattawa, Ont., where it will be re-erected.

The London city council has issued a permit for the erection of the remainder of the buildings in connection with the new roundhouse. They are to be of steel and concrete and will cost about $60,000.

Lake Superior Division Bridges.—The Board of Railway Commissioners has authorized the company to build bridges at mileage 27.34 and 95.15 on this division, and to use bridge at mileage 16.16 Webbwood sub-division.

Fort William Coaling Plant.—The Canadian Stewart Co. started work, Sept. 1, on the big coal handling plant and freight terminal on Island no. 1, Fort William, Ont. The estimated cost of the work is said to be about $2,000,000.

New Buildings, etc., Manitoba, Division.—Tenders are under consideration for trenching and laying pipe lines at Sidney and Newdale, Man., and it is also reported that it has been decided to erect new shops and a roundhouse at Neepawa, Ont.

Lanigan to Prince Albert.—We are advised that there is nothing in the press reports that a line is being located from Lanigan, via Humbolt to Rosthern, Sask. The company has under consideration the building of a line from Lanigan to Prince Albert, Sask., but nothing definite can be said as to when it will be built.

Brandon Station.—The existing facilities consist of two buildings, east and west, placed 50 ft. apart and built 60 ft. from north boundary of Pacific Ave. The ground floor is approximately the track level and is about 12 ft. below Pacific Ave. level. The greater portion of the existing building is to be removed and to be replaced by new work which will connect with the existing east building, and part of it, 50 ft. in width, will extend to the north boundary of Pacific Ave. When the work is completed, all departments will be enlarged and new ones added. On the ground floor, (track level), the refreshment rooms, baggage room, parcel checking room, telegraph office, Dominion Express room and office, men's smoking room and lavatory and store rooms, etc., will be located. On the first floor, (Pacific Ave. level) will be the general and women's waiting rooms, women's retiring room and lavatory, and the ticket office. The second floor will have the various railway operating offices. The exterior will be of brick and stone construction. The interior of the first floor will be finished in oak with marble base and terazzo floors. The contract for the construction of the station has been awarded to the Brandon Construction Co.

Union Station, Regina.—The new station at Regina, for the joint use of the C.P.R. and Canadian Northern Ry., is designed in a free renaissance style of

Nicholson Co.

The Only Satisfactory Test of a File is Actual Use

Mechanics are particular and will continue to use a make of file they have found to give the best results. The Nicholson File Company adopted and adhered to the policy of making the best file possible.

The result of this policy is that their business has increased from 100 dozen a day sold in a local market in 1864 to 16,000 dozen a day sold all over the world, and Nicholson-made Files are recognized as the standard wherever files are used.

architecture. The main building, centrally placed, is three stories high, with one story wings on each side, the total length is 316 ft., the width 62 ft. and the height of central portion 48 ft. The accommodation provided includes general waiting room, ticket office, men's and women's smoking and retiring rooms and toilet rooms. These take up the entire ground floor space of the central building, the dimensions being 120 by 59 ft. The ticket office, octagon shaped, is conveniently placed in the centre of general waiting room on the track side and opposite to the entrance vestibule from the front. There are wide doors placed to the right and left of ticket office and give access to the platform and track. The news, telegraph and telephone offices are in full view and placed at one end of the general waiting room. The baggage room, 64 by 58 ft.., is reached from the general waiting room through a wide corridor, on each side of which the public will have access to the baggage checkers, valises, parcels, customs, baggage master and transfer offices. An additional entrance is provided from this corridor to the platform. The C.P.R. and C.N.R. express rooms and offices, which are kept entirely separate, are placed to the right of main station building, the general dimensions being 105 by 57 ft. Large storage for the use of the baggage is placed in the basement, and a freight elevator is provided for the use of baggage department. The staff offices are placed on first and second floors of the main building and are well lighted and conveniently arranged around a central staircase, constructed of steel and white marbel, which leads directly out of the general waiting room. The buildings are to be of reinforced fireproof construction, the whole of the basement walls being of concrete and external walls of superstructure of brick faced with Bedford cut stone neatly tooled and moulded. The roofs are to be covered with tar and gravel and the whole of the interior walls and ceilings plastered. The general waitingrooms, etc., will be finished with white polished oak, the floors with terazzo mosaic, and maple floors will be laid in the baggage and express rooms and in the first and second floor offices. An ornamental glazed copper marquise will be fixed over the entrance to waiting room and glazed awnings over the baggage and express platforms. The buildings are to be heated throughout by a system of steam at low pressure supplied to vertical direct radiators placed in the various rooms. The electrical wiring will be done by the C.P.R. Co.'s own workmen. The contractors for the building are the J. McDiarmid Co., of Winnipeg, and the building was designed in the C.P.R. Assistant Chief Engineer's office, at Winnipeg.

Locomotive and Car Shops, Saskatchewan Division.—Press reports state that it is the company's intention to locate locomotive and car repairing shops for the Saskatchewan Division, at Weyburn, Sask. Some new plant and machinery for locomotive and car repair work is being installed at the roundhouse, and this is regarded as the beginning of the development.

Crave-Colonsay Branch.—The Board of Railway Commissioners has authorized the opening for traffic of this branch between Colonsay and Imperial, Sask. The branch connects via Craven, with the main line at Regina.

Forward to Ogema, Sask.—A train service has been placed in operation on the extension of the branch from Weyburn, towards Lethbridge, between Forward from Ogema. A further extension westerly from Ogema, is under construction.

Moose Jaw, Southwesterly. — The Board of Railway Commissioners has approved location plans of the branch from the main line at Moose Jaw, southwesterly for 35.39 miles. The latest map issued by the company shows that this line will connect up with the branch now under construction from Swift Current southeasterly, and that at or near the junction a branch will run south and join the extension of the line from Weyburn to Lethbridge, which now terminates at Ogema .

Moose Jaw to Macklin, Sask.—A Rosetown dispatch, Sept. 14, states that tracklaying on the extension of the branch from Moose Jaw has been practically completed. It is not expected that the line will be ready for operation until the spring, owing to the fact that the bridge across the Saskatchewan River at Outlook, will not be completed for some time.

Wilkie-Anglia and Wilkie-Kerrobert.—Grading has been completed on the first of these branches southerly from Wilkie, and tracklaying is being proceeded with. Fourteen miles of grading has been done on the second branch, which will terminate at Kerrobert, on the Moose Jaw-Macklin branch.

Castor to Kerrobert.—The Lacombe branch of the Calgary and Edmonton Ry. is being extended from its present terminus at Castor, Alta., to Kerrobert, Sask, and track was reported to have been laid to Coronation, Alta., 20 miles, Sept. 15. Press reports state that engineers are locating northerly and southerly from Coronation.

Cutknife Branch.—Considerable work is being done on the branch northerly from Wilkie, Sask., to the Cutknife district.

Irrigation Belt Branches.—The Board of Railway Commissioners has approved the location of the branch from Langdon,, Alta., northerly, from mileage 40 to 102.1. The branch is in operation as far as Acme, and the company's latest maps show it as effiecting a junction with the Calgary and Edmonton Ry. at Tuttle. From Irricana, on this line, there is a branch running easterly to Standard, from where the company's latest map shows it will be extended to Kininvie; and at the Irricana end to Crossfield. The Board of Railway Commissioners has approved the revised location of a line from Bassano to the Irricana branch, and a portion of the location plans for the same branch, mileage 0 northwesterly for 20.2 miles.

Medicine Hat to Calgary.—The fact that C.P.R. engineers are constantly making examinations of territory to ascertain its development, and making approximate surveys for branch lines, has probably given rise to the report that it is proposed to start work this year on the building of a line from Medicine Hat to Calgary, Alta. We are officially advised that there will be no such line built this year.

Edmonton to International Boundary.—We are officially advised that there is no truth in the report that the company is making surveys for a line from Edmonton, via Swift Current to the International boundary, about 100 miles west of North Portal. The line now being built from Swift Current northwesterly will not cross the Saskatchewan River, and there is no intention of extending the line now being built south easterly from Swift Current, to the International boundary.

Calgary Shops.—Tenders are under consideration for building an extension of the boiler house at Calgary, Alta.

Calgary and Edmonton Ry.—The Board of Railway Commissioners has authorized the carrying of the projected line into Edmonton, Alta., across the Edmonton, Yukon and Pacific Ry., in the Hudson's Bay reserve, the North Saskatchewan river, and Saskatchewan Ave. This is the high level bridge under construction, between Strathcona and Edmonton.

Western Shops.—Sir Thos. G. Shaughnessy, President, on his recent trip west, was questioned at various points as to the location of the proposed western shops. He stated at Calgary, that a special meeting of the direcors would be held to consider the matter shortly after his return to Montreal, and an announcement would be made about Oct. [illegible].

Fort William Terminals.—The increased business and the prospects of future expansion in business, which has to be handled at Fort William, is far greater than the company can meet with its present layout, and owing to the condition becoming somewhat congested, it has been decided to extend the developments on to the east side of the Kaministikwia River on the property that is known as Island no. 1. The company has recently purchased a large area of this island and intends ultimately to construct rather large facilities in the way of coal handling plants, freight sheds, etc. In order to properly serve such facilities, extensive yards will be necessary, also engine terminal facilities. In the lines of this development, the company is now constructing a bascule bridge over the Kaministikwia River on to Island no. 2, and also a rolling lift bridge from island no. 2. The only facility which the company is at present constructing on the island is the new coal handling plant, which, when completed, will have a storage capacity of 800,000 tons, a boat discharging capacity of about 10,000 tons a day and a car loading capacity of about 300 cars a day. The plants will be so designed that all these capacities can be increased when the company desires. There will be about six miles of yard tracks and sidings to serve the coal docks.

Waldo Branch.—The Board of Railway Commissioners has approved of the revised location of this branch between mileage 9.7 and 11.33 on lot 152 kootenay District, B.C.

Vancouver, Etc., Terminals. — The Board of Railway Commissioners has authorized the company leave to expropriate certain lots at Coquitlam, required for its proposed shops and yard facilities there.

Sir Thos. G. Shaughnessy, speaking to the Vancouver board of trade, Sept. 7, said the extensive new yards proposed to be laid out at Coquitlam would greatly relieve the traffic at Vancouver. Plans had been prepared for extensive improvements at the Vancouver station, but after full consideration it had been decided to build a new station, and plans for this were in course of preparation.

Esquimalt and Naniamo Ry.—The extension of the line into Alberni, is expected to be placed in operation Nov. 1. Work on the Cowichan Lake extension is being pushed rapidly. (Sept., pg. 845.)

Three Forks to Lucky Jim Mine.—The spur line under construction from Three Forks to Lucky Jim Mine, B.C., will be 3.5 miles long. The work is very light, the gradient is 3.5%, with 15 degrees of curvature. There is one frame trestle 800 ft. long and 75 ft. high to be built.

Canadian Pacific Railway Second Track Work in Saskatchewan.

The C.P.R. is building 23 miles of second track on its main transcontinental line from Pasqua through Moose Jaw to Caron, Sask., a distance of 23 miles. For a portion of the distance between Pasqua and Moose Jaw, a new double track line is being built, and on

Dearborn Treatment Overcomes All Bad Water Troubles

Because Scientifically Prepared to Suit Water Conditions

Boiler troubles such as scale, leaking, corrosion, priming and foaming, are caused by mineral salts in the water, and can be overcome only by the use of proper reagents for these salts. To this end the waters along the line must be analyzed, and specific treatment applied accordingly.

Gallon samples of the waters are required for analysis. When reports are completed, we are ready to prepare treatment, and will send an expert engineer to instruct in the proper handling of the material.

PROFESSIONAL CARDS.

The Railway and Marine World is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. The Railway and Marine World is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

the remaining distance a second track is being built on the old right of way allowance.

Starting at Pasqua, the junction point of the C.P.R. main line with its Portal subdivision, which runs to North Portal, on the international boundary, where connection is made with the Minneapolis, St. Paul and Sault Ste. Marie Ry., to St. Paul and Minneapolis, the new line parallels the C.P.R. main line for two miles, and then branches off for 2.5 miles, rejoining the present main line 4.5 miles from Pasqua. The old main line has gradients of 0.77% and 6.88%, while the new line has a gradient of 0.40% compensated for curvature. From the point where the new piece of track joins the main line a new track is being built, and the old track is being raised so as to eliminate the 0.77% gradient; and give a maximum gradient of 0.40 over the whole piece of second track, compensated for curvature, the curvature remaining the same as heretofore.

The quantities on the Pasqua-Moose Jaw section of the work ran to 250,000 cubic yards, principally earth. The contractors were allowed to use all available dirt, which amounted to 110,000 cubic yards, the rest being removed for train filling. A steam shovel has been installed in cuts to get the minor quantity of dirt, and incidentally to widen the cuts, thereby hoping to avoid cuts being filled with snow during the stormy periods of the year. From Moose Jaw to Caron, 16 miles, the work consists of building a second track parallel with the existing track, 13 ft. centres, requiring about 105,000 cubic yards of earth. There are also on the work 16 small bridges over water courses, for which concrete abutments, requiring about 800 cubic yards of concrete, are required. Progress on the first section of the work has been slow on account of the very heavy traffic which does not give the work trains much chance to work steadily. From Moose Jaw to Boharm, eight miles, the track will be laid with all crossed ties, tie plates on all ties, and 85 lb. steel, and the rest of the mileage will be laid with 85 lb. steel on no. 1 ties. The contractor for both sections is the J. C. Hargrave Co., Ltd., Winnipeg, which firm did the second track work between Winnipeg and Portage la Prairie, Man.

Traffic Orders by the Board of Railway Commissioners.

Summaries of other orders are given on another page, under "Orders by the Board of Railway Comimssioners."

Rates on Crude Oil, Stoy, Ill., to Toronto.

14386. May 16. Re application of British American Oil Co. Ltd., for an order declaring that the C.P.R. has unjustly discriminated against crude oil shipments from Stoy, Ill., to Toronto, by refusing to carry them at 20c. per 100 lbs., in accordance with published tariff and Official Classification; that the C.P.R. has overcharged the applicant; and that order 7093, made upon the complaint of the applicant against the G. T. R. is equally binding upon the C.P.R. It is declared that the legal rate chargeable on the said carload shipments was the fifth class joint through rate in effect at the time the shipments moved, as shown in the joint through tariffs published and filed with the Board, and in accordance with Official Classification 29, and subsequent issues thereof.

Rates on Petroleum, Etc., from Ohio and Pennsylvania.

14387. May 16,—Re application of Canadian Oil Companies, Ltd., against the G.T.R. and the C.P.R., complaining that the railway companies unjustly discriminated against them upon shipments of petroleum and its products from certain Ohio and Pennsylvania points to Toronto and other Canadian points, by refusing to carry such shipments in carloads, at fifth class rates in accordance with the Official Classification; that the companies overcharged the applicant and applying for an order prescribing proper tolls. It is declared that the legal rates chargeable on petroleum and its products, in carloads, from points in Ohio and Pennsylvania to Toronto, were the fifth class joint through rates in effect at the time the shipments moved, as shown in the joint through tariffs published and filed with the Board, and in accordance with Official Classification 29, and subsequent issues thereof

Approval of Supplement 2, to Canadian Classification 15.

14495. Aug. 4.—Re application of Canadian Freight Association for order approving proposed Supplement 2, to Canadian Classification 15, embodying a revision of the ratings on plate or mirror glass. It is ordered that the proposed supplement abolishing the form of shippers' "release" hitherto required to entitle shippers to certain ratings for plate or mirror glass of the said classification, and embodying certain amendments in the ratings necessitated thereby, but without advancing any of the said ratings, be approved, to take effect in Canada not later than Sept. 1, 1911.

Approval of Bulk Grain Bill of Lading

14591. Aug. 18.—Re consideration of new bulk grain bill of lading submitted for approval by the Canadian Freight Association on behalf of the railway companies, for use at stations west of Lake Superior, it is ordered that the form be approved, subject to the proviso that section 6 be amended to read as follows:

"Sec. 6. Notice of loss, damage, or delay must be made in writing to carrier at the point of delivery, or to the carrier at the point of origin, or to the claims agent of either, within four months after delivery of the bulk grain herein described, or in case of failure to make delivery, then within four months after a reasonable time for delivery has elapsed. Unless notice is so given the carrier shall not be liable."

◆

Transportation Men in the General Election.

F. N. McCrae (Liberal), President, Lotbiniere and Megantic Ry., was elected in Sherbrooke, Que., by 52 majority.

J. A. C. Ethier, (Liberal), director, Central Ry. of Canada, was re-elected in Two Mountains, Que., by acclamation.

M. L. Hersey (Liberal), consulting chemist, C.P.R., was defeated in St. Antoine, Montreal, by H. B. Ames, by 2,360.

Col. H. H. McLean, K.C. (Liberal), Vice-President, St. John Railway, was re-elected in Sunbury-Queens, N.B., by 238 majority.

D. A. Gordon (Liberal), President, Chatham, Wallaceburg and Lake Erie Ry., was re-elected in East Kent, Ont., by 300 majority.

E. Bristol, K.C., (Conservative), director, Richelieu and Ontario Navigation Co., was re-elected in Centre Toronto, Ont., by 2,124 majority.

Hon. G. P. Graham (Liberal), who has been Minister of Railways and Canals since Aug., 1907, was defeated in Brockville, Ont., by 125.

R. B. Hepburn (Conservative), President and General Manager, Ontario and Quebec Navigation Co., was elected in Prince Edward, Ont., by 281 majority.

Robt. Bickerdike (Liberal), President, Montreal and Great Lakes Steamship Co., was re-elected in the St. Lawrence Division of Montreal by 1,119 majority.

Hon. John Haggart (Conservative), who was Minister of Railways and Canals from Jan., 1892, to July, 1896, was re-elected in South Lanark by some 800 majority.

J. A. M. Aikins, K.C., (Conservative), who was elected in Brandon, Man., by 600 majority, has been C.P.R. Local Solicitor at Winnipeg since the company's inception.

H. B. McGiverin (Liberal), whose firm are solicitors for the Klondike Mines Ry. and who represented Ottawa, Ont., in the last parliament, was defeated by 1,112.

Jules Hone, Jr. (Independent Conservative), general railway and steamship ticket agent, and formerly City Passenger Agent, C.P.R., Quebec, was defeated in Quebec Centre.

C. A. Magrath (Conservative), formerly Land Commissioner, Alberta Railway and Irrigation Co., who represented Medicine Hat, Alta., in the late Parliament, was defeated there by 480.

E. B. Osler (Conservative), director, C.P.R., and President, Niagara Navigation Co., was re-elected in West Toronto, Ont., by 7,965, the largest majority obtained by any candidate in the Dominion.

S. Barker (Conservative), who was re-elected in Hamilton East, Ont., by 1,500 majority, was at one time Solicitor and general counsel for the old Great Western Ry. of Canada, and was for a short time General Manager, Northern and Northwestern Railway.

G. H. Barnard (Conservative), who was elected in Victoria, B.C., by 240 majority, is a son of the late F. J. Barnard, at one time M.P. for Cariboo, B.C., who was the founder of the British Columbia Express Co. and interested in other transportation matters.

Rodolphe Forget (Conservative), President, Quebec Railway, Light and Power Co. and Richelieu and Ontario Navigation Co., who sat for Charlevoix, Que., in the last parliament, was re-elected for this constituency by 530 majority and was also elected in Montmorency, Que., by 54.

Hon. R. Lemieux, (Liberal), who represented Gaspe, Que., prior to dissolution and who was appointed Minister of Marine and Fisheries a short time ago, was elected in Rouville, Que., by 265 majority. He also ran again in Gaspe, where the election was held four days later, and was defeated there.

W. F. Nickle (Conservative), Secretary-Treasurer, Kingston, Portsmouth and Cataraqui Electric Ry., was elected in Kingston, Ont., by 345 majority. He represented the same seat in the Ontario Legislature from 1908 until he resigned to run for the House of Commons. Kingston was represented in the House of Commons from 1902 until the recent dissolution by W. Harty, President, Canadian Locomotive Co., who refused to again be a candidate.

Use of Soft Ties.—The report of the Roadmasters' and Maintenance of Way Association's committee on the question: "Is it economy to use soft ties for switches, switching leads and track?" as presented at the recent convention, is given in full on page 911 of this issue. In the discussion on the report, T. Hickey, Roadmaster, Michigan Central Rd., St. Thomas, Ont., said the M.C.R. had used cedar ties for many years but had stopped buying them. They were not satisfactory under heavy traffic, and even on branch lines where standard equipment is used they are being replaced by white oak.

Canadian Northern Railway Construction, Betterments, Etc,

The Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the building of a 90 ft. deck plate girder bridge across the St. Charles River, at mileage 4.38 from Quebec.

The question of the extension of the company's yards in Hochelaga ward, Montreal, has been before the Board of Railway Commissioners on several occasions recently, and an appeal to the Supreme Court is being made against one of the Board's rulings. In this connection the Montreal city council has been recommended to delay granting roads.

The Board of Railway Commissioners has extended the time for the completion of the line across Notre Dame St., and the Montreal Street Ry. tracks.

Canadian Northern Ontario Ry.—A deed of sale has been registered in Montreal showing the transfer of 500 arpents of land in Longue Pointe ward from Mackenzie, Mann & Co., Ltd., to the C.N.O. Ry. The land adjoins the C.N.Q. Ry. near the approach to the Moreau Rd. terminal.

The bridges on the new short line which is being built from Montreal to Hawkesbury, Ont., are as follows: Riviere des Nordes, mileage 13.5 from Hawkesbury, consisting of five 55 ft., three 60 ft., deck plate girder spans, and one 24 ft. beam span on concrete piers and abutments. Rouge River, mileage 15.5 from Hawkesbury, consisting of two 40 ft. and one 85 ft. half through plate girder spans on concrete piers and abutments. Riviere des Chenes, mileage 30.7 from Hawkesbury, consisting of one 65 ft. half through plate girder span on concrete abutments. Riviere des Milles Iles, mileage 37.9 from Hawkesbury, consisting of 16 half through plate girder spans of 65 ft. each, girders 17 ft. 6 in., centre to centre, with floor systems, on concrete piers and abutments. Riviere des Prairies, (Back River) West channel, mileage 39.6 from Hawkesbury, consisting of five 80 ft. half through plate girder spans, girders 17 ft. 6 in. centre to centre, with floor system; main or east channel, mileage 40 from Hawkesbury, consisting of two 135 ft. centre to centre, and two 185 ft. centre to centre end bearing rivetted through trusses on concrete piers and abutments. These steel bridges will be built to Dominion Government specifications of 1908, class heavy loading, which provides for safe operation of two consolidated locomotives, coupled together, each weighing in working order 180 tons, followed by a train load of 4,750 lbs. per ft. The contract for the first four bridges has been let to the Dominion Bridge Co., Montreal. Contracts for the other two bridges have not yet been let. The concrete work is being done by the general contractor. The Board of Railway Commissioners has approved of the building of these bridges, and also of the revised location of the line from mileage 1.81 to mileage 7.85 from Hawkesbury.

The negotiations for the entrance of the line into Ottawa are proceeding, and it was reported Sept. 13, that the company had completed the purchase of the land necessary for its entrance and terminals. It is stated that negotiations are in progress for the purchase of the site of the Bate warehouse, on the west bank of the Rideau canal, just across from the new central station, for station purposes

Revised plans for the line at Buck Lake, in Storrington and Bedford tps., and from mileage 164.31 to 165.56, have been approved by the Board of Railway Commissioners, which has also approved of plans for a station at Belleville.

It is expected that the first section of the new line from Toronto to Ottawa will be opened for traffic Oct. 1. The mileage of this section from the junction with the Toronto-Sudbury line in the Don Valley just outside Toronto, to Trenton, is 104.4 miles. The company's officers inspected the line at the end of Aug., and the inspection by the Engineers of the Department of Railways was fixed for Sept 23. The Board of Railway Commissioners has authorized the company to connect its tracks with the Central Ontario Ry. tracks at Trenton, mileage 104.4, from Toronto. The Board has also approved of the plans for laying out a freight yard at Trenton.

Application will be made to the Board of Railway Commissioners, Oct. 12, for approval of plans for a station building just south of the new bridge over the Don at Queen St. east, Toronto, and for the approval of the plans for the Toronto-Ottawa line from across the north part of Toronto.

In connection with the Ottawa-Selwood Jct. of the main line, it is stated that the delay in the letting of a contract is due to the fact that certain diversions will have to be made from the route as at present laid out, and that as a consequence it will be some little time before the new plans and specifications can be prepared.

With respect to the Sellwood Jct.-Port Arthur line, which is under contract, the Board of Railway Commissioners has approved of revised location plans for the line from mileage 15.75 to 24.75, and from mileage 32.4 to 50.6, southeast of Port Arthur, and of location plans through unsurveyed territory in Thunder Bay district from mileage 84 to 200, east of Port Arthur. The contractors are reported to have over 500 men at work on the first 70 miles east from Port Arthur, established in ten camps. A steam drill is at work in the rock cut near Current River.

Press reports state that a sub contract has been let to E. Anderson for grading 15 miles out from Port Arthur, to A. McGregor from mileage 15 to 17 and to Vigars and Paanaman from mileage 19 to 23, easterly from Port Arthur, and that J. A. Whalen has been given a contract for building a bridge 59 miles east of Port Arthur.

A press report that C. P. L. Fowler, formerly Manager of the Nelson-Jenks Coal Co., at Great Falls, Montana, had been appointed Purchasing Agent for Foley Bros. and Northern Construction Co., contractors for the C.N.O.R. between Selwood Jct. and Port Arthur, was mentioned in our last issue. We have since been advised that Mr. Fowler has been appointed Chief Accountant, not Purchasing Agent.

C. T. De Lamere has taken charge of the work on Division C, at Nipigon, Ont., in place of R. H. McCoy, who was drowned recently.

Canadian Northern Ry.—Sir Donald Mann, Vice President, in an interview at Port Arthur, Ont., Sept. 11, is reported to have said the present grain elevator there will be doubled in size, thus bringing its storage capacity up to 14,000,000 bush., and that work on the enlargement will be started just as soon as the preliminary work, upon which the contractors are engaged, is completed. The contractors guarantee that a larger section of the additional storage capacity will be ready in Jan. or Feb., 1912. The company also proposes to establish a line of steamers of its own to ply between Port Arthur and the company's terminals on the Georgian Bay. The passenger steamers will be ready in the spring of 1913.

It is reported that the hotel at Port Arthur is to be enlarged at an early date.

The Board of Railway Commissioners has authorized the opening for traffic of the following lines: from Calder to Rhein, for freight at a sped of 18 miles an hour, the Roseburn extension from Rhein to Hamton, and the Delisle branch from Delisle to McRorie, Sask.

A connection between the C.N.R. line and the G.T. Pacific Ry. has been authorized by the Board of Railway Commissioners in s.w. ¼ sec. 36, tp. 30, r. 4, w. 2 m., Sask.

The Board of Railway Commissioners has ordered the fencing of the company's right of way on the Wawanesa subdivision, by July 1, 1912; has approved of plans for building a subway under the company's tracks at 23rd St., Saskatoon, and has approved location plans for the following lines: mileage 0 to 41.76 and mileage 49.94 to 60.45 on the extension westerly in Saskatchewan; mileage 0 to 14.16 from the junction with the Moose Jaw extension, Sask.; mileage 46.68 to 93.40 Alta.; mileage 255.73 to 260.03; and mileage 260.03 to 261.08 on the Calgary extension.

In a recent interview, G. H. Shaw, General Traffic Manager, in summing up the work in progress along the line, said the new station at Brandon is approaching completion, and the new hotel at the same place will be completed early in 1912. The work of relaying the old Qu'Appele, Long Lake and Saskatchewan Rd., with heavier steel rails is practically completed between Regina and Warman. The new line from Vegreville to Calgary is in first class order from the junction with the main line at Vegreville, through Camrose to Stettler, Alta., 104 miles, and a full service of trains was put in operation Sept. 1.

Tracklaying on the branch into Moose Jaw., Sask., has reached a point about three miles south of that town; a large bridge is being erected there, and on its completion, tracklaying will be resumed.

In connection with the Vegreville-Calgary line, Sir Donald Mann, on the occasion of his recent visit to Calgary, said the line will be completed into the city by the end of the year. The Board of Railway Commissioners has authorized the construction of a bridge to carry the tracks over the C.P.R. main line near Calgary. To the south of Calgary there is a good deal of location work being done, and latest reports are that final location stakes are being put in on the route for the lines in the vicinity of Pincher Creek and Lethbridge.

Sir Donald Mann, Vice President, during his recent western trip, stated that a high level bridge will eventually be built to give connection with the country south of Edmonton, but whether it will be built at the east or west end of the city it has not been decided. Every effort of the company is now being directed to the completion of the coast to coast line.

As regards the work on the line from Edmonton to the Yellowhead Pass, late reports state that grading is well advanced to 168 miles west of Edmonton, and it is expected that track will be laid to the Rocky Mountains next year.

Track laying is reported to have been completed on the line to Athabasca Landing, to north of Clyde, Alta., and it is expected that steel will be laid into the Landing by the end of the year.

On the line towards the Peace River country from west of Edmonton, it is expected to have the grading completed to the Pembina River this fall. The Tobin Construction Co., which has the general contract is reported to have let a sub contract to the Bradley Construction Co.

Sir Donald Mann, Vice President, is reported to have stated on the occasion of his recent visit to Edmonton, that construction will be started next summer on a line northeast from Edmon-

ton, splitting the wedge of territory between the Athabasca Landing line and the Saskatchewan River. The route will, it is said, follow pretty closely that proposed for the Alberta and Great Waterways Ry., as far as the junction with the line now under construction from North Battleford to Athabasca Landing.

Canadian Northern Pacific Ry.—We are officially advised that a contract has been let for the construction of the line from Kamloops, B.C., to the Yellowhead Pass, to the Northern Construction Co., jointly. The work is to be started immediately and is to be completed by July 1, 1913. A general description of the route has already been given, but there have been some changes made on the revised location surveys which have just been completed. The Northern Construction Co., in conjunction with Foley, Welch and Stewart, has the contract for the 163 miles from Hope to Kamloops, while the Cowan Construction Co., is building westerly from Edmonton to the Yellowhead Pass.

Reports state that good progress is being made with construction on the Hope-Kamloops section, and the subcontractors are getting large gangs of men and big plants on the different sections.

Sir William Mackenzie, President, and Sir Donald Mann, were at the Pacific coast at the beginning of Sept., looking over the work in progress at Port Mann, the terminus of the transcontinental line on the mainland, and at Victoria, in connection with the lines on Vancouver Island, and in interviews, stated that everything was going on satisfactorily.

Canadian North Eastern Ry.—Sir Donald Mann, in a recent interview said the project of extending this line, formerly known as the Portland Canal and Short Line Ry., across the divide into the Naas River Valley had not been lost sight of by the company. It was intended to carry the line through to a connection with the company's lines in Alberta, but the work coul dnot be undertaken until the main trunk line was completed. (Sept., pg. 839.)

Terms of Quebec Central Railway Lease the to C.P.R.

The Secretary has issued the following circular to the holders of securities:

I am instructed by my board to inform you that, subject to your approvel, to be hereafter asked for at meetings of each class of debenture stockholders and the bond shareholders, to be summoned for that purpose, and subject also to the granting of the necessary statutory authority in Canada, they have entered into a provisional agreement with the directors of the Canadian Pacific Ry. Co., to lease your railway and all its assets for 999 years for a rental sufficient to provide for interest and dividends as follows:

Payment of interest on the 4% debenture stock (preserving all existing rights).

Payment of 3½% per annum on the 3% debenture stock (which is to be converted into a 50 year debenture stock at the new interest rate). Payment of principal guaranteed by lessee.

Payment of 5% per annum half yearly on the 7% income bonds (these bonds being converted into new 50 year bonds at the new rate of interest), and a 10% cash bonus being given as compensation to the converting bondholders for reduction of interest. Payment of principal guaranteed by lessee.

Payment half yearly of a dividend of 4% per annum on the shares for the first four years of the lease and a dividend of 5 % per annum thereafter.

All these payments of interest and dividends will, in effect, be the direct obligation of the C.P.R. Co.,

The lease will commence from Jan. 1, or July 1, as the case may be, next after the date when the agreement becomes effective.

The C.P.R. will, it is understood, make such subsequent arrangements as may be necessary with the New York, New Haven and Hartford Rd. in regard to traffic agreement, etc. The control of the company will be with the C.P.R., and it is likely that the directorate will be changed to Canada.

The final steps in the transfer will not be taken by the shareholders until after the necessary act has been passed by the Quebec Legislature.

Canadian Northern Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

	Earnings.	Expenses.	Net Earnings.	Net Increase
July	$1,475,900	$1,114,300	$ 361,600	$ 13,400
Inc.	$ 250,800	$ 237,400	$ 13,400	....

Approximate earnings for August, $1,420,650, and for two weeks ended September 14, $696,800 against $1,093,000 and $544,300 for same periods 1910.

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:

	Earnings.	Expenses.	Net. Profits	Net Increase.
July	$9,661,818.14	$5,958,789.81	$3,703,028.33	$218,408.74
Inc.	$ 792,603.82	$ 574,195.08	$ 218,408.74	....

Approximate earnings for August, $10,073,000, and for two weeks ended September 14, $4,555,000, against $8,926,000 and $4,153,000 for same periods 1910.

Grand Trunk Railway Earnings, Expenses, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R., for July, as compared with those for July, 1910:—

Grand Trunk Railway.

	1911.	1910.
Earnings	$3,336,900	$2,538,400
Expenses	2,523,000	1,826,750
Net earnings	$ 813,900	$ 711,650

Canada Atlantic Railway.

	1911.	1910.
Earnings	$ 177,700	$ 126,000
Expenses	157,000	135,900
Net earnings	$ 20,700	*$ 9,900

Grand Trunk Western Ry.

	1911.	1910.
Earnings	$ 551,500	$ 394,400
Expenses	428,800	335,700
Net earnings	$ 813,900	$ 711,650

Detroit, Grand Haven and Milwaukee Ry

	1911.	1910.
Earnings	$ 171,200	$ 121,200
Expenses	143,400	120,200
Net earnings	$ 27,800	$ 1,000

*Deficit.

Approximate earnings for Aug., $4 502,674, and for two weeks ended Sept. 14, $2,060,101, against $385,049 and $ 1,901,444 for same periods, 1910.

Traffic Receipts of the System.

Aggregate receipts from July 1 to Aug. 31:

	1911.	1910.
Grand Trunk Ry.	£1,414 826	£1,151,928
Canada Atlantic Ry. ..	75,348	59,283
G. T. Western Ry. ..	230,960	183,405
D.G.H. & M Ry.	74,768	57,084
Totals	£1,795,902	£1,451,700

◆

During July 19 employes were killed and 31 injured in the course of their employment in railway service in Canada. Of the fatalities, seven were due to being struck by trains and locomotives, five to being run over, three to derailments, two to being crushed when coupling, and one each to heat prostration and to scalding. In addition to the foregoing, two employes were killed in the course of their work on railway construction, one being due to being run over by a train, and one to falling rock.

Railway Route Plans Approved.

The Minister of Railways has approved of the following route plans:—

Algoma Central and Hudson Bay Ry. July 24; about 100 miles.

Campbellford, Lake Ontario and Western Ry. (C.P.R.) July 24. From east of Cobourg to a connection with Ontario and Quebec Ry. (C.P.R.) near Glen Tay, Ont.; about 109 miles.

Canadian Northern Ontario Ry.—July 24. Revision of Sudbury-Port-Arthur line, 10 miles.

Ottawa-French River line. Revision from Pembroke westerly; about 42 miles.

Canadian Northern Ry.—July 24. Yorkton to Hudson Bay Junction, about 95 miles.

Revision of Moose Jaw-Kindersley branch; about 25 miles.

Canadian Pacific Ry.—July 24. Asquith to Conquest; 42 miles.

July 24.—Lauder to Boissevain; 33.5 miles.

July 24.—Wilkie to Anglia branch; 64 miles.

July 24.—Revision of Moose Jaw southwesterly line; 35 miles.

July 24.—Bassano to Irricana branch, 22 miles.

Grand Trunk Pacific Branch Lines Co.—July 24, Harte to Brandon; about 25 miles.

July 24.—Entrance to Brandon; about 5.4 miles.

July 24.—Biggar-Calgary branch, a slight revision in tp. 31, ranges 23 and 24, west of 3rd meridian, about 10 miles.

Kettle Valley Ry.—July 24. Revision of Midway-Carmi branch; 46 miles.

Aug. 24.—Penticton towards Osprey Lake, first 5 miles from Penticton.

Lake Erie and Northern Ry.—July 24. Brantford to Port Dover, about 35 miles.

Southern Central Pacific Ry.—July 24. From sec. 20, tp. 10, r. 2, to near n.e. corner of sec. 20, tp. 7, r. 2, west of 5th meridian; 22.4 miles.

July 24.—From sec. 26, tp. 6, r. 1, west of 5th meridian to the international boundary near Coutts; 96.5 miles.

Orders Placed for Steel Rails.

We were officially advised, Sept. 20, that the C.P.R. had ordered 1,200 tons of 65 lb. steel rails in the United States for use on branch lines in the Canadian northwest.

The National Transcontinental Railway Commission received tenders up to Sept. 4 for 2,000 gross tons steel rails, 80 lbs., to be delivered at Moncton, N.B. The Dominion Iron & Steel Co.'s tender has been accepted.

In our June issue it was stated that the Grand Trunk Ry. had ordered 37,500 tons of 100 lb. rails, divided between the Algoma Steel Co., and the Dominion Iron & Steel Co. We are now officially advised that a further order has been placed for 12,500 tons of 100 lb. rails, with the Algoma Steel Co., and 5,000 tons of 80 lb. rails have been ordered from the Lackawanna Steel Co., for use on G.T.R. lines in the United States.

A recent press report stated that the G.T.R. was in the market for 10,000 tons of steel rails. We were officially advised Sept. 21, that the management was figuring on the supply for next year, but the quantity to be ordered had not been decided.

◆

The Secretary of the Board of Railway Commissioners, issued a circular Sept. 6, asking railway companies to furnish within 60 days a statement showing the number of snow ploughs equipped with automatic couplers on the front end, and the number that are not so equipped, or that are equipped with the old fashioned bar.

C. J. Binney, of the Canadian Freight Association's staff at Winnipeg, was married there, Sept. 6, to Miss R. M. Boulton.

H. H. Colpitts, C.P.R., engineer, Macleod, Alberta, was married recently there to Miss A. F. Johnson, of Monarch, Alta.

Mrs. S. P. Mabee, who died at Port Rowan, Ont., Sept. 5, aged 85, was mother of J. P. Mabee, Chief Railway Commissioner.

E. N. Soper, son of N. Y. Soper, director of the Ottawa Electric Ry., was married to Miss H. A. McDougall, in Ottawa, Sept. 30.

A. J. Gorrie, Receiver for the Quebec and Lake St. John Ry., returned to Quebec, Sept. 1, from Great Britain, by the s.s. Royal Edward.

T. Howell, General Immigration Agent, Canadian Northern Ry., Toronto, returned from Great Britain, by the s.s. Royal Edward, Sept. 1.

Jas. Leitch, K.C., Chairman, Ontario Railway and Municipal Board, returned to Toronto early in September, from a vacation in Great Britain.

W. R. McRae, Superintendent, Motor and Truck Dept., Toronto Railway, returned to Toronto on Sept. 14 with his family, from a trip to Europe.

N. Curry, President, Canadian Car & Foundry Co., Montreal, has been unanimously elected President of the Canadian Manufacturers' Association.

A. F. Murray, of the C.P.R. Architect's Department, Montreal, was drowned while bathing at Isle Cadieux, Lake of the Two Mountains, Sept. 3.

W. J. Connolly, who died at Gillingham, Alta., recently, aged 68, spent several years in railway contracting work west of Winnipeg.

W. Burn, a representative of the Great Western Ry. of England, recently completed a tour of Canada in the interests of his company.

Miss Brownlee, daughter of J. Brownlee, Superintendent, C.P.R., Moose Jaw Sask., was married there, Sept. 6, to Mr. Leach, of Cranbrook, B.C.

F. H. Phippen, K.C., General Counsel Canadian Northern Ry., accompanied by his family, returned to Toronto, Sept. 1, from Great Britain.

G. Hannah, Passenger Manager, Allen Steamship Line, returned to his office in Montreal, Sept. 18, after having been in Great Britain for some weeks.

Lady Shaughnessy and family have returned to Montreal from St. Andrews, N.B., and have closed Fort Tipperary, their summer home, for the winter.

Sir Wm. Van Horne, left Montreal, Sept. 22, for a short visit to St. Andrews, N.B., where Lady Van Horne expects to remain until the end of Nov.

Sir Thos. Tait, was in St. John, N.B., Sept. 13, in company with D. McNicoll, Vice President C.P.R., on the latter's inspection of the lines east of Montreal.

C. Schreiber, C.M.G., Consulting Engineer to the Dominion Government, returned to Ottawa, Sept. 19, after spending a short holiday in New Brunswick.

W. G. Annable, General Passenger Agent, C.P.R. Atlantic Steamship Service, Montreal, and Mrs. Annable arrived in England, Sept. 1, for a short holiday.

D. J. Evans was presented with a diamond ring, Aug. 31, by the office staff of the Canadian Locomotive Co., Kingston, Ont., on his retiring from the position of accountant.

J. M. Bryce, who died in Toronto, Aug. 29, aged 79, is reported to have been driver of the first C.P.R. engine which ran from Winnipeg across the Assiniboine River.

The marriage of C. P. Edwards, of the Dominion Government Radio-Telegraph Service, Vancouver, B.C., to Miss M. G. Dickeson, of Ottawa, is announced to take place in October.

C. S. Mellen, President, New York New Haven and Hartford Rd., is reported to have stated, Sept. 12, that there was no truth in the reports that he was about to resign the presidency.

F. J. Moss, of the Canadian Northern Ry. Emigration Department, London, Eng., spent some time in Aug. and Sept., on a tour through Canada, collecting information for the use of the department.

Lord Strathcona has given $3,000 towards the fund being raised in Vancouver, B.C., to purchase the old British survey ship, Egeria, as a training ship for the Vancouver branch of the Navy League.

Dr. D. M. Lincham, Winnipeg, and Dr. Fraser, Brandon, Man., are reported to have been appointed medical officers in charge of the construction camps on the Dominion Government railway to Hudson Bay.

Frank Grundy, Vice President, Quebec Central Ry., Sherbrooke, Que., who died Nov. 15, 1910, left an estate of $213,713.77, divided equally in shares of $35,618 each among five sons and one daughter.

Lord Strathcona sailed from England, Sept. 23, via New York, for Canada. He may be present at the welcome to H.R.H. the Duke of Connaught, when he arrives to assume the position of Governor-General.

H. N. Frith, at one time in the B.C. Electric Ry. accountants' department, and now Secretary of the Yokuna Valley Transportation Co., is reported to have resigned that position with a view of returning to Vancouver.

J. F. Cameron, of Trickey and Cameron, railway contractors, died in the hospital at Cornwall, Ont., Sept. 3, aged 55. He was a son of the late J. Cameron, who was engaged on the construction of the Hoosac tunnel.

The engagement is announced of Miss M. G. Nanton, daughter of A. M. Nanton, Winnipeg, Managing Director of the Alberta Ry. & Irrigation Co., to D. L. Cameron, son of Hon. D. C. Cameron, Lieutenant-Governor of Manitoba.

A life size portrait of the late R. Reid, who was one of the original members of the National Transcontinental Ry. Commission, has been placed in the Public Library, London, Ont. He was the first chairman of the library board.

H. T. Wilgress, Agent, C.P.R. Trans-Pacific Steamship Line, Yokohama, Japan, accompanied by Mrs. Wilgress, arrived in Canada, Sept. 15, from England, on the C.P.R. s.s. Empress of Ireland, on their return to Japan after a vacation.

J. J. O'Connor, steamship agent, etc., Port Arthur, Ont., has been appointed by the Ontario Government as a magistrate, with jurisdiction along the Canadian Northern Ontario Ry. under construction from Port Arthur to Gowganda Jct.

G. S. Hodgins, who was at one time connected with the C.P.R. Mechanical Department, has resigned the position of Managing Editor of Railway and Locomotive Engineering, New York, on account of ill health, and has gone abroad to recuperate.

S. O. Greening, President of the B. Greening Wire Co., Ltd., Hamilton, Ont., died there, Aug. 3, aged 64. He was one of the directors of the Dominion Power and Transmission Co., owning the electric railways running into and radiating from Hamilton.

Sir William Whyte was chairman of the committee which had charge of the arrangements for the dinner given in Winnipeg, Sept. 28, to Sir Daniel and Lady McMillan, on Sir Daniel terminating his tenure of office of Lieutenant-Governor of Manitoba.

P. A. Laing, a resident engineer on the National Transcontinental Railway construction, was presented with a diamond pin by the staff at Residency 20, near Cochrane, Ont., Sept. 12, on his leaving to take a post-graduate course in engineering in Columbia University, New York.

J. S. Campbell, who died at Byron, Cal., Sept. 10, resided for a number of years in Winnipeg, and was connected with the C.P.R. passenger department. At the time of leaving that company's service in 1898 he was Secretary to R. Kerr, then Assistant Traffic Manager Western Lines.

C. H. Allen, who has been appointed Real Estate Agent, Western Lines, C.P. R., Winnipeg, Man., is a son of T. Carleton Allen, K.C., LL.D., of Fredericton, N.B., and was born at St. John, N.B., Aug. 28, 1880. Prior to entering the C.P.R. Solicitor's office in Jan. 2, 1909, he practised law in Fredericton, N.B.

Sir Thos. G. Shaughnessy, President, C.P.R., has offered $1,000 as a prize for the best 20 lbs. of hard red wheat at the American Land and Irrigation Congress to be held in New York in Nov. The C.P.R. will carry all shipments of wheat for the competition from the Calgary irrigation lands free of charge.

W. McIlroy, City Passenger Agent, C.P.R., Peterboro, Ont., who was appointed by the Canadian Ticket Agents' Association as representative to attend the American Association of General Passenger and Ticket Agents' convention at St. Paul, Minn., Sept. 19, was unable to be present in consequence of a change of staff in his office.

C. J. Rogers, who has been appointed acting Purchasing Agent and Cashier, White Pass and Yukon Route, Vancouver, B.C., was born at Winnipeg, Man., Dec. 22, 1887, and entered W.P. and Y. R. service Sept. 1904, since when he has been, to Nov. 1, 1906, clerk at Dawson, Yukon; Feb. 4, 1907 to July 31, 1911, Assistant Purchasing Agent, Vancouver, B.C.

E. T. Agate, C.E., M. Can. Soc., C.E., who was recently appointed District Engineer, Canadian Northern Ontario Ry., in charge of District 1, Port Arthur-Sudbury line, at Sudbury, was born at Pittsford, N.Y., Dec. 7, 1874, and graduated from Cornell University in 1897. He was with the C.P.R. Construction Department from 1897 to 1906, and from 1906 to 1910 was engaged in railway work in British Columbia and Washington State.

G. T. Rooke, whose appointment as Inspector of Transportation, Eastern Lines, C.P.R., was announced in our last issue, was born at Whitby, Ont., Oct. 21, 1865, and commenced railway work in Aug., 1880, as telegraph operator on the Credit Valley Ry. He remained with the C.P.R. when it took over the C.V.R., and to the date of his present appointment has been telegraph operator, train dispatcher and train and station inspector, consecutively.

Canadian Representative

G. C. ROYCE, West Toronto, Ont.

Let us quote you on your requirements.

R. H. McCoy, Division Engineer, Division C, Canadian Northern Ry., Gowganda Jct to Port Arthur line, with S. A. Drum, Resident Engineer, Nipigon, and R. Nelson, rodman, were drowned by the upsetting of their canoe, in Lake Helen, north of Lake Nipigon, about Aug. 30. R. H. McCoy was for some years in the C.P.R. Engineering Department, and latterly was engaged under the Division Engineer, Chicago, Milwaukee and Puget Sound Ry., Spokane, Wash. S. A. Drum was a native of Minneapolis, and had latterly been engaged on the C.M. & P.S.R. in Washington, and R. Nelson was from Duluth, Minn.

A. A. Goodchild, whose portrait appears on another page, was born at London, Eng., June 3, 1866, came to Canada, June, 1886, and entered railway service in July, 1886, since when he has been, to Jan. 1, 1888, in Audit Department, G.T.R.; Jan. 1, 1888, to Oct. 2, 1899, in Comptroller's office, C.P.R.; Oct. 2, 1899, to Jan., 1900, Assistant Auditor of Disbursements, C.P.R.; Jan., 1900, to Dec. 28, 1904, Auditor of Statistics, C.P.R., on which date he was appointed Auditor of Stores and Mechanical Acounts, which position he now holds. He has taken an active part in the Canadian Railway Club's work and is its president for the current year.

R. L. Thompson, District Passenger Agent, C.P.R., Toronto, has resigned, and has been appointed Managing Director, Pacific Realty Co., Ltd., Toronto, which carries on an insurance and real estate business. He was born at Montreal, Aug. 17, 1873, and entered C.P.R. service Aug., 1888, in the General Passenger Department, occupying positions as stenographer, advertising, claims, accounts and rate clerk, to July, 1904, since when he has been, to Nov., 1905, assistant chief clerk, and Nov., 1905, to Jan., 1907, chief clerk to Passenger Traffic Manager, Montreal; Jan., 1907, to Sept. 8, 1908, General Agent, Passenger Department, Cincinnati, Ohio; Sept. 8, 1908, to Sept., 1911, District Passenger Agent, Toronto.

A. B. Calder, whose resignation from the position of General Agent, Passenger Department, C.P.R., Chicago, Ill., was mentioned in our last issue, was born at London, Ont., Aug. 24, 1867, and entered C.P.R. service in 1887, since when he has been, to 1889, in the Passenger Department, Winnipeg; 1889 to Oct., 1893, ticket clerk at Tacoma, Wash.; Oct., 1893, to July, 1895, Travelling Passenger Agent, Tacoma, Wash.; Oct. 1893, to July, 1895, Travelling Passenger Agent, San Francisco, Cal.; Dec., 1897, to Nov., 1904, Travelling Passenger Agent, Seattle and Tacoma, Wash.; Nov., 1904, to Nov., 1910, General Agent, Passenger Department, Seattle, Wash.; Nov., 1910, to Sept., 1911, General Agent, Passenger Department, Chicago, Ill. After a short vacation on the Pacific coast, he will join his father in the general ticket business in Winnipeg. Before leaving Chicago he was given by the passenger staffs of the various railways represented there a case containing an assortment of hats for all occasions.

J. M. R. Fairbairn, who has been appointed Assistant Chief Engineer Eastern Lines, C.P.R., Montreal, was born at Peterboro, Ont., June 30, 1873. He graduated from the School of Practical Science, Toronto, in 1893, and until Aug., 1901, was engaged in survey and construction work, since when he has been, to Nov., 1902, Assistant Engineer, Maintenance Department, Eastern Lines, C.P.R.; Nov. 1902, to Aug. 1904, Resident Engineer, District 4, C.P.R., Ottawa; Aug. 1904, to Aug. 1905, Assistant Engineer, Chief Engineer's office, C.P.R., Montreal; Aug., 1905, to Mar., 1906, acting Division Engineer, Eastern Division, C.P.R., Montreal; Mar., 1906, to Nov., 1907, Division Engineer, Ontario Division, C.P.R., Toronto; Nov., 1907, to Oct., 1908, Division Engineer, Eastern Division, C.P.R., Montreal; Oct., 1908, to Oct., 1910, Principal Assistant Engineer, Eastern Lines, C.P.R., Montreal; Oct., 1910, to Feb., 1911, Engineer of Maintenance of Way, Eastern Lines, C.P.R., Montreal; Feb. to Sept., 1911, acting Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal. .

J. W. Loud, whose retirement from G.T.R. service on account of his having reached the age limit is announced, was born in Warwickshire, Eng., and was in the employ of the Midland Ry. from Aug., 1861, to 1872, in which year he came to Canada, since when he has been, Sept., 1872, to Jan., 1875, clerk, General Eastern Freight Agent's office, G.T.R.; Jan. to Apr., 1875, Agent, G.T.R., Hamilton, Ont.; Apr., 1875, to Sept., 1877, chief clerk, Assistant General Freight Agent's office, G.T.R., Toronto; Sept., 1877, to Nov., 1881, chief clerk, General Freight Agent's office, G.T.R., Montreal; Nov., 1881, to Dec., 1886, Freight Agent, G.T.R., Toronto; Jan., 1877, to Aug., 1889, General Freight Agent, Through Traffic, G.T.R., Montreal; Sept., 1889, to Feb., 1896, Traffic Manager, Detroit, Grand Haven and Milwaukee Ry., Detroit, Mich.; Feb., 1896, to Apr., 1900, General Freight Agent, G.T.R., Montreal; May, 1900, he was appointed Freight Traffic Manager, G.T.R., Montreal, and subsequently, also, Freight Traffic Manager, Central Vermont Ry., and Grand Trunk Pacific Ry.

A. H. N. Bruce, whose portrait appears on the first page of this issue, was born at Ballyscullion, County Derry, Ireland, June 18, 1854, and after studying engineering and taking a practical course in Glasgow, Scotland, came to Canada in 1889, since when he has been, to 1890, on construction of Canada Atlantic Ry. bridge over the St. Lawrence at Coteau, Que.; 1890, assistant engineer on location and construction, St. Lawrence and Adirondack Ry.; 1890 to 1898, Chief Assistant Engineer on location and construction of Ottawa and Parry Sound Ry.; 1899, on location survey of Manitoba and South Eastern Ry.; 1900, on location and construction of 30 miles of Great Northern Ry. of Canada, from St. Jerome, Que., to Hawkesbury, Ont., including the bridge over the Ottawa River; 1901 and 1902, Chief Engineer, Whitney and Opeongo Ry.; 1903 to Mar. 31, 1904, Divisional Engineer on location and construction, Lindsay, Bobcaygeon and Pontypool, Ry., Mar. 31, 1904 to 1905, Chief Engineer, same road; 1905, Assistant Chief Engineer, Toronto and Hamilton Ry.; 1906, Chief Engineer on surveys and construction, Napierville Jct. Ry.; 1907 to 1909, in private practice; 1910, Chief Engineer in charge of surveys, Little Nation River Ry.; and since Feb., 1911, Chief Engineer, Quebec and Saguenay Ry., which is under construction between Cap Tourmente and Murray Bay, Que.

Comparative Freight and Passenger Rates.—A contemporary publishes the following: The statement is frequently made that the freight and passenger rates on United States railways are lower than those for other countries. The average freight rates charged by the Union Pacific and Northern Pacific per ton mile, for ten years figure out .97 cent. and .89 cent., respectively, compared with .76 cent. on the Canadian Pacific. The ten-year average passenger rates, per passenger per mile for three yoads, figure out as follows: Union Pacific, 2.13 cents; Northern Pacific, 2.23 cents; Canadian Pacific, 1.83 cents.

Grand Trunk Pacific Railway Fort William Terminals.

A press report states that the company's plans for terminals at Fort William, Ont., include elevators with a capacity of 60,000,000 bushels and docks. The dock plans show three great piers in the Mission River harbor from which freight can be loaded into lake vessels by working elevators on both sides. It will be possible to drop 75,000 bush. of grain every hour of the day from the elevators into lake boats. Each unit will consist of a working elevator and storage elevators of 10,000,000 bush. capacity when complete. The cars can be unloaded at six places at the rate of 2,400 cars a day of 20 hours. The unloading is done in the track shed, which is part of the working house. Four tracks extend through this shed. The arrangement is such that grain from the various cars cannot be mixed. The unloading is done by power grain shovels of unusual size and strength Even the dock is of concrete and the storage house consists of seventy cylindrical concrete bins, each over 23 ft. inside diameter and with 50 interspace bins. Six vessel loading spouts are provided for loading grain into lake vessels.

C.N.R. Toronto to Trenton.—The Canadian Northern Ontario Ry. has arranged to open its recently completed Toronto-Trenton line for traffic, Oct. 2, when both passenger and freight services will be put into operation, should nothing unforeseen occur. The pasenger service will consist of two trains each way daily, leaving Toronto Union Station, and calling at Queen St., Rosedale, East Don, Malvern, Cherrywood, Greenburn, Brooklin, Oshawa, Bowmanville, Orono, Starkville, Osaca, Port Hope, Coburg, Grafton, Colborne, Brighton and Trenton. The freight service will consist of one train each way, daily. There will be no changes of officials of the Operating Department, the present officials having their jurisdiction extended over the new line.

Railway Commission for the West.—During his tour in Manitoba and the other northwest provinces last summer the Dominion Premier-elect, R. L. Bordon, stated that if returned to power he would create a western division of the Board of Railway Commissioners to deal with western cases. It is expected that legislation to carry this into effect will be introduced at the next session of Parliament and that a separate board, under an Assistant Chief Commissioner will be appointed with headquarters in the west.

The Canadian Railway Club has changed its monthly meetings at Montreal to the second Tuesday in the month, instead of the first Tuesday, as heretofore.

The C.P.R. has changed the name of its Ottawa union station to Ottawa Broad St. station. The central station, owned by the G.T.R., which is also used by the C.P.R. for certain trains is designated in C.P.R. time tables as Ottawa Sparks St. station.

Lt. Col. H. E. Greenwood, Assistant Chief Engineer, Mackenzie, Mann & Co., Ltd., returned to Toronto early in September from Great Britain. While there he engaged a number of young men to act as resident engineers, and in other positions on the Canadian Northern Ontario Ry. construction between Ottawa and Port Arthur. The resident engineers' pay is about $100 a month and board. Applicants for positions were informed that they must provide transit, theodolite level and drawing instruments and pay their passage to Toronto.

THE COMPANY OFFERS FOR SALE

Farming and Grazing Lands in Manitoba and the Northwest Territories

ON EASY TERMS OF PAYMENT

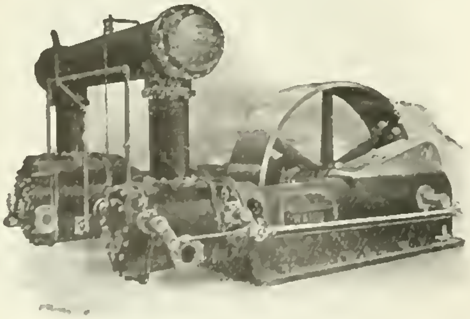
Town Lots for Sale at Winnipeg, Ft. William, Edmonton, Prince Albert, etc.

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

RAND DUPLEX POWER-DRIVEN **COMPRESSORS**



In buying Rand Compressors, you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

Martin; Lucknow, Ont., S. Young; South Indian, Ont., W. J. Buberville; Barry's Bay, Ont., W. P. Bradley; Aubrey, Que., J. Beaupre.

Great Northern Ry.—W. R. Dale, heretofore chief clerk, C.N.R., Seattle, Wash., is reported to have been appointed General Agent, Victoria, B.C., vice E. R. Stephen, resigned to enter private business.

National Transcontinental Railway.—S. N. Parent, Chairman, is reported to have resigned, and it is said the other Commissioners will do the same, in consequence of the defeat of the liberals in the Dominion elections.

H. M. Balkam, heretofore Inspecting Engineer, Ottawa, has been appointed District Engineer, Cochrane, Ont., vice A. N. Molesworth, resigned, to enter C.N.O.R. service.

G. L. Mattice, Assistant District Engineer, North Bay, Ont., has had his office moved to Cochrane, Ont.

Union Pacific Rd., Southern Pacific Co., Oregon Short Line Ry., Oregon-Washington Rd. and Navigation Co. It was stated in our last issue that G. W. Vaux, Travelling Passenger Agent, Toronto, had been appointed Canadian Passenger Agent. A copy of the circular issued by the General Agent, Detroit, Mich, since received assigns him the following territory: points in Ontario, Sault Ste. Marie, Ont., and east to, and including points in Quebec, west of an imaginary line commencing at Riviere du Loup and St. Lawrence River, thence south to the Northern state line of Maine.

Wabash Rd.—G. C. Knickerbocker, heretofore Travelling Freight Agent, Toledo, O., has been appointed Travelling Freight Agent, New York State territory, reporting to General Agent at Buffalo; the New York State territory being divided between him and W. N. Price, District Freight Agent. Office, Ellicott Square Bldg., Buffalo. N.Y.

White Pass and Yukon Ry.—O. L. Diskeson, Vice President, has also assumed the duties of General Manager, vice A. L. Berdoe, resigned.

G. H. Miller has been appointed acting Auditor, vice W. B. King, resigned. Office, Skagway, Alaska.

C. J. Rogers has been appointed acting Purchasing Agent and Cashier, vice H. H. Phillips, resigned. Office, Vancouver, B.C.

Creosoting Ties.—The Canadian Northern Ry. has, we are officially advised, made an arrangement with Alex. Bruce & Co., for the preservative treatment of 500,000 ties, by the Bruning & Marmetsche process. The plant, which is to be erected at Fort Frances, Ont., will have a capacity of about 2,000 ties a day, and the C.N.R. has agreed to deliver enough 8 ft. ties to keep the plant employed till the contract is completed. This year 100,000 ties are to be delivered. and the balance during 1912, the whole 500,000 to be treated by Dec. 31, 1912.

C.N.R. Elevator at Port Arthur.—Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, is reported to have stated there, Sept. 6, that the company would shortly increase its storage capacity at Port Arthur. Estimates are being prepared, but it is said that work will not be commenced this year owing to the lateness of the season.

A conciliation board will shortly be appointed to consider the question of the G.T.P.R. machinists and boilermakers for a similar wage and time schedule to that which prevails on the C.P.R. and C.N.R.

Brake Beams for All Classes of Cars, Locomotives and Electric Equipment

The Retirement of Sir William Whyte from the C.P.R. Service.

The withdrawal of Sir William Whyte, Vice President of the C.P.R., from active railway work, after 46 years continuous service in Canada, first with the G.T.R. and for 28 years with the C.P.R. and its acquired lines, is an event of really national importance, and the announcement has been received with deep regret, not only throughout the vast territory of empire extent west of Lake Superior, where he has had general charge of all the company's great interests, but in every part of Canada, his name being a household word from the Atlantic to the Pacific.

After most satisfactorily serving the C.P.R. in various operating positions in Ontario and Quebec, Mr. Whyte went to Winnipeg in 1886, as General Superintendent of the then Western Division, in charge of all lines between Lake Superior and British Columbia's eastern boundary. In the following year he was made Manager of all lines west of Fort William to the Pacific Coast and in 1901 was appointed Assistant to the President. In Dec. 1903 came the crowning point in his career, when he was appointed Second Vice President in general charge of the maintenance and operation of the Western Lines, and, under the President's direction, of the administration of the company's affairs in the territory between Lake Superior and the Pacific Coast. Never has any other railway appointment in Canada been so popularly acclaimed. The people and the press throughout the west unanimously gave expression to the general feeling of satisfaction and a new era of relations between the company and the western public was inaugurated.

In the years that have elapsed the wisdom of the C.P.R. directorate in placing Sir William at the head of its western affairs has become plainer day by day. He has administered its great interests with conspicuous ability and unwearying devotion, and while maintaining the company's position has carried the public with him, by his absolute candor and fairness. The public confidence in his integrity has been a most valuable asset to the company and has enabled him to carry through many negotiations in a manner that very few indeed, if any other, men could have done. A notable instance of how he could maintain the company's position without alienating public opinion occurred in the eighties, when the Northern Pacific Rd., backed by the Manitoba Government, the Winnipeg Board of Trade and in fact the citizens generally, attempted to lay a track across the C.P.R. in the Fort Rouge suburb of Winnipeg. Mr. Whyte having been apprised of what was to be attempted, was on the spot with a small army of men, before the N.P.R. forces arrived. He effectually prevented the laying of the crossing, for which there was no legal authority, but so judiciously handled the delicate situation that he made no enemies for himself or the company. The historic name, Fort Whyte, will ever be a reminder of this memorable incident, when most serious trouble might easily have occurred had the protection of the company's interests been in the hands of a less diplomatic man.

Among the other officers and employes of the Western Lines there is the deepest regret at the severance of the tie with their chief of so many years. Absolutely fair in every respect, Sir William has for years been looked on as the friend of everyone on the pay roll and everyone knew that he could always get a patient and fair hearing and that he would not be the victim of any injustice or hasty action.

The history of Sir William's administration of the vast territory under his jurisdiction is practically the history of its general development and expansion. From a comparatively small mileage, he has seen the company's lines west of Lake Superior grow many times over, until the Western Lines alone have today more mileage than many of the more important systems on this continent. Most of the mileage has been constructed on his initiative and recommendation, in which and many other respects he has taken a foremost position as a great empire builder.

Sir William Whyte.

Under ordinary circumstances, Sir William would have retired three years ago, at the age of 65, but as Sir Thomas Shaughnessy stated in announcing the retirement at a dinner in Winnipeg a short time ago, he personally solicited Sir William to remain in office for a few years longer. It is most gratifying that Sir William's great experience and ability will still be at the company's service as a director and we trust that he may be spared for many years to enjoy the rest and leisure which he has so well earned. In retiring, he carries with him the best wishes of the entire people; he has the satisfaction of knowing that he has done his duty, and his whole duty to the fullest extent, and that he is without any exception, the most respected and most popular man in the entire west.

The following extracts from leading western papers endorse everything we have said:

Winnipeg Free Press: "The retirement of Sir William Whyte, marks the end of an era in the development of the country and of the railway company. . . . . With the era which may be said to have closed, no name is more closely associated than that of Sir William. His personal faith in the value of the prairie provinces never wavered, and from the beginning he pressed consistently for the speedy construction of further mileage and the supply of better equipment. When others were despondent and disposed to believe that the investment in the C.P.R. might prove a poor one, he urged a continuance of the policy of expansion. In all the large undertakings of a commercial nature, he took a deep interest, and while on every occasion seeking to protect the interests of the railway company, he sought also to aid and assist those who were doing the work necessary to develop the country. . . . . He has gained a knowledge of the west which is not possessed by any other resident of the country, and his personal acquaintanceship west of Lake Superior is probably more widespread than that of any other citizen. In his contact with western people he has always inspired a spirit of hope and optimism, and has shown both in word and deed a readiness, so far as it was possible for him, to furnish to communities and to individuals the opportunity for advancement. So far as the employes of the C.P.R. are concerned, it may probably be said with truth that no railway official in Canada was ever regarded with esteem equal to that in which Sir William is held. Men in all positions in the employ of the corporation have been disposed to believe in his fairness and justice, and to accept his statements as final. He will carry with him into private life the warmest and kindest regard of thousands of workmen as well as of the officials with whom he has been so closely associated for so long a time."

Winnipeg Tribune: "Western Canada learns with profound regret that Sir William Whyte is about to retire. The company and Canada will lose the services of a man who ranks as a railway statesman, a man of the broadest ideas, progressive, conciliatory and considerate, one who has maintained the respect and esteem of every section of the people since the first day that he set foot on Manitoba soil. . . . . Sir William has been the living example to the C.P.R. men. The courtesy, the thoughtfulness for public comfort, the care of life and limb, the general good conduct of the thousands of men in the C.P.R. service in Western Canada, all of these things may be set down in a large measure to the credit of Sir William. . . . . He has earned the greatest reward that comes to any man on this side of time, namely, the highest esteem and profoundest respect of his fellow man."

Vancouver News Advertiser: "Sir William Whyte will be remembered as essentially a public man and regarded as one of the makers of Canada. . . . He saw from the first what the country would be, and became a source of inspiration to his company, and on the other side to the settlers, business men and investors in the west. Personally identified with all sorts of movements looking toward the development of Western Canada, both in material things, and in the higher lines of advancement, Sir William, with a great corporation behind him, and the unlimited resources of his own initiative and enthusiasm, became a power in the land. It is easy now to go on with this campaign, but it is not surprising that the older prairie people and the public of Winnipeg, who have been through the struggle, have been nominating Sir

William for everything in sight."

Victoria, B.C., Colonist: "The retirement has been expected for some little time, but it will be none the less regretted by every person who has any business transactions with him. Sir William had not only great qualifications for the very important post that he filled, but is a genial, whole-souled, public-spirited gentleman.."

◆

Railway Rolling Stock Notes.

The G.T.P.R. has received four consolidation locomotives.

The G.T.R. has ordered 25 locomotives from the Canadian Locomotive Co., Kingston, Ont.

The G.T.R. is asking tenders for four mogul locomotives for its Detroit and Toledo shore lines.

The 250 box cars which the Canadian Northern Ry. has ordered from the Crossen Car Manufacturing Co., Cobourg, Ont., as mentioned in our last issue, will be of 60,000 lbs. capacity, 36 ft. long, and will be equipped with Simplex bolsters and brake beams and Westinghouse air brakes.

The Canadian Car and Foundry Co., Montreal, is building 15 Hart convertible ballast cars for the Hart-Otis Car Co., Montreal; one snow plow for F. H. Hopkins and Co., Montreal; 30 six-ton mining cars for the Great Northern Mining Co., and two 30-ton flat cars for the Canadian Explosives Co.

The Canadian Northern Ry., between Aug. 15 and Sept. 16, ordered the following additions to rolling stock: six cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont., and 150 flat cars; also 10 refrigerator cars and 20 stock cars, for the Duluth, Winnipeg and Pacific Ry., from the United States.

The 20 stock cars which the Duluth, Winnipeg and Pacific Ry. (C.N.R.) has ordered in the United States, will be equipped with Simplex truck bolsters and brake beams, R. E. Janney couplers, Westinghouse air brakes, McCord journal boxes, steel back brake shoes, class A truck springs and axles of open hearth steel.

The C.P.R., between Aug. 18 and Sept. 12, ordered the following additions to rolling stock: 76 box cars, seven stock cars, one van, 15 first class cars, 10 sleeping cars, five dining cars, six tourist cars, two double track snow ploughs, seven flangers and three D.10 locomotives from its Angus shops, Montreal, and 15 single track snow ploughs from the Canadian Car and Foundry Co., Montreal.

Following are the chief details of the 10 second class coaches which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:—

Length over end sills	72 ft. 6 ins.
Width over side sills	9 ft. 10½ ins.
Width over all at eaves	10 ft. 2¾ ins.
Width between deck sills	5 ft. 6 ins.
Height, top of sill to bottom of plate	6 ft. 8½ ins.
Platforms	Standard Coupler Co., type A-3
Body bolsters	Double cast steel

The Canadian Northern Ry., between Aug. 15 and Sept. 15, received the following additions to rolling stock: 42 flat cars, 149 box cars, two first class cars and three dining cars, from the Canadian Car and Foundry Co., Montreal; 46 refrigerator cars (freight) from the Crossen Car Manufacturing Co. Cobourg, Ont.; five second class and baggage cars from the Preston Car and Coach Co., Preston, Ont.; 130 box cars from the Nova Scotia Car Works, Halifax, N.S., and 350 box cars for the Duluth, Winnipeg and Pacific Ry., from the United States.

The C.P.R., between Aug. 18 and Sept. 12, received the following additions to rolling stock: 350 wooden box cars, 32 stock cars, 29 vans, one freight, refrigerator cars, two compartment sleeping cars, one baggage and smoking car, two horse express cars, one business car, five switching locomotives, four D.10 locomotives and one Mallet locomotive from its Angus shops, Montreal; 503 steel frame box cars from the Canadian car and Foundry Co., Montreal; eight N.3 locomotives from the Montreal Locomotive Works; five N.3 locomotives from the Canadian Locomotive Co., Kingston, Ont., and 92 steel frame box cars and 72 coal cars from the U.S.

The Algoma Steel Co., has ordered two six wheel switching locomotives from the Montreal Locomotive Works. Following are the chief details:—

Cylinders, diar. and stroke	19 by 24 ins.
Driving wheels, diar	50 ins.
Boiler pressure	185 lbs.
Firebox	84 by 33¾ ins.
Tubes, no. and diar.	218-1 ins.
Tubes, length	11 ft.
Wheel base, driving	11 ft.
Weight, total	123,000 lbs.
Heating surface, tubes	1246 sq. ft.
Heating surface, firebox	107 sq. ft.
Heating surface, total	1353 sq. ft.
Grate area	19.7 sq. ft.
Maximum tractive power	27,250 lbs.

Following are the chief details of the 10 freight refrigerator cars which the Duluth, Winnipeg and Pacific Ry. (C.N.R.) has ordered in the United States:—

Length over end sills	36 ft. 9¾ ins.
Length inside	33 ft. 10 ins.
Width over side sills	9 ft. 0¾ ins.
Width inside	8 ft. 1 in.
Body and truck bolsters	Simplex
Couplers	R. E. Janney cast steel
Air brakes	Westinghouse
Brake shoes	Steel back
Brake beams	Simplex
Journal boxes	McCord
Springs	Simplex
Axles	Open hearth steel
Galvanized ice boxes	4 in each end of each car

Following are additional details of the 10 Richmond compound consolidation locomotives which the G.T.R. recently ordered from the American Locomotive Co., Schenectady, N.Y., as mentioned in our last issue:—

Weight on front truck	26,400 lbs.
Weight on first pair drivers	48,350 lbs.
Weight on second pair drivers	44,430 lbs.
Weight on third pair drivers	48,720 lbs.
Weight on fourth pair drivers	43,300 lbs.
Weight on drivers, total	184,800 lbs.
Weight on front tender truck	65,600 lbs.
Weight on rear tender truck	77,700 lbs.
Weight of engine, loaded	211,200 lbs.
Weight of tender, loaded	143,300 lbs.
Wheel base, engine and tender	57 ft. 3½ ins.
Total length, engine and tender	67 ft. 6½ ins.

Following are chief details of the 10 consolidation locomotives, type D.4, which the C.P.R. has ordered from the Montreal Locomotive Works, as mentioned in our last issue:—

Cylinders, diar., and stroke	23½ by 32 ins.
Driving wheels, diar.	63 ins.
Boiler pressure	180 lbs.
Tubes, no. and diar.	270-2 ins. & 24-5 ins.
Wheel base, driving	16 ft. 6 ins.
Wheel base, total	25 ft. 5 ins.
Weight on drivers	195,000 lbs.
Weight, total	220,000 lbs.
Heating surface, tubes	2620 sq. ft.
Heating surface, firebox	165 sq. ft.
Heating surface, total	2785 sq. ft.
Grate area	40 sq. ft.
Maximum tractive power	43,000 lbs.

The Canada Iron Corporation has ordered two six wheel switching locomotives from the Montreal Locomotive Works. Following are the chief details:—

Cylinders, diar. and stroke	19 by 26 ins.
Driving wheels, diar.	50 ins.
Boiler pressure	180 lbs.
Firebox	102 by 33 ins.
Tubes, no. and diar.	218, 2 ins.
Tubes, length	11 ft.
Wheel base, driving	11 ft. 6 ins.
Wheel base, engine and tender	40 ft. 10 ins.
Weight in working order	124,000 lbs.
Heating surface, tubes	1480 sq. ft.
Heating surface, firebox	140 sq. ft.
Heating surface, total	1620 sq. ft.
Grate area	23.4 sq. ft.
Maximum tractive power	28,720 lbs.

The Algoma Central and Hudson Bay Ry., has 180 steel under frame cars, 80,000 lbs. capacity, and 25 steel under frames on order with the Canadian Car and Foundry Co., Montreal; 50 Otis type general service cars, with the Hart-Otis Car Co., Montreal; five consolidation freight locomotives with cylinders 22½ by 28 ins., with the Montreal Locomotive Works, and five similar locomotives and five 10-wheel locomotives, with the Canadian Locomotive Co., Kingston, Ont. The 25 steel under frames will be completed as flat cars in the company' shops at Sault Ste. Marie, Ont. Of the locomotives mentioned, the 10 consolidation ones are to be delivered this fall, and the five 10-wheel ones in the spring, while the company has, in addition, received five consolidation locomotives from the Montreal Locomotive Works this year. Further orders for rolling stock are under consideration, but we are advised that the plans are not yet completed.

The G.T.R. has ordered 10 switching locomotives in the United States, for use on its U.S. lines. Following are the chief details:

Weight	139,500 lbs.
Cylinders	20 by 26 ins.
Drivers, diar	56 ins.
Boiler, type	Straight, 66 ins.
Boiler, pressure	190 lbs.
Heating surface, tubes	1772 sq. ft.
Heating surface, firebox	148 sq. ft.
Heating surface, total	1920 sq. ft.
Tubes, no. and diar.	264-2 ins.
Tubes, length	12 ft. 9½ ins.
Firebox	98½ by 40⅛ ins.
Grate Area	27.44 sq. ft.
Capacity, water	4,500 galls.
Capacity, coal	8 tons
Axles	Steel.
Bell ringer	G.T.R. standard.
Boiler lagging	Franklin Railway Supply Co.
Air brakes	Westinghouse.
Brake beams and shoes	G.T.R. standard.
Brick arch	Supported on water tubes.
Driving boxes	Cast iron.
Sanding device	G.T.R. standard.
Sight feed lubricators	Detroit Lubricator Co.
Wheel centres	Cast steel.

Following are chief details of the 10 six wheel switching locomotives which the G.T.R. has ordered from the Montreal Locomotive Works:

Cylinders, diar and stroke	20 by 26 ins.
Driving wheels, diar.	56 ins.
Boiler, outside diar, 1st course	66 ins.
Boiler, pressure	190 lbs.
Firebox	98½ by 40⅛ ins.
Tubes, no. and diar.	264-2 ins.
Tubes, length	12 ft. 9½ ins.
Heating surface, firebox	140 sq. ft.
Heating surface, tubes	1772 sq. ft.
Heating surface, total	1920 sq. ft.
Grate Area	27.44 sq. ft.
Capacity, water	4,500 U.S. galls.
Capacity, coal	8 tons
Weight	139,500 lbs.
Wheel base, engine	12 ft. 8 ins.
Wheel base, engine and tender	42 ft. 4 ins.
Weight of tender	110,000 lbs.
Inside finish	Birch, stained mahogany
Lighting	Commercial Acetylene Co.
Heating	Gold Duplex with Frumveller heater
Fire extinguishers	Miller, No. 8
Air brakes	Westinghouse P.M. 1612
Trucks	C.N.R. standard 6-wheel, 60,000 lbs.
Wheels	36 in., steel tired, cast steel centres
Axles	M.C.B. steel, 4¼ by 8 ins.
Bolster springs	36 ins. double elliptic
Equalizer springs	8½ by 10 ins., 3 coils
Brake beams	Simplex high speed
Journal boxes	McCord malleable
Journal bearings	Canadian Bronze Co.

The Reid Newfoundland Co., is building at its shops at St. John's Nfld., eight 10-wheel locomotives. One of these has been completed, and was recently given a trial run to Killigrews and back, with satisfactory results. This was the first locomotive built in the colony. Following are the chief details:—

Gauge	3 ft. 6 ins.
Cylinders	17 by 22 ins.
Cylinder valves	Balanced
Boiler, type	Straight, radial stayed
Boiler, material	Steel, ⅝ in. thick
Boiler, diar.	56 ins.
Boiler, pressure	180 lbs.
Firebox	97¼ by 33¾ ins.
Firebox, material	Steel
Firebox, depth	Front, 54 ins., back 48¾ ins.
Firebox, sheets	Sides and back, ⅜ in., crown, 7-16 in., tube, 9-16 in.
Tubes, no. and diar.	184, 2 ins.

Tubes, length	12 ft.
Heating surface, firebox	92.5 sq. ft.
Heating surface, tubes	1,200 sq. ft.
Heating surface, total	1,292.5 sq. ft.
Driving wheels, diar.	50 ins.
Journals	7 by 8 ins.
Truck wheels, diar.	26 ins.
Journals	4¼ by 8 ins.
Wheel base, driving	11 ft.
Wheel base, engine	20 ft. 5 ins.
Wheel base, engine and tender	48 ft.
Weight on driving wheels	74,000 lbs.
Weight on front truck	17,000 lbs.
Weight, total engine	91,000 lbs.
Weight, total engine and tender	147,000 lbs.
Tender type	8-wheel
Wheels, diar.	30 ins.
Journals	4¼ by 8 ins.
Capacity, water	2,800 galls.
Capacity, coal	5½ tons
Air brake	Westinghouse standard automatic
Air signal and pump	Westinghouse
Steam heating	Gold improved
Lubricators	Nathan Mfg. Co. triple sight feed bull's eye

The Grand Trunk Ry. is asking prices on ten 30-ft. and ten 40-ft. steel underframe flat cars.

The Grand Trunk Ry. has placed a contract with the Canadian Car and Foundry Co., Montreal, for 1,000 box cars, nos. 19,000 to 19,999, having a capacity of 60,000 lbs., with length over all, 36 ft. 9¾ ins., length inside, 36 ft., width 8 ft. 6 ins., height inside, 8 ft., underframes, steel, air brakes, Westinghouse.

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Lampman and Parkman, Sask., and has closed its offices at Bresaylor, Jameson and Langbank, Sask.

A London, Eng., press dispatch of Sept. 15, stated that the Anglo-American Cable Co., the Western Union Telegraph Co., and the Direct United States Cable Co. have amalgamated.

The C.P.R. is renewing its telegraph line between Chilliwack and New Westminster, B.C. A two circuit line is being erected with new poles. This line was for some time operated by the B.C. Telephone Co. as a telegraph and long distance telephone line, but was abandoned some time ago in favor of another route.

A cable message was sent around the world recently by the New York Times in 16½ min., It was relayed at San Francisco, Honolulu, Midway Island, Manilla, Hong Kong, Saigon, Singapore, Madras, Bombay, Aden, Suez, Port Said, Alexandria, Malta, Gibraltar, Lisbon and the Azores. In all, 21,397 nautical miles (24,963 land miles) of submarine cable and 3,650 land miles of telegraph line were traversed.

The erection of the telegraph line in the St. Barbe district, Nfld., is proceeding, the work having been completed as far as St. Barbe, and it was expected connection would be made with Flower's Cove before the end of Sept. From the latter point the line will be carried along the shore to Cape Norman. The poles for the last section are ready, but work has been somewhat delayed owing to the difficulty of getting men.

The 42nd annual report of the Dominion Telegraph Co., shows assets of $1,310,530 and liabilities of $1,016,860, with a balance to credit of profit and loss of $293,670. Following are the officers and directors for the current year: President, T. Swinyard; Vice President, Sir Henry M. Pellatt; Secretary-Treasurer, F. Roper; other directors, B. Brooks, T. F. Clark, R. C. Clowry, Æ. Jarvis, C. O'Reilly and A. G. Ramsay.

The Newfoundland Government has opened telegraph offices at Daniel's Harbor and Port au Choix, in connection with the telegraph line extension which was completed to those points last year. Further extensions are being made this season, wires having been erected beyond Port au Choix to within a few miles of Brig Bay. It is anticipated that before the close of the season the line will be completed round Cape Norman, and offices opened at Brig Bay, Flower's Cove and Cape Norman.

The Marconi Wireless Telegraph Co., of Canada's report for the year ended Jan. 31, 1910, recently issued, shows total traffic receipts of $36,100, and it is stated that there is every anticipation that the receipts for the current year will be about 20% in excess of that figure. The directors propose to create and issue $2,500,000 thirty year first mortgage 6% gold bonds, $1,000,000 to be issued immediately, the proceeds to be used to pay off the company's indebtedness, the balance of the bonds only to be issued when the further development of the company requires further capital. The report is signed by A. A. Allan, Montreal, President.

The Marconi Wireless Telegraph Co.'s annual report shows gross trading profit of £127,452, and after deducting a number of expenses, including salaries, directors' fees and managing director's remuneration, there is a net profit of £60,513. After payment of preference dividend amounting to £16,600, there is a balance of £49,119. The assets show an amount owing by the Marconi Wireless Telegraph Co. of Canada, of £163,865, which the reports' states has not been paid owing to the recent prosecution of officers of the United Wireless Telegraph Co., having disturbed the financial atmosphere concerning wireless telegraphy.

Among the Express Companies.

The Dominion Ex. Co. has closed its offices at Royal Muskoka and Port Cockburn, Ont., for the season.

T. H. McGarrell, agent, Dominion Ex. Co., New Liskeard, Ont., was married to Miss L. F. Traynor at Grand Forks, N.D., recently.

F. N. Wiggins, heretofore in Canadian Northern Ex. Co. service at Winnipeg, has been appointed Superintendent, C.N. Ex. Co., Ontario Division, in charge of lines east of Port Arthur and west of Ottawa. Office, Toronto.

The Canadian Northern Ex. Co. has inaugurated its service on the C.N.O.R. between Toronto and Trenton, and has opened offices at Malvern, Brooklin, Oshawa, Bowmanville, Orono, Port Hope, Cobourg, Grafton, Colborne, Brighton and Trenton.

The Canadian Northern Ex. Co., will re-open its offices, Oct. 2, on the C.N.O.R. between Parry Sound and Sudbury, as follows: Bayswater, Bolger, Burton, Coniston, Cranberry Lake, Deer Lake, French River, Key Jct., Mowat, North Magnetawan, Pickerel River, St. Cloud, South Magnetawan, Still River, Sudbury Jct., Waterfall and Waubamik.

The Board of Railway Commissioners has approved standard mileage tariffs of the Dominion, Canadian, Great Western, United States, American, National and Pacific Ex. Cos., and for express traffic on the Alberta Ry. and Irrigation Co.'s line, and has extended to Oct. 15, the time for the filing of the Dominion Ex. Co.'s standard mileage tariffs of maximum tolls.

The Canadian Northern Ex. Co. has put its service into operation on the Central Ontario Ry., and the Dominion and Canadian Ex. Co.'s which previously operated over the line, have retired. Offices have been opened at Anson Jct., Bancroft, Bannockburn, Birds Creek, Bloomfield, Central Ontario Jct., Coe Hill, Conseon, Eldorado, Frankford, Gilmour, Hillier, L'Amable, Marmora, Maynooth, Millbridge, Ormsby Jct., Picton and Wellington.

Rates on Oysters From New Haven, Conn.

The Board of Railway Commissioners passed the following order, 14723, Sept. 9:—Re complaint of H. Walker & Son, of Guelph, Ont., alleging discrimination in express rates on oysters originating at New Haven, Conn., destined to Guelph, as against the rates to Brantford, St. Thomas and London, Ont. It is ordered that all joint tariffs on oysters from New Haven, Conn., Providence, R.I., and other shipping points of the Adams Express Co., taking the same rates, containing higher through rates than $1.50 per 100 lbs. to Toronto, and $1.55 per 100 lbs. to Guelph, be disallowed.

That the Canadian and Dominion Express Companies on or before Nov. 1, file with the Board joint tariffs providing a through rate of $1,50 per 100 lbs. to Toronto, and $1.55 per 100 lbs. to Guelph; provided that the concurrence of the Adams Express Co. and the American Express Co. can be obtained thereto, and if such concurrence is withheld by either or both of said companies, then the Canadian and Dominion Express companies shall notify the Board thereof, giving the particulars of such refusal (if any) on or before Oct. 21, 1911.

That if any dispute arise as to the division of the said new rates, or any portion thereof, between the Dominion Express Co. and the American Express Co., then the Board will dispose of same upon application by any party interested.

◆

Locomotive Spark Arresters. — The Board of Railway Commissioners has appointed twelve fire wardens to investigate the spark arrester and other appliances with which locomotives are equipped with the view of deciding what further, if anything, must be done so as to minimize the danger of fires being started in forests and elsewhere along the tracks.

Montreal and Southern Counties Ry.—That no action can be taken on the company's application for rights on additional streets in Montreal until the resumption of negotiations between the city and the Montreal Street Ry. was the decision reached by the Montreal board of control, Aug. 30. (Sept., pg. 879.)

Temiskaming and Northern Ontario Ry.—Gross revenue for July, $149,783.11; expenditure, $117,832.40; net earnings, $31,950.71; hire of equipment, $592.17; outside operations, $300; net result, $31,058.54; percentage of revenue against operation, 78.06.

Canadian Railway Club.—At the recent meeting of the Canadian Railway Club, a paper was read by A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R., on the accounting department in connection with the mechanical and stores departments.

Alberta Ry. and Irrigation Co.—Notice is given that the company will on Jan. 1, 1912, pay off and redeem the amount of 5% debenture stock outstanding at the final closing of the books, Dec. 4.

Sir Thos. G. Shaughnessy returned to Montreal, Sept. 22, from his inspection trip over the company's lines to the Pacific Coast.

The Board of Railway Commissioners has authorized the operation of trains over the first 100 miles easterly from Prince Rupert at 30 miles an hour instead of 15 as formerly. (Sept., pg. 835.)

The s.s. Princess Alice, the latest addition to the C.P.R.'s British Columbia coast fleet, left Newcastle-on-Tyne, Eng., Sept. 22, for Vancouver, via Cape Horn in charge of Capt. A. Lindgren, who took the s.s. Princess Alice over the same route some months ago.

The Accounting Department in Connection with the Mechanical and Stores Departments.

By **A. A. Goodchild**, Auditor of Stores and Mechanical Accounts, C.P.R., Montreal.

"By their fruits ye shall know them." This truth is as applicable to the various departments of a railway today as it was to those to whom it was spoken, nearly 2,000 years ago.

Whether it be the mechanical, traffic, transportation, maintenance, or any other department of a railway, the results obtained, as set forth in the balance sheet, are the final revelation of their fruit-bearing qualities. The accounting and auditing departments may be briefly described as the unbiased exhibitor of these fruits, without any desire to make them appear more or less worthy of the proprietor's approval than their inherent worth may justify. Some may, perhaps, carry the simile further, with allusions as to the method of preparation for the purposes of exhibition, etc., but in so far as these may infer a desire to overvalue, underrate, or in any manner mislead, they may be dismissed as illusions or delusions of unsuccessful cultivators. The function of accounting and auditing is the accumulation and statement of facts or conditions by means of which the proprietors and managers may know the financial and operating features of a corporation, or of any portion of its business, and it is generally recognized that the head of the department in charge thereof must have a very complete knowledge of the workings of every other department as well as his own, owing to the fact that all of them, whether revenue producing or otherwise, will be found to come under his surveillance in some manner or another. The method by which this surveillance is exercised, however, varies considerably in the many railways of this continent, and in no case is it more noticeable than in connection with the mechanical and storekeeping departments, to which our attention is especially directed at this time. It is the practice of a number of railways to leave considerable actual accounting in the hands of these departments, a balance sheet or other summary being sent to the head office periodically, for incorporation in the accounts of the company; indeed, in so far as the storekeeping department is concerned, the majority of roads may be said to adhere to this practice. Such a condition cannot be said to conform with sound business principles; it would be quite as logical for a departmental store, for example, to permit its various departments to employ and control their own staff of accountants, as it is for a railway to permit its mechanical superintendent or storekeeper to do this. The impropriety is readily recognized in the one case, and it is difficult to justify it in the case of a railway, where the expenditures, etc., are enormously larger than the largest departmental store.

The argument usually met with in justification of such methods is that the work is very largely of a technical nature, and it is necessary to be more familiar with material and its uses than is possible for the general staff of accountants to be. Whatever element of truth there may be in this claim, can, and should be, largely, if not entirely overcome by a proper classification and itemising of material. One of the most essential features of material accounting forces itself upon our consideration right at this point; for whether the work is carried on in the stores, or in a central accounting office, such accounts should undoubtedly lend themselves to proper analytical process, in the same manner as the operating expenses do. Under any circumstances such an argument does not apply more forcibly, if as strongly, in justification of the storekeeping department doing the necessary accounting than in favor of the accounting department, for there is no branch of business life today which necessitates more exact knowledge of details, and correct principles of work than that of the accounting department. Extensive and varied training and experience is required to enable one to become proficient in such matters, and it is not possible for a storekeeper, be he ever so able, to properly meet such demands upon his time. This statement is made without the least desire to detract from the well-known ability of many forceful and energetic men holding, or who have held, such positions of responsibility in many of the railways of this continent.

These are days of specialization in professions of every class and description, and it is but natural that we should look for and expect to find it in all branches of railway work. Instances may be cited where an individual has been endowed with remarkable faculties of combining expert knowledge of a variety of professional duties, and such an individual will almost naturally be found in the high places of professional life; but to the ordinary mortal, to excel in one special line of work may be said to entail the full use of his faculties. Apart, however, from this subject of individual capacity must be considered the actual requirements of the profession—I am referring now to the railway profession—and only to a few—a very few—can the positions of president or general manager ever be more than a mere chimera.

A. A. Goodchild,
Auditor of Stores and Mechanical Accounts, C.P.R., and President, Canadian Railway Club.

Railways today require a large number of specialists and few generalizers. Their organization resembles that of an army. One general in chief, two or more generals of divisions, a limited number of colonels, an increasing number of captains, and a further increasing number of lieutenants. Each officer must be proficient and possess sufficient initiative to enable him to act as though the entire result of any movement depended entirely upon his particular unit to command. Brilliancy is not absolutely essential, but a perfect knowledge, to enable a junior lieutenant to carry out his orders, is entirely necessary.

This question of the relationship of the accounting department to the stores and mechanical departments has been the subject of discussion at various conventions, also of consideration by many of the higher officials in the railway world, evidence of which may be found in the appointment of auditors or other accounting officers, to take full charge of all stores and mechanical accounts, for we may safely assume such changes would not be made except after mature consideration. Of course, the question is one of comparatively minor importance to a number of our smaller railways, for reasons which will at once occur to you. Let us discuss for a few moments the duties, responsibilities, and qualifications of a storekeeper, and in doing this, we shall deal with only the general practice of roads whose storekeepers are the custodians of unused material. The larger question as to the duties of taking cognizance of all material until actually used may be left to some future consideration.

These duties bring him in constant touch with the entire operating department of a road. Locomotive, car, bridge and building, transportation, and other branches of the service are dependent upon him for supplying the necessary materials with which to carry on the work, whether it be construction of a thousand box cars, or the putting on of a patch to the side of a car, the building of cars or monster locomotives, or the supplying of a tender truck box cover wherever we find material being used, there also we find the storekeeper an interested party, and this interest entails upon him the need of cultivating a very close acquaintance with the heads and the requirements of various departments. He is above all also an operating official, and should be able at all times to supply the material needs of the entire road. These needs are varied. No line of business can be excluded from its voracious maw. Hardware, glass, oils, paints, drugs, acids, the precious metals, lumber from the cheapest to the most expensive, minerals, coals, coke, road and shop tools of every description, office supplies, flour, cement, silks, furniture, carpets, and so on, ad lib., all serve to appease, but never satisfy the hunger of our railway systems. What kind of man is required to cater to all these varied needs, and to cater intelligently, in order that he may furnish the maximum amount of satisfaction at a minimum expense to his employers, be ever ready to fill the order and never overload himself with material which the æsthetic taste of a superintendent of motive power, or a master car builder refuses to attempt to digest? Surely a man to fulfill such requirements must be a paragon, surely such duties in themselves entail a large enough field for the most industrious cultivation, and the requisitioning for, receiving, storing, and disbursement of such material, calls for the very highest ability taxed to its utmost capacity.

Having those requirements in mind, let us glance briefly at the various steps one must tread before he can reach the topmost rung of the storekeeping ladder. Let us enter one of our large stores and as we pass along we find our man trucking castings or unpacking boxes of various materials, may be, sweeping away refuse. Later on he is found loading material into cars or getting articles down from the shelves, assisting a storeman. He advances steadily, and is, perhaps given charge of certain divisions or sections of the store house, and in the fulness of time is called upon to assume charge over the entire section or store.

The completion of this paper, read before a recent meeting of the Canadian Railway Club, Montreal, will be given in our next issue.

The Toronto Railway Co's Lansdowne Avenue Car Shed.

The rapid growth of Toronto, demanding a constantly increasing number of street cars, made necessary the construction of a new shed to accommodate the growing equipment. The pinch being most keenly felt among the lines terminating in the north-western section of the city, that locality was selected for the new shed, plans for which were begun in 1908, the location being settled upon for Lansdowne Ave., at the corner of Paton Rd., a short distance above Bloor St. This site is midway between the termini of the Bloor and Carlton St. lines, each of which operates a heavy service. All the Bloor and Bathurst cars are accommodated here, also the Spadina, Belt Line, and half the Carlton St. cars. Previously, these cars were spread around among the nearest sheds, the Bathurst at the Roncesvalles shed; Belt Line at Yorkville shed, Carlton at Dundas, and the Bloor at Dundas. The building was completed and moved into in May of this year, under charge of A. J. Edmunds, Divisional Superintendent, who was well qualified for his new duties, having served in a similar capacity at the King St. and other sheds previously.

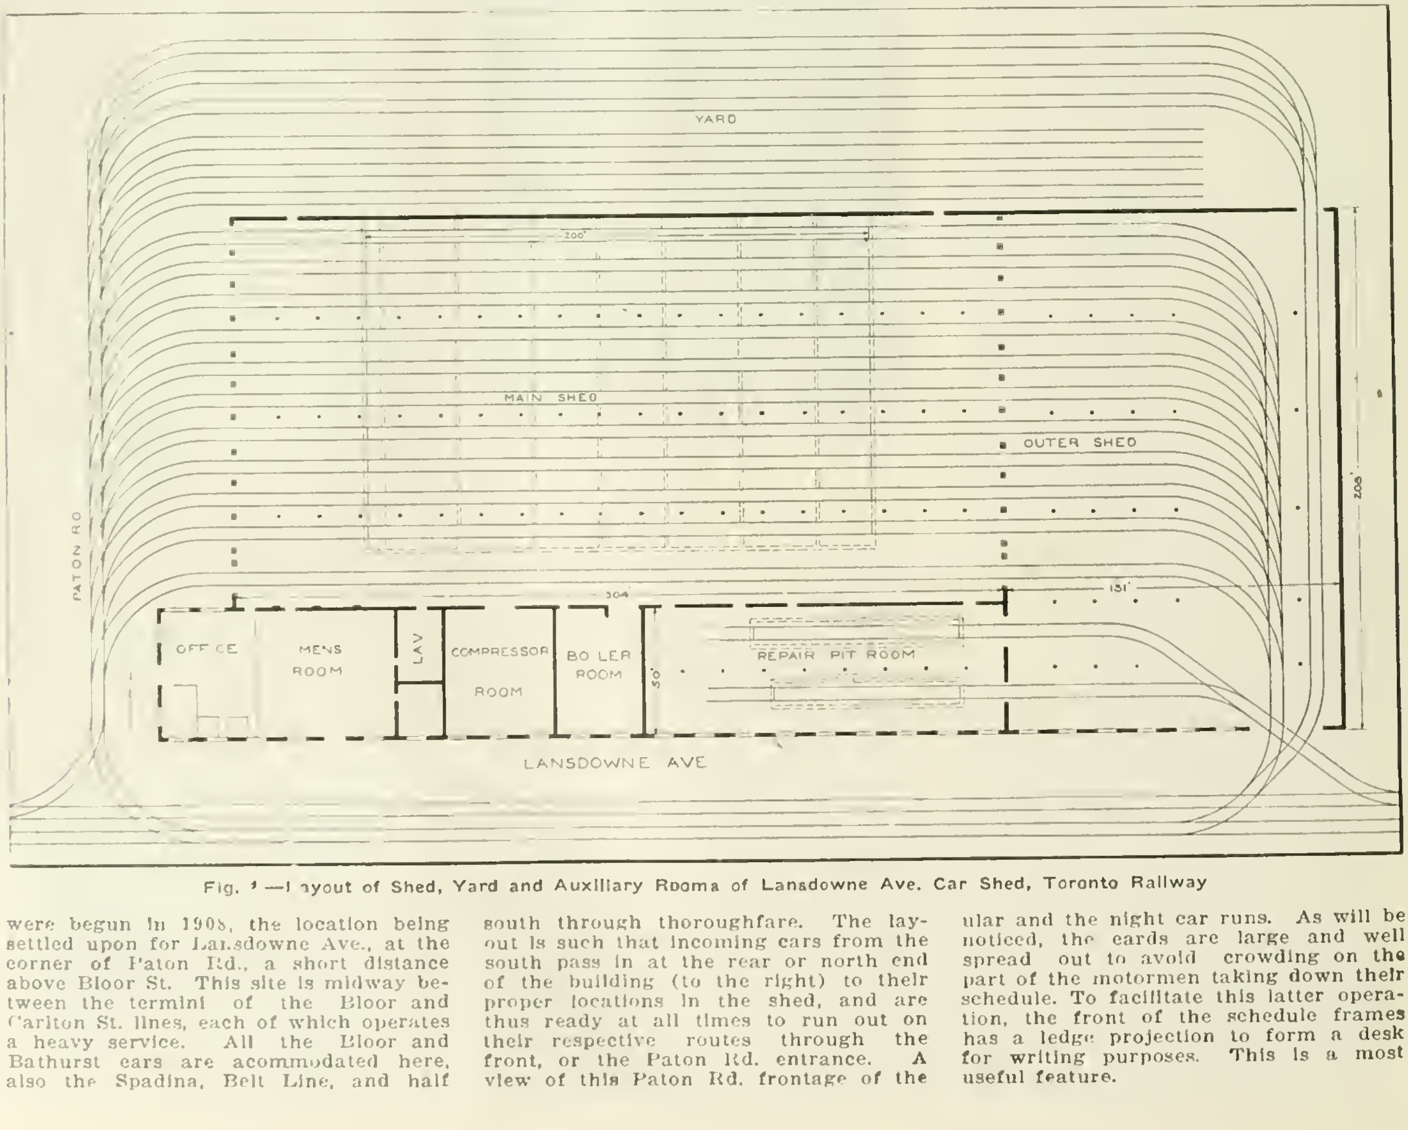

Fig. 1.—Layout of Shed, Yard and Auxiliary Rooms of Lansdowne Ave. Car Shed, Toronto Railway

As mentioned, the plans for the new building were prepared in 1908, following a consideration among the company's superintendents, etc. The idea was to build the best possible shed for the purpose, it being therefore necessary that the ideas of all might be gleaned, the composite idea taking shape in the final plans evolved. It is acknowledged by all, however, that Jno. McCulloch, Division Superintendent, is entitled to credit for many of the new ideas. The plans were prepared by the Imperial Construction Co., which built the shed and offices, the company doing the interior work direct.

The general plan and layout of the shed and yard, is comprehensively shown in fig. 1. It is of the slow-burning mill-building design throughout. As will be noticed, the shed lies along Lansdowne Ave., a principal north and south through thoroughfare. The layout is such that incoming cars from the south pass in at the rear or north end of the building (to the right) to their proper locations in the shed, and are thus ready at all times to run out on their respective routes through the front, or the Paton Rd. entrance. A view of this Paton Rd. frontage of the shed is given in fig. 2. This will present a neater frontage when paved, as it will be in the near future.

Office and Men's Room.

Along the Lansdowne Ave. side of the building are located the various auxiliary rooms of the shed. The more southerly of these—a large room 50 by 92 ft.,—has a cross partition of glass, dividing the office from the men's room. The small rooms indicated in the office are used for divisional superintendent's office, lavatory for office staff and vault. Behind the glass partition on the office side are located the ticket counters. Fare boxes and transfers for each conductor are arranged together in pigeonholed racks directly behind the clerks, convenient for passing out through the wicket. Two such wickets and racks are in use.

To the north of the glass partition is the men's room, a corner of which is shown in fig. 3. It is a spacious room, arranged with the creature comforts of the men in mind. The two rooms to the north contain lavatory facilities of the most modern type. One feature of particular interest in the men's room is the manner of displaying the routing cards as indicated in fig. 3, where the weekday, Saturday and holiday running schedules are posted for the four regular and the night car runs. As will be noticed, the cards are large and well spread out to avoid crowding on the part of the motormen taking down their schedule. To facilitate this latter operation, the front of the schedule frames has a ledge projection to form a desk for writing purposes. This is a most useful feature.

COMPRESSOR ROOM.

The compressor room to the north of the rooms just described, is at present equipped with but one compressor unit, a Reavell compressor direct-connected to a motor, as shown in fig. 4 and operating at a speed of 250 r.p.m., with an air displacement of 186 cu. ft. per minute. A similar air unit is at present being installed.

The air storage consists of four long steel drums of relatively small diameter, stacked in a pile along the south wall. The three upper ones carry the high pressure, or 315 lbs. per sq. in., and have a total capacity of 332 cu. ft., while the lower one with a capacity of 80 cu. ft., carries a 40 lb. pressure.

Air is supplied to the cars from a connection between each of the front doors, two on the street outside the barn, and two at the corner of Bloor St. and Lansdowne Ave., a couple of blocks away, where the Bloor car supply is replenished. The air is also used for car cleaning.

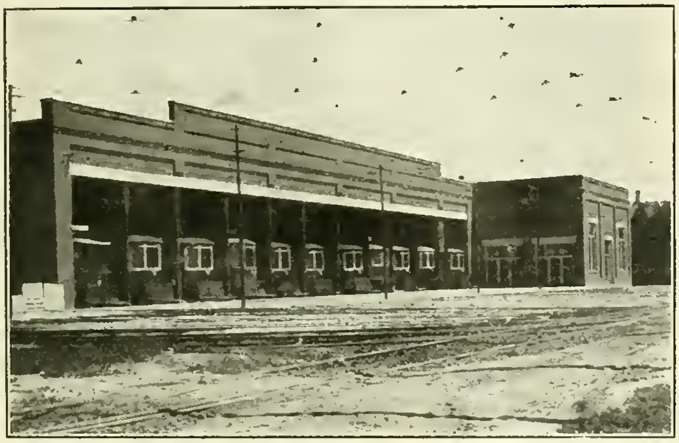

Fig. 2.—Paton Road Frontage on the Lansdowne Ave. Car Shed.

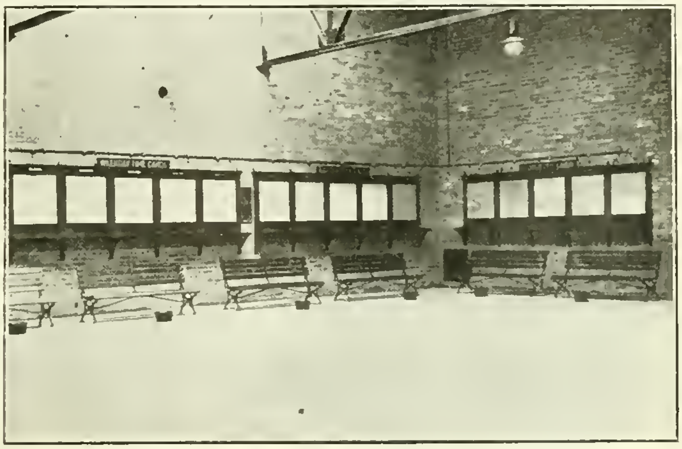

Fig. 3.—Men's Room, with Desk-front Routing Cards.

BOILER ROOM.

The boiler room, located directly north of the compressor room, in a fireproof division with incombustible ceilings and fitted with firehose, contains the complete heating system of the plant. The total volume of air within the main part of the car shed is 2,500,000 cu. ft., and it was the aim of the designers to maintain a temperature of 65 degrees F., with an outside temperature of zero. This point appears to have been attained to the satisfaction of those in charge.

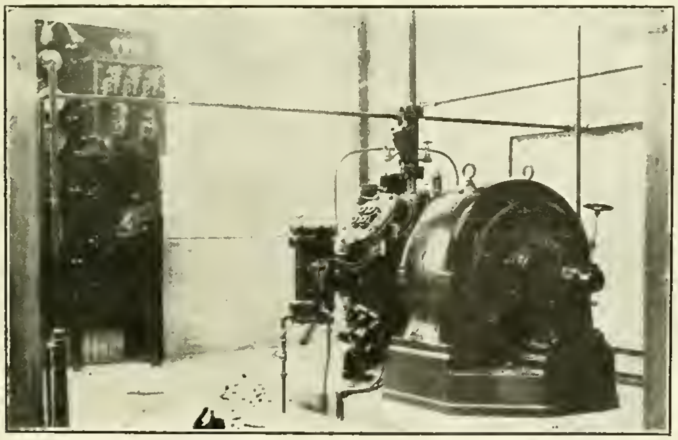

Fig. 4.—Direct-connected Compressor with Switchboard.

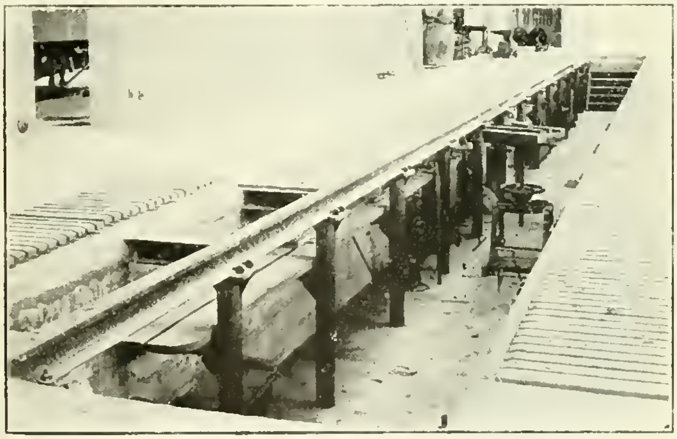

Fig. 5.—A Repair Pit showing Workmen's Platforms.

The heat generators consist of two 72 in. by 18 ft. return tubular boilers, each containing 72-4 in. tubes. A short steel stack is all that is required, forced draft being used. A 6 by 4 by 7 in. brass-fitted hot-water pump with receiver tank complete on one base, returns all the water of condensation to the boiler. It is also arranged with the necessary by-passes to pump water directly to the boiler from the city mains when necessary. Special care has been taken to eliminate all traces of oil from the condensed water by means of unusually large area oil separators.

The heating of the shed is effected by what is known as the plenum or blast system through tunnels constructed under the floor to all parts of the building as will be described later, in the description of the main car shed. The main equipment consists of two vertical pipe heaters, located over the boiler, each containing 10,000 ft. of 1 in. pipe, tested after installation to 100 lbs. cold water pressure. Two 120 in. bottom horizontal multivane exhaust fans with a capacity of 78,000 cu. ft. of free air at 200 r.p.m., direct-connected to two 8 by 7 in. McEwan fly-wheel governor engines, draw the air up a shaft from the pit in the main shed, through the heating coils, and discharge it through the ducts mentioned.

The induced draft for the boilers is obtained from a 100-in multivane top discharge exhaust fan with a capacity of 32,000 cu. ft. at 200 r.p.m., direct-connected to a 8 by 7 in. McEwan engine running under control of a reducing valve on the main steam header. It is so arranged that when the steam in the main drops below a specifid pressure, the engine automatically speeds up until the increased draft causes the pressure to rise to its normal position again, when the draft fan again drops to its normal speed. All this equipment is located over the boilers. Bowser oil tanks are used for storing the engine and cylinder oils.

REPAIR PIT ROOM.

The repair shop, 140 by 50 ft., contains two repair pits, as shown in figs. 5 and 6. These pits are of a special construction, as fig. 5, a view of the westerly pit indicates. The rails are carried on the top of cast-iron bracketed posts, so that the walls may be set back from the rails, leaving a clear space. On the brackets which project outwardly from the centre of the track, a platform is placed about 18 ins., below rail top. This facilitates repair work for the mechanic. When not in use, the open space above the platform is protected by a wooden grilling, made in sections for easy removal. The construction of the platform is more clearly shown in the pit illustration, fig. 6. A convenient pit truck is also illustrated in fig. 5.

The pit nearer the Lansdowne Ave. side, contains a flat-wheel grinding attachment, as indicated in fig. 9. This is a standard attachment and need not be described. The driving motor is set back into a recess in the front wall for the sake of convenience. The jackshaft for driving the grinding wheels, is so arranged as to be easily removed when not in use, leaving a clear, unhampered pit. The removable sections of rail immediately over the grinding wheels, are so disposed as to be easily taken out and replaced.

MAIN SHED.

The main shed is a structure 304 by 154 ft., and containing 11 tracks, 10 of which are over the large pit covering the greater portion of the area of the shed. This pit is 200 by 133 ft. and forms an immense room under the shed floor as indicated in fig. 7, which is a photograph taken under the shed floor.

The Corbet Foundry & Machine Co., Limited

OWEN SOUND - - - - ONTARIO

This pit is 4 ft. 11 ins. deep at the middle and 4 ft. 8 ins. at the ends, providing a small drainage slope.

The roof structure is supported at frequent intervals, as shown in fig. 1, by wooden posts, the main features of which are indicated in fig. 8. The post caps are designed and constructed to give an equivalent wood bearing value for end thrust and side compression for the post and roof members respectively. The design of foundation cap is particularly good. The cap is cupped both top and bottom to receive post and foundation. The foundation abutment being built of concrete, tends to chip at the top, but by this construction, it is constrained from so doing by the retaining cap. Cupping both faces of the cap also gives the post a permanent location.

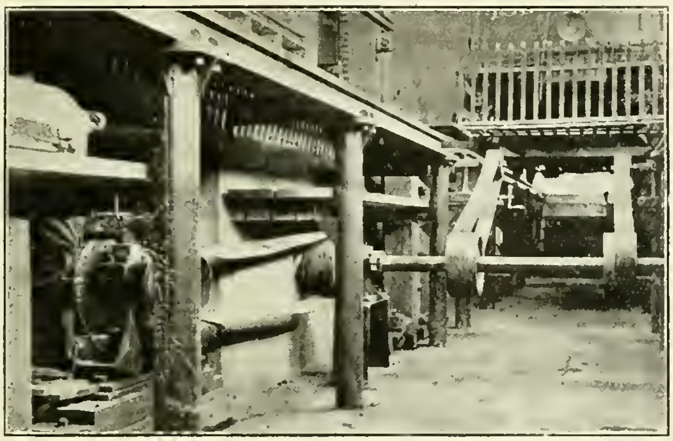

Fig. 6.—Repair Pit fitted with Flat-wheel Grinder.

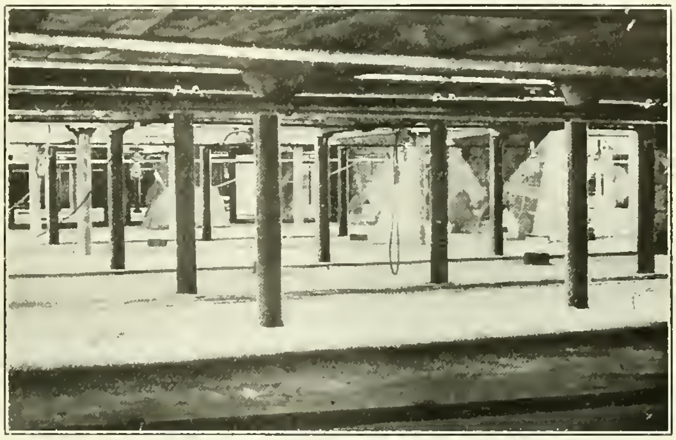

Fig. 7.—Under Shed Floor, showing Pit Construction.

Among the special features of design is that of the door posts, a section of one of which is given in fig. 9. The curved section faces outward to receive any impact from striking cars. The design is such that the post is so reinforced that a collapse under a side impact is practically impossible. Fig 8 also shows how the end posts next to the side walls are retained in position. The end posts are made in half-sections, and are held up against the brick wall of the building by the dotted straps shown, which is built into the wall structure.

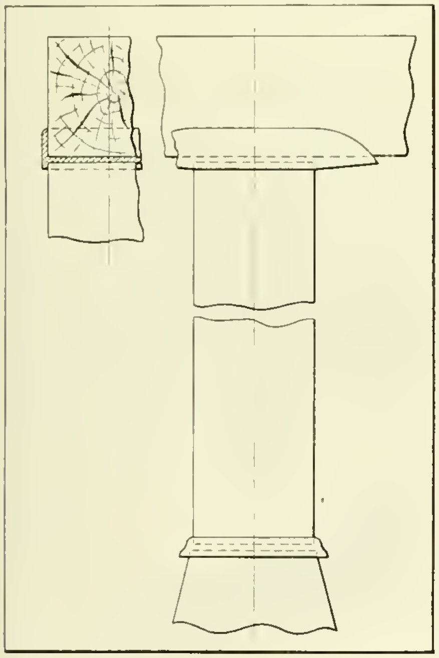

Fig. 8.—Roof Post, showing Cap and Base Construction.

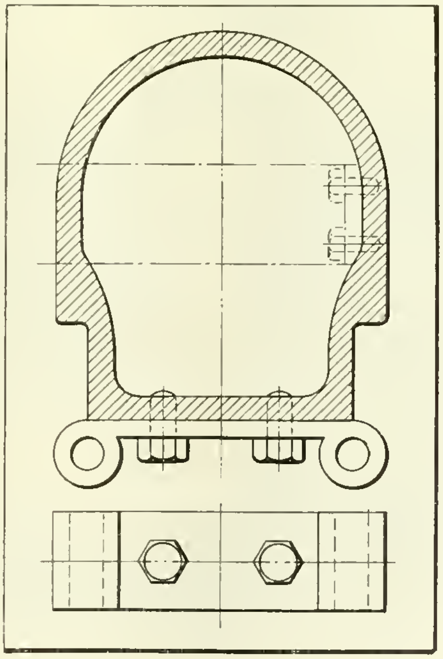

Fig. 9—Door Post of Reinforced Construction

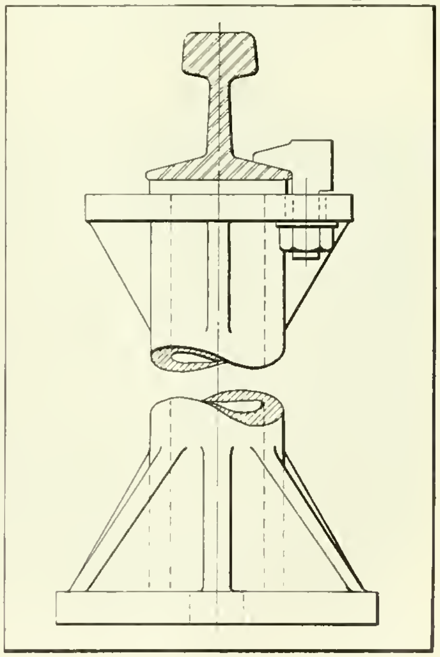

Fig. 10.—Underfloor Post Contruction in Pit.

The pit construction is decidedly unique, as an inspection of figs. 1 and 7 will show. In the former illustration, the pit is shown dotted under the floor of the main car shed. The whole underfloor space is open except for concrete arches to be seen in the background in fig. 7, and which are located every 30 ft. through the length of the pit. These arches are in width equal to the distance between the outside rails of adjoining tracks, so that the space between the rails through the full length of the pit is open. Between arches are four cast iron posts of a construction indicated in fig. 10. This illustration shows the method adopted for bolting down the rail, a special type of bolt being used.

Near the northerly end of the pit, the devil-strip between all the tracks over the pit is depressed, as indicated in fig. 11, in order to facilitate inspection and light repairs on the cars in the barns. This depression is of just sufficient length to accommodate the newer type of cars being built by the company.

Figs. 7 and 11 show the provision for lighting in the pit. Between each arch, under every track, three protected hand lamps, with cable of convenient length, are provided.

The devil strip over the pit is constructed throughout of reinforced concrete. Adjoining rails are tied together, making ties between the individual rails of a track unnecessary.

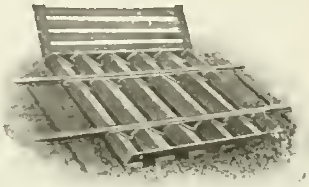
Various minor features for facilitating work have been introduced at different points in the shed. For example, fig 12, illustrates the idea devised for facilitating the carman's work of placing the route signs on the car. An elevated stand secured to the roof posts is used. This illustration at the same time shows the roof construction of the building.

Another feature worthy of notice is the car starter's sign racks, shown in fig. 3. Here all the car numbers, routing signs and destination cards are kept in a convenient location near the office door. To the right of the point in the illustration, on the office wall, the car starter has his routing board, on which the conductor's number, car and track on which car is located, are previously scheduled, so that no confusion exists when all the cars start out as they do, in quick succession.

The heating system employs concrete passages moulded to shape, with 6 in. walls. From under the boiler room floor a duct 6 ft. 5 ins. by 4 ft. leads right across to the underside of the pit floor, tapering down to an opening 5 ft. 8 ins. by 4 ft., where it opens into two

Kalamazoo "PERFECT" Steel Surface Cattle Guard

ONLY GUARD THAT **ALWAYS** TURNS AWAY ALL STOCK WITHOUT INJURY



Furnished ready-to-place, saving expense of hardwood ties, much excavating and much assembling. Offers no catching points for dragging chains—readily removable during track overhauling—cannot rattle to pieces—proof against corrosion—self-cleansing of snow and rubbish. In short, this is **the perfect guard.**

THE OHIO BRASS CO., Mansfield, Ohio

parallel passages, the two forming the same size passage. These two parallel passages run directly across the building tapering to small size at the far side. Under each devil strip under the pit floor, lengthwise passages branch out from the two main ducts. Each of these lengthwise passages has two openings into the pit between each concrete arch. These openings are through special cast iron grids of a form shown on the pit floor in figs 7 and 11. The heat rising from these grids, strikes the underside of the devil-strip and is deflected each way up into the running-gear of the car where the heat is most required. A perfect system of heating is thus obtained, the means of heating being at the same time so located as not to inconvenience the workmen. The heating is only accomplished in the pit. The heating of office and rooms is independent.

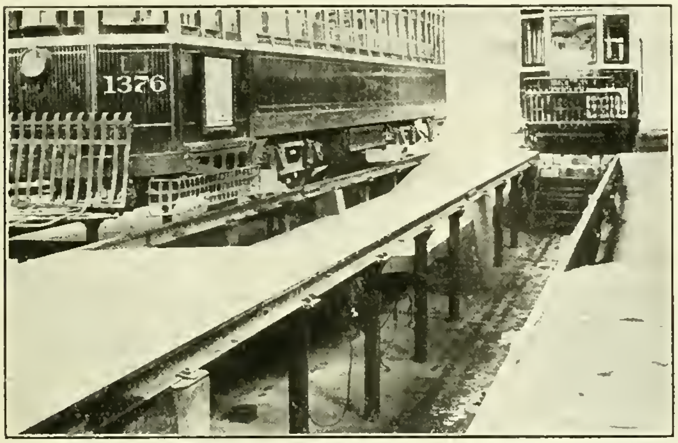

Fig. 11.—Depressed Devil-strip for Side Inspection of Trucks.

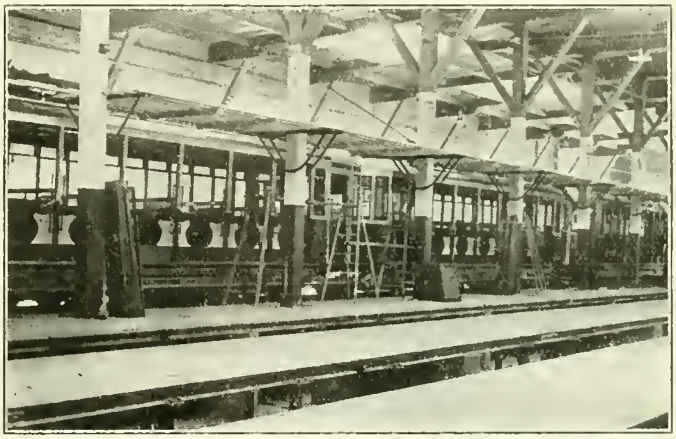

Fig. 12.—Stands for Placing Signs on Cars.

OUTER SHED.

The original intention of the designers was to leave open the 131 ft. to the north of the main shed. It was finally decided, however, that it would be preferable to cover, and thereby increase the capacity of the barn, a course that was followed, the framework being steel throughout as indicated by fig 14. Comparing figs. 12 and 14, it will be observed that the construction of the two parts is quite different.

An interesting operating feature is also shown in fig. 14, which is a view from the rear entrance on Lansdowne Ave. Each track is numbered over the entrance to the main shed. The cars as they enter from the rear are scheduled on to a certain track. To facilitate locating the switch belonging to the proper track—a confusing detail where there are so many switches—each of the switches corresponding to the track, is numbered at the turnout, as shown in the illustration. Much time and confusion is thereby avoided.

CAPACITY.

The main shed has a capacity of 100 large cars or about 150 small cars on its 11 tracks. Counting the 6 tracks in the yard to the west, and the trackage in the outer shed, about 200 cars of all sizes can be accommodated, which is the number at present reporting there.

The Calgary Municipal St. Ry. added four cars to its rolling stock during Sept., making 30 in all. Out of the money to be raised under a bylaw to be shortly voted upon, it has been arranged to purchase 20 more cars, some 41 and others 46 ft. long.

By F. G. Simmons.

(CONTINUED FROM SEPTEMBER ISSUE).

The numerous references and quotations cited show conclusively that the use of tee rail in the permanent paving of city streets is not an experiment, although its use has been given many setbacks through the selection of improper material and improper methods of installing the paving where tee rail tracks are laid. Therefore, in concluding this paper the author wishes to give his ideas as to the proper construction of tracks in city streets, the proper paving to be laid in connection with these tracks and the proper method of laying such paving.

To begin with tee rail of proper section should be selected, this being admittedly the most nearly perfect mechanical type.

The track should be so laid that while not absolutely rigid it yet permits only a very minor deflection, scarcely more than vibration.

The paving should not be of the sheet variety for the most obvious reasons (previously quoted), and it should be laid with extreme care as to every detail.

The author's specification for an ideal construction follow:

Sub-grade in trench prepared by thorough rolling and checking, an 8-ton roller to be employed.

Installation of a tile in the centre between double tracks about 8 inches below base of tie, same to be connected with sewers at about 100-foot intervals.

Wood ties to be chemically treated with some adequate preservative; to have not less than a 6-in. face and to be laid with not to exceed 16 in. open space between ties.

Rails to be of the 7-in. Shanghai tee rail type, not under 90 lbs. per yard in weight, 60 to 66-ft. lengths and preferably of open hearth steel.

Joints to be cast welded in a thorough and workmanlike manner.

Track to be ballasted on at least 6 ins. of Portland cement concrete, mixture no leaner than 1-2½-5 and to be well tamped to place. Concrete to be continued up to the proper level for the installation of the paving.

Paving to be as follows:

On streets where commercial vehicular traffic is very heavy, granite stone paving.

Where the traffic is still commercial but not so heavy, either sandstone or vitrified brick.

On residence streets vitrified brick or creosoted block. As previously stated there is sufficient field for sheet asphalt on boulevards and other streets, either residence or retail business, where street railway tracks do not exist.

The sand cushion on which the paving is placed should be in no place less than 1 in. in thickness and should be well compacted before the paving is set. The blocks or bricks at the gauge line of the rail should be depressed and projected under the head of the rail crowning up within 17 ins. to a level with the

A HISTORY OF THE PAY-AS-YOU-ENTER CAR
AND ITS LESSON

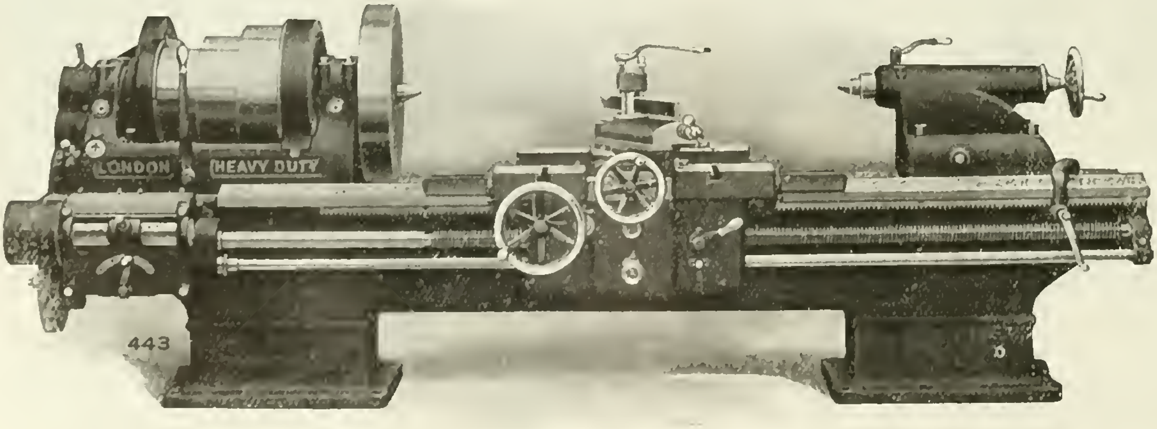
The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co., Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL



These

LONDON MACHINE TOOL CO., LIMITED
HAMILTON, - - CANADA

top of the rail and then extending practically level until within 17 ins. of the other gauge line. The outside stem of the rail should be properly filled with a creosoted strip or cement blocks, and the entire pavement filled with a one-to-one cement grout very carefully applied and allowed to thoroughly set before any traffic is permitted.

The author believes that while some objection may be found to various of the details in this construction that it embodies a method which most nearly equalizes the requirements of the city and the company and produces a result giving the maximum of wear with the minimum of obstruction.

The author will be pleased to go into this matter further with anyone who is actively interested and will endeavor to elucidate to the best of his ability any of the details that have not been thoroughly explained.

Electric Railway Notes.

The Ottawa Electric Ry. is the fifth largest taxpayer in Ottawa.

The ratepayers of Kildonan, Man., will vote Oct. 7, on a bylaw permitting the operating of street cars in the municipality.

The Regina, Sask., Municipal Ry., has in operation on its lines, four single truck and two double truck pay-as-you-enter cars.

F. H. Deacon, Toronto, has been elected a director of the Duluth-Superior Traction Co., Duluth, Minn., in succession to R. Forget, Montreal, resigned.

The operation of the Regina, Sask., Municipal Ry. is in charge of H. Doughty, as Superintendent, with E. W. Bull as Superintendent of the power plant.

The Edmonton Radial Ry. has received two 30½ ft. pay-as-you-enter car bodies, 43½ft. long over all, mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa, Ont.

The Montreal City Council has notified the Incline Ry. that unless it is prepared to enter into a contract with the city, the line must be removed from Mount Royal Park.

The Board of Railway Commissioners has extended to Nov. 1 the time for equipping the Hull Electric Ry. cars with power brakes as required by the Board's general order.

The Pay-as-you-Enter Car Corporation is reported to have sold its European patents, in connection with which the International Pay-as-you-Enter Car Co. is to be organized in Great Britain.

The Quebec Public Utilities Commission, in the application of the Shawinigan Water & Power Co., and with the approval of the Shawinigan Falls Terminal Ry. Co., has authorized a crossing of the railway and a diversion of a roadway.

The Niagara, St. Catharines and Toronto Ry. had to cease operations for several hours, Aug. 27. The cable carrying power, which is laid across the Welland canal at Thorold, Ont., was broken by an anchor thrown out to stop a vessel which had broken away from her moorings.

The St. Thomas, Ont., Electric Ry. and the London and Lake Erie Ry. and Transportation Co. have some differences over right of way for their cars. The city owns the line, and has leased a right of way for the L. and L.E. Ry. and T. Co.'s cars through the city. The difficulty arises when the city cars and the through cars between London and Port Stanley arrive at a crossing point together.

A. C. Lytle, formerly General Superintendent and Freight and Passenger Agent, Orford Mountain Ry., and since the absorption of that railway by the C.P.R., Assistant Trainmaster, District 1, Eastern Division, C.P.R., at Farnham, Que., has been appointed Assistant Superintendent of Construction, Montreal St. Ry.

G. H. Bentson, Secretary-Treasurer London St. Ry. Co., died in the Victoria Hospital, London, Ont., Sept. 9, of acute liver trouble, after having only been in the hospital two days.. He was born at Toledo, Ohio, Aug. 26, 1879, was in the service of the Toledo Traction Co., and afterwards with the Toledo Railway and Light Co. as cashier. In 1895 he was appointed Secretary-Treasurer, London St. Ry. Co.

Wilford Phillips, whose portrait appears on this page, was born in Prince Edward County, Ont., Oct. 8, 1858, and commenced electric railway work on the Metropolitan Ry., North Toronto, now the Metropolitan Division, Toronto and York Radial Ry., in March, 1890, in which service he remained until July, 1802, since when he was, to March, 1893, Engineer and Superintendent, North Toronto Water Works and Electric Light; March, 1893, to 1896, Mechanical and Electrical Engineer, Niagara Falls Park and River Ry.; 1896 to June, 1900, Manager same company. In August, 1900, he was appointed Manager, Winnipeg Electric Ry., which position he now holds.

Wilford Phillips,
Manager, Winnipeg Electric Railway,

A Winnipeg dispatch, Sept. 24, says: "Following a conference between Sir Wm. Mackenzie and the special committee of the city council for the purpose of discussing certain details demanded by the solicitors before drafting the agreement, the arranging of a basis of audit and ultimate purchase of the Winnipeg Electric Railway has been agreed upon. General satisfaction is expressed by both parties interested. The proposed purchase involves the payment of some $24,000,000 for all the Mackenzie & Mann interests in Winnipeg pertaining to the electric railway, light, power and gas plants. The agreement cannot become law, until the ratepayers vote favorably.

The B.C. Electric Ry. put in effect, Sept. 1, a general reduction of passenger rates over the interurban lines connecting Vancouver and New Westminster, except as to the Burnaby interurban line, which is operated under a Dominion railway charter, and the revised rate on which will go into effect as soon as the permission of the Board of Railway Commissioners can be obtained. The new rate from Vancouver to New Westminster is 25c. single fare and 50c. round trip. Proportionate reductions are made covering all points on the lines where interurban rates prevail. The company has also recently put in force a reduced freight tariff covering its South Fraser Valley extension, which covers the 76 mile stretch between Vancouver and Chilliwack, and connects the rich agricultural district lying on the south side of the Fraser River with the B.C. coast cities.

Electric Railway Finance Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for July, $409,330; working expenses, $258,265; net operating earnings, $151,065 renewal funds, $38,012; net earnings, $113,053; approximate income from investments, $25,000; net income, $133,053, against $283,535 gross earnings; $173,850 working expenses; $109,685 net operating earnings; $23,820 renewal funds; $85,865 net earnings; $22,000 approximate income from investments; $107,865 net income for July 1910.

The Cape Breton Electric Co. has been authorized by the Nova Scotia Legislature to guarantee the payment of the principal and interest on bonds or other securities of any corporation, the majority of the capital stock of which is held or controlled by the company.

Calgary Municipal Street Ry.—Passenger earnings for July, $38,301.90; miscellaneous earnings, $845.85, making altogether, $39,147.75 against $23,474.15 for July, 1910. Operating expenses, $15,187.22, against $9,443.56 in July, 1910. After providing $5,263.33 for interest and sinking fund charges, and setting aside 5% of the gross revenue for sinking fund there remains a net profit for the month of $16,739.82 against $10,141 for July, 1910.

Edmonton Radial Ry.—Gross rereipts for Aug., $26,848.86, against $17,062 for Aug., 1910. Passengers carried, 643,005, against 389,631, in Aug. 1910.

Halifax Electric Tramway.—Receipts for Aug., $25,594.16, and for three weeks ended Sept. 21, $18,690.11, against $22,781,86 and $14,365.54 for same periods, 1910.

Montreal St. Ry.—Passenger earnings for Aug. $426,252.67; miscellaneous earnings, $16,855.31; total earnings, $443,107.98; operating expenses, $232,529.56; net earnings, $210,578.42; city percentage on earnings, $52,562.98; interest on bonds and loans, $15,463.55; rental leased lines, $607.10; taxes, $5,000; total charges $73,633.63; surplus, 136,944.79; expenses per cent. of earnings, 52.48, against $382,817.76 passenger earnings; $16,010.81 miscellaneous earnings; $398,828.57 total earnings; $216,314.19 operating expenses; $182,514.38 net earnings; $46,707.72 city percentage on earnings; $14,482.71 interest on bonds and loans; $552.90 rental leased lines; $4,000 taxes; $65,743.33 total charges; $116,771.05 surplus; 54.24 expenses per cent. of earnings, for Aug. 1910. Aggregate total earnings for 11 months ended Aug. 31, $4,319,819.20; operating expenses $2,478,724.76; net earnings $1,841,094.44; total charges $549,606.62; surplus, $1,291,487.82; expenses per cent. of earnings, 57.38, against $3,889,475.05 aggregate total earnings; $2,237,830.24 operating expenses, $1,651644.81 net earnings;

EDISON BSCO

PRIMARY BATTERY

Reliability at any cost is the first requisite of a railway signal battery. Economy, as far as reliability will permit, is the second requisite.

The Edison BSCO is the *most* reliable, *as well as the most* economical railway signal battery made. It's slightly higher first cost is far more than counterbalanced by its low operating cost and the reduction in attending labor cost.

Edison BSCO Renewals fit all standard caustic soda primary battery jars, and besides increasing the efficiency and dependability of other cells in service, they will give higher effiective capacity than any other type of the same rated capacity.

Write for prices stating the type of cells now in use.

OTTAWA - - CANADA

$485,289.82 total charges; $1,166,354.99 surplus; 57.54 expenses per cent. of earnings for same period 1909-10.

A meeting of the shareholders has been called for Oct. 5, to ratify the acquisition of the Montreal Park and Island Ry. and Montreal Terminal Ry., and the contract transferring these properties and the property of the M.S.R. to the Montreal Tramways Co., the title of the new company. In connection with this meetings of the shareholders of the Montreal Park and Island Ry., and Montreal Street Ry. were called for Sept. 28, when the Tramways Co. released each of the two companies of their indebtedness, covenanted to pay all debts and liabilities, and to indemnify each of the companies against all loss or damage arising in respect thereof. The Board of Railway Commissioners is being asked to ratify the amalgamation of the several companies.

Quebec Ry., Light, Heat and Power Co.—The annual meeting, which was to have been held Sept. 12, was postponed on account of the general election, in which the President, R. Forget, was engaged.

The Regina Municipal Ry. started regular operation, July 29. The receipts for August, including July 29 and 30, were $7,718.50; operating expenses, $3,328.48; net earnings, $4,390.02. Car mileage, 12,815 miles; gross earnings per car mile, 60.23 cents; operating expenses, 25.97 cents; net earnings, 34.26 cents; passengers carried, 151,104.

The Sherbrooke Ry. and Power Co.'s capital is $1,500,000 stock and $1,500,000 of bonds, and there have been issued $1,000,000 of each. The last $1,500,000 of each issued being to provide for the purchase of the Stanstead Electric Light Co., and the Eastern Tonwships Light and Power Co.

The gross earnings for the three months ended July 31, were $12,960.46 against $9,578.05 for the corresponding months in 1910. Only the lines taken over from the old company were being operated during that period, the extensions not being operated over until the end of July.

Toronto Ry.—Gross earnings for Aug. $421,973.75, expenses $210,962.33, net earnings $210,991.42; against $380,934 gross earnings, $195,883.22 expenses, $185,050.78 net earnings for Aug., 1910. Aggregate gross earning for eight months ended Aug. 31 $3,052,968.07, expenses $1,551,378.12, net earnings $1,501,589.95; against $2,767,357.94 aggregate gross earnings, $1,433,380.71 expenses, $1,333,977.23 net earnings for same period 1910.

For the 12 months ended Aug. 31, the company paid the city $751,870.38, made up of $668,730.38 percentage on earnings, and $83,140 mileage rent. The amount paid to the city for the previous year was $661,399.58. During the past year 101,788,323 tickets were sold realizing $3,873,710, and $753,221.45 was taken in cash fares. The total receipts were $4,643,651.94, an increase of $451,636.65 over the previous year. The directors have declared a quarterly dividend of 2%.

Winnipeg Electric Ry.—Gross earnings for July, $322,751; expenses $152,108; net earnings, $170,643, against $252,014 gross earnings; $119,754 working expenses; $132,260 net earnings for for seven months ended July 31, $2,204,- July 1910. Aggregate gross earnings 357; net earnings $1,096,193, against $1,784,210 aggregate gross earnings and $887,140 net earnings for same period 1910.

Mayor Evans is reported as stating Sept. 14, that while some delay has been experienced in connection with the negotiations for the purchase of the company's lines by the city, it was hoped that with an independent audit sufficient information will have been compiled, so that the purchase by the city may be carried out to the advantage of all concerned.

◆

Electric Railway Projects, Contruction, Betterments, Etc.

Alberta Electric Ry.—Press reports state that application is to be made to the Dominion Parliament to change the name of the company to the Alberta Interurban Ry. The report further states most arrangements are being made for the building of about 30 miles of line from Calgary eastward, in the direction of Bassano, and that the route will be on the main highways for the greater part of the distance, and adds that individual unit cars, fitted with internal combustion engines will be used. May, pg. 453.)

Berlin and Waterloo St. Ry.—It is reported that an addition will be built to the car house, in which a hydraulic motor lift will be installed. (Jan., 1910, pg. 57.)

Brandon, Man.—Considerable work has been done in the way of building an electric railway on Ninth St., by the city council, and the work is being pushed forward rapidly. (Aug., pg. 783.)

British Columbia Electric Ry.—A start was made, Sept. 7, upon the building of a second track on the Vancouver and Lulu Island Ry., and tenders are being asked for the grading between King Edward Ave. and Eburne, four miles. Heavy steel is to be laid on the new track, and the steel rails on the present track are to be replaced with rails of corresponding weight. The Burnaby municipal council decided, Sept. 11, to consider the question of taking legal proceedings with the view of having the validity of the company's franchise tested.

A contract has been let to C. C. Moore & Co., Seattle, for the extension of the auxiliary steam power plant at Main and Branard Streets, at an approximate cost of $250,000. The equipment covered includes four Babcock and Wilcox boilers, each of 500 h.p., which will operate a 2,000 k.w. Allis-Chalmers turbo-generator. The contract also covers condensers, piping, etc., necessary for the operation of the new unit. A special feature of the work is the erection of a reinforced concrete stack 256 ft. high, similar in detail to the stack of the same height which was built for the company's steam auxiliary plant a few years ago. The additional equipment will increase the available power from the steam auxiliary plant to 12,000 horse power.

The company has also called for tenders for a large car barn at Queen's Ave. and 12th St., New Westminster, nearly opposite the company's shops. The plans call for alternate bids on reinforced concrete or wood frame with galvanized iron covering. The barn is to be 240 by 104 ft. and will consist of two units each having four tracks. Provision is made for pit tracks, workshops, etc., in connection with the project, the plans covering the demands for an up-to-date car barn in every particular. The work will be rushed to completion as soon as the contract is awarded.

The new interurban station and office building at New Westminster was opened Sept. 5. The building is two stories high, of brick construction, the lower floor being used for passenger and freight traffic and the upper for the company's offices. From the station are operated the Westminster city lines, interurban lines connecting New Westminster with Vancouver over the three routes of the company between the cities, and Fraser Valley branch running through the South Fraser Valley to Chilliwack

A contract for grading 18 miles of a new interurban line on Vancouver Island running north from Victoria, has been awarded to Moore & Pethick, who have been doing work for the company in connection with the Jordan River power plant. They will start work at once and are to complete the work within a year. The Saanich extension will be 22 miles in length, connecting Victoria with Deep Bay on the west shore of the Saanich peninsula near its northern point. The estimated cost of the line complete is from $600,000 to $750,000. It will open up a large area of land which is ripe for settlement and development, but which has previously been sparsely setled owing to inadequate transportation facilities. Considerable preliminary clearing work has already been done on the right of way by the company. From the northern terminus of the line it is probable a ferry will be operated connecting fertile islands on the Gulf with the mainland. (Sept., pg. 877.)

Calgary Municipal Street Ry.—A bylaw is being prepared for submission to the ratepayers for the purpose of raising $400,000 to met the cost of second track work on certain streets, extensions of lines, and general improvements. It was expected to have added 25 miles of track to the system by Sept. 30, bringing the total length of lines built to 40 miles, of which 10 miles are double track. (Sept., pg. 877.)

The Chilliwack Tramway Co. is reported to have been formed with a capital of $25,000 to build an electric railway within the limits of the city of Chilliwack, B.C. The company is formed under the provisions of the general Railway Act passed last session, but it does not appear to have been formally registered.

Coteau Power Co.—Press reports from British Columbia, Sept. 15, state Sir Wm. Mackenzie, Sir Donald Mann and associates have purchased the Coteau Power Co.'s rights and interests. The company was formed by W. C. Ricards, G. A. Henderson and others interested in the development of the Okanagan Valley, with a view to providing electric power for industrial, lighting and heating purposes, and to build a system of electric railways throughout the valley. M. Neilson, Montreal, recently made an examination of the route covered by the company's powers and is said to have made a favorable report thereon. J. E. Rothery, manager of the Toronto Eastern Ry., a Mackenzie-Mann project, was also in B.C. recently, and probably also looked into the C.P. Co.'s scheme. The route of the line as projected will be from Shuswap Falls, through the White Valley, and Coldstream, linking up the various Okanagan Valley towns, and reaching out to Enderby on the north and Kelowna on the south. (June, pg. 555.)

Dartmouth and Cow Bay Electric Ry.—The line which this company is authorized by the Nova Scotia Legislature to build is to extend from Dartmouth to Cow Bay Beach in Halifax county, and it may be built "along, alongside of or across the public highways." The provisional directors are: R. Stanford, I. W. Vidah and A. Pyke, Dartmouth, N.S. (June, pg. 555.)

Dunnville, Wellandport and Beamsville Electric Ry.—It is reported that about $100,000 of the capital stock has been subscribed for, and that about $15,000 has been paid in. Bonds for $40,000 are understood to have been issued, and municipal bonuses amounting

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. INTERNATIONAL TEXTBOOK COMPANY
Box 1072, Scranton, Pa.

to $20,000 are said to have been paid in. The company has some real estate, and has expended a considerable sum on grading, bridges, plant, etc. For some time past construction has been at a standstill. (Aug., pg. 783.)

Lake Erie and Northern Ry.—The Brantford, Ont., city council, Sept. 12, directed the preparation of a bylaw for submission to the ratepayers authorizing the guarantee of the company's bonds to the extent of $300,000. The town of Simcoe and the village of Port Dover are being asked to guarantee an additional $50,000 of bonds each, and it is proposed to issue $900,000 of bonds or at the rate of $30,000 a mile for the 30 miles of line proposed to be built between Brantford and Port Dover. The estimated cost of construction is $40,000 a mile.

We are advised that it is intended that the line shall be built entirely over a private right of way, and that all the surveys made have been across country, running via Mount Pleasant, Boston, Waterford and Simcoe, a distance of 32 miles, which it is expected to shorten by two miles on revision. It is proposed to start construction this fall, or early next spring.

The officers and directors are: President, J. Muir, Vice President, J. Sanderson, Secretary-Treasurer, W. S. Brewster Chief Engineer, W. P. Kellett; other directors, R. E. Ryerson, D. W. Schultz, all of Brantford, Ont. (Sept., pg. 879.)

Moncton Tramways, Electricity and Gas Co.—We are advised that owing to the misunderstanding of a cablegram, at Moncton, the information given in our last issue that steel rails had been ordered in the United States, was incorrect. Grooved girder rails, 84 lbs. to the yard, for two miles of track have been ordered in Great Britain. Track work has been proceeded with and about a mile of roadway has been opened and is ready for the rails. It is the company's intention to lay two miles of track and have it in operation in the fall. (Sept., pg. 879.)

Montreal Street Ry.—In connection with the opening of the Canadian Light and Power Co.'s new plant, at St. Timothee, Que., Aug. 31, E. A. Robert, President of both companies, stated that the street railway problems would be solved within a short time, and that the various lines would be extended, one of the extensions being to Beauharnois. (Sept., pg. 879.)

Nanaimo, B.C.—Notice has been given that a bylaw providing for the granting of a franchise for an electric railway in the city, will be introduced at an early meeting of the city council. (Sept., pg. 879.)

Nipissing Central Ry.—The Mayor of Liskeard, Ont., received a leter from J. L. Englehart, President N.C.R., and Chairman of the Temiskaming and Northern Ontario Ry. Commission, Sept. 12, stating that engineers were in the field locating the proposed extension from Haileybury to Liskeard, Ont., and stating that construction would not be delayed any longer than could be helped.

Reports from Cobalt state that it is proposed to divert the line in North Cobalt, in order to avoid a section upon which expensive repairs have constantly to be made. The new route will be shorter and more convenient. (Sept., pg. 879.)

Ottawa Electric Ry.—Questions affecting the extension of lines in Ottawa were considered by the city council's street railway committee, Sept. 11, and the committee's report is now before the council. Superintendent J. E. Hutcheson, is reported as stating that nothing can be done as to the Ottawa South extension until after the completion of the Bank St. bridge by the city, which he expects will take about a year to build. (Sept., pg. 879.)

Ottawa, Smiths Falls and Kingston Ry.—Press reports state that it is proposed to operate this line, when constructed, with cars and trains which will generate power for themselves. Each car or locomotive will be equipped with a gasoline engine for the purpose of driving a dynamo for generating power. (Sept., pg. 879.)

Peoples Ry.—The Guelph, Ont., city council passed a resolution Sept. 5, notifying the company that if the line be not completed within three months, the agreement between the city and the company will be cancelled. The agreement which was ratified by the Ontario Legislature in 1910 provides for the construction of certain lines in the city, and extensions to various points, which are to be completed at specified times, the whole to be finished by June 30, 1913, and further that if the city or the Guelph Radial Ry. considers that substantial or satisfactory progress has not been made with construction, three months' notice may be given to terminate the agreement, but "no part of such three months shall extend beyond Dec. 1, or commence earlier than April 1, in any year.' (Aug., pg. 783.)

Regina Municipal Ry.—We are advised that two miles of the electric railway built by the city council have been in operation since Aug. 1, although traffic on a regular schedule was not started until Aug. 14. The construction program for the current year covers the building of six miles of track, and it is expected that this will be ready for operation early in Oct. A 7½ minute service is being given in the centre of the city, and a 15 minute service elsewhere.

The city council has let a contract to A. E. Downs for the erection of car barns at a cost of $22,975. The work is to be completed early in Oct. The main building will be 200 by 88 ft. and 24 ft. high. It will be of stone and reinforced concrete, with roof of steel truss construction, and will have four rows of desk lights running the entire length. There will be 10 pairs of windows in the west side of the building. Adjoining will be repair and machine shops and an office section.

A bylaw was given its third reading by the city council Sept. 6, authorizing the raising of $40,000 for street railway construction.

The construction work is being carried out under the direction of L. A. Thornton, city engineer. (Sept., pg. 879.)

Saskatoon, Sask.—The city council is preparing to start work on grading the streets on which it is proposed to lay the first sections of the projected electric railway. M. E. Evans, submitted plans showing the proposed routes to the city council on Aug. 28, and these have been approved of. (Aug. pg. 785.)

Toronto and York Radial Ry.—The new bridge over the Mimico Creek, on the Lake Shore division has been completed, and cars are being operated over the new double track line constructed on private right of way there. (July, pg. 685.)

Toronto Civic Lines.—The Toronto city council is asking for tenders for the building of certain subways with the view of ascertaining the probable cost of the same preparatory of submitting a bylaw to the ratepayers in Jan. It is proposed to abandon the projected Yonge St. subway, and to build one instead from Front St. along Bay, Terauley extended, St. Vincent, Chapel and North streets to Bloor, and northerly to Yonge St., at Birch Ave., and then along the surface level to St. Clair Ave., provided an arrangement can be made with the Metropolitan Ry. for the use of its tracks in exchange for the use of the city tracks between certain points. (Sept., pg. 879.)

Toronto Eastern Ry. — The Board of Railway Commissioners has authorized the line to be built across 11 highways in Pickering tp., between mileage 0.9 and 7.7; and to build across the Oshawa Electric Ry. at Simcoe St., Oshawa, Ot. (July, pg. 685.)

Winnipeg Electric Ry.—Tracklaying on the extension of the line on Marion St., Norwood, was expected to be started, Sept. 25. (Sept., pg. 847.)

American Electric Railway Associtaion.

As previously announced in these columns, the annual convention of this association and its affiliated associations will be held at Atlantic City, N.J. Oct. 9 to 13.

James Anderson, Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., and President, Canadian Street Railway Association, has been appointed a member of the transportation committee in connection with the convention. The Eastern Canadian Passenger Association has made the following concessions in rates: Lowest one way first-class fare and one-half; from Kingston, Sharbot Lake, Renfrew and west, tickets will be sold on Oct. 5 to 9, inclusive; from east of Kingston, Sharbot Lake and Renfrew, tickets will be sold on Oct 6 to 10 inclusive; return limit to reach original starting point not later than Oct. 10. Tickets are to be validated by agent of terminal line at Atlantic City, N.J.

CITY OF TORONTO.
TENDERS
for
PROPOSED SUBWAY CONSTRUCTION

Sealed tenders will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, up to 12 o'clock noon on Wednesday, Nov. 1st, 1911, for the construction of three miles of reinforced concrete subway and subway stations.

No tender will be received for less than one-half mile sections.

Envelopes containing tenders must be plainly marked on the outside "Tenders for Proposed Subway Construction."

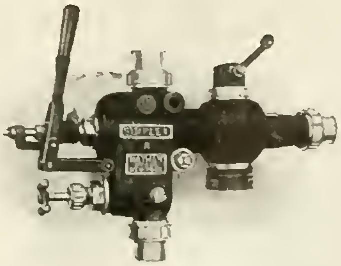
Plans and specifications may be obtained on application to the Department of Railways and Bridges, City Engineer's Office, Toronto, also on file for inspection at the following points:

1. N. B. Colcock, Ontario Govt. Agent, 163 Strand, London, W.C.
2. Canadian Engineer, B-33 Board of Trade Bldg., Montreal.
3. Canadian Engineer, Room 404 Builders' Exchange Bldg., Winnipeg.
4. Engineering News, 220 Broadway, New York.
5. Engineering Record, 239 West 39th St., New York.
6. Engineering Contracting, 537 S. Dearborn St., Chicago, Ill.

Each tender must be accompanied by a marked cheque for Two Thousand ($2,000) dollars for each one-half mile section tendered on.

The lowest or any tender not necessarily accepted.

G. R. GEARY, (Mayor),
Chairman of the Board
of Control.



SIMPLEX
TYPE "R"

Lifting Locomotive Injector is a self-adjusting and re-starting instrument designed to meet modern locomotive conditions. It will feed water at a higher temperature than ordinary service demands, and the delivering capacity increases with increasing pressure.

This injector works steadily, whether the engine is running fast or slow, and with heavy or light trains.

TITANIUM

The Wonder-Working Alloy

Solves Every Phase of the Rail Problem

Titanium Alloy gives to steel increased strength and toughness *with* ductility—and *without* brittleness. Titanium open-hearth rails having carbon content as high as 0.85 are showing most unusual qualities of endurance and power to resist shock and impact. 21,000 tons of such rails have been ordered recently by the Lehigh Valley R.R. Other railways in the United States are using Titanium rails with remarkable results. Increased cost ranges from $1 to $5 per ton.

Booklet No 30 goes into details. Send for it.

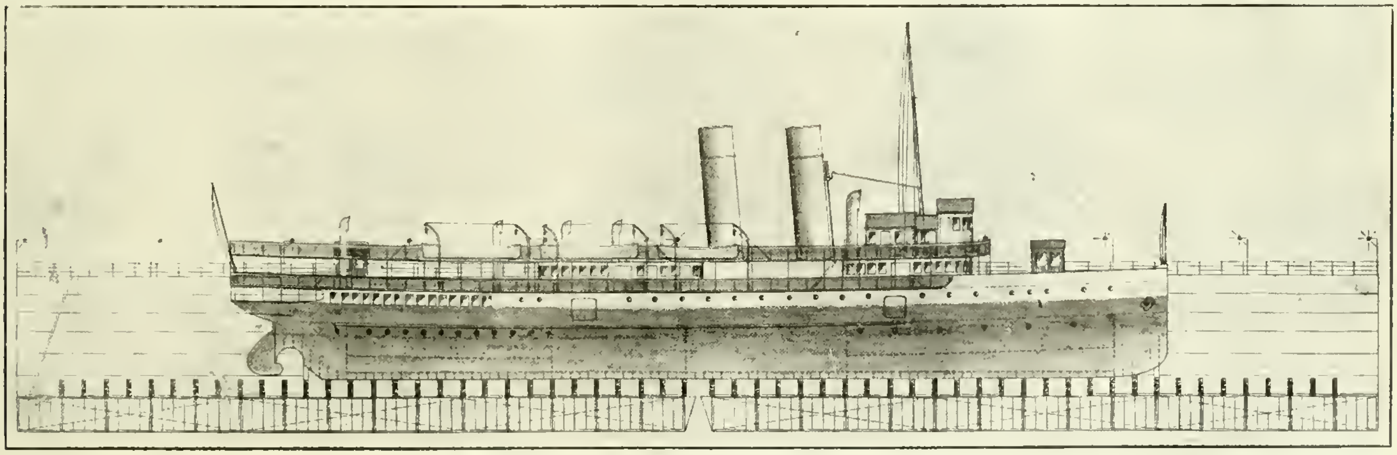
Floating Dry Dock and Repair Plant for Toronto.

The Dominion Government recently granted Polson Iron Works, Ltd., Toronto, a 3% bonus yearly for 20 years on $900,000 to be spent in building a floating dry dock and a repair plant at Toronto. The dock will be located at the foot of Frederick St., just west of and adjoining the company's present plant. The company has leased from the city, 136 ft. of land just west of the present property on which a basin will be blasted to a depth of 28 ft. to accommodate the floating dock. The company has also recently acquired the property to the east of its present plant and to the east of the Sherbourne St. slip, and it is the intention to use this property outside of Lake St., as a basin for the accommodation of steam boats which may come to the dock for repairs, and this space will provide ample dock accommodation for all vessels which may be waiting their turn to use the dock.



Longitudinal Section of Floating Dry Dock for Toronto.

The floating dry dock is ultimately to be of the following dimensions:—

Length	600 ft.
Length over outrigger	642 ft.
Breadth over all	100 ft.
Breadth at deck inside	80 ft.
Breadth at top inside	84 ft.
Depth over all	35 ft.
Depth to dock deck	8 ft.
Lifting capacity	9,000 tons

At present, two sections 150 by 100 ft. are being built, making an overall length of 336 ft., having a lifting capacity of 4,500 tons, and easily able to accommodate any vessel on Lake Ontario. In the future, when larger vessels are expected to be on these waters, a 300 ft. section will be built and added to the dock, making a total length of 642 ft., and having a lifting capacity of 9000 tons.

The dry dock is of the U-shaped section, and each 150 ft. part is divided transversely by two watertight bulkheads, spaced 50 ft. apart. These bulkheads are fitted intercostally between the three longitudinal bulkheads which are run continuously from end to end, the centre one being non-watertight, and the side ones at 20 ft. from the centre line being watertight. These bulkheads are composed of ⅜ in. plating, 5 by 3 by ⅜ in. vertical stiffeners, spaced 30 in. apart and 5 in. by 3 by ⅜ in. horizontal stiffeners spaced about 7 ft. apart, and shell and deck angles of 3½ by 3½ by ⅜ in.

The framing consists of both longitudinal and transverse systems, the former being carried out between the wing bulkheads in the centre and the latter outside the wing bulkheads and on the walls. Solid floors are fitted transversely every 10 ft. between the longitudinal bulkheads, and consist of ⅜ in. plating, with connecting angles of 3 by 3 by ⅜ in. and vertical stiffeners of 5 by 3 by ⅜ in. spaced 30 ins. apart. Between these solid floors are fitted the longitudinal frames which are 6 by 3½ by ⅜ in. on the bottom and 12 by 25 in. channel at the top. The former are fitted intercostally between the solid floors, but the latter run continuously from bulkhead to bulkhead. This longitudinal system of framing is completed by a continuous series of lattice work of 4 by 4 by ⅜ in. angles with ⅜ in. cross ties and brackets securely connecting them to frames and vertical stiffeners. The longitudinal framing amounts to a non-watertight centre bulkhead, two side wing bulkheads, both watertight, and 14 rows of frames and bracings. The transverse framing consists of a series of lattice work frames opposite every solid floor of 6 by 3½ by ⅜ in. angle frames, ⅜ in. brackets and 4 by 4 by ⅜ in. bracings. The side frames of outer and inner walls extend from top to bottom continuously, and have beams securely bracketed to them about every 7 ft. The intermediate frames are fitted between each solid floor, spaced 30 in. and extend from wing bulkhead to top and are of 6 by 3½ by ⅜ in. angles with ⅜ in. brackets connecting beams and stanchions.

The bottom plating is 7-16 in. worked transversely in way of longitudinal framing at centre, and longitudinally in way of transverse framing at sides. The outer wall is ⅜ in. plating with top and bottom strakes of 7-16 in. The inside wall is of ⅜ in. plating and the top is 7-16. The deck plating is ⅜ in., worked in the same manner as the bottom plating in connection with the framing. The corner angles at the deck, top and bilge are 4 by 4½ in. All shell landings will be joggled and linears dispensed with. The end plating is ⅜ in., and is connected to deck and bottom by 4 by 4 by ⅜ in. angles with 5 by 3 by ⅜ ins. vertical stiffeners spaced 30 ins. and horizontal stiffeners of 5 by 3 by ⅜ ins. The gangways are fitted in each section in each side; the opening being 20 by 15 ft., with plating ⅜ in., and connecting angles 3 by 3 by ⅜ in. The rivets in the whole construction are ¾ in. in diameter, the plate landings being double rivetted and the laps quadruple rivitted.

Ladders are placed at each side of each pontoon and rails and stanchions are fitted all around the top. Cast iron bollards are placed in each corner of each section and securely bolted into place. Three cast steel brackets are placed on each side of each section securely fastened to heavy brackets and special connection between the two sections are fitted so as to give rigidity to the whole dock when lifting operations are under way.

The connecting links are made of forged iron and secured by bolts and held by strong lugs. The outrigger platform which extends 15 ft. from each end of dock is made up of ⅜ in. plating and has brackets and stays every 30 ft. with a fender all round its edge. On the top deck, two manholes with hinged covers are fitted to each watertight compartment. Ladders of 2½ by ½ in. flat, are placed in way of each manhole on the bulkheads.

Bilge and keel blocks are placed at suitable distances apart having an oak base 60 ft. long on which the bilge blocks can slide. This base will be bolted through clips 5 by 3 by ⅜ in. securely riveted to deck. The sliding blocks are of pine and the best arrangement of guides, pulleys, and chains will be fitted so as to make the work of docking as easy as possible.

PEOPLES GAS BUILDING,

CHICAGO, ILL.

The pumps are the horizontal centrifugal type with 16 in. suction located in the bottom of the dock and are driven by a vertical shaft connected to a 50 h.p. motor, located on top of dock. Two pumps are fitted in each section and all parts are interchangeable. The pumps have a capacity of 7,000 imperial gallons a minute at 300 revolutions. The two pumps in each section are to empty that section in about 1 hour, 20 minutes. The motors are 50 h.p., located on suitable base plate at top of dock. The pumps are located in the bottom of the docks, discharging through the side ot the dock about 3 ft. above the bottom. The casing is of cast iron and about 7 ft. in diameter.

The suction nozzle is 16 ins. in diameter and the discharge 15 ins. diameter, the latter having a 15 in. screw check valve between end and sea valve. A cast iron manifold is fitted close to each pump for the end compartments, and two similar manifolds for the middle compartments, and from these the different branch lines run. The branches to the centre compartment are 6 in. and to the wing compartments 10 ins., each valve being fitted with a quick opening gate valve close to the manifold. Suction boxes are fitted on end of each pipe and placed in a gutterway of special construction built in the bottom of the dock, so that it can be drained dry. A 16 in. pipe connects the two pumps so that one pump can operate the whole section in case of emergency. The two flooding valves are 18 ins. in diameter. The flooding and discharge valves are operated by a spindle, with hand wheel on stand, with different heights of stands so as to be easily distinguished.

As previously stated, it is expected that at a future date, a 300 ft. section will be added to the first 300 ft. dry dock, and so accommodate the largest vessels that are expected to be on these waters, but in case of the smaller vessels, up to 150 ft., the sections will be separated and only one used for lifting. In operating docks of this description, considerable care has to be taken previous to the submersion of the dock, particularly with regard to the position of the bilge blocks, which should be as far away from the centre as possible. Also all chains and guides must be seen to be clear of all obstructions.

At the corners of the dock are vertical rollers which are of great assistance to the vessel if she is being docked in bad weather, and should they be struck by the vessel, instead of doing the damage that a square corner might do, they assist rather than retard her headway. The dock will be usually sunk about 2 ft. deeper than the draft of the vessel to be raised, and after the vessel has been securely moored by ranging lines fore and aft and by mechanically governed side shores, the pumping operations will be begun and the dock and vessel raised.

The dock will have a complete installation of electric light on the top deck, and every convenience for the rapid handling of all kinds of repairs.

It is expected to have the two sections now under construction completed so that vessels may be docked on the opening of navigation.

The company is also building a new boiler shop 300 by 120 ft, composed entirely of steel, except the boiler walls. Two large compartments are to be built, one 60 by 40 ft., for a pump and compressor room, the other 60 by 60 ft., for a flange fire shop.

◆

During July, 18 employes were killed and nine injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, 17 were due to drowning and one to being caught in machinery.

The Loss of the s.s. Sechelt.

The enquiry into the loss of the Sechelt Steamship Co.'s s.s. Sechelt, which foundered with all hands, Mar. 24, off South Bedford Island, Beecher Bay, Straits of Juan de Fuca, was concluded Sept. 1, at Victoria, B.C., and judgment delivered by Mr. Justice Martin, concurred in by Capts, Neurotsos and Reed as nautical assessors. Following is a summary ot the judgment:—

While in the absence of direct testimony it is impossible to state definitely what brought about the disaster, yet it seems to be clear that from some unexplained cause the ship got into the trough of the sea, with a heavy westerly wind and hard squalls prevailing, which caused her to heel to such an extent as to allow the water to flow into the body of the ship through the apertures on the main deck communicating with the engine and boiler space, and forehold, and it is probable that cargo on the main deck, of light iron rails, car wheels and axles, shifted in the heavy rolling to an extent sufficient to deprive the ship of ability to right herself.

The ship, though given a certificate to carry 40 passengers under sec. 1, part VII, of the Inspection Rules, was not fitted for the Victoria-Sooke route, for which she was licensed, and the Inspector of Hulls, J. C. Kinghorn, should not have given her permission to run on it. A grave error in judgment was made in classing the route in question as being one within "the island waters" of Canada, as defined by sub-sec. (g), sec. 72 of the Canada Shipping Act, because it comes clearly within the exception "salt water ways and gulfs on the sea coast" specified in that section, and though part of the route, viz., from Victoria to Race Passage, would in general be more or less sheltered, except from southeasterly gales, yet after passing through that passage a ship would be exposed to the full force of prevailing westerly gales from the Pacific ocean. The Sechelt was quite unable to cope with such conditions or with the ordinary stress of wind and weather to be encountered in that locality, because of her peculiar construction, whereby the main deck was in effect made the weather deck, and also because of the insecurely protected apertures above mentioned, which properly come within the scope of sec. 14 of part VII, of the Inspection Rules, requiring that "gangways and openings on or below weather deck" should "be fitted with covers in such a manner that they can be quickly and efficiently secured;" with other similar provisions respecting coamings and hatch covers intending to safeguard the bouyancy of the ship, which were insufficiently observed or ignored, though the section declares them to be "important items to be noticed by the inspector in steamboats subject to heavy seas."

The vessel was originally designed as a tug for service on Lake Washington, but had had much additional superstructure for the accommodation of passengers which tended to lessen her original stability, and encouraged the carrying of freight on the main deck.

Though sec. 24 of the Inspection Rules provides that the steering gear shall be inspected and thoroughly examined at least once a year by the Inspector of Hulls, there is no specific evidence that this was done, which is the more to be regretted as it was suggested that the cause of the ship unaccountably getting into the trough of the sea was owing to some defect in the steering gear. It is surprising to observe that in the printed form of return of inspection no reference is to be found to this essential matter. Though the Sechelt has been stranded in the Vancouver Narrows, Aug. 7, 1910, and again on Bowen Island, Nov. 5, 1910, and her main engine had broken down on Dec. 8, 1910, suffering on each occasion a material degree of injury to her hull or machinery as defined by secs. 15 and 21 of the Canada Shipping Act of 1908, which injuries were, in two cases at least, reported to the Inspector of Hulls, yet permission was given to her owners to change her run from Vancouver to Sechelt to a more dangerous one, viz., from Victoria to Sooke, without any inspection, though full powers are given to the inspector in such cases. With reference to the issuance of a certificate that a vessel is fit to ply, the limits within which she may ply must be defined and a duplicate of the certificate posted in a conspicuous part of the steamboat. In this case the certificate states that the Sechelt is permitted to run on the waters between Vancouver and Sechelt, therefore she was running on a route for which she had in fact no certificate.

The judgment concludes with a number of recommendations, for the appointment of additional inspectors, and for the establishment of rules that no vessel should be allowed to carry freight or passengers for hire without having first obtained the certificate of a board of inspection collectively, that she is in all respects suitable for the route on which she is to ply, instead of the two individual and inadequate certificates now in use.

A new Detroit

Locomotive Lubricator

The new Detroit No. 22 Bullseye Locomotive Lubricator can be started and stopped instantly without even touching the feed adjustments.

One valve controls the admission of oil to all the feeds. This Oil Valve makes it easy to save oil without bothering to change the feed adjustment.

There are no removable tubes in the Detroit. Nothing to get out of order. Nothing to require repairs.

Write to-day for catalog U and full information.

HUDSON BAY RAILWAY.

Notice to Contractors.

SEALED TENDERS for the following supplies addressed to the undersigned and endorsed "Tender for track materials for the Hudson Bay Railway," will be received at this office until 16 o'clock on Monday, the 16th day of October, 1911.

30,000 gross tons steel rails 80 lbs. per yard.

1,700 gross tons splice bars.

2,100 kegs track bolts and nuts 200 lbs. per keg.

8,000 kegs track spikes 200 lbs. per keg.

Specifications, drawings, forms of tender, and form of contract to be entered into can be seen on and after Tuesday, August 22nd, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Chief Engineer of the Hudson Bay Railway, Winnipeg, at which places forms of tender may be obtained.

Contractors are requested to bear in mind that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque equal to 5 p.c. of the tender made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part of security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES,
Secretary.

New Steamship for Halifax-Boston Route.

The Canada Atlantic and Plant Steamship Co., has ordered in Glasgow, Scotland, a steamship for service between Halifax and Boston. The contract calls for delivery at Halifax, N.S., by June 1, 1912. She is being built to Lloyds' requirements with all the latest improved equipment. Her dimensions will be, length 350 ft., breadth 46 ft., depth, molded to main deck, 33 ft. The hull will be of steel, with double bottom and seven water tight bulkheads divided into six compartments. There will be five decks, lower, main, awning, boat or promenade and navigating and bridge. There will be 265 staterooms, with accommodation for 650 passengers, and cargo capacity of 1,500 tons. The deck houses will be of steel with teak doors and finish. On the bridge deck there will be captain's and officers' quarters, wireless telegraph office and operator's room, and on the promenade deck will be situated a smoke room, 40 by 25 ft., finished in oak and morocco leather, aft of which will be the main entrance leading to the awning deck, and also 50 staterooms. The whole of the awning deck will be devoted to passenger accommodation, with wide promenade on each side. A social hall will be provided, 56 by 30 ft., the forward part constituting an observatory with a clear view looking forward. Adjacent to the social room, six suites of rooms will be provided, and there will be other staterooms aft. The dining saloon will be on the main deck forward, being 35 by 45 ft., with seating accommodation for 150 persons. The remainder of this deck will be taken up with staterooms, bridal suites, and toilet accommodation. The crew's quarters, galley, etc., will be on the lower deck. The most improved systems of steam heating and electric lighting will be installed. The vessel will be driven by twin screws and equipped with engines capable of developing a speed of 18 knots an hour.

Atlantic and Pacific Ocean Marine.

The Newfoundland Shipping Co., has chartered the s.s. Rescue, owned in Goole, Eng., to load fish at St. John's for Spain and Italy.

The Uranium Steamship Co.'s s.s. Uranium, bound from Rotterdam to New York, after calling at Halifax, had to delay her voyage there, owing to trouble with her engines.

A Montreal press report states that a Liverpool, Eng., firm, will shortly inaugurate a steamship line between the Maritime Provinces and Mediterranean ports, starting from Halifax, N.S., and calling at St. John N.B. and New York or Philadelphia, mainly in the fish trade.

A Liverpool, Eng., press dispatch announces an increase of 10% in freight rates by steamship companies operating across the Atlantic, to go into effect Sept. 11, but it is stated that it was doubtful if the change can be put into force before the commencement of the winter traffic.

The new vessels which the C.P.R. has ordered for its Pacific service will be built with cruiser sterns, that is, the underbody aft will be cut away, and the rudders will be of a type which has not been used generally in the merchant service, but has been adopted on the channel service vessels between England and France.

It is reported from Jacksonville, Fla., that a steamship line is to be started between Halifax, N.S., Savannah and Charleston, with a possible extension of

BADECK BRANCH LINE.

Intercolonial Railway.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Alba-Baddeck Branch," will be received at this office until sixteen o clock on Thursday, October 12th, 1911, for the construction of a branch line of railway from a point on the Intercolonial Railway, near Alba to the town of Baddeck, a distance of 22.7 miles.

Plans, specifications and form of contract to be entered into may be seen and full information obtained on and after 15 inst., at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Chief Engineer of the Intercolonial Railway at Moncton, N.B.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $30,000.00, made payable to the order of the Minister of Railways and Canals must accompany each tender which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES,
Secretary.

the service to Havana, that the proposed service will be commenced as a monthly one, and that if the trade permits, a better service will be put on. M. N. Stineud, of Halifax, N.S., is said to be interested in the scheme.

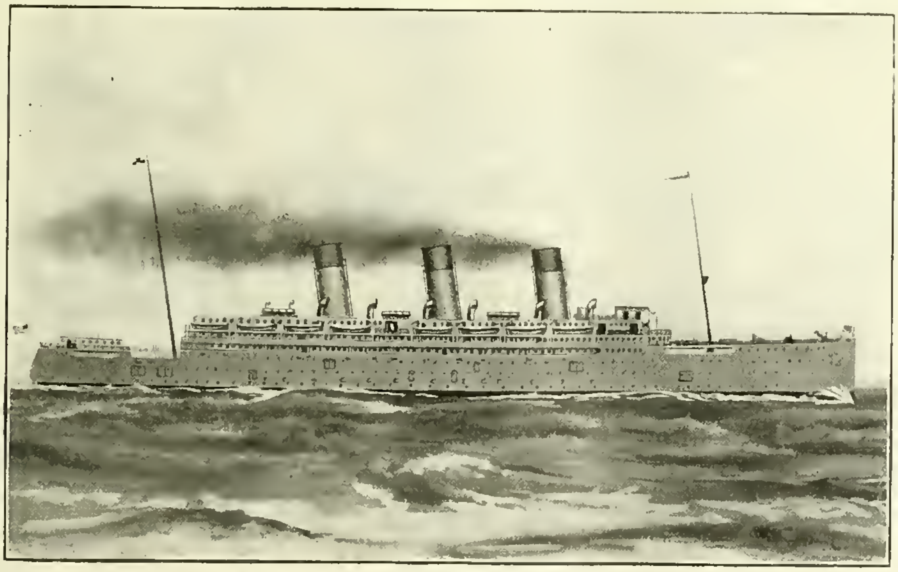
Press reports state that the London and North Western Ry. of England, has sent representatives to various parts of Europe and to Lake Michigan, to study the operation of car ferries, with a view to deciding the practicability of adopting some such service between Great Britain and Ireland in connection with the proposed "all-red" service between Galway, Ireland and Halifax, N.S.

A Halifax press report states that following a conference between Sir William Mackenzie, President, Canadian Northern Steamships Ltd., and the Newfoundland Premier, the company is considering the extension of its trans-Atlantic service to Newfoundland, with Trepassey as the port of call. The Newfoundland Government is stated to be willing to pay a subsidy for the service.

The Union Steamship Co. of New Zealand, has ordered in Scotland, a vessel for service between Vancouver, Honolulu, Suva, Auckland and Sydney. She will be about 12,000 tons, length 423 ft.; beam 66 ft.; and will be equipped with combined turbine and reciprocating engines for a speed of 17 knots an hour. There will be accommodation for about 700 passengers and a large refrigerator space. The contract calls for delivery by the summer of 1912.

The Union Steamship Co., of New Zealand is reported to have purchased the s.s. Port Kingston, which was built at Glasgow, Scotland, for the Elder Dempster Co.'s West Indies route. It is stated that this vessel will be placed on the Canada-New Zealand mail route pending the completion of the vessel which the company has recently ordered, and that she will replace the Zew Zealand Shipping Co.'s s.s. Zealandia, at present on the route.

A correspondent writing to a London, Eng., daily paper, recently, from Dublin, Ireland, says that a harbor at Galway is of Imperial importance, as it would shorten the ocean journey between Ireland and Halifax, N.S., to 3⅛ days, and to Trepassey, Nfld., to 2¾ days, the saving in distance being 965 miles to Canada and 1,480 miles to Newfoundland, as compared with the Liverpool to New York route. The mail service, he says, would be accelerated by 1½ days between Halifax and London and by one day between London and New York.



One of the Twin Steamships being built for the C.P.R. Trans-Pacific Service.

The enquiry into the cause of the stranding of the C.P.R. s.s. Empress of China, off the Japanese coast, July 27, which was held at Yokohama, Aug. 17, showed that the disaster was due to the vessel having been set out of her course 18 nautical miles by a strong and unusual current, of which the master had no knowledge and no means of knowledge. No blame was attached to him, nor other of the officers, but he was ordered to pay the cost of the enquiry, £6 4s. 6d. Since the wreck, salvage operations have been in progress almost continuously, under considerable difficulties. It was recently reported that the vessel had been dragged about 40 ft. nearer deep water and that her cargo had been lightered and several holes patched up. She is in a bad position, and should a heavy storm arise, it is feared that she might break up. It was however anticipated that she could be floated and taken to Hong Kong for repairs.

Maritime Provinces and Newfoundland.

The Dominion Public Works Department received tenders Sept. 20 for the construction of a series of wharves in the harbor at St. John West, N.B.

The Dominion Public Works Department has awarded the contract for the construction of a breakwater at Brooklyn, N.S., to the Nova Scotia Construction Co., at about $200,000.

The steam tug Progress, of St. Pierre, which left St. John's, Nfld., recently, after undergoing repairs, sprang a leak during a storm off Cape Pine and sank, the crew escaping in one of the boats.

At a meeting of the St. John ferry committee, Sept. 1, $2,500 was voted for the installation of steam steering gear and other changes in the ferry steamboat Governor Carleton, bringing the cost of the vessel to date, to $42,689.42. A contract was also awarded for the repainting of the ferry Ludlow.

The Merchants' Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Sydney, N.S., to own and operate steam and other vessels and carry on the business of shipowners and common carriers. The incorporators are, Jas. McConnell, A. W. Mann, F. G. Konig, W. T. Lynch and J. A. Young, Sydney, N. S.

The steamboat Robert G. Cann, recently built at Shelburne, N.S., has been towed to Yarmouth, where her machinery is being installed. She has been built for hard service and her passenger accommodation has been made large and comfortable. Her dimensions are, length 125 ft.; breadth, 25 ft.; depth 10 ft. It was expected that she would be ready for operation early in October.

The Newcastle Mines is applying to the Lieutenant-Governor in Council, for incorporation, with a capital of $600,000 and office at Minto, N.B., with power to carry on a general mining business, and among other things, to build, own and operate barges, vessels, etc.

The Dominion Department of Public Works will receive tenders, to Oct. 3, for the construction of a wharf at Meat Cove, N.S., to Oct. 11, for the construction of a breakwater at the entrance to Little Bras d'Or, and for the construction of a wharf at Louisdale, N.S., and to Oct. 19, for the construction of a wharf at Rous Brook, Lunenburg, N.S.

The steamboat Miner, which was sold by the sheriff, Sept. 11, at North Sydney, N.S., to Thompson and Sutherland, for $250, was formerly owned by the Port Hood Richmond Ry. Coal Co., and was built at Jarrow, Eng., in 1880. She is screw driven with engine of 16 n.h.p. Her dimensions are: Length, 65 ft., breadth 14.6 ft., depth 6.8 ft., tonnage, 49 gross, 33 register.

The steamboat Sincennes, owned by D. J. Purdy, St. John, N.B., was destroyed by fire at Cole's Island, Sept. 8, one of the crew losing his life, and another receiving injuries, from which death resulted later. She was built at Montreal in 1893, and was a paddle wheel vessel with engine of 34 n.h.p. Her dimensions were, length 142.2 ft.; breadth 24.4 ft., depth 8.4 ft., tonnage, 228 gross, 129 register.

At the recent annual meeting of the Canada Atlantic and Plant Steamship Co., at Halifax, N.S., it was announced that a new steamship is under construction at Glasgow, Scotland, for the company, for delivery by June, 1912. Following are the officers for the current year: President, A. W. Perry; Vice President, McC. Grant; Treasurer, H. G. Perry; Auditor, R. C. Verner; Secretary and Eastern Manager, H. L. Chipman.

The Dartmouth, N.S. Ferry Commission's new ferry steamboat Halifax, built at Glasgow, Scotland, arrived at Dartmouth, Sept. 1, having taken 22 days on the voyage. She is a double screw vessel, driven by compound surface condensing engines supplied with steam at 120 lbs. working pressure, by two boilers. The hull is of steel with three water tight bulkheads at each end of the vessel. Her dimensions are: length 125 ft.; breadth, 48 ft.; depth 13 ft. 1 in.; tonnage, 600 gross, 268 register.

The Nashwaak Lumber Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $2,500,000 and office at Marysville, N.B., to acquire the Alexander Gibson Railway and Manufacturing Co. property, and in connection therewith to build, own and operate steam and other vessels, wharves, piers, warehouses, etc., and to act as ship owners and carriers by land and sea. The incorporators are, D. Jardine, Liverpool, Eng.; L. and J. S. MacLaren, H. H McLean, F. R. Taylor, St. John, N.B., and A. Rowley, Marysville, N.B.

Province of Quebec Marine.

Montreal, Que. Chicago, Ill.

It is reported that the Quebec and Levis Ferry Co. will build another railway ferry to cope with the increasing traffic between Quebec and Levis.

Revillon Freres Trading Co., is applying to the Dominion Parliament for incorporation, to carry on a general trading business and to take over the business and property of Revillon Bros. Ltd.

The Montreal Harbor Commissioners, accompanied by their Chief Engineer, Secretary and Superintendent Engineer, visited Quebec, Sept. 8, in their steam tug, Sir Hugh Allan, and were entertained on board the Dominion Government s.s. Druid by the Quebec Harbor Commissioners.

The International Transit Co., has sold its ferry steamboat Algoma, to a Montreal syndicate. She was built at Toronto in 1901, and is a screw driven vessel with engine of 54 n.h.p. Her dimensions are, length 104 ft.; breadth, 26.3 ft.; depth 11ft.; tonnage, 157 gross, 107 register.

There was handled in the Montreal Harbor Commissioners' elevators this year, to Aug. 1, 8,348,001 bush. of grain, against 7,962,777 bush., during last year. In Aug. there was a slight decrease in the amount handled, as compared with Aug. 1910, stated to be due to the railway strikes in England.

The Montreal Harbor Commissioners invited a number of business men to accompany them on an inspection trip, Sept. 6, on their new steam tug, Sir Hugh Allan. The various works in progress were visited, including the 10-ton electric hoist, which had been put into operation the previous day for the first time, the grain elevator and the new Victoria pier.

During August there were 3,426 vessel passages through the Lachine canal, against 3,336 in Aug. 1910. Of the vessels passing through the canal, 640 steamboats and 682 barges were Canadian owner, and 83 steamboats and 84 barges owned in the U.S. There was a considerable increase in the quantity of merchandise handled and a decrease of about 4,000 in the number of passengers.

The Montreal Harbor Commissioners, after an interview with a special committee of the Corn Exchange, Sept. 13, decided to postpone the date, from Sept. 15, when their bylaw limiting the free storage of grain in their elevators to 10 days, shall come into force, pending the receipt of a written statement on the matter promised by the committee. The bylaw limits the free storage to 10 days, instead of 20 days, as heretofore, and provides for a charge of one-twentieth of a cent a bush. for each day thereafter which the grain shall remain in storage. The committee points out that Portland, Me., allows 30 days and ⅛c. a bush. for each additional 10 days; Boston, Mass., 20 days and ⅛c. for each additional 10 days, and New York, 10 days and ⅛c. for each additional five days, with insurance charges extra.

◆

Ontario and the Great Lakes.

The canal employes in the Dominion Government Service have been granted increases in wages, to date from April last.

Weddell and Manley, of Toronto, have been awarded the contract for the construction of a turning basin in the Welland canal at Thorold.

The navigation season on the Yukon River will close Oct. 10, on which date the last sailings from Dawson and White Horse are scheduled.

The Calvin Co., Kingston, Ont., has entered action against the owners of the s.s. Hero, for $30,000 damages for the sinking of its s.s. Chieftain.

A. Major, master of the Montreal Transportation Co.'s barge Hector, died suddenly at Kingston, Sept. 13, aged 55. He was a native of Valleyfield, Que.

The Welland canal was open for the passage of vessels on Sunday Sept. 10, and it was announced that it would be kept open on Sundays for the remainder of the navigation season.

An Ottawa press dispatch of Sept. 7, stated that the Canadian Northern Ry. has acquired the Rideau Lakes Navigation Co., and that it will extend the service on the Rideau Lakes.

The steamboat Riverside, which grounded in the Cornwall canal, Aug. 23, was released Sept. 3, by the raising of the water level, owing to the local works being closed and the canal not open to navigation.

The city of Toronto recently invited tenders for the construction of a steam tug for use in the harbor. Only one tender was received, viz.: from the Polson Iron Works, Ltd., Toronto, for $17,063. The board of control has recommended that it be accepted.

Alex. Cunning, master of the Great Lakes Towing Co.'s steam tug Favorite, was arrested at Amherstburg, recently, on a charge of theft of cargo from the wreck of the steamboat Wissahickon, which ran ashore on Duck Island about the close of navigation last year.

The Montreal Transportation Co.'s barge Winnipeg, in tow with 1,200 tons of coal for Montreal, struck a rock in the Rapid du Plat, Sept. 13, and later sank near Farrans Point, below Morrisburg. She was built at Kingston in 1893.

The Dominion Public Works Department has been carrying out sounding and boring operations at Goderich, north of the harbor, and near the mouth of the Maitland river, in connection with the proposal to extend the north breakwater by 1,000 ft.

Capt. M. A. Livingstone of the Northern Navigation Co.'s s.s. City of Midland, was presented with a silver loving cup recently, by a number of the passengers, in appreciation of his services during a disagreeable trip through bad weather, between Mackinac and Collingwood.

The schooner Keepsake, owned at Belle River, and which has been used for some time as a sand carrier, ran on the rocks near the mouth of the Detroit River, Sept. 1. She was built at River Puce in 1880, her dimensions being, length 72.6 ft.; breadth, 19.9 ft.; depth, 3.7 ft.; tonnage 45 register.

The Northern Navigation Co.'s s.s. City of Midland, while backing out of Parry Sound harbor recently, struck bottom, breaking her shoe and driving her rudder into the wheel. The Dominion Government steamboat Simcoe, towed her to Collingwood, where the necessary repairs were carried out.

The Turbine Steamship Co.'s s.s. Turbinia, which was recently fined $50 for an alleged infringement of the U.S. navigation laws, has had the fine remitted, and has been allowed, for the present, to continue to carry excursionists as heretofore.. It is stated that during the winter, the law will be carefully looked into.

The Northern Navigation Co. has arranged with Hugh Calderwood to prepare plans for another steamship,

LAKE GRAIN SHIPMENTS.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William, and Port Arthur, of the 1910 crop, from Sept. 1, 1910 to Aug. 31, 1911. The last two figures in each column represent lbs.

which it intends to build for operation next season. The new vessel will be about the size of the company's s.s. Hamonic, and as soon as the plans are completed they will be submitted to shipbuilders for tenders.

The Montreal, Ottawa and Georgian Bay Canal Co. has given notice of application to the Dominion Parliament for amendments to its act of incorporation, including the naming of seven of the incorporators to act as provisional directors, and to extend the time within which the contemplated works may be commenced and completed.

J. H. Hall, Manager, Ottawa Forwarding Co., who recently returned to Canada from Scotland, is reported to have stated that negotiations were practically completed for the purchase of a vessel in Scotland, for operation on the Rideau canal, between Ottawa and Kingston, and that the vessel will be brought across the Atlantic under her own steam.

The Northern Michigan Transportation Co., Chicago, Ill., is arranging docking facilities at Collingwood, for its steamboat Missouri, which it purposes placing on the route from Chicago via Mackinac island and the Sault canal, to Georgian Bay points. The Missouri is a steel vessel, and was built in 1904. and is of the following dimensions, length, 250 ft.; breadth 40 ft..; depth, 16 ft.; tonnage, 2434 gross, 1484 register.

The vessel Toiler, a new type of lake freighter, of which we gave a full description some time ago, and which has been built in England for the Canadian lake trade, sailed from Middlesbrough, Eng., at the end of August, with a cargo of pig iron, for Halifax and Montreal, arriving at Halifax, Sept. 22. It was not anticipated that she would make the voyage this season, and we were advised to that effect a few weeks ago, as mentioned in our September issue.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for August, as follows:— Superior, 602.15; Michigan and Huron, 579.83; Erie 571.62; Ontario 245.19. Compared with the average August levels for the past ten years, Superior was 0.71 ft. below; Michigan and Huron 1.33 ft. below; Erie, 1.08 ft. below and Ontario, 1.45 ft. below. It was anticipated that during September, Superior would rise 0.1 ft., Michigan and Huron, would fall 0.2 ft.; Erie, fall 0.3 ft., and Ontario, fall 0.4 ft.

The Ottawa River Navigation Co. has only been operating the steamboat Princess on the river between Montreal and Carillon this season, and has not been operating the Grenville and Ottawa end of the route. The Carillon and Grenville Ry., which has been purchased by the Mackenzie, Mann and Co. interests, has not been operated this year. This railway is to be changed to standard gauge, and it is anticipated that next year connection will be made with the steamboat at Carillon, and the journey to Ottawa completed by rail.

A press dispatch from Winnipeg, Sept. 8, stated that Sir Donald Mann, Vice President, Canadian Northern Ry., announced there that next year the C.N.R. would proceed with the establishment of a line of passenger vessels on the Great Lakes, the first sailing to take place in the spring of 1913. Another dispatch, from Duluth, Minn., states that the headquarters of the proposed service will be at Duluth, and that strong competition with U.S. lake lines is proposed, with an increased ocean service to handle grain cargoes.

The Farrar Transportation Co., Collingwood, has been awarded about $20,000 as damages sustained by its steamboat Collingwood in a collision with the U.S. steamboat George L. Craig in the Detroit River, Aug. 24, 1909. The matter has been before the courts for some time, and was referred to arbitrators, who met in Cleveland, Ohio, recently and settled the case. G. E. Fair, Manager, Farrar Transportation Co., and A. W. Wright, Manager, St. Lawrence and Chicago Steam Navigation Co., Toronto, acted for the Farrar Transportation Co., and W. H. McGean, Cleveland, Ohio, for the owners of the George L. Craig.

The North Vancouver Ferry Co., has renewed its application to the city council to purchase $150,000 of the company's stock to enable it to purchase an additional ferry steamer.

After an inspection by the Government Steamboat Inspector, the North Arm Steamship Co.'s steamboat Skeena, has been licensed to carry 425 passengers instead of 150 as heretofore.

The liquidator of the Fort George Lumber and Navigation Co., recently stated that it would be several months before the company's affairs would be settled and that the dividend to ordinary creditors would be very small.

The B.C. Public Works Department received tenders, Sept. 15, for the operation of ferries across the Fraser River at North Bend; across the North Thompson River at Chinook Cove, and across the North Thompson River at Jones' Crossing.

It is reported that an engineer representing the Department of Public Works, has selected a site at Nelson, for the immediate construction of a dredge for service on the Columbia River, to replace the present one, which is considered too small for the work.

By order of the British Admiralty, the single screw sloop of war, H.M.S. Egeria was offered for sale at Victoria, Sept. 18 and 19, together with one 28ft. steam cutter and other equipment. She is 160 ft. long, with beam 31ft. 4 ins., and is equipped with engines of 120 h.p.

A press dispatch from Mirror Lake, Sept. 6, stated that J. C. Gore, Superintendent, C.P.R. British Columbia Lake and River Service, accompanied by some Great Northern Ry. officials, inspected the steamboats International and Kaslo, which are controlled by the G.N.R., with a view to purchase.

C. H. Nicholson, Manager, G.T.P. Pacific Coast Steamship Co., announced recently that the steamships Prince Rupert and Prince George would be equipped with oil burning apparatus, at the close of the summer season, and that the company would construct large capacity oil storage tanks near the Main St. docks.

Robert Ward and Co., Victoria, are applying to the Governor General in Council for approval of the plan and site of a proposed wharf to be built in front of lot 1299, Lot 46 Beckley Farm, Victoria. The necessary plans have been deposited with the Minister of Public Works, Ottawa, and in the Land Registry Office, Victoria.

The Vancouver Harbor and Dock Extension Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $10,000,000 and office at Vancouver, to build, own and operate steam and other vesels, to carry on a general ship owning and forwarding agents' business, to build, own and operate wharves, docks, dry docks, warehouses, etc., and for other purposes.

J. A. Thomson, Dominion Government Steamboat Inspector for British Columbia, stated recently that since 1889, the tonnage of vessels on the Slocan, Kootenay and Arrow lakes has increased from under 100 to over 8,000 tons. In 1889 the largest steamboat on the lakes was the Galena of 47.64 gross tons, now the largest is the C.P.R. steamboat Bonnington of 1,700 tons.

The C.P.R. has added another transfer barge to its car ferry service. It was built at Esquimalt, and is stated to be the first steel barge built on the Pacific coast. It is constructed on the Isherwood longitudinal system, giving greater strength and additional space. It will carry 15 loaded cars, and has four hatches for cargo. It is equipped

with strong derricks and gear for quick transfer. It is named Transfer No. 3, and its dimensions are: length, 254 ft.; breadth, 42 ft.; depth, 4 ft., with capacity for 1,200 tons of cargo.

Judgment respecting the loss of the s.s. Iroquois, off Sidney, B.C., Apr. 10, was given by Justice Martin, assisted by Capts. Neroutsos and Reed as nautical assessors, Sept.. 14, when the certificate of the master, A. A. Sears, was cancelled, that of the engineer, W. Thomson, suspended for nine months, and that of the mate, J. Isbister, for six months. Regarding the master, the judgment declares that the harsh comments on his conduct after reaching shore were not justified by the evidence, but he failed to perform his duty in regard to rescue work and stowage of cargo, and also failed in his ability as a seaman and master. The Inspector of Hulls is blamed for not insisting on suitable alterations to vessels.

The Wreck of the s.s. Amethyst

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash, and Capt. F. J. Thomson, Superintendent Canadian Northern Steamships, as nautical assessors, held an investigation at Quebec, Aug. 26, into the cause of the stranding and the loss of the s.s. Amethyst off Mutton Head, in Trepassey Bay, Nfld., on July 22. The Amethyst was a single screw steel built vessel, whose speed was from eight to nine knots. She was registered in Montreal, the owner being Dr. J. P. L. Fiset, and was engaged in transportation of freight and a limited number of passengers, between Montreal and the Maritime provinces and St. John's, Nfld. Her crew numbered from 18 to 20 and her tonnage was 1,400 gross and 892 net. She was drawing 13 ft. aft and 7 ft. forward on her fatal voyage.

The master, O. C. Bernier, deposed that he is the holder of a Canadian certificate of competency, issued in 1883, and that the Amethyst left Sydney, July 20, and that on passing Flat Point at 7.30 a.m. a departure was taken, the log was put over and set at zero, and although enveloped continually in a dense fog the vessel proceeded at full speed on a southeast by east half east course. At 4 a.m. on the 22nd a sounding, which recorded 72 fathoms, was taken, but this is contradicted by the log entry reading "55 fathoms," which latter, however, the master declares is incorrect. After a lapse of approximately four hours, without an additional cast having been taken, the indistinct sound of a fog signal was heard, whereupon the master, with an unverified position, forthwith accepted the vague sound as Cape Race and proceeded accordingly. Herein, however, rested the error which lost this ship, for the sound which came to him, as he now admits, was Cape Freer, but at the time its existence being unknown to him, although he had heard as long as a year previous of the proposed Cape Freer signal, he proceeded in an almost impenetrable fog at full speed under the belief that it was Cape Race. But a brief period elapsed before the captain and others observed that the ship was heading for and almost upon the rocks, whereupon the order to reverse was promptly given, but almost simultaneously with this order or immediately following it the vessel struck, and the engines being kept full astern for a period ranging from 10 to 15 minutes the gravity of the vessel's position was realized by the master, who then ordered full ahead with the object of beaching her. A signal for assistance was sounded, and the boats ordered to be lowered and the crew quickly manned them and abandoned the ship without instructions from the captain to do so. Tow vessels in the vicinity responded to the call for assistance and succeeded in salving a large number of the live stock, as well as a portion of the general cargo from the then partly submerged vessel, which work could have been accomplished more satisfactorily and with greater completeness had the crew rendered the assistance their duty called for. Interrogated as to the navigation instruments at his disposal on the trip, the captain declared that there was but one compass, so enclosed within the wheelhouse that the deviation could not be ascertained by planetary observation, and that he relied exclusively upon the courses previously steered and the bearings of known points of land to navigate his ship. The inadequacy of the ship's equipment in this respect was brought to the owner's attention by the master, but the desired improvement was not affected. Other witnesses corroborated the captain's testimony both as regards the weather conditions and the manner in which the ship was navigated, and the second officer declared that as they believed the ship would sink immediately, they sought refuge in the boats and abandoned her, he adding, however, that the master was one of the last if not the last to leave the disabled ship. When he, the second officer, left the vessel in the boat only part of the Amethyst was above the water and the morning following she was no longer visible.

John S. Conradi, M.I.M.E.

The court finds that as the Amethyst was inadequately supplied with navigating instruments, the captain instead of suggesting the need of additional aids in this respect to the owner, who was not a mariner and therefore unaware of its importance, should have insisted upon the vessel being properly equipped for its safe navigation. Furthermore, that the master by his own admission, failed to exercise the caution and the navigating skill which the circumstances called for and that too much reliance was placed upon the infrequent sounding of an unreliable lead line. Also, that the log was improperly kept and that the captain, when he heard the sound, which he admits to have been indistinct, should have taken the necessary means of authenticating his supposition, which action would have disclosed his error, instead of forthwith concluding that the signal which he heard was Cape Race and none other. In view of the fact that the master of the Amethyst has already been in command of two vessels which met with disaster, the present ship being his third total loss, the court orders that his certificate be suspended for 18 months from Aug. 26, 1911, to Jan. 26, 1913. The first officer, Oscar Mercier, who in a measure is also responsible for the careless method in which the Amethyst was navigated, cannot be exonerated, and in view of his negligence in this respect, and for his unpardonable indifference to a subpœna served upon him by the court, which action on his part is akin to contempt, his certificate is suspended for six months from Aug. 26, 1911 to Feb. 26, 1912.

The Polson Iron Works Management.

John S. Conradi, who has been appointed General Manager of Polson Iron Works, Ltd., Toronto, and who will have the active management of the present plant, and of the construction and operation of the floating dry dock now under construction, was born in Glasgow, Scotland, and is 41 years of age. He commenced his engineering career in the workshops of the late firm of Maudsley, Son & Field, of Westminster, engineers and boiler makers, who supplied propelling machinery for a large number of British battleships and cruisers, and it is said that many mills in Great Britain are still running with engines built by them a hundred years ago. To gain experience in the running of marine engines and handling and care of boilers under actual running conditions, he joined the Ross Line of steamships sailing to Australia, South America, and the Gulf of Mexico and Canada. After four years of this experience and obtaining Board of Trade certificates, he entered the service of John I. Thornycroft Co., of Chiswick, Southampton and Basingstoke, shipbuilders and engineers, remaining with them 14 years, for six of which he was Superintendent and Manager and was responsible for the speed and steam trials of many speed record breaking vessels built under his supervision. He also had to do with the building of the first destroyer for the British Admiralty and the stern wheel steamboats built for relief of Khartoum in the Nile expedition. He is said to have been the first person in England to adopt pneumatic tools in the construction of marine boilers. The first steam turbine built and installed in a war vessel was carried out during his service with the firm. Five years ago he entered the Vickers Co.'s service as General Manager of their plants at Erith, Crayford and Dartford, the manufactures including ordnance, ammunition, rifles and motor cars. He was elected a member of the Institute of Mechanical Engineers in 1892.

Industrial Opportunities in Nova Scotia and New Brunswick, a booklet issued by the Intercolonial Ry., contains useful information for those who desire to establish new industries, or to invest capital in the exploitation and development of natural resources. The advantages of many parts of New Brunswick and Nova Scotia are presented in detail, together with many facts that ought to impress those who have capital ready to invest in a new field that is certainly rich in opportunity. The booklet will be mailed free on application to the Industrial Department, I.C.R., Moncton, N.B.

The Crows Nest Southern Ry. has authorized H. A. Jackson, Assistant Traffic Manager, Great Northern Ry., St. Paul, Minn., to file tariffs of tolls, under the provisions of the B.C. Railway Act, 1911.

Stranding of the s.s. Princess May.

An enquiry into the causes of the stranding of the C.P.R. s.s. Princess May, on Sentinel Island, Alaska, on Aug. 5, 1910, was held recently at Victoria, B.C., before Mr. Justice Martin, assisted by Capt. A. H. Reed and Capt. S. Cullington as nautical assessors. The following judgment was delivered Aug. 31:—

The court finds that the chief officer, John Richardson, who was officer of the watch, was solely to blame for the accident, which was due to his negligent and careless navigation to such a degree that his certificate should be suspended, but in view of the fact that more than a year has elapsed from the time of the stranding to the holding of the investigation, during which he has entered the service of another employer as master mariner, wherein he appears to have conducted himself satisfactorily, the court is of opinion that it would work a hardship to visit the consequences of a somewhat stale charge as chief officer upon him, and therefore considers that the justice of the case will now be met by a suspension of 24 hours only, but this formal suspension will nevertheless be recorded upon his certificate as a constant warning to him in future of his duty to the public. The court observes from the evidence that the master, John MacLeod, was required to keep a regular watch, but in view of the fact that the master is at all times burdened with the responsibility of the ship and is frequently called upon through stress of weather and other circumstances to remain on watch for long periods, causing much physical and mental strain, we consider that in the public interest he should not, in vessels where two certificated officers are carried, be required to keep regular watch, but to take due opportunity for rest during intervals of fine weather and favorable conditions, in order that he may exercise his faculties in the best possible manner when conditions require him to take charge of the vessel. The present unsatisfactory state of affairs could be remedied by allowing officers who are fully qualified to take regular watches during ordinary favorable conditions.

The Stranding of the Yacht Ida May.

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Captains B. Couch and R. A. Butt, as nautical assessors, held an investigation at Quebec, Aug. 24, into the cause of the stranding of the yacht Ida May, of Morrisburg, N.Y., on the north of the east end of the Island of Orleans, near Quebec, on Aug. 20. They found that the pilot, Isiode Noel, failed to utilize in a practical

CITY OF TORONTO.
TENDERS
for
OVERHEAD AND POLE LINE MATERIAL.

Separate or bulk tenders on prescribed forms will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, Canada up to noon on Wednesday, Oct. 18, 1911, for the supply of overhead and pole line materials, which include the following: No. 2/0 trolley wire; 300,000 c.m. feeder wire; steel tubular poles; span wire, hangers, ears, insulators and pins, etc.

Specifications and forms of tender may be obtained on application to the Department of Railways and Bridges, City Engineer's Office, Toronto.

Envelopes containing tenders must be plainly marked (on the outside), "Tender for Overhead and Pole Line Material."

The tenderers shall submit with their tenders the names of two sureties (approved of by the City Treasurer, not members of the City Council or officers of the Corporation of the City of Toronto), or in lieu of said sureties, the bond of a guarantee Company approved of as aforesaid.

The lowest or any tender not necessarily accepted.

G. R. GEARY (Mayor),
Chairman of the Board of Control.
City Hall,
Toronto, Aug. 31, 1911.

The Grand Trunk Railway Company of Canada.

Notice is hereby given, that the Ordinary Half-yearly General Meeting of the Grand Trunk Railway Company of Canada will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday, the 26th day of October, 1911, at 12 o'clock noon, precisely, for the purpose of receiving a report from the Directors, and for the transaction of other business of the Company.

Notice is also given that a Resolution will be submitted to the Meeting to authorize the Directors to exercise the powers conferred by the Grand Trunk Act 1911, as amended by the Grand Trunk Amendment Act, 1911.

Notice is also given that the Transfer Books of the Company in London and Montreal will be closed from Saturday, the 23rd. day of September, to the day of meeting, both days inclusive.

By order.
ALFRED W. SMITHERS,
Chairman,
H. H. NORMAN,
Secretary.
Dashwood House, 9 New Broad Street,
London, E.C., 15th September, 1911.

manner the aids to navigation in the vicinity of the stranding, which neglect is all the more pronounced in view of the exceptionally clear weather prevailing at the time, and furthermore, that when he undertook to pilot a vessel in waters with which he had not a thorough knowledge he ignored the grave responsibilities of his charge, in view of which the court held that he was careless and committed a serious error of judgment. He was fined $40 and warned that if he reappeared before the Wreck Commissioner he would be severely dealt with.

Vessels Removed from the Register.—The following vessels were removed from the Canadian register, during July, for the reasons assigned:— Steam—Belcarra, Vancouver, B.C., 172 tons, foundered; Belfast, Vancouver, B.C., 72 tons, burnt; Ganges, Vancouver, B.C., 15 tons, burnt; Maple Leaf, Peterboro, Ont. 17 tons, broken up; Ouangondy, St. John, N.B., 99 tons, broken up; Saturna, Vancouver, B.C., 15 tons, wrecked; Western Extension, St. John, N.B., 169 tons, broken up. Sailing—Damaraland, Liverpool, N.S., 199 tons, abandoned at sea; Frances, Shelburne, N.S., 68 tons, transferred to Newfoundland; Minnie Cline, St. John, N.B., broken up; Nautilus, St. Andrews, N.B., 19 tons, broken up; Nettie M.G., Halifax, N.S., 32 tons, transferred to Newfoundland.

LOCOMOTIVE BOILER CONSTRUCTION AT THE CANADIAN LOCOMOTIVE CO.'S WORKS.

By Frederick H. Moody B.A.Sc.

Probably every reader of this article if he stops but a moment to consider, will agree that of all the branches of the metal working industries, less change has taken place recently in the art as applied to boiler making than to any other branch. The tools, with but few exceptions, are almost exactly the same as those developed years ago in old country naval yards for ship-plate and marine boiler work. The one prominent exception to this lack of development is that of the advent of the pneumatic tool as a handy and indispensable adjunct of the boiler shop for rivetting and chipping purposes.

Various reasons may be assigned to this seeming lack of improvement, the most prominent of these being the fact that plate-working machinery reached a high stage of perfection years ago, leaving less room for improvements—different from the case of machine tools where the introduction of high-speed steels practically revolutionized the industry.

The outcome of the few changes in boiler shop equipment has been that boiler shops in general have had a marked tendency to deteriorate from every standpoint, with the possible exception that quality of production has probably remained at the same steady point. The high quality of work which many of these old-time shops were capable of producing, is worthy of particular note.

Within the past few years, some remarkable changes may have been noticed. Throughout Canada, nearly all the leading boiler-making plants have been entirely rebuilt on a larger scale. From a production equipment standpoint, the shops are much the same as ever, the big change occurring in the layout, and general facilities for the expeditious handling of the material in a more systematic manner, the routing of the boiler through the shop being more or less automatic, making possible much more rapid production.

Such is the case of the Canadian Locomotive Co. at Kingston, Ont. This company, which has always been noted for the high quality of its product, was, until within the last couple of years, handicapped in the rapid production of work by an old-fashioned shop, which, while well equipped, was not designed according to a Taylor or any other system where rapid and at the same time efficient, production is the principal feature.

The demand for locomotives having increased to such an extent as to make the old plant inadequate, it was finally decided to build a new shop of the latest and most modern design, equipped with the very best machinery and appliances of all kinds, it being necessary to maintain the high reputation for quality while at the same time decreasing the cost of the output.

Description of Plant.

The Canadian Locomotive Co.'s plant is located on the Kingston waterfront. Previous extensions to other departments of the business having absorbed most of the available property, a wide pier was built out into the water, the outer end of the new locomotive boiler shop being located on this made land.

A comprehensive view of the main part of the boiler shop is given in fig. 1, a view looking from the outer end of the shop toward the main portion of the works. The section shown in the illustration is 380 by 60 ft., with a height of 35 ft., and is of the typical all-steel, trussed-roof shop construction, excellent lighting being obtained from very large windows. The blank part of the wall is made up of wood sheathed outside with tin, presenting an imitation brick surface. To the right of the part shown, there is a flanging shop, 48 by 45 ft., built on as an addition. This shop forms a part of the boiler shop with no intervening wall, and is of the lean-to type of construction.

George Bury,
Vice President and General Manager, Western Lines, Canadian Pacific Railway.

The boiler shop proper is supplied with two 35-ton Shaw electric cranes as indicated, these being more than sufficient for all needs. They are of sufficient capacity to lift the heaviest boiler and carry it bodily down the shop to the large hydraulic rivetter at this end of the shop, the photograph, fig. 1, being taken from the platform of this rivetter. It is of the Chambersburg Eng. Co.'s manufacture, with a throat depth of 14 ft. and 4 ft. 6 in. gap, and having a controlled range of pressures up to 225 tons for the large size rivets. The working pressure is about 100 lbs. Alongside is located the pump and accumulator, both being sufficiently large to supply a hydraulic flanging press and small hydraulic riveter as well. The latter is located alongside the large one.

To the left, just out of the picture, there is a twin punch, each punch being supplied with a small jib, one of which shows in the photograph. Along the left wall, just visible in the picture, there is a large plate-trimming planer The immediate foreground is the lay-out floor. Along the right wall, there are a couple of radial drills for tube-sheet work, and also a flange punch. Along the left wall there are a couple of cold cut-off saws. One of the finest pieces of the equipment is the large Hills & Jones roll in the middle foreground. This has rolls 22 ins. diameter, capable of bending plate up to 1½ in. and is driven by a 60 h.p. motor. It is of a modern design, capable of bending plate from the very edge. The construction consists of two rolls in vertical ways, between which the plate passes, with a third or bending roll set in ways at an angle to the perpendicular. The nearness of this third to the other rolls determines the curve. But few of this type of roll are to be seen in boiler shops. The background in the photograph is the erecting floor.

The flanging shop addition already mentioned, contains, as shown in fig. 2, a large flanging press, plate-heating furnace and flanging forge.

Construction Work.

The main feature of this article, i.e., the actual construction practice as followed by this company under the supervision of W. J. Robinson, Boiler Foreman, is next to be dealt with. As the initial step, the various plates entering into the boiler make up, are laid out in that section of the shop in the immediate foreground in fig. 1. On being laid out, they are all brought to the near end of the shop by the cranes to a convenient position for the jibs at the punches, which are located to the immediate left as before mentioned, to pick up. All plate work that has any flanging, is carried across to the right by the crane, and deposited in the flange shop. All other plate work is carried back down the shop to the edge-trimming planer.

Consider first the flanging operations: The piece operated on in fig. 2, is the front tube sheet. These sheets come from the mill in circular form, so that up to this stage they require no work in the boiler shop. The heating furnace and arrangement for transferring to the flanging press are well designed for quick work. The furnace doors, operat-

ed by air, are controlled by levers located with the flanging press levers to the rear of that machine convenient for the operator. The heated plate, pulled out by hooks from the furnace on to a simple metal stand, is lifted with special hoop hooks by an air hoist on an I-beam track, running across to the flanging press. The plate is here dropped on to a couple of rollers, and shoved on to the lower clamping plate of the press. This plate is then raised by the operator, lifting the tube sheet up and clamping it to the upper clamping plate, the male part of the die, secured to the upper tube of the press by bolsters. The female part of the die, supported on bolsters on the lower table, is forced up over the projecting edge of the tube sheet by the whole lower table being raised; this forms the flange. The table and clamping plate are then lowered, plate removed, and the operations repeated. The action being familiar to all, requires no further description. The flanged edge and tube sheet are next laid out and the sheet taken first to the flange puncher and then to a radial drill to have the tube holes drilled.

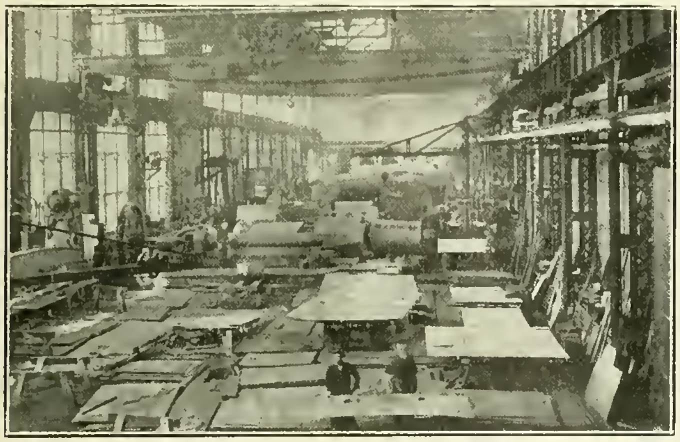

Fig. 1—View of Boiler Shop, looking from Outer End towards the Assembling and Erecting Floors.

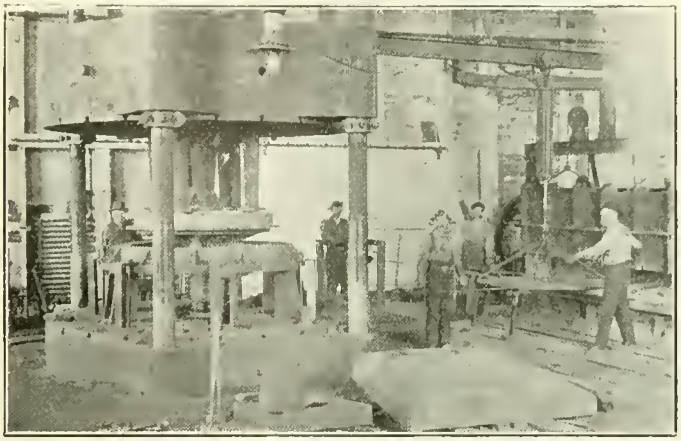

Fig. 2—Arrangement of Heating Oven and Hydraulic Flanging Press.

The art of using the flanging press for all kinds of flanging work has been developed to a high degree, a wide range of dies having been made for flanging up various parts of the boiler, such as tube sheet, face sheet, back sheet, back tube sheet, throat sheet, steam dome and the various pipe flanges. It is a question that only the condition of the order can decide, the question of whether or not the order contains enough locomotives to make it pay to make the necessary pair of dies for the press. This question has been settled so often in the affirmative that a large collection of dies for many parts on boilers of varying sizes, have been made from time to time.

Quite a number of sizes of dies have been made for hydraulically flanging the sides of the throat sheet. Where this is possible, the flange can be made in one heat. In the case of the throat sheet shown in fig. 3, which is one of an order of six boilers, it was considered inadvisable to make hydraulic dies, so only a single block of the requisite shape is made for the flanging operation. The sheet, originally flat, trimmed to the correct size, after being laid out to be punched for the barrel-flange fit, is removed to the punch for this purpose. From there it goes to the rolls, where the bends are given to it, and it is then brought on to the flanging shop. One edge at a time is heated in a flange fire, and in from four to five heats the flange is formed, all the work being done by the sledge hammer. In fig 3, the plate is shown fresh from the flange fire in the background, after the third heat. The sheet is brought across by a crane running on an I-beam. It is lowered on to the flange block and located by pins dropped into two previously laid out and punched holes in the sheet, which register with similar holes in the block. The man to the right is shown inserting one of these pins. The clamp beam is quickly lowered by knocking out supporting end blocks, and tightening down the nuts on the guiding bolts. The four men in shifts of two, gradually hammer down the flange as desired. The flange for the barrel fits is similarly formed when no hydraulic dies exist.

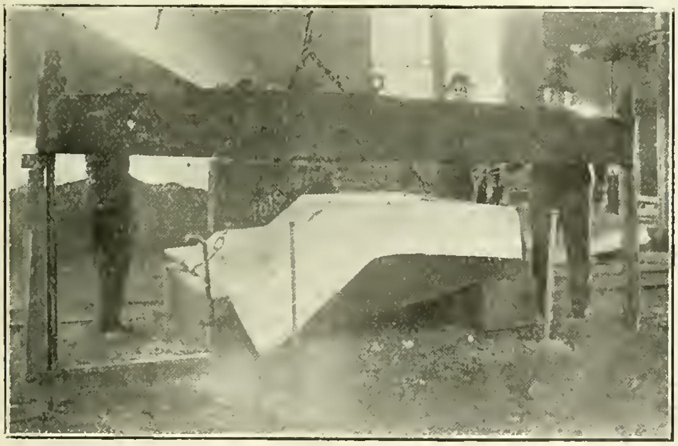

Fig. 3—Side-flanging a Throat Sheet by Hand on a Formed Flanging Block.

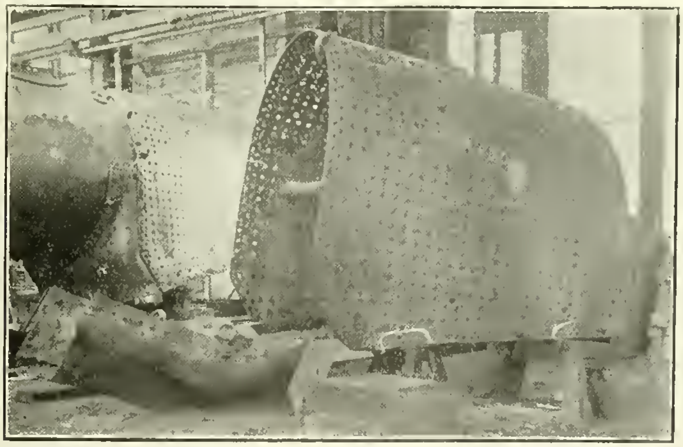

Fig. 4—Operation of Fitting Throat Sheet and Face Sheet Corners to Mud Ring.

The various component sheets of the boiler that require bending, after being laid out and punched, are taken to the rolls before referred to, and bent to the desired diameter. In the case of the barrel, the various straight and tapered courses after being thus punched and rolled, are fitted together on the floor in their proper relation to each other and held together as a unit by bolts in the circular seams and along the lapped seams. The front tube sheet is also bolted up into this barrel section. When thoroughly bolted together the whole unit is carried down the shop to the hydraulic rivetter, where the 20-ton hydraulic crane over the rivetter raises the barrel into position for rivetting, all the barred rivets being thus inserted. This process of forming the barrel is often slightly varied, depending on the way the different parts are advanced. The different courses may be independently butt strapped, and these courses then rivetted together. The process is but slightly affected by such changes in the routine.

Every plate as it leaves the rolls, is carried further on down the shop. Such is the case of the outer wrapper shown in fig. 4. The operations carried on in this position, are those of fitting the corners of the throat sheet and face sheet to the mud ring. The mud ring finished and drilled in the machine shop, is placed on low horses, and the outer wrapper bolted to it as indicated. The throat sheet, placed on the ground in front of the wrapper, is swung up into position with regard to mud ring and wrapper, and clamped there. The throat sheet has no holes in it up to this point, the reason for which will be explained presently. An oil torch directed against the corner of throat sheet where it fits over the mud ring, heats it to a working heat. This is done that the throat sheet may be worked directly into the exact shape on the mud

ring over which it is to fit. Both corners are similarly treated, insuring a close fit. The face sheet, which, after flanging, is laid out and punched, is bolted into location on the mud ring and also tied to the latter by working hot.

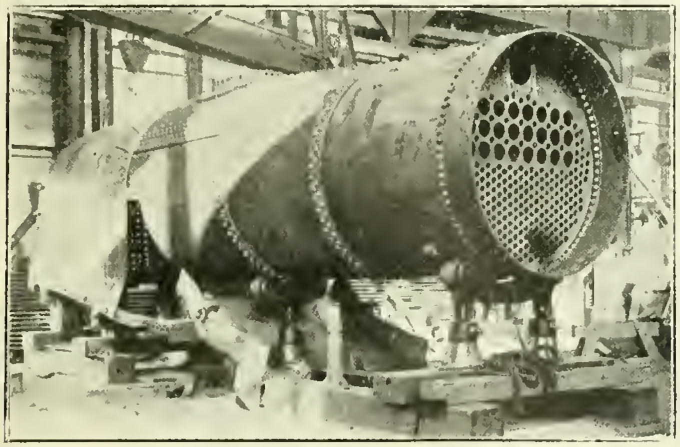

Fig. 5—Assembling Stand for Accurately Locating the Boiler Units.

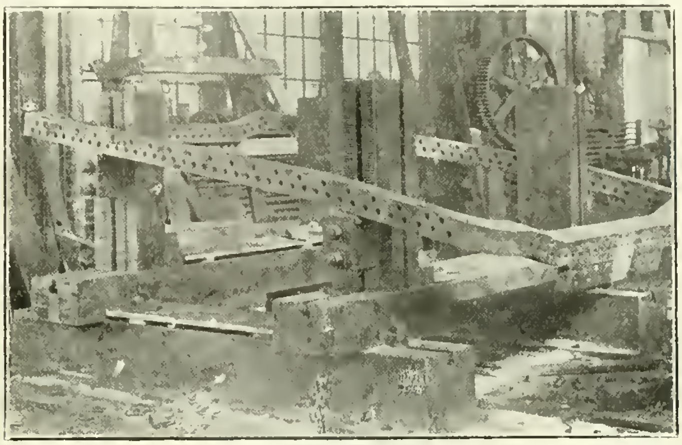

Fig. 6—Detail View of Rear Part of Stand which supports Mud Ring.

The next step contains what is probably the most ingenious device in the whole process of manufacture and assembly. This device is the assembling stand shown in fig. 5, the next stand down the shop from that in fig. 4. The barrel completely rivetted up, is horizontally located on the two roller stands shown in fig. 5. These stands are vertically adjustable,. being constructed like screw jacks. Both these stands are rigidly located on a concrete base, both having lengthwise adjustment and the front one crosswise as well. These adjustments accommodate all sizes.

The rear section of the assembling stand of fig. 5, is best shown in the closer view, fig. 6. Two stands parallel with the boiler centre line on a concrete base, carry longitudinally adjustable cross-beams on which are vertical supports, adjustable crosswise. Each of these four supports carries a vertically adjustable bracket. Through the various adjustments, the mud ring may be located in its exact location with regard to the previously located boiler barrel, both vertically and crosswise. The outer wrapper is then slipped over the mud ring and bolted to it. The wrapper and barrel are then dowelled and bolted together. The advantage of this type of assembling stand is that once the first boiler is properly adjusted, the following boilers on the same order will slip into place without further adjustment of the device, dropping the parts into the same locations as those previously occupied by the preceding boiler parts.

The barrel, wrapper and mud ring are thus far exactly located with regard to each other. Customarily in locomotive boiler practice, the throat sheet, like all the other parts, is independently laid out from scale. The practice of this company is different in this particular. The multiplicity of joints occurring around the throat sheet, and the fact that the throat sheet is an awkward piece to lay out accurately to scale, all tend to introduce errors, so that if each were independently made, punched and rivetted together without further fitting, the boiler might not line up properly. The method here used overcomes this. The blank throat sheet is slipped under the boiler on the stand, as shown in fig. 5, and fitted up in to its proper location with regard to its three joining members, and clamped in that location while the holes are laid out on it from the previously punched holes in the assembled pieces. The throat sheet thus laid out, is removed, punched and put back in location. The matched holes are then reamed as with all other joints.

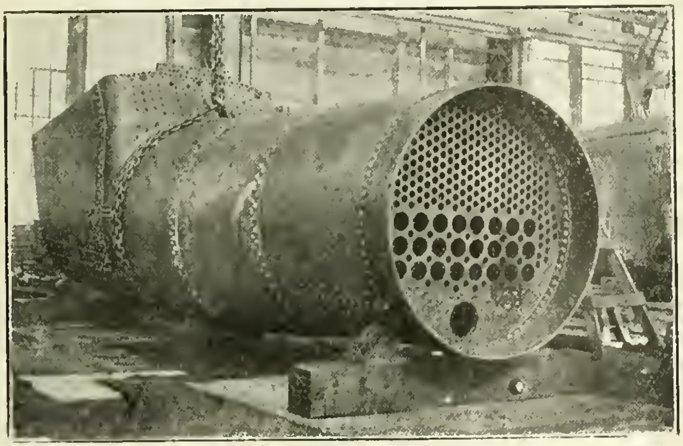

Fig. 7—Boiler on Stand after Face Sheet and Mud Ring are put in place.

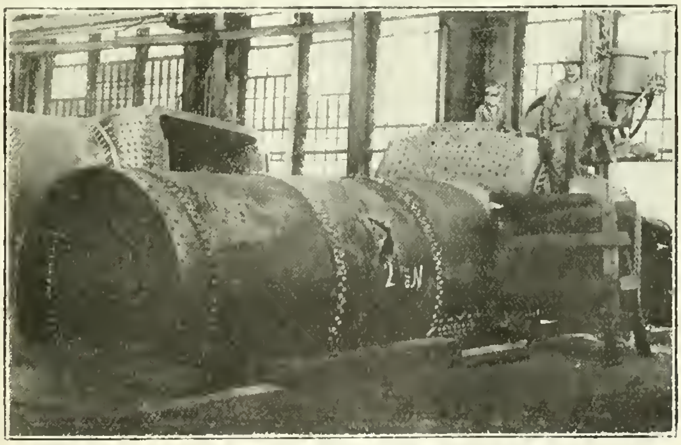

Fig. 8—Pit Stand where Mud Ring is Rivetted and Firedoor Opening Fixed.

The whole structure is then securely bolted together as a unit, when, after loosening from the mud ring, the barrel, wrapper and throat sheet are taken to the hydraulic riveter. This is as far as the hydraulic riveting can be carried, and is more than can commonly be obtained, the system of assembling making it possible.

The next step is that of putting the fire box in place. The boiler being through with the assemhling stand after hydraulic rivetting, is placed on the next stand, as in fig. 7. This stand consists of rollers secured to wooden beams, the latter resting on concrete bases. The firebox, previously assembled and rivetted up in the usual manner, is loosely slipped into position, the boiler meanwhile lying on its back in the stand. The next step is that of putting in the face sheet and rivetting around the outside seam. This is done on the same stand. From the narrowness of the water leg, this rivetting is rather difficult, but is accomplished with a pneumatic rivetting hammer and long holding-on block. The rollers make it very convenient, during this operation, turning the boiler to the most convenient location.

The boiler is then rolled on its back again and the mud ring slipped into place in the bottom of the water leg, and securely bolted all around. Fig. 7 shows all this completed.

The boiler is then lifted bodily to the next stand shown in fig. 8. This stand is similar to the last one, only to facilitate working, the whole is lowered into a shallow pit. Overhanging this and the next stand, there are two jib cranes. For this stand, the jib supports the air rivetter for rivetting the mud ring into place. In this same location, the firedoor is rivetted up. It frequently so happens that the fire-door projection for the back sheet does not fit the opening in the face-sheet, so that the oil heater is again impressed into service and the inner opening stretched out to fit the outer, when the two are rivetted together.

The boiler is now moved on to a stand similar to the one previous to the last, as indicated in fig. 9. In this position, all the staybolt holes are tapped by air motor, the staybolts screwed in, and the heads cut off by the air clipper shown at work in fig. 9, supported from a jib. The staybolts are then rivetted over with a hand hammer and finally gone over with an air hammer. In this lo-

cation, all the flexible staybolts are also inserted. Likewise many of the boiler trimmings, such as pipe flanges, are fitted on.

On the completion of these steps, the boiler is moved on to the next stand, which consists of two wooden horses. In this stand, the boiler is kept in a vertical position. Here, the smoke-box is rivetted on, smoke-box trimmings added, tubes inserted and beaded and the safety holes drilled in the staybolts in the manner indicated in fig. 10. The device for this consists of two hoop structures over the firebox with a cross piece between, against which the breast drill bears.

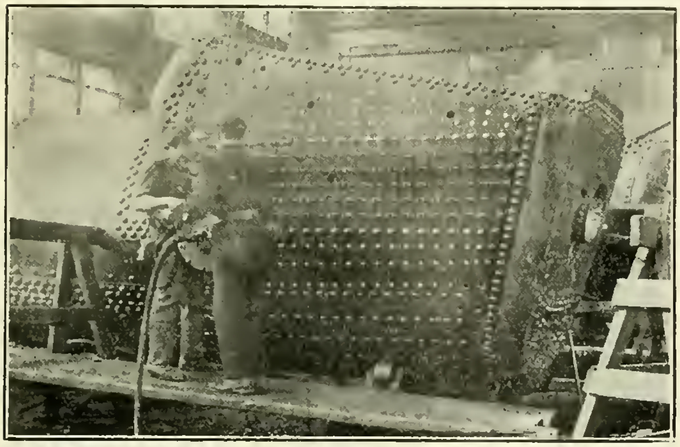

Fig. 9—Stand where the Boiler receives all the Staybolt Operations.

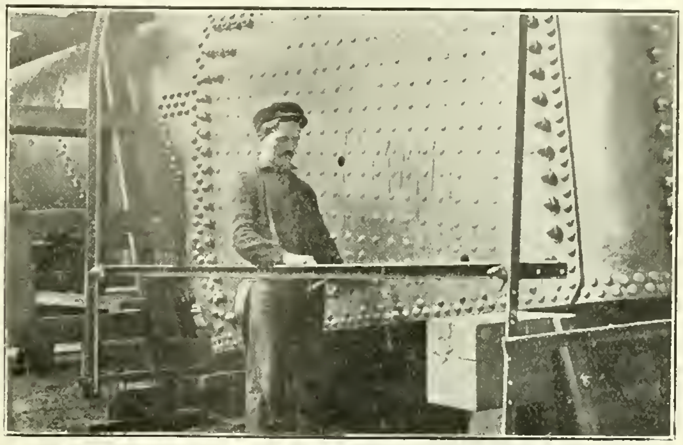

Fig. 10—Drilling Safety Holes in Staybolts with Simple Stand.

The boiler is now completed and is moved on to the next, which is the testing stand. Here all the pipe fittings and connections are attached, and the boiler subjected to a specified hydraulic pressure. This pressure is obtained by a powerful injector.

This end of the shop where the boiler is now located, is next to the erecting floor over to which it is now passed, to be built into the completed locomotive.

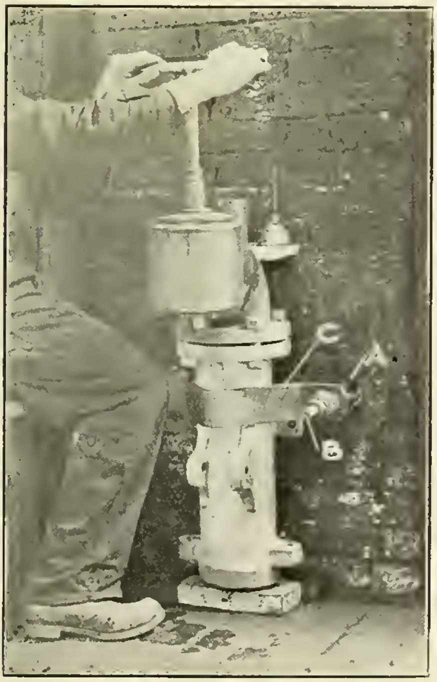

Fig. 1.—Throttle Valve Stand Clamp used in Valve Grinding.

SUMMARY.

What impressed the writer most particularly in the gathering of this information, was the system that entered at every step. The reader will, no doubt, have noticed how the material and finished pieces, seldom covered the same ground twice, everything gradually working from the lay out floor at the far end of the shop, up to the erecting floor end. By the adoption of some such system as the one just described the operating costs of a plant are very materially reduced, the handling of the material from point to point being reduced to a minimum. The management is to be congratulated on producing such a well designed shop.

◆

Steam Pipe Kinks at the Pere Marquette St. Thomas Shops.

The idea of securing the throttle valve stand pipe while grinding in the valve, as shown in fig. 1, is due to H. Francis, who uses it for the purpose mentioned in the Pere Marquette Rd. shops at St. Thomas, Ont.

Ordinarily, the standpipe is stood up in some corner while the valve seats are being ground, a rather shaky support being thus obtained. When the operator tests the tightness of the fit, he is often unable to determine whether the "wobble" is due to the valve seats not being correct, or to the insecurity of the standpipe. This difficulty led Mr. Francis to devise this simple clamp. Two eye-bolts A pass through the brick wall on one side of the erecting floor, and are securely bolted, the eyes being on the inner side. Each of these longer eye-bolts has a shorter one, B, which hold the vee-clamp C over the stand pipe, tightening it up against wooden vee-blocks on the wall, securely holding the pipe. The standpipe being thus properly secured, it is quite possible to trace any looseness to its only cause—the poor fit of the valve seats. In addition to this advantage, the standpipe is made much more convenient for working upon.

Another kink, as developed by Mr. Francis, for use on the steam pipe, is illustrated in fig. 2. The Pere Marquette, like a few other roads, instead of casting the ball joint of the smoke box steam pipe integral with the end of the steam pipe, finishes the end of the pipe flush, and grinds a piece to this surface, this ball-joint piece having the ball face to give the ball and socket contact. This detachable piece is the piece A in fig. 2. The operation shown is the grinding together of this piece to the face B of the steam pipe.

To facilitate operations, a hole has been cut into the floor, into which the pipe is set on end. This feature is worthy of notice, as the curved pipe when stood up elsewhere always proved a menace to the workman's limbs. In this hole, the pipe is properly secured. The principal point in the device is the chuck for holding the ball piece A. It consists of a steel plate C, to which three wooden jaws D are slidably attached; these may be secured in any desired position by the nuts shown, these nuts passing through a wooden jaw and holding plate. Radial movement of the bolt is permitted by slots in this piece C. To force out the jaws on the piece B, there is a cone-shaped piece on a bolt in the same line as the motor stem, but invisible in the photograph, being inside of the pipe bearing on the inside of the jaws. A thumb nut on the bolt tightens up the cone, forcing out the wooden jaws. This makes a much neater and handier rig than is commonly used for such jobs.

◆

J. Ellis Barker, writing in the Nineteenth Century, says, the average income of railway workers, exclusive of station masters, inspectors and clerks is $5.62 in England and Wales, $5.36 in Scotland and $4.46 in Ireland.

Special Features in Mounting Car Wheels at the Michigan Central St. Thomas Shops.

In the M.C.R. car wheel department at St. Thomas, under Henry Batiste, Foreman, Blacksmith and Wheel Shop, with Neil Marple, as General Foreman, Car Department, there have been introduced several interesting little features in the operation of mounting car wheels on their axles. The practice of these shops in this particular, seems to be superior to that found in the majority of places, although all the parts of the equipment are standard in form.

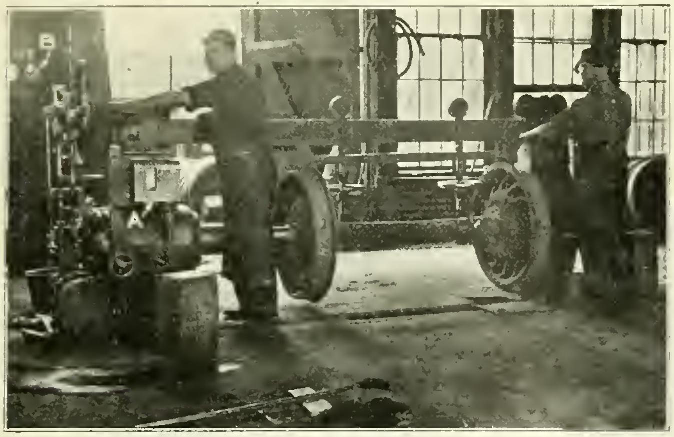

Fig. 1.—Car Wheel Press with Recording Pressure Gauge.

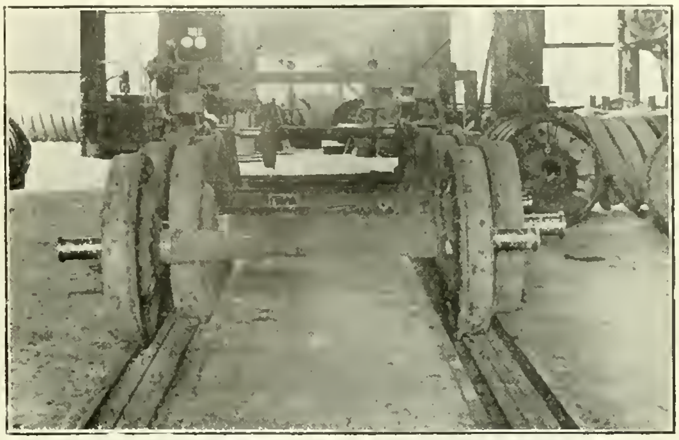

Fig. 4.—Track for Wheels Leaving the Press.

An ordinary hydraulic wheel press is employed for pressing on the wheel, the operation being shown in fig. 1. Two or three minor kinks in the loose assembling of the wheels and axle, before placing in the press were noticed, which, while good in themselves, are not of sufficient value to illustrate.

The main point of difference between standard practice and that employed by the M.C.R. in the actual pressing-on operation, is the introduction of a recording pressure gauge to the ram end of the press, as shown at A in fig. 1. In common with all railways, the M.C.R. has drawn up tables of pressures required for forcing on wheels whether cast iron, wrought iron or steel. These tables are given herewith; the maximum and minimum pressures for forcing the wheel on are listed, the variation between maximum and minimum being also tabulated. These figures for the maximum pressure are based on a fit pressure of 8 net tons per inch of diameter of the fit for cast iron, and 9 tons for cast steel and wrought iron. The diameter used is the mean of the two diameters given in the fit column.

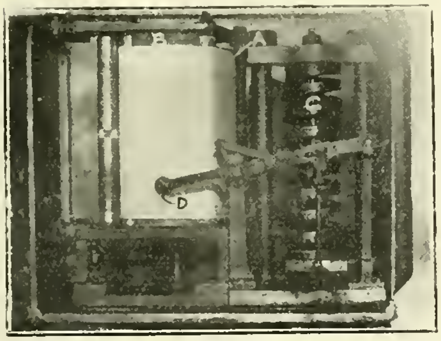

Fig. 2.—Mechanism of the Recording Pressure Gauge.

Before the use of the recording pressure gauge, the pressures were obtained by two indicating gauges arranged on the wall some distance away as shown at B, fig. 1. This gave no record of the forcing pressures used except those that were taken down for various points in the path of motion of the plunger while under pressure. To determine the degree of increment of pressure, or the uniformity with which the wheel is forced on, these noted pressures must needs be plotted if any correct knowledge of the quality of the fit be desired. If the resultant line be practically straight and inclined to the horizontal, it shows that the diameters of fit are uniform and that at no particular point of the forcing-on period does the load do anything but uniformly increase.

The recording gauge used is shown in fig. 2. A roll of section paper A passes over a plane surface B, winding from one roll to another, the paper receiving a motion to the left directly proportional to the movement of the car wheel over the axle hub during the forcing-on period, the movement being obtained through a string from the plunger attached to small gears in the bottom of the gauge drawing the paper between two knurled rollers. The arrangement on the machine is shown in fig. 3.

TABLE I.—Pressures for Cast Iron Hubs

9 — 9 7/16	68	83	15
9½ — 9 15/16	73	88	
10 —10 7/16	77	92	

Referring again to fig. 2, the hydraulic pressure acting under the heavy coiled spring C compresses the latter, the movement being directly proportional to the hydraulic pressure applied. Through the system of multiplying levers the movement is conveyed in a straight line, vertical motion, to the pen D pressing against the paper. The relative movement of the roll of paper over the plane surface, and the upward movement of the pen, traces a line indicative of the pressures in the press for every point on the path of the wheel on to the axle. Such a curve is clearly shown in fig. 2. This card would indicate that the quality of the fit is good, as a straight line is traced. The sectioned paper being adapted to the gauge calibration, the exact pressure at any point may be directly read off. The paper as it passes on to the receiving roll, has the number of the car wheel written on it by the operator, thereby forming a record for future purposes. This makes it impossible for an imperfect fit to pass the foreman, the recording gauge curves being there for his inspection at any time.

The manner in which the gauge is connected up is indicated in fig. 3. The string A, passing over several small sheaves, gives a motion to the paper roll the same as that of the plunger. A ratchet attachment on the paper-roll-carrying drum, prevents the roll running back, all motion being ahead. A pipe, B, leading directly from the ram cylinder, delivers to a small cylinder C, in which the plunger compressing the

gauge spring is attached. The arrangement is very simple and complete.

As part of the wheel mounting operation considered as a whole, it is interesting to note the wheel storage arrangement for the mounted wheels and axles as they leave the press. This is shown in fig. 4. It is customary in car wheel shops to merely run the wheels out on to the floor on completion which does not allow of a very orderly or compact arrangement. In the M.C.R. arrangement, two standard tracks are laid as indicated, just sufficient space being allowed for the wheels to clear each other. This arrangement has a twofold advantage it is possible to store a large number of wheels in a smaller space on account of the overlapping; and the fact that the wheels are on rails makes it possible for the operators to merely place the completed wheel on the rail, give a slight shove, and it will run some distance of its own momentum, whereas, without a track, the workman would have to shove the wheel to the place where it would be required.

Hot Punch for Hexagon Nuts at the Michigan Central St. Thomas Shops.

For the production of hexagon nuts under the drop hammer, John Sumner, the toolmaker at the M.C.R. shops at St. Thomas, Ont., has designed and built a die and necessary punches, all illustrated and described herewith. The idea was to construct a tool so that rectangular bar stock of a width equal to the hexagon flats, and a thickness equal to the nut thickness, might be employed. This has been successfully accomplished.

Fig. 1 shows the construction of the body and main part of the die, while figs. 2 to 4 show the main and auxiliary punches in the successive stages of operation; the same lettering is used in all four figures. As the illustrations show, the body consists of a steel block A, capped with a plate B, and having inserted in the bottom an annular die ring made of hardened steel. The block A is grooved the width and depth of the stock, the cap B forming a passage through which the stock is fed. Through both body A and cap plate B, there is a hexagonal hole D extending down to the inserted ring C.

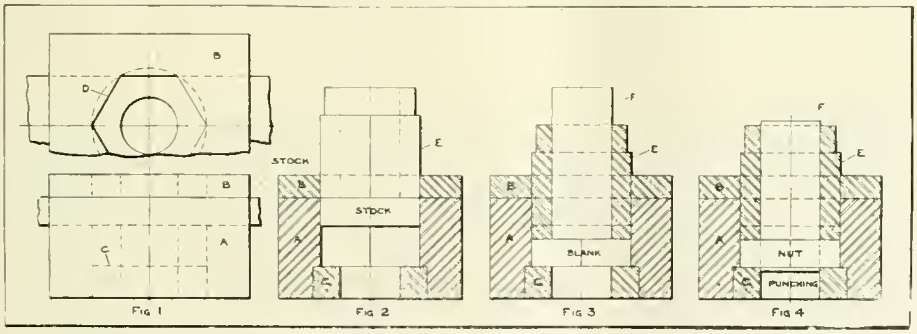

Fig. 1 to 4.—Hot Punch for Hexagon Nuts in Successive Stages of Operation.

Preparation for the first operation is shown in fig. 2. A hollow hexagon punch E, the size of the nut to be punched, is placed in the hexagon opening in the cover B on top of the stock. A blow from the steam hammer punches out a nut blank for the stock as indicated in fig. 3, the blank resting on the ring C. A round punch F, of the requisite size to leave stock for thread in the nut, is next placed in the corresponding opening in the hexagon punch E. Another blow from the hammer forces this blank centre punching through, leaving the finished forged nut as indicated in fig. 4. By removing the die ring C, which is made to fit loosely, the complete nut may be removed. The two punches are then removed, the ring C replaced, and the tool is ready for further use.

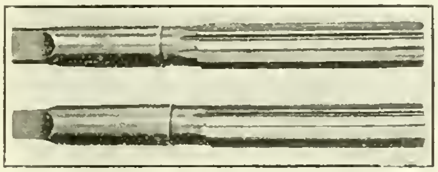
This tool is not as rapid as hot nut pressing machines, but is especially useful in shops where the quantity of work to be produced is not sufficient to require such a machine.

◆

Straight Reamers at the Michigan Central St. Thomas Shops.

While slightly foreign to railway work proper, the matter of tools and equipment is of sufficient importance to be considered at all times as bearing directly on the quality and quantity of production. In both classes can be considered the straight reamers made at the M.C.R. shops at St. Thomas, Ont., by John Sumner, the toolmaker.

Long tapered reamers with chip breakers have been known in the machine tool industry for years, and are, in fact, a standard product which can be purchased in the market. These M.C.R. reamers are on the same principle.



Thread-Ended Straight Reamers.

Straight reamers are often entered into their holes with difficulty, especially if much stock has been left for the reamer to remove—which is more often the rule than the exception in railway practice. Also, on account of the forcing necessary, the mouth of the hole tends toward an oval shape unless extreme care is exercised.

These reamers indicated in the illustration, are very simply made. They are merely the standard straight reamer with an ordinary flat top V-thread cut on the end of the reamer for a distance of upwards of an inch back from the point. This thread makes it possible to enter the hole easily, and the thread running up the reamer sufficiently far, straightens the reamer in the hole. By its use, it is a simple matter to make a perfect reamed hole.

During August, 23 employes were killed, and 27 were injured in the course of their work in connection with Canadian railways. Of the fatal accidents, 10 were due to being run over, nine to collisions, two to falls from locomotives, one to being struck by a train, and one to a driver jumping from his locomotive and receiving fatal injuries.

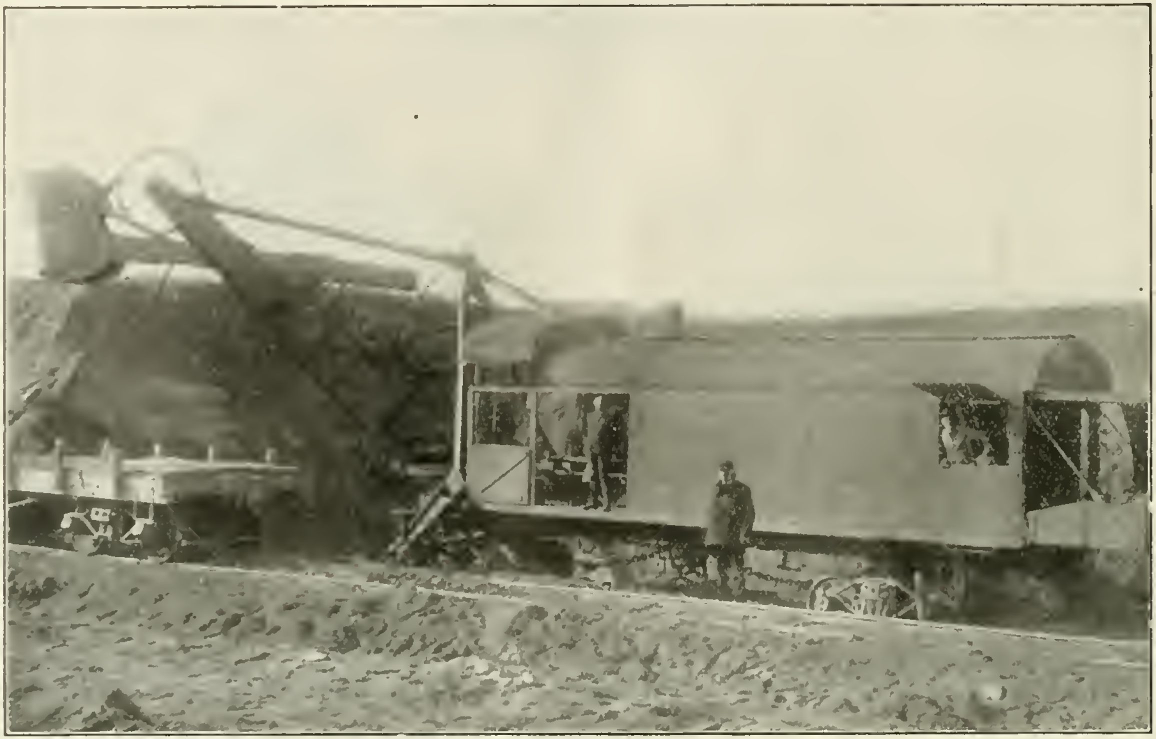
ATLANTIC STEAM SHOVELS



CLASSY 45-16-2½ ATLANTIC SHOVEL.

ECONOMY IN OPERATION

Reduction in friction and boiler losses, with corresponding increase in pull at dipper, is the reason why the Atlantic shovel digs more at less cost than shovels of the chain type.

Wire rope hoist, found only in the Atlantic, exerts a direct pull on the dipper and substitutes friction of a rope with but one large sheave for that of a chain with from four to six additional small sheaves. The less power lost in the machine itself, the more you have left for digging.

Further economy in operation is secured by using a large boiler of the locomotive type, in which more of the heat is utilized and less is lost up the stack. This is possible only because of the removal of the hoisting engines from their usual position on the car body, to the boom.

The placing of the main hoisting engines at the foot of the boom reduces the power necessary for swinging the boom and removes the twist upon the car body when working on one side. With this construction the turntable centre and boom foot constitute the engine frame. One casting takes the place of four or more in the usual construction, reducing the total weight of the shovel, and the weight on the front trucks.

Spare parts are kept on hand at our Works at Longue Pointe, Montreal, Canada. Every part is made to gauges, and sure to fit.

MONTREAL LOCOMOTIVE WORKS, LTD.

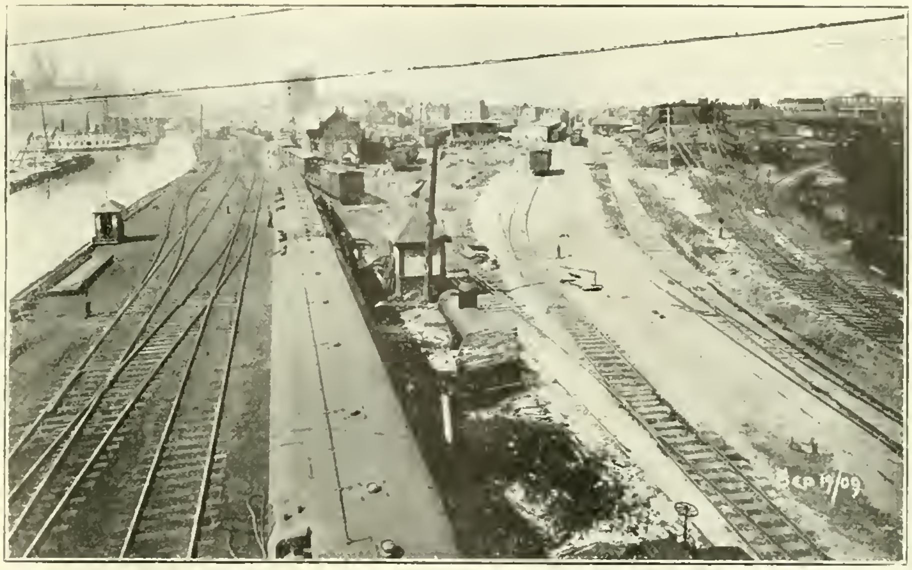
OTTAWA BANK BUILDING, MONTREAL, CANADA

Remodelling of the Grand Trunk Railway Ottawa Terminal Yards.

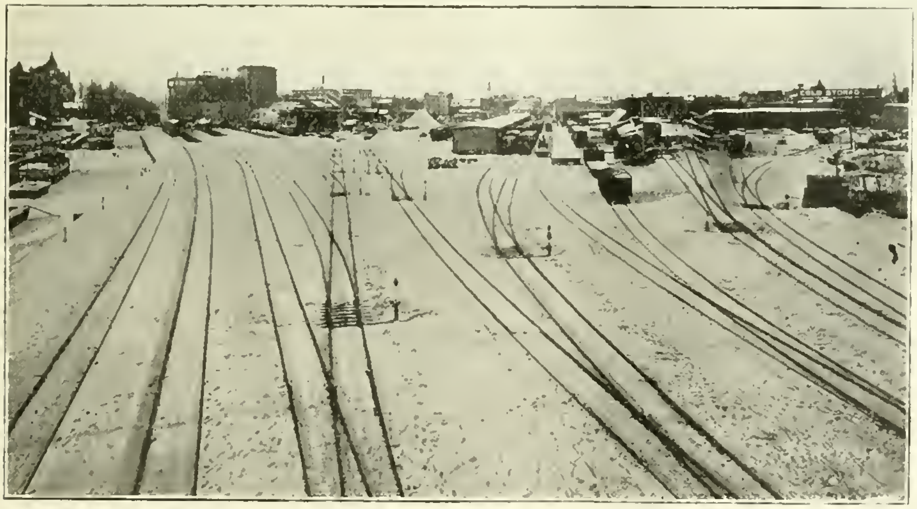
By Alexander Gray, A.M. Can. Soc. C.E.

In giving a brief account of the work of remodelling the G.T.R. central station yard in Ottawa it would be superfluous to review the reasons which led up to such work, further than to say that when the Canada Atlantic Ry. was fortunate enough to secure this route to the heart of the city, the terminal was not designed with any consideration of future requirements. Tracks and other railway facilities were built by degrees as demands arose and property was acquired. Under such conditions it was only a question of time until all the available land north of Laurier Ave. was taken up with a jumble of tracks which were very difficult to operate and in an exceedingly poor state of repair, the rails being 56 lb. steel and the switches stub. When we came to consider the remodelling of this yard, the problem which confronted us was not to design a yard by using up the old one, but to design one without any regard for existing conditions, a yard giving the facilities for passenger and freight accommodation.

The passenger and freight yards are entirely separate from south of Laurier bridge, and as both the passenger and freight business enter from Besserer St. the grades of the tracks are governed by the grades of this street. From the station entrance towards the freight shed there is a drop of about 6 ft., which makes the passenger yard ascend from Laurier bridge towards the station and the freight yard descend from Laurier bridge towards Besserer St. While we were anxious to have the two yards of a uniform grade, it was impossible to obtain this without very considerable expense both in land damages and in bringing up the adjacent streets to such grade. With the present arrangement there is excellent drainage for these two yards. The 20 ft. roadway between the two ladder tracks may be called the water shed. The passenger yard drainage runs toward the canal and Laurier bridge and the freight yard drainage goes towards Besserer St., where it drains into a sewer at Musgrove St. This was one of the difficulties in the old yard, there was no drainage, which meant a lot of heavy maintenance work during spring and fall weather.



G.T.R. Central Station Yards, Ottawa, from Laurier Avenue Bridge, Sept. 17, 1909 before Improvements.



G.T.R. Central Station Yards, Ottawa, from Laurier Avenue Bridge, Jan. 17, 1910, showing Improvements made.

In the centre of the old yard between Laurier Ave. and Besserer St. there was a hump of about 3 ft. and as the tracks were lying on blue clay with little or no ballast underneath, a steam shovel was put to work and excavated the freight yard for its entire width and right through to Besserer St. to a uniform grade of 1-10% and to a depth of 2 ft. below the base of rail. At the side of the tracks under the transfer platform the excavation was made about 18 ins. deeper, in order to have the sub grade of the tracks thoroughly drained. This arrangement gives a very dry yard in all weather. Part of the excavation from this point was dumped into the old canal basin where the freight shed stood on piles, this part having never been filled in. With this work all surface traces of the old canal basin have now been obliterated.

In the carrying out of this work the chief point we had to keep in sight was the safe and speedy operation of present business. The freight facilities were so congested that we could not cut out one track without making provision for its business at some other point. It so happened that part of the new freight shed was located on vacant property, thus enabling us to build the freight office and about 300 ft. of the freight shed and two of the freight tracks before disturbing the old shed, which was located where part of the main passenger ladder track now runs. As the new tracks peculiarly crossed the old tracks diagonally, a good deal of study had to be given to each move made, so that freight business would not be tied up during the construction of any of the new works.

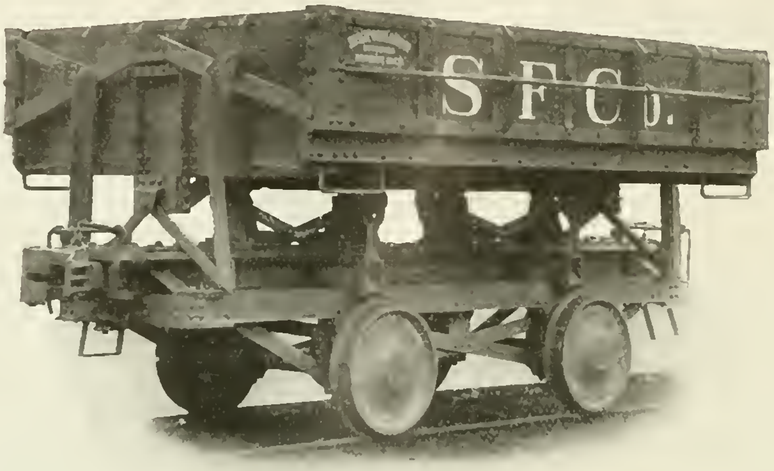
The rail in the freight tracks is 80 lbs. and the switches are split with no. 9 frogs, thus having leads which will admit of a safe operation by the ordinary class of engines, although there is a special yard engine to do all the switching work in this yard. The maximum curvature is 9½ degrees, which is the turnout for no. 9 frog. Up to the time of writing there have not been any derailments in this yard since its completion, whereas previously there was an engine off the track on an average every 24 hours.

The freight yard consists of a freight shed and office 668 by 30 ft., with four parallel tracks the full length of the shed. A transfer platform 560 by 16 ft. and three pairs of unloading team tracks with macadamized roadways 30 ft. wide are also parallel with the freight shed. The floor of the freight shed is level with the floor of cars standing alongside. Freight can thus be loaded or unloaded into the cars through the shed. Opposite every alternate door in the shed is a set of weigh scales set in the floor, which saves a considerable amount of trucking.

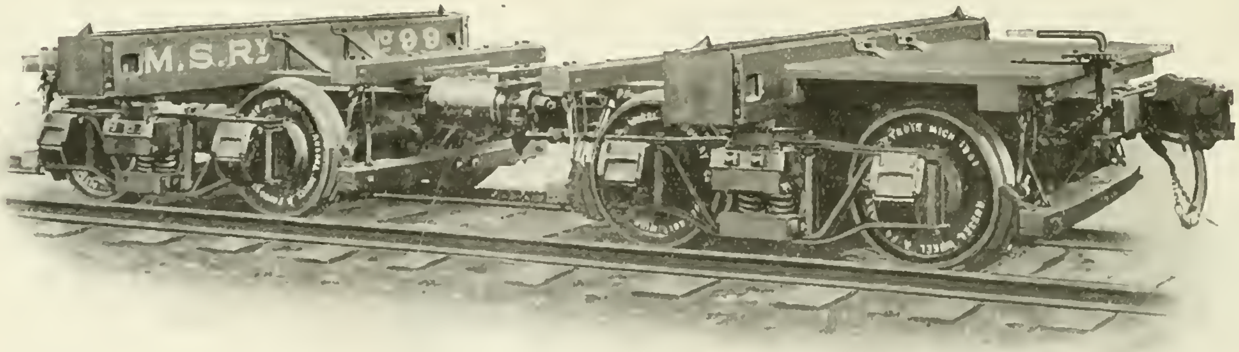
The passenger yard tracks are in pairs 13 ft. centres, with room between each pair of tracks for a platform 19 ft. wide. The shortest pair of tracks have a train capacity of eight cars each (figuring average length of car over all at 70 ft.) and the longest can hold 17 cars. The total train capacity of this yard is 100 passenger cars, which figures out of a little more than double the train capacity of the old passenger yard. The passenger yard tracks are built of 100 lb. rail with no. 9 frogs. All the switches are on the one ladder, which gives the engine driver approaching the yard a clear view of the condition of all the switches. Ultimately it is the intention to have all these switches interlocked, the tower to be located either on or near Laurier bridge. A train shed, of the Bush type, 500 ft. long, covers all the tracks from the baggage annex to the canal. The tracks are ballasted with crushed stone which will keep down the dust in the station vicinity. The platforms are concrete at an elevation of 7 ins. above the top of rail.

In the passenger yard layout, in order to provide a through second track for the C.P.R. in the event of its double

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

Detroit, Mich., U.S.A.

tracking its lines across the Alexandra bridge, we had to build a retaining wall 1,079 ft. long of an average height of 17 ft. Before commencing work soundings were taken with an iron rod along the side of the wall at intervals of about 25 ft. Instead of these soundings going to rock (as the man who took them reported) they only went to rock for about half the length: the rock extended from Sappers bridge end of the work for about 550 ft. and then suddenly disappeared: its place being taken by large boulders and gravel. The profile showing these soundings was so uniform that there were no grounds to question the results. This shows that no reliance can be placed on this method of sounding. The only safe way, in my opinion, is to put down test pits.

Designing the wall on this profile we

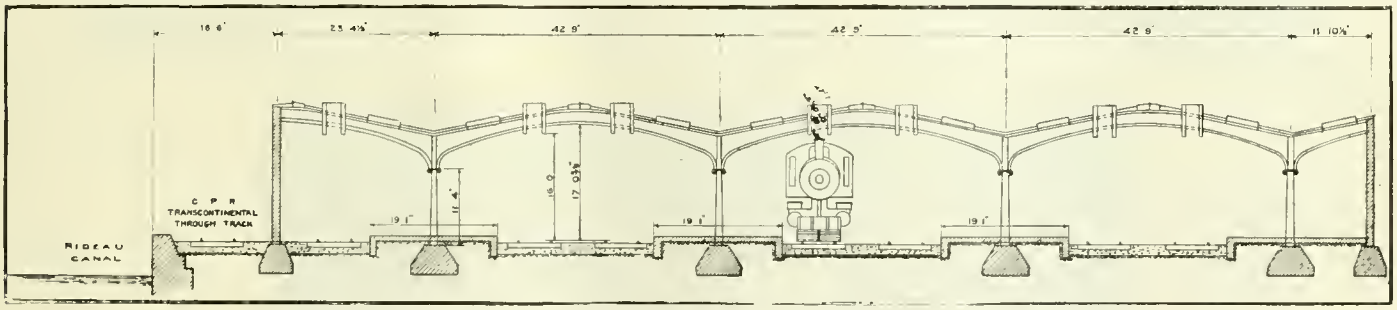
figured on a rock foundation throughout and at the south of Laurier bridge end of the work for a distance of 137 ft. concrete piers 9 ft. 10 ins. by 5 ft. and at 12 ft. centres were built and put down in each case to the boulder foundation. Sheet piling was used in putting down these piers. The sheet piling was 3 in. lumber and was driven with an ordinary pile-driver, only instead of the 3,000 lb. hammer a piece of pine, 12 by 12 ins., was substituted; as the hammer simply split the piling in pieces. When we reached the boulders we experienced very great difficulty in driving and keeping the proper alignment, in fact we found it almost impossible to go to any depth in this foundation, as some of the boulders were so large that they had to be blasted to be taken out. There was little to be gained in looking for a better foundation than this. The piers are connected to each other by a concrete slab 2 ft. thick and reinforced with old rail. Where the wall did not rest on piers we widened out our footing 12 ins. and put the wall about 3 ft. deeper than originally intended, so that it would not be undermined in the event of the Rideau canal being deepened to a 10 ft. draught. The outside face of this wall is 13 ft. from the centre line of the first passenger track. In the design we had therefore to take care of the train load as well as the ordinary surcharge of earth pressure. Expansion joints were placed every 25 ft. and the concrete was laid in alternate 25 ft. sections.



Cross Section of Train Shed Grand Trunk Ry. Central Station, Ottawa.

The cost of excavation work was pretty high. On account of the through C.P.R. main lines being 26 ft. from the face of the wall and having to keep this track clear at all times we had to dump the excavations into the bed of the canal and after the wall was completed handle the excavations again, part of it with a derrick and the remainder by shovelling on to platforms and from there to cars. There was 4,800 cubic yards earth excavation which cost $1.44 a yard, and 450 cubic yards of rock which cost $2.10 a yard. The total cost of excavation, including back fill and disposing of waste material, was $7,862.15. The sheet piling for piers cost about 3c. per cubic yard of the total concrete in the wall. There were 2,880 cubic yards of concrete. The total cost per cubic yard, including excavation, sheet piling, walling, and everything in connection with the work was $8.43. The cost of concrete may be divided up as follows: Forms, 93c. per cubic yard; sand, $1.087; crushed stone, $1.364; cement, $1.17; mixing and placing, 70.8c.; old rail for footings, 9.2c.; pipe for weep-poles, 1.8c.; walling, 13c.; watchman, 4.5c.; and excavation, 2.73c. per cubic yard of concrete. This comes to, labor $3 879.7; materials $4.39, and tools 16c. The cost of concrete, not including excavation and sheet piling for piers was $5.67 per cubic yard. All this work was done by our own forces. Work was commenced on Feb. 20, 1910, and finished for the opening of navigation, May 1, 1910.

In the remodelling of railway terminals I think it is always advisable for the young engineer to freely discuss the disadvantages of existing conditions and endeavor to discover from the men who are responsible for the operation of the yard to be designed wherein the difficult and objectionable features of the existing conditions lie. I do not wish to be understood as advising that an engineer should be led entirely by what everyone suggests, for if he did he would find himself in the same position as the man with the ass crossing the bridge. The yard men will want switches every few hundred feet, where the roadmaster will not want any at all. The master mechanic will insist upon a gravity coaling plant, where the physical conditions favor a mechanical one, all on account of saving his department the maintenance work, and vice versa. When I was remodelling Bank St. yard in Ottawa, before it was completed the yardmaster and his crew strongly protested that they would never be able to operate the yard for the reason that there were not as many switches in the new yard as in the old. I am safe in saying that in the operation of our terminals in Ottawa 99% of the derailments and trouble were at switches. Another point in remodelling yards is that special study must be given as to how the work is to be carried out during the continuance of traffic. This is sometimes a very difficult problem, especially in congested yards.

[The writer of this article was Resident Engineer, G.T.R., at Ottawa, when the works described were carried out. He is now Assistant Engineer in Charge Upper Ottawa River Storage, Public Works Department, Ottawa.—Editor.]

* * *

Grand Trunk Railway Terminal Buildings at Ottawa.

The buildings which the G.T.R. is completing at Ottawa include the Chateau Laurier hotel, the central union passenger station, the baggage and express annex and the power plant building. A preliminary description of these was published in our issue of Nov., 1907, a complete illustrated description of the hotel and station was published in our issue of July, 1908, and in our issue of June, 1911, we gave a panoramic view showing a portion of the station, the hotel, the plaza formed by the junction of the Dufferin and Sappers bridges, the Rideau canal and a portion of the Government buildings. Some fuller particulars of the station, train shed, etc., are now available.

The passenger station is built on the southerly side of Rideau St. between the Corry office building and the Rideau canal. It is entered from Rideau St., on the second floor, through a large main corridor in the centre, leading by a marble stairway down to the general waiting room which has an area of over 9,000 ft., and extends the whole width of the building on the lower or ground floor. In height this room is equal to the total height of the office building in the front portion of the structure. The walls of the room are in Travertine finish, the flooring is of marble and the ceiling is vaulted and richly coffered. The men's waiting room, smoking room, barber shop and lavatories are approached from this room, also the ladies' waiting room, rest room and lavatories, and the lunch room, parcel room, telephone and telegraph booths, news stands and information bureau. An important feature here is the doorway leading to the subway connecting with the Chateau Laurier. Its location in the centre of the room is emphasized by the two flights of marble stairs on either side of it which lead to Rideau St.

From the main waiting room, the concourse and platforms are reached through a ticket lobby, with ticket offices on the left and a lunch room on the right. The concourse, 60 ft. wide, extends in length the full width of the main building, and has a carriage entrance from Besserer St.. Through this concourse at the easterly end a vestibule leads directly to the baggage building. The lower part of the exterior walls, to a height of about 60 ft. from the ground, is of Stanstead granite, the remainder above this line being of buff Indiana limestone.

The G.T.R. divisional offices are located in this building, and the Board of Railway Commissioners has its offices as well as its public court room on the upper floors of the Rideau St. portion of the building.

The station has been planned to meet all practical and general requirements. Peculiar and difficult conditions with regard to track, street and bridge levels have been successfully overcome, and the result provides not only a railway terminal adequate to meet the needs of the travelling public, but an architectural adornment to the capital city.

THE TRAIN SHED is of the Bush type. It is 533½ ft. by 164 ft. and contains seven covered tracks. The train platforms are each 533½ ft. long. The area of the shed roof is 78,600 sq.. ft. The width of the train platforms is 19 ft. 1 in. and the train shed columns are on the centre lines of these platforms. The columns and platforms are 42¾ ft. apart centre to centre, and the columns are spaced longitudinally on the platforms at a distance of 27 ft. centre to centre, the first row being 15 ft. from the station building. The distance from the top of track rail to the clearance line of smoke duct at the centre of each track is 16 ft. There are two skylights, each 4 ft. 10 ins. wide by 21 ft. long over each 19 ft. 1 in. platform, and one continuous skylight 3½ ft. wide, with a ventilator in the centre of each bay over the space between the tracks, the total area of all skylights being 26,150 sq. ft. The skylights over the platforms will furnish excellent light on the platforms, as well as to the side of the cars standing next to the platforms, and the skylights over

(Under construction)

Head Office : - MONTREAL, P.Q.
Western Office : 702 Temple Building, TORONTO, ONT.

Representative for British Columbia : E. A. EARLE & CO., 532 Pender St., West, Vancouver, B.C.

the space between the tracks will afford good light to the inner windows of two lines of cars standing on a pair of tracks between the platforms. The open smoke ducts over each track are 2 ft. 5 ins. in clear width and have sides 4 ft. 2⅝ ins. high. These smoke ducts extend the full length of the train shed over one track, which is a through track, and the smoke ducts for the other six tracks stop within 18 ft. of the concourse. The through track outside the train shed on the westerly side and parallel to it, is for the C.P.R. transcontinental trains.

The columns will be supported on concrete piers, of which about 80% will require to be piled, the remainder will be taken down to rock. The proportions of concrete in the foundations will be 1-2½-5. The platforms and curbs will be composed of concrete, in the proportions of 1-2-4 for the curbs and 1-2½-5 for the platforms. The sides of the train shed will have curtain walls of concrete. The roofing will be composed of a 2 in. slab of concrete, and it is intended to have a tar and gravel covering. The drainage of the roof will be taken care of by 4-in. wrought iron pipes extending down the centre of every second column, and will be led to main drains between columns, and drained in the canal close by.

BAGGAGE AND EXPRESS ANNEX BUILDING. Immediately adjoining, in the rear, next to the platforms and tracks and affording easy communication and most convenient operation, is the baggage and express building with its main elevation on Besserer St. facing the space at the foot of Little Sussex St., recently acquired and paved to accommodate the vehicular traffic to the concourse of the station and the baggage and express building. In the baggage and express building are provided the mail rooms, immigrants' quarters, engine room, coal elevators, conveyors and boiler plant. In the latter the most up-to-date labor-saving devices and mechanical equipment have been installed, these include the electric separators for light and power, the refrigeration plant, filters, pumps, engines, etc., required in the operation of both hotel and station.

Railway Route Maps Approved.

The Minister of Railways has approved of the following route plans.—

CANADIAN PACIFIC RY.—Wilkie to Anglia branch. The approval of July 24, was amended so as to cover the whole distance from Wilkie to Anglia, 78.1 miles, and a revision of the same line between mileage 7.46 and 24.9 was approved on same date.

CANADIAN NORTHERN ONTARIO RY.—Sept. 27, from Chisholm tp., Nipissing District to Capreol tp., Sudbury District, about 100 miles.

◆

C.P.R. Second Track in Saskatchewan.—In the article under this heading in our Oct. issue, page 951, it was stated that, "From Moose Jaw to Boharm, eight miles, the track will be laid with all crossed ties." It should have read, "all creosoted ties. . . . "

The Canadian Society of Civil Engineers, Ottawa Branch, has elected the following officers for the current year: Chairman, S. J. Chapleau; committee, G. J. Desbarats, R. F. Uniacke, John Murphy, N. Cauchon, R. de B. Corriveau; Secretary-Treasurer, V. Brayley.

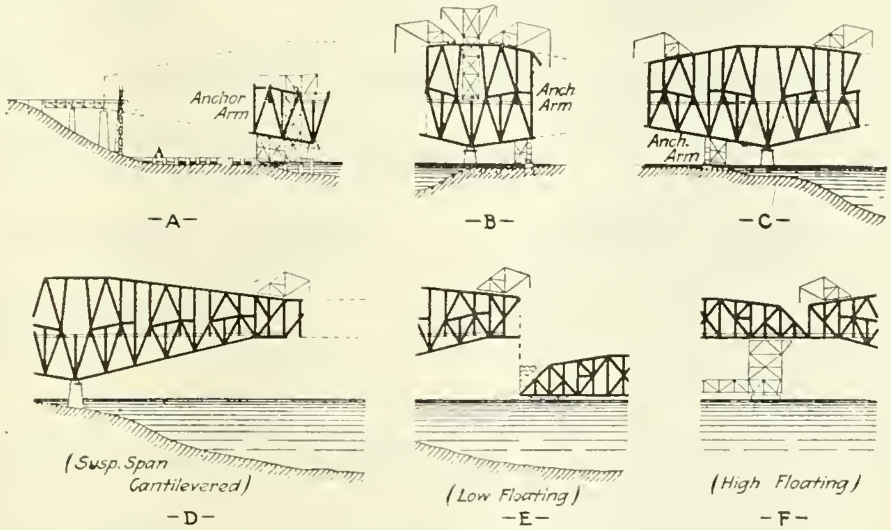
J. F. Taylor, General Superintendent, Great Northern Ry., Great Falls, Mont., is reported as having stated at Lethbridge, Alta., recently that in future trains will run through from Lethbridge to Great Falls instead of transferring the passengers at Virden, Mont., as heretofore.

Schemes of Erection Proposed for the Quebec Bridge.

In our Sept. and Oct. issues we gave particulars of the schemes of erection proposed by the St. Lawrence Bridge Co., and the British Empire Bridge Co. Following are further particulars:

The Pennsylvania Steel Co. proposed three different schemes of erection on the Board's design in addition to submitting a tender for a suspension bridge based on a design by Gustav Lindenthal. The different schemes of erection of the cantilever designs differ only in the manner of the erection of the suspended span, viz., by cantilevering out, by floating on high falsework, and by floating on low falsework and hoisting into place. The method of erecting the cantilever and anchor arms is naturally the same in all cases.

Preparatory work in the nature of storage yards, crane, runways, loading and unloading gantrys, etc., is fully provided for by the proposal, and some of it is shown in the first of the sketches in the figure on this page. At the north side, where erection would start, there is a heavy timber elevator to deliver the bridge material from the upper to the lower level, as the company proposes to bring all material in by rail. On the lower level a yard served by a 100-ton gantry is laid out for storing and handling material to be used on the north side. The material for the south half of the bridge will be brought to the north side and carried by the north gantry crane, assisted by a special derrick car, to a barge slip, whence the steel is transferred across the river on barges. On the south shore it is received by a gantry equipment similar to that on the north shore. All machinery is operated by electric power. An electric winch helps handle the scows and a motor operates the material trucks on the tracks from the gantry yard to the slip.



Pennsylvania Steel Co. Board's Design.

The first step in the erection will be the raising of a steel tower, 46 by 50 ft. and 248½ ft. high, behind the main pier. This tower will be equipped with four booms of 90 tons capacity operating from the corners at the top. The booms are fed either directly from the gantry yard or by a special track leading from the yard.

The derricks on the tower erect the falsework between the pier and AL10, after which the permanent bridge steel, including the shoe, bottom chords, laterals, etc., up to the bridge floor is put in place. With a suitable number of additional stringers placed on the floor, the upper part of the tower is disconnected from the lower part at the level of the floor. The top is then skidded along the bridge floor until it is in a position directly over the main pier. The lower part of the tower is then taken down and re-erected on top of the section already in place. On the top of this reconstructed tower the booms are again erected, the hoisting engines remaining on a platform on the tower at the floor level.

The tower in this second position erects the permanent members of the truss that can be handled within the swing of the booms, including the top-chord section between the main posts and the two diagonals completing the triangle AL14—AU12—AL10. Under panel point AL10 a temporary steel bent is placed to support this triangle, the bent being imbedded in concrete to above high-water mark, as a protection against ice, etc. As the work of erection progresses from this point, the cantilever and anchor arms are so balanced that the centre of gravity of the completed work always lies between the main pier and the temporary tower at AL10. This tower being securely anchored down is also capable of acting as an anchorage, thus affording an extra factor of safety.

When the work has proceeded this far, the top section of the erecting tower is hung up from the top chords by floorbeams in temporary positions, and the lower part of the tower is taken down. The tower booms then erect the top chord travelers, one for the anchor arm and one for the cantilever arm, taking a large part of the material from the bottom sections of the tower.

These travelers have booms 90 ft. long and a lifting capacity of 100 tons. In addition they are equipped with two 20 ton derricks with booms 80 ft. long, located 15 ft. inside the centre line of the bridge trusses. The 20 ton derricks have double booms for convenience in driving pins. The travelers slide forward from panel point to panel point, on runway box girders. They have no wheels, but are fitted with sliding shoes, except in the cantilevering of the suspended span, when rollers are placed under these shoes. This is done as an added factor of safety to prevent any tendency of the traveler to slide forward, or to get out of hand when unclamped and moving.

Material is supplied to the top travelers by derricks situated on the bridge floor. One 100 ton derrick is located over the main pier and one for lighter material at panel AL10, both command-

ing the gantry yard below. Where possible, material from the gantry yard is picked up direct by the top travelers.

After the main anchorages are in position the traveler on the cantilever arm continues ahead on the suspended span until the whole bridge is completed. Adjustable members are introduced at the end of the cantilever arm, in order that the work may be coupled up at the centre. The travelers are adjusted to work on a horizontal instead of inclined chord by means of extra steel members and the rollers mentioned above.

High Floating Erection.—The suspended span is erected on high steel falsework, the proposed site for this erection being at Victoria Cove, about half a mile below the bridge site. Material for the suspended span is taken from the north gantry yard and transported by water as required. The falsework is erected by gin-poles assisted by a derrick on a scow. The span is erected on the falsework by an inside steel tower traveler, having two heavy derricks in front and a light one at the rear. This tower is high enough so that brackets on the top floor level overhang the top chord of the span, and from them the truss members are temporarily hung. When the span is fully assembled and the traveler taken down, the trusses connecting the two falsework towers are lowered from their top position to the bottom of the tower, where they are connected to these towers, thus acting as reinforcement to the pontoons and holding them in their proper relative positions.

The pontoons are floated under the falsework towers in between the temporary concrete piers upon which the framework is erected. At high tide the load of the falsework and suspended span is transferred to the pontoons which are then towed to the site. Two pontoons are used. Each is 252 by 75 ft., and 13 ft. deep.

Low Floating Erection.—Under the scheme, the suspended span is erected in the same manner as for the high floating scheme except that the span is erected on low timber falsework. When the span has been completely assembled the falsework is removed, allowing the span to rest on four concrete piers, in which position it is finally riveted up. At the proper time six scows, three at each end, are floated in, and when the tide rises the span is transferred to these scows and towed into position. From this position it is jacked up into its final position.

The wire suspenders attached to the suspended span are held up in place by wooden falsework, the suspenders being sufficiently slack so that any wave motion will not tend to pick up any corner of the span before all four corners are attached, and the entire weight taken simultaneously by the lifting jacks.

The cast collars that hold the upper end of the wire suspenders are supported on a heavy frame made of girders, which are in turn attached to a chain of lifting plates. These plates are 27 ins. wide and are full of bolt holes, uniformly spaced, so that they can be thoroughly bolted together. The plates lap past each other so that each plate can act as both material and splice, and can also be readily removed as the span is gradually lifted. Each lifting plate has 10 in. pin holes every 3 ft.

On the top of the end of the cantilever arm is a steel box which has a 2,000 ton jack inside of it, and just above it is another steel box similar in design. The lifting plates pass through both of these boxes and at the start of the lifting operations the lifting plate carrying the suspended span is hung from the upper box by means of a 10 in. pin passing through the box and plate. The jack in the lower box is operated by an ft. and a speed of 2 ins. per min. When everything is ready the jack is operated and the load raised 3 ft., or until the pin through the lower box and the lifting plates can be driven and the upper pin withdrawn. The upper box is then lowered until its pin hole comes opposite the next lowest in hole in the lifting plate. This pin is then driven and the lower pin withdrawn, the jacks again operated, thus completing a cycle. As sections of the lifting plates are released, they are disconnected and by means of the traveler are lifted out of the way.

The lifting operation proceeds at all four corners of the suspended span simultaneously. When the span is fully raised the final pins can be driven as the pin holes in the cast collars are not used during the raising.

A safety device is provided to safeguard the raising operations. It consists of four screws at the four corners of the lower box, driven by an electric motor operating through equalizing gears. These screws are always bearing against the upper box, and as they are capable of sustaining the whole load, the temporary failure of the lifting apparatus would have no serious result. These screws can also be used for quickly lowering the upper box after each operation.

After the load of the suspended span has been transferred to the lifting jacks the scows can be released and all lines and anchors cleared from the river. It is estimated that the span can be lifted and connected in two working days. Many of the special appliances propos- electrically-driven pump and is designed for a working pressure of 11,000 lbs per sq. in. with an effective stroke of 3 ed by this firm in connection with the erecting of this bridge have been patented. The scows used in this scheme are each 257 by 38 ft. and 10½ ft. deep.

Winnipeg Union Stockyards.—As a result of a conference Oct. 10, between representatives of the Manitoba Government, the railway companies and the Abattoir Commission, it has been decided to start work immediately on the union stockyards. A site of 215 acres has been provided at St. Boniface, and it is expected to have everything in readiness for starting operations early in the fall of 1912. The union stockyards will be under the control of the government, in so far as the rates and charges are concerned, while the government, which has the first choice over the packing houses, has already obtained a site of 15 acres to be utilized in connection with the construction of a cold storage plant and abattoir.

David Jardine, of Farnworth and Jardine, Liverpool, Eng., who died there, Oct. 8, aged 84, was born in New Brunswick, and his firm controls the lumber properties formerly owned by the Alexander Gibson Ry. and Manufacturing Co. in New Brunswick.

Preserving Ties for the Canadian Northern Railway.

The C.N.R. management has, as officially stated in our last issue, made a contract for the preservative treatment of 500,000 ties at Fort Frances, Ont., by the Bruning and Marmetsche process. This is a German process, named after the inventors, and has been in use for about three years. It is claimed to be an improvement on the straight zinc chloride process introduced in 1838 by Sir William Burnett, and known as the Burnett or Burnettizing process. The new feature of the B. and M. process is the use of salts of aluminum, which are used to dissolve the cloudy precipitate which is formed when zinc chloride is diluted with water. It is claimed that by the clearing of the solution the zinc chloride is carried much further into the heartwood and penetrates the sap wood, and the aluminum sulphate holds a sufficient quantity of the zinc chloride there permanently so that it will not leach out. The solution is used hot enough to open the pores of the wood cells, which enables the timber to take up more solution than it could when cold and to coagulate the albuminous constituents of the wood cells with the zinc and special salts, impregnated, but the solution is not hot enough to form free acid, which would render the timber brittle, a drawback which caused the failure of some earlier and otherwise satisfactory processes.

This leaching out of zinc chloride has been the chief objection raised against the process, and in some cases where there is a heavy rain fall, it has been a considerable objection. On the other hand, F. J. Angier, in a paper read before the New York Railroad Club, states that a study of certain leaching tests shows less than 30% of the zinc chloride got out of the wood in nearly a year's time, and that the largest part (approximately 18%) leached out in the first 70 days. In a book describing a new process (Cresol Calcium) it is admitted that modern technicians ascribe little importance to leaching out and that zinc chloride never becomes altogether washed out. In a summary of the results of certain tests reported in the American Railway Engineering and Maintenance of Way Association's proceedings, it is stated with reference to various zinc chloride processes that 81%, 87% and 92% respectively of the Allardyce, Burnett (Chicago) and Wellhouse (Chicago) ties are still serviceable, points to the preservative value of zinc chloride.

As stated above, zinc chloride has been used for over 70 years as a preservative, and its advocates claim that its use is increasing, which they point to as proof that the leaching out is not such a serious matter at its opponents claim. The B. and M. process depends on zinc chloride for its preservative features. The aluminum sulphate, also a preservative, merely fixes the zinc chloride so that it does not leach out. Professor Hatt, Chairman of the American Railway and Maintenance of Way Association's committee on wood preservation, has given in a report evidence based on laboratory tests showing that after severe washing of sawdust a sufficient amount of aluminum and zinc remains, and states that a test has been made in exceptional severe exposures, like coal mines, or humid situations. The evidence shows that pit props have lasted in mines over two and one-half years when treated with B. and M. process, where untreated props only last nine months.

A. W. Smithers, Chairman of the Board of the G.T.R., sailed from New York, Oct. 4, for England.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

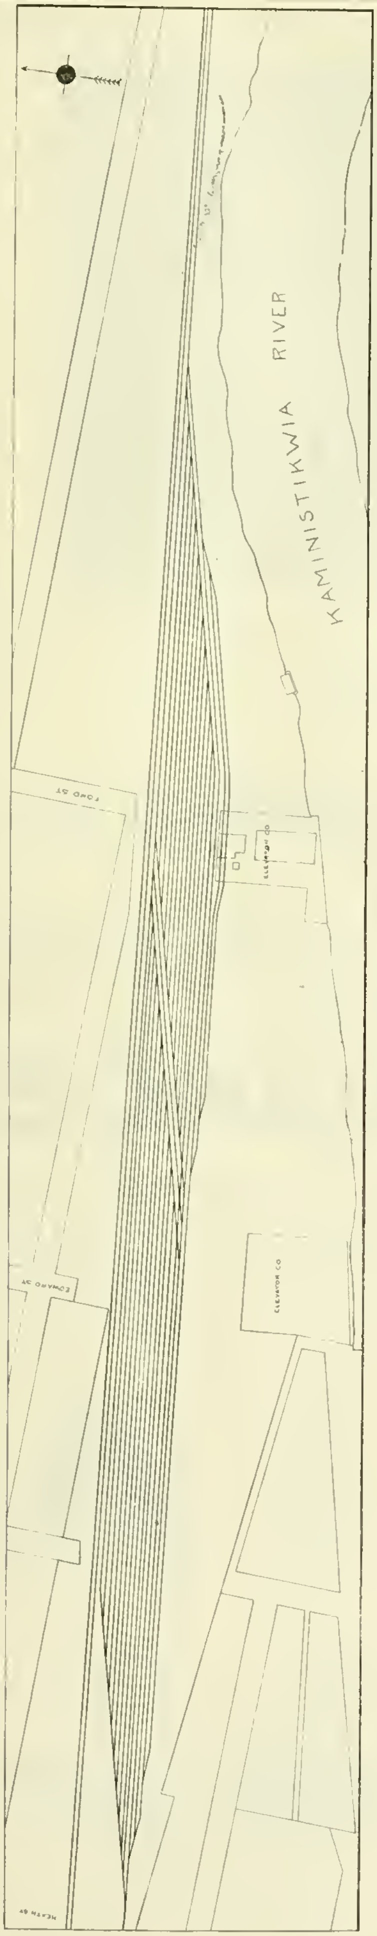
MODERN DESIGNS FOR MOTOR CONNECTION



C.P.R. Poling Yard, Westfort, Fort William, Ont. Old Layout. Plan A.

The Canadian Pacific Railway's Gravity Yard at Fort William.

On account of the great satisfaction given by the C.P.R. hump yards at Winnipeg, the management decided to do away with the poling yard at Westfort, Fort William, and substitute for it a gravity yard.

To bring this change about it was necessary to raise the east end of the old receiving yard approximately 6 ft., and alter the eastern ladder track so that there will be two ladders running from the centre track of the old yard. The ladder at the west end of this yard is also changed so that the maximum length of the tracks is developed. The tracks in the old classification yard are lengthened and altered so that the ladders from the hump develop the longest track possible under existing conditions.

About 100 ft. of the east ladder of the classification yard is on pile trestle with planked top. The grade of the approach to the hump is approximately 1% and the decline to the east 3% for 150 ft. from the summit and gradually eased off.

The accompanying plan A, shows the old arrangement of tracks; plan B shows the arrangements of tracks in the new hump yard. The dotted lines in the latter plan show tracks which have been eliminated in the new layout.

The work is in charge of Frank Lee, Division Engineer, Winnipeg.

The Accounting Department in Connection with the Mechanical and Stores Department.

By A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R., Montreal.

(Continued from October issue)

Hitherto, his work has been manual, but now the stock cards and books engage considerable of his attention, for he is required to know the exact condition of his stock to enable him intelligently to place requisitions for the depleted materials, he must know what the average monthly consumption is, how far his stock will provide for ordered requirements, what quantity if any he has to on order, and whether through some special or irregular condition he is likely to be called upon for more than his normal supply. Thus it has become necessary for him to devote considerable time and attention to book records. This may be, and frequently is, an entirely new experience for him. Coupled to this, under the system which is still largely in vogue, he must devote his attention to the accounts of his store. The debits and credits are impressed upon him as important factors. For this purpose he engages a clerk, if the funds will permit, who does the necessary book work and accounting for him and in his ignorance of the merest theory of such work, signs statements and records which are put before the management of the road.

It is general practice when a storekeeper keeps his own accounts, for him to keep those of the mechanical department also, the stores being very closely allied thereto, especially in a large plant where considerable manufacturing is carried on for road purposes. This necessitates his becoming a timekeeper, as the largest disbursements of mechanical accounts are for labor. He must become an authority on distribution of such labor, and exercise a prerogative in connection with shop system, contract work, etc. Is it not hopeless to expect a man with a training which I have briefly outlined, to meet such varied requirements? With all respect to the large number of able general storekeepers on this continent, I affirm that they cannot devote their attention to storekeeping, account-

ing, and shop systems, with justice to either branch of the work. Indeed, there is very little, if any, attempt at doing this, as a matter of fact. It is largely a fiction. The clerk is held responsible for statements, etc., issued under a storekeeper's signature for the reason that the storekeeper himself has no time to attend to such matters, and not infrequently looks upon them as of very secondary importance, or is lacking in a proper appreciation of the value of such duties, and he almost naturally develops a tendency to protect the store's accounts at the expense of those of the mechanical department. Quite apart from the question of integrity of the departmental officials, a feeling of dissatisfaction inevitably underlies all questions of disputed costs. Speaking from experience, I have no hesitation in affirming that it is a simple matter to load an account with items which should never be charged thereto, and so to manipulate accounts as to afford more than ample protection to the storekeeping department. There was a time in the recollection of many, when the necessity for proper accounting methods and men was not realized as it is today. Everything pertaining to the accounts, from the man who "wanted to know" to the underpaid clerk who was expected to "show," was accorded very little consideration, and one can almost understand how it came about that the storekeeper was looked upon as a sufficiently informed and responsible person to take charge of accounting and timekeeping, but today, and I venture to say, never more than today, it is considered proper and necessary for this work to be handled by men whose minds have been thoroughly trained thereto. A man who is held responsible for a proper system of timekeeping must have an organization at his back to properly handle all the varied problems relative thereto, and must be expert in matters of shop practice, the many vagaries of which have received much attention and investigation during the past few years of agitation and labor unrest.

If we look at the mechanical department, locomotive and car, we shall find the same high standard requirements of efficiency and capacity in all that relates to the practical working of these departments as was found to be necessary in the storekeeping department. In fact, bearing in mind the great organized efforts which are being made to raise the standard of apprenticeship in the various shops throughout the country, and the hard course of training which an efficient mechanic has to undergo before reaching the position of, say gang or shop foreman; and remembering that our universities are instinctively availing themselves of the vast openings offered for college trained men for the higher official appointments, and are educating and training young men in theory and practice of the mechanical railway, we can safely say the standard of excellence obtained is higher than in almost any other branch of railway work. They must keep up with the times, and with the pressure for improvements or betterments making for greater efficiency in power and rolling stock. Improved shop practice, improved tools and machinery, improved facilities at terminals for handling the power is increasing, and is brought about by the efforts of the management to obtain cheaper and yet more efficient results, in order that a proper equilibrium may be maintained between revenue and expenses. Yet we find, with few exceptions, that the practice is almost invariably for this department to have its accounting taken care of by another department, either the storekeeping or the auditing, I believe as much from choice of the mechanical officers themselves as from a recognition by the various managements of the sound business principle that authority over the accounts of a department must be separate from the authority governing the practical working of that department. Such a rule has behind it the undoubted authority and wisdom of those whose duty it has been to ensure the most perfect results and records of business transactions.

What of the duties of the auditor in his relations with the mechanical and the stores departments? Labor is, of course, the important factor in all mechanical accounts, and the ensuring to every employe in all shops and roundhouses, etc., of a just accounting for his time must receive first consideration. At the same time, necessary precautions against fraudulent claims for time not worked must be taken. It is also of prime importance that such time is properly distributed, or, in other words, that the account for which labor is performed is charged therewith, so that the correct cost of an engine or group of engines, a car or groups of cars, going through the shops for repairs or construction, etc., may be determined accurately. The cost of articles manufactured, such as bolts, nuts, forgings, wheels, castings, etc., must be compiled in such a manner as will make comparison with the market prices of such articles a simple proposition. No great advantage can accrue in manufacturing articles which can be purchased in the open market as cheaply or cheaper than you are making them. Shop costs systems have received a great deal of enterprising attention from what is yet a new branch of commercial life, the shop cost engineering profession. An elaborate system of store orders, requisitions, and labor distribution is entailed, much detail work of an accounting nature is necessary. Where piece work or contract systems are in force, it is necessary that the auditor should satisfy himself as to the completion of work paid for, in order that he may not certify for payment any unearned monies; but it must be recognized that much of this class of work requires mechanical experts to pass upon, and in many cases all the auditor can do is to see that proper safeguards are set up to prevent fraud or collusion. Other questions relating to labor, particularly those relative to shop efficiency, and job time records, come more or less under the observation of the auditor; but I am of the opinion that the less his department has to do with such matters the better, alike for himself and the mechanical department. They are the legitimate work of the mechanical staff, shop superintendent, foreman, clerks, and specialists, as the results obtained are purely of interest for economical reasons to the shops themselves, and all responsibility for their carrying out or development must devolve upon the shops. In none of these matters is the storekeeper an interested party, for even the item of labor on manufactured material, if properly cleared, does not affect his stock balances, whether the charges are correct or not. Both the storekeeper and the mechanical department, however, are concerned in all questions relating to material, and the essential duty of the auditor in this regard is to see that the storekeeper is properly credited with all materials delivered to or taken by the shop forces. At the same time he will see that the accounts for which material is charged are properly covered by approved requisition, and the purpose for which material is required is clearly set forth. If, as sometimes occurs, any unusual quantity is called for, the matter should be investigated, and he should satisfy himself as to the special requirements. Only such material as may be required for current needs should be requisitioned for, and bulk issues should not be allowed. He will endeavor in every way to protect the stores by seeing that they are credited with the value of all issues, and, at the same time, must be equally satisfied that nothing is charged against the mechanical department, except that which is justly chargeable thereto. It should be clearly understood that no advantage can accrue to the storekeeper by overcharging other departments, and with careful checking of prices by the auditor there could not exist much opportunity for doing so, should there be any such desire. Careful inventories of material on hand should be taken at least once a year, and from his records the auditor should be enabled to inventory a considerable portion of every storehouse much more frequently. Should there appear from such inventory a surplus, it should be transferred to the general books of the company for funding purposes, as an offset against future possible shortages, or application of credit made to the accounts which have been charged with material since previous inventory, pro rata according to the amounts charged. As regards accounting for material received from purchasing of the same, he will see that proper acknowledgment is received from the storekeeper of all such items, and by having communication with all requisitions, will satisfy himself that authorized officials have approved the purchasing the same. He will see that the records of its receipt are kept in such a manner as will ensure against the passing of duplicate invoices or acknowledgments, and also that proper stock book records are maintained of all intake or output of the various items of material. At the most convenient time such records must be gone over with a view of satisfying himself as to surplus or obsolete material, or undue quantities of any articles being carried at one point on the road while purchases of similar material are being made elsewhere. Obsolete material should not be destroyed, sold, or turned over to the scrap pile, until the authority of the department for which it was originally procured, is obtained, as the storekeeper's accounts must receive credit for whatever loss is sustained, and the expense be borne by this department. Inventories should, as far as possible, be taken by auditors independent alike of the stores' auditor and the storekeeper, thus obviating any possibility of irregularities, the desire being at all times that the most accurate records possible be obtained. In companies where the consumption of material represents from \$100,000 up to \$2,000,000 a month, there is ample scope for the auditor, without infringing on the natural field of the storekeeper's activities, which pertain to the receipt and disbursement of material and maintenance of proper stock records of same; or of the mechanical department, whose duty it is to see that proper material is supplied for their requirements, and proper and economical use made of same. Economy of operation of the stores department is usually determined by taking the percentage which the amount of stock issues bears to the total stock on hand, at the first of the month plus the receipts during the month. While not mathematically correct, this method, no doubt, gives a fair line on the results obtained. At all events for comparative purposes, year by year, it is absolutely good, while month by month the variable conditions of business require to be considered. Except in special cases, where, for instance, material must be purchased abroad, the stock should not average more than 60 days' supply, and in a large number of items, 30 days' is sufficient, but forethought and interchange of ideas and plans between the storekeeper and the mechanical department, is at all times desirable, and even necessary, if this standard is to be maintained, also it

should be remembered that the question of economical operation can be driven so far as to entail distinct loss to the companies. The auditor and general storekeeper should be vitally interested in these percentage figures, as they afford a ready means of determining the efficiency of the storekeeper. Continued poorness in this respect is a matter that calls for the general storekeeper's intervention, and sometimes a change of departmental officials.

A. Lowes Dickinson, in speaking on the necessary qualifications of an auditor, states: "There is probably no other profession, not even excepting law, which requires of its members, if they would succeed, a higher standard of education, experience, and general business knowledge. The moral qualities called for are so high that it should place the profession at the head of all which come in contact with business affairs. The lawyer's duty is first of all to his client, and that duty frequently compels him to avail himself of technicalities and other means of enabling that client to evade the law and its penalties, but the auditor or public accountant has only one duty to his client and to the public, and that is to disclose to him or for him 'truth, the whole truth and nothing but the truth,' so far as his abilities and special training to that end enable him to ascertain it. No legal quibble will save him from moral condemnation if he fails in his duty, no juggling with words or phrases will absolve him from responsibility, moral and often legal; for results that he has reason to know are not what they seem to be, or which having regard to his special training in business affairs, and the accounts relating thereto, he ought to have known did not represent the facts. Errors there may be, and for errors made after full and proper precaution taken and due care exercised, no responsibility will lie. But there is no profession in which the results of careless errors or misstatements will more certainly bring retribution."

In looking over a catalogue of the New York School of Accountancy recently, I came across the following paragraph regarding a public accountant: "The public accountant is expected to have a knowledge of the underlying principles of the laws that govern business relations, and of the practical applications of such principles, a thorough knowledge of the principles of modern accounting, and of their scientific application to the keeping and stating of accounts, in all lines of business enterprise, and whenever settlements involving money are to be made, he is expected to be able to solve the most abstruse and intricate problems that arise in any branch of accounting, and as an auditor, he is expected to have a broad general knowledge of business with the intuition of the detective, as well as the skill of an accountant."

At first sight these statements may appear to attach a somewhat exaggerated importance to the functions of an accounting officer, yet on closer analysis they do nothing more than express the merest truth, and I will not detain you with any discussion on the matter, but composed as the Canadian Railway Club very largely is, of mechanical and storekeeping representatives, I should like to emphasize the fact that the auditor, or other accounting officer, in the proper carrying out of his duties is absolutely impartial, and is independent of all forces whatever might be brought to bear upon him were he affiliated or subject to other departmental officials. He has no axes to grind, his duty being simply to set forth the actual financial facts of any particular operation, or set of operations, for the information of the management. This fact should make for harmonious relations between departments, and I feel sure you will agree that anything which will facilitate such a desirable result is of great material benefit. Otherwise good individual enterprise is ofttimes invalidated by the knowledge that the heads of departments are at loggerheads, which knowledge invariably percolates through the respective staffs and finds expression in inattention, carelessness, or cussedness, and so makes for general inefficiency. You have all seen this sort of thing at work, and know exactly what I have reference to.

Auditing or accounting by an independent officer should make for real efficiency in the departments concerned. I speak for myself in this matter as much with regard to the stores and mechanical departments, and I welcome an outside auditor, who may be authorized to do so, going over the methods and analyzing the principles upon which the work of my department is conducted; showing up any loopholes or weak spots, in order that whatever remedy is found necessary may be applied. Not only this, but an auditor must keep his mind in a constant state of receptiveness. Many a good suggestion emanates from unexpected quarters, and the practical knowledge of a shop superintendent, a foreman, or a clerk should not only not be ignored, but should be sought and encouraged with the view of developing the utmost efficiency in all that pertains to the employer's interests. Differences of opinion will, and must exist, and in such cases the auditor cannot but be paramount in his rulings unless a higher authority intervenes. This efficiency is after all the raison d'etre of the existence of the auditing department as it is today, and higher ideals of workmanship must naturally develop as the efficiency of the accounting department is evidenced in the various departments of railroading. The fruits themselves must be the evidence of the good workmanship, and not the self-compiled blue prints or glowing picture books with the halo beautifully worked in to add the necessary touch of sanctity to the artist, with the horns prominently displayed in the caricature of his unfortunate rival. Rivalry and competition are the soul of trade, also of railway efficiency, and are, therefore, eminently desirable, but honesty and integrity must go hand in hand therewith. Systems which lay bare all attempts to mislead shareholders, directors, presidents, or whoever it may be, and place before them only honest, unbiased results, must be more and more appreciated and ever increase in value to the vast corporations in which they are employed, and I believe you will find in such corporations more integrity and greater efficiency in all departments, officers, and men who are ready to be judged by the high quality of their accomplishment, and who recognize the desirability, and appreciate the arduous and somewhat thankless tasks of the accounting department.

The present status of the science of auditing and accounting is not at all final. There cannot be any finality in connection with it any more than with other branches of railroad science. Development must continue. A motto which impressed me very much, as a youngster, and which, if I remember correctly, was used by a Glasgow manufacturer as a part of his trade mark, reads thus: "While I live I grow." Life and growth are synonymous. Stagnation spells death. There are plenty of good men, very much alive, busy in the accounting world; new men with advanced ideas are constantly arriving on the scene, and I look forward hopefully, knowing that the value and importance of the work is becoming recognized as making for harmony, efficiency and truth.

The foregoing paper was read before the Canadian Railway Club recently.

Sink Holes on the Duluth, Winnipeg and Pacific Railway.

The Duluth, Winnipeg and Pacific Ry., a subsidiary of the Canadian Northern Ry., has encountered a number of bad sink holes on the extension now being built between Duluth and Virginia, Minn. Many of these were filled directly with small dump cars, but in two instances the surface did not break through until after the track was laid over them and construction trains were running. At the larger one, at mileage 56, soundings were taken for a distance of about 1,500 ft., showed a depth of from 20 to 45 ft. of soft mud. The surface crust appeared to be fairly solid and it was hoped that it would hold up, but it broke through early last spring after trains had been running over it but a short time. About the middle of April this hole became so bad that it was impossible to operate trains over it, and steps were taken to completely fill it.

To support the track, timbers were laid about 30 ft. out on each side of the centre line and parallel with it. Large white and Norway pine and tamarack logs were laid across these outside timbers at intervals of 3 ft. The track was then laid over this grillage and the cars were dumped between the cross timbers. In the first 100 ft. of the hole an average of 200 12-yd. cars were dumped each day for three weeks before the material appeared above the surface of the water, for after the crust of the swamp was broken there was nothing immediately below the track but water and liquid mud. About a week after soundings were begun new soundings were taken, and where they had formerly showed a depth of soft material of 35 ft. they now showed a depth of 60 ft., indicating that there were harder layers of material in the soft mud. This was borne out by the action of the embankment which would be brought up nearly to grade, and would then drop suddenly a distance of 15 or 20 ft.

After spending over six weeks of steady work at this hole, and after filling only about 500 ft. of it, it was decided to try to prevent the rest of the swamp from breaking through. Contractors were ordered to crossway it with heavy timbers for a width of 50 ft. and a depth of at least 2 ft. where it had not already broken through, which work is now under way. In constructing this grillage, timbers are first laid close together longitudinally and with broken joints for the 50 ft. width. On top of this cross timbers 50 ft. long are laid close together. A layer of brush is put on top of this and the embankment dumped on the brush. In addition to this crosswaying a dredge is now digging a ditch 12 ft. deep for a distance of two miles to drain the swamp and solidify its surface. It is expected that these measures will remedy the trouble at this point.

At mileage 69 two sink holes were encountered close together, with a small ridge between them. Each hole was about 600 ft. long, and one had a maximum depth of 35 ft., while the other showed no bottom at a depth of 50 ft. Both of these have been filled solidly, using the same method as at mileage 56. They required about six weeks' work, dumping an average of 180 12-yd. cars per day.

This line is being built under the direction of H. T. Hazen, Chief Engineer, to whom we are indebted for the foregoing information.—Railway Age Gazette.

N. J. Grace, Travelling Passenger Agent, White-Star Dominion Line, and at one time New England Passenger Agent, G.T.R., at Boston, Mass., is reported to have died suddenly Oct. 1.

Telephone Train Dispatching.

By A. Dwight Smith.

[The following is the third of the series of articles on this important subject, the two previous ones having appeared in our Sept. and Oct. issues.]

The most important feature of the telephone train dispatching system is the selector. A large number of these devices have been developed, but those which have proved successful can be counted very quickly. If some means were not provided so that the dispatcher could call a way station individually and keep the bell ringing as long as he wishes, telephone train dispatching would probably not be practical.

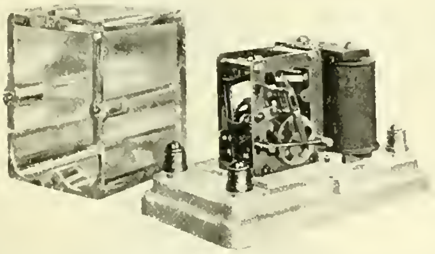

Fig. 1.—The Gill Selector.

The selector is an electro-mechanical device by means of which the dispatcher is able to signal the station he wants without calling any other station. One is placed at every station and at the dispatcher's office is a corresponding key to operate it The selector must not only be able to "select," as its name indicates, but it also must not affect the telephone line in any harmful way as regards talking. It must be possible to connect as many of these instruments to the circuits as may be desired and transmission is not affected. This means, of course, a very careful electrical design, unless expensive auxiliary apparatus is to be used, and selectors in general use at present (all of the bridging type) meet this condition in a most satisfactory manner. There are two selectors of this individual calling type in extensive use.

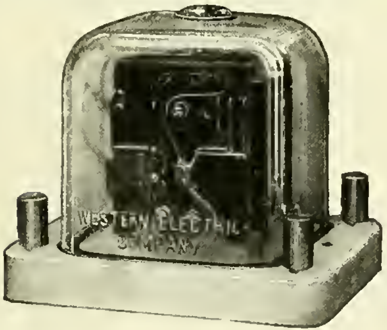

Fig. 2.—The Western Electric Selector.

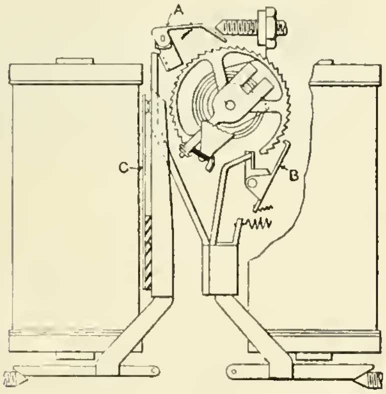

Fig. 3.—Schematic Diagram of Lever Movements, Western Electric Selector.

1. The Gill selector, fig. 1, was developed some years ago for use on telegraph circuits to call an operator in on the line and did away with the long continued calling of Morse characters. The essential features of this selector are the step-up selector wheel and the time wheel which is normally held at the bottom of an incline track. The operation of the selector magnet forces this wheel to the top of the track and allows the wheel to roll down to home. If the magnet is operated rapidly, the wheel does not get clear down before being pushed back again by an arm connected to the armature. The small pin on the side of the pawl engaging the selector wheel normally opposes the selector wheel teeth near their outer points. When the time wheel rolls down to the bottom of the track, however, the pawl is allowed to drop to the bottom of the tooth. Some of the teeth on the selector wheel are formed so that they will effectually engage with the pawl only when the latter is in normal position, while others will engage only when the pawl is at the bottom position, thus innumerable combinations can be made which will respond to certain combinations of rapid impulses with time intervals between. The correct combination of impulses and intervals steps the selector wheel clear around so that a contact is made. All other selectors fail to reach contact position, because at some point in their revolution, the pawl has slipped out, allowing the selector wheel to return home.

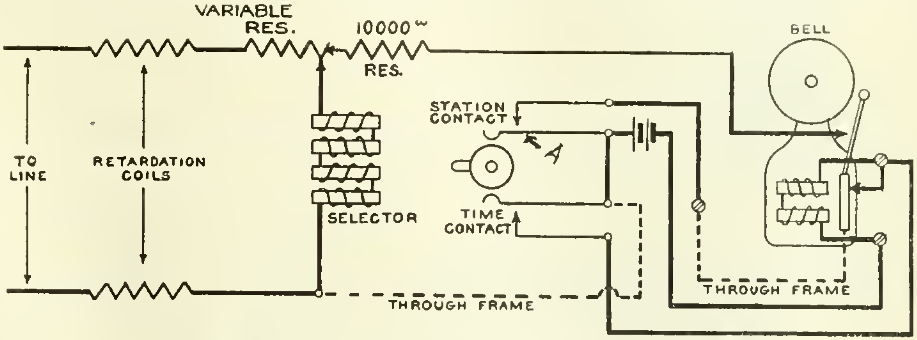

Fig. 4.—Wiring Diagram, Western Electric Selector. (Local Battery).

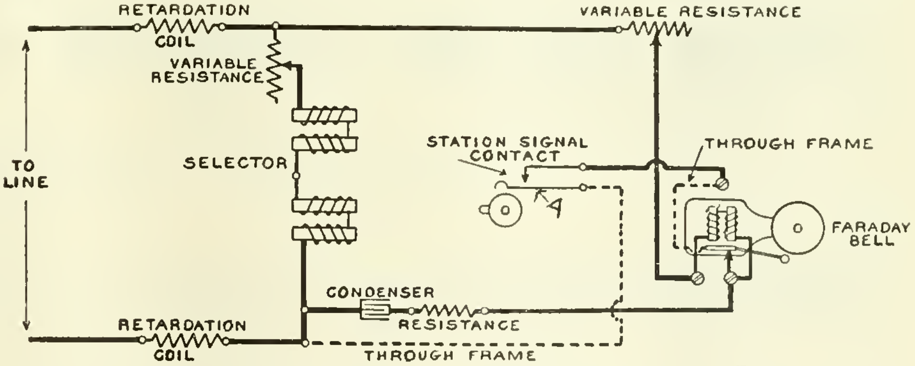

Fig. 5.—Wiring Diagram, Western Electric Selector. (Central Energy).

2. The Western Electric selector, fig. 2, is the newest, and is on the step up principle. The apparatus consists of two electro-magnets connected in series, and mounted by means of a brass frame on a porcelain base. Each magnet is equipped with two spools, the cores of which differ somewhat, one of the magnet's cores being covered with copper sleeves to produce slow action.

Fig. 3 shows the schematic diagram of the lever movements. Upon the fast acting lever is mounted a stepping-pawl A, designed to engage with a ratchet wheel, to which is fastened a platinum pointed arm, mounted on the frame work as the retaining-pawl B, designed to retain the teeth as they are stepped around. Attached to the slow acting armature are two fingers, designed to engage with the two pawls in such a way that when in normal position with the slow acting armature the two pawls will be held out of engagement with the wheel. While in the operated position, the fingers will permit the pawls to engage with the wheel.

This selector is operated by first placing on the line an impulse of current which operates both magnets. There is then placed on the line a succession of shorter impulses which cause the stepping magnet to oscillate back and forth and step the wheel around the desired number of steps. The speed with which these impulses are sent out on the line, however, does not permit the slow acting relay releasing. When the desired number of steps are taken, the contact is made and the current is held on the line, thus ringing the bell. As soon as the battery is removed from the line, the slow acting magnet releases, which raises the pawls and permits the wheel to fall back to normal position under the influence of a retractile spring.

When a station is called, say for instance, no. 15, all the selectors on the circuit take 15 steps, and the selectors at the first 14 stations will momentarily make their contacts as they step by, and the local battery at these stations close momentarily. This, however, will not cause the bell to ring, because the selector operates at the rate of 8 to 10 steps per second, and the arrangement of contact spring C, fig. 3, is such that it follows the movement of the stepping lever, and during a stepping cycle makes contact with the contact arm in but the small percentage of one-tenth of a second, the time necessary to take a step.

The contact arm of the wheel in its normal position rests against an insulated stop piece. On the other side of this stop piece is fastened a platinum contact which will engage with the contact arm when the stepping wheel is revolv-

ESPLANADE STREET EAST, TORONTO

ed to its limiting position. This stop piece is angularly adjustable and permits easy adustment of any selector for any station. This makes this selector a universal type which is very desirable in emergency. The selector requires 10-milliamperes at 37 volts for its operation, and calls at the rate of one second per 10 stations. It is sealed in a glass dustproof cover but can be easily opened for maintenance work. Fig. 4 shows the local battery way station circuit used with this selector. There are two 40-ohm choke or retardation coils placed one on each side of the selector as a protection against lightning. The selector is wound to 3750 ohms and is connected in series with a taper resistance across the line to produce equal operating current in all bridges.

When a station is called, contact A, fig. 4, is made. It closes the local battery through the vibrating bell. The bell is also equipped with an auxiliary contact which makes and breaks a 10000 ohm resistance across the line, and gives the dispatcher an "answer back"—a positive sign that he has rung the bell.

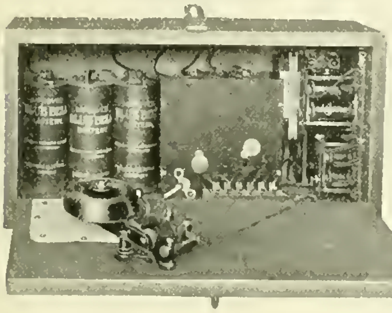

Fig. 6.—Cummings-Wray Selector.

This selector is also arranged to ring a bell by means of a main line battery located at the dispatcher's office, thus eliminating the local battery at the way station. Fig. 5 shows the apparatus so arranged.

All selectors are arranged with a back contact, by means of which time signals can be sent out to each way station on the line simultaneously for the comparison of clocks—a feature that is not obtained on any other type of selector.

The Sandwich selector is another type which is on the step-up principle. It consists of a stepping segment, stepping magnet and one locking magnet. The locking magnet controls the locking pawl and is normally one of engagement from the stepping segment. This is also true of the stepping pawl.

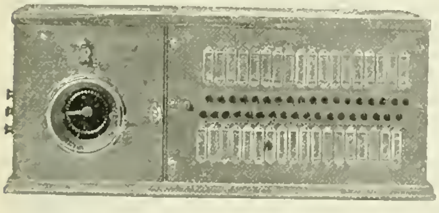

Fig. 7.—Cummings-Wray Calling Cabinet.

The locking magnet has two windings with different resistances, one being approximately 20 ohms, while the second spool is of rather high resistance. One terminal of the low wound magnet is connected to a platinum point and this contact is closed when the locking armature pawl is pulled down.

The circuit arrangement for this magnet system is such that the low wound magnet will get a portion of the line current from a shunt winding, and when the armature pulls down a magnet winding, has a local closed circuit through this contact on the armature. Thus the magnet is made slow acting since the low resistance winding has much the same effect os a copper sleeve over the core. When current is put to the line, this armature is put down as is also the stepping armature and as the circuit is interrupted, the stepping magnet will function quite rapidly, advancing the segment, while the locking magnet will not release. The stepping segment is therefore held in an advanced position.

The only successful multiple calling apparatus in service is the Cummings Ray selector, (figs. 6 and 7), which is installed on some of the western railways in the United States but is not used on any of the installations in Canada. This is based on the principle of synchronous clocks, but has of course a serious obection in that all the clocks on the circuit must be wound once a week. Indications point to a discontinuance of this system.

Fire Precaution Regulations for Railways in British Columbia.

The Minister of Railways for British Columbia issued recently, regulations governing the construction and operation of railways within the province, with a view to the protection of forests from fire. The right of way is to be cleared of all perishable matter, and everything, not to be used, must be burned under a permit from a provincial fire warden. Nothing must be thrown outside the right of way, which must at all times be kept free from dead timber, brush, dry grass and other inflammable matter. In specially dangerous places the Minister may direct the cutting and clearing of fire guards on lands adjacent to the right of way. The companies must provide sufficient appliances at suitable points, and their employes, as well as the men employed by contractors, are liable to be called upon to aid in subduing forest fires in proximity to the right of way. The debris on Crown lands, where the company has cut, under permit, any timber, must be dealt with as directed by the Minister of Lands.

Following are the rules with respect to safety appliances on locomotives:

Every locomotive having an extension smoke-box shall be equipped with netting mesh, the mesh to be not larger than 2½ x 2½ per in. no. 10 Birmingham wire gauge, and to be placed in the smoke-box so as to extend completely over the aperture through which the smoke ascends; the openings of the said mesh not to exceed a quarter of an inch and one sixty-fourth of an inch to the square inch. On every engine equipped with a diamond stack the mesh to be not more than 3 x 3 per in. of no. 10 Birmingham wire gauge, and to be placed across the top of the stack so as to completely cover the same; the opening of the said mesh not to exceed three-sixteenths of an inch and one sixty-fourth of an inch to the square inch.

The openings at the back of the ash-pans on every locomotive must be covered with heavy sheet-iron dampers, or with screen-netting dampers, 2½ x 2½ per in. of no. 10 Birmingham wire gauge; such dampers to be fastened either by a heavy spring or a split cotter and pins.

Overflow pipes from the injectors must be put into the front and back part of the ash-pans and used from April to October, inclusive.

During the months from April to October inclusive, wire screens must be fixed to the windows of all smoking compartments of railway carriages.

The remaining sections of the rules provide for the inspection of these safety appliances by the railway officials at least once a week, the keeping of the records of such inspections, and for inspections at reasonable times by the Government fire wardens.

Grand Trunk Railway Earnings, Expenses, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R., for Aug., as compared with those for Aug., 1910:—

GRAND TRUNK RAILWAY.

	1911.	1910.
Earnings	$3,548,500	$3,067,600
Expenses	2,597,800	2,213,700
Net earnings	$ 950,700	$ 853,900

CANADA ATLANTIC RAILWAY.

	1911.	1910.
Earnings	$ 189,000	$ 162,500
Expenses	175,600	157,900
Net earnings	$ 13,400	$ 4,600

GRAND TRUNK WESTERN RAILWAY.

	1911.	1910.
Earnings	$ 572,500	$ 498,200
Expenses	473,400	399,500
Net earnings	$ 99,100	$ 98,700

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1911.	1910.
Earnings	$ 192,650	$ 156,600
Expenses	153,950	144,700
Net earnings	$ 38,700	$ 11,900

Approximate earnings for Sept., $4,409,559, and for two weeks ended Oct. 14, $1,981,330, against $4.087,955 and $1,843.722 for same periods 1910.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Sept. 30:

	1911.	1910.
Grand Trunk Ry.	£2,125,503	£1,813,107
Canada Atlantic Ry...	113,237	95,403
Grand Trunk Western Ry.	346,035	292,226
Detroit, Grand Haven and Milwaukkee Ry.	117,200	95,064
Totals	£2,701,975	£2,295,800

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

Canadian Ticket Agents' Association Annual Meeting.

The twenty-fifth annual meeting of the members of this Association was held at Sault Ste Marie, Ont., Oct. 4, 5 and 6. The attendance was not as large as usual, there being about 80 members present, and a large number of ladies. The Secretary-Treasurer, E. de la Hooke, as usual, had all arrangements most carefully made.

The business meeting was held Oct. 4, the President, J. F. Dolan, city ticket agent, Richelieu & Ontario Navigation Co., Montreal, being in the chair. Mayor Munro, and C. H. J. Jones, President, Board of Trade, welcomed the members and F. W. Churchill, C.P.R. ticket agent, Collingwood, Ont., responded on behalf of the Association.

The Secretary-Treasurer, E. de la Hooke, presented his annual report, showing that 25 new members had been enrolled during the year, but that 18 of the old members had not paid their subscriptions, so that there was a net gain of seven, the membership being 205 against 198 a year ago. The balance on hand at the beginning of the year was $169.58 and the receipts $669.01, a total of $838.59. The expenditures were $516.13, leaving a balance of $322.16, the largest in the Association's history.

On the question of Transportation, Mr. de la Hooke said:— "The matter of the disabilities as to free transportation in the United States, under which many of our members rest, owing to the laws laid down by the Interstate Commerce Commission, has received attention during the year. In accordance with resolution passed at the Quebec meeting your Secretary wrote G. A. Cullen, General Passenger Agent of the Delaware, Lackawanna and Western Ry., who was the accredited representative of the General Passenger and Ticket Agents' Association to our meeting to take the question up in our behalf and endeavor to interest his Association in the matter. He was given the salient points in the situation and in replying in very courteous but not encouraging terms stated that he would do all he could to advance our claims."

Reference was made to the death of four members during the year, C. E. Morgan, of Hamilton, W. Bunton, of Peterboro, J. C. Whichelo, of Parry Harbor, and W. F. Bleecker, of Marmora.

The President, J. F. Dolan, read his address in which he thanked the Association for the honor conferred on him in his election. He spoke approvingly of the selection of Sault Ste. Marie for the meeting, referring to it as a place where, "while physical beauties are everywhere to be seen, they are made to join hand in hand with commerce and industry." Feeling references were made to the members who had died during the year. He suggested a change of name to "The Canadian Association of Passenger and Ticket Agents," so as to allow general, district and travelling agents to become members.

A very interesting letter was read from Barlow Cumberland, Vice President of the Niagara Navigation Co., and one of the earliest members of the Association, regretting his inability to be present and referring to the work performed by the Association.

H. G. Elliott, General Passenger Agent, G.T.R., Montreal, as the representative of the American Association of General Passenger and Ticket Agents, and M. H. Bohreer, D.P.A., Mobile and Ohio Rd., Chicago, representing the American Association of Passenger Agents, addressed the meeting.

As suggested in the President's address, an amendment to the constitution was introduced to make eligible for membership, district passenger agents, general agents, passenger department, travelling pasenger agents and steamship agents doing business in Canada. After a good deal of discussion, this motion was carried and the name of the association was changed to Canadian Association of Passenger and Ticket Agents.

S. B. Morris,
President, Canadian Ticket Agents' Association.

W. Jackson,
Who has attended twenty-five consecutive annual meetings of the Canadian Ticket Agents' Association.

The following officers were elected for 1912:— President, S. B. Morris, C.P.R., Rodney, Ont.; First Vice President, G. J. Alexander, G.T.R., Richmond, Que.; Second Vice President, J. Kidd, C.P.R., Goderich, Ont.; Third Vice President, C. B. Janes, C.P.R., Orillia, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Executive Committee, W. Jackson, C.P.R., Clinton, Ont.; M. McNamara, G.T.R., Walkerton, Ont.; F. W. Churchill, C.P.R., Collingwood, Ont.; W. McIlroy, C.P.R., Peterboro, Ont., and C. E. Horning, G.T.R., Toronto.

C. A. Cairns, G.P. and T.A., Chicago, and North Western Ry., Chicago, presented W. Jackson, C.P.R., Clinton, Ont., with a silver tray on behalf of the Association's guests, in appreciation of his untiring work in its interests and in commemoration of his attendance at every one of the twenty-five annual meetings. Mr. Cairns prefaced the presentation with a very interesting and amusing speech.

Social Features.

C. H. J. Jones, President, Board of Trade. W. B. Moorhouse, C.P.R.; W. R. Thom, Northern Navigation Co., and H. J. Herrold, A. C. & H.B. Ry., all of Sault Ste. Marie, had charge of the entertainment features of the programme and are to be congratulated on the efficient manner in which they were carried out.

On the evening of Oct. 4, a smoker was held for the men at Columbia Hall and an interesting boxing bout was given. The ladies being taken to the theatre and entertained at supper afterwards at the St. Charles Hotel. On the morning of Oct. 5, the whole party was conducted through the Lake Superior Corporation's steel plant. At noon they boarded the steamboat City of Chatham from the Commercial Dock at the plant and were given a trip through the locks and up the St. Marys river, refreshments being served on board. In the evening a reception and informal dance were given at Columbia Hall. On Oct. 6, the entire party were taken as the guests of the Algoma Central and Hudson Bay Ry. by special train to Pangissin, 68 miles north of Sault Ste. Marie, which is the farthest point to which the line is at present in operation and where a camp dinner was served.

The following presentations were made on behalf of the Association:— W. B. Moorhouse, ticket agent, C.P.R., silver chafing dish; C. H. L. Jones, President, Board of Trade, cut glass pitcher; H. J. Herrold, General Agent, A.C. & H. B. Ry., cut glass lemonade jug; W. R. Thom, Northern Navigation Co., cut glass pitcher; J. J. Brignall, Travelling Passenger Agent, C.P.R., cut glass bowl.

Transportation in the United States.

As stated in our last issue, W. McIlroy, City Passenger Agent, C.P.R., Peterboro, Ont., who was appointed to represent the Association at the American Association of General Passenger and Ticket Agents' annual meeting in St. Paul, Minn., was unable to attend, so he sent a written communication, in which, in referring to the C.T.A.A.'s Quebec meeting last year, he said:— "The subject of free transportation over U.S. railways to members of the C.T.A.A. who are not wholly employed in the ticket business, was again brought up and discussed, and I have been requested to bring the matter before you again. When the payment of commissions to agents on tickets sold by them over foreign lines were cut off some years ago, it was followed by a ruling of the Interstate Commerce Commission that no ticket agents, except those wholly employed in railway business, should secure free transportation over U.S. lines. The members of our Association who come under the ban by this ruling are successful business men in the smaller towns throughout Canada. They are paid commission for selling tickets by the railways they directly represent. They also sell coupon tickets over foreign lines, both in

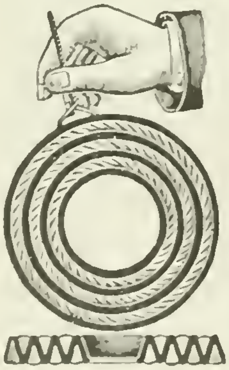
Have You Tried These?



☞ This one—
World-Goetze
Elastic Corrugated
Copper Gasket

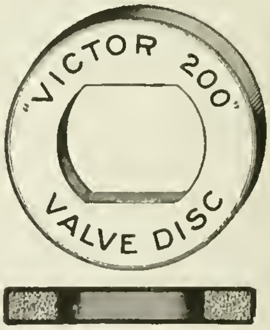
with Asbestos Lining No. 2—is for flanged joints. It makes such joints tight when nothing else will—it makes them permanently tight and one in a joint is enough.

Why not try them on a few of your most troublesome joints? Why not try them *now* and pass up your flanged joint troubles for good.

This one—☞
"Victor 200"
Copper Valve Disc

is for valves of Jenkins or similar types.

These Discs not only ensure longer life to *new* valves, but enable you to renew the life and usefulness of many an old valve—and besides they save a lot of time in renewals.



Being made of copper and asbestos they have just enough "give" to make an absolutely tight joint, without going to pieces like rubber or composition discs.

If you haven't received a copy of our Catalogue listing these Gaskets and Discs, we shall gladly send you one.

T. McAVITY & SONS, Ltd., - ST. JOHN, N.B.

Canada and the United States. They can get transportation over foreign lines in Canada at least once a year through the Secretary of our Association, but they get nothing from U.S. lines. The members of our Association want to go to the United States and familiarize themselves with the railways and the wonders of that great country, but they are barred out as a body by the Interstate Commerce Commission's ruling. Is there no remedy? Could not free transportation be arranged for once a year for the annual meeting to all the members of our Association? I solicit your earnest endeavours on our behalf."

◆

Canadian Pacific Railway Co's. Annual Meeting.

The 30th annual meeting of shareholders was held in Montreal, Oct. 4. Sir Thos. G. Shaughnessy, President and Chairman of the Board, in moving the adoption of the report, which was published in our last issue, said:

The volume of passenger and freight traffic even exceeded our expectations, with the very gratifying result that your gross operating revenue for the year was over $104,000,000. The additional acreage under crop this year at the estimated average yield per acre will furnish largely increased tonnage for the transportation companies, and, although the quality of wheat has been injuriously affected in some portions of Western Canada where bad weather prevailed during the harvest season, it is apparent that the financial return to the producers will be very large indeed.

The expenditures in the year for the upkeep of the property were on quite a liberal scale, and as a consequence your railway and equipment are in an excellent state of efficiency.

It is expected that the 75 miles of the Georgian Bay and Seaboard Ry. between Coldwater and Bethany, Ont., a portion of the shorter and more economical route between Georgian Bay and the head of ocean navigation, will be completed this autumn, and such progress has been made with the construction of the various branch lines in Western Canada that about 374 miles will be finished within the next couple of months and added to the mileage that is being operated. It will not only be desirable but necessary to continue to build year by year a good many miles of these branch lines to provide present and incoming settlers with transportation facilities, more miles, indeed, than you would have been called upon to provide had the Dominion and Provincial Governments who have pledged their credit almost beyond the limit of prudence to assist other railway companies insisted that these companies should open up new territory, instead of building their lines through settled sections of the country where ample transportation facilities already existed.

It is evident that on some portions of the system the time is almost at hand when a single track will not accommodate your growing traffic without congestion and increased expense, and, therefore, your directors are of opinion that the double track should be continued westward from Brandon to Medicine Hat, about 524 miles, as rapidly as the work can be done without undue interruption to the train service.

With all that has been done during the past seven or eight years, we find that at points like Montreal, Toronto, Ottawa, Fort William, Winnipeg, Calgary and Vancouver, we must still further enlarge our accommodation for passengers and freight. Nearly all of the requisite property has been acquired, and the various works will be carried to completion as soon as possible. It is important that modern and commodious shops should be provided for the maintenance and repair of the large number of cars and locomotives now in service on your lines in Alberta, and it has been decided that for present and future convenience and economy Calgary will be the best location for these shops, provided that suitable arrangements can be made with the city authorities.

The outcome of the first season's work on the irrigation system in what is known as the eastern block is very gratifying. The great dam at the Horse Shoe Bend of the Bow River, south of Bassano, is almost finished, and before the close of the season upwards of 6,000,000 yards of material will have been moved in making ditches. This should ensure the completion of the work within the next two years, but, of course, some of the land can be served with water before that time.

After more than twenty years of immunity from serious accident of any nature to our fleet on the Pacific Ocean, we were so unfortunate as to lose the s.s. Empress of China, wrecked on the coast of Japan, July 27. Another steamship to take the place of the Empress of China, but twice as large and costly, will be provided at the expense of the steamship replacement fund.

Very favorable business conditions exist throughout all the territory served by your lines in Canada, and there would appear to be ample justification for expecting their continuance. West of Lake Superior there is a universal spirit of confidence and buoyancy, and, while there is some apprehension that real estate values are, in certain localities, on rather a speculative basis, there is room for serious error in this regard because of the business strides that are being made by almost every city and town of any importance. It will be disappointing if the immigration next year is not larger than ever before, and with our country's advantages so well known and recognized all over the world, there would appear to be no good reason why we should not have an increasing number of new-comers year by year for a long time to come. If this be the case there will be no halt in the activity and progress of the West. The commerce and manufactures of Eastern Canada are in a thriving state, as indicated by the quantity of goods that is being shipped. The increase in the demand for a great many articles previously manufactured abroad, or that had only been made in Canada in a small way, encouraged the establishment of new industrial works, as well as the enlargement of existing ones, thus furnishing employment for thousands of additional workmen, so that in point of increased population Eastern Canada has quite kept pace with the West. With the continuance of good times in the agricultural districts the commercial interests of the country will be proportionately benefited, and those who are engaged in manufacturing enterprises should feel warranted in making such additions to their works and employing such additional workmen that large consumers of material in Canada will no longer be compelled to go abroad to meet any portion of their requirements.

The shareholders, the directors and the executive are to be congratulated on having a most capable staff of officers and employes, to whose united efforts the signal success of the company's operations may be attributed. Since the close of the fiscal year the company and the board of directors met with another serious loss by the death on July 13 of Robt. Meighen, who joined the board in 1908. He was a good citizen, a capable and upright business man, and had been a warm friend and supporter of the company from its inception. Sir Wm. Whyte, who as Vice President was for many years in special charge of the company's interests west of Lake Superior, and who recently retired from active service, has been elected a member of the board to fill the vacancy caused by Mr. Meighen's death.

Following the unanimous adoption of the report, the following resolutions were adopted:

That the lease of the South Ontario Pacific Ry. be sanctioned and approved, which lease, amongst other things, demises to this company for 999 years, the whole of the railways and branches which the S.O.P.R. Co. has been authorized to construct, and whether constructed or to be constructed, including a railway now under construction from Guelph Jct. to Hamilton, about 16½ miles, and all other railways or branches hereafter constructed by that company, and their appurtenances, at an annual rental of a sum equal to the interest payable on all bonds at a rate not exceeding 4% per annum, payable half-yearly, which the lessor may issue at the request of this company expressed in writing, the payment of such interest being guaranteed by this company, and the aggregate of all such bonds outstanding not to exceed $30,000 a mile of railway either constructed or under contract to be constructed.

That the lease from and agreement between the Alberta Ry. and Irrigation Co. and this company be sanctioned and approved, which amongst other things, demises to this company, for 999 years, the whole of the railways and branches of the lessor company, in Alberta, constructed, or to be constructed, and their appurtenances, and all the corporate powers possessed by it and such portion of all the other powers, properties, etc., in so far as they are or may become necessary for the working of the said railways and branches, at an annual rental equal to 6% per annum on the whole of the outstanding ordinary capital stock of the lessor company, viz., $3,250,000, and which lease also includes the sale and conveyance to this company of the whole of the lessor company's lands, irrigation works and mines, and generally all its assets and properties, excepting those to be leased as aforesaid, in part consideration of the above payment on the capital stock and in part consideration of the assumption by this company of all the obligations of the lessor company, including its outstanding debenture stock, the interest of which will be paid by this company half-yearly until redemption of same as provided for in the trust deed.

That the directors be authorized and empowered to enter into a lease from the Esquimalt and Nanaimo Ry. Co. to this company of its railways now constructed or to be constructed, including the railway in operation from Victoria to Wellington on Vancouver Island, about 78 miles, and the railway from Wellington to Alberni, about 60 miles, a portion of which railway, viz.:—from Wellington to Cameron Lake, 30 miles, has been completed and is now in operation, and the remainder from Cameron Lake to Alberni is approaching completion, for 99 years at a rental equal to interest at the rate of 4% per annum, payable half-yearly on mortgage bonds guaranteed both as to principal and interest by this company, and to be from time to time issued by the E. and N.R. Co. with the consent in writing of this company, the said bonds not to exceed in the aggregate $14,000 a mile in respect of the railway from Vancouver to Wellington and $30,000 a mile in respect of the branch railway from Wellington to Alberni and such other railways, branches and extensions as may be hereafter constructed; such lease to be in such form as may be approved by the directors of this com-

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus; and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

Over Two Million Pounds of Vanadium Cast Steel Used in the Emergency Dams and the Lock Gates of the Panama Canal

"MASVAN"

Trade Mark. Registered in U. S. Patent Office

THE hinges or yokes of the lock gates, aggregating 1,138,236 pounds, 284 castings all told, are being made by the Wheeling Mold & Foundry Company, for the McClintic-Marshall Construction Company. "Masvan" Ferro Vanadium is used in the molten steel.

The racks and pinions for the emergency dams, aggregating 1,350,000 pounds, are being cast by the American Steel Foundries Company for the American Bridge Company. "Masvan" Ferro Vanadium is used.

Physical and dynamic qualities excelling those of any other type of steel casting are obtained for this monumental work through the use of our standard vanadium alloys. For castings or forgings designed for the hardest service, specify "Amervan," or "Masvan" ferro vanadium to your steel maker. Vanadium *as a component element of steel* gives it strength, ductility, and life, without brittleness or the tendency to crystallize. The best means of getting Vanadium into steel *as a component* part is to use "Amervan" or "Masvan" alloys.

AMERICAN VANADIUM COMPANY

324 Frick Building, - PITTSBURGH, Pa.

Universal Vanadium Company. General Agent, New York, London, Paris, Pittsburgh.

pany; and, that the former resolution authorizing lease of the said company's railways be abrogated.

Whereas the branch lines and extensions set forth below have been constructed or are in course of construction, and it is deemed desirable that authority be given to the directors to issue consolidated debenture stock to meet the requisite expenditure in connection therewith, it was resolved that the construction and equipment of the following branch lines and extensions of other branch lines which have been heretofore authorized, be approved:

Moose Jaw southwesterly branch, southerly and southwesterly from Moose Jaw, 35 miles.

Kerrobert northeasterly branch, northeasterly from Kerrobert, on the Moose Jaw northwesterly branch, 25 miles.

Weyburn-Lethbridge branch, extension westerly from the westerly end of the branch heretofore authorized, 21 miles.

Estevan-Forward branch, westerly and northwesterly from Estevan on the Souris branch, 55 miles.

Swift current branch, southerly and southeasterly from Swift Current, 45 miles.

Swift Current northwesterly branch, northerly northwesterly from Swift Current 35 miles.

Wilkie northwesterly branch, northwesterly from Wilkie on the Pheasant Hills branch, 32 miles.

Wilkie-Anglia branch, southeasterly from Wilkie, on the Pheasant Hills branch, 35 miles.

Bassano-Irricana branch, northerly and northwesterly from Bassano, on the main line to Irricana on the Langdon branch, 73 miles.

Kipp-Aldersyde branch, extension northwesterly from the northerly end of the branch heretofore authorized to Aldersyde, 27 miles.

And for aiding the construction and equipment of these branch lines and extensions the directors may issue and dispose of consolidated debenture stock to such an amount as they may deem expedient, not exceeding in the aggregate £6,000 sterling a mile in respect of the Moose Jaw southwesterly branch, the Swift Current southeasterly branch, the Swift Current northwesterly branch, the Bassano-Irricana branch, the Kerrobert northeasterly branch and the Wilkie-Anglia branch, and £5,000 sterling a mile in respect of the Wilkie northwesterly branch, the extension of the Weyburn-Lethbridge branch, the Estevan-Forward branch, and the extension of the Kipp-Aldersyde branch.

Whereas this company has statutory power to issue consolidated debenture stock in aid of the acquisition of steam vessels to the extent of the cost thereof, and the Fairfield Shipbuilding and Engineering Co. has recently constructed for this company on the Clyde, Scotland, two single screw steamships named Princess Adelaide and Princess Alice respectively, each being about 290 ft. long, with beam of about 46 ft., moulded depth of about 15 ft., triple expansion engines and a tonnage of about 2,000 tons; and Bow, McLachlan & Co., of Paisley, Scotland, have recently constructed for the company a steel twin-screw passenger steamship named Princess Mary, 210 ft. long with beam of 40 ft., moulded depth of 14 ft., triple expansion engines, and a tonnage of about 1,500 tons, and have entered into a contract for the construction for this company of a steel single-screw passenger steamship named Princess Sophia, about 245 ft. long with beam of about 44 ft., moulded depth of 18 ft., triple expansion engines and a tonnage of about 2,000 tons; and this company has recently purchased the steel screw steam tug Colima, 91 ft. long, beam 22 ft., depth of hold 9 ft., with compound engines; and the total cost of the said five vessels, including rigging, appurtenances and auxiliaries, will amount to about £300,000 sterling; and this company, pursuant to the authority given by the shareholders on Oct. 2, 1907, has entered into a contract for the construction by the Fairfield Shipbuilding and Engineering Co. of two steel quadruple turbine steamships for its Trans-Pacific Ocean service, to be named Empress of Asia and Empress of Russia, such steamships to have a gross tonnage of 15,000 tons each, a length of 570 ft., moulded depth of 38 ft., beam of 68 ft., and the whole cost thereof, including rigging, appurtenances and auxiliaries, complete when delivered, being £500,000 sterling, each; and the directors have decided to pay the cost of one of the last recited steamships out of the Steamship Replacement Fund; and in order to provide funds for payment of the cost of one of the steamships lastly described, and of the four steamships first described, and of the tug and their rigging, appurtenances and auxiliaries, and pursuant to the power above recited, it is deemed advisable to create an issue of consolidated debenture stock, it is resolved that this company is hereby authorized to issue consolidated debenture stock, and bearing interest not exceeding 4% per annum, to the amount of £800,000 for the purpose of paying the cost of the steamships above described and their rigging, appurtenances and auxiliaries; and that such stock may be issued in such manner and in such amounts respectively as shall from time to time be determined by the directors.

The retiring directors, Sir Wm. C. Van Horne, R. B. Angus, E. B. Osler, M.P., and H. S. Holt were re-elected for a further term of four years. At a meeting of the board held immediately after the shareholders' meeting, the following officers were re-elected for the current year: President, Sir Thos. G. Shaughnessy; Vice President, D. McNicoll; Executive Committee, R. B. Angus, D. McNicoll, E. B. Osler, M.P., Sir Thos. G. Shaughnessy, Lord Strathcona, and Sir Wm. C. Van Horne.

Trade and Supply Notes.

At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Pintsch Compressing Co., has appointed as its attorney in British Columbia, Jas. Dunn, Vancouver.

The Brown Hoisting Machinery Co., of Cleveland, Ohio, announces the opening of its San Francisco office in the Monadnock Building, with J. P. Case as Manager.

A. H. Wiggin, President, Chase National Bank, New York, has been elected a director of the American Locomotive Co., in place of the late J. E. French.

Supplementary letters patent have been issued under the Dominion Companies' Act increasing the capital of the St. Laurence Bridge Co. from $500,000 to $3,000,000.

The Pratt and Letchworth Co., Ltd., Brantford, Ont., has been authorized by letters patent under the Ontario Companies Act to increase its capital from $350,000 to $400,000.

The Titanium Alloy Manufacturing Co. calls attention to statistics issued by the American Steel Association respecting the tonnage of steel treated with various alloys during 1910. Out of a total of 567,819 gross tons, 326,316 were treated with Titanium.

T. A. Edison, Inc., Orange, N.J., has issued as a pamphlet, a reprint of argument comparing the relative economy of primary batteries and lead type portable storage batteries for railway signal operation, which was read at a recent meeting of the Railway Signal Association at Chicago, Ill., by E. E. Hudson.

The Robb Engineering Co., Ltd., Amherst, N.S., has taken the general agency for Canada of the gas engines and suction gas producers made by Davey, Paxman & Co., Ltd., of Colchester, England. The Paxman gas engine is made in a full line of sizes from 2½ to 300 h.p.; those larger than 20 h.p. are equipped with a compressed-air self starter which starts the engine with the same ease and certainty as a steam engine.

The Nova Scotia Car Works, Ltd., Halifax, N.S., is duplicating its power plant, and has placed the order with the Robb Engineering Co., Amherst, N.S., which supplied the original equipment. The new installation will consist of a 600 h.p. Corliss engine for direct connection to electric generator, three 200 h.p. return tubular boilers with self-supporting steel smoke stack 5 ft. diameter, 90 ft. high, also feed-water heater, piping and other accessories.

The Brown Hoisting Machinery Co., Cleveland, Ohio, has issued a well printed and illustrated pamphlet showing a few typical installations of the Brownhoist locomotive cranes, equipped with bottom block and lifting magnet, and some with Brownhoist grab bucket. These cranes can be used for switching purposes, the four-wheel types being equipped with drawbar, and the eight-wheel types with M.C.B. couplers. The latter are also equipped with steam brakes, M.C.B. trucks, train pipe, air hose connection and grab handles and steps.

Babcock & Wilcox, Ltd., Montreal, report the following orders: Winnipeg Electric Ry., 6,500 h.p. boilers; British Columbia Electric Ry., 2,000 h.p. boilers and C. G. stokers; Regina Electric Ry., 1,000 h.p. boilers and superheaters; Saskatoon, City Power Station, 1,500 h.p. boilers, superheaters, stokers, coal handling machinery and piping; Edmonton Electric Ry., 1,500 h.p. boilers, superheater, stokers and piping; Dominion Iron & Steel Co., 8,000 h.p. boilers, superheaters and stokers; Calgary Electric Ry., 2,000 h.p. boilers, superheaters and stokers; Moose Jaw, electric power plant, 300 h.p. boilers and superheaters; Canadian Pacific Ry., 1,200 h.p. boilers and superheaters for Windsor St. station, Montreal, and 650 h.p. for Place Viger station; Acadia Coal Co., 3,000 h.p. of boilers, superheaters, stokers and coal handling machinery; Atlin Construction Co., Prince Rupert, B.C., 500 h.p. boilers and stokers; Canada Iron Corporation, Midland, 2,500 h.p. boilers; Lethbridge Collieries, 1,000 h.p. boilers and stokers; Alberta Ry. and Irrigation Co., 500 h.p. boilers and stokers; Dominion Express Co., Montreal, 320 h.p. boilers; Canadian Car & Foundry Co., Montreal, 500 h.p. boilers; North Vancouver City Ferry, no. 2, marine water tube boilers; Montreal floating dock, 6 boilers portable type. They have recently completed etaoinshrd new boilers in the Government steamship Aberdeen at Halifax. By A. Dwight Smith.

All Steel Section Car

No. 28 Fairbanks-Morse Gasoline Motor Cars

SPECIFICATIONS

Gauge	Any gauge 24 inches and over
Wheel Base	3 feet 10 inches.
Length of Car Over All	7 feet 0 inches.
Width, Without Guide Arms	26 inches.
Wheels	17-inch wood center and 14-inch wood center guide wheels.
Axles	Rear axle 1⅛ inches. Front axle 1½ inches.
Axle Boxes	Rear boxes are malleable iron with oil cellar. Front boxes are full brasses and oiled by engine lubricating system, as well as grease cups for emergency use.
Frame	All pressed steel and steel guide arms.
Power	Two-cylinder, 3¼ x 4 inches, two-cycle air-cooled engine, one cylinder direct connected to front axle on each side. Cranks entirely enclosed. Engine develops about 4 H.P.
Lubrication	Engine is entirely lubricated by oil mixed with the gasoline and reaches the engine with the gasoline, passing through the carburetor.
Control	Spark and throttle are controlled by levers on the seat and the throttle lever also operates a switch and cylinder relief cocks.
Brake	On front and rear wheels. Can be operated from either front or rear seat.
Seating Capacity	Three persons.
Tank	Gasoline tank holds about 2¼ gallons, which operates the car about 80 miles.
Speed	Runs either way up to 30 miles per hour.
Weight	About 400 lbs.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Central Ry.—Steel is reported to have been laid west of the Calgary and Edmonton Ry. at Red Deer to the river, and the substructure of the bridge, half a mile in length across the river, has been completed. It is expected that the bridge will be completed by the end of the year. Track laying will be continued on the farther bank of the river pending the completion of the bridge, and it is expected to have it laid as far as Rocky Mountain House by Dec. 31.

The Board of Railway Commissioners has approved location plans for the line between mileage 64.5, and 71.3 west of Red Deer; and between mileage 160 and 194.6 east from Red Deer, Alta. (Oct., pg. 935.)

Algoma Central and Hudson Bay Ry.—The Board of Railway Commissioners has authorized the operation of trains over the extension of the main line, in Sault Ste. Marie. It has also approved location plans for the extension of the line from mileage 30.08 to 129.39.

Arrangements are being made for the letting of contracts for the building of a new station at Tagona, at a cost of about $10,000, and plans are being prepared for a new station and office building at the foot of Bruce St., Sault Ste. Marie, at an estimated cost of $100,000. R. S. McCormick, Chief Engineer, was reported as saying, Oct. 11, that the contract for this work would probably be let in the spring of 1912. (Oct., pg. 935.)

Atlantic, Quebec and Western Ry.—Track has been laid on the extension of the line into Gaspe, Que., and we are advised that construction trains are being run through to that point. The bridge work and ballasting on the extension are being finished, and it was expected to have everything practically completed by the end of October. Oct., pg. 935.)

Brandon Transfer Ry.—The short piece of line connecting C.P.R. and Canadian Northern Ry. and the Brandon, Saskatchewan and Hudson Bay Ry. (Great Northern Ry.) was opened for traffic, Sept. 19. The line was built and is being operated by the last mentioned railway, under an order of the Board of Railway Commissioners; the rate for handling traffic being $3 a car. (Oct., pg. 935.)

British Columbia and Alaska Ry.—Plans for this projected railway from Vancouver to Fort George have been filed at Victoria and Ottawa. J. Wolkenstein, President, accompanied by several of the directors, completed an inspection of the route Sept. 25, and in Vancouver, on their return from Fort George, the President said arrangements for building the line were being advanced, but whether by the company itself, or in amalgamation with another company, he was not then in a position to state. (Oct., pg. 935.)

Burrard Inlet Tunnel and Bridge Co.—An agreement was signed Sept. 28, between the company and the city of Vancouver respecting the building of a bridge across the second narrows of Burrard Inlet. Under the agreement, the city will subscribe for $200,000 of the company's stock. The company is controlled by the municipalities and the bridge is to be built in connection with railways to be built by the Vancouver, Westminster and Yukon Ry. (See Vancouver, Westminster and Yukon Ry., Oct., pg. 937.)

At a meeting of the directors, Oct. 5, Sir J. Wolfe Barry, of London, Eng., was appointed consulting engineer

Central Ry. of Canada.—We are officially advised that the engineers in charge of parties are: De S. Beaudry Hawkesbury, Ont., on the section west of that point, and L. G. Parker, St. Andrews, Que., on the section east from Hawkesbury. It is expected to get the location completed, the right of way cleared, and a start made with the earth work during the winter, so as to have some grade ready for tracklaying in the spring of 1912. L. B. Howland, Toronto, formerly President and General Manager, Irondale, Bancroft and Ottawa Ry. has been appointed Superintendent of Construction. (Oct., pg. 939.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has extended the time to Mar. 31, 1912, for the completion of the reconstruction of the bridge over the Shubenacadie River at South Maitland, U.S. (Sept., pg. 853.)

Application is being made to the Dominion Parliament to extend the time within which the company may build the line from between Kentville and Canning, to between Berwick and Middleton, authorized to be built in 1908.

Edmonton, Dunvegan and British Columbia Ry.—T. Turnbull, Chief Engineer, arrived in Edmonton, Alta., Sept. 21, after having made a preliminary survey of the first hundred miles of this projected railway out of Edmonton. The company has several survey parties in the field locating the line.

A meeting of shareholders will be held in Edmonton, Nov. 6, for the purpose of formally organizing the company. C. Pringle, Ottawa, is Secretary of the Provisional Directors. (See Edmonton to Peace River, Oct., pg. 935.)

Edmonton to Peace River.—In connection with the reports referred to in our last issue, an interview with J. L. Cote, a member of the Alberta Legislature, in Vancouver, Oct. 22, states that the charter which has been acquired by the J. D. McArthur interests, covers the building of a line from Edmonton to Fort George. This is the route of the Edmonton, Dunvegan and British Columbia Ry. Mr. Cote added that a survey party was going over the route to secure data preliminary to the location survey. It is expected that construction will be started during 1912, and the line completed in 1914. (Oct., pg. 935.)

Erie, London and Tillsonburg Ry.—Dominion Parliament is being asked for an extension of time within which the projected line from Port Burwell to London may be built, J. H. Teall, Tilsonburg, Ont., is President of the company. (June, 1910, pg. 447.)

Fredericton and Grand Lake Coal and Ry. Co.—The question of the building of a railway from Fredericton or Gibson to the Queen's County coal fields near Minto, N.B., in the interests of the C.P.R. is under consideration. The Fredericton and Grand Lake Coal and Ry. Co., with H. P. Timmerman, of the C.P.R., as one of the provisional directors, was incorporated by the N.B. Legislature in 1910, and in addition to having power to build from Fredericton or Gibson to Minto, was authorized to acquire the New Brunswick Coal and Ry. Co.'s lines, etc. Location surveys have recently been made by D. F. Maxwell, who went over the route in company with Sir Thos. Tait, Sept. 30. It is reported that the F. and G.L.C. and R. Co. has entered into a contract to supply 100,000 tons of coal a year to the C.P.R., and that the line will be built at once in order to deliver the coal. One report says that the line will be completed by Oct. 1, 1912.

Under the terms of an act passed last session of the New Brunswick Legislature, the Provincial Government is authorized to guarantee the bonds of the F. and G.L.C. and Ry. Co., provided it has entered into a contract with the C.P.R. or other company for the operation of the line, and for the mining of at least 100,000 tons of coal, and also for the leasing from the province of the Coal and Ry. Co.'s line.

High River, Saskatchewan and Hudson Bay Ry.—Application is being made to the Dominion Parliament to incorporate a company to build a line from tps. 25 to 29, range 1, west of the 4th meridan, Alberta, northeasterly to Saskatoon, thence to tps. 52 to 56 on the eastern boundary of Saskatchewan, thence to The Pas, N.W.T. A. A. Ballachey, High River, Alta., is solicitor for applicants. (Sept., pg. 53.)

Intercolonial Ry.—Contracts are reported to have been let by the late Dominion Government for the building of the following lines: Dartmouth to Deane, N.S., 43.2 miles, M. P. Davis & Co.; Guysboro to Country Harbor, N.S., 72 miles, Nova Scotia Construction Co.

A contract is reported let to F. Wilson, Truro, N.S., for the erection of a new station there. The building will be 296 by 50 ft., the centre portion being two stories high. The building will be of stone and the contract price is $150,000. The actual work of building the line will be started in the spring. (Oct., pg. 935.)

Kaslo and Slocan Ry.—In a recent interview, J. L. Retallack, who is at the head of the company formed to take over this railway, stated that there is every probability that the line between Kaslo and Sproules, B.C., will be put into condition for carrying traffic this fall, and that the remainder of the line from Sproules to McGuigan, will be in shape for operations in the spring. (Oct., pg. 935.)

Kettle Vlaley Lines.—Recent press reports state that of the 250 miles under construction, 65 miles of grading has been completed, and 50 miles of track laid. It is expected that by the end of the year another 15 miles of grading will be completed, and an additional 25 miles of track laid. (Oct., pg. 935.)

Kootenay and Alberta Ry.—Application will be made to the Dominion Parliament to extend the time within which the company's projected line may be built. G. V. Cousins, Montreal, is solicitor for the company. (Oct., pg. 937.)

Michigan Central Rd.—Last year the company built a section of 16 stalls for a roundhouse at St. Thomas, Ont. Work has been started on an addition of 25 stalls, the contract being reported let to G. A. Ponsford. The old roundhouse is to be abandoned entirely as soon as the new one is completed. (Sept., pg. 855.)

Minneapolis and St. Louis Rd.—Iowa Central . Ry.—A New York press despatch of Oct. 18 says: "N. Erb., President of the Minneapolis and St. Louis Rd. and the Iowa Central Ry., who returned to-day from an inspection trip, said that preliminary arrangements had been made for extending the Minneapolis and St. Louis to the Canadian border. Engineers were instructed to make a reconaissance for two routes to the Canadian border, one from Minneapolis to Emerson, where a connection would be effected with the Canadian Northern Ry. and another from Watertown to a point on the border, where a connection would be made with the Grand Trunk Pacific Ry. as well as with the Canadian Northern."

Montreal-St. Lambert Tunnel.—It is reported in Montreal, that in connection with the announced intention of the Canadian Northern Ry. to enter Montreal by a tunnel under Mount Royal, the project of connecting Montreal with the south shore by a tunnel under the St. Lawrence River will be carried out. The Montreal South Shore Land and Development Co. is reported to have secured over 600 acres on the south shore, and is about to amalgamate with other interests having the construction of the

tunnel in view. The syndicate is stated to comprise among its members, R. Forget, D. McMartin, A. E. Robert, J. L. Perron, W. G. Ross, and Mackenzie, Mann & Co., Ltd. The report further states that the south end of the tunnel will be between St. Lambert and Longueuil, and that the northern end will be either in Chaboillez Square, or between Harbor and Frontenac streets. (See Montreal Central Terminal Co., July, pg. 647.)

Nelson River Ry.—Application is being made to the Dominion Parliament to declare the company's corporate powers to be in full force and effect, and extending the time within which the authorized lines may be built. (July, 1910, pg. 549.)

North Arm Bridge and Ry. Co.—The Dominion Parliament is being asked to incorporate a company with this title, to build a bridge across the north arm of Burrard Inlet, from Turtles Head to lot 575, directly north of White Rock island, with power to connect with the C.P.R. Port Moody branch to North Vancouver, or with any lines to be built on the north shore of Burrard Inlet, and with any street railway. W. H. Langley, Victoria, B.C., is solicitor for applicants.

Quebec Central Ry.—Tenders are being asked for the erection of a two story concrete station at Sherbrooke. Que. The estimated cost of the building is $30.000. Sept., pg. 855.)

Quebec Eastern Ry.—A party of 16 is reported to have left Sherbrooke, Oct. 6, in charge of Hazen Drury, to make a survey for a line from Sherbrooke to Quebec. In connection with this report it is further stated that R. Forget and J. A. Greenshields have secured control of the charter; and that they have also acquired control of the Lotbiniere and Megantic Ry., which line will be utilized as a part of the projected railway. The Q.E. Ry. Co. was originally incorporated with power to take over the L. and M. Ry., and the charter of the Wolfe, Megantic and Lotbiniere Ry. F. N. McCrea and others controlling the L. and M. Ry. were interested in the Q.E. Ry. A Montreal report, Oct. 14, says that when constructed the line will connect at Quebec with the Quebec and Saguenay Ry., now under construction. Certain preliminary surveys were made in 1909, but nothing definite was done. (May, pg. 411.)

Reid Newfoundland Ry.—A passenger train service has been put in operation on the Bonavista branch, the first of the lines to be built, under the agreement of 1909. Grading on the Trepassey line is being pushed and work on the line from Broad Cove station to Heart's Content, has been started. This line will be 35 miles long, and run along the south shore of Trinity Bay. (Oct., pg. 937.)

St. John Valley Ry.—The Premier of New Brunswick, stated Oct. 5, that the contract with the Dominion Government for the building of the projected railway from St. John to Grand Falls, was ready for signature, but it could not be signed until some small matters of detail had been arranged with the new government at Ottawa. (Oct., pg. 937.)

Temiskaming and Northern Ontario Ry.—Grading on the extension of the Porcupine branch to Pearl Lake, Ont., has been practically completed. There are four rock cuts still to be finished. Some track has been laid, and it is expected to have the extension completed early in Dec.

The spur to connect the line at North Bay with the G.T.R. at Nipissing Jct., is practically completed. A new freight shed to be used jointly by the T. and N. O.R. and the G.T.R., at Regina St., North Bay, is expected to be completed early in Nov.

Speaking in Toronto, Oct. 13, A. C. Macdonnell, M.P., said it was assured that the new Dominion Government would grant a bonus to the line, which the late Government had refused to approve.

Professor S. C. Ellis, has returned to Ottawa, having completed an exploration survey of the country between Cochrane and James Bay, and of the conditions of James Bay itself in the vicinity of Moose River. A report of his observations will be presented to the Commissioners for consideration in connection with the project to extend the line to Hudson Bay. (Oct., pg. 937.)

United Gold Fields of B.C.—The Dominion Parliament is being asked to change the head office of the company from Frank to Blairmore, Alta.; authorize a change in the location of one of its authorized lines from "range four" to "ranges three and four"; to authorize the building of the following additional lines: From the C.P.R. at Blairmore southerly to the company's coal mines, and from Blairmore easterly to Lille; and to extend the time within which the lines may be built. (Aug., 1909, pg. 577.)

Grand Trunk Pacific Ry. Co's. Annual Meeting.

The adjourned annual meeting of shareholders was held in Montreal, Oct. 10. The President, C. M. Hays, stated that during the year track laying on the main line of the Western Division had been extended from Wolf Creek to Fitzhugh west of the Athabasca River in the Rocky Mountains, which is 1,027 miles west of Winnipeg, and will be the divisional point for that section, and that construction work is under full headway with night and day forces to Tete Jaune Cache, on the Fraser River beyond Yellowhead Pass on the western slope of the Rocky Mountains, and it is expected that track laying will reach this point. 1,094 miles west of Winnipeg, before the close of the year. From Prince Rupert, track is laid easterly for 100 miles to Copper River, and construction work is being prosecuted vigorously with night and day forces from Copper River to Aldermere, 240 miles east of Prince Rupert. This section of the line includes the crossing of the Skeena River, where the substructure for a large bridge is being built, and also includes several short tunnels, the character of which will probably delay the laying of track, but it is expected that early in the season of 1912 the track will reach Aldermere. The contract for the construction of that section of the line through Northern British Columbia between Aldermere and Tete Jaune Cache, 410 miles, has been let to Messrs. Foley, Welch & Stewart, who have done most of the construction work on the main line of the Western Division. As this portion of the railway is located for the most part along the navigable rivers in that part of country which will be availed of for the transportation of material and supplies during the building of the line, it is expected that these advantages will greatly facilitate the progress of the work. The reports received from the engineers who have explored this new region are very gratifying with regard to the large areas of arable land situated in the valleys contiguous to the line, and judging from the tide of immigrants and settlers which has already set in to this territory, there is every reason for the belief that there will be a large traffic available for transportation as soon as the railway can be completed. Although this portion of the railway is designated the "Mountain Section," the future prospects of the company in connection with the same are exceptionally favorable and unique in respect to the large areas of land just referred to which are available for settlement and agriculture by reason of the fact that the valleys are wider, thus affording a more distant prospective to the mountains from the location of the line, which also enhances its scenic features.

For the purpose of occupying additional territory in the Western Provinces that is being settled which gives good promise of increasing traffic, the company has under construction approximately 1,400 miles of branch lines, considerable portions of which have already been completed, the latter including the lines to Yorkton, Canora, Regina and Moose Jaw. Lines are also under construction to Prince Albert, Battleford, Calgary and Lethbridge, which will place all these growing cities in direct communication with the main line and secure a large volume of traffic that is rapidly becoming established. Branch lines are also being built into the rich coal fields situated west of Edmonton.

On all portions of the line which have been sufficiently completed trains are in operation and a daily through freight and passenger service is established on the line between Winnipeg, Edmonton and Edson.

For the purpose of establishing suitable hotel accommodations throughout the country which will be traversed by the company's lines, it is proposed to construct a chain of first-class modern hotels. A contract has been let for the construction of a large hotel in Winnipeg at a cost of $1,500,000. This hotel will be located on Broadway, next to the Manitoba Club, and within easy access to the new union station on Main St. As the hotel is also located at the site of old Fort Garry, "The Fort Garry" has been adopted as its name. Other hotels will be constructed in the near future at Edmonton, also in Jasper Park in the Rocky Mountains, and at Prince Rupert.

The company has been granted a subsidy by the Government for the construction of a floating dry dock at Prince Rupert at an approximate cost of $2,200,000, on which work has already been commenced, and tenders have been asked for the construction of terminals and station in that city.

The steamship Prince John has been added to the company's fleet on the Pacific Coast and placed in service between Prince Rupert and the Queen Charlotte Island. This region is rapidly developing as a rich mineral and agricultural district and will no doubt eventually provide a large traffic for the company's steamships and railway.

Good progress has been made in construction on the Eastern Division (National Transcontinental Ry.). A total of 1,223.45 miles of main line track and 136.50 miles of side track have been laid, and the remaining portions of this section are all under contract. Considerable portions of the main line track have been laid in continuous sections, particularly from Moncton to the western boundary of New Brunswick, 218.2 miles; from Quebec westerly beyond La Tuque, 253 miles, and from 125 miles east of Cochrane westerly for 290 miles; from Lake Superior Junction easterly 100 miles has been laid. The line between Fort William and Winnipeg has been in operation during the past year for freight traffic principally, by means of which the company has been enabled to participate in the transportation of the northwestern grain crop to the extensive elevator and terminals which have been constructed at Fort William, and it is expected that this portion of the line will be finally completed for daily train service within a few months.

In the construction, therefore, of approximately 5,133 miles of railway un-

dertaken in the first instance, there has been laid practically 3,300 miles of main line track, and on large sections on which the construction of the road-bed is already advanced, a large addition will be made to the track mileage within the next few months.

Under agreements with the Government to provide equipment for the operation of the railway, there have been purchased 13,749 freight cars, 173 passenger cars, and 129 locomotives.

The terms of office of the directors expires each year when the full board is eligible for re-election. In the representation on the board by members of the board of Grand Trunk Ry. Co. of Canada resident in London, these directors serve in turn in alternate years. Hugh A. Allan, who was a member of the first board of directors, and has served since the organization of the company in 1904, having taken up his residence in England, is unable to continue as an active member of the board, and the company and directors have much regret in parting with his able co-operation and support.

The following directors are proposed for re-election: A. W. Smithers, Sir Henry Mather Jackson, G. Von Chauvin, Col. Firebrace, C. M. Hays, E. J. Chamberlin, W. Wainwright, E. H. Fitzhugh, W. H. Biggar, E. B. Greenshields, Hon. R. Dandurand, Hon. Geo. A. Cox, E. R. Wood, J. R. Booth.

◆

Grand Trunk Railway Construction, Betterments, Etc.

New England Extensions.—A. W. Smithers, Chairman of the Board, G.T.R., accompanied by C. M. Hays, President, G.T.R., and officers of the Central Vermont Ry., made an inspection of the route of the projected Southern New England Ry. in Massachusetts and Rhode Island recently.

The S.N.E. Ry. has been ordered to file a bond of $1,000,000 to protect property owners in Massachusetts, whose property may be taken for the building of the line.

It appears that the differences between the S.N.E. Ry. and the New York, New Haven and Hartford Rd., in Woonsocket, Mass., have not been completely adjusted, as the latter company has filed plans for two new freight houses on North Main St., on part of the route located for the S.N.E. Ry..

Ottawa Station.—The first section of the new Central Station at Ottawa to be completed was handed over by the contractors to the company, Oct. 14. The work was reported to have been completed, with the exception of some finishing touches, Oct. 7. It was expected that the staff would move into the new offices by Oct. 30.

Ashbridge Bay Spur.—The Toronto board of control has granted the company permission to build an industrial spur and sidings from the National Iron Works to Leslie St., in the Ashbridge Bay district. The agreement provides that the line may be acquired by the city at any time it is thought advisable to take it over and make it part of the city's industrial system in the district. The line is estimated to cost $90,000.

Toronto Grade Revision Work.—Considerable progress has been made on the grade revision work westerly to Mimico, and the permanent tracks have been laid on the section to near Sunnyside, where the buildings south of the Lake Shore road have been demolished, and a start made on the work for the bridge which is to carry the road over the railway. The Board of Railway Commissioners has approved plans for this bridge, without prejudice to the Toronto and York Radial Ry. (Mimico and Lake Shore Division.)

Midland-Penetang Branches Connection.—The Board of Railway Commissioners has authorized the opening for traffic of the line from Tiny Jct., on the line from Orillia to Midland, to Saurin Jct., on the line between Colwell and Penetanguishene, Ont. A service of two trains a day each way was commenced Oct. 3.

Northern Division Bridges.—The Board of Railway Commissioners has authorized the rebuilding of 14 bridges on the Northern Division.

Hamilton.—Press reports state that the company has purchased a considerable area in the vicinity of Barton and Ferguson Sts., upon which it is expected a new station will be built. C. M. Hays, President, informed the mayor, Oct. 6, that one of the Vice Presidents would visit the city shortly and hear the representatives of the different interests as to the railway accommodation provided by the company in the city.

The mayor received a telegram Oct. 18, from C. M. Hays, stating that he, Vice President Kelley, and W. G. Brownlee, General Transportation Manager, would be in the city, Oct. 28, to discuss the question of the company's facilities there, with a view to their improvement and extension.

Guelph Station.—The new station at Guelph, Ont., has a frontage of 123½ ft., and a depth of 43 ft., with aloggia and porte-cochere. The general waiting room is 60 by 40 ft.; the ladies' parlor, 17 by 43 ft.; the smoking room, 27 by 20 ft.; parcel and baggage office, 13 by 21 ft.; baggage room, 40 by 26 ft. The ticket and telegraph office is directly opposite the porte-cochere.. There is a covered platform of 100 by 30 ft. between the station and the express building which is 40 by 33 ft. These buildings are constructed on concrete foundations, of Bryants Pond grey granite, from foundation to window-sill, with pressed buff brick for walls, trimmed with granite jamb linings, and belt course for all buildings. The entire roof is covered with dull green tile. The interior of offices and waiting rooms is finished in the floors and wainscoting, quarter cut oak trims, doors and sash, granulated plaster walls and ceilings, decorated in suitable tints. The interior of the baggage room and express building is finished in pressed brick. The area of platforms for handling of public is 29,200 sq. ft., and has four tracks in front of the station for passenger trains. At the rear is a circular driveway through a porte-cochere with a side walk from the streets, leading to the loggia for main entrance to the waiting room. The grounds on the city side and end of the building are terraced and sodded, and it is located on what was known as Jubilee Park, the tracks being elevated some 6 ft. The building has a pleasing appearance from the main streets of the city.

Brantford Industrial Switch.—Plans were approved by the Board of Railway Commissioners, Oct.. 11, for the proposed Holmedale cut-off from the Ontario Institute for the Blind to the Brantford and Tillsonburg branch line. An agreement respecting this work was made with the G.T.R. some time ago, and the commissioners' order only was required to enable the work to be gone on with. The mayor stated that the work is to be started at once and it will be completed early in 1912.

Interchange Track at Ingersoll.—The Board of Railway Commissioners has authorized the G.T.R. to build a track for the interchange of traffic with the C.P.R. at Ingersoll, Ont.

London Improvements.—C. M. Hays, President, stated in a recent interview, that nothing could possibly be considered in the way of the proposed improvements in London, Ont., until the work in progress in Toronto is out of the way. (Oct., pg. 943.)

◆

Traffic Orders by the Board of Railway Commissioners.

Summaries of other orders are given on another page under "Orders by the Board of Railway Commissioners.."

RATES ON MEATS, ETC., IN BRITISH COLUMBIA.

14871. Sept. 1.—Re application of Vancouver-Prince Rupert Meat Co., Ltd. complaining against increased rates charged by Great Northern Ry., under Supplement 32 to its Special Tariff. C.R.C. 602, effective Aug. 1, 1911, on meats, fresh, cured, smoked, dried, or salted, and packing house products, from Sapperton to Vancouver, B.C., shipped by the applicant company; and applying for an order directing the railway company to restore the rate of 5c. per 100 lbs., minimum weight 17,000 lbs., per car, as agreed between the applicant company and the railway company. It is ordered that the Special Tariff of the railway company, Supplement 32 to C.R.C. 602, dated July 18, 1911, effective Aug. 1, 1911, be cancelled in so far as it affects the said traffic; and the railway company is required to restore the rate on the said tariff from Sapperton, B.C., to Vancouver, in force under the tariff issued by the railway company, Supplement 22 to C.R.C. 602, effective Oct. 10, 1910; provided that should the railway company be able to prove the said restored rate to be unremunerative after it has been in effect for a period of not less than one year from the date of restoration, application may be made to the Board for leave to increase it.

G.N.R. TO FURNISH REFRIGERATOR CARS.

14872. Sept. 1.—The application of the Vancouver-Prince Rupert Meat Co., Ltd., complaining of refusal of Great Northern Ry. to furnish duty-paid refrigerator cars for dressed meat for shipment from the applicant company's plant at Sapperton, B.C., to Vancouver. It is ordered that the railway company, within the shortest time necessary to provide such equipment, furnish the applicant company with refrigerator cars properly equipped with racks, or cross-pieces, suitable for holding the hangers or hooks used by the applicant company in loading its fresh meat shipments.

GREAT NORTHERN RY. RATES.

14887. Sept. 2.—Re application of Prudential Builders, Ltd., for order directing the Great Northern Ry. to provide a 30,000 lbs. minimum weight on a 40,000 lbs. capacity car on the Vancouver, Victoria and Eastern Ry., from Burnaby Lake, B.C., to Vancouver. It is ordered that the G.N.R. amend item 70 of its Special Tariff C.R.C. 602 issued June 20, 1909, applying to lumber, lath and shingles shipped from the company's stations in British Columbia to Vancouver and New Westminster, so as to provide the reduced minimum weight of 30,000 lbs., for cars less than 36 ft. in length.

REFUND OF OVERCHARGE ON LUMBER.

14888. Aug. 31.—Re application of Fullerton Lumber and Shingle Co., for order directing the Great Northern Ry. to refund an amount alleged to have been overcharged by the railway companies on a carload of lumber shipped by the applicant company from Tynehead, B.C., to Moose Jaw, Sask. It is ordered that the railway company be permitted to refund to the applicant company $12.85 overcharged by the railway companies on the shipment.

The Bowser Table Tank

For Filling Switch and Signal Lamps At Way-Stations

This Bowser Tank has been especially designed to meet the requirements of the way-station or central oil house where switch and signal lamps are cleaned and filled.

The Pump on this Tank is self-measuring and can be set to exactly fill the different lamps. Any oil that is spilled drains into the receptacle in the lower right hand corner of the table attachment. (See cut.) This table is almost a necessity for cleaning and trimming the lamps.

The cost is so little that no railroad can afford to be without it.

This is but one of the many designs of the

Bowser Railroad Oil Storage Systems

which cover the entire oil storage and distribution field for railroads.

CAR CASTINGS, FORGINGS AND REPAIR PARTS

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given or orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

14482. Sep. 9—Approving location of G.T.P.R. station at Entwistle, Alta., authorizing the building of a highway approach thereto, and pending completion of same, ordering that trains be stopped at King St., for passengers and at the sawmill siding for freight.

14712. Sept. 6.—Approving C.N.O.R. location through unsurveyed territory, Thunder Bay District, mileage 140 to 160 from Port Arthur.

14713, 14715. Sept. 7.—Authorizing C.N.R. to cross three public roads with its Prince-Albert Battleford line, Sask.

14716. Sept. 7.—Approving plans of proposed new station and platform to be built at Shawinigan Jct., Que.

14717. Sept. 6.—Approving C.N.O.R. location through unsurveyed territory, Thunder Bay District, mileage 120 to 140 from Port Arthur.

14718, 14721. Sept. 5.—Approving Kettle Valley Ry. plans for bridges over Coldwater and Kettle Rivers, B.C.

14722. Sept. 6.—Approving C.N.O.R. location through unsurveyed territory, Thunder Bay District, mileage 179 to 200 from Port Arthur.

14723. Sept. 7.—Disallowing joint tariffs on oysters from New Haven, Conn., Providence, R.I., and other shipping points of Adams Ex. Co. taking higher through rates than $1.50 per 100 lbs. to Toronto and $1.55 per 100 lbs. to Guelph, Ont., new joint tariffs to be issued.

14724. Sept. 5.—Authorizing C.P.R. to build double track and sidings across highways on its Brandon, Man., subdivision, from mileage 57.64 to 130.49.

14725. Sept. 8.—Authorizing Vancouver Power Co., and New Westminster Southern Ry. to operate trains over crossing at Cloverdale, B.C., interlocker being completed.

14726. Sept. 9.—Authorizing C.P.R. to build bridge 133.28 over Thessalon River, Lake Superior Division.

14727. Sept. 9.—Authorizing C.P.R. to build spur into city's material yard, Lethbridge, Alta.

14728. Sept. 9.—Authorizing C.P.R. to build spur for Gordon, Ironsides & Fares Co., Moose Jaw, Sask.

14729. Sept. 8.—Authorizing G.T.P.R. to build standard no. 1 station at Reford, Sask.

14730. Sept. 9.—Authorizing G.T.R. to rebuild bridge across public road, con. 3, Tay tp., Ont.

14731. Sept. 7.—Authorizing G.T.R. to build eight bridges on District 13, Northern Division, Ont.

14732, 14733. Sept. 8-9.—Authorizing C.N.R. to cross six highways with its Prince Albert Battleford line, and five highways with its Swift Current line, Sask.

14734. Sept. 6.—Approving substructure plans of subway under C.N.R. at 23rd St., Saskatoon, Sask.

14735. Sept. 8.—Approving character and plans, ninth concession, Berfeltz and Brewer municipal drains under G.T.R. in Huron county, Ont.

14736. Sept. 12.—Authorizing G.T.R. to build siding into Tudhope-Anderson Co.'s premises, Orillia, Ont.

14737. Sept. 9.—Extending to Oct. 31, time for completion by G.T.R. of cutting down embankment in Camahe tp., Ont.

14738. Sept. 9.—Authorizing C.P.R. to build subway across Scarlett Road, York tp. and to take possession of private land.

14739. Aug. 2.—Authorizing C.P.R. to build third track between Angus and Mile End across Papineau Ave., Montreal, and Montreal St. Ry.

14740. Sept. 11.—Authorizing C.P.R. to build its Reston and Wolseley branch across 34 highways in Saskatchewan.

14741. Sept. 12.—Authorizing city of Hamilton, Ont., to maintain sewer under T.H. & B.R., on south side of Main St.

14742. Sept. 12.—Approving location of C.N.O.R station grounds at St. Benoit, Que.

14743. Sept. 12.—Ordering C.P.R. within 15 days, under penalty of $25 a day to erect between mileposts 123 and 126, fences of 4½ ft. minimum height, with swing gates at farm crossings, at Alameda, Sask.

14744. Sept. 12.—Authorizing G.T.P. Branch Lines Co., to connect its Yorkton branch with C.N.R. at Canora, Sask.

14745. Sept. 12.—Authorizing G.T.R. to change deviation of spur on its Lachine Canal branch, into Canadian Light and Power Co.'s premises, Montreal.

14746. Sept. 11.—Relieving C.P.R. from further protection of crossing on London and Chatham road at mileage 62.2, east of Chatham, Ont.

14747. Sept. 11.—Ordering G.T.R. to enlarge culvert on lot 21, con. 14, Hullett tp., Ont.

14748, 14749. Sept. 13.—Authorizing Kettle Valley Ry. to cross roads at stations 945 and 901, northwest of Midway, B.C.

14750, 14751. Sept. 11.—Authorizing C.P.R. to build spurs for Halliday Bros., Winnipeg, and Dryden Timber and Power Co., Wabigoon River, Ont.

14752. Sept. 11.—Authorizing South Ontario Pacific Ry. (C.P.R.) to build overhead crossing for its Guelph Jct. to Hamilton branch, over Mill St., Waterdown, Ont.

14753. Sept. 11.—Authorizing South Ontario Pacific Ry. (C.P.R.) to close portion of road allowance between East and West Flamboro tps., Ont.

14754. Sept. 13.—Relieving C.P.R. from further protection at Pottery Corner crossing, Ops tp., Ont.

14755. Sept. 13.—Ordering G.T.R. to provide farm crossing for J. Lauzon, Tilbury North, tp., Ont.

14756. Sept. 14.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. along north of sec. 15, tu. 5, r. 11, w. 2 m.

14557. Sept. 14.—Authorizing C.P.R. to build across highway crossing east of Lachevrotiere station, Que.

14758. Sept. 14.—Authorizing C.P.R. to build its Plenty ballast pit spur on its Moose Jaw northwesterly branch to sec. 3, tp. 33, r. 19, w. 3 m., Sask.

14759. Sept. 14.—Amending orders re operating of semaphores at crossing of Hull Electric Ry. by C.P.R. at Hull, Que.

14760. Sept. 13.—Ordering C.N.R. to fence its right of way on its Wawanesa subdivision by July 1, 1912, under penalty of $25 a day.

14761. Sept. 13.—Authorizing C.N.R. to connect with G.T.P.R. Melville-Yorkton branch, in s.w. ¼ of sec. 36, tp. 30, r. 4. w. 2 m., Sask.

14762. Sept 14.—Extending to Oct. 15, time for completion by C.N.R. across Notre Dame St., Montreal, and Montreal St. Ry.

14763. Sept. 14.—Authorizing C.N.R. to cross and divert public road on its Rossburn line, between secs. 21 and 20, tp. 25, r. 31, w. p.m., Sask.

14764. Sept. 18.—Authorizing C.N.R. to cross with its Strathcona-Camrose line eight highways in Alberta.

14765. Sept. 11.—Ordering C.P.R. to build crossing at extension of Henderson St., Grayson, Sask.

14766. Sept. 18.—Authorizing C.P.R. to rebuild bridge 93.5 over Stave River, B.C.

14767. Sept. 18.—Authorizing C.P.R. to extend spur serving National Portland Cement Co. in Brant tp., Ont.

14768. Sept. 16.—Authorizing C.P.R. to operate sidings for Lethbridge Collieries Co. 4 m., near Lenzie, Alta.

14769. Sept. 16.—Authorizing C.P.R. to build two spurs to proposed freight shed at corner of Water and Sherbrooke Sts., Peterboro, Ont.

14770, to 14772. Sept. 18-16.—Approving details of masonry of abutments for subway to be built at Keele St., and or bridges to be built at Jameson and Dowling Aves. Toronto.

14773 to 14775. Sept. 18.—Authorizing G.T.P. Branch Lines Co., to cross with its Biggar-Calgary branch, three highways in Winslow municipality, and two highways in Prairiedale municipality, Sask.

14776. Sept. 18.—Authorizing G.T.P.R. to cross with its Lake Superior branch, C.N.R. main line at Empire St., Fort William, Ont., interlocker to be installed.

14777. Sept. 18.—Authorizing C.P.R. to join its main line at mileage 88 from Victoria Harbor, with its Ontario and Quebec line at mileage 38.57 from Havelock, Ont.

14778. Sept. 18.—Approving C.N.R. location through tps. 10-11, r. 1-3, w. 3 m., Sask.

14779. Aug. 8.—Appointing 12 fire wardens to investigate fire appliances with which locomotives operating in British Columbia are equipped

PROFESSIONAL CARDS.

The Railway and Marine World is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. The Railway and Marine World is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

EDISON BSCO
PRIMARY BATTERY

Reliability at any cost is the first requisite of a railway signal battery. Economy, as far as reliability will permit, is the second requisite.

The EDISON BSCO is the *most* reliable, *as well as the most* economical railway signal battery made. It's slightly higher first cost is far more than counterbalanced by its low operating cost and the reduction in attending labor cost.

Edison BSCO Renewals fit all standard caustic soda primary battery jars, and besides increasing the efficiency and dependability of other cells in service, they will give higher effective capacity than any other type of the same rated capacity.

Write for prices stating the type of cells now in use.

Thomas A. Edison, Inc.,

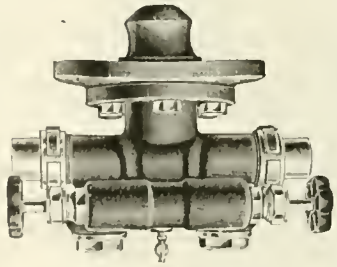
YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be used so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog **now.**

INTERNATIONAL TEXTBOOK COMPANY
Box 1072, Scranton, Pa.

DOUBLE BOILER CHECK VALVE



The position of this valve is on top of the boiler. It is provided with a stop valve for each check valve, so that either one of the check valves, if out of order, may be "cut out" without interfering with the feeding of the boiler. Removable caps on top of each check permit inspection and grinding of valves without disconnecting pipes.

Simple and pleasing design, compact and efficient. Furnished complete with boiler flange.

Murphy, who has been appointed District Passenger Agent, C.P.R., Toronto, was born at Halifax, N.S., Feb. 26, 1878, and entered C.P.R. service, Mar. 31, 1899, since when he has been, to Jan., 1901, agent and operator, Atlantic Division; Jan., 1901, to 1903, chief clerk, Freight Agent, C.P.R., and agent, Dominion Express Co., Halifax, N.S.; 1903 to 1905, Travelling Passenger Agent, Atlantic Division; 1905 to June, 1907, Assistant to District Passenger Agent, St. John, N.B.; June, 1907, to Nov. 1, 1910, General Travelling Passenger Agent, Western Lines, Winnipeg; Nov. 1, 1910, to Oct. 1, 1911, General Travelling Passenger Agent, All Lines, Montreal.

The Canadian Freight Association, at its meeting in Montreal Oct. 19, passed the following resolution: "This association learns with regret that W. B. Bulling, owing to ill-health, has been obliged to retire temporarily from active duty as Assistant Freight Traffic Manager, C.P.R. Its members desire to place on record an appreciation of his services. His long years of experience, his accuracy and strength of memory, and the thoroughness of his work inspired respect and confidence, while his unfailing patience, integrity and courtesy caused him to be held in high esteem and friendly affection by all. It is the hope of this association that a complete rest may restore his health and enable him to once again become an active member."

Engineering and Maintenance of Way Association

J. G. Sullivan, who has been appointed Chief Engineer, Western Lines, C.P.R., Winnipeg, was born at Bushnell's Basin, N.Y., Jan. 11, 1863, and graduated C.E., at Cornell University, June, 1888. He entered railway service in July, 1888, since when he has been, to Mar., 1889, rodman, Great Northern Ry.; Apr., 1889, to Aug., 1890, rodman, instrument man and assistant engineer, Spokane Falls and Northern Ry.; Aug., 1890 to May, 1893, Asistant Engineer, Great Northern Ry. coast lines; July, 1893 to Feb., 1894, Assistant Engineer, Alberta Ry. and Coal Co.; July to Oct., 1894, section foreman, Northern Pacific Ry.; Oct. 1894, to Apr. 1895, Locating Engineer, Butte, Anaconda and Pacific Ry.; Apr. to Dec., 1895, Division Engineer, Kaslo and Slocan Ry.; Dec. 1895, to Feb., 1901, Locating and Reconnaissance Engineer and Engineer in Charge of Construction, Columbia and Western Ry.; Feb. 1901, to Sept., 1905, Division Engineer of Construction, Western Lines, C.P.R.; Sept. 1905 to Feb., 1907, Assistant Chief Engineer, Panama Canal; Feb. 1907, to Sept. 15, 1908, Manager of Construction, Eastern Lines, C.P.R., Toronto; Sept. 15, 1908, to Jan. 1, 1911, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Jan. 1, to Oct. 9, 1911, Assistant Chief Engineer, Western Lines, Winnipeg.

Grant Hall, who has been appointed Assistant General Manager, Western Lines, C.P.R., Winnipeg, was born at Montreal. Nov. 27, 1863, and entered railway service as an apprentice in the G.T.R. shops, Montreal. He has been from Mar. to July 1888, Master Mechanic, International Ry., Sherbrooke, Que.; Aug. 1888 to June 1889, Locomotive Foreman, C.P.R., Megantic, Que.; July 1889 to March 1890, Locomotive Foreman, C.P.R., Brownville Jct., Me.; Apr. 1890 to Feb. 1893, Locomotive Foreman, C.P.R., Windsor St., Montreal; Mar. 1893 to Aug. 1898, General Foremon, Intercolonial Ry., Moncton, N.B.; Sept. to Dec. 1898, Locomotive Foreman, C.P.R., Windsor St., Montreal; Jan. 1899 to Jan. 1901, General Foreman, C.P.R., McAdam Jct., N.B.; Feb. to June, 1901, General Foreman, C.P.R., Winnipeg; July 1901 to Nov. 1902, Master Mechanic, Pacific Division, C.P.R., Revelstoke. B.C.; Dec. 1902 to Feb. 1904, Assistant Superintendent of Rolling Stock, C.P.R.. Montreal; Mar. to Sept. 1904, Assistant Superintendent of Motive Power, C.P.R.. Montreal; Oct. 1904 to Jan. 1908, Assistant Superintendent of Motive Power. C.P.R., Winnipeg; Jan. 1908, to Oct. 1911, Superintendent of Motive Power, C.P.R., Winnipeg.

E. H. Fitzhugh, who has relinquished the duties of First Vice President, G.T.R., in consequence of his appointment as President, Central Vermont Ry, Central Vermont Transportation Co., Southern New England Rd. Corporation. Southern New England Ry., and Montreal and Southern Counties Ry., was born in Montgomery county, Mo., Feb. 1, 1853, and entered railway service in 1873, since when he has been, to 1889, successively, clerk in Master Car Builder's office, St. Louis, Kansas City and Northern Ry., in car mileage office, same road, and chief clerk to Superintendent, Western Division, Wabash, St. Louis and Pacific Ry.; 1889 to Jan., 1896, Master of Transportation, Wabash Rd., Moberley, Mo.; Jan., 1896, to May, 1899, Superintendent, Middle Division, G.T.R., Toronto; May, 1889, to Mar., 1901, Vice President and General Manager, Central Vermont Ry.; Mar. to Dec., 1901, Assistant to President, Southern Pacific Co.; Feb., 1902, to Dec., 1904, Vice President and General Manager, Central Vermont Ry., St. Albans, Vt.; Jan. 1, 1905, to Jan. 7, 1910, Third Vice President, G.T.R., Montreal; and Vice President, Central Vermont Ry.; Jan. 7, 1910, to Oct. 2, 1911, First Vice President, G.T.R., and to July 27, 1911, Vice President, Central Vermont Ry., at which date he was appointed President C.V.R.

Harry Robinson Safford, who has been appointed Chief Engineer of the Grand Trunk Railway System, was born at Madison, Ind., in 1875, and was educated in a course of civil engineering at Purdue University in that State, graduating from that institution in 1895. Previous to graduation, he had had active service in his profession, being employed with an engineering corps operating on the Pennsylvania lines west of Pittsburgh in 1893. Immediately after graduation, he entered the service of the Illinois Central Railroad, and was continually with it until May, 1910. During the first year of service he was employed as a rodman, since when he has been consecutively, 1896 to 1897, Resident Engineer; 1897 to 1900, Assistant Engineer; 1900 to 1901, Roadmaster of Amboy Division; 1901, Roadmaster Freeport Division; 1902, Roadmaster, St. Louis Division; 1903 to 1905, Principal Assistant Engineer; 1905 to 1907, Assistant Chief Engineer. In 1907 to 1910, Chief Engineer of Maintenance of Way; 1910 to 1911, Assistant to the President, Edgar Allan Manganese Steel Co.; 1911, Chief Engineer, George B. Swift Co. He is a member of the American Society of Civil Engineers and a charter member also of the American Railway Engineering Association, and has been very active in the work of the latter body, having served as chairman of the committee on records and accounts for a number of years.

W. Wainwright, who has been appointed Vice President, G.T.R., Montreal, was born at Manchester, Eng., Apr. 30, 1840, and entered railway service, Jan., 1858, with the Manchester, Sheffield and Lincolnshire Ry., now the Great Central Ry., serving successively as junior clerk in the Chief Accountant's office, senior clerk in the same office, secretary to Assistant General Manager, and secretary to General Manager. In 1862 he joined the G.T.R. staff, serving one year as senior clerk in the Accountant's office, three years as secretary to the Managing Director, six years as senior clerk to the Managing Director and in charge of the car mileage department, eight years and five months as General Passenger Agent; May, 1881, to May, 1890, Assistant Manager; May, 1890, to May, 1896, Assistant General Manager; from Apr., 1883, to Sept., 1895, also General Manager, North Shore Ry.; May, 1896, to July, 1907, General Assistant; Dec., 1900, to July, 1907, also Comptroller; July, 1907, to Jan. 7, 1910, Fourth Vice President; Jan. 7, 1910, to Oct. 2, 1911, Second Vice President, also Second Vice President, G.T.P.R.. He is a director of the Guarantee Co. of North America, director, Montreal Telegraph Co., Vice President, Richelieu and Ontario Navigation Co., Vice President, Grand Trunk Insurance and Provident Society, director, Canadian Express Co., and of various G.T.R. subsidiary lines. He was for eight years in command of a company of artillery in the old Grand Trunk Brigade, and retired with the rank of captain on its disbandment.

◆

Quebec Central Ry.—Gross earnings for July, $125,106.47; expenses $81,252.84; net earnings, $43 853.63, against $123,947.37 gross earnings; $80,592.21 expenses; $43,355.16 net earnings for July, 1910.

The Intercolonial Ry. has ordered 1,500 car wheels from the Nova Scotia Car Works, Halifax, to be delivered within one year.

Great Northern Ry. Lines in Canada

Midland Great Northern Ry. or Midland Ry. of Manitoba.—Track is reported to have been laid from St. James Jct., to the river, about two miles, on the company's line into Winnipeg. It is said that as soon as the bridge over the river is completed track laying will be resumed on the remaining mileage to a junction with the Canadian Northern Ry. line to Emerson.

It is said that the C.N.R. will, for the present, operate through freight over the C.N.R. line from Emerson as far as the junction and then over its own line to its own terminals. It is reported that an arrangement has been made by which the G.N.R. passenger trains will be run over the C.N.R. into Fort Garry station, Winnipeg, and that this arrangement will be put into effect as soon as it has received parliamentary sanction.

Crows Nest Southern Ry.—J. M. Gruber, General Manager, and other G.N.R. officials, went over this line Sept. 26, and local reports state that in addition to business connected with the annual inspection of the company's lines in Canada, the question of extending the line along the Elk Valley in the direction of Calgary was under consideration.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Tracklaying is reported to be in progress beyond Princeton, B.C., through the Tulameen canyons. About five miles of track has been laid, and three bridges are being built. It is expected that track will be laid to Coalmount, 14 miles from Princeton, early in November. As soon as this is finished the bridge over the Similkameen River west of Maplehurst, will be built.

The General Manager and a party of officials visited Vancouver Oct. 9, and looked over the work in progress at the new False Creek terminals. It is said that it has been decided to transfer the handling of the local traffic from the present yards on Pender St., to the south side of False Creek and that tracks for this purpose will be laid at once.

Victoria Terminal Ry. and Ferry Co.—The Victoria city council is applying to the Provincial Government to compel the V.T.R. and F. Co., to observe the agreement with the city as to the laying of tracks and the operation of trains. It is alleged that tracks have been laid since 1909 without authority, and that the tracks do not conform to the grade of the streets.

Victoria and Sidney Ry.—It is reported that arrangements have been made to operate the car ferry now running from Victoria to New Westminster, between Victoria and Port Guichon. The change, it is said, will enable the ferry to make five additional round trips a month. (Oct., pg. 939.)

◆

A Railway to Hudson Bay.—It was reported Oct. 17, that the Department of Railways had notified the J. D. McArthur Co., which has the contract to build 185 miles of this line from Pas Mission, Sask., to delay further operations for time being. Up to the present time the contractor has only been taking in plant and supplies. A later report Oct. 23, stated that after an interview with the Minister, Mr. McArthur was given authority under which he will be able to proceed with certain portions of the work. (Oct., pg. 921.)

The M. J. Haney Realty Co., has been incorporated under the Ontario Companies Act, with a capital of $50,000 and offices in Toronto, to deal in real estate, etc.

H & E Patent Ball-Bearing Lifting Jacks

For Railway and Bridge Work, Contractors' and Builders' Use

Foot-Lift

For Convenience, Speed and General Efficiency these Jacks are Unequalled. Are fully guaranteed. Being made of the best grades of Malleable Iron and Steel are strong and durable. Working parts entirely protected insure long wearing qualities. Sizes from 8 to 50 tons now complete. Send for prices and discounts.

Canadian Northern Railway Construction, Betterments, Etc.

Quebec, New Brunswick and Nova Scotia Ry.—A Quebec press report states that the projected extension of the Canadian Northern Ry. from Quebec to Fredericton, N.B., and the Atlantic coast in Nova Scotia, for which the company holds a charter with the above title, will be abandoned if a satisfactory agreement can be made for operating rights over the Intercolonial Ry.

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the company to carry its lines across Ontario, Valois, Chambly and Nicolet streets, Montreal, the crossing of the last two streets being by a double track. The company had started operations on Valois St., Sept. 23, but had to stop upon the city council obtaining an injunction pending the order of the Board, which was made Sept. 30. This crossing is being made in connection with the enlargement of the freight yards.

Upon a recent trip to Montreal, Sir Donald Mann, is reported to have said he expected to see the C.N.R. transcontinental line completed in three years. With regard to the position of Montreal, the company would have a central terminal station in the heart of the city. The question of a union station with the G.T.R. had never been discussed. An announcement as to the terminal plans, etc., would be made in due time. He favored the tunnel approach, of the feasibility of which he was assured. The plans for all this work, however, would have to be approved by the city.

Application is being made to the Dominion Parliament to incorporate the Canadian Northern Montreal Tunnel and Terminal Co. to construct and operate a railway tunnel from some point in Montreal generally westerly under Mount Royal with the necessary approaches and works; to build the necessary lines of railway to connect the tunnel with the C.N.Q. Ry., the C.N. Ontario Ry., and with the Montreal Harbor Commissioners' tracks, the undertaking to be one for the general advantage of Canada.

Press reports say the C.N.R. interests are desirous of purchasing the St. James Methodist church property in Montreal, for terminal purposes. The property has an area of 77,550 sq. ft. with four frontages. The trustees announced Oct. 9 that they would consider an offer of $2,000,000 for the property, and this amount is said to have been put up by those desirous of making the purchase.

The Board of Railway Commissioners has authorized the building of a bridge across the main channel of Riviere des Prairies, at mileage 40 on the new line from Montreal to Hawkesbury.

The Dominion Parliament is being asked to extend the time within which certain lines authorized to be built in 1907 may be constructed.

Canadian Northern Ontario Ry.—The first section of 100 miles of the Toronto-Ottawa line was opened for traffic Oct. 9. It branches off from the Toronto-Sudbury line in the Don Valley, extending to Trenton, Ont., where a junction is effected with the Central Ontario Ry., which is under C.N.R. control. The Board of Railway Commissioners authorized the opening of the line for traffic Sept. 30, the inspecting engineer of the Department of Railways having approved the line Sept. 24. The construction of the remaining mileage into Ottawa is being proceeded with at a satisfactory rate.

The matter of the route from the Don Valley along the north part of Toronto in the direction of Hamilton, etc., has been before the Board of Railway Commissioners on several occasions lately. On Sept. 30, the Commissioners approved location plans from mileage 0 to 10.97 from Yonge St., and through part of York and Etobicoke tps. On Oct. 14, after a lengthy argument the Board ordered the C.N.R. and the C.P.R. to prepare and file plans by Dec. 31, for the elimination of all grade crossings from Avenue Road westward to Dufferin St. This order was made on the C.N.O.R. application for a final approval of its location across North Toronto, the C.P.R. being opposed to the utilization of a portion of its right of way by the C.N.O.R.

Ottawa press reports, Oct. 18, state that the C.N.R. proposes to build car shops on the large areas of land purchased by the C.N.R. around Merivale, about three miles from the Experimental farms and that options were taken on half a dozen farms, which have been closed.

The Dominion Parliament is being asked to extend the time within which certain already authorized lines may be built, and to give power to build the following additional lines: from Chisholm tp. southeasterly, to a junction with the Central Ontario Ry., and from near the head of Long Lake, northwesterly to a junction with the National Transcontinental Ry.

The Ontario and Ottawa Ry., which is a subsidiary of the C.N.R., is applying to the Dominion Parliament to extend the time for the building of the line authorized in 1910, and to authorize the construction of a line from Lake Couchiching westerly to Georgian Bay.

Sir William Mackenzie was reported as stating Oct. 1, that the Dominion guarantee of bonds in respect of the building of the Ottawa-Port Arthur line, has been fully settled. The Board of Railway Commissioners has approved revised location plans for the line through Boulter, Chisholm, and Himsworth tps., mileage 316.74 to 328.13; from mileage 89.78 to 94.97, and from mileage 101.52 to 110.14 from Sudbury Jct.

The construction of what is called the Sudbury-Port Arthur line is being carried out from both ends, one district having its engineering headquarters at Sudbury, with E. T. Agate as District Engineer, and the other its headquarters at Port Arthur, with H. T. Hazen as District Engineer. There are eight divisional engineers in the Sudbury district, each of whom has a staff of resident engineers under him. Following are the names and offices of the Division Engineers, with the names of their resident engineers:— Division A, G. Scott, Gowganda Jct.; G. F. Harrison. Division B, G. Scott, Gowganda Jct.; H. W. Perkins. Division C, Geo. Scott, Gowganda Jct.; Sect. 1, G. Taylor; Sect. 2, H. P. Thompson; Sect. 3, C. G. Brook; Sect. 4, A. B. Manson; Sect. 5, C. B. Price. Division D, F. G. Mackie, Bisco; H. Knifton, J. B. McLachlan, J. S. McIntosh, B. B. Hill. Division E, L. F. McCoy, Bisco; R. H. Duff, H. H. Blackwell, C. R. Needs. Division G, G. I. Root, Missanabi; E. W. Delano, P. Hone, C. M. Ainslie, R. Ridge. Division H, S. L. Whelham, Missinabe; W. L. Young, A. B. Churchill. Division I, W. M. Wilkie, Hobon; R. B. Jennings, J. A. Baird, E. L. Frost, F. C. Hay. There are four division engineers in the Port Arthur district, with 17 resident engineers stationed as follows:—Division A, A. P. Wenzell, Port Arthur; C. R. Schulb, B. H. Dow, T. C. Kanter, E. R. Griffin, C. D. Ashbrooke. Division B, E. L. Dorsett, Nipigon; W. K. Tanner, Pearl, Ont.; K. G. Polybank, Dorion, Ont.; C. H. West, Hurket, Ont.; R. M. Magnus, Coglin, Ont.; C. B. Croasdale, Nipigon, Ont.; Division C, C. T. Delamere, Nipigon; K. C. McFarland, L. E. Purvis, O. R. Lundbland, R. W. McKenney, W. A. Loomis. Division D, A. J. Isbister, Nipigon; H. C. Nelson, O. D. Jones.

It was reported, Oct. 12, that over 3,000 men were at work along the line. One of the most important pieces of work on the contract is the diversion of the Nipigon River, which is being done under contract awarded by the late Government. The river sweeps around a curve with such force as to eat away about 10 ft. of the bank in a year, and in order to make the permanent way possible a canal or cut-off is necessary, which when finished will divert the waterway nearly half a mile from its present channel.

Duluth, Winnipeg and Pacific Ry.—The tunnel at Short Line Park, Duluth, Minn., was reported completed, Sept. 26, and track has been laid through it. The tunnel is 50 ft. long, with a bore 17½ by 26 ft., with a 1% gradient, and is on a seven degree curve. The reconstruction of the bridge at 49th Ave., Duluth, is reported practically complete.

Canadian Northern Ry.—A contract is reported to have been signed under which Barnett and McQueen will build an extensive addition to the coal docks at Port Arthur, Ont. The addition will be 3,000 by 500 ft. It is expected to start construction in Jan., 1912.

The Board of Railway Commissioners has authorized the International Bridge and Terminal Co., which is one of the C.N.R. subsidiaries, to build a bridge over the Rainy River, at Fort Frances, Ont. This work is in connection with the company's line to Duluth, the final section of which, under the charter of the Duluth, Winnipeg and Pacific Ry., is approaching completion.

In connection with the extension of the Bird's Hill branch in the direction of Fort Alexander, it was reported, Oct. 12, that the company had acquired about 3,000 acres of land near Bird's Hill, and it is conjectured that it is proposed to locate shops there.

Plans were submitted to the city council of St. Boniface, Man., Oct. 7, for the company's terminals at that point. The members of the council subsequently went over the ground which it is proposed to lay out.

The extension of the Oakland branch from near Totogan, Man., for 17 miles was opened for traffic Oct. 3, the authorization of the Board of Railway Commissioners having been signed, Oct. 2. Totogan is at the head of navigation on Lake Manitoba and is one of the oldest settlements in the province.

The relaying of the old Qu'Appelle, Long Lake and Saskatchewan Ry. with heavier steel, has been practically completed between Regina and Saskatoon. A spur from the main line at Clarkboro is under construction into Saskatoon, where a store house is being built for locomotive and other supplies. At Warman, where the main line crosses the Q.'A., L.L. and S. Ry., considerable additional siding accommodation is being provided.

Engineers are reported to be at work making surveys for a line from Canora, Sask., on the main line, northerly to a junction with the Thunderhill line at Stanhope.

The Board of Railway Commissioners has approved location plans for a C.N.R. line through tp. 11, range 5, west of the 3rd meridian, mileage 77.27 to 97.

The plans for the C.N.R. line into Moose Jaw were before the city council, Sept. 30, and it was reported that the track laying gang had completed its work to about three miles south of Moose Jaw.

The Cowan Construction Co.'s grading outfit was delivered at Macleod, Alta., Oct. 10, and work was at once started about a mile south of the town. The route located proceeds southerly via Wellsville, then easterly to Eveline and on to Pincher Creek. H. L. Vercoe, one of the company's engineers, was in

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

DRUMMOND, McCALL & CO.
GENERAL SALES AGENTS

Macleod completing the arrangements for the work, Oct. 3. A Pincher Creek dispatch, Oct. 13, stated that the route had been approved from Macleod to a point nine miles southeast of Pincher Creek. This line, it is said, will form the continuation either of the line now being built from Maryfield westerly, or of that now being built to Moose Jaw.

The Board of Railway Commissioners has authorized the opening for traffic of the branch line from Vegreville to Warden, Alta., 109 miles, and a train service was put on Oct. 12. The construction of the line is being pushed on to Calgary, at which point, Sir Wm. Mackenzie, President, recently stated, a station, roundhouse and machine shop will be built this fall. It is said that the line will be extended southerly to a junction with the line near Standoff mentioned in the last paragraph.

From this Vegreville-Calgary line a branch is being built from Stettler to Rocky Mountain House. Track laying is reported to have been completed to Poplar Ridge, where a bridge is being built. Grading has been completed on the Medicine River, where another bridge is being built.

The Alberta Legislature is being asked to pass an act amending chap. 48 of the statutes of 1910 (second series) respecting the Canadian Northern Western Ry., by authorizing the building of the following additional lines of railway: from the Edmonton and Slave Lake Ry. between the southern boundary of tp. 61 and Athabasca Landing, generally northeasterly to Fort McMurray on the Athabasca River; from near Edmonton northerly and northeasterly passing west of Lac la Biche to a junction with the Fort McMurray line; from between Stony Plain and Wabamum Lake on the Edmonton, Yukon and Pacific Ry. southwesterly to tp. 49, range 8, west of the 5th meridian; from between Ladyminster and Minburn on the C.N.R. southerly to Medicine Hat; from between Cochrane and Nanton on a previously authorized line southerly to Pincher Creek; from near Brule Lake on the C.N. Alberta Ry. northerly to a junction with one of the already authorized lines of the C.N.W.R.

Another notice states that the C.N.W.R. will ask the Alberta Legislature to authorize the building of the following lines: from Athabasca Landing to Fort McMurray; from some point on this line to Lac la Biche; from Edmonton on the north side of the North Saskatchewan River to the eastern boundary of Alberta; from Bruderheim to Vermillion and thence to the southern boundary of the province; from near Wabamum Lake to tp. 4-9, range 8, west of the 5th meridian; from near Brule Lake, for 35 miles northwesterly; from Brule Lake northerly to a junction with a C.N.R. line; from Little Smoky River to Lesser Slave Lake; from near Medicine River southerly to Pincher Creek; from near Camrose to the eastern boundary of Alberta; from Athabasca Landing northerly to Peace River Landing; from near Big River or Stettler to the Saskatoon-Calgary line; from Calgary for 70 miles northerly; from Strathcona for 50 miles southwesterly.

Track laying is expected to be completed into Athabasca Landing, Alta., by Dec. 30, and for a considerable mileage on the line being built out from Onoway. Reports state that the whole of the extension from Onoway to the British Columbia boundary is under contract, and that steel had been laid to the Sturgeon River. The sub-contractors working on the line are reported to be: Phelan and Shirley, McMillan Bros. and Kenny, D. F. McArthur, and Jas. O'Connor. Work will be continued through the winter.

Application is being made to the Dominion Parliament to authorize an extension of time within which certain already authorized lines in Saskatchewan and Alberta, under the acts of the C.N. Ry., the Saskatchewan North Western Ry., the Saskatchewan Midland Ry. and the Alberta Midland Ry. may be built.

Canadian Northern Pacific Ry. With respect to the revision location survey of the line from Kamloops, B.C., to the summit of the Rocky Mountains in the Yellowhead Pass, at the British Columbia-Alberta boundary, we are officially advised that the distance between the two points is 250 miles. A level location was made in 1910 which showed that it was possible to obtain less than a 1% gradient over the worst section, which lies between the lower end of Moose Lake and 150 miles above Kamloops. Going west from the summit a gradient of 0.7% is obtained to Albreda summit, the divide between the Fraser and the North Thompson water, and it is expected that this gradient will not be exceeded between there and down to within 125 miles of Kamloops, to which point there is a 0.4% gradient from the coast. That is, there will be a gradient of 0.4% from the coast for 375 miles east, and it is expected that the gradient will not exceed 0.7% for the remaining 125 miles to the Yellowhead Pass. This 125 miles is not yet all definitely located, but three survey parties are at work, and it is expected to have the location furnished during the winter.

The contract for this section—from Kamloops to the Yellowhead Pass—has been let to the Northern Construction Co. and Cowan, and we are officially advised that construction gangs are at work on the first 40 miles out of Kamloops, and it is expected to have the next 60 miles under sub-contract immediately. There are no serious difficulties in the way of construction above Kamloops, and for the first 85 miles the work will be, for the most part, light and only comparatively heavy for the remainder of the distance to the summit. There are no long tunnels and little heavy bridging.

Vancouver Island Lines.—Press reports state that tenders will shortly be asked for a second section of the line on Vancouver Island. The section which will be put under contract will extend from mileage 60 to 100, near the northwest corner of Cowichan Lake. It will include some heavy work. Location surveys are reported to have been completed to Alberni, about 53 miles from the Cowichan summit.

Canadian North Eastern Ry.—A regular train service is being placed in operation from Stewart to Red Cliff, B.C The ballasting of the spur line to the Red Cliff mine was reported to be practically finished Sept. 30. A turntable is being put in at Red Cliff.

Plans of the preliminary survey for an extension of the line through the Bear River Pass to the Meziadin Lake have been prepared. They show a route passing through a tunnel 2008 ft. long at the pass, and along the north-eastern shore of the lake. A survey party in charge of C. Hoard is reported to be working from the Meziadin Lake easterly, with the view of joining up the surveyed route with a line which is being run by a party working west from the Rocky Mountains. This latter party was reported to be working in the vicinity of Fort Connolly, Sept. 29. (Oct. pg. 953.)

◆

Alberta Central Ry.—The Board of Railway Commissioners has approved location plans for the line between mileage 64.5. and 71.3 west of Red Deer; and between mileage 160 and 194.6 east from Red Deer, Alta. (Oct. pg. 935.)

Dominion Atlantic Railway Annual Meeting.

The annual meeting was held at the new head office, C.P.R. Windsor St. Station, Montreal, Oct. 13, the previous fourteen annual meetings having been held in London, Eng. Following are extracts from the report:

There has been a healthy increase in passenger business during the year, to which both railway and steamers have contributed. Freight business, however, shows a large decrease, there being a shrinkage of £20,474 in earnings under this head. The principal cause of the decreased freight earnings was the failure of the apple crop, which alone accounted for a falling off of nearly £15,000 in receipts. Both in quantity and quality the crop was the poorest Nova Scotia has had for many years, it being only about one-third of that of the previous year. With their receipts for apples thus reduced the spending power of the population in the territory served by the company was severely curtailed, with the result that the earnings in nearly all other commodities were adversely affected.

The balance available for the year, including £1,597 10s. 7d. brought forward from last year, is £42,503 6s. 10d. Against this, interest charges amount to £44,047 13s. 4d. The sale of investments held by the company, which stood in the books at £17,500, realized £16,280 7s., a loss of £1,219 13s. The total deficiency on net revenue account is £2,763 19s. 6d., and this has been charged to suspense account, which now stands at £33,039 3s. 2d. The proportion of working expenses to gross receipts was 84.3%, or an increase of 5.6% compared with the previous year.

There was no capital expenditure during the year. By the sale of the company's investments a reduction of £16,280 7s. was effected in the amount of temporary loans. A further sum of £9,000 was contributed from the company's general funds. This item now stands at £73,719 13s., compared with £99,000 at June 30, 1910.

The directors have arranged with the Canadian Pacific Ry. Co. to lease this company's railways and their appurtenances to that company for 999 years upon terms and conditions contained in lease which will be submitted for approval. As practically the whole of the preference and ordinary stocks are now held in Canada, the head office of the company has been transferred to Montreal. On July 12, at the special meeting of the stockholders, Sir Thomas G. Shaughnessy and D. McNicoll were elected additional directors. For the reason mentioned above H. W. Bilks and F. W. Taylor have tendered their resignations. In accordance with the bylaws all the directors retire at this meeting, and Sir Thomas G. Shaughnessy, D. McNicoll and T. Skinner offer themselves for re-election. To fill the vacancies created by the resignation of Messrs Birks and Taylor, it is proposed to elect R. B. Angus and I. G. Ogden. In consequence of the transfer of the head office to Montreal, the auditors, Drury, Thurgood & Co., of London, and Cunningham & Co., of Ottawa, do not seek re-election. John Leslie, of Montreal, will be nominated as auditor.

The following are the directors for the current year: President, Sir Thomas G. Shaughnessy; Vice President, D. McNicoll; other directors, T. Skinner, I. G. Ogden; Secretary, H. Campbell Oswald.

National Transcontinental Railway Construction, Etc.

Tenders will be received by the Commissioners to Nov. 8, for the construction and erection complete of two 150 h.p. horizontal return tubular boilers and boiler room equipment in the engine houses at Napadogan, and Edmundston, N.B., and three similar boilers at Cochrane, Ont.

We are officially advised that the contract for the building of the terminal station at Quebec has been let to Jos. Gosselin, Levis, Que. The ex-Minister of Railways stated Oct. 2, that the contract had been awarded to the lowest tenderer for $145,015. A description and plans of the building were given in our Sept. issue.

The new Minister of Railways, Hon. F. Cochrane, issued an order Oct. 16, directing that contractors engaged on contracts in connection with the railway entered into since the dissolution of Parliament, are to cease work. The reason for this order is that there is no money on hand to pay progress estimates, on these works, the necessary supplies not having been voted prior to dissolution. The order does not affect work being done on contracts entered into prior to dissolution, for which supplies had been voted. As a result of a further consideration of the matter the contractors are allowed to proceed with foundations on station and other buildings. This permission does not extend to the contractor for the terminal station at Quebec.

It was recently reported in Fort William, that track had been laid easterly for about 100 miles from Superior Jct., Ont., and it was expected that the steel laying gang would reach Lake Nipigon by the end of the year. (Oct., pg. 941.)

The shops at Transcona, Man., it is reported, will be completed in about six weeks, and the repair of locomotives, etc., will be started with the new yea..

F. J. McIntosh, Assistant District Engineer, St. Boniface, Man., stated Oct. 12 that there was no truth in the reports that the piers of the bridge over the Seine River were sinking because of the weakness of the foundations. The two piers and abutments were completed during the summer and the steel work is practically completed. There has, he says, been absolutely no movement of the bridge since the concrete was placed.

A later dispatch states that the foundation for the report as to the state of the bridge, lies in the fact that one of the approaches was built over a sewer at Archibald St., which caved in, and caused a crack in the west wing wall.

Grand Trunk Pacific Railway Construction, Etc.

The excavation for the foundations of the company's hotel at Winnipeg, is being rushed forward, and it is expected to have it completed by Dec. 1. The general contractors, Geo. A. Fuller Co., Ltd., sublet this part of the work to Rigby and Kellett, Winnipeg. The permit issued by the city of Winnipeg puts the cost of the building at $1,300,000.

The Board of Railway Commissioners has approved the location of a branch line in Saskatchewan from the east line of sec. 9, tp. 33, r. 11, to the south line of sec. 11, tp. 31, r. 25, w. 3rd m. mileage 50.23 to 77.13.

Reports state that in addition to the completion of the branch from Melville into Regina, Sask., work has been done to Sept. 30, as follows:— Grading 95% completed on the 130 mile branch from Regina to the International boundary; grading has been completed for 30 miles on the branch from Regina to Moose Jaw, Sask; 50% of the grading has been completed on the 48 mile branch from Moose Jaw northwesterly; grading has been completed on 86 miles and track laid for 67 miles on the branch from Young to Prince Albert; 70% of the grading has been completed on the Battleford branch; 50 miles of grading on the branch from Biggar towards Calgary has been completed and the remaining 52 miles is under contract; the grading on the Vegreville-Calgary branch is 75% completed beyond the point to which track was laid in 1910, and tracklaying is in progress; 60% of the grading has been completed and six miles of track laid on the Alberta coal branch.

Local reports state that a large block of property between Namayo and Kinistino streets, Edmonton, Alta., has been bought by the G.T.P. Ry. upon which it is intended to erect freight sheds. The owners of some portions of the property have received notice to vacate it at once. The question of the construction of subways on Namayo and other streets in the vicinity, for which the Board of Railway Commissioners has issued orders, is being reconsidered by the city council in connection with the project.

We are advised that the shop to be built at Edson, will be a small one, 130 by 50 ft.

Tenders have been asked for the excavation and grading necessary for the station, and roundhouse sites, the clearing of the yards, etc., at Prince Rupert, B.C. (Oct., pg. 941.)

A. W. Smithers, Chairman of the Board, G.T.R., on returning to Montreal, after having been over the entire system, said the G.T.P. Ry. was running trains over 1,800 miles of line, the financing had been completed for the building of the line through to the Pacific coast; contracts for all the work had been let and it was expected to have the work done by the fall of 1914. The line had been opened for traffic from Prince Rupert to Haslemere, B.C., 100 miles, and the grading had been completed to Aldermere, 245 miles from Prince Rupert. The contract for grading the line between Aldermere and Tete Jaune Cache, had been let to Foley, Welch and Stewart, and work was already in progress from both ends.

Considerable information as to the progress of construction is given in the report presented at the company's recent annual meeting, which appears on another page.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Notice has been issued that the company will, on Jan. 1, 1912, pay off and redeem its 5% debenture stock, outstanding on that date. The transfer books relating to this stock will be finally closed Dec. 4, and as soon as possible afterwards a notice will be sent to each stockholder regarding the steps to be taken for paying off the stock. Interest will cease to accrue on and from Jan. 1, 1912.

The annual meeting of shareholders will be held at the C.P.R. offices, Montreal, Nov. 1, In addition to ordinary business it is proposed to submit a bylaw reducing the number of directors to five.

Application is being made for the ratification by the Governor General of an agreement leasing this railway to the C.P.R. for 99 years from Jan. 1, 1912.

Brockville, Westport and Northwestern Ry.—An order has been made in the action against this company by the trustee for the bondholders directing the sale of the property by auction at Osgoode Hall, Toronto, on Dec. 14. The property will be offered in one lot and will consist of 45 miles of railway from Brockville to Westport, Ont., with all its property, rights, powers and franchises. A reserve price has been placed on the property.

Canadian Northern Alberta Ry.—There has been deposited with the Secretary of State at Ottawa, a trust mortgage dated Mar. 22, securing the company's 3½% 50-year debenture stock, guaranteed by the Dominion to the amount of £647,260. 5s. 6d., upon certain lines of railway in Alberta.

Canadian Northern Ontario Ry.—There was deposited with the Secretary of State at Ottawa, Oct. 4., a trust deed securing an issue of 3½% 50-year debenture stock of the company to the amount of £7,493,835 12s. 4d., guaranteed by the Dominion upon the line now under construction between Ottawa and Port Arthur, Ont.

The Canadian Pacific Ry. Co. is applying to the Dominion Parliament for power to acquire the debenture and other stock of railway companies the principal and interest of which has been guaranteed by the C.P.R., in the same way that it can now acquire mortgage bonds, by the issue of C.P.R. 4% debenture stock.

Central Ry. of Canada.—The final instalment of 20%, of the recent issue of £600,000 5% bonds is due and payable in London, Eng., Nov. 1.

Dominion Atlantic Ry.—Gross earnings for Aug., $173,200, against $160,676 for Aug. 1910. Aggregate for two months, ended Aug. 31, $333,800 against $309,108 for same period 1910.

Quebec Central Ry.—Gross earnings for Aug., $138,995.80; expenses, $82,444.96; net earnings $56,550.84, against $132,376.89 gross earnings; $78,477.06 expenses; $53,899.83 net earnings for Aug. 1910. Aggregate gross earnings for two months ended Aug. 31, $264,102.27; expenses $163,697.80; net earnings $100,404.47, against $256,324.26 aggregate gross earnings; $159,069.27 expenses; $97,254.99 net earnings for same period, 1910.

Cables from London, Eng., state that at the annual meeting of shareholders held Oct. 18, the accounts showed a surplus of $160,415, out of which a dividend of 3% was declared. The report referred to the provisional arrangement which had been entered into for leasing the line to the C.P.R. for 999 years. Some shareholders disapproved of the proposed lease, but the report was adopted. The formal meetings to ratify the lease will be held at some future date.

Temiscouata Ry.—Profit on operation for July, $6,372, against $4,646 for July, 1910. Aggregate profit for seven months ended July 31, $27,546, against $26,474 for same period, 1910.

Temiskaming and Northern Ontario Ry.—Gross earnings for Aug., $190,329.33; expenses $122,585.46; net earnings, $67,743.87; ore royalties $3,779.68; net income $71,527.55; less hire of equipment $4,223.74; net result $67,299.81.

St. Mary's and Western Ontario Ry.—A meeting of the representatives of the municipalities holding second mortgage bonds was held at Embro, Ont., Oct. 12, at which it was decided to decline the recent offer of the C.P.R. to give 25% of the face value of the bonds for the release of the mortgage. It was further decided to submit an offer to the company.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Following are the directors and officers for the current year elected at the annual meeting in Vancouver, Oct. 11: President, L. W. Hill, St. Paul, Minn.; other directors: W. H. Barker, E. E. Evans, F. J. Bayfield, K. J. Burns, Vancouver; Judge Brown, Seattle, Wash. K. J. Burns is General Agent of the Great Northern Ry. in Vancouver.

THE T. H. SYMINGTON COMPANY

BALTIMORE ROCHESTER CHICAGO NEW YORK

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., to Digby, N.S.—Local reports state that the question of the operation of a car ferry for freight between the C.P.R. at St. John, N.B., and the Dominion Atlantic Ry. at Digby, N.S., is under consideration.

Second Track Reports.—A press report states that arrangements are being made to build a second track from Adirondack Jct., via St. Johns to Farnham, Que.

Windsor St. Station.—It was stated, Oct. 18, that the office section of the extension to the Windsor St. station will be ready for occupation in May, 1912, and that the remainder of the building will be ready for occupation about a month later. There is a 20 ft. space between the present building and the addition, which will not be connected up until the offices in the south of the present structure are removed.

Place Viger Improvements.—The viaduct along Notre Dame St., over the C.P.R. yards at Place Viger, which has been under construction for the past two years, was opened for traffic Oct. 17. It extends from Berri St. to Montcalm St., 1,200 ft. On the surface a double track electric car line has been laid, with ample room for vehicular and pedestrian traffic, while underneath is the company's bonded warehouse. Considerable progress has been made with the work of laying out the new yards. The inbound and outbound sheds are situated between the viaduct and the river. They are 1,000 and 1,200 ft. long respectively and they are separated by a 1,000 ft. covered transfer platform. All three sheds are of concrete and steel construction and are equipped with fire walls, sliding doors and all the latest weighing appliances. The total capacity of the freight tracks is about 900 cars. For the outward bound shed there are four tracks, with a capacity of 122 cars. For the inward bound shed there are three tracks, with a capacity of 75 cars, and for the bonded shed there are two tracks. The storage and teamway tracks have a capacity of about 600 cars.

Second Track Ste. Therese-Quebec Jct.—The second track work being done at Montreal at present extends from Ste. Therese to Quebec Jct., 7.22 miles. It is expected to have the grading completed this fall, but the finishing of the work and the building of the second track on the bridge at Ste. Rose, will not likely be gone on with before next year.

Smith's Falls-Glen Tay Second Track. The second track work between Smith's Falls and Glen Tay, Ont., has been practically completed and is being ballasted.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the company to connect the tracks of this line at mileage 88 from Victoria Harbor with the line between Montreal and Toronto at mileage 38.57 from Havelock, Ont. The contract for the erection of stations, freight sheds, water tanks, etc., along the line is reported to have been let to G. T. Martin, of Smiths Falls, Ont.

The last rail on this line was laid Oct. 18, and the ballasting is being pushed as fast as possible. It is expected that it will be ready for traffic by the end of the year. The line is in operation from Coldwater Jct., on the Toronto-Sudbury line to Victoria Harbor, where large terminal facilities are under construction. The extension easterly from Coldwater Jct., 88 miles, joins the Montreal-Toronto line near Bethany Siding, Ont. The Toronto Construction Co. had the contract.

The C.P.R. has given a contract to John S. Metcalf Co., Ltd., Montreal, for 700 ft. of cribbed wharf with reinforced concrete superstructure at Victoria Harbor, Ont., in addition to the 6,500 ft. of wharf already built and under construction by the Metcalf Co., at Victoria Harbor.

South Ontario Pacific Ry.—The Board of Railway Commissioners is being asked to recommend the Dominion Government to sanction a lease of the line now under construction from Guelph Jct. to Hamilton, Ont., to the C.P.R. for 99 years from Jan. 1, 1912. The board has approved plans for the building of bridges at mileage 12.46 in West Flamboro tp., and over the G.T.R., near Hamilton.

The Dominion Parliament is being asked to extend the time within which the line, now under construction, may be built, and to authorize the company to enter into an agreement with the C.P.R. for any purpose specified in sec. 361 of the Railway Act.

Entrance to Stratford, Ont.—J. W. Leonard, Assistant to the Vice President, met members of the city council and of the board of trade, Oct. 10, to discuss the plans for the route of the company's projected line through the city. Several suggestions were made, and Mr. Leonard promised to have them looked into by an engineer. The company desires to have a route through the city along the river, but this is being opposed by the citizens on the ground that it would destroy the park, etc.

London Station.—Work was started on the new station on Quebec St., London, Ont., Oct. 1, and it is expected that it will be completed by the end of the year. The station building will have a total length of 121 ft., the main building being 65 ft. long and a story and a half high, while the single story sheds at each end will be 28 ft. long. The main waiting room, in the east end of the building, will be 26 by 17 ft. deep, and adjoining it will be ladies' rooms with lavatory accommodation.. In the other parts of the building there will be offices for the agent, rooms for the operators, caretakers, etc., and the baggage and express rooms will be in the sheds at the ends. Upstairs will be offices for the district superintendent, etc. The building, which will cost about $10,000, is being built by the company's staff.

Branch at Byng Inlet.—The Board of Railway Commissioners has authorized the building of a branch line and a Y at Byng Inlet, Ont., on the Toronto-Sudbury line.

Northern Colonization Ry.—The Dominion Parliament is being asked to extend the time within which the extension of the railway to a junction with the Ottawa and North Western Ry. at Maniwaki, Que., may be built.

Ottawa and North Western Ry.—The Dominion Parliament is being asked to extend the time within which the lines authorized to be built by the company's acts of 1899 and 1900, may be built.

Campbellford, Lake Ontario and Western Ry.—Press reports state that a choice will be made at an early date from among the routes surveyed, for the projected line from between Blairton and Ivanhoe to between Locust Hill and Leaside Jct., on the existing line between Montreal and Toronto, the new line being projected to serve the lake front towns as far as possible.

West Ontario Pacific Ry.—The Dominion Parliament is being asked to extend the time within which the line authorized by the acts of 1906 may be built.

Subway at Fort William.—Tenders were received to Oct. 16 for the construction of a subway at Syndicate Ave., Fort William, Ont.

Winnipeg-Brandon Second Track.—The second track work into Brandon, Man., has been completed, and the first passenger trains were operated over it to and from Winnipeg, Oct. 10.

Shops at Neepawa.—We are officially advised that it is not the intention to erect new shops and a roundhouse at Neepawa, Man., as reported in daily papers.

Shops at Weyburn.—We are officially advised that it is not the intention to erect locomotive and car repairing shops at Weyburn, Sask., as reported in daily papers.

Regina to Bulyea.—The new line connecting Regina and Bulyea, Sask., is expected to be opened for traffic early in Nov.

Manitoba and North Western Ry.—Application is being made to the Dominion Parliament to authorize the building of a line from Harrowby, southeasterly and southerly to near Hamiota, Man., and to extend the line for the building of lines from Churchbridge to Cutarm Creek, Sask.; from Theodore to a junction with the Russel branch in tp. 20 or 21, range 28, west of the 3rd meridian, Sask. and Man.; from Butte to Hamiota, Man.; and from Russell to the mouth of Shoal River on Lake Winnepegosis, Man.

Calgary Shops.—The Calgary city council approved an agreement with the C.P.R. in connection with the location of the proposed new shops there, at a meeting held Oct. 14. The agreement provides that the company shall have free use of the city sewers and shall give a site for disposal works; water rates for the shops to be the same as for other industrial concerns; the street railway to be extended to the shops; operation to be started on the building of shops within 30 days after the ratification of the agreement; the city to maintain certain grade crossings, and to sell electric power upon terms to be arranged between engineers representing the company and the city. These terms were arranged after a discussion of the matter with F. W. Peters, Assistant to the Vice President, Oct. 13. There are some small points of difference between what the company asked and what the city is prepared to grant, but it is expected that these will be settled, in time to permit the bylaw to be submitted at the next municipal elections.

Lacombe Easterly.—The Board of Railway Commissioners has authorized the opening for traffic of the Lacombe branch, of the Calgary and Edmonton Ry., from Castor to Coronation, Alta., 25 miles.

Strathcona-Edmonton High Level bridge.—The concrete substructure of the high level bridge over the Saskatchewan River, on the new line to connect Strathcona with Edmonton, Alt., is reported to have been completed. The erection of the steel work is expected to be comenced early in Nov. Track has been laid from Strathcona to the bridge to facilitate the work of getting in the steel superstructure.

Western Lines.—Application is being made to the Dominion Parliament to authorize the building of the following branch lines; from range 10, 11 or 12, on the Estevan-Forward branch to a junction with the Weyburn-Lethbridge branch in range 24, 25 or 26, west of the 2nd meridian, Sask.; from near Sedgewick southerly to a junction with the Lacombe branch in tp. 35, 36 or 37, range 10, 11 or 12, west 4th meridian, Alta.; from north of the Battle River on the last mentioned line northwesterly to a junction with the Wetaskiwin branch in ranges 17, 18 or 19, west 4th meridian, Alta. An extension of time for the building of the following lines is also asked: from Osborne to a point between Cartwright and Boissevain, Man.; from Otterbourne to Stuartburn, Man.; from the Icelandic River northwesterly for 100 miles in Manitoba; from Killam to Strathcona, Alta.

Rocky Mountain Water Powers.—A recent press report stated that the water power of the Adams River, which flows into the South Thompson River, near the west end of Shuswap Lake, had been secured in the name of J. S. Dennis, Manager Irrigation and Land Interests in Alberta and British Columbia, and that the purchase had been made with the view of preparing for the operation of certain of the C.P.R. lines in the vicinity, by electricity. Mr. Dennis wrote us on Oct. 21, that as far as he knew the company had not taken any steps to acquire a water power at that point.

Coquitlam Yards, Etc.—Local press reports state that arrangements are being made for clearing the land acquired at Coquitlam, B.C., for yard and other purposes.

Vancouver Station.—We are officially advised that it is not likely the plans for the proposed new station building at Vancouver, B.C., will be ready for some little time.

Esquimalt and Nanaimo Ry.—It is expected that the extension to Alberni, will be opened for traffic early in Nov. The grading of the extension to Cowichan is going ahead rapidly, and the steel for laying the first 25 miles has been delivered.

Application is being made to the Dominion Parliament for an extension of time for the building of certain lines authorized by the company's acts of 1884 and 1906. (Oct., pg. 945.)

Investigation of Fire Precautions in British Columbia.

The Board of Railway Commissioners recently issued an order providing for the investigation of fire appliances with which locomotives of railway companies subject to the Board's jurisdiction and operating in British Columbia, are equipped, and also the condition of the companies' right of way, as to whether it is free from dead grass, weeds and other combustible matter. By arrangement with the Forestry Branch of the Interior Department, the services of fire wardens, already engaged in fire preventive work, will be utilized. The instructions relative to the order have been given by the Board's operating officers and report of the investigations will be made to them. The following fire wardens have been detailed for the work: Supervisors of Fire Wardens, W. H. McGregor, Nelson, and W. C. Gladwin, Vancouver; Assistant Supervisor of Fire Wardens, W. F. Loveland, Nelson; Division Fire Wardens, G. B. Watson, Cranbrook, R. J. Long, Nelson, W. A. Wilmot, Fernie, M. V. Allen, Vernon, F. D. Markland, Victoria, J. K. McLean, Revelstoke, and W. H. Smith, Vancouver; Fire Wardens, R. E. Allen, New Denver, and G. A. Kerr, Kitselas.

H. H. Vaughan, Assistant to the Vice President, C.P.R., Montreal, accompanied by Mrs. Vaughan, sailed from Quebec, on the s.s. Empress of Ireland, for England, for a holiday, intending to be absent about five weeks.

W. S. Painter, who has resigned as Chief Architect, C.P.R., is reported to have entered into partnership with F. H. Swales, a London architect, with offices at Montreal and Vancouver, B.C. It is said that Mr. Painter will be retained by the C.P.R. in a consulting capacity, especially in regard to western work.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has ordered six snow ploughs from the Canadian Car and Foundry Co., Montreal.

The Intercolonial Ry. has added two vans to its rolling stock, since Sept. 18, both having been built in its Moncton shops.

The Temiskaming and Northern Ontario Ry. has received three parlor-cafe cars, named Sesekinika, Tetepaga and Wasaksima, from the Canadian Car and Foundry Co., Montreal.

The Grand Trunk Ry. has ordered 25 first class cars and 25 baggage-express cars from the American Car and Foundry Co., and 25 first class cars and 25 baggage-express cars from the Pullman Co., for delivery towards the end of the year.

The C.P.R., between Sept. 13 and Oct. 13, placed orders at its Angus shops, Montreal, for the following rolling stock,—90 box cars, 15 stock cars, three vans, two refrigerator cars, freight, 31 colonist cars, 30 baggage and express cars, 25 suburban cars, 15 first class cars, and 15 first class and smoking cars.

The Canadian Northern Ry., between Sept. 15 and Oct. 15, ordered one dining car and six snow ploughs from the Canadian Car and Foundry Co., Montreal, and two passenger and mail cars and three second class passenger and baggage cars from the Preston Car and Coach Co., Preston, Ont.

In our July issue it was stated that the G.T.R. had ordered 1,000, 36-ft. steel under frame box cars from the Canadian Car and Foundry Co., Montreal, and in September we received a communication from a G.T.R. official about a similar 1,000 cars, mentioned as having been ordered from the Canadian Car and Foundry Co. This latter information was taken as referring to an additional order, and was so treated in our October issue. Enquiry has shown that only one order has been placed.

The Canadian Northern Ry., between Sept 15 and Oct. 15, ordered the following rolling stock,—1,500 box cars, 300 steel underframe flat cars and 15 first class cars, from the Canadian Car and Foundry Co., Montreal; 400 Hart convertible cars, from the Hart-Otis Car Co., Montreal; 200 flat cars, 300 box cars, 12 baggage cars, 12 baggage and mail cars and 20 cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont.; 1,000 box cars from the Nova Scotia Car Works, Halifax, and 50 flat cars.

The Canadian Northern Ry. has ordered 1,500 box cars from the Canadian Car and Foundry Co., Montreal:—

Length inside body	33 ft. 10¾ ins.
Width inside body	8 ft. 6⅛ ins.
Height top of floor to bottom of carlin	8 ft.
Length over end sills	36 ft. 9¾ ins.
Width over side sills	9 ft. 0¾ in.
Width at eaves	9 ft. 7⅜ ins.
Height over sill	14 ft.
Truck centres	26 ft. 9¾ ins.
Door opening	7½ by 6 ft.
Bolsters and brake beams	Simplex
Draft springs	M.C.B. 6¼ by 8 ins.
Air brakes	Westinghouse K C. 812
Trucks	Arch bar type
Journal boxes	M.C.B. cast iron
Axles	Steel
Wheels	Cast iron, 33 ins.
Brake shoes	Steel back

O'Brien, McDougall and O'Gorman, railway contractors, have ordered 15 Hart convertible cars, from the Hart-Otis Car Co., Montreal. Following are the chief details:—

Capacity	80,000 lbs.
Width over side sills	8ft. 10 ins.
Length inside, as hopper	20 ft. 10 ins
Length inside, as goodola	84 ft. 8 ins
Width, inside	8 ft. 8 ins
Width overall	10 ft 2½ ins
Width at top	9 ft. 10 ins.
Height from rail to top of floor	4 ft. 4¼ ins.
Height from rail to top of car	8 ft. 1⅜ ins.
Height inside	3 ft. 9¼ ins.
Truck centres	26 ft. 8 ins.
Wheel base of truck	5 ft. 4 ins.
Length of hopper door opening	16 ft. 8½ ins
Width of hopper door opening	2 ft. 9 in.

The C.P.R., between Sept. 13 and Oct. 13, received the following additions to rolling stock,—445 wooden box cars, 45 vans, two baggage and smoking cars, three second-class cars, one baggage and express car, four compartment sleeping cars, seven switching locomotives, and four D.10 locomotives from its Angus shops, Montreal; 15 D.10 locomotives and three N.3 locomotives from the Montreal Locomotive Works; seven N.3 locomotives from the Canadian Locomotive Co., Kingston, Ont.; 571 steel frame box cars from the Canadian Car and Foundry Co., Montreal, and 695 steel frame box cars and 343 steel coal cars from the United States.

The Edwardsburg Starch Co., Cardinal, Ont., has ordered one four-wheel saddle tank switching locomotive from the Montreal Locomotive Works. Following are the chief details:—

Cylinders	13 by 18 ins.
Driving wheels, diar.	36 ins.
Boiler, diar.	46 11-16 ins.
Boiler, pressure	165 lbs.
Firebox	47½ by 36⅛ ins.
Tubes, no. and diar.	100; 2 ins.
Tubes, length	10 ft.
Heating surface, tubes	524 sq. ft.
Heating surface, firebox	53 sq. ft.
Heating surface, total	577 sq. ft.
Grate area	11.9 sq. ft.
Weight in working order	56,000 lbs.
Maximum tractive power	11.851 lbs.
Capacity, coal	900 lbs
Capacity, water	1,000 galls.
Wheel base	6 ft. 3 ins.

Following are chief particulars of the four dining cars which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal:—

Length over end sills	72 ft. 6 ins.
Length over buffers	80 ft. 6¼ ins.
Width over side sills	9 ft. 10½ ins.
Width over sill at eaves	10 ft. 2¾ ins.
Width between deck sills	5 ft. 6 ins.
Height, top of sill to bottom of plate,	6 ft. 8½ ins.
Height over roof board	14 ft. 2⅜ ins.
Body holsters	Cast steel double
Vestibules	Pullman wide, type C
Platforms	Standard Steel Co. type A3
Heating	Gold combination steam and hot water
Air brakes	Westinghouse L.N. 1812
Trucks	C.N.R. standard 6-wheel, 80,000 lbs. capacity wood passenger trucks
Wheels	Steel tired, 36 ins.
Axles	M.C.B. 5 by 9 ins.

P. Lyall and Sons, Montreal have ordered one four wheeled saddle tank locomotive from the Montreal Locomotive Works. Following are the chief details:

Weight	56,000 lbs
Wheel base	6 ft. by 3 ins.
Cylinder, diar. and stroke	13 by 18 ins.
Wheels, diar.	36 ins.
Boiler, type	Straight top.
Boiler, pressure	165 lbs.
Boiler, diar, at front end	41-11-16 ins.
Firebox	47-11-16 by 36⅝ ins.
Tubes, no. and diar.	100-2 ins.
Tubes, length	10 ft.
Heating surface, tubes	524 sq. ft.
Heating surface, firebox	53 sq. ft.
Heating surface, total	577 sq. ft.
Grate area	11.9 sq. ft.
Tank capacity	1,000 galls.
Maximum tractive power	11,850 lbs.

The Reid Newfoundland Co., which is building at its St. John's shops, a number of locomotives, details of which we gave in our last issue, is also building three sleeping cars, 49 ft. long, 8½ ft. wide, 6 ft. 4½ ins. wall, with steel platforms, with eight sections and drawing room; four first class day cars, 47 ft. long, 8½ ft. wide, 6 ft. 5½ ins. wall; six second class cars, same dimensions as the first class; two baggage cars, 52½ ft. long, 8½ ft. wide, 6 ft 5½ ins. wall; two dining cars, 41 ft. long, 8½ wide, 6 ft. 4½ ins. wall, to seat 18 passengers; 50 box cars, 30 ft. long, 8 ft. wide, 6 ft. 4 ins. wall, 40,000 lbs. capacity; two snow ploughs, all equipped with air brakes and Tower couplers.

Roger Miller and Son, Toronto, have ordered two four wheeled saddle tank locomotives from the Montreal Locomotive Works. Following are the chief details:

Weight, total	39,000 lbs.
Wheel base	4 ft. 9 ins.
Cylinder, diar. aud stroke	11 by 16 ins
Wheels, diar.	33 ins.
Journals	5 by 6 ins.
Boiler, type	Straight top.
Boiler, pressure	165 lbs.
Boiler, diar. at frout end	35⅝ ins
Firebox	40½ by 33 ins.
Tubes, no. and diar.	85-2 ins.
Tubes, length	8 ft. 3½ ins.
Heating surface, tubes	367 sq. ft.
Heating surface, firebox	41 sq. ft.
Heating surface, total	408 sq. ft.
Grate area	9.3 sq. ft.
Tank capacity	750 galls.
Maximum tractive power	8,230 lbs.

The Canadian Northern Ry., between Sept. 15 and Oct. 15, received the following additions to rolling stock,—28 flat cars, 136 box cars, two first class cars and three baggage cars, from the Canadian Car and Foundry Co., Montreal; 47 refrigerator cars and six cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont.; two second class passenger and baggage cars from the Preston Car and Coach Co., Preston, Ont.; 195 box cars from the Nova Scotia Car Works, Halifax; five consolidation locomotives from the Baldwin Locomotive Works, Philadelphia, Pa., five ten wheel locomotives from the American Locomotive Co., and 150 flat cars for the Duluth, Winnipeg, and Pacific Ry.

The use of gas-electric motor cars on the Central Ontario Ry. between Trenton and Picton, Ont., is said to be under the consideration of officials of the Canadian Northern Ry., which now controls the C.O.R. The prime mover in these cars is a gas engine, the energy from which is transmitted to the driving wheels by an electric drive, thus avoiding any direct mechanical gearing. The engine is direct coupled to an electric generator forming a compact power plant. The electric motors under the car are standard railway motors. A number of these cars are in operation on the Buffalo, Rochester and Pittsburg Ry. and the Southern Ry., and some have been built recently for the St. Louis and San Francisco Rd.

The Toronto, Hamilton and Buffalo Ry. has ordered two consolidation locomotives, equipped with superheaters, from the Montreal Locomotive Works. Following are the chief details:—

Cylinders, diar and stroke	23 by 28 ins.
Driving wheels, diar.	55 ins.
Boiler, outside diar., at front end	64¼ ins
Boiler, pressure	180 lbs.
Firebox	96 by 75¼ ins.
Tubes, no. and diar.	202-2 ins; 28-5⅜ins.
Tubes, length	15 ft.
Heating surface, tubes	2162 sq. ft.
Heating surface, firebox	168 sq. ft.
Heating surface, total	2330 sq. ft.
Grate area	50.2 aq. ft.
Wheel base, driving	17 ft.
Wheel base, engine	57 ft. 3 ins.
Weight on leading truck	28,000 lbs.
Weight on driving wheels	175,000 lbs.
Weight, total	203,000 lbs.
Weight, tender	140,000 lbs.
Tractive power	41,200 lbs

◆

The Titanium Alloy Manufacturing Co. calls attention to statistics issued by the American Iron and Steel Association respecting the tonnage of steel treated with various alloys during 1910. Out of a total of 567,819 gross tons, 326,316 were treated with Titanium.

The Supreme Court gave judgment at Ottawa, Oct. 5, in the appeal against the Exchequer Court decision in E. A. Walberg's action for extras on the contract for building the new shops for the Intercolonial Ry. at Moncton, N.B. The court reduces the amount fixed by the Exchequer court to that named by the referee.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ontario Ry.—J. W. Kelly has been appointed Car Foreman in charge of all work pertaining to the Car Department. Car inspectors will send all correspondence to him and work will be under his supervision. Office, Parry Sound, Ont.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry.—L. P. McGee has been appointed acting Bridge and Building Master, vice J. W. Phair, accidentally killed on the Q. & L. St. J. R., near Chambord Jct., Que., Oct. 11. Office, Joliette, Que.

Canadian Northern Ry.—J. D. Sinclair, heretofore Contracting Freight Agent, Toronto, has been appointed Travelling Freight Agent, Toronto, vice G. D. Lindsay, resigned.

I. L. Healy, heretofore in Freight Traffic Department, Toronto, has been appointed Contracting Freight Agent, Toronto, vice J. D. Sinclair, promoted.

H. R. Safford,
Chief Engineer, Grand Trunk Railway.

S. J. Lupton has been appointed General Foreman Boilermaker, with jurisdiction over boiler inspecting, testing and repair work generally at all points, vice P. Spence, Boiler Inspector, assigned to other duties. Office, Winnipeg.

P. Spence has been appointed Locomotive Foreman at Saskatoon, Sask., vice P. H. Neville, assigned to other duties.

Canadian Pacific Ry.—W. B. Brown, heretofore Trainmaster and Chief Dispatcher at St. John, N.B., has been appointed Assistant Superintendent, District 1, Atlantic Division, the dispatching office at St. John having been consolidated with that at Brownville Jct., Me., on the adoption of the telephone dispatching system on the division. Office, St. John, N.B.

A. W. Horsey, heretofore District Master Mechanic, District 1 and Montreal Terminals, Eastern Division, Farnham Que., has been appointed District Master Mechanic, District 1, Eastern Division. Office, Farnham, Que.

G. A. Balfour has been appointed Assistant to the General Superintendent, Eastern Division. Office, Montreal. This is to relieve F. P. Gutelius of much of the detail work, which has increased greatly on account of the larger volume of business now being done.

John Burns, heretofore District Master Mechanic, London, Ont., has been appointed Master Mechanic, Eastern Division, succeeding J. B. Elliott, who is retiring on well earned pension after faithfully serving the company from its formation. Office, Montreal.

H. A. Pepler has been appointed District Master Mechanic, District 2 and Montreal Terminals, Eastern Division. Office, Montreal.

W. S. Painter, Chief Architect, has resigned to carry on private practice.

J. M. Burke, heretofore District Master Mechanic, Districts 2 and 4, Eastern Division, Smiths Falls, Ont., has been appointed District Master Mechanic, District 4, Eastern Division. Office, Ottawa, Ont.

M. G. Murphy, heretofore General Travelling Passenger Agent, Montreal, has been appointed District Passenger Agent, Toronto, vice R. L. Thompson, resigned. Office, 16 King St. East.

A. J. Downing, heretofore chief clerk to agent, has been appointed city ticket agent, C.P.R., and agent Dominion Ex. Co., Woodstock, Ont., vice G. A. Joyce, resigned.

R. T. Moran has been appointed Chief Dispatcher at Sudbury, Ont., vice J. O'Meara.

F. Nowell, heretofore Locomotive Foreman at Ottawa, has been appointed District Master Mechanic, District 2, Lake Superior Division, vice J. A. Carroll, resigned to enter other service. Office, White River, Ont.

E. T. Wright has been appointed Storekeeper at Schreiber, Ont.

George Bury, heretofore General Manager, Western Lines, has been appointed Vice President and General Manager Western Lines, vice Sir William Whyte, Vice President, who has retired from active service. Office, Winnipeg.

Grant Hall, heretofore Superintendent of Motive Power and Car Department Western Lines, has been appointed Assistant General Manager, Western Lines in charge of matters pertaining to operation and maintenance. Office, Winnipeg, Man.

J. G. Sullivan, heretofore Assistant Chief Engineer, Western Lines, has been appointed Chief Engineer, Western Lines. Office, Winnipeg. The position of Assistant Chief Engineer has been abolished.

C. H. Temple, heretofore Assistant Superintendent of Motive Power, Western Lines, has been appointed Superintendent of Motive Power, vice Grant Hall, promoted. Office, Winnipeg.

C. A. Davis has been appointed Locomotive Foreman at Rogers Pass, B.C. vice G. R. Steeves, assigned to other duties.

G. Donley has been appointed Assistant Foreman of Repair Track at Vancouver, B.C.

W. Woodhouse has been appointed Assistant Coach Yard Foreman at Vancouver, B.C. This is a new position.

Capt. C. D. Neroutses, heretofore in command of the C.P.R. s.s. Princess Royal, has been appointed Marine Superintendent, B.C. Coast Steamship Service. Office, Victoria, B.C.

A. L. Sauve has been appointed City Passenger Agent, Detroit, Mich., succeeding G. G. McKay, transferred to Chicago as City Passenger Agent.

Central Vermont Ry.—See Grand Trunk Ry. for particulars respecting the President of the C.V.R., etc.

J. E. Dalrymple, Vice President, G.T.R., and Fourth Vice President, G.T.

P.R., has also been appointed Vice President, C.V.R., in charge of traffic. Office, Montreal.

Grand Trunk Pacific Ry.—J. E. Dalrymple, heretofore Assistant Freight Traffic Manager, Winnipeg, has been appointed Fourth Vice President, in charge of Traffic. Office, Montreal.

D. E. Galloway, heretofore private secretary to the President, G.T.R. and G.T.P.R., has been appointed Assistant to the President, G.T.R. and G.T.P.R., vice R. S. Logan, appointed Vice President, G.T.R. Office, Montreal.

In our October issue mention was made of a report that J. H. Hanna, at one time Division Freight Agent, G.T.R., Hamilton, Ont., had been appointed City Passenger Agent, G.T.P.R., Calgary, Alta. We are advised that the report is incorrect.

The following agents have been appointed: Pope, Man., F. J. Brande; Rea, Man., A. G. Ridford; Atwater, Sask., N. Fizer; Bangor, Sask., R. W. Esty; Birmingham, Sask., C. A. Swan; Ituna, Sask., H. S. McClelland; Balcarres, Sask., C McMahon; Hinton, Alta., F. R. Harrison.

Grand Trunk Ry.—In order to relieve the President of the more important detail work, which has heretofore been largely centralized, the directors have approved the reorganization of the executive staff of the G.T.R. and affiliated companies.

E. H. Fitzhugh, heretofore First Vice President, G.T.R., having been elected President Central Vermont Ry., Central Vermont Transportation Co., Southern New England Rd. Corporation, Southern New England Ry. and Montreal and Southern Counties Ry., has relinquished his duties in connection with his former position to devote his time to the affairs of the companies named. He will also perform such duties in connection with other G.T.R. subsidiary lines as may hereafter be assigned to him. Office, Montreal.

The practice of designating the several vice presidents by numbers has been discontinued.

W. Wainwright, heretofore Second Vice President, has been appointed Vice President. Office, Montreal.

M. M. Reynolds, heretofore Third Vice President, has been appointed Vice President, in charge of Financial and Accounting Departments. Office, Montreal.

H. G. Kelley, heretofore Chief Engineer, has been appointed Vice President, in charge of Construction, Transportation and Maintenance Departments. Office, Montreal.

J. E. Dalrymple, heretofore Assistant Freight Traffic Manager, G.T. Pacific Ry., Winnipeg, Man., has been appointed Vice President, G.T.R., in charge of Traffic. Office, Montreal.

R. S. Logan, heretofore Assistant to the President, G.T.R. and G.T.P.R., has been appointed Vice President, G.T.R., in charge of Land, Tax, Claims and Mail Departments. Office, Montreal.

D. E. Galloway, heretofore private secretary to the President, G.T.R., and G.T.P.R., has been appointed Assistant to the President, G.T.R. and G.T.P.R., vice R. S. Logan, appointed Vice President, G.T.R. Office, Montreal.

H R. Safford, M. Am. Soc. C.E., at one time Chief Engineer of Maintenance of Way, Illinois Central Rd., has been appointed Chief Engineer, G.T.R., vice H G Kelley, promoted. Office, Montreal.

J. W. Loud, Freight Traffic Manager, after 40 years continuous service with the G.T.R. and affiliated lines, has retired under the provisions of the Pension Fund. President Hays, in the circular announcing the retirement, said: "It is a pleasure to testify to the faithful and efficient manner in which he has discharged his duties in the various positions occupied.

John Pullen, Assistant Freight Traffic Manager, Montreal, has resigned on his appointment as President, Canadian Express Co., in succession to C. M. Hays, elected Chairman of the Board of Directors.

C. A. Hayes, heretofore General Freight Agent, Montreal, has been appointed Freight Traffic Manager, vice J. W. Loud, retired. Office, Montreal.

H. C. Martin, heretofore Second Assistant General Freight Agent, Chicago, Ill., has been appointed General Freight Agent, vice C. A. Hayes, promoted. Office, Montreal.

A. F. Read, heretofore Foreign Freight Agent, Montreal, has been appointed General Foreign Freight Agent. Office, Montreal. This is a new position.

F. J. Watson, heretofore Division Freight Agent, Montreal, has been appointed Assistant General Freight Agent. Office, Montreal.

G. T. Pettigrew, heretofore Division Freight Agent, Stratford, Ont., has been appointed Division Freight Agent, Montreal.

W. H. Tool, heretofore Inspector of Bridges and Buildings, Allandale, Ont., has been appointed Master of Bridges and Buildings, Northern Division, vice E. Brown, resigned. Office, Allandale, Ont.

R. J. S. Weatherston, heretofore chief clerk, Division Freight Agent's office, Hamilton, Ont., has been appointed Division Freight Agent, Stratford, Ont.

F. Dearing, heretofore Car Distributor at Stratford, Ont., has been appointed Car Distributor at London, Ont., vice E. R. Harwood, promoted.

E. R. Harwood, heretofore Car Distributor, London, Ont., has been appointed chief clerk to Master of Transportation, with entire charge of freight car distribution. Office, London, Ont.

J. E. Van Kauren has been appointed Car Distributor at Stratford, Ont., vice F. Dearing, transferred.

S. E. Dewey, heretofore Soliciting Freight Agent, New York City, has been appointed Commercial Agent, Pittsburgh, Pa., vice E. F. Flinn, promoted.

R. L. Burnap, heretofore Assistant General Freight Agent, Chicago, Ill., has been appointed Assistant Freight Traffic Manager, vice John Pullen, resigned on his appointment as President, Canadian Express Co. Office, Chicago, Ill. Mr. Pullen's office was at Montreal.

E. F. Flinn, heretofore Commercial Agent, Pittsburgh, Pa., has been appointed Division Freight Agent, Chicago, Ill.

S. L. Strauss, heretofore chief clerk, Tariff Department, Chicago, Ill., has been appointed Chief of Tariff Bureau. Office, Chicago, Ill.

James Waugh, heretofore Travelling Freight Agent, Philadelphia, Pa., has been appointed Commercial Agent, Omaha, Neb., vice A. Wallace, resigned.

The following agents have been appointed: Coteau Jct., Que., W. J. Ferguson, Noyan Jct., Que., F. X Landry, Kirkfield, Ont., E. M. Ellis; Concord, Ont., H. O. McLean; Severn, Ont., J. W. Wiggins; Milton, Ont., B. Sine; London East, Ont., R. E. Taylor; Brucefield Ont., E. A. Pattison; Pembroke, Ont., J. B Pilson, Edington, Ont., H. W. Lora.

Great Northern Ry.—R. J Smith, heretofore General Agent at Cincinnati, Ohio, has been appointed District Freight and Passenger Agent at Grand Forks, B.C., vice V. Kistler, transferred

W. R. Dale heretofore chief clerk to Assistant Traffic Manager, Seattle, Wash., has been appointed Agent at Victoria, B.C., vice E. R. Stephen, resigned to enter private business.

National Transcontinental Railway Commission.—R. W. Leonard, M. Can. Soc. C.E., of St. Catharines, Ont., has been appointed Chairman, N.T.R. Commission, vice S. N. Parent, resigned.

Temiscouata Ry.—G. G. Grundy, General Manager, has also been appointed Secretary, vice D. B. Lindsay, deceased. Office, Riviere du Loup, Que.

Temiskaming and Northern Ontario Ry.—S. H. Ryan, heretofore Chief Dispatcher, has been appointed Trainmaster. Office, North Bay, Ont.

J. J. Campbell, heretofore second trick dispatcher, has been appointed Chief Dispatcher, vice S. H. Ryan, promoted. Office, North Bay, Ont.

Toronto, Hamilton and Buffalo Ry.—W. T. Kuhn, heretofore Assistant Master Mechanic, Lake Erie and Western Ry., Lima, Ohio, has been appointed Master Mechanic, T.H. & B.R. Office, Hamilton, Ont.

White Star-Dominion Line.—J. W. Wilkinson and G. D. Lindsay have been appointed Travelling Freight Agents, for Ontario, to assist M. A. Overend, recently appointed Freight Agent to succeed the late G. W. Torrance. Office, 28 Wellington St. East, Toronto.

◆

Southern New England Ry.—Following are the directors of this company, a subsidiary of the Central Vermont Ry., which is controlled by the G.T.R.: E. H. Fitzhugh, H. G. Kelley, Montreal; G. C. Jones, C. W. Witters, St. Albans, Vt.; T. W. Kennefick, Palmer, Mass.; J. S. Murdoch, Providence, R. I.

Victoria Terminal Ry. and Ferry Co., Victoria and Sidney Ry.—Following are the officers and directors for the current year: President, A. H. MacNeill, Vancouver, B.C.; Vice President, F. V. Brown, Seattle, Wash.; Secretary-Treasurer, A. M. Thomas, Seattle, Wash.: other directors, F. Van Sant, Victoria, B.C. and John L. Snapp, Seattle, Wash.

Wabash Rd.—Following are the directors elected at the meeting of the stock and bondholders held in Toledo, Ohio, Oct. 10:—G. J. Gould, Jay Gould, H. Gould, F. A. Delano, E. T. Jeffrey, E. T. Welles, H. Bludgett, S. C. Reynolds, R. B. Clowry, T. H. Hubbard, J. J. Slocum, E B. Pryor, R. McCallaway. Frank Gould has been dropped from the board.

Toronto Union Station Plans.—The Board of Railway Commissioners, after a hearing extending over a couple of days directed, Oct. 14, that an order should be issued directing the preparation of new plans for the projected union station in Toronto. These plans are to be based upon a design submitted to the Board by the Toronto Board of Trade, which the commissioners and the C.P.R. favored in preference to the plans prepared by the G.T.R. The Chief Commissioner suggested that in the plans to be submitted 15 tracks be provided. Five through tracks and ten local tracks, or two sets of five tracks with the concourse between. The G.T.R. is given two weeks in which to prepare the amended plan.

P E. Ryan, father of P. E. Ryan, Secretary, National Transcontinental Railway Commission, died at Ottawa, recently, aged 76.

The Western Union Telegraph Co.'s agreement with the Newfoundland Government gives the company the right to land cables on the island on as favorable conditions as those granted for other cables, either now landed, or to be landed except as regards any special privileges now enjoyed by the Anglo-American Telegraph Co. It is also provided that the company shall not compete with government lines. The amount fixed for landing the cables is $4,000 a year for each cable, and the company shall not be charged for more than five cables.

The Repainting of Electric Cars, its Frequency, Method and Cost.

In compliance with a request for information on this subject, we have obtained the following interesting and valuable facts from a number of electric railway companies:—

BRITISH COLUMBIA ELECTRIC RY.

Our cars are touched up and revarnished eight months after being painted. The car is then brought into the shop every 12 months, cleaned and revarnished until it has received four varnishings. After it has received the fourth varnishing it is brought in the barn after 12 months and repainted. This means that the car is repainted every four years and eight months, and is revarnished four times during that time. The average cost of painting the cars is about $40 and the cost of touching up and varnishing, inside and out, about $30.

CAPE BRETON ELECTRIC CO.

The work in our painting department divides itself into three classes, namely: touch up, cut in with color, and burning off and repainting jobs. The cars come into the shop in the interim between burning off and repainting jobs for touch up or a recoloring. The average car mileage between burning off and repainting jobs is 590,208. The car mileage between touching up and revarnishing jobs is 262,314. Cost of retouching and varnishing jobs, painting, stock, and labor is approximately $50. Touch up jobs include cleaning, touching up scratches, etc., with color, and revarnishing. Cut in with color jobs include cleaning, coloring the car all over, and revarnishing. Burning off and repainting jobs include all the necessary steps to practically repaint the car. We give below a summary of the different methods in detail.

BURNING OFF AND RE-PAINTING JOBS.

1. Burn off all the old paint. 2. Clean up the surface with sandpaper. 3. Apply a coat of lead, allow one day to dry. 4. Apply a coat of same lead. 5. Putty next day with putty. 6. Apply a coat of knifing lead, and when it has commenced to set, the surface is gone over with a broad putty knife to eliminate all brush marks and irregularities. 7. The surface is gone over with no. ½ sandpaper. 8. Apply a coat of color, tinted in the direction of body color, only a shade lighter. 9. The surface is gone over with fine sandpaper. 10. Apply a coat of body color thinned with turpentine only. 11. Apply a coat of finishing varnish colored with body color, about 2 oz. of color to 1 lb. of varnish, allow one day to dry. 12. Do all the necessary striping and lettering. 13. Apply one coat of exterior body varnish.

CUT IN WITH COLOR JOBS.—1. Remove one coat of varnish with ammonia. 2. Go over surface with fine sandpaper. 3. Apply a coat of body color thinned with turpentine and given an extra binder of exterior finishing varnish, about one gill of varnish to one pint of the thinned color. 4. Apply a coat of exterior finishing varnish colored with body color, 2 oz. of color to 1 lb. varnish. 5. Do all necessary striping and lettering. 6. Apply a coat of exterior finishing varnish.

TOUCH-UP JOBS.—1. Wash surface with soap and water in connection with powdered pumice, about 1 lb. soap to 3 gals. water. 2. Touch up scratches, etc., with color. 3. Apply a coat of exterior railway finishing varnish.

GALT, PRESTON & HESPELER STREET RAILWAY COMPANY.

We run our cars between 5,500 and 6,000 miles before putting in the shop for general repairs. We have no standard method, but what we do is to consider what is best for each particular car according to the length of time it can be held in the shop. The general practice to date has been to wash down, and light rub the old surface, touch up when necessary and in some cases, one complete coat of color, then two coats exterior varnish, and one coat inside, as well as painting of the roof, floors and trucks. We endeavor to have the car put in twice a year, once for a coat of varnish and the next time for painting. If the equipment is allowed out until it is in bad condition, lead and oil is certainly the best process.

HALIFAX ELECTRIC TRAMWAY CO.

Our cars make an average of 175,000 miles between painting. The method adopted in painting a car is to first burn off old paint to the wood, sand paper to a surface, then one coat primer followed by three coats surfacer, which is rubbed to a surface with pumice, etc. One coat color-ground, one coat color, striped and lettered, one coat varnish, rubbed, one coat finishing varnish. Cost of above about $100 a car. This is good for about eight years.

At or before the beginning of each season, other than the one in which the repainting is done, cars are washed, touched up and varnished one coat. Floors and roofs, one coat paint of their respective colors. This will cost about $25 a car.

HULL ELECTRIC COMPANY.

Our cars are painted every 2½ years and varnished every year. The old paint is rubbed down, but not burned off. Painting single truck cars costs $35 and double truck cars $70.

LEVIS COUNTY RAILWAY.

We do not keep a mileage record of the painting of cars. We varnish our cars every year and paint every three years. The average cost of varnishing is $25 a car. The average cost of painting and varnishing is $50 a car.

LONDON STREET RAILWAY.

Our mileage between painting of cars is from 50,000 to 60,000. The method of painting the car body, where painted above window rail, is to put on one priming coat of white lead and oil, three coats of white paint, each rubbed down, one coat of color varnish and two coats of finishing varnish. For painting the car body outside where finished in cherry, below window rail, we use one coat of boiled oil rubbed down, one coat of stain, one coat of shellac, one coat of rubbing varnish and two coats of finishing varnish. The car body inside is stained same as above and given one coat of finishing varnish. The floor gets two coats of lead paint and the roof two coats of roof paint. For our cars which are 31 ft. 7 ins. long over bumpers, with body 22 ft. 7 ins. long outside and 8 ft. wide outside, the height from roof to bottom of sill being 9¾ ft., with front vestibule closed, the average cost of material is $28.05 and labor $42.62, a total of $70.67.

OTTAWA ELECTRIC RAILWAY.

Average mileage between painting of cars, 37,000. Method, hand labor. Average cost per car per year, $70. Cars washed and varnished every year, painted every second year.

QUEBEC RY., LIGHT & POWER CO.

Average mileage between painting of cars, 85,140 miles. Method, burning off with blow torch and repainting. Average cost for painting cars, closed $50, open $45.

SANDWICH, WINDSOR & AMHERSTBURG RAILWAY.

We do not keep track of mileage between painting of cars, but whenever a car requires to be painted we have it done. The cost is from $60 to $125 a car, according to size.

TORONTO & YORK RADIAL RY.

We have not a fixed rule governing how often we paint. We have tried, as far as our business would permit, to paint every three years, with two coats of varnish during that time. Our method of painting is to clean off all paint and varnish and start with lead coat or size, and completely repaint, putting on six coats altogether, including color varnish and finishing varnish. Our average cost is $195 for painting, varnishing, etc., for our big cars complete.

◆

Grouse Mountain Scenic Incline Railway.

The object which the promoters of the company have in view in projecting the construction of a scenic railway to the summit of Grouse Mountain on the north shore of Vancouver harbor, B.C., is to add to the transportation conveniences provided for tourists and the public generally. The company has been incorporated by the B.C. Legislature, the provisional directorate consisting of W. J. McGuigan, L. C. Mills, W. H. May, W. J. Manson, W. H. R. Collister. The officials are: Consulting Engineers, Waddell and Harrington; Solicitor, T. O. Townley; Auditor, M. B. Cotsworth; Secretary, H. J. Cave.

The project consists first of an electric railway, extending across the canyon of the Capilano River, for about 8,000 ft., to the foot of the incline line; second, an incline railway of about 7,440 ft. long, operated by a steel cable and having a rise of 2,330 ft. in its length; and third, an electric railway of about 3,600 ft. long, skirting the crest of the mountain. The three lines will form a continuous route extending from the top of the mountain down across the canyon on the Capilano river, to a junction with a proposed extension of the B.C. Electric Ry. The line as located at the foot of the mountain, after crossing the Capilano river, will wind about in order to obtain the most satisfactory gradients, till it reaches a point where the rising gradient is too steep for satisfactory operation by the usual methods. The cable line will rise to the top of the mountain on gradients varying from 17 to 60%. The line on the top of the mountain will wind along the crest of the mountain on a roadbed very largely cut from solid rock and on fairly steep gradients.

The electric line will be of ordinary

Gate Shear Steam-Driven

construction, necessitating some timber trustle work and a good deal of rock cutting. The Capilano canyon will be crossed by a steel bridge erected as a cantilever, because the depth of the canyon, 280 ft., prohibits the use of false work. The bridge will be built on concrete pedestals resting on the solid rock at the edges of the gorge. The line on the top of the mountain will follow the crest of a steep declivity and will be provided with a heavy guard rail on the outside of the track to prevent accident in case of derailment. The cable line as surveyed will traverse some very rough ground, requiring some heavy rock cutting, some timber trestles, and thorough anchorage of the track on the steep stone incline, and considerable sidehill cutting is also encountered. The general plan is to construct a two car, three rail line consisting of three lines of heavy timbers beneath the rails, anchored to the rock and extending from end to end of the line, across ties drift bolted to these timbers; three lines of rails spiked to the ties and at intervals, bolted to the track to prevent them from creeping downhill, and heavy outside guard timbers bolted to the ties. At the middle of the line the centre to centre spacing of the tracks will be increased and four rails will be used to facilitate the passing of the cars.

The cable line will be provided with two cars, each of which will seat about 60 passengers, and on each end of a plough steel wire cable, which between the cars, will be wound over two grooved steel drums which will be actuated through a train of gears by two electric motors. The two drums will be placed in tandem with the line and the cable will make four turns about the pair, thus providing for the continuous winding on or off of the cable without traverse along the drum. The grip of the rope as wound on the drums will be equal to the total strength of the cable, and slipping will be impossible. Gum wood rollers will support the cable as it drops to the track behind the car and decrease friction and wear. The motors will be provided with limit switch and solenoid brakes to bring the cars to a stop without jar at the end of their travel. Hand brakes will also be provided. A plough steel cable, 1.25 in. in diameter, will be provided to haul up and lower the cars, and a safety cable will also be employed. Automatic brakes will clamp the car to the guard rail should a cable break. There will thus be two independent safeguards provided. Both telephone and signal bells will enable the conductors on the cars, to communicate with the operator in the machinery house at any time.

On the lines at the top and bottom of the mountain eight wheel cars of the city type will be provided, but equipped with heavy motors and air brakes. The cable cars will be fitted with swinging seats or platforms that will so adjust themselves that they will always be level, notwithstanding the changes in the gradients.

The power and stationhouse will be adequately equipped, and shelter houses and platforms will be provided. Provision will be made in the power house for a motor generator set to transform high protential alternating current to direct at about 600 volts. The power will be supplied by the B.C. Electric Ry.

The estimated cost of construction is: line at foot of mountain, $71,870; cable line, $191,615; line at top of mountain, $73,085; electric supply, $11,000; cars, $15,000; power house, etc., $13,200; engineering and incidentals, $30,230. Right of way and incorporation expenses not included.

◆

Montreal Tramways Co., Organization.

At a meeting of shareholders of the Montreal St. Ry. Co., Oct. 5, a resolution was passed by a vote of 61,391 shares to 3,627 to convey all the properties of the M.S. Ry., the Montreal Park and Island Ry., the Montreal Terminal Ry. and the Public Service Corporation to the Montreal Tramways Co., which was incorporated at the Quebec Legislature last session. The terms of the transfer are that $89.50 shall be paid in cash, and there shall be allotted $160 in 5% debenture stock and $20 in common stock of the Montreal Tramways Co., for each share of M.S. Ry. held. It was stated that as an alternative, arrangements would be made by which shareholders could receive $250 in 5% debenture stock and $20 in common stock in case they did not wish any cash. It was elicited during the meeting that the company had arranged for the sale of $10,000,000 of 5% bonds at 95 net, with accrued interest, to N. W. Harris and Co. Boston and New York.

The M.S. Ry. at present owns the Montreal Park and Island Ry. the Montreal Terminal Ry. and the Public Service Corporation, but each of them is carried on as a separate corporation. An agreement for the transfer of the M.P. & I.R. property to the M.S. Ry. was signed Sept. 22, and a meeting of shareholders of the selling company to approve the transfer was called to be held Oct. 23. The agreement provides as a consideration for the sale that the M.P. & I Ry. Co., will be released from all indebtedness to the M.S.R., which company undertakes to discharge all liabilities and to indemnify the M.P. and I. Ry. Co. against damages from any claims that may be made against it, and to pay to shareholders, other than those held for the M.S. Ry. $100 a share.

Application is being made to the Dominion Parliament to ratify the agreement between the Montreal Terminal Ry. and the Montreal St. Ry., for the conveyance to the latter of the former company's undertaking in whole for the following considerations:— (1) A release of the indebtedness of the M.T. Ry. to the M.S. Ry., and (2) a covenant on the part of the M.S. Ry. to pay all M.T.R. debts, liabilities and engagements.

The Montreal board of control has had the matter of the amalgamation of the companies under consideration, and carried the question before the Quebec Public Utilities Commission, Oct. 10. The position taken by the city is that the several companies should be completely merged, and arrangements made so that there should be only one franchise granted. The consideration of the matter was adjourned, an arrangement being made by which the parties should discuss the basis of a settlement.

The Montreal Tramways Co., issued a circular to shareholders of the M.S. Ry. Oct. 14, announcing the terms of the transfer, and inviting those shareholders who desired to accept the shares of the new company without any cash payment, to notify the company at once. The shares in the new company will be allotted after the expiration of 15 days from the date of the circular.

◆

Moncton Tramways, Electricity and Gas Company, Ltd.

Rapid progress is being made with the construction of the part of the electric railway called for by the agreement with the city and it is expected to be ready this month. This section is about two miles of single track, extending from the hospital on King St. to the I.C.R. shops on John St. The complete scheme includes about 6½ miles of track, which is to be proceeded with next spring.

The company is an English organization, formed for the distribution of the gas from the nearby natural gas fields. The electric railway is but a part of a comprehensive plan of public utilities being developed. The English officials are Dr. J. A. S. Henderson, President, and E. A. Mitchell, Consulting Engineer, both of London; the officials in Moncton are F. W. Sumner, Vice President; J. P. Chalmers, Secretary, and W. G. Ritchie, Resident Engineer. The company has taken over the charter of the street railway company which operated in the town for three or four years some 15 years ago. The charter has 39 years to run.

A unique construction of roadbed has been introduced by the company's engineers. Apprehending difficulty from frost under the roadbed causing the track to upheave, and profiting by the experiences of other companies in this vigorous northern climate, the construction of the roadbed is decidedly different from that to be found elsewhere. The

hard road surface, after being removed to the desired depth, is dressed smooth, and on this level surface, two-inch creosoted planks are laid lengthwise. It is believed that this will eliminate all difficulty from frost. Over this planking, there is a layer of sand ballast to the depth of about 2 ins., on which the ties, spaced 2½ ft. apart, are laid and ballasted between. This construction is in the nature of an experiment, but the engineer believes it will prove satisfactory. A deep girder rail is being laid. The overhead construction will use copper wire of the figure 8 section, supported by mechanical clamps.

Four small single-truck cars of 24-passenger capacity and a snow sweeper have been delivered for the initial operation.

British Columbia Electric Railway Interurban Cars.

The B.C. Electric Ry. purchased recently from the G.C. Kuhlman Car Co., Cleveland, Ohio, three closed vestibule motor cars for interurban traffic, exterior and interior views of which are given on this page. The following are the chief particulars:—

Length over bumpers	53 ft 6⅝ ins
Length over each vestibule	4 ft. 8½ ins
Length of body over corner post	42 ft. 9⅝ ins.
Width over sills, including sheathing	8 ft. 3 ins
Width over all	8 ft. 4¾ ins.
Width inside walls of car body	7 ft. 9¾ ins.
Width of jamb opening car body end door	34 ins.
Width of jamb car body partition door	24 ins.

They are equipped with anti-climber bumper, radial M.C.B. draw bar and locomotive type petols. The glass is Pullman sash cathedral in four parts and deck sash cathedral; roof monitor; deck coach hoods; hood, steam coach; interior finish, mahogany; ceiling, empire deck; seats, rattan, 37¼ ins. over all; 18 in. aisle; Westinghouse A.M.M. air brakes; motors, G.E. 204; trucks, No. 27 M.C.B., 3 trucks; 6½ wheel base, 34 in. draw wheels, 4½ ft. track gauge; radius of curve, 35 ft.

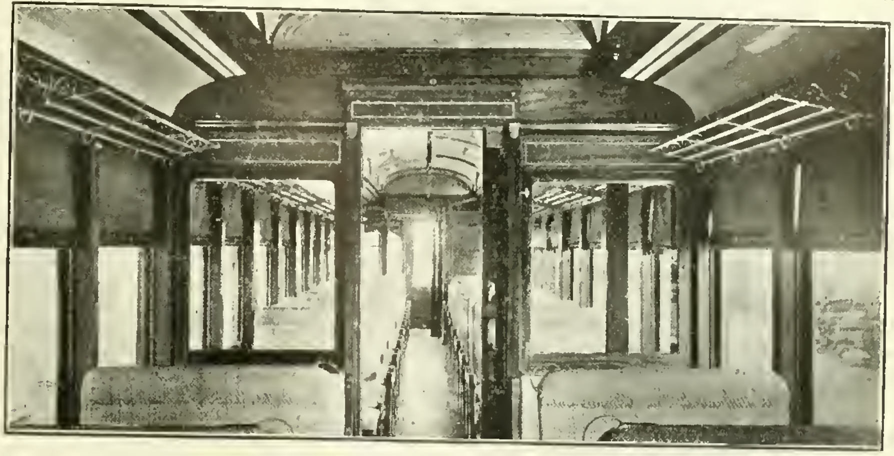
Electric Railway Finance Meetings, etc.

British Columbia Electric Ry.—Gross earnings for Aug., $436,520; operating expenses, $278,513; net operating earnings, $158,007; renewal funds $37,935; net earnings, $120,072; approximate income from investments, $25,000; net income $145,072, against $302,121 gross earnings; $170,083 operating expenses; $132,038 net operating earnings; $22,626 renewal funds; $109,412 net earnings; $22.000 approximate income from investments; $131,412 net income for Aug. 1910. Aggregate gross earnings for two months ended Aug. 31, $845,859; net earnings, $283,125, against $585,656 gross earnings and $239,277 net earnings for same period, 1910.

Cape Breton Electric Co.—Gross railway revenue for 12 months ended July 31, $332,935; operating expenses, $171,736; net revenue, $161,199; fixed charges $73,759; net income, $87,440, against $310,680 gross revenue; $169,178 operating expenses; $141,502 net revenue; $74,048 fixed charges; $67,454 net income for same period, 1909-10.

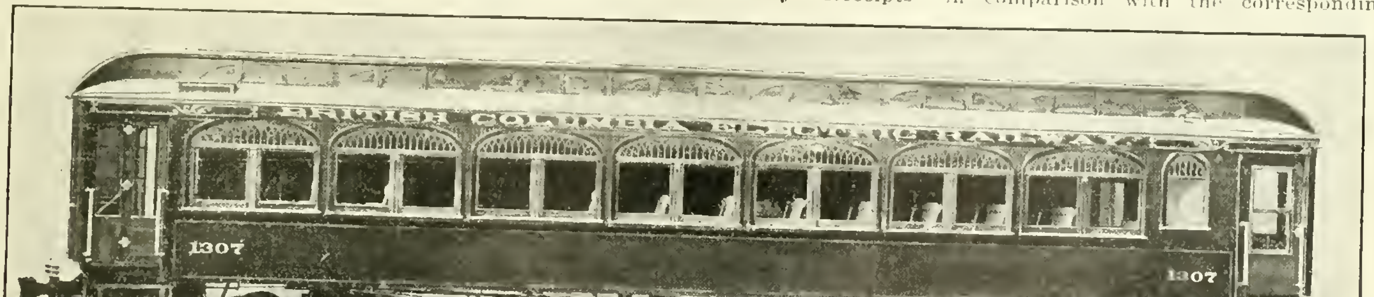


British Columbia Electric Railway Co.'s Interurban Car. Interior.

Chatham, Wallaceburg and Lake Erie Ry.—Gross earnings for the past year, $103,282.78, of which $52,159.62 was derived from passengers and $42,315.09 from freight, the balance being received from sundry operations. After providing for all expenses and bond interest, there is a surplus of $21,170.42. Following are the officers and directors for the current year:— President, D. A. Gordon, M.P.; Vice President, U. M. Fell; other directors, N. H. Stevens, C. Hadley, E. F. Kiser, G. R. Hill and M. P. Murray.

Grand Valley Ry.—Press reports, Oct. 12, stated that President Verner was in New York, in connection with negotiations for the merging of the G.V.R. and its allied companies—the Brantford St. Ry. and the Woodstock, Thames Valley and Ingersoll Ry.—with some other companies, with the object of connecting and extending them to form a line from Toronto to Detroit.

Halifax Electric Tramway.—Receipts for Sept., $24,864.20, and for two weeks ended, Oct. 14, $8,356.11, against $21,141.04, and $10,407.87 for same periods, 1910.



British Columbia Electric Railway Co.'s Interurban Car.

Montreal and Southern Counties Ry.—The following officers were elected for the current year, at the adjourned annual meeting, Oct. 2:— Chairman, S. T. Willett; President, E. H. Fitzhugh; Vice President and General Manager, W. B. Powell; Treasurer, Frank Scott; Secretary, H. W. Cooper.

Quebec Ry., Light and Power Co.—Gross earnings for the year ended June 30, $1,380,126; operating expenses, $661,907; net earnings $718,219; fixed charges $445,219; surplus $273,000, against $1,127,952 gross earnings; $644,563 operating expenses; $483,388 net earnings; $442,644 fixed charges; $40,744 surplus for same period 1909-10.

Quebec Ry., Light, Heat and Power Co.—The annual meeting, which was adjourned from Sept. 12, was held Oct. 3. The resignation of J. W. McConnell, was accepted, and it was announced that in view of the heavy French holdings, it had been decided to elect three Paris men as directors.

The regular quarterly dividend of 1% was paid Oct. 16, to shareholders of record at Sept. 30.

Regina St. Ry.—Gross earnings for Aug., $7,718; operating expenses $3,328; net earnings $4,390.

St. Thomas Street Ry.—Passenger receipts for Sept., $1,361.79 against $1,333.02 for Sept., 1910. Passengers carried 39,498, against 38,040 in Sept. 1910.

Sherbrooke Ry. and Power Co.—We are advised that the railway department of the company did remarkably well during the four months ended Sept. 30, in comparison with the corresponding period in former years. The returns show 34% increase in the gross earnings, and a corresponding increase in the net earnings. The proportion of operating expenses to gross earnings during the four months averaged 52%.

HAMILTON, - - CANADA

Dearborn Treatment Overcomes All Bad Water Troubles

Because Scientifically Prepared to Suit Water Conditions

Boiler troubles such as scale, leaking, corrosion, priming and foaming, are caused by mineral salts in the water, and can be overcome only by the use of proper reagents for these salts. To this end the waters along the line must be analyzed, and specific treatment applied accordingly.

Gallon samples of the waters are required for analysis. When reports are completed, we are ready to prepare treatment, and will send an expert engineer to instruct in the proper handling of the material.

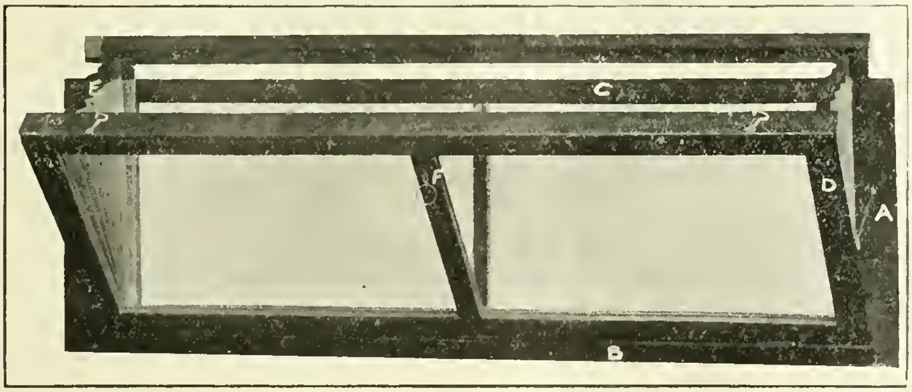
DEARBORN DRUG & CHEMICAL WORKS

McCormick Bldg., - - - CHICAGO.

Sept., $182,380, against $112,368 for Sept., 1910. Passengers carried in Sept., 4,356,327, against 2,612,599 in Sept., 1910.

London St. Ry.—Gross earnings for Sept., $27,766.69; expenses, $16,251.20: net earnings, $11,515.49; deductions, $2,409,35; net income $9,106.14; against $26,045.64 gross earnings; $15,470.80 expenses; $10,574.84 net earnings; $2,363.05 deductions; $8,211.79 net income for Sept., 1910. Aggregate gross earnings for nine months ended Sept. 30, $209,181.14; expenses, $144,450.13; net earnings, $64,731.01; deductions. $21,571.09; net income, $43,159.92, against $190,724.93 aggregate gross earnings; $134,856.98, expenses; $55,867.75 net earnings; $21,503.45 deductions; $34,364.30 net income for same period, 1910. At a meeting of directors, Oct. 24, it was decided to increase the capital stock from $552,000 to not exceeding $750,000. The new capital will, it is said, be used for extensions, which the city will shortly call for under a clause in the company's franchise.

Toronto Ry.—Gross earnings for Sept. $467,814.19; expenses $214,898.25; net earnings $252,915.94, against $428,580.07 gross earnings; $201,379.49 expenses; $227,200.58 net earnings for Sept. 1910. Aggregate gross earnings for nine months ended Sept. 30, $3,520,782.26; expenses $1,766,276.37; net earnings $1,754,505.89, against $3,1895,938.01 aggregate gross earnings; $1,634,760.20 expense; $1,561,177.81 net earnings for same period 1910.



A New Car-Window Ventilator.

The Toronto Power Co. is preparing to issue on the London, Eng., market, £821,197 4½% consolidated guaranteed debenture stock at 96. The issue is guaranteed unconditionally as to principal and interest by the Toronto Ry. Co.

Winnipeg Electric Ry.—Gross earnings for Aug., $299,615; operating expenses, $137,825; net earnings, $161,790, against $247,046 gross earnings; $124,719 operating expenses; $122,327 net earnings, for Aug. 1910. Aggregate gross earnings for eight months ended Aug. 31, $2,503,972; net earnings, $1,257,983, against $2,031,256 aggregate gross earnings; $1,009,468 net earnings for same period, 1910.

The special committee having under consideration the question of the purchase of the W.E.R., decided, Oct. 6, to recommend to the city council that negotiations be deferred. This report was adopted by the council Oct. 10.

R. J. Mackenzie is quoted as having stated Oct. 11, that a bid of $300 a share has been made for the company's whole capital stock by a Montreal-New York syndicate in which F. Morton Morse and the Manitoba Power Co. are interested.

An unconfirmed Winnipeg press dispatch of Oct. 23 says: "All holdings of the Winnipeg Electric Ry., which supplies gas, power and street railway services to Winnipeg and vicinity, have been purchased by the E. R. Reese Engineering Co., a United States concern backed by large capital. Final papers will be signed this week, part of the purchase price having been paid over last week. The company will build rural lines throughout the provinces."

Enquiries in Toronto, Oct. 25, failed to elicit any information in regard to the matter, one of the W.E. Ry. directors stating positively that there was nothing in the report.

◆

A New Car-Window Ventilator.

A ventilator of a new and rather ingenious design has recently been invented by M. Power, Master Car Builder, Toronto Railway, and on account of its adaptability to car window use it is here illustrated and described.

The illustration clearly shows its construction. The frame A of a width equal to that of the window and about half the window depth, is set into the window slide on its lower edge B, the window itself lowering on to the upper edge C of the ventilator frame. This ventilator frame is fitted with a very fine mesh brass wire screening similar to that used in sleeping car screen ventilators which this new type is intended to replace.

Hinged to the lower edge of the ventilator frame, there is a swinging window D fitted with panes of glass. This pane, when closed, fits up against the main pane very snugly. The ends are kept closed at all times by pieces E made of leatherette; these open and close with the window. The position of this window D is regulated by the chain F in a slot. The circulating air coming through the screen is deflected upward at an angle, refreshing the air, but doing away with the draft incidental to the ordinary form of ventilator.

This ventilator is especially adapted to keeping out cinders, and any such foreign material as does enter is precipitated to the pocket at the bottom by the inclined window, thereby freeing travelling from one of its disagreeable features. The screen pane has felt-covered spring edges for fitting into the window sash snugly.

A number of these ventilators have been given trials under varying circumstances, and so successful has their use been that the Perfect Ventilator Co., Ltd., 48 George St., Toronto, has been formed for their manufacture. Patents have been allowed both in Canada and the United States.

◆

The Board of Railway Commissioners issued a circular, Oct. 12, requesting that all railway companies file, within thirty days, a list showing the location of all draw bridges on their lines, and the manner of production provided for them.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—The promoters advise us that since the act incorporating the company was extended to July 21, representatives of the company have been actively canvassing the municipalities through which the lines are projected. The total mileage authorized under the act is 1,200, but it is proposed to build it in sections. The line is authorized to be built along the main highways, but the company is being offered every facility for acquiring a private right of way at a minimum cost, so that it is probable very little, if any, portion af the line will be built on the highways. The ten sections authorized radiate from Calgary, west, northeast, east, southeast, and south, and will, if built, serve such places as Banff, Strathmore, Bassano, and Brooks, in one direction; Rocky View, Yankee Valley, Irricana and Red Deer to the north; Bennett, Gladys, Brant, Long Coulee and Medicine Hat to the southeast. From the Medicine Hat line it is proposed to build lines to Taber, Lethbridge and Macleod, and another line is proposed from Macleod to Pincher Creek. The cost of construction on the highways will, it is claimed, be about one-third of that of the steam railways. It is proposed to operate the line by individual unit cars, the plan being: a car about 60 ft. long, containing first, the compartment for the 200 h.p. kerosene motors, and the driver in charge; second, compartment containing room for baggage, parcels and smoking; the main portion of the car containing seats for 50 or 60 persons. This car would have sufficient power to haul two freight cars, and, as the gauge would be the standard steam railway gauge, it is proposed to haul ordinary railway cars in addition to the company's own lighter cars for market produce, milk, cattle and such like. With the low cost of construction, low operating charges, and other things, it is hoped to put the rates low enough to make an extensive business not only possible, but easy.

Application is being made to the Dominion Parliament for an act authorizing the company's name to be changed to that of the Alberta Inter-Urban Ry., and to replace sec. 3 of the present act by one declaring that the capital shall be $10,000 a mile of the total mileage, actually constructed or under contract, the total capital not to exceed $10,000,000. (Oct., pg. 973.)

A general meeting of shareholders has been called to be held in Calgary, Alta., Nov. 8, to elect directors, consider a contract with the Land Traction Co. for the building of the projected lines, and to authorize the directors to issue bonds and to execute a mortgage as security for the bond issue. The notice is signed by G. E. Wood, chairman of the provisional board of directors.

Brandon, Man.—The first spike of the municipal electric railway was driven by the mayor, Oct. 9. The line is being built by the city council, but nothing has been decided as to its operation. The question is under consideration on the basis of a draft agreement submitted June 26, by J. D. McGregor. (Oct., pg. 973.)

British Columbia Electric Ry.—While the company is carrying out a number of improvements, on the lines in Vancouver and the surrounding municipalities, and is considering the building of a number of additional lines, the question of the unification of the various franchises is the most important matter under consideration. The municipality of Burnaby is submitting a bylaw to the ratepayers confirming franchises

Blau-Gas TRADE MARK FOR WELDING PURPOSES

THE ROYAL LINE SS. ROYAL GEORGE

"At your request for a recommendation with reference to Blau-gas, I would say that we have used your Blau-gas and Oxygen for cutting out rivets and plates and have found it extremely satisfactory. It is much quicker than any other method of cutting I have seen used, also it can be used in places where hand work is impossible. I have much pleasure in recommending it to anyone requiring expeditious work of this kind."

THOS. DAVIDSON MFG. CO., MONTREAL.

granted, and providing for the construction of additional lines. The city of Vancouver desires to increase its boundaries, but finds that one of the difficult matters to be adjusted is the street railway franchises. The Vancouver Board of Trade and city council, and the councils of the other municipalities are discussing the matter, and it is expected that the ratepayers will be asked to decide whether steps should be taken or not to acquire the whole of the rights and franchises of the company for street railway purposes in the interests of the people.

The Westminster road extension in Vancouver has been completed and cars are being operated over it. Tenders are under consideration for rebuilding Kitsilano bridge on the Lulu Island line, with the exception of the draw span. The new bridge will be a double track one, as a second track is being built from King Edward Ave., Vancouver, to near the B.C.E.R. station in Eburne, about four miles. A second track is also being built on the line to Kitsilano Beach.

An addition, 240 by 104 ft., is to be built at the present car works on Twelfth St., New Westminster.

As the British Columbia Electric Ry. Co.'s interurban cars are being sent to the shops for repairs, alterations are being made to the equipment of each by the installation of the Westinghouse multiple unit control. This change is being made in anticipation of two car trains being operated next year between Vancouver and New Westminster when the cut-off just outside the latter city is ready for service, the grade at the entrance to the city being thereby reduced from 12% on one stretch to 2%. The control being installed is of the type which automatically shuts off the power as soon as the motorman's hand is taken from the lever.

The company has awarded two contracts in connection with the double-tracking of the branch of its system extending from Vancouver to Eburne. This stretch forms a part of the Lulu Island Ry. and is operated by the B.C.E.R. Co. under a lease from the C.P.R. The entire line is now single track from Vancouver to Steveston as well as the branch line along the north arm of the Fraser River to New Westminster. Settlement is proceeding rapidly in the suburban area along the line adjacent to the city necessitating the double-tracking of this stretch. The contracts awarded are to G. H. Webster, M. Can. Soc. C.E., of Vancouver, for grading four miles of the line in readiness for track laying and ballasting, this work including the stretch between Twenty Fourth Ave. Point Grey and Eburne, and to Armstrong, Morrison & Co., of Vancouver, for the reconstruction of the bridge over False Creek used in approaching the central district of Vancouver. The bridge is about 1,500 ft. long, of trestle construction. It will be double-tracked throughout with the exception of the drawspan, Australian hardwood piles being used, the work covering a complete reconstruction of the bridge. In connection with the double-tracking the company will improve the line by using 60 lb. rails throughout. The new track will be laid just to the east of the present track, following practically the same line and grade as now exists. While the contractor is proceeding with grading, the company will complete the double-tracking of the line from 24th Ave. to the Vancouver terminal, as well as similar work on the city extension of the line from the south end of False Creek bridge to Kitsilano.

The company is reported to have purchased 200 acres of land at Cadboro Bay for park purposes. (Oct., pg. 973.)

Calgary Municipal Ry.—The taxpayers of Calgary, Oct. 4, passed a bylaw, authorizing the issue of $375,000 debentures for the extension of the street railway, and for the purchase of additional rolling stock and power house equipment.

The extension of the line to Tuxedo Park has been completed; a project is under consideration for the building of a line in the south-eastern section of the city. (Oct., pg. 973.)

Coteau Power Co.—We are advised that the charter rights and the franchises, etc., of this company have been acquired by Mackenzie, Mann & Co., Ltd. Sir Wm. Mackenzie, accompanied by T. H. White, Chief Engineer, Canadian Northern Pacific Ry. recently went over the routes of the proposed electric railways in the Okanagan Valley, B.C., and it is said that arrangements are being made for starting construction in the near future. (Oct., pg. 973.)

Edmonton Radial Ry., Strathcona Radial Ry.—The ratepayers of Edmonton and Strathcona, Alta., passed bylaws, Sept. 27, providing for the amalgamation of the two cities, and the Legislature will be asked to ratify the same. The agreement for amalgamation provides for various extensions of the electric railways in Strathcona, and for the erection of a low level bridge to connect the two cities. The S. R. Ry. is controlled by the E. R. Ry., which is owned by the Edmonton city council. (Sept., pg. 877.)

Hull Electric Co.—Press reports state that the company is considering tenders for the erection of a new carhouse at Hull, Que. (July, pg. 683.)

Lethbridge, Alta.—The City Engineer recently presented a report to the city council upon the building of an electric railway in the city. He recommended the building of 11.1 miles reckoned as single track, at a cost of about $300,000. It is expected that a start will be made on construction early in 1912. In the meantime the grading and paving work upon certain streets is being carried out in such a way that the railway construction work will be facilitated. (Sept., pg. 879.)

London St. Ry.—The London, Ont., city council passed a resolution, Oct. 16, directing its street railway committee to consider the whole question of the service given by the L.S.Ry., the betterments necessary in order to provide more adequate service, and the extensions to which the city is entitled under the franchise by reason of the increase of population. (June, pg. 555.)

Moncton Tramways, Electricity & Gas Co.—E. A. Mitchell, Consulting Engineer, who inspected the work in progress Oct. 13, reports that satisfactory progress has been made with the work. About a mile of track has been laid, and a good deal of the overhead work is ready. The car shed is completed, and the power house is well advanced. Four cars and a snow sweeper have been delivered. He expected that cars would be in operation by the end of the year. (Oct., pg. 975.)

Montreal and Southern Counties Ry.—Application was made to the Montreal city council, Oct. 10, for permission to build lines from Youville Square along Grey Nun St., by St. Paul St. to Inspector St., Chaboillez Square, Cathedral St., and Metcalfe St., to St. Catherine St. West. The application is under consideration. (Sept., pg. 879.)

Montreal St. Ry.—The city council passed a resolution, Oct. 16, directing its law department to do everything necessary to protect the interests of the city in the rearrangement of the charters held by the company, and to prevent the present obligations to the city being got rid of in the amalgamation of the several companies under the title of the Montreal Tramways Co. (Oct., pg. 975.)

Morrisburg and Ottawa Electric Ry.—The shareholders were called upon to pay to the Secretary, R. A. Bishop, Ottawa, by Oct. 23, a call of 10% of the amount of the stock subscribed for by them, in accordance with the resolution of a special meeting of shareholders held Sept. 12. (Sept., pg. 879.)

Nanaimo, B.C.—The city council, Sept. 26, authorized its tramway committee to take the necessary steps to secure a charter for the building of an electric railway in this city. This was in accordance with the recommendation of the committee which has been, for some time, considering applications from financial and construction companies for franchises. (Oct., pg. 975.)

Nipissing Central Ry.—The spur line connecting the old line of the N.C.R. at North Cobalt, Ont., with the Temiskaming and Northern Ontario Ry., was completed Oct. 11. The line between Cobalt and Haileybury is being reballasted at certain points. Three routes are under consideration for the extension of the line from Haileybury to New Liskeard, and a bylaw is being prepared for submission to the taxpayers in the latter town, renewing the franchise and designating the streets on which the line is to be run. (Oct., pg. 975.)

Ottawa, Smiths Falls and Kingston Ry.—Press reports state that surveys for this projected railway have been completed between Smiths Falls and Manotic, Ont., and that the engineering party is now going over the route between Smiths Falls and Kingston. (Oct., pg. 975.)

Owen Sound, Ont.—The mayor of Owen Sound has proposed that an electric railway be built in the town to be owned and operated by the municipality. It is suggested that six miles of track be built by an initial estimated cost of $100,000.

Regina Municipal Railway—The ratepayers voted Oct. 5, in favor of a bylaw authorizing the city council to raise $400,000 in connection with the construction of an electric railway in the city.

Rapid progress is reported to have been made with the building of the electric railway lines and the chairman of the committee having charge of the work, stated at the last meeting of the council, that he expected nine miles would be completed by the time operations would have to be suspended for the season. (Oct., pg. 975.)

Rural Ry. of Manitoba.—Nothing has been done by the company in the way of building lines in the municipality of St. Vital, which were to form part of a belt line round the outskirts of Winnipeg, and connecting with the city lines at all points. The municipalities interested are considering what action to take in the matter, and it is reported that the Winnipeg Electric Ry. may take over the charter rights and franchises of the Rural Ry. (June, pg. 557.)

St. John's, (Nfld.), Electric Ry.—The question of the extension of the electric railway owned by the Reid Newfoundland Co., in St. John's, Nfld., is under consideration. The city council desires that some new lines be laid, and that the routes be re-arranged so as to enable a better service to be given.

The Sherbrooke Ry. and Power Co. is devoting practically all its attention at present to the extension of its power plant. A transmission line which it is expected to have completed by Dec. 1, is being built to Derby Line, Vt. This will supply light and power to Lennoxville, Capelton, Eustis, Waterville,

TITANIUM

The Wonder-Working Alloy

Increases Rail Life by Purifying the Steel

Titanium Alloy purifies molten steel by removing harmful gases and solid impurities. It also counteracts the harmful effects of sulphur and phosphorus. It makes open-hearth rails tough and ductile. It removes brittleness and increases durability to a remarkable degree. Increased cost of Titanium rails ranges from $1 to $5 per ton, depending upon amount of alloy used.

Leading steam and electric roads in the United States use Titanium rails. Illustration shows Titanium Rails in electric zone leading to Grand Central Station, New York City.

Booklet No. 30 tells all about Titanium Alloy and its effect on iron and steel.

Titanium Alloy is made for Canadian consumption by Electro Metals, Ltd., Welland, Ont.

THE WM. KENNEDY & SONS, LIMITED
OWEN SOUND, ONT.

Compton, North Hatley, Massawippi, Ayer's Cliff, Boynton, Smith's Mills, Beebe Jct., Beebe Plain, Rock Island, Stanstead, Que., and Derby Line, at the Quebec-Vermont boundary. At North Hatley the company recently acquired the 400 h.p. electric installation, which will be absorbed into the system on the completion of the new transmission line. (Aug., pg. 785.)

Saskatoon, Sask.—Under the bylaw passed in July last, confirming the agreement between the city council of Saskatoon, Sask., and H. M. E. Evans, regarding the supply of power to, and the construction of an electric railway in the city, the contractor undertakes to obtain from the Legislature a confirmation of the charter of the Saskatchewan Power Co., and authority to build the electric railway. We are advised that no construction will be done this year on the railway part of the undertaking, but it is expected that a start will be made early in the spring. A site has been secured for the power plant, and work is being proceeded with for the development of the water power under the provisions of the Dominion Act incorporating the Saskatchewan Power Co.

The lines to be built under the agreement have their centre opposite to the C.P.R. station, one line running to the Caswell Hill addition, thence to Albert Ave., on to Boundary Drive, along 7th Ave., Princess St. and 2nd Ave. to 19th St., crossing the river by the traffic bridge to the corner of Broadway and Spruce streets, where a divergence is made, one line running to the University grounds, and another to the fair grounds. A line from the C.P.R. along 23rd St. connects with the line on 2nd Ave.; and a third runs along 20th St. to St. Mary's Hospital, a branch running from opposite the 20th St. school to 16th St.

The present organization for handling the project, we are advised, is the Saskatoon Power Tramways Construction Syndicate of London, Eng. The directors of this organization are.— J. S. F. Samborne, R. N. Grenfell, and W. C. Burton. H. M. E. Evans, of Edmonton, Alta., being the Canadian representative. The engineering work is in the hands of J. G. White & Co., New York.

Stratford Street Ry.—A number of the directors had an interview with J. W. Leonard, Assistant to the Vice President, C.P.R., in Stratford, Ont., Oct. 11. M. Williams, stated on the following day that the interview was a most satisfactory one and that as a result the building of the electric railway was assured. The route by which the C.P.R. would enter the city was immaterial, as the street railway would be connected with it under any circumstances. An agreement was in course of settlement for the street railway to handle the C.P.R. traffic. (June, pg. 557.)

Three Rivers, Que.—Property owners in Three Rivers, Que., voted Oct. 16, in favor of authorizing the city council to arrange for the building and operation of an electric railway in the city.

Toronto Eastern Ry.—It is said that the management is considering the use of gas-electric motor cars instead of trolley cars and that this is one of the reasons why construction has not been started this season.

Vancouver and Grouse Mountain Scenic Incline Ry.—The final location surveys are being made and it is expected that some alterations will be made which will effect a considerable saving on the incline section of the projected line.

Welland, Ont.—A press report states that grading on a line under the Niagara, Welland and Lake Erie Ry. charter, was started in Welland, Ont. Sept. 20, and on Oct. 3. The mayor drove the first spike. Arrangements are being made to extend the line to Port Colborne, on the east side of the Welland canal.

Windsor, Essex and Lake Shore Rapid Ry.—The Board of Railway Commissioners has approved plans for passenger shelters to be erected in Sandwich South tp., Ont. (May, pg. 455.)

Winnipeg Electric Ry.—During the construction season now concluded 9.155 miles of new lines have been laid in Winnipeg, in addition to a number of switches, loops, etc. All these lines are expected to be completed for traffic early in Nov.

It is stated that owing to the failure of the Rural Ry. to carry out work under the franchise granted it in St. Vital, Man., the W.E. Ry. will be asked to build lines in that municipality. (Oct., pg. 975.)

◆

Levis County Railway.

The report for the year ended June 30, presented at the annual meeting at Montreal, Oct. 18. shows gross receipts $66,656.98; expenses $57.755.03; net earnings, $8,901.95. Following is the balance sheet:—

ASSETS.			
Property account		$608,778 44	
Track, roadway, and machinery		3,737 23	
		$612,515.67	
Sale of land	$1,800.00		
Less costs	32.35		
	$1 767 65		
Elevator fire	6,000.00	7,767 65	$604 748.02
Stores			3,391.60

Accounts payable			8,042.07
Accrued bond interest			26,013.17
			$653,355.24

Following are the officers and directors for the current year:— President, S. H. Ewing; Vice President, Hon. R. Turner; Secretary-Treasurer, E. A. Macnutt; other directors, J. A. Richardson, John Forman, Col. C. E. Allen-Jones and J. C. Blouin.

◆

Electric Railway Notes.

The Montreal St. Ry. has ordered 70 G.E.2 trucks, without wheels, in the United States.

The B.C. Electric Ry. has added six new cars to its rolling stock in Victoria, B.C.

The Hull Electric Co. is in the market for six double truck, semi-convertible, pay-as-you-enter cars.

J. W. Williams, Detroit, Mich., has been appointed Secretary, London St. Ry., London, Ont., vice G. H. Bentson, deceased.

The Winnipeg Electric Ry. is building 2 new cars at its own shops. There have been 23 new cars placed on the lines already this year.

The British Columbia Electric Ry. has ordered one heavy double broom electric snow sweeper from the Ottawa Car Co., Ottawa, Ont.

The Moose Jaw Electric Ry. has ordered two 21 ft. cars, 31½ ft. long over all, mounted on 21-E trucks, from the Ottawa Car Co., Ottawa, Ont.

The British Columbia Electric Ry. is considering the operation of two-car trains on its Vancouver-Westminster interurban lines, instead of single cars as at present.

The North Toronto council is preparing an indictment against the Metropolitan Ry. (Toronto and York Radial Ry.), for maintaining a common nuisance in the loading and unloading of freight cars.

The Montreal city council is applying for a mise en demeure against the Montreal Terminal Ry., claiming that the company has broken its agreement not to send freight over its tracks on certain lines in Longue Pointe.

A. J. Dacres, cashier, Quebec Ry., Light and Power Co., Quebec, was presented with a locket and chain, Oct. 8. by the office staff, on his leaving the service, to enter the employ of the Jonquiere Pulp, Co., Jonquiere, Que.

The Moose Jaw, Sask., town council, has called the Moose Jaw Electric Ry.'s attention to the fact that it is operating its cars on Sundays, without first having obtained the sanction of the ratepayers, which, it is claimed, is required by law.

The Edmonton, Alta., city commissioners received tenders, Oct. 19, for three and five years, for advertising privileges on the street railway cars. There are now being operated 30 semi-convertible cars, carrying about 20,000 passengers daily.

G. McLeod, Electrical Engineer, Sandwich, Windsor and Amherstburg Ry., has also been appointed Superintendent, with authority over all motormen and conductors. M. Brocklebank, heretofore Superintendent, will continue as his assistant. Office, Windsor, Ont.

The St. John Ry., St. John, N.B., increased the wages of its motormen and conductors on Oct. 2, one cent an hour all round, making the present rates as follows: 1st year, 18½ c.; 2nd year, 19½c.; 3rd. year, 20c.; 4th year, 20½c.; 5th year, 21c. Three cents extra on Sundays.

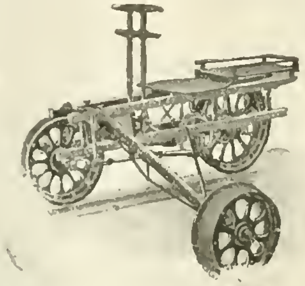
F. B. Griffith, heretofore claims Agent and Superintendent of Shops, Dominion Power and Transmission Co., Hamilton, Ont., has been appointed Claims Agent and Superintendent of Interurban Lines, vice A. J. Clarke, Superintendent of Interurban Lines, resigned. J. O. Binkley succeeds him as Superintendent of Shops.

The ratepayers of Kildonan, Man., voted on Oct. 7, on the question of permitting the operation of street cars within the municipality on Sundays. The vote stood 119 for and 11 against, but as the total vote polled was 50 less than the three-fifths of the electorate necessary to secure the passing of the bylaw, nothing further will be done at present.

The Calgary city council has arranged to purchase 18 new cars. Six cars, 46½ ft. long, have been ordered from the Ottawa Car Co., and the remainder from the Preston Car and Coach Co. Of these latter, six will be 46½ ft. long, and six will be smaller. These orders are for car bodies only, the trucks and motors being provided by the city. A sprinkler has also been ordered from the Preston Car and Coach Co.

The electrification of the Swiss national railways will, it is said, be by the use of the single-phase overhead-conductor, 15,000-volt system. The construction will be patterned after that on the London, Brighton & South Coast Ry., in England. The first work will be on the St. Gothard line, gradually extending to the whole Federal system of 1,830 miles. The cost is reported to be estimated at $13,140,000 and the running expenses are estimated at 10% less than the present cost of steam operation.

The Toronto and York Radial Ry. has a large milk business and operates spe-



Kalamazoo Reinforced Pressed Steel Wheels

For Hand and Push Cars

They always wear much longer than others, giving fully 100 per cent. greater service than any other wheel of similar design or weight.

Kalamazoo Wheels are strongest where other wheels are weakest—in the throat of the flange (See sectional cut).

Made in three sizes, 16 in., 20 in., 24 in.

Twenty Styles of Kalamazoo Velocipedes

The Kalamazoo idea is to provide the proper velocipede for each different need. No difference what you want or for what purpose, we have it

We also build Hand Cars, Push Cars, Inspection Cars, and Gasolene Motor Cars, in many styles and sizes.

cial milk cars which are provided with chain hung shelves for increasing the load capacity. These are folded up out of the way when not needed. Milk is handled at the rate of 10c. per 8-gal. can up to 20 miles, and 15c. from 21 to 30 miles. Much of it is delivered at the freight terminal on the outskirts of the city, but a portion is delivered by the company's express wagons and gasoline trucks, for which a charge of 2c. per 100 lbs., with a minimum of 20c., is made.

Jas. Roosevelt, heretofore General Superintendent, Third Avenue Ry., New York City, has been appointed Manager of the Transportation and Sales Department, British Columbia Electric Ry., with office at Vancouver. This office covers a new field, viz., the supervision of the company's tram systems, both urban and interurban, on the mainland and Vancouver Island, as well as the control of the sale of light and power at all points of the company's territory. In the operating department, he assumes the duties heretofore carried out by F. R. Glover, formerly Assistant General Manager, now General Executive Assistant.

S. B. Thompson has been appointed Mechanical Superintendent, British Columbia Electric Ry., Vancouver. This is a new position in the division of the company's work, its creation having become necessary owing to the rapid development now going on over the territory served. He will have supervision of rolling stock and electrical equipment at all points on the Mainland and Vancouver Island. Prior to going to Vancouver, he was in charge of the operating department of Sanderson and Porter, Consulting Engineers, New York City, and was formerly connected with electrical railways at Baltimore, Youngstown, Ohio, and Anderson, Ind., as well as with several steam railways.

Edward P. Coleman, whose portrait appears on this page, was born at Taunton, Mass., June 14, 1867, and educated at the public schools there. He was, from Feb. 9, 1885, to Feb. 9, 1896, in the draughting room of Hubec Printing Press, at the shops of the Taunton Locomotive Manufacturing Co., with which his father and grandfather had been associated for many years; Jan. 1, 1896, to Sept. 1, 1900, Treasurer and General Manager, Attleboro Steam and Electric Co., Attleboro, Mass.; May 5, 1898, to Mar., 31, 1899, in United States service during the Spanish war as Second Lieutenant and Battalion Adjutant, 5th Massachusetts Infantry; July 1, 1899 to Sept. 1, 1900, General Manager, Plymouth Electric Light Co., Plymouth, Mass.; Sept. 1, 1900 to June 1, 1905, Vice President and General Manager, Consolidated Lighting Co., Montpelier, Vt.; June 1, 1905 to Mar. 1, 1907, in practice as consulting engineer, general, electric light, power, railway and quarry work, and Treasurer and Manager, Wetmore and Morse Granite Co., Montpelier, Vt.; Mar. 1, 1907 to Jan. 1, 1909, General Manager, Great Northern Power Co., Duluth Minn.; and since Mar. 1, 1909, Manager of Railways, Dominion Power and Transmission Co., Ltd., Hamilton, Ont.

◆

The C.P.R. Telegraph Department has opened offices at Pictou, N.S.; Lochalsh, Nestleton and Staffordville, Ont.; Aranaud, Genest, Headingly and Nivervlllem, Man.; Ogema and Pangman, Sask.; Beiseker, Alta.

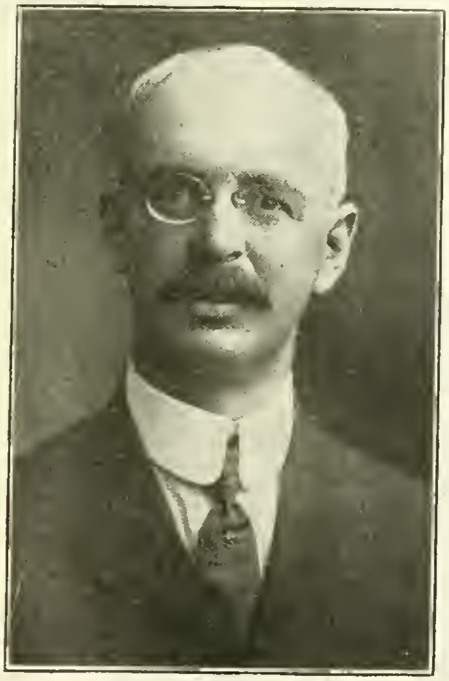
The Great North Western Telegraph Co.'s annual meeting was held at Toronto, Sept. 28. Following are the officers and directors for the current year: President, H. P. Dwight; Vice President, Adam Brown; other directors, W. C. Matthews, Jas. Hedley, Hon. J. K. Kerr, Æ. Jarvis, F. B. Hayes, Toronto; J. B. VanEvery, N. Carlton, New York.

Telegraph and Cable Matters

The Superintendent of Newfoundland postal telegraphs has announced that communication has been established with offices on the Burin branch line and all offices in Trinity, Bonavista and Notre Dame Bays, also offices on the west and northwest coasts to Port aux Basques and Port Saunders, via Cuckold's Cove, Canso and Port aux Basques.

Jas. Kent, Manager of Telegraphs, accompanied by B. S. Jenkins, General Superintendent of Telegraphs, Western Lines, C.P.R., recently completed the annual inspection trip through the west. During the past year the company has strung 12,000 additional miles of wire, 80% of which is copper, and it is anticipated that almost as much will be strung next year.

The Temiskaming and Northern Ontario Ry. is erecting two additional telegraph wires between North Bay and Englehart. It is said to be the intention to handle local business mainly on the new wires, through business having the right of way over the existing wires. Complaints had been made regarding poor service, and it is believed that the new wires will take care of all the business offering.



E. P. Coleman,
Manager of Railways, Dominion Power and Transmission Co., Ltd.

A number of representatives of the G.T.R. telegraph operators from various parts of Canada and the United States, met in Toronto recently to discuss a general wage and time schedule. It was reported that the G.T.R. schedules were behind those of the C.P.R., and that some steps would probably be taken in the near future to discuss the matter with the company, with a view to bringing the G.T.R. into line with the other companies. The minimum monthly wage of the G.T.R. operator, for a week of seven days, was quoted as $50, against $53 a month, for a week of six days, on the C.P.R.

B. S. Jenkins, General Superintendent, C. P.R. Telegraphs, Western Lines, Winnipeg, has recently completed 30 years of continuous service with the company. He was concerned in the organization of the department in 1883, when a single wire, east to Port Arthur and west to Medicine Hat, was sufficient to carry the business. There are now, on the Western Lines, 7,320 miles of poles, 44,251 miles of wire, and 525 offices. He was born at Richmond Hill, Ont., Apr. 8, 1859, and entered C.P.R. service Sept. 21,1881, as telegraph operator at St. Boniface, Man.; transferred to Brandon, Apr. 1882; appointed Superintendent of Telegraphs, Western Division, July 1883, and General Superintendent of Telegraphs, Western Lines, Dec. 1899.

The Pacific Cable Board's report for of £29,334, towards meeting the amount the year ended Mar. 31, shows a balance of £77,544 in respect of interest and sinking fund. The balance is an increase of £11,378 over the previous year. The deficit is paid by the British, Canadian and Australian Governments. The Canadian land line service was taken over by the board in Sept., 1910, the results being quite satisfactory, the average time for transmission between Great Britain and Australia having been reduced nearly 18 minutes, in addition to an improvement in accuracy. The number of messages handled during the year was 129,154, representing 1,849,613 words. A system of deferred messages at reduced rates will be adopted shortly.

Among the Express Companies.

Four employes of the Dominion Ex. Co., are under arrest at Calgary, Alta., on charges of theft of money, forgery and embezzlement.

A. J. Downing, heretofore chief clerk, at Woodstock, Ont., has been appointed agent, Dominion Ex. Co., and ticket agent, C.P.R., there, vice G. A. Joyce, resigned.

The Dominion Ex. Co. has issued a circular announcing the withdrawal of its service over the Central Ontario Ry. It will, however, retain its offices at Marmora and Bannockburn.

The Board of Railway Commissioners has fixed the limit for the delivery and collection of parcels by express companies, in Brandon, Portage la Prairie and St. Boniface, Man., and Regina, Sask.

The Canadian Ex. Co., is being sued at Levis, Que., for $1,116, claimed as damages for the loss of two maps delivered by the company to wrong parties in Montreal, by whom they were destroyed. The company offered $100 in settlement of the claim.

John Pullen, heretofore Assistant Traffic Manager, G.T.R., has been appointed President, Canadian Ex. Co., in charge of all the company's affairs, vice C. M. Hays, who has been elected Chairman of the board of directors. Office, Montreal.

The Board of Railway Commissioners has defined the limits for the collection and delivery of express parcels, for Port Arthur and Fort William, Ont.; Winnipeg, Selkirk and St. Boniface, Man.; Watrous, Saskatoon, Prince Albert, Weyburn and Moose Jaw, Sask.; Edmonton, Alta., and Vancouver, New Westmnister and Victoria, B.C.

The express companies' tariff for merchandise to points in Manitoba, Saskatchewan and Alberta, from Winnipeg, remodelled on the basis of the judgment of the Board of Railway Commissioners, Dec. 24, 1910, has been issued. The basis adopted is $5 per 100 lbs., per 1,000 miles, as against $3 in Eastern Canada. In some few cases, the new rate is a reduction on the old one, in others it is the same, while in a majority of cases the rate is slightly increased. The Winnipeg board of trade has protested to the Board of Railway Commissioners as to the basis of the rate.

The C.P.R. Steamship Princess Alice.

The departure of this vessel, the latest addition to the C.P.R.'s British Columbia coast service, from Newcastle-on-Tyne, on Sept. 22, for Vancouver, was noticed in our last issue. Prior to this she completed a series of exhaustive trials at sea off the mouth of the River Tyne. A high speed was maintained and the machinery and boilers worked to the entire satisfaction of the owners, who were represented by Capt. Mowatt, Marine Superintendent. The Princess Alice is about 300 ft. long and 46 ft. broad. The plans of the ship and her construction were supervised by the C.P.R.'s steamship representatives in England. She has been built to fulfil the requirements of the Canadian Government for Pacific coast and channel service, and she carries the highest class of Lloyds registry.

An interesting feature is that she is the first of the C.P.R. fleet that has been specially built to carry oil fuel for raising steam in the boilers, though oil burning apparatus has been fitted into several of its other vessels. The furnaces are so constructed that either coal or liquid fuel can be used. The installation of the oil burning apparatus is extremely simple, the oil being forced into the furnaces through a specially constructed nozzle in a conical spray, when it at once becomes ignited. When burning liquid fuel on this system all brickwork is entirely removed from the furnace, and the system is so perfect that complete combustion takes place within a foot or two of the furnace front. From the moment of lighting up there is no smoke whatever to be seen from the ship's funnel. Among the numerous advantages of burning liquid fuel may be mentioned that firemen are dispensed with; there is no handling of ashes, and no coal dust or dirt in stokehold—in fact, the boiler room can be made the cleanest part of the ship. Furthermore, all the discomfort and inconvenience of loading a ship with coal in the ordinary way is entirely obviated.

The main propelling machinery consists of a four cylinder triple expansion engine with four cranks balanced, which successfully eliminates vibration, thereby greatly adding to the comfort of the passengers. The engine builders also constructed the four single ended boilers, each with three furnaces.

The passenger accommodation embodies all that the experience of the owners and skill of the builders could devise, and the ship will be one of the handsomest in her service. On the promenade deck the observation room is placed forward, and the smokeroom aft, both of these comfortable saloons having large plate glass windows, so as to give passengers an uninterrupted view of the splendid scenery of the coasts along which the ship will pass. The observation room is handsomely panelled in mahogany and the smokeroom in fumed oak, relieved by hammered copper panels depicting ancient totem poles of North American Indians, and also specimens of Canadian trees, fruit and grain. The furniture and upholstery in both these rooms and throughout the ship have been very carefully studied and will make her extremely comfortable. The corridors between the observation and smoke rooms are of polished mahogany with inlaid panels, and lead to a succession of comfortable deckhouse staterooms. A notable feature of the corridors is that they are surmounted by a cambered roof with a clerestory, giving a feeling of great height and spaciousness, together with ample light and ventilation. From the promenade deck, handsome staircases lead down to the upper deck, which is chiefly occupied by a series of first-class staterooms, including several suites of bridal chambers. On this deck there are also two social halls or music rooms.

On the main deck aft is the dining saloon, a handsome apartment panelled in beautiful Italian walnut. A noticeable feature in this room is the provision of specially large plate glass windows. The saloon is arranged with small tables, those at the sides being ensconced in bays. At the after end of the dining room is the pantry and behind that the galley. Underneath the dining room is the first class restaurant where meals may be taken a la carte.

The C.P.R. s.s. Princess Alice, for British Columbia Coast Service.

During August, 20 employes were killed, and four were injured in the course of their work in connection with Canadian navigation. Of the fatal accidents, 18 were due to drowning, one to a fall, and one to fire.

Grounding of s.s. Carrigan Head.

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Raymond, formerly a director of the Quebec Corporation of Pilots, as nautical assessors, held an investigation at Quebec, Sept. 1, into the cause of the stranding outward bound on July 14 of the s.s. Carrogan Head, a steel built vessel of 10 knots, whose net tonnage is 2,715. She carries a crew of 35, with three properly certificated officers, and carries general cargo and occasional passengers between Montreal and Quebec and Belfast and Cardiff.

The Pilot Simard, declared that he boarded the vessel at Quebec and proceeded without incident, steering the usual courses, and that upon passing Green Island on an east northeast compass course on which he allowed three degrees westerly deviation, he estimates that at 8.05 p.m., on July 14 he passed Bic Island, whose light was distinctly visible at a distance of three miles, and that upon bringing Bic Island abeam the course was altered to east by south, by compass, or, east three-quarters south magnetic, after allowance being made for the three degrees deviation. Although there seemed to be a haze over the land, it was clear surrounding the ship and the vessel proceeded at her full speed of ten knots on an east three-quarters south magnetic course. It is estimated that as it was the last of the ebb and the consequent ineffectual current that the vessel traversed 15 miles between 8.05 and 9.30, but after the pilot had proceeded a supposedly sufficient distance from Bic without discerning the Father Point Light, he ordered a cast of the lead, which was taken and 12 fathoms found. The pilot relied absolutely upon this single cast and proceeded on his course at full speed, but not many minutes elapsed before his ship took the ground, gliding, it would appear, on to a soft bottom without apparent tremor. The pilot held unwaveringly to the belief that Bic Island was three miles distant when abeam, and that he steered precisely the same

course on this occasion as has been his custom for years, and that the vessel must have gone on an unchartered shoal.

Captain Eyers deposed that he was on deck when the vessel passed Green Island and Bic Island was passed at a distance of from three to three and one half miles and that the usual course of east three-quarters south, magnetic, was steered. He corroborated the pilot's testimony regarding the weather conditions, and declared that the light and variable wind was of insufficient strength to affect the vessel's course, and that upon failing to discern the Father Point light, as expected, the third officer was instructed to take a cast of the lead and that 12 fathoms were found.

The third officer, A. Bingham, declared that he had been acting in this capacity on Carrogan Head for nine months and that the courses given by the pilot had been accurately steered, that he had endeavored to put into effect the instructions given by the master to take cross and four point bearings of points of land, but on both occasions his attempts were frustrated by the course being changed. The ship was supplied with three compasses, one of which was in the wheelhouse, another on top of it, and another on the bridge. The cost of the lead which he took recorded 12 fathoms and the ship, according to his calculation, took the ground at 9.47 and was still fast when his watch terminated at 12.

The court finds that the pilot's method of placing absolute reliance upon former courses steered, without repeated verification on each particular voyage, cannot be accepted as safe navigation. The Father Point light being usually visible for 15 miles, it is held that when it was not discerned after passing Bic Island, the estimated distance of which was placed by usual observation alone at three miles, that the speed of the vessel should have been reduced and a chain of soundings taken to ascertain its position, instead of relying absolutely upon a single cast of the lead. The court considers that the pilot committed an error in judgment, but owing to his previous clean record, it confines itself to issue a warning to him to exercise more discretion in future, and to inform him that it is his duty upon passing points of land and lights to verify the position of his ship and not rely absolutely upon previous courses steered, and a single cast of the lead as he did in this particular instance. The master and third officer are exonerated, but the master is advised that for the safe navigation of the vessel, he should insist upon frequent soundings being taken, as it requires a chain of soundings to establish the position of a ship with accuracy.

Stranding of the s.s. Belcarra.

Following is a summary of the judgment of Justice Martin, concurred in by Capts. Reed and Collington, delivered at Victoria, B.C., recently, regarding the stranding of the s.s. Belcarra, off Dempsey's Camp in Agamemnon channel, Sept. 17, 1910: The court is satisfied, after hearing the explanation of the master, J. E. Fulton, that the customary light on the float at the camp was not burning, and that he was deceived in making landing by mistaking another light further inland, and no blame should be attached to him in this respect. In the course of the evidence, however, it became apparent that though the vessel had shortly before undergone her annual inspection, her compass was sluggish, and from want of proper compensation, unreliable. A new compass had been taken from another vessel, but its hand had not been placed in position, owing to lack of necessary fittings, nor had it been adjusted to local conditions on the vessel, and therefore the master was entitled to disregard it. This does not, however, relieve the owners, the Sechelt Steamship Co., from their duty to instal and keep adjusted a proper compass, and had the accident been caused by their negligence in this respect their responsibility would have been a grave one. As to the navigation of the vessel, the master admitted in evidence that he was sailing through the narrow channel, averaging a mile in width, at seven knots, the vessel's full speed, in a dense fog. This was clearly a violation of art. 16, and the master being obviously guilty of reckless navigation is censured.

Fuel Oil on Canadian Pacific Railway B.C. Coast Steamships.

After very careful consideration of the subject during last year, the C.P.R. management decided to equip a few of its vessels on the British Columbia coast, for the purpose of testing the efficiency of oil as compared with coal for fuel. Before doing this the various aspects of the question, as to speed, efficiency, supply and cost, were discussed, and the result of this inquiry, together with the experience of others, indicated clearly a decided advantage in the use of oil.

The first vessel to be equipped was the Princess May, which was undergoing extensive repairs. While the reports were being made two oil tight bulkheads were erected in the hull, these bulkheads running from side to side of the ship. Two fore and aft divisions were placed in compartment form, thus giving three complete and independent oil tanks. Great care was exercised in the execution of the work, as it is found more difficult to make steel work tight for oil than for water. The work was done by the B.C. Marine Railways Co., and has proved an entire success.

The Princess May has three boilers, with three furnaces each. These furnaces were fitted with the Cyclone burner. The principle of the system is an extension front on the furnaces suggestive of the old-time Dutch oven effect, and each front is fitted with a burner, the oil being atomized by a steam jet, and the form of the jet is such as to set up centrifugal action, thus breaking up the oil into small particles. It distributes the oil and therefore the flame, following the corrugated furnace in circular form, thus utilizing the entire surface, bottom and all.

The oil used, in order to comply with the Government requirements, is very heavy, and before passing through the burner, is pumped through a heater, raising the temperature to about 160 degrees. This liquifies the oil, and allows a thorough atomization, and with a careful adjustment of the admission of air, the fires burn with a very clear, bright flame, and the boilers steam freely.

In former years, when burning coal, this vessel was unable to make the desired speed at all times. There were losses through cleaning of fires and the handling of ashes, and on a voyage where tides form such an important feature, due to the necessity of passing through certain channels at certain stages of the tide, if the vessel fails to catch the tide, it becomes necessary to anchor, and thus lose still further time. It will therefore be readily seen how important it is to be able to secure the speed when called for, and this advantage has been gained in the Princess May by the use of fuel oil. It is now found that she can maintain an average speed with two boilers, just about equal to what she had before with three boilers burning coal.

One of the great advantages in the use of oil is the steady steam throughout the watch, and in fact from day to day. With coal it is up and down, and the operation of cleaning fires has an injurious effect on the boilers, while with oil there is no cleaning of fires, and the temperature remains the same at all times.

The company's vessel, Princess Charlottee, has also been fitted for oil, the fuel being carried in her double bottom, no special tanks being required. She has six boilers with three furnaces in each. They have all been fitted with Cyclone burners, and this vessel is showing very good results.

It is found that 3.75 barrels of oil will do the work of one ton of Vancouver Island coal.

One of the great advantages in the use of oil is its cleanliness and the great saving in labor. No coal trimmers are required, no gangs of men to put the coal on board; or the ashes overboard, the number of firemen is very much reduced, and their work is now comparatively easy. The decks are not covered with cinders and smut, and the time required for taking fuel on board each day is more than cut in two.

The company has constructed a large tank in Vancouver with a capacity of 55,000 barrels of oil. There has been placed near the wharf another tank of 1,000 barrels. The oil is transferred from the large tank to the smaller one by means of a steam pump, and from the smaller one direct to the vessel's tanks by an electric driven pump of sufficient capacity to deliver about 1,000 barrels an hour on board.

The company's officers are very much pleased with the results so far, and there is little doubt that the greater number of the company's vessels on the coast will soon be fitted for this fuel.

We are indebted for the foregoing very interesting article to Sir William Whyte, at whose request it was prepared by Capt. J. W. Troup, Manager, B. C. Coast Service, C.P.R., Victoria

Obstruction by Tows on the St. Lawrence River.

Acting upon a complaint made by the Shipping Federation of Canada, the Department of Marine ordered that an enquiry be conducted as to the alleged misconduct of the master of the Alaska, who, it was claimed, shaped a course with a tow of 20 barges on Aug. 21, which barred the channel to the extent of compelling the pilot of the s.s. Ionian to reverse and detain his vessel, thus averting the collision which seemed imminent. The investigation was conducted in Montreal Sept. 19, by Capt. L. A. Demers, Dominion Wreck Commissioner, with L. Z. Bouille, a member of the Pilotage Association of Montreal, as assessor.

Capt. Eastway, of the Ionian declared that upon hearing the telegraph rung astern, he hastened to the deck and observed that a tow was strung out from the north to south intersecting the channel ahead of his ship, and that although her headway was being gradually diminished with her engines full astern, the Ionian nevertheless approached to within 50 feet of the second last barge in the tow, and a collision was averted through the prompt action of the pilot and the power of the vessel's twin screws.

Pilot T. Hamelin declared that when in the vicinity of Vercheres, the weather being clear with a light south west breeze, he perceived a tug with a tow, while considerably to the north-

ward of the latter he noticed a barge with full set sail coming down. He perceived that the tug, which was recognized as the Alaska, the property of the Sincennes-McNaughton Co., was crossing with its tow from north to south, or from the Ionian's starboard to port bow, without signalling notification of such action, the progress of the Ionian being so obstructed that a collision seemed imminent, whereupon the witness promptly resorted to the only alternative of reversing the engines, but despite this the tow of 20 barges and one schooner was of such length that the Ionian's headway was only lost when she had approached to within 50 feet of the second last barge.

Capt. C. Lavalee, of the Alaska, deposed that while proceeding from Sorel to Montreal with a tow whose length he estimated at 1,400 feet, he observed a sail barge with the wind slightly on her port quarter, drifting towards him, and that in order to keep clear he altered his course to the southward of the channel, without however signalling his

intention, and that the tow in consequence involuntarily impeded the progress of the Ionian. He admitted that it is difficult to control a tow of such length and that while the schooner was being steered the 20 barges were left unattended.

The court finds that the statement of the master of the Alaska on the one hand and the pilot and master of the Ionian on the other as to the direction of the wind are contradictory, and if the court accepts the statement of the pilot of the Ionian, that the wind was south west, which it does, it precludes the necessity on the part of the Alaska of altering her course so materially to southward to avoid the sail barge which it has been averred was at a safe distance to the north of the tow. But even admitting that such a course was essential, it is held that the master of the Alaska should have complied with the rule of the road and sounded two blasts to indicate his intention, and for his failure in this respect and consequent placing of valuable property in jeopardy, he is severely censured by the court and is warned that should he reappear following a similar complaint his certificate will be dealt with.

The court deprecates the system which permits of tows of ungovernable lengths to ply the narrow stretches of the River St. Lawrence, as they constitute a menace to navigation, and as the shipping interests have frequently found cause to complain heretofore, the court accepts it as a duty to point out to the proper authorities the necessity of enacting laws and regulations limiting the length of tows, thereby minimizing the danger of casualty, prevailing under the present unrestricted conditions.

Hero-Chieftain III. Collision.

Following is a summary of the judgment, recently delivered, as a result of the enquiry by L. A. Demers, Wreck Commissioner, assisted by Capts. A. Reid and F. Nash and W. Gauthier, as assessors, into the cause of the collision between the steamboats Hero and Chieftain III., in the River St. Lawrence, near St. Antoine, Que., Aug. 20, resulting in the foundering of Chieftain III., and the loss of four lives.

The court finds that reliance cannot be placed on the calculations made by the pilot on Chieftain III., who, by his own admission, is ignorant of the most elementary rules of navigation, and accepts the corroborated testimony of the Hero's witnesses. The court comes to the conclusion that an improper lookout was kept on Chieftain III., and that the pilot, in porting, while his vessel was green to green, committed a flagrant transgression of the rules of the road. As the pilot holds neither a certificate nor a pilot's license, it is beyond the court's jurisdiction to inflict a penalty for his gross and unpardonable ignorance, but he is held to be in default and responsible for the casualty. The engagement of Onesime Hamelin, as pilot, was effected contrary to the bylaw which permits the master or member of a crew to pilot an exempted vessel, but exacts that if a pilot be engaged, he must possess a license. Therefore the owners of Chieftain III., through whose instrumentality this engagement was effected, are held to be indirectly responsible, while to the Chieftain's mate, who was on watch with the pilot, no blame can be attached, as being without certificate, he is viewed in the light of a deck hand and therefore irresponsible. The captain of the Chieftain III., acting in accordance with the faulty system endorsed by owners of this class of vessel, for the master to keep watch and watch, nevertheless lacked an adequate conception of his responsibilities in leaving the fate of his vessel to such incompetent hands. Furthermore, the persons he carried in addition to his crew, must be considered as passengers, and as the certificate he held precluded the carrying of passengers, he violated the Shipping Act, and the court being of opinion that he is indirectly responsible for the disaster, suspends his certificate as master for two years from Aug. 30, and in the meantime grants him a certificate as mate for a tug boat on minor waters. Regarding the pilot of the Hero and the second officer, they are exonerated from all blame, but are advised that when reversing they should indicate such action by sounding the regulation blasts. The captain of the Hero is also exonerated, but the court cannot condone his indifference subsequent to the casualty. He should have anchored his vessel and made vigorous search for those known to be in jeopardy, but he ignored the common claim of humanity and is severely censured for his action, which will be reported to the Norwegian authorities. It is ordered that the costs of the investigation be paid by the owners of Chieftain III., the Calvin Co., Kingston, Ont. The Hero is owned by Kjaer and Isdahl, Bergen, Norway, and is under charter to the Intercolonial Coal Mining Co., carrying coal between Sydney, N.S., and Montreal.

Bonds on Steamship Yorkton.

The Mathews Steamship Co., Ltd., has issued $55,000 first mortgage 6% gold bonds due July 1, 1921, secured by a first mortgage on the s.s. Yorkton, which was built last year at Sunderland, Eng. Following are extracts from the prospectus, issued by Æmilius Jarvis & Co., Toronto:—

The Yorkton is constructed entirely of steel according to the designs and specifications of the owners, based on long experience in the shipping trade on the Great Lakes. She is classed A1, in Lloyds Inland Register and is 250 ft. long, 42½ ft. beam, and 18½ ft. deep. She is designed to have the greatest carrying capacity (85,000 bush.) of any steamer capable of passing through the St. Lawrence canals. On the Upper Lakes her carrying capacity is 100,000 bush. She is of the latest design in every respect, is lighted with electricity, heated by steam, and has steam steering gear. She has a double bottom, and is double decked, and cost in cash over $115,000. The $55,000 bonds offered constitute the entire bonded debt of the steamship, and in addition to being secured by a first mortgage on the steamship, they are an obligation of the Mathews Steamship Co., Limited, in its entirety. Under the mortgage protecting the bonds, the company is obligated to keep the steamer and its appurtenances covered by the mortgage amply insured against loss or damage by fire, and against all marine risks and disasters, all collision liability, general and particular average, and against liability for injuries to persons.

The company's statements show that from 1906 to 1910 their boats Edmonton and Haddington averaged annual net earnings of $25,938.50, and that in 1910 their boats earned $26,458.65 net. This year to Sept. 7, they earned $18,587.63 net, while the Yorkton (operating only two months after completion and arrival from England) earned $2,631.77 net. This shows total net earnings of $21,218.43 to September, and with the three busiest months to be added, the company estimates over $39,000 net earnings for 1911. All earnings mentioned are net after paying insurance. The company's statement shows assets of $288,091.10 as at Jan. 31, 1911, not including the Yorkton, valued at $130,000. Adding this the assets total $418,091.10.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

101. Sept. 20. 273. Ontario, Lake Ontario, Bay of Quinte, Minnie Blakely shoal, gas buoy established. 274. Ontario, Lake Erie, Port Burwell, bell buoy discontinued. 275. Ontario, St. Joseph channel, Wislon channel, Chicora shoal and middle ground, buoys discontinued. 276. Ontario, Lake Superior, Porphyry island, Porphyry point, light improved. 277. Ontario, Lake Nipissing, South bay, South river mouth, change in position of light. 278. United States of America, Lake Huron, Detour passage, change in characteristic of submarine signal. 279. United States of America, Lake Superior, Two Harbors light station, characteristic of light changed.

102. Sept. 22. 280. New Brunswick, Bay of Fundy, Grand Manan island, Flag cove, Net Rock ledges, bell buoy established. 281. New Brunswick, south coast, Bay of Fundy, off Negro Head, bell buoy established. 282. Nova Scotia, Bay of Fundy, Long island, Petit passage, Boars head, hand fog alarm at light station. 283. Nova Scotia, Cape Breton, Lower L'Ardoise, bell buoy established, hydrographic notes.

103. Sept. 28. 284. Nova Scotia, Bay of Fundy, Hall harbor, position of lighthouse. 285. Nova Scotia, south west coast Cape Sable, rock westward of. 286. Nova Scotia, Cape Breton, Lennox passage, Ouetique island lighthouse, character of illuminating apparatus. 287. Nova Scotia, Cabot strait, St. Paul island, permanent light. 288. Quebec, River St. Lawrence, Escoumains, light established on wharf. 289. Newfoundland, west coast, Ste. Genevieve bay, existence of shoals. 290. Newfoundland, west coast, Old Ferolle harbor approach, existence of shoals.

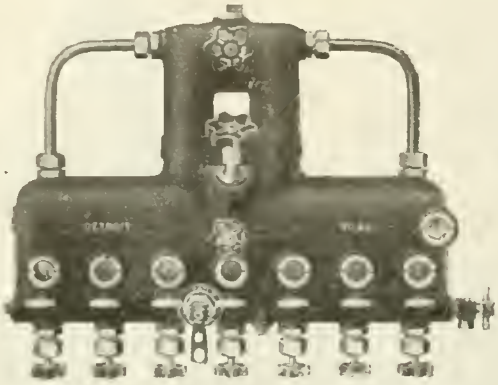
104. Oct. 3. Quebec, Chaleur Bay, Port Daniel West lighthouse, color of lantern. 292. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, above St. Antoine, wreck marked by gas buoy. 293. Quebec, River St. Lawrence, Montreal harbor, buoys established.

105. Oct. 4. 294. Ontario, Lake Ontario, west end, Burlington channel front range lighthouse, hand fog horn for occasional use. 295. Ontario, Lake Erie, Long Point lighthouse to Port Rowan, telephone line. 296. Ontario, Lake Erie, Port Burwell, breakwater under construction, temporary light. 297. Ontario, Lake Superior, Thunder bay, Port Arthur, position of wireless telegraph station.

106. Oct. 12. 298. New Brunswick, south coast, Bay of Fundy, St. John harbor, off Negro point, change in position of gas buoy. 299. Nova Scotia, Bay of Fundy, Lurcher shoal, lightship replaced on her station. 300. Prince Edward Island, west coast, Miminegash, range lights increased in height. 301. Prince Edward Island, north coast, Savage harbor, change in position of front range light.

107. Oct. 16. 302. Nova Scotia, Cape Breton, Cape St. Lawrence lighthouse, lower light discontinued. 303. Nova Scotia, south coast, Little Liscomb harbor, Redman head, hand fog horn at light station. 304. Quebec, Gulf of St. Lawrence, Gaspe coast, Grand River wharf, hand fog bell at light station. 305 Quebec, Magdalen islands, House harbor entrance, change in character of buoy. 306. Quebec, Lake St. John, Ile au Belier, back range light.

Detroit Lubricators for every Locomotive



Detroit Bullseye Locomotive Lubricators are used on all kinds of locomotives in every kind of service.

They are made with two, three, four, five, six and seven feeds for simple, compound, Mallet compound, superheater Mallet compound, Shay—all kinds of locomotives — with special provision for controlling the lubrication of one or more air pumps, mechanical stoker and intercepting valve.

The new Detroit Bullseye locomotive lubricator with oil control valve will give every part of any locomotive efficient, dependable and economical lubrication.

Vessels Removed From the Register.

The following vessels were removed from the Canadian register during August and September, for the reasons assigned:—Steam— Amethyst, Montreal, 894 tons, stranded; Eliza Williams, Port Arthur, Ont., 34 tons, broken up; Kaministiquia, Port Arthur, Ont., 72 tons, burnt; Neptune, St. John, N.B., 48 tons, broken up; Norseman, Goderich, Ont., 400 tons, sold to United States; Sechelt, Vancouver, B.C., 71 tons, lost; Zoa H., Lunenburg, N.S., 16 tons, sold to foreigners. Sailing—Blue Wave, Parrsboro, N.S., 37 tons, stranded; Carib II., Shelburne, N.S., 195 tons, sold to foreigners; Confidence, Lunenburg, N.S., 35 tons, transferred to Newfoundland; Coryl, Parsboro, N.S., 59 tons, broken up; Frank, Charlottetown, P.E.I., 30 tons, sold to foreigners; Foster Rice, Annapolis Royal, N.S., 17 9tons, wrecked; Gaza, Parrsboro, N.S., 71 tons, broken up; General Laurie, Shelburne, N.S., 198 tons, transferred to Barbadoes; Georgie E., Weymouth, N.S., 95 tons, wrecked; Kohinoor, Charlottetown, P.E.I., 77 tons, wrecked; L'Etoile, Port Hawkesbury, N.S., 48 tons, wrecked; Lottie S., Shelburne, N.S., 42 tons, lost; M.D.S., Windsor, N.S., 190 tons, transferred to Newfoundland; Madona C., Magdalen Islands, 21 tons, sold to foreigners; Marion T., Weymouth, N.S. 30 tons, condemned; Olga, Parrsboro, N.S., 79 tons, broken up; Robert Kerr, New Westminster, B.C., 1 123 tons, wrecked; Rose, Quebec, Que., 79 tons, stranded; Rush Light, Sydney, N.S., 51 tons, broken up; Secret, Lunenburg, N.S., 76 tons, stranded; Stella, Arichat, N.S., 14 tons, broken up; Stranger, Lunenburg, N.S., 540 tons, transferred to Barbadoes; Tay, St. John, N.B., 125 tons, wrecked; W. N. Zwicker, Lunenburg, N.S., 398 tons, transferred to Barbadoes.

◆

Atlantic and Pacific Ocean Marine.

The Cunard Line s.s. Ausonia will be partially remodelled during the winter season, an additional deck being made, providing accommodation for a further 100 passengers.

The vessel which the Union Steamship Co., of New Zealand, is having built at Glasgow, Scotland, for the Canadian mail service, and which was launched recently, has been named Maunganui. She is 430 ft. long by 55 ft. beam.

G. M. Bosworth, Vice President, C.P.R. has denied that the C.P.R. will operate a line of steamships between Boston, Mass., and Rotterdam, Holland, in connection with the New York, New Haven and Hartford Ry., as reported in the daily press.

It is reported that the Cunard Line proposes to add two vessels to its Montreal-London service, in the spring of 1912. It is stated that the company will either build vessels for the service, or transfer two of its vessels from the Mediterranean route.

Reports brought to Vancouver by the Harrison Line s.s. Crown of Castile, state that the company is having built for the direct service between Glasgow and Vancouver two vessels to be named Crown of Toledo and Crown of Adalusia, each of about 10,000 tons gross.

The Donaldson Line s.s. Letitia, which is under construction at Glasgow, Scotland, will, it is expected, be ready for service between Glasgow and St. John in Feb., 1912. She will be 10,000 gross tons, and will have accommodation for about 275 second class and 1,000 third class passengers.

The Canadian Mexican Pacific Steamship Co. has chartered the s.s. Strathdene for its Mexican service, to replace the s.s. Henley, which has been released. She commences the new service in November. The s.s. Beckenham has also been chartered for this service, and will sail from Vancouver in December.

The C.P.R. s.s. Mount Temple was reported to have been damaged in collision with the s.s. Osterly at Tilbury, Eng., Oct. 16, after which she was docked at Millwall for examination and repairs. Montreal officials are reported to have stated, Oct. 18, that they had no report of such an accident, but if such a collision had taken place, the damage must have been slight.

Press reports state that arrangements have been made for the operation of a steamship line between Vancouver, Victoria, Seattle, San Francisco and Bristol, Eng. The line will use the vessels which have recently been managed by Evans, Coleman and Evans, Vancouver, and will be known as the Maple Leaf Line. The vessels chartered are the Harmattan, Oceania, Queen Alexandra and Queen Amelie.

The steamships which the C.P.R. recently ordered for its Trans-Pacific steamship service, one of which was illustrated in our last issue, will be named Empress of Asia and Empress of Russia. Their dimensions will be, length, 570 ft.; beam, 68 ft.; moulded depth, 38 ft.; tonnage, about 15,000 gross. They will be equipped with two steel quadruple turbines, and the price of each, delivered and complete, will be £500,000.

The Allan Line has invited tenders for the building of two steamships, each about 520 ft. long, equipped with twin screw reciprocating engines, for a speed of 18 knots an hour. Special attention will, it is said, be given to first and second class passenger accommodation. When completed, early in 1913, it is said that the new vessels will replace two at present on the Liverpool route which will be transferred to the Glasgow route.

Salvage operations have been continued on the C.P.R. s.s. Empress of China, which was recently wrecked off the Japanese coast. It is stated that a considerable amount of rock is to be blasted, which, if successful in clearing the after hold, will be followed by an attempt to raise her by means of compressed air. It is feared that, on account of bad weather, and the position in which she is lying, the attempt will be unsuccessful, and that she will be a total loss.

Manchester Liners, Ltd., operating vessels between Montreal and Manchester, Eng., with which Lord Furness, of Furness, Withy and Co., and the Richelieu and Ontario Navigation Co., is intimately connected, reports a trading profit of £57,000 for the year ended June 30. This is an increase of £19,600 over the previous year. A full year's dividend of 5% was paid on the preference shares, thus clearing off accumulations of dividend to Dec. 31, 1905. The report states that should the present improvement in shipping be maintained, the regular payment of preference interest will be resumed.

C. M. Hays, President, G.T.R., and G.T.P.R., on his recent return to Montreal, after a trip over the system to the Pacific coast, is reported to have said that in the near future, not only will the G.T.P.R. have a steamship line operating to the Orient, but also to Great Britain, from the Pacific coast, via the Panama canal. The vessels, it is said, will be built in England, under the supervision of the G.T.R. board of directors, and they will be specially designed for grain carrying by the Panama route. The proposals in connection with this scheme involve the erection of grain elevators at Prince Rupert and other points and considerable harbor extensions.

Referring to the much-talked-of all red route, between Great Britain and Canada, a recent press dispatch from England states that the project, which, among four other ones, appears to have most chance of success, is one in which the Canadian Northern Steamships, Ltd., and C. T. Bowring & Co., are interested. The former operates the Royal Line from Bristol, and the latter runs steamships between Liverpool, New York, Halifax, N.S., and St. John's, Nfld. An essential part of the scheme is the operation of car ferries between Holyhead Wales, and Kingstown, Ireland, but so far as this is concerned, the great difficulty would be the difference in gauge between the English and Irish railways, which are 4 ft. 8½ ins. and 5 ft. 3 ins., respectively.

G. W. Stephens, Chairman, Montreal Harbor Commission, has issued a pamphlet giving arguments in connection with the rates of insurance on vessels operating on the St. Lawrence route. It is shown that the rates are based on conditions which existed in 1900 before the channel was improved by widening to 30 ft., and the replacement of the old signals and oil lights by submarine bell stations, telephones, wireless telegraph, acetylene gas installations and modern lighting equipment, which, with the remodelled pilotage system has brought the route up to a high state of efficiency. The floating dry dock, under construction, is also dwelt upon, and the fact that today, vessels of 15,000 tons can safely navigate the channel by day or night, whereas ten years ago, only vessels of about 5,000 tons could safely undertake the journey to Montreal. He claims that in view of what has been accomplished, a reasonable reduction of marine insurance rates is not only possible, but justified by the physical condition of the route and the actual loss experienced in the business. He also proposes that the British North America clause in the policies be removed. This clause excludes all vessels except regular lines from trading with Canada, without paying an extra premium for so doing, and acts as a restriction so powerful that no outside tonnage can be chartered for single voyages, as the extra insurance premium demanded is prohibitive.

◆

Maritime Provinces and Newfoundland.

The Newfoundland Government has appointed a commission of five members to supervise the pilots of the port of St. John's. The number of pilots has been fixed at 12.

The Newfoundland Marine Insurance Co. has been incorporated by the Newfoundland Legislature with a capital of $150,000 and office at St. John's, Nfld.

Smith's Fish Market, Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $10,000 and office at St. John, N.B., to carry on a general wholesale and retail fish business and in connection therewith, to operate steam and other vessels, wharves, etc.

Press reports from St. John, N.B., state that the car ferry service, which the C.P.R. proposes to operate between St. John and Digby, N.S., will be taken in hand next year. It is said that plans have been prepared, and a site for the proposed dock has been looked over by C.P.R. officials.

The steamship Senlac Co.'s s.s. Senlac, managed by Wm. Thompson and Co., St. John, N.B., has been sold by auction for $7,500. She was built at St. John in 1904, and is screw driven by engine of 66 n.h.p. Her dimensions are: length 182.4 ft., breadth 33 ft., depth 16.1 ft., tonnage, 1,011 gross, 615 register.

Application has been made to the New Brunswick Government for the incorporation of a company with the title of John McDonald, Jr., Ltd., to carry on a general produce and cold storage business, and in connection therewith, to operate ships, dredges and dredging equipment. The office will be at St. John. N.B., and the capital $20,000..

The harbor master at St. John's. Nfld., has given notice that owing to neglect by owners certain old schooners lying in the harbor are likely to sink and be a menace to navigation and an obstruction in the harbor, and that if no arrangement is made regarding them. they will be towed out to sea and sunk.

The Newfoundland Produce Co. is receiving a subsidy of $500 a round trip for a steamship service between St. John's and Change Island and other ports in the Fogo district, from the Newfoundland Government. The agreement. which is for 12 years, provides that 38 weekly trips between May 1 and the end of the season, each year.

The Marine Railway Dock Co., registered in St. John's, Nfld., with power to build a marine railway dock at Harbor Grace, has been granted a free site by the Government. By way of further aid, the Government covenants to pay the amount by which the annual net dividends shall be less than 5% on the actual paid up cash capital, for 15 years. the amount to be paid by the Government, in no case, to exceed $2.500 in any one year.

Province of Quebec Marine.

The steamboat Turret Bell has been libelled at the instance of G. T. Davie and Sons, Quebec, on a claim of $2,500 for necessaries and repairs.

The Dominion Public Works Department has awarded the contract for the construction of a wharf at Papineauville to T. and J. Moran, Arnprior, Ont.

G. W. Stephens, Chairman, Montreal Harbor Commission, addressed the McGill Canadian Club, Montreal, Oct. 16. on the port of Montreal, comparing it very favorably with any other port on the continent.

The statue of the late Hon. John Young. four times Chairman of the Montreal Board of Harbor Commissioners, and known as the father of the Port of Montreal, which has been erected in Custom House Square, Montreal, was unveiled by Earl Grey, Oct. 4.

F. W. Cowie, Chief Engineer of the Montreal Harbor Commission recently stated that the work on the construction of the new elevator is in such a condition that everything will probably be ready for operation in the spring. The completion of the concrete work has been somewhat delayed owing to the installation of extra machinery for driving the concrete piles, but it will be completed before frost interferes. and during the winter the interior work will be proceeded with.

Ontario and the Great Lakes.

The Dominion Public Works Department has awarded the contract for the lock work on the St. Peter's canal, to W. H. Weller. St. Catharines.

Polson Iron Works, Ltd., launched at Toronto, Oct. 7, a lifeboat of a novel design. It is claimed by the inventor, that it is fireproof, unsinkable and absolutely self-righting.

We are officially advised that the recent press reports, to the effect that Canadian Northern Ry. interests had purchased the Rideau Navigation Co. are incorrect.

The Merchants' Mutual Line steamboat, H. M. Pellatt, which grounded at Iroquois, Sept. 19, was released Oct. 6, and proceeded to Montreal under her own steam.

The Montreal Transportation Co.'s barge Winnipeg, which ran aground in the Rapid du Plat, recently, with 11,000 tons of coal, was released, Oct. 15, without damage.

B. R. Hepburn, M.P., President and General Manager, Ontario and Quebec Navigation Co., stated at Picton, Oct. 8, that a sister vessel to the Geronia would be built in about a year.

The Dominion Public Works Department has awarded the contract for the construction of a breakwater at Port Stanley, at a cost of $210,000 to M. J. Hogan, Port Colborne.

The Ontario and Quebec Navigation Co.'s s.s. Geronia, which had her machinery thoroughly overhauled, had a trial trip, Oct. 8, between Picton and Kingston, when she averaged 16 miles an hour.

The Canadian Northern Ry. has given a site for the erection of a sailors' institute at Port Arthur, Ont. The site has been granted on a 30 years lease, which is renewable. Building will be commenced in the spring.

The Canadian Lake Line steamboat Corunna, which ran ashore on Welcome Island, near Port Arthur, Oct. 6, was lightered and removed to the dry dock for examination and repairs. The damage both to cargo and vessel was slight.

The Inland Lines s.s. Emperor while anchoring in the Canadian canal at Sault Ste. Marie, Oct. 18, rode over her anchor, causing it to tear a hole in her bow, after which she sank, blocking the channel. She was released the next day, and, after temporary repairs were made, proceeded to Midland.

At a meeting of directors of the Richelieu and Ontario Navigation Co., in Montreal, Oct. 4, it was stated that there would in all probability be no change in the constitution of the Northern Navigation Co.'s board before that company's annual meeting, early next year, and it is possible, even then. that no changes will be made.

Coals Transportation Ltd., has been incorporated under the Dominion Companies Act, with a capital of $200,000 and office at Toronto, to operate steam and other vessels, and to carry on a general shipowning and shipping business. The incorporators are J. R. Corkery, J. M. Forgie, E. G. McMillan, H. Riley and W. B. Sturrup, Toronto.

The schooner Azov, laden with lumber, while bound for Sarnia. became waterlogged in Lake Huron, Oct. 24, and capsized near Point aux Barques. The crew escaped in one of the boats. She was owned by J. McDonald, Goderich, and was built at Wellington Square, Ont., in 1866, her dimensions being, length 108.4 ft., breadth 23.7 ft., depth 10 ft.; tonnage, 195 register.

The steam tug Gordon Gauthier, owned in Port Arthur, and which has been engaged in hauling supplies along the north shore for Canadian Northern Ry. construction, was burned at Port Arthur, Oct. 10. She was built at Wallaceburg in 1884. Her dimensions were, length 52.7 ft., breadth 13.9 ft., depth 6.4 ft.; tonnage, 26 gross, 8 register. She was equipped with engine of 24 n.h.p. driving a screw.

The steamboat Joliette, which was sunk some time ago in the St. Clair River, near Sarnia, is considered to be a menace to navigation. It was recently stated that the wreck would be dynamited, but owing to the proximity of the St. Clair tunnel, this is not considered likely. It is reported that the Marine Department has the matter in hand and will shortly call for tenders for the vessel's removal.

G. S. Wright, formerly master of the steamboat, D. A. Gordon, who was recently charged at Toronto, with having obtained his master's certificate by false pretences, and making fraudulent use of same, was acquitted Oct. 5. Judge Winchester expressed the opinion that the false representations, if any, were the result of a misconception of the meaning of the term, mate, as used in the regulations laid down by the Marine Department, and were not intended to deceive.

Sir Robert Perks, who as a member of the firm of MacArthur, Perks & Co., is interested in the proposed Georgian Bay canal, and who was in Canada during October, is reported to have said that he had received an assurance from the Dominion Government that it would act immediately in the matter of financing the work. This work, he stated, will take 10 years to complete, and cost about $150,000,000. Since this statement was made, a change of Government has taken place.

Short tons are tons of 2,000 pounds

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for September, as follows:—Superior, 602.20; Michigan and Huron, 579.63; Erie, 571.53, and Ontario, 244.91. As compared with the average September levels for the past ten years, Superior was 0.69 fe. below; Michigan and Huron 1.35 ft. below; Erie, 0.90 ft. below, and Ontario, 1.32 ft. below. During Oct., it was anticipated that Superior would remain stationary; Michigan, Huron and Erie would fall 0.2 ft., and Ontario, 0.3 ft.

The Detroit & Cleveland Navigation Co.'s steamboat, City of Detroit III., which was launched at Wyandotte, Mich., Oct. 7, is 500 ft. long, over all, breadth molded, 55 ft; breadth over guards, 100 ft.; depth molded, 22 ft.; depth at stem, 29.25 ft.; depth at stern, 25.25 ft.; depth at guard, 21.25 ft. The hull is built of steel with double bottom divided into 11 compartments by water-tight cross bulkheads, extending from the keel to the main deck. The bottom is divided at the centre line and athwartships into 15 water-tight tanks. There are two decks below the main deck and three above, the main deck and the housings on the main deck and orlop deck will also be of steel.

Manitoba, Saskatchewan and Alberta.

The traffic on the Red River, during the season just closing, is reported to have been about four times heavier than last year. The larger increases are in lumber, cordwood, sandstone, gravel and ice. Six barges have been built and put into service during the season.

S. A. Bentley, Athabasca Landing, Alta., who is interested in water transportation in the district, announces that he will operate a vessel next season between Athabasca Landing and Grand Rapids, and that The Pelican, which was running on the river route during the past season, will be transferred to Wabasca.

At a meeting of the dockage and wharfage committee of the Winnipeg city council, Oct. 13, a sub-committee was appointed, representing Winnipeg and St. Boniface, to wait on the Minister of the Interior, on his next visit to the city, with the object of obtaining his consent to the introduction of a bill into the House of Commons, creating a harbor commission for the two cities. The city solicitor is preparing a draft of a bill on the same lines as those creating harbor commissions in the east.

B.C. and Pacific Coast Marine

The C.P.R. s.s. Princess Beatrice, engaged in the coast service, was reported ashore on Noble Island, Oct. 16. The damage is said to be considerable. She was built at Victoria in 1903.

SAVE TIME AND MONEY
ON LOCOMOTIVE REPAIRS

Use Thermit and weld broken frames and mud rings without removing them from the engine. Locomotives can be repaired and returned to service in less than 24 hours.

The Thermit Process is in general use by the principal railways of the United States, Canada and Mexico, and there is nothing experimental about it.

Write for illustrated Pamphlet No. 22-N, which gives full particulars.

BABBITTS. Miscellaneous Brass Castings for Railroads.
Works and Office: 69 DELORIMIER AVENUE, MONTREAL QUE

The Union Steamship Co.'s s.s. Chelohsin, which has been built at Belfast, Ireland, sailed for Vancouver, Oct. 9. It is stated that she will, on arrival, be put on the northern run. On her trials she maintained a speed of 14¼ knots during eight hours, which is above her contract speed.

With reference to the press dispatch, mentioned in our last issue, to the effect that J. C. Gore, Superintendent, C.P.R. British Columbia Lake and River Service, had inspected the steamboats International and Kaslo, controlled by G.N.R. interests, on Mirror Lake, with a view to purchase, we are officially advised that there is no intention on the part of the C.P.R. to purchase any steamboat equipment belonging to the G.N.R. in the district named.

The Dominion Government steam tug Point Grey, practically a sister vessel of the Point Ellice, was launched at North Vancouver, Oct. 10. The machinery which is being installed was made in Great Britain. Her dimensions are, length 110 ft., beam 24 ft., depth of hold 14½ ft. She is equipped with engine having cylinder stroke of 27 ins., and the boiler is 14 by 14 ft. It is intended to utilize her in connection with the dredge Mastodon in the First Narrows, where dredging is proceeding.

The C.P.R. has purchased the s.s. Queen Alexandra, heretofore operated in the passenger service on the River Clyde, Scotland. It is stated that she will be placed on the Vancouver-Nanaimo route in the spring, making two round trips daily. She is now being overhauled and altered at Dumbarton, Scotland, and is expected to leave for Vancouver, towards the end of November. She is a triple screw vessel, equipped with turbines and large double ended boiler. Her dimensions are, length 270 ft., beam 32.1 ft., depth 11 ft.; tonnage, 665 register.

Canadian Northern Montreal Tunnel and Terminal Company, Limited

Notice is hereby given that the Canadian Northern Montreal Tunnel and Terminal Company, Limited, will apply to the Parliament of Canada at its next session for an Act:—

(a) Declaring the undertaking of the Company to be a work for the general advantage of Canada;

(b) Authorizing the Company to construct and operate a railway tunnel from some point in the City of Montreal, thence in a generally westerly direction under Mount Royal, with the necessary approaches and works;

(c) Authorizing the Company to construct and operate lines of railway connecting the tunnel and works of the Company with the lines and tracks of the Canadian Northern Ontario Railway Company, of the Canadian Northern Quebec Railway Company, and of the Harbor Commissioners of Montreal;

(d) Fixing the amount of the securities which the Company may issue in respect of its authorized lines of railway;

(e) Authorizing the Company to enter into agreements under sections 361, 362 and 363 of the Railway Act; and

(f) Providing for the acquirement by the Company of easements in respect of lands affected by its railway tunnel and lines and the granting or making by the Company of lands, interests in lands, or structures in mitigation of damages.

Toronto, October 17th, 1911.

GERARD RUEL,
Chief Solicitor

◆

Ontario and Ottawa Railway Company

Notice is hereby given that the Ontario and Ottawa Railway Company will apply to the Parliament of Canada at its next session for an Act:—

(1) Extending the time within which the Company may commence and construct the line of railway authorized by section 7 of chapter 139 of the Statutes of Canada for 1910;

(2) Authorizing the Company to construct and operate a line of railway from a point at or near Lake Couchiching, westerly to the Georgian Bay; and

(3) Fixing the limit to the amount of the securities which may be issued in respect thereof

Toronto, October 19th, 1911.

GERARD RUEL,
Chief Solicitor

◆

Canadian Northern Quebec Railway Company

Notice is hereby given that application will be made to the Parliament of Canada at its next session for an Act extending the time within which the Canadian Northern Quebec Railway Company may construct and complete the lines, branches and extensions authorized by paragraphs (c), (e) and (f) of section 3 of chapter 73 of the Statutes of Canada for 1907, and authorizing the Company to enter into agreements under sections 361, 362 and 363 of the Railway Act

Toronto, October 19th, 1911

GERARD RUEL,
Chief Solicitor

The Canadian Northern Railway Company

Notice is hereby given that application will be made to the Parliament of Canada at its next session for an Act extending the time within which the Canadian Northern Railway Company (hereinafter called the Company) may commence and construct the following lines of railway:—

(1) The lines of railway authorized by paragraphs (a) to (k) inclusive of section [illegible] of chapter 80 of the Statutes of Canada for 1910;

(2) The lines of railway authorized by paragraphs (e), (g), (i), (k) and (l) respectively of section [illegible] of chapter 92 of the Statutes of Canada for 1908, as renewed by section 6 of chapter 80 of the Statutes of Canada for 1910;

(3) The lines of railway authorized by chapter 45 of the Statutes of Alberta for 1909, in respect of the Alberta Midland Railway Company, which has been amalgamated with the Company;

(4) The lines of railway authorized by chapter 18 of the Statutes of Saskatchewan for 1908-1909, in respect of the Saskatchewan North-Western Railway Company, which has been amalgamated with the Company;

(5) The lines of railway authorized by chapter 41 of the Statutes of Saskatchewan for 1909, in respect of the Saskatchewan Midland Railway Company, which has been amalgamated with the Company.

Toronto, Oct. 19th, 1911.

GERARD RUEL,
Chief Solicitor.

◆

NOTICE.—The Ottawa Northern and Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway extension and branches which it was authorized to construct by section 1 of chapter 84 of the Statutes of 1899, and by section 1 of chapter 72 of the Statutes of 1900, and for other purposes.

Dated at Montreal, this 19th October, 1911.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

NOTICE. The Esquimalt and Nanaimo Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the branches which it was authorized to construct by its Act of Incorporation, chapter 14 of the Statutes of British Columbia, 1884, and by section 2 of chapter 92 of the Statutes of Canada, 1906, and for other purposes.

Dated at Vancouver, this 19th October, 1911.
W. F. SALSBURY,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

NOTICE.—The Manitoba & Northwestern Railway Company of Canada will apply to the Parliament of Canada, at its next session, for an Act:—

1. Authorizing it to construct a branch from a point at or near Harrowby south-easterly and southerly to a point at or near Hamiota, Manitoba;

2. Extending the time within which it may construct the following branch lines of railway:—

(a) From a point at or near Churchbridge to a junction with the Pheasant Hills Branch of the C.P.R. at or near Cutarm Creek, Saskatchewan;

(b) From Theodore to a junction with its Russell Branch in Township 20 or 21, Range 28, West 3rd Mer., Saskatchewan and Manitoba;

(c) From Birtle to Hamiota, Manitoba;

(d) From Russell to a point where Shoal River enters Lake Winnipegosis, Manitoba, and for other purposes.

Dated at Montreal, this 19th October, 1911.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

Canadian Northern Ontario Railway Company

Notice is hereby given that the Canadian Northern Ontario Railway Company will apply to the Parliament of Canada at its next session for an Act:—

1. Extending the time within which the Company may complete and put in operation the lines of railway authorized by section [illegible] of chapter 110 of the Statutes of Canada for [illegible], as renewed by section [illegible] of chapter [illegible] of the Statutes of Canada for [illegible], and the uncompleted portion of the line authorized by section 3 of chapter 50 of the Statutes of Canada for 1895, as renewed by section 3 of chapter 111 of the Statutes of Canada for 1906, and section [illegible] of chapter [illegible] of the Statutes of Canada for [illegible];

2. Authorizing the Company to construct and operate the following lines of railway:—

(a) From near the head of Long Lake, north-westerly to a junction with the National Transcontinental Railway;

(b) From a point in the Township of Chisholm, south-easterly to a point on the Central Ontario Railway.

3. Fixing the limit to the amount of securities which the Company may issue in respect of such lines; and

4. Authorizing the Company to enter into agreements under sections 361, 362 and 363 of the Railway Act.

Toronto, Oct. 19th, 1911.

GERARD RUEL,
Chief Solicitor.

◆

NOTICE.—The South Ontario Pacific Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railways and bridges which it was authorized to construct by section 3 of chapter 85 of the Statutes of 1887, as enacted by section 1, of chapter 92 of the Statutes of 1887, as enacted by section 1 of chapter 92 of the Statutes of 1891, and authorizing it to enter into an agreement with the Canadian Pacific Railway Company, for any purpose specified under section 361 of The Railway Act, and for other purposes.

Dated at Montreal, this 19th October, 1911.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

NOTICE.—The Dominion Atlantic Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway which it was authorized to construct by section 1 of chapter 101 of the Statutes of 1908, and increasing its bonding powers, and for other purposes.

Dated at Montreal, this 19th October, 1911.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

NOTICE.—The West Ontario Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway which it was authorized to construct by section 1 of chapter 178 of the Statutes of 1906, and for other purposes.

Dated at Montreal, this 19th October, 1911.
H. C. OSWALD,
Secretary

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

NOTICE.—La Compagnie du Chemin de fer de Colonisation du Nord will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railways which it was authorized to construct by section 7 of chapter 62 of the Statutes of 1898, and for other purposes.

Dated at Montreal, this 19th October, 1911
H. C. OSWALD,
Secretary

Pringle, Thompson & Burgess
Ottawa Agents

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act,

1. Authorizing it to construct the following branch lines of railway:—

(a) From a point on its Estevan-Forward Branch in Range 10, 11 or 12, west 2nd M., to a junction with the Weyburn-Lethbridge Branch in Range 24, 25 or 26, west 2nd M., Saskatchewan.

(b) From a point at or near Sedgewick southerly to a junction with the Lacombe Branch, in Township 35, 36 or 37, Range 10, 11 or 12, west 4th M., Alberta.

(c) From a point north of the Battle River on the line described in paragraph (b) northwesterly to a junction with the Wetaskiwin Branch in Range 17, 18 or 19, west 4th M., Alberta.

2. Extending the time within which it may construct the following lines of railway:—

(a) From Osborne to a point between Cartwright and Boissevain, Manitoba.

(b) From Otterbourne to Stuartburn, Manitoba.

(c) From a point on the Icelandic River, northerly and northwesterly 100 miles, Manitoba.

(d) From Killam to Strathcona, Alberta.

3. Amending the Statute relating to the company's power to issue four per cent. Consolidated Debenture Stock for the acquisition of mortgage bonds so as to make it apply also to the debenture stock and other securities of any other railway company, the principal or interest of which has been guaranteed by the company, and for other purposes.

Dated at Montreal, this 19th October, 1911.
WALTER R. BAKER,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

◆

A meeting of the British Columbia Shipping Co., Ltd., Victoria, is called for Nov. 3, to consider the liquidator's accounts in connection with the winding up of the company.

The Boscowitz Steamship Co.'s s.s. Venture, which ran on Pender rocks, near the Seymour Narrows, recently, had her repairs completed, Oct. 10, and resumed her service to northern ports the following day.

A. Bassett, District Accountant, Hudson's Bay Co., Victoria, B.C., is reported to have been appointed Manager of the fur trade district and steamship service at Victoria, vice Jas. Thomson, appointed Land Commissioner, Winnipeg.

The Lake Winnipeg Shipping Co. is again applying to the Winnipeg city council for permission to proceed with the construction of a wharf at Water St. Permission was granted for the wharf in the spring, but there were some objections to the wording of the agreement, which stated that the wharf must be, to some extent, a public convenience.

The British ship Egeria, which has been utilized in hydrographic work on the Pacific coast for a number of years, was sold by auction at Victoria, Oct. 9. She was purchased on behalf of the Vancouver Branch of the Navy League, for $6,800. It is the intention of the purchasers to take her to Vancouver, and anchor her in Burrard Inlet, as a training school for seamen.

It is announced that J. H. Welsford, of Liverpool, Eng., President, Union Steamship Co. of Vancouver, who was in Vancouver recently, has acquired a considerable interest in the Boscowitz Steamship Co., and that the two companies will be amalgamated, but that they will be operated under their respective names, as heretofore, with J. Barnsley, Manager, Boscowitz Steamship Co., as Manager of both. The Union Steamship Co. operates the steamships Camosun, Capilano, Cassiar, Cheslake, Comox, Coquitlam and Cowichan, while the Chelohsin, recently built at Belfast, Ireland, is now en route to Vancouver. The Boscowitz Steamship Co. operates the steamships Vadso and Venture, all in the coasting trade.

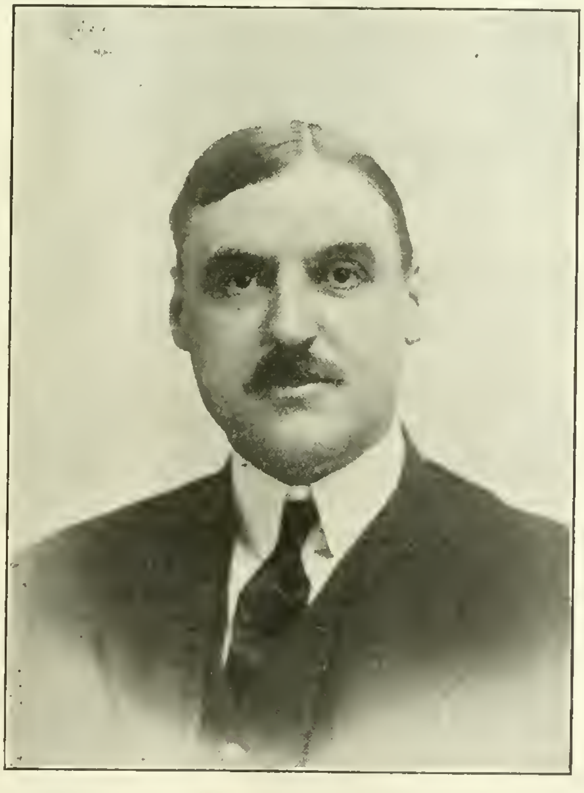
INTERCOLONIAL RAILWAY ROUNDHOUSE PRACTICE.

By Frederick H. Moody.

Every organization of importance is operated on a systematic basis, each of the many systems in use being the outcome of years of experience in the devising of ways and means of handling the routine work to the best advantage. At the same time, these systems are usually of sufficient flexibility to be capable of meeting all or any of the numerous exigencies that arise in the daily practice of any art. Railways in particular have developed systematic business methods, probably to a greater degree than have the majority of business organizations that are more or less centralized. The outlying character of railway systems makes this possible.



Grant Hall,
Assistant General Manager, Canadian Pacific Railway
Western Lines.

As a unit, the railway organization comprises a systematic arrangement of branches that work harmoniously as a whole. Segregated, these branches contain minor sections, or wheels within wheels, so to speak, each in itself an organized unity. In the mechanical department of a large railway system there are numerous minor branches, one of the most important of which is that pertaining to the roundhouse, for it is upon this pivot that the whole operation of the system centres. It is here that the care and attention necessary to preserving the motive power in good order, is taken; in other words, it is the focal point of actual movement on the railway lines.

As an example of railway system as applied to roundhouse practice, the Intercolonial Ry. roundhouse at Moncton, N.B., has been selected as a good sample of what is being done by the Government system. This particular roundhouse was not selected because of its being the best on that line, for such is not the case, but because of the fact that it is the centre of the system, and handles more locomotives than any other point. These considerations in themselves, however, are immaterial, as the same routine system applies to all the roundhouses from Montreal to Halifax, St. John and Sydney. The Moncton roundhouse is in charge of C. White, Day Roundhouse Foreman, to whom the writer is indebted for the material contained in this article.

The locomotive, on the completion of the run, after being disconnected from its train, is taken by the engineer to the ashpit to have the fires drawn. Here, the engineer releases his charge, turning it over to the roundhouse hostler for further care between that point and the roundhouse. The hostler, with the ashpit men, cleans the ashpan, draws the fire and coals the tender.

The coaling station and ash combined at the Moncton roundhouse, and are of such a unique design that the arrangement will be briefly described, although it is foreign to the subject under treatment. The arrangement consists essentially of an elevated coal bin structure with a ground space about 20 ft. wide between the tracks. On each side of this coal tower there are two tracks, the inner one of each having an ashpit. Outside these double tracks are enclosed supports carrying a superstructure attached to the coal bin. Each of these outside supports carries an ash bin. Passing under the coal bin and four tracks, and running up through one of the outside enclosed supports, across the top of the superstructure and down the other outside support, there is a slowly moving chain of coal buckets, driven by a small engine in the tower. The ashes dropped from the locomotive ashpan into the pit may be further dropped into the chain bucket tunnel and carried up into the ash bin by the travel of the buckets. The ash bin may be unloaded by a gate in its bottom. Coal is unloaded from drop-bottom cars into the same tunnel through openings under the outer of the two outside tracks. Of course, these operations do not occur at the same time. The coal, being raised in a like manner to the ashes into its bin, is drawn again from a chute on to the tender. The bucket mouth of the chute holds just one ton, by which the quantity of coal drawn off is roughly measured.

The locomotive with ashes and fire drawn and re-coaled, is run into the roundhouse by the hostler. Sufficient steam is left in the boiler for this purpose. The turner at the roundhouse table sets the table for the track decided upon, and, having had the hostler run it in, proceeds to a board where the section in which the locomotive has been placed is noted. This board is divided into three sections corresponding to the roundhouse sections, and under the required one the locomotive number is placed.

Meanwhile, the engineer, after leaving his locomotive on the ashpit, proceeds to the office, where an engineer's report book is kept. The engineer is responsible for all the paraphernalia and parts of the locomotive above the running board, and if any defects are noticed at any point it is his duty to make a report covering his observations in the report book. As illustrative of this, and the method followed, an example has been selected from the report book. This book has several columns covering the two opened pages.

The first three columns contain the date, locomotive number, and engineer's report, calling for repairs or examination, followed by his signature. Thus:

> "Oct. 19. 276. Pack air end of pump; examine left tender feed hose, as it doesn't appear to be getting sufficient water; grind left boiler check; make sand to work on right side; and blow out tubes.
> "T. W. McBeath."

This report, as left by the engineer, is looked up by the machine foreman, who details the necessary mechanics to attend to this work. The next column is therefore left for the report of these workmen on the completion of their respective tasks. As for example:

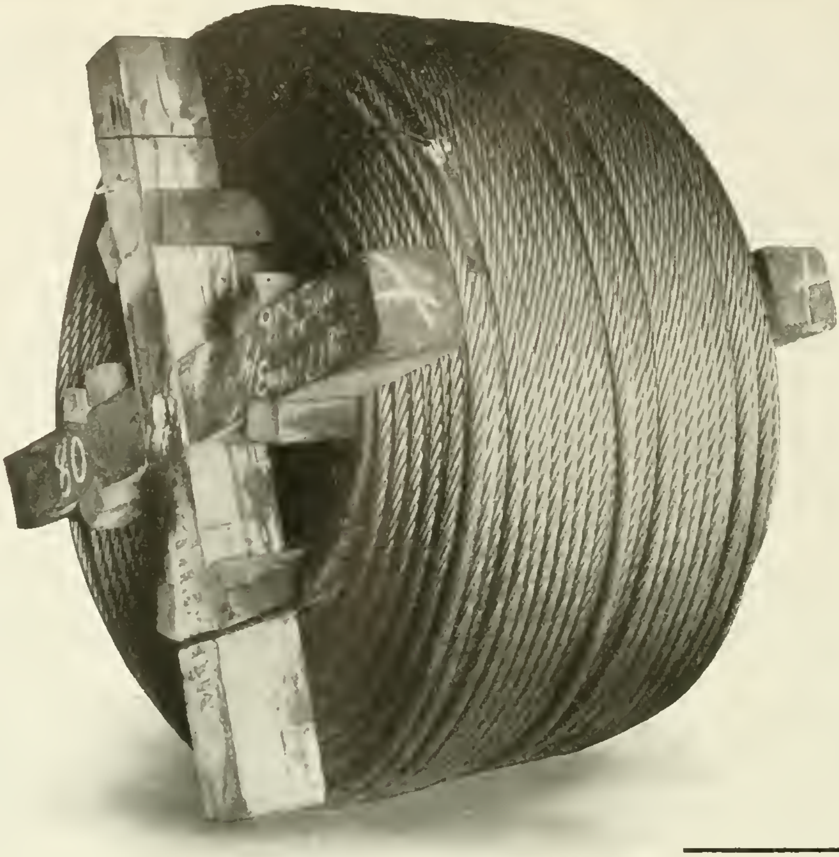
> "Air end of pump packed. Oct. 19.
> "Millish and Anderson."
> "Tender feed examined. Oct. 19.
> "Hines and Parkinson."
> "Sand box and traps cleaned. Oct. 19. "Anderson and Millish."

While the repair work on the faults discovered by the engineer is being performed, the roundhouse inspector sets to work to thoroughly overhaul the locomotive for any detectable flaws. The engineer being responsible for all above running board, the inspector only examines the part below, going thoroughly over the wheel and outside parts, and finally working underneath to the running gear. Any defects are noted in the next column of the book, as, for example:

> "Oct. 19. 276. Tighten left beading and trailing wedge bolts; overhaul and level grates; tighten tail-casting bolts in tender.
> "J. McClintock."

Following this there is a column for the reports of the mechanics set to do these tasks, different pairs being assigned to the locomotive and tender to specialize their duties:

> "Work done. Oct. 19.
> "McKenzie and Fram."
> "Work done on tender. Oct. 19.
> "Hines and Parkinson."



"Dominion" Wire Rope

"The Rope of Quality."

The Quality of a wire rope depends upon the class of wire used in its construction and the way this wire is stranded together. All our ropes are made from the best quality of imported wire, specially drawn to our own specifications. Our years of experience enables us to specially prepare wire ropes for every possible rope condition, which will give the very best results and will suit the most severe tests.

Wire Rope of every description for Elevators, Mines, Coal Hoists, Ore Hoists, Conveyors, Derricks, Steam Shovels, Dredges, Logging, Ballast Unloaders, Etc.

We have all sizes in stock, supplied in all lengths. Special rope made to order.

Blocks, Clips, Thimbles, Hooks, Turnbuckles, Etc.

THE DOMINION WIRE ROPE CO., LIMITED, MONTREAL

In addition to this inspection by the roundhouse inspector, a boilermaker looks over every boiler, both internally and externally, after each trip. Every 14 days the boilers are thoroughly washed out and all the staybolts tightened.

Fig. 1. Locomotive Engineer's Requisition Blank on Storekeeper for Run Supply.

With the roundhouse attention given the locomotive as outlined in the above, Intercolonial freight locomotives will run 80,000 miles, and express locomotives 100,000 miles before requiring complete overhauling. About the time half these mileages are completed, however, the locomotives are called in to the shops for what are termed "specific" repairs, which include the replacing of such parts as tires, piston rods, and similar members that are subject to proportionately greater wear than are other parts of the locomotive.

The locomotive after this roundhouse attention is ready for its next run. Alongside of the board mentioned earlier, on which the locomotive locations are listed, there is another board containing three columns: locomotive, train and hour of departure. The engineer, knowing his particular train or run, when he reports for duty, ascertains the locomotive to be used by consulting this board, which is kept posted by the roundhouse foreman. The authority of the latter comes from the traffic department, which advises him of the number of cars to be hauled, giving him a means of selecting the locomotive most suited to the purpose.

The sundry stores required by the engineer have been computed for every run on the system, so that each engineer is kept within a certain allowance. This schedule of stores for the runs is posted in the foreman's office. The engineer, knowing his run, jots down the stipulated quantities on a form provided, as shown in fig. 1. This slip is handed over to the storekeeper in exchange for the supplies.

The locomotive is watered in the roundhouse, and being previously coaled, is ready for its run. Consider the same run as that previously dealt with—from Moncton to Springhill Jct. and return. When Springhill Jct. is reached, the coal supply will require replenishing, which is accomplished at the Springhill Jct. coal chutes. As a check on this, a slip such as that shown in fig. 2 (where two are illustrated) is made out and handed to the station agent. This slip (no. 1) the station agent signs and forwards to the fuel agent at Moncton for the latter's records. Similarly, on return to Moncton, the locomotive is re-coaled, and while the engineer does not use this particular coal, nevertheless, on account of that taken out at the beginning of the run, he is held for this amount, and slip no. 2, fig. 2, made out, and as there is a coal foreman there, it is given to him to sign and forward to the fuel agent.

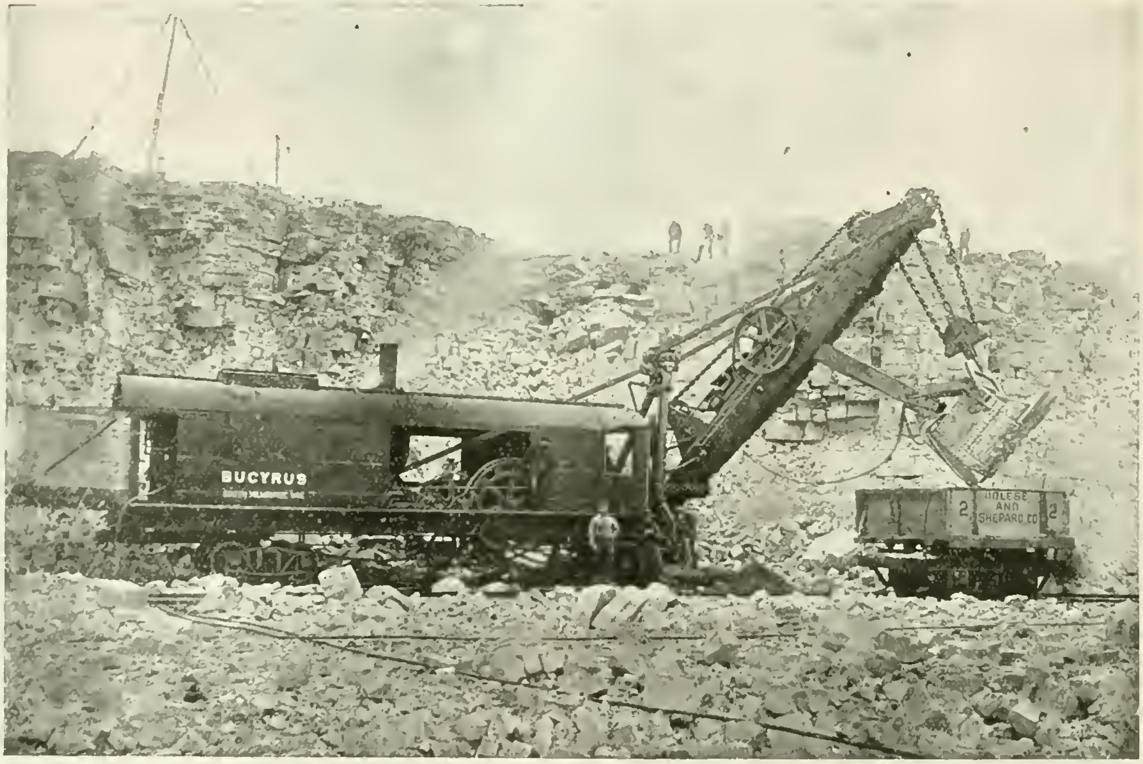
Fig. 3. Locomotive Engineer's Report Sheet containing Essential Features of the Run.

Formerly, another stub was attached for the engineer's own use, but now another more complete form, one of which is shown in fig. 3, is used for that purpose. Reference to this sheet will show that a very complete record of the run is contained on this report. In this particular case it was not one

BUCYRUS
STEAM SHOVELS

Built by THE BUCYRUS CO., South Milwaukee



For heavy cuts and hard digging

USE BUCYRUS SHOVELS

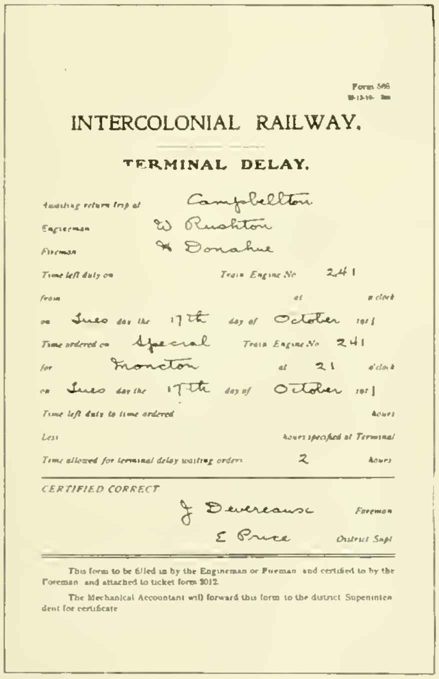
They stand right up to the work

MUSSENS LIMITED

Montreal	Toronto	Cobalt	Winnipeg	Calgary	Vancouver
318 St. James St.	73 Victoria St.	Opp. Right of Way Mines.	250-261 Stanley St.	Semis Block	Mercantile Bldg.

of the regular passenger, mixed or freight trains designated by the numerals 1, 2, and 3, but an extra freight. It might also have been cab (caboose), work, push, help or light, according to conditions. The stations are filled in, also the mileage return, and the coal taken on at terminals. The advertised time and actual time (the same in this case) are next filled in, followed by time of arrival back at point of departure.

As the most important function of this engineer's report sheet is to furnish the motive power department with an accurate knowledge of the locomotive mileage, particular attention is paid to that part of the report. Special instructions relative to the proper classification of the mileage are printed on the back of the report sheet, and being instructive from the standpoint of just how this railway arrives at its locomotive mileage, these instructions are given in full as follows:



Form 598

INTERCOLONIAL RAILWAY.

TERMINAL DELAY.

Awaiting return trip at Campbellton

Engineman W Rushton

Fireman H Donahue

Time left duty on *Train Engine No* 241

from *at* *o'clock*

on Tues *day the* 17th *day of* October 1911

Time ordered on Special *Train Engine No* 241

for Moncton *at* 21 *o'clock*

on Tues *day the* 17th *day of* October 1911

Time left duty to time ordered *hours*

Less *hours specified at Terminal*

Time allowed for terminal delay waiting orders 2 *hours*

CERTIFIED CORRECT

J Devereause *Foreman*

E Price *District Supt*

This form to be filled in by the Engineman or Fireman and certified to by the Foreman and attached to ticket form 2012.

The Mechanical Accountant will forward this form to the district Superintendent for certificate

Fig. 4. Terminal Delay Slip used when waiting over before Return Trip.

"When a train is handled by one locomotive only, the mileage of that locomotive between stations is classifiable as 'Train.' This train mileage represents the miles over which the traffic is hauled as distinguished from the locomotive.

"Mileage of a locomotive which starts on a trip with caboose, for the purpose of hauling traffic to the end of its run, is classified as 'Train'; if incidental to the run, the locomotive makes part of the run between as described, with caboose only, the mileage should be classified as 'Train' also.

"When a locomotive runs dead-head from one lay-over point to another, hauling caboose only, such mileage is to be classified as 'Freight with caboose only.'

"When a train is divided—the locomotive proceeding with a portion of the train and returning 'Light' for the remaining portion—the mileage while hauling first section is to be classed as 'Train'; while running without attachment to be classed as 'Light'; while hauling remainder to be classed as 'Helping.'

"The mileage of a 'Helping' locomotive while running 'Light' to be classed as 'Light' under 'Passenger,' 'Freight,' or 'Mixed,' according to the service necessitating the run.

"Work includes mileage of engines hauling of track construction material, picking up wrecks, running snow-plough, clearing and hauling snow; also service of engine and enginemen hauling pay train, and special non-revenue trains, etc.

"The classification should show the actual miles made by the locomotive without reference to the time for which the enginemen are to be paid.

"Shunting engines should be allowed mileage at the rate of six miles per hour, that is, a locomotive shunting for ten hours should be shown in column headed 'Shunting' as having run sixty miles, and specified as 'Passenger' or 'Freight,' as the case may be.

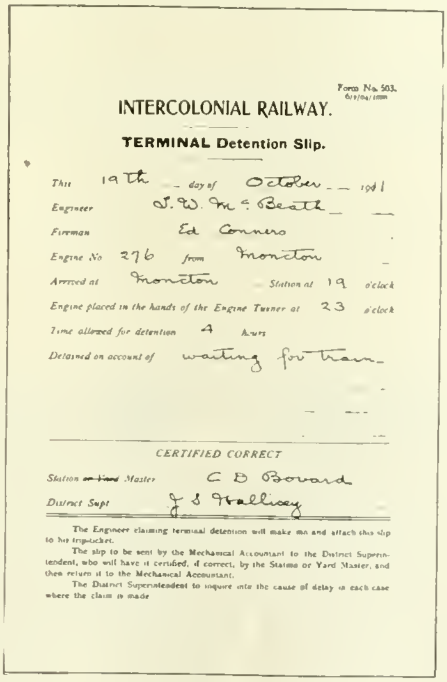
"No allowance shall be made for shunting of a road locomotive between terminals, that is, an engine running between Moncton and St. John should show no mileage for any time which may have been made at any way points shunting cars into or out of the train."

The above instructions thoroughly cover the I.R.C. classification of mileage. It is from this that the engineer knows the proper column to mark down the mileage.

The time allowance is based on the ruling that 100 miles constitute a 10-hour run for this class of traffic. This means 1¼ days allowance for the 130-mile run. The time allowance gives the engineer 1¼ days' pay, even if the run were made in less than this specified time; that is to say, there is a certain minimum pay for a given run. Should the time exceed that allowed, extra pay is given—in this case for 5 hours.

The Moncton roundhouse foreman (night, in this case) signs at time of departure, and also does likewise on return.

At the bottom of the forms, space is provided for sundry remarks concerning the trip. This form, filled in with actual operating information from a run, gives an idea of the operation of the system. This completed card is forwarded to the motive power department and there entered into the locomotive record book, which, of course, is out of the scope of this article.



Form No. 503.

INTERCOLONIAL RAILWAY.

TERMINAL Detention Slip.

This 19th *day of* October 1911

Engineer J. W. McBeath

Fireman Ed Conners

Engine No 276 *from* Moncton

Arrived at Moncton *Station at* 19 *o'clock*

Engine placed in the hands of the Engine Turner at 23 *o'clock*

Time allowed for detention 4 *hours*

Detained on account of waiting for train

CERTIFIED CORRECT

Station ~~or Yard~~ Master C D Bovard

District Supt J S Hallisey

The Engineer claiming terminal detention will make out and attach this slip to his trip-ticket.

The slip to be sent by the Mechanical Accountant to the District Superintendent, who will have it certified, if correct, by the Station or Yard Master, and then return it to the Mechanical Accountant.

The District Superintendent to inquire into the cause of delay in each case where the claim is made

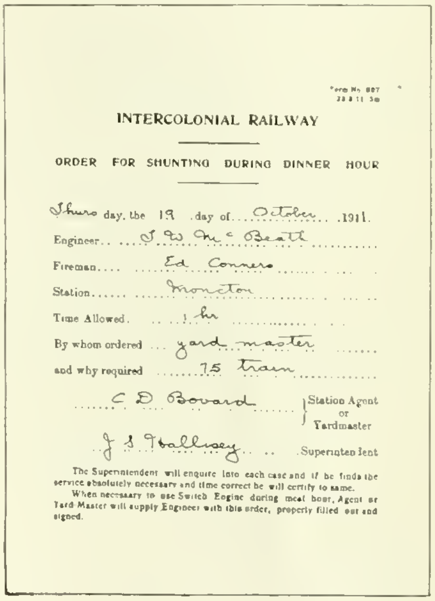
Fig. 5. Terminal Detention Slip for use when Detained under Orders.

The forms shown in figs. 4, 5 and 6 are others used by the engineers under different circumstances. That in fig. 6, the terminal delay form, is used when an engineer, having completed half of a return trip, is delayed for any considerable period before the train he is to take is made up. In fig. 4, Engineer Rushton should have left Campbellton on the return half of his run at 21 o'clock, but on account of delay, he was held at Campbellton for 2 hours before his train was ordered out. No allowance is made for such terminal delay unless the period of delay exceeds 10 hours.

The terminal detention slip in fig. 5 is intended to meet a different kind of terminal delay. In this case, the train has been made up and is under orders, but has to wait four hours to let a train pass. In this case, four hours detention is allowed. The same slip is used when the engineer, after leaving his train, is blocked in the yard and prevented from reaching the ashpit, where he leaves the engine.

There is also a slip, corresponding to the shop overtime slip, shown in fig. 6. It is used when it is necessary to have the switching engine in operation during meal hour. All these three last described slips are handed in to the roundhouse foreman, as were the others.

This system would appear to be quite complete, and all that could be desired. As a means of exchanging ideas it would be well if officials of other roads—or of this road—would make comments on the system in order that its good and bad features might be discovered. A description of other systems would likewise be appreciated, that a comparison might be drawn. The discussion that would ensue would doubtless prove of value to all. Any communications on the subject will be appreciated by The Railway and Marine World.



Form No. 807

INTERCOLONIAL RAILWAY

ORDER FOR SHUNTING DURING DINNER HOUR

Thurs day, the 19 day of October 1911.

Engineer J. W. McBeath

Fireman Ed Conners

Station Moncton

Time Allowed 1 hr

By whom ordered yard master

and why required 75 train

C D Bovard Station Agent or Yardmaster

J S Hallisey Superintendent

The Superintendent will enquire into each case and if he finds the service absolutely necessary and time correct he will certify to same.

When necessary to use Switch Engine during meal hour, Agent or Yard Master will supply Engineer with this order, properly filled out and signed.

Fig. 6. Order issued to Locomotive Engineers for Shunting during Meal Hour.

◆

Train Rule Examinations Made Easy is the title of a 234 pg. book, 4 by 6½ ins. by G. E. Collingwood. It is a complete treatise on train rule instructors, superintendents, trainmasters, conductors, enginemen, brakemen, switchmen, train dispatchers, operators and others, and deals with the American Railway Association's standard code of train rules. The text is divided into three parts, of which the first explains the meaning of the rules, being really a rewriting of the subject matter of the code in the form of a connected exposition. The second part presents a set of examination questions designed to completely cover the code. Answers to the questions are given separately in the pages following. The standard code is reprinted as the third part of the book. The text is followed by about 25 pages of diagrams showing hand, flag and lamp signals and train signals. The book is published by the Norman W. Henley Co., New York, at $1.25 and can be obtained through the Railway and Marine World's book department.

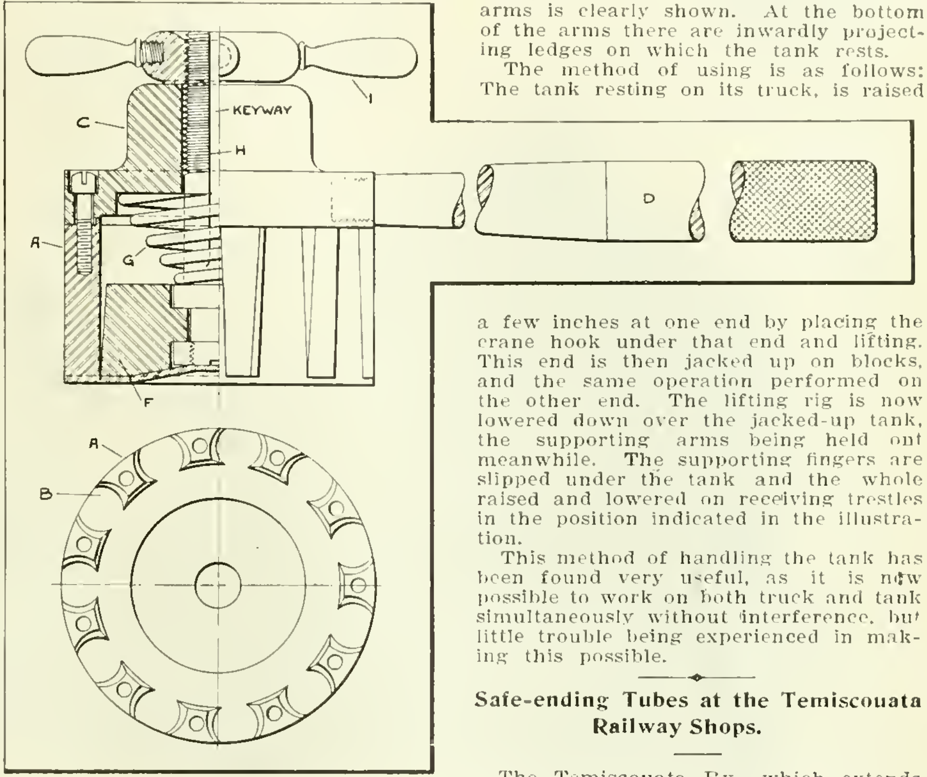
PRESIDENT

Triple Valve Bushing Roller used by the Pere Marquette Rd.

The accompanying illustration shows a triple valve bushing roller as used at the Pere Marquette Rd. shops at St. Thomas, Ont. A glance will show that it closely resembles the usual flue expander of the roll type, only in this case the roller is better designed, with the object in view of giving a more uniformly distributed radial pressure while rolling the bushing of the triple valve into place.

The main part of the roller is the body A, in which are 11 longitudinally converging tapered holes containing correspondingly tapered pins that fit loosely. The holes are made longitudinally converging in order that the outer surface of the rollers might be parallel with the centre line of the roller body. This body A is attached by cap screws to a top C, the latter having a handle D, by which the device is manipulated. Inside the body A, there is a tapered part F, up against which the rollers bear on the inside. This part F is kept normally in its lower position by the spring G. Bolt H with a loose connection in F, raises the latter by the handwheel I, thereby forcing out the rollers for rolling. A keyway in the bolt H keeps the latter from revolving with the wheel I. The size shown is for rolling 3½-inch bushings.



Triple Valve Bushing Roller.

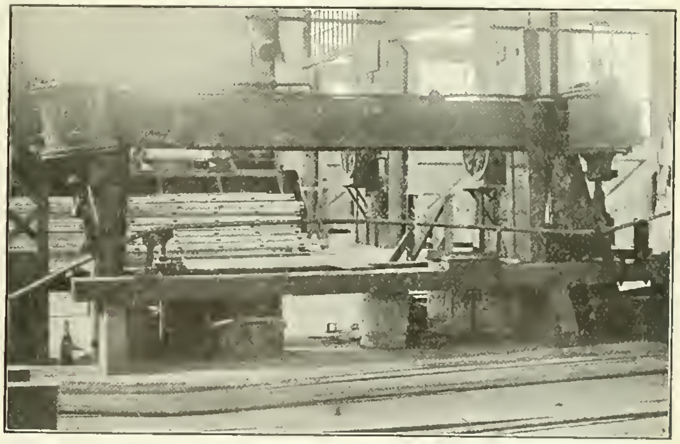
◆

Bending Truss Rods at C.P.R. Angus Shops.

The truss rods commonly used under freight cars are formed from round bar stock, each having an end threaded right hand with the other ends which engage in the turnbuckle, threaded right and left hand respectively to give the draw. These truss rods have two bends of a few degrees—at the outer end, to pass horizontally through the end sill, and inner end, to pass horizontally toward the centre, where they are tightened up by the turnbuckle. The bends occur at the truss rod posts placed on top of the body bolster and under needle beams.

Many ways have been employed for giving these bends to the rod, one of the principal of which, where but few rods are to be bent, is to use the bulldozer, with forms for the purpose, bending cold. Many other methods are familiar to those engaged in this work.

At the C.P.R. Angus shops, Montreal, in the freight car department, of which N. Pierson is foreman, a simple but effective device is employed for the purpose. Referring to the accompanying illustration, the device is mounted on heavy scantling located between two of the erecting tracks. To the upper beam of the supporting frame two old air cylinders are attached a distance apart equal to the distance between bends. On the table of the frame there are three knife edges, the outer located a little further apart than the distance between bends. The plungers in the air cylinders have formed ends to fit on the rod, so that when the air is turned on, a correctly bent truss rod results. Air is controlled by the valve on the top of the upper cross beam. A three-way connection leads to each end, so that both cylinders operate simultaneously.



Rig for Bending Freight Car Truss Rods.

Crane Attachment for Raising Tanks.

Crane Attachment for Tanks at Intercolonial Ry. Shops.

In the I.R.C. boiler and tank shop at Moncton, N.B., a very useful attachment is used for lifting tender tanks bodily from their trucks. As the illustration shows, the supporting cross member of the attachment is a heavily ribbed steel casting designed to support a much heavier load than that to which it will be subjected in practice. This cast cross beam has a straddling link at the centre which slips over the crane hook.

Pendant at each end of the cross beam there are two supporting arms built up of structural shapes. The connection between beam and supporting arms is through a pair of links at each end, thereby leaving the supporting arms free to be swung out or drawn straight out. The construction of the arms is clearly shown. At the bottom of the arms there are inwardly projecting ledges on which the tank rests.

The method of using is as follows: The tank resting on its truck, is raised a few inches at one end by placing the crane hook under that end and lifting. This end is then jacked up on blocks, and the same operation performed on the other end. The lifting rig is now lowered down over the jacked-up tank, the supporting arms being held out meanwhile. The supporting fingers are slipped under the tank and the whole raised and lowered on receiving trestles in the position indicated in the illustration.

This method of handling the tank has been found very useful, as it is now possible to work on both truck and tank simultaneously without interference, but little trouble being experienced in making this possible.

Safe-ending Tubes at the Temiscouata Railway Shops.

The Temiscouata Ry., which extends 113 miles southerly from Riviere du Loup, Que., to Connors, N.B., near the Maine border, passing Temiscouata Lake and tapping a good portion of the big game district of New Brunswick, naturally has not a very heavy traffic, its freight for the most part consisting of lumber, which is plentiful along the line. The tractive rolling stock of the line comprises nine locomotives, a sufficient number to handle all the traffic. The shop at Riviere du Loup, under W. J. Walsh, Master Mechanic, usually has one of these locomotives dismantled for repairs, the locomotives successively undergoing this shopping.

Such conditions scarcely warrant much special machinery; this applies especially to the forge shop, where only one blacksmith and helper are employed. The few tubes to be safe-ended do not call for special semi-automatic machines such as are found in many shops. However, much ingenuity has

been used in devising ways and means of doing the necessary work, and it may safely be said the work as done here is of a very superior character, even though not produced very expeditiously.

The tubes, as removed from the locomotive boiler, are carried to the blacksmith shop in an adjoining building. One of the bad ends of each tube is removed by the aid of the hand pipe cutters commonly found in small pipe shops. This squared end is then heated to a forging heat in an old-fashioned bellows forge fire, following which it is swaged to a taper end by forging on the horn of the anvil with a light blacksmith hammer. The safe ends are cut from a long tube in an engine lathe and brought to the blacksmith shop. Mr. Walsh proposed flaring this safe end to create a better initial fit between tube and safe end, but the blacksmith claimed better results could be obtained by leaving the end of the safe end squared.

The safe end is next slipped on the taper end of the tube and the point of juncture placed in the forge fire; it is here that the welding takes place. When the two parts are heated to a welding heat, the helper gives the safe end a blow with his heavy hammer, driving the safe end up on to the tube, this operation uniting the parts into a good weld. The most interesting part of the operation follows. The blacksmith, with a light hammer of about ¾ lb. weight, and having a handle about 2 ft. in length of ¼ in. iron, strikes the protruding seam repeated light blows while the tube is still in the fire, turning it meanwhile so that all parts of the pipe may receive like treatment. This completes the weld, and when withdrawn from the fire the seam is barely perceptible. A sizing iron of the minimum inside diameter of the tube is next entered into the tube, and if tight, is driven in to give the tube the correct size; this is seldom required. At the same time the blacksmith scrapes away the scale, so that any flaws might be detected.

The tube thus treated is stood vertically on its bad end to cool. Following this, the bad end is removed to the required length by the hand pipe cutters, the same as the other bad end. The tube is then ready to be put back in the boiler.

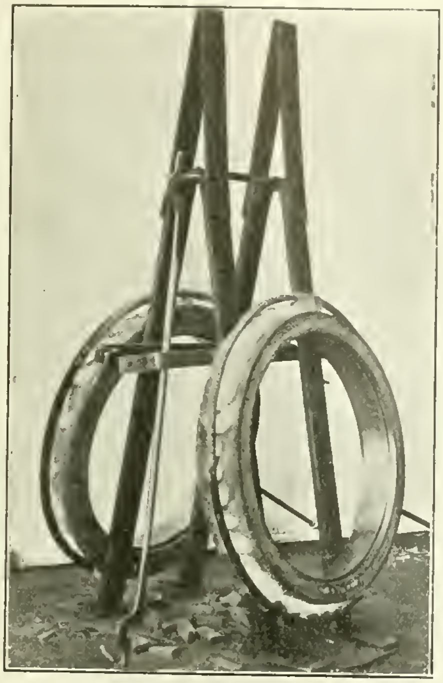
This operation, while slow, gives excellent results, and should appeal to the master mechanics of small lines where the volume of repairs is light.

◆

Press reports from Ottawa, Nov. 10, stated that the C.P.R. was in negotiation with the Government for the purchase of the Government peat plant at Alfred, Ont., with the view of continuing the industry on commercial lines, to supply Montreal, in particular, with peat fuel.

Stand for Heating Tires at Intercolonial Ry. Shops.

A very convenient stand for heating locomotive and other tires which is used at the I.R.C. shops at Moncton, N.B., is shown in the accompanying illustration. The tires, instead of being laid on their edges, with an encircling heating hoop, are stood on edge, as indicated, the construction of the supporting projections being such as not to interfere with the proper heating of the rim, the tire resting on its flange. In place of fuel oil, gasoline is used for the heating medium, this being found more satisfactory, producing no smoke, and leaving no dirt, as is customary with fuel oil. These considerations are necessary in this particular case, as all the heating and mounting is performed in the locomotive shop and not in an outbuilding, as is frequently done.



Stand for Heating Tires.

On being heated, the gasoline is turned off and the hoops removed. The tires, which, as noted, are heated in pairs, are lifted individually to the prepared axle and wheel centres on a trestle. A special lifting arrangement on a jib crane is used. This consists of a hook arrangement, with an upwardly projecting sharp point, which is placed inside the wheel on the shrinking surface. Being lifted on this point hook to the awaiting centres, no obstacle is presented to the free slipping on of the tire, the hook being withdrawn when the tire is started.

The stand is of sufficient size to accommodate all sizes of tires for drivers or truck wheels. The stand also forms a support for holding the distance gauge. Altogether, it makes a very neat and compact arrangement.

◆

Renewing Air Hose at the Michigan Central Ry. Shops, St. Thomas.

Each shop has its own method of doing the routine work that falls to its lot. One of the commonest of these jobs is the renewing of old hose, removing the old section and using the same connections on a new piece. The use to which the hose has been put through its period of usefulness is such that the parts of the connections become very materially rusted. This is particularly the case with the clamps that secure the connection to the hose. So rusted are the holding bolts that they are of no further use for new hose. Thus, nothing would be gained by unscrewing the nut off the bolt, making it cheaper to cut it in two instead, and then simply spread the clamp to slip the hose out.

The device for cutting the bolts at the M.C.R. shops at St. Thomas, Ont., is shown in fig. 1, the idea having been taken from the Pere Marquette Rd. shops, where a similar device is in use. A vise-like structure has a knife-jaw A solid with the frame, and a similar knife-jaw B movable with respect to the other jaw, as in a bench vise. The movable jaw is actuated by a plunger in the air cylinder C. In use, the bolt to be cut is held up against the knife edge of jaw A. Air is then turned on full in cylinder C, which causes knife-edge of jaw B to give a heavy chisel blow on the bolt, which, if repeated a couple of times, severs the bolt, removing it from the clamp. The stationary jaw may then be used as an anvil on which to hammer the jaw for spreading the bolt-connecting surfaces to facilitate removal. On the completion of this the hose connection may be held between the knife edges by bringing the two together gently on the connection in this position, twisting off the hose from the connection.

Both connections being removed, they are taken to a device of the form indicated in fig. 2. This mechanism is not a new one, for it is quite extensively used; but as there are some shops where its use is still unknown, a description of it is being included in this article. The coupler connection is laid in a stationary casting A, shaped to receive it, and holding it central with the rest of the device. The train-line connection is held

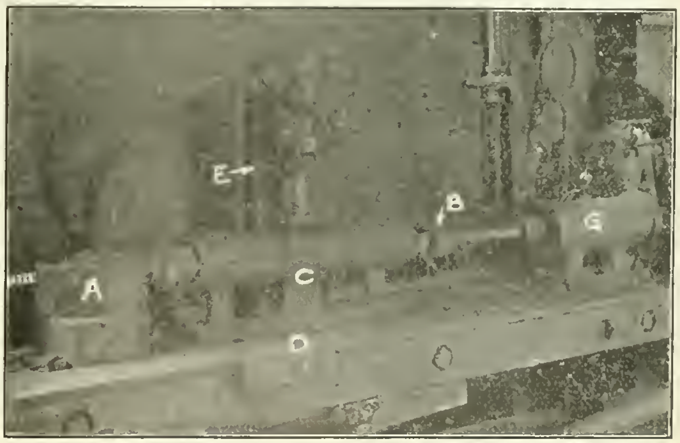

Fig. 2. Forcing on New Hose End Connections.

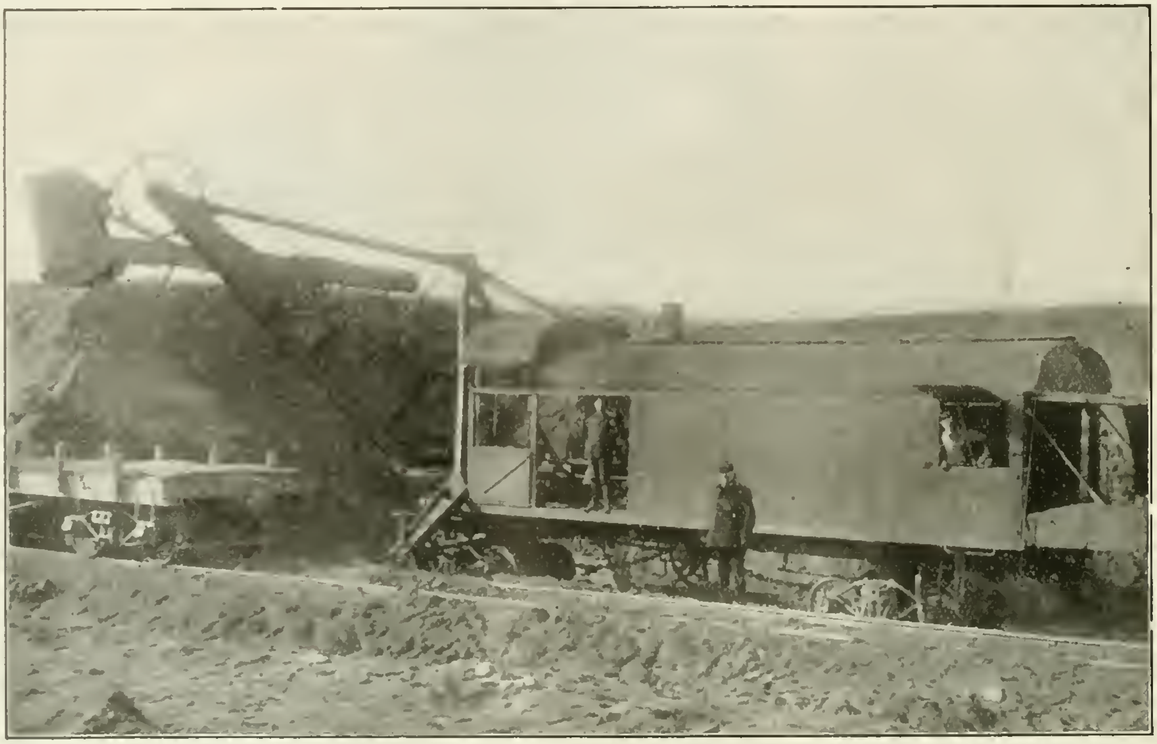
ATLANTIC STEAM SHOVELS



CLASSY 45-16-2½ ATLANTIC SHOVEL.

ECONOMY IN OPERATION

Reduction in friction and boiler losses, with corresponding increase in pull at dipper, is the reason why the Atlantic shovel digs more at less cost than shovels of the chain type.

Wire rope hoist, found only in the Atlantic, exerts a direct pull on the dipper and substitutes friction of a rope with but one large sheave for that of a chain with from four to six additional small sheaves. The less power lost in the machine itself, the more you have left for digging.

Further economy in operation is secured by using a large boiler of the locomotive type, in which more of the heat is utilized and less is lost up the stack. This is possible only because of the removal of the hoisting engines from their usual position on the car body, to the boom.

The placing of the main hoisting engines at the foot of the boom reduces the power necessary for swinging the boom and removes the twist upon the car body when working on one side. With this construction the turntable centre and boom foot constitute the engine frame. One casting takes the place of four or more in the usual construction, reducing the total weight of the shovel, and the weight on the front trucks.

Spare parts are kept on hand at our Works at Longue Pointe, Montreal, Canada. Every part is made to gauges, and sure to fit.

MONTREAL LOCOMOTIVE WORKS, LTD.

OTTAWA BANK BUILDING, MONTREAL, CANADA

on the end of an air piston rod, as at B, in line with the other connection at A. The piece of hose is placed in the form C, and over the ends of the piece of hose the clamps are slipped. The lower section of C is free to slide lengthwise on the bed D. Integral with form C is the upright E, to which cylinder F is attached. The upper half of form C is held on the end of a plunger in F, and by releasing the valves shown, this upper half may be clamped down tightly on the piece of hose, holding it securely.

The hose being securely held in C, the plunger in cylinder G is set in motion, simultaneously pushing the connections held in A and B into the ends of the hose. C is made movable on base D to allow for this movement for introducing the end at A. In this position the clamps at each end are tightened up with bolts, leaving the hose ready for use when the two plungers are released.

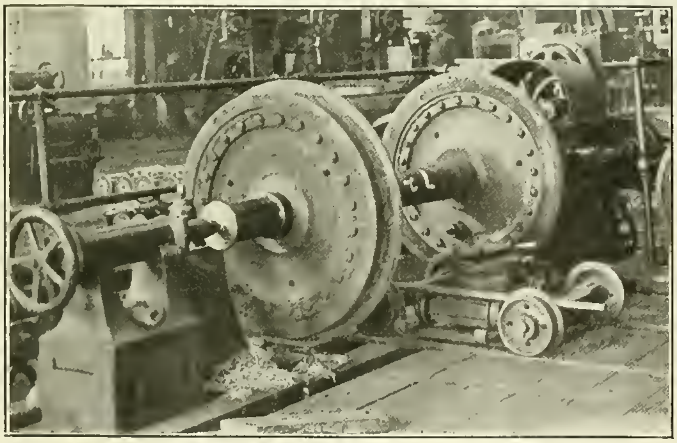
Arrangement of old Carwheel Lathe at C.P.R. Angus Shops.

In the newly erected tender department at the C.P.R. Angus shops, Montreal, there is a tender wheel section where many ingenious methods of doing work are employed. Among these is one in particular—the excellent arrangement of an old carwheel lathe for finishing up the old carwheels. Different from modern wheel lathes, into which the assembled wheels and axle are easily rolled, this old machine is of the standard engine lathe type, elevated from the ground in the customary manner. This gave a very unhandy arrangement for setting up the wheels in the lathe.

To overcome this difficulty, when the new shop was built, a pit a little longer and about twice as wide as the lathe base was constructed of concrete in the desired location in the shop. This pit was made a depth equivalent to the height of the lathe ways, making these latter flush with the floor. This arrangement is indicated in the accompanying illustration, which is a rear view, not showing the space in front of the lathe for the operator. The side and the ends have a pipe railing for protection. From the rear, a couple of strips of iron running on to the lathe bed serve as tracks for the little car indicated. This car also has a smaller truck on it, giving an endwise adjustment. This smaller truck has attached to it a small air cylinder and plunger, connected by flexible hose to the air line. The wheels to be machined are run into location over this truck in the rear of the lathe, the plunger raised lifting the wheels, and the whole device is then run into location, quickly centreing the axle in the lathe. This gives an excellent arrangement for an old machine.

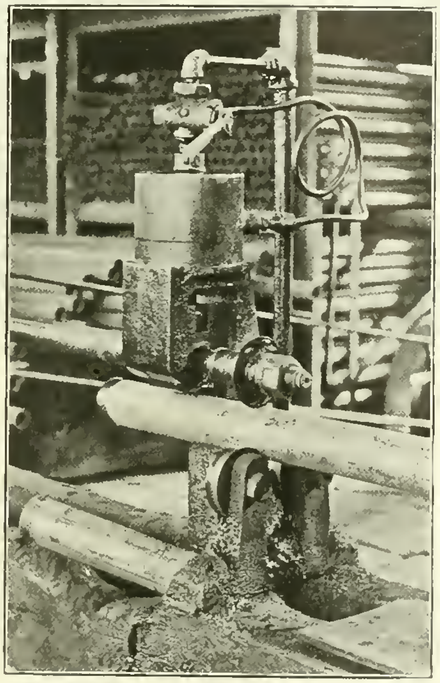


Arrangement of Old Carwheel Lathe.

◆

Cutting off Safe Ends at the Intercolonial Ry. Shops.

The equipment in use in most shops for cutting off safe ends for re-ending the boiler tubes, is pretty much standard in design, consisting of two pairs of rollers on which the tube is free to revolve, while over one pair of the rollers there is a cutting disc mounted on a long shaft, the shaft being driven by a belt through a pulley on this shaft. The majority of such outfits have a screw feed for forcing the cutting disc down through the tube wall while revolving. It is in this particular that the device employed at the I.R.C. shops at Moncton, N.B., is different from the standard machines. The cutter shaft, journalled in its loose bearing in vertical ways, instead of being screw-connected, is attached to an air plunger in the air cylinder indicated in the accompanying illustration. The operator, after shoving along the tube to the marked position, forces down the cutter disc by turning on the air through the top valve indicated. This relieves the operator of the work of feeding down. On releasing the valve when the tube is cut, the plunger again resumes normal position, ready for the next operation. Much more rapid work is possible by the use of this arrangement.



Air Attachment for Cutting off Safe Ends.

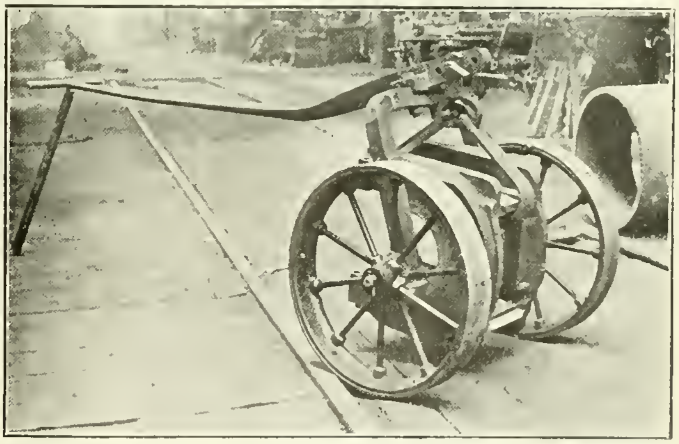
Truck for Locomotive Brasses at C.P.R. West Toronto Shops.

The accompanying illustration shows a very convenient shop truck used by A. Dixon, General Foreman, Locomotive Shops, C.P.R., West Toronto, for moving locomotive driving-wheel brasses about in the shop from point to point for the various necessary operations incidental to undergoing repairs. Previous to its use, it was necessary to raise them on to an ordinary truck by block and chain, and when removed to the new location, lift them off in a similar manner.

By the use of this truck, the necessary work is very much reduced. As will be noted, the truck is built on the cantilever principle. At the end opposite the handle, there are two attached hooks which, when the handle is raised, may be gripped over the ends of the brass. Depressing the handle clears the brass from the floor ready for moving. The construction of the upright from the wheels is such that its inclination is just sufficient to bring the centre of gravity of the brass directly in line with the wheel centre line. Thus, the brass is in equilibrium, in no way bearing down on the handle, and is therefore very easily moved. One man can operate much more easily than two could by chaining up and raising by block and chain as heretofore. It will be noted that the parts are of very simple design throughout.



Truck for Locomotive Brasses.

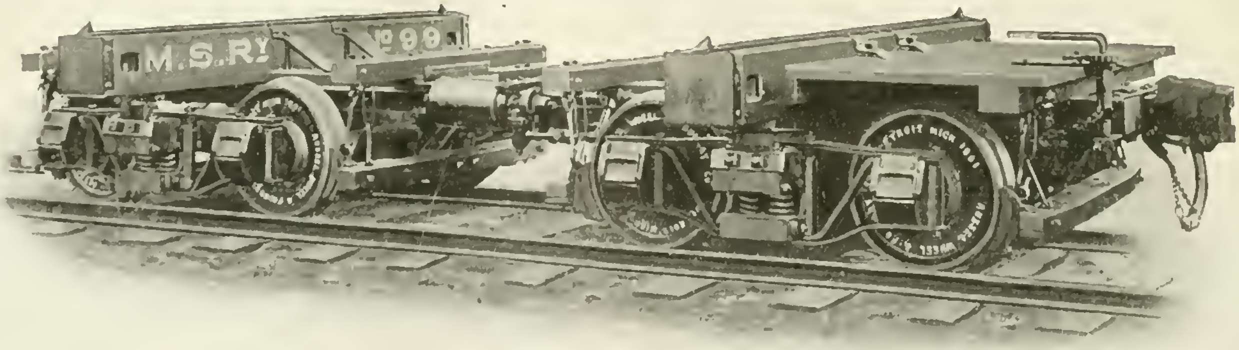
Railway Lands Patented.—Letters patent were issued during September, in relation to railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	1,914.00
Canadian Northern Ry.	2,275.50
Canadian Pacific Ry.	1,093.29
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	961.00
Total	6,243.79

Running Rights over Temiskaming and Northern Ontario Ry.—Sir James Whitney, Premier of Ontario, announced recently that arrangements had been made by which the G.T.R. will have running rights over the T. & N.O.R., the G.T.R. assuming an equitable share of the general maintenance of the road and paying $300,000 a year as rental for such running rights, this sum representing one-half of the interest on the total cost of construction of the railway.

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

Canadian Northern Railway Company's Annual Report.

The following directors' report, over the signature of Sir William Mackenzie, President, was submitted at the annual meeting recently:—

The result of operations for the year ended June 30, 1911, is as follows:—

GROSS EARNINGS.

Passenger traffic	$ 2,869,677.05
Freight traffic	11,951,993.75
Express, mail, telegraph, dining and sleeping cars, interest and profits from elevators and other subsidiary companies	1,539,041.59
	$16,360,712.39
Working expenses, including taxes, etc.	11,370,365.57
Net earnings	$ 4,990,346.82
Deduct:—	
Fixed charges	3,982,651.02
Surplus	$ 1,007,695.80
From this deduct interest at 5% paid on income charge convertible debenture stock outstanding	312,872.05
Net surplus	$ 694,823.75

The gross earnings show an increase of $2,527,650.76, or 18.27%, and the net earnings $645,956.79, or 14.87%, over the preceding year. The working expenses, including all taxes, were 74.81% of the gross earnings of the railway proper and 69.50% of the gross earnings from all sources, compared with 74.01% and 68.59% respectively last year.

During the year over 400 miles of newly constructed tracks were added to the system, the average mileage operated being 3,383.

Your directors are again gratified to report a substantial increase both in the total amount of grain hauled and in the proportion of the total grain crop carried by your railway. In the northern districts, where your railway has immense territories tributary to it, more equable climatic conditions prevailed during the growing season of 1910, resulting in a uniform ripening of the crop and consequent increased yield. Confidence in the continuance of these conditions has resulted in a substantial increase in the areas put under cultivation, emphasis of this being found in the last estimate of the total grain crop for the growing year 1911, which shows that Saskatchewan will produce about 60% of the entire crop of the prairie provinces. The figures for Saskatchewan for the two seasons past are as follows:

	Government figures, 1910 bush.	Government estimate, 1911 bush.
Wheat	72,666,000	92,367,000
Oats	63,315,000	103,140,000
Barley	5,859,000	6,642,000
Flax	3,044,000	5.770,000

Your directors continue to exercise a careful regard for transportation facilities for the incoming settler and by judicious location of branch lines to meet these demands. In Manitoba, Saskatchewan and Alberta many new lines are under construction.

It is gratifying directors that, in respect to Saskatchewan, the traffic return has justified their policy of acquiring the advantage of first construction in the best districts and a preemption of the most advantageous position to maintain for your railway its supremacy in that fertile province.

The operation of the Royal Line of Steamships from its inception has proved to your directors the wisdom of engaging in the Atlantic trade. It is manifest, however, having regard to the organization necessary to be maintained and the demand for accommodation which on different sailings could not be met, that a further addition to the fleet at an early date should be made. Negotiations are now pending, and it is hoped a satisfactory arrangement will be reached at an early date, whereby all the business offered to the Steamship Co. can be accepted.

The land sales during the year were 279,151 acres for $3,345,498.73, an average of $12 an acre, compared with 246,996 acres for $2,561,072.62, an average of $10.36 an acre the preceding year. The large sale to the Colonization Co. referred to in the previous annual report was completed during the year and the agreement of purchase guarantees exceptionally favorable conditions of settlement along the line of your railway, which will in due course produce satisfactory traffic results. Land grant bonds (issue of 1909) £47,000 were retired during the year, thus reducing the amount outstanding to £927,400, or $4,513,346.68. The company still has 871,866 acres selected lands unsold.

The demand for increased facilities in every department of your railway continues, and to meet the requirements of a rapidly growing traffic and to generally improve the efficiency of your property large expenditures were incurred during the year. These expenditures represent the enlargment of shops at many of the divisional points, the purchase of additional machinery, the building of water stations and new and additional passing tracks, the re-laying of many miles of road with heavier rails, the ballasting of tracks and the extension of the telegraph system.

The past year is notable for the commercial expansion of the Dominion generally and the progress of development within the prairie provinces in particular. Trade conditions in all sections have been entirely satisfactory. New records have been established for influx of immigration and capital: the western wheat crop greatly exceeded that of any previous year; and building operations and the extension of transportation facilities have responded to the impetus of the general advance of industrial and agricultural development. It is perhaps in the prairie provinces that the greatest measure of progress is evidenced. This is reflected in the expansion of such commercial centres as Winnipeg, Saskatoon, Edmonton, Calgary, Regina and Prince Albert. The growth of these cities, being a concomitant of the settlement of the vast areas tributary to them, naturally received great stimulus from the gratifying increase of immigration during the year. The Government authorities announce that during the fiscal year 1910-1911 the increase in population from immigration was 311,084. It is a matter of official record that over 7,000,000 acres of homestead lands were entered upon by these new settlers during the year, and this in addition to the large areas of lands sold by the Government and other agencies. It is reasonable to expect that the natural advantages and resources of the Dominion will continue to attract a constantly increasing influx of immigration and capital: and as the industrial development of Eastern Canada is an essential complement to the increased activities in the agricultural development of the west, the future prosperity of the Dominion as a whole is well assured.

Car trust obligations were created to the extent of $3,294,000 in connection with the purchase of locomotives, passenger cars and freight cars. During the year $1,943,669.95 was repaid in respect to previous obligations, thus making a net increase on this account for the year of $1,350,330.05.

A further issue of 5% income charge convertible debenture stock was made during the year. The total amount issued and now outstanding is $15,000,000, and as the surplus net earnings of your company permitted the payment of the interest there was paid out $312,872.05 for interest upon the amount of principal outstanding from time to time during the fiscal year.

The year just closed is particularly important in the history of your company because of the final step towards the accomplishment of your directors' determination to secure for it the status of a transcontinental system. In May last the Dominion Government entered into an agreement with the Canadian Northern Ontario Ry. Co. to facilitate the construction and guarantee the financing of a line from Montreal to Port Arthur to connect there with the present eastern terminus of the Canadian Northern Ry. This arrangement, together with the similar contract entered into last year with the Government of British Columbia for the construction of a line from the western boundary of Alberta to the Pacific coast, assures for your railway the completion of the original project for the establishment of a transcontinental service. The construction of both lines is now being vigorously pushed forward.

Since the close of the fiscal year the C.N.O.R. line between Toronto and Trenton has been opened for traffic. The territory through which this line is constructed is one of the most productive sections of the Dominion, contributing as it does a large proportion of manufactured and naturally produced commodities consumed in the western provinces. The same desirable conditions prevail in the territory between Trenton and Ottawa, through which the work of construction is being pressed, and will, it is expected, be completed within a year. The completion of this work includes a physical connection with the C.N. Quebec Ry. and will thus establish a direct line between Quebec, Montreal, Ottawa, and other large industrial centres with the Great Lakes. This will bring to your company the substantial advantage of a large movement of business to and from Western Canada and will also give to the C.N.Q. and C.N.O. R.'s traffic advantages which will be of material revenue value to those companies.

The accounts and statistical tables appended were submitted by D. B. Hanna, Third Vice President:—

REAL PERSONAL SUPERVISION

is only completely possible by using

THE Northern-Electric
AND MANUFACTURING CO. LIMITED

Telephone Train Dispatching System

The fact that the men talk directly to each other is one of the biggest reasons for the success of the telephone in the railroad field.

The personal element introduced produces a greater spirit of co-operation between the operators and the dispatchers with a resultant increase in discipline.

The nerve strain of handling a key is removed and the result shows in the high grade of work performed.

This advantage is shared by superintendents as well as all other officials, for with the use of Portable and Siding Sets every employee is in vital touch with the operating conditions of the road.

The Northern-Electric and Manufacturing Co., Ltd., maintains a department of specialists in this line. Their services are at your disposal, free of charge.

Address Desk 1017.

Boarding, tool, auxiliary cars, steam shovels and snow equipment	481	416

The total mileage owned and operated, including leased lines, at June 30, was 3,731.40, located as follows,—Ontario, 356.60; Manitoba, 1,752.28; Saskatchewan, 1,312.90; Alberta, 221.42; Keewatin Territory, 44.50; Minnesota, 43.70. The average mileage operated during the year was 3,383.

The report was unanimously adopted, and the following officers and directors were re-elected for the current year: President, Sir William Mackenzie; Vice President, Sir Donald Mann; other directors, Z. A. Lash, K.C., F. Nicholls, Toronto, and R. M. Horne-Payne, London, Eng.

◆

Under arrangements made between the Alberta Railway and Irrigation Co., and the Great Northern Ry., through passenger trains are now being run between Lethbridge, Alta., and Great Falls, Mont., instead of transferring passengers at Virden, Mont., as heretofore. Two sets of rolling stock are used in this run, being furnished by the two companies in proportion to the mileage of each.

Birthdays of Transportation Men in December.

Many happy returns of the day to,—

E. T. Agate, M. Can. Soc. C.E., District Engineer, Canadian Northern Ontario Ry. Sudbury-Port Arthur Line, Sudbury, born at Pittsford, N.Y., Dec. 7, 1874.

E. Alexander, Assistant Treasurer, C.P.R., Montreal, born in Yorkshire, Eng., Dec. 8, 1862.

J. H. Barber, Engineering Department, C.P.R., Montreal, born at Cobourg, Ont., Dec. 20, 1856.

Telephone Train Dispatching.

By A. Dwight Smith.

[The following is the fourth of the series of articles on this subject, the three previous ones having appeared in our Sept., Oct., and Nov. issues. This article deals with line construction.]

The arrival of the telephone among the railways for dispatching trains has also been a prolific cause for the advent of new methods, new ideas and new material in their line construction. While it has been done gracefully, nevertheless the telephone has been responsible for many improvements in railway wire service. By its own needs, it has forced changes, some of them almost revolutionary from the old telegraph man's point of view, but all of them advances in the art. It is not intended to cover here the whole number of the changes which have been introduced; that is beyond the scope of one paper. There is, however, one feature which it is fitting to deal with first, because it is what the railways which go into telephone dispatching meet first of all. That is the line.

The telegraph circuit occasionally, it is true, is of copper, but much more often, especially in railway work, it is of iron with wrapped joints. Frequently also these points are not soldered. The telegraph circuit is a single wire working from ground to ground. It also is a much less sensitive circuit than is required in telephony. High resistance joints can be cared for by raising the voltage, leaks to the ground can be handled in the same way, together with adjustment of the artificial line in the telegraph office; likewise the effect of the wet weather. The sole object to be accomplished is the operation of a relay or relays at the distant end and provided this is effected, voltage, current, capacity and resistance are of small account.

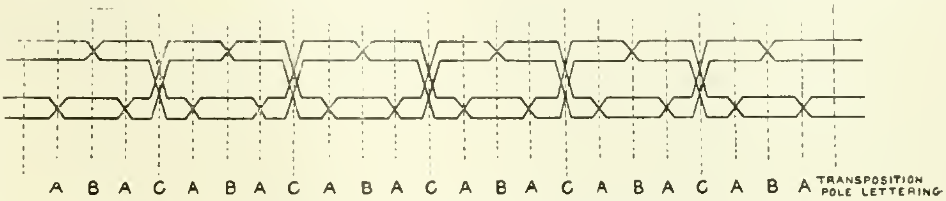
TRANSPOSITION POLE LETTERING

Standard Transposition of Railway Telephone Lines.

By this it is not intended to state that they are neglected, far from it, but a difference in voltage between 40 and 400 volts is merely the difference between a local and a trunk circuit in telegraph service. The point is that such differences can be cared for in telegraph work by electro-mechanical means. It is, of course, due to the fact that they can be thus easily cared for that the telegraph line construction along railway right of way has taken the form now existing. This construction has aimed to meet the requirements for successful telegraph operation, and it has succeeded admirably. The pole line itself differs not at all in the two systems of communication. The difference comes when we get into apparatus and material affecting the operation of the circuits themselves.

In telephone work, particularly long-distance work of the nature of which dispatching circuits partake, the factors outlined above exert a direct and very appreciable influence. The resistance of the wire itself affects that delicate quality known to telephone engineers as attenuation. In other words, high resistance thins out the spoken word until it disappears completely from hearing. The limit at which transmission is considered commercial, or the grade of speech a man will pay for, and that will give him satisfaction, is taken arbitrarily at the equivalent of that obtained over 850 miles of no. 8 B.W.G. 2-wire copper circuit with a telephone set at each end.

Railway dispatching circuits run from 50 to 300 or more miles in length. It has been found, in fact, that many which start near 100 miles are increased to 300, so great is the improvement in operating efficiency. On the above basis no. 9 B. & S. copper has been adopted as standard for train wires on nearly all the railways. This gives excellent transmission up to the greatest length of dispatcher's district which is met with in Canadian practice. It is not always necessary at the outset, but experience has shown it to be the most economical, due to the fact that the railways are in many cases combining and adding to the line handled by one dispatcher. It has also been found desirable to arrange train dispatching circuits so that several can be joined together forming one circuit, for special purposes.



A B A C A B A C A B A C A B A C A B A C A B A
TRANSPOSITION POLE LETTERING

Transposition Scheme for Telephone Train and Message Wires with Provision for Phantoming.

The telephone circuit is, of course, a two-wire circuit and all joints are made with copper sleeves, so that there is no chance for high resistance spots to appear in the line with the consequent injury to transmission of speech. Further, in view of the fact that the telephone is the most sensitive commercial instrument known to electrical engineers, special care must be taken to prevent outside influence from interfering with its operation. These outside sources of disturbances in railway service are most often the telegraph lines themselves, but frequently power, lighting and high tension transmission lines are met with and parallel the talking circuit.

For ordinary cases of induction, namely, low voltage power circuits and telegraph wires, the familiar transposition scheme followed on all commercial telephone lines is sufficient. This in itself is a new development to the railways who have been working the single wires for so many years. They are, however, employing the same methods used by the telephone companies, in some cases using single pin transpositions on a two-piece insulator, in others using one-piece insulators, one on the crossarm and one on a hanging iron or steel bracket. Since the telephone circuits are practically all new on railway pole lines, these transpositions are being made during the process of line construction and cutting the wires thus avoided.

Where the telephone train wire is exposed to straight and duplex telegraph lines only, half mile transpositions are generally sufficient. If two circuits are strung, a train wire and a message wire, these are made at alternate quarter mile poles on each circuit. Where quadruplex telegraph lines are met with and it is impossible so to locate the telephone circuit that it is a considerable distance from these, it will be found that more frequent transpositions are required, say every quarter mile on each circuit. It is advisable, however, always to place the telephone circuits as far away as possible from lines working quad, solely on account of induction.

The railways are finding one of the great advantages of their telephone systems is that the trains can carry portable sets, which can be hooked on the line at any point in cases of emergency. With this object in view the question of providing an insulator of distinctive appearance for the telephone circuits is coming up today and porcelain promises to come into use. This material also has a great advantage of an increased insulation resistance over glass, and aside from the question of expense, is altogether most satisfactory. This is particularly true on telephone lines of this character for long haul work.

On some short lines not exceeding 100 miles in length it has been found desirable as a matter of economy to arrange two of the no. 8 B.W.G. iron telegraph wires as a message circuit and to install telephone and selector equipment upon it. Then in event of breaks in the copper train wire circuit, this iron wire may be used to patch it up temporarily. It is necessary, however, before equipping such a circuit to go over the line most carefully, making the necessary transpositions and soldering all joints. It is not possible to phantom an iron and a copper circuit. For this reason alone the use of iron for such purposes is to be considered most carefully.

In order to get the maximum service out of a pair of telephone circuits, these may be phantomed, using each pair of wires as one side of a third circuit, a matter accomplished very simply by means of repeating coils located at the ends of the line. Phantom circuits affect the line construction in that they require special transpositions to prevent cross-talk between the sides and the phantom. These special transpositions of each pair of wires forming one side of the phantom against the other side assist and complement the action of the phantom repeating coils in eliminating the conversation in the side circuits from the phantom. Thus three conversations can be carried on over two pairs of wires at once without interference. The railways are planning to take advantage of this and on many of them it is the custom to cut in the phantom transpositions about once per mile on the line when construction is in progress. This is done as a matter of economy whether the phantom circuit itself is put in service at once or not. The phantom circuit over train and message wires offers a road a very economical way of obtaining private telephone service be-

LINE MATERIAL

tween its important points. The extra expense involved is practically nil.

Drop wires for the telephone equipment are quite generally of no. 14 B. & S. braided rubber cover, twisted pair wire. This makes a convenient and neat appearing method of looping into an office and can be carried on porcelain knobs. Where there are many circuits cable is used, for obvious reasons. The usual practice in this work is to tap from the main line with either wrapped soldered joints or by means of test connectors. In case testing equipment is installed in the office, the line must be looped through this and therefore it is generally dead ended in each direction and the office connections run in from both sides. Two-piece insulators are used for dead-ending the line, although, if poles are situated conveniently, it is better to terminate the line in each direction on separate poles.

The twisted-pair wire is carried to the under side of the cross-arm and mounted on porcelain knobs, or run in wooden or porcelain cleats to the end, where it terminates on a knob. On the building end this wire may either be terminated on a bracket-mounted insulator or a distributing ring. It is, of course, carried into the building in the usual way, but each wire should have its own porcelain bushing through the wall.

Many, practically all, of the above methods of construction are those in general use throughout the country in telephone work. They have been the result of years of experiment and years of experience to show what gives the best practical results. They are aimed in one direction—the construction of a good line, well insulated, without poor joints, sightly and economical both from a cost and a maintenance standpoint. The expense is, as in all such cases, a matter of compromise, but it has been very evident that in pole lines, as in other things, the attempt to save money by cheap, poorly built equipment results in a greater expense in the end. The portion of the country under consideration will obviously modify construction methods to a certain extent, but it is only a modification. Lines in the sleet districts will necessarily be more strongly erected, more firmly guyed than lines in the south. The effect of local influence is always felt, but the basic principles of line construction on which satisfactory telephony rests are always the same.

That the requirements in this newly developing railway field are more severe than have hitherto existed is an advantage to the roads in that it leads them by degrees into better, more stable construction and more permanent wire lines along their rights of way.

◆

White Pass and Yukon Ry. Rates.—In connection with the question of the W.P. and Y.R. rates before the Board of Railway Commissioners, the Dawson Board of Trade is laying information before the Commission, charging the railway company with maintaining an "earnings reserve fund," from which rebates are made to certain shippers and passengers. It is alleged that during the past 11 years, a certain proportion of the freight and passenger receipts has been set aside for this purpose, and never included in the reports to the Government or shareholders, the amount in that period being quoted as over $2,750,000.

The Board of Railway Commissioners had an application before it, Nov. 7, at Ottawa, regarding the remuneration to be paid railway companies for carrying mails. It is claimed that since 1895, the mails have increased about 18%, and the train service about 400%. The hearing of the matter was postponed to Jan. 23.

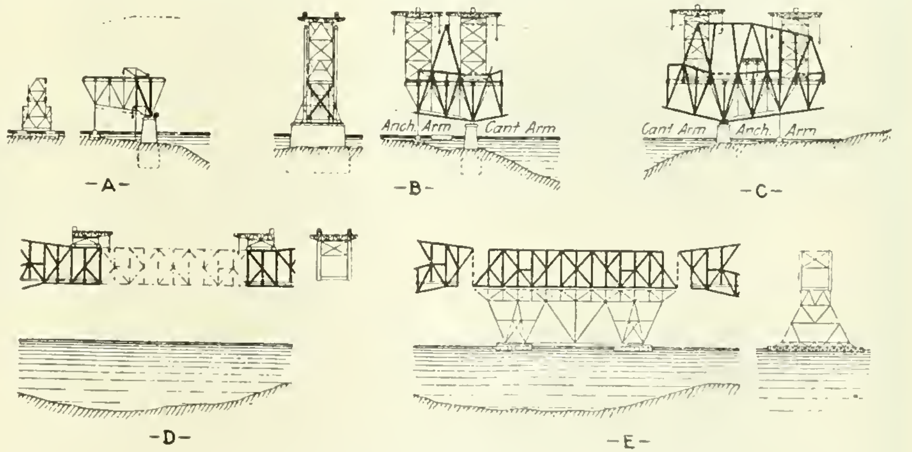
Schemes of Erection Proposed for the Quebec Bridge.

In our last three issues we gave the schemes of erection proposed by the St. Lawrence Bridge Co., the British Empire Bridge Co. and the Pennsylvania Steel Co. Following is the scheme proposed by Maschinenfabrik Augsburg-Nuernberg A.G., for the Board of Engineers' design:

In two forms of the Board's design, the entire bridge is to be erected by cantilevering. Erection would start from the main piers, both the anchor and the cantilever arms being erected without falsework. To insure stability the anchor arm is temporarily supported at panel-point AL10 by a steel temporary bent resting on concrete footings.

Before erecting the permanent truss members, a temporary framework spanning from the main pier to the temporary bent is erected by derricks (see plan). The floor members of the bridge being erected on this framework, the erecting cranes would be built on this floor.

It is proposed to erect the bridge by double-jib traveling cranes, two on each arm, having cross travel on a tower or trestle arranged to run longitudinally along the floor of the bridge. All movements are to be by electric power. Each crane has a lifting capacity of 200,000 lbs. Erection can therefore proceed simultaneously at four different points. The rails on which the crane trestles are to run are to be laid on the regular stringers, which for this service could be shifted towards the main trusses of the bridge. The expense of providing four cranes on each side of the river was considered warranted on account of the amount of time saved for the completion of the work. Erection is to proceed on both sides of the river at the same time.



Maschinenfabrik Augsburg-Nuernberg A.G. Board's design.

The cantilever-arm traveling crane will be built first and the work of erection will commence at panel A13 to C13 (panel-point 14 is the main post), including the erection of the temporary supporting bent and its adjoining members. While this work is progressing the anchor-arm crane will be erected in panel A11 — A10 and work started on the erection of the first anchor-arm triangle L14 — U12 — L10. The diagonal members AU12 — AL14 are temporarily strengthened, because they become compression members for a time. An auxiliary member is to be inserted between the points AM13 — CM13 to serve for regulating the system during the first cantilevering out.

While the bridge construction below the floor is being cantilevered out panel by panel, assisted by auxiliary members, some of which are adjustable, the posts and upper-chord members between the two compression diagonals are put in place, by means of the crane operating from central position.

When cantilevering out the cantilever-arm, the intermediate chord points M3 and M1, as well as the upper chord points U2 and U0, are connected to the floorbeams of the bridge by special stiffeners in order to increase the lateral rigidity of the trusses.

Cantilever Erection of Suspended Span.—In cantilevering out the suspended span, the first two panels are erected in the same manner as the last panels of the cantilever arm by using the same traveling cranes. By lowering the working platforms both the traveling cranes are then changed into upper chord cranes, thus decreasing the weight and consequently the stress in the members of the bridge. These upper chord cranes then work in the usual manner, panel by panel, up to the centre of the bridge.

The operation of connecting up at the centre of the suspended span is facilitated by means of strong adjusting devices connected with the top and bottom chords at the end of the cantilever arms.

Suspended Span Floated In.—This scheme necessitates the erection of the suspended span on high steel falsework, this falsework being supported in turn on large pontoons, the whole being finally towed into position. The height of the falsework is such that at low tide the suspended span is about 2 ft. higher than corresponding points on the cantilever arms. The hanger or rocker U0 — L0 is composed of wire cables, and thus is enabled to buckle under compression. On this account the connection between the suspended span and the cantilever arm (by means of the pin at L0) can be made at any time and the suspended span still remain on the falsework and move up and down with the tide. The connection need not be made simultaneously at all four corners, as would be the case if these members were composed of rigid eyebars.

The steel falsework is first erected on concrete pedestals, situated in some bay or cove adjacent to the bridge site. When the span has been completely erected over the falsework, scows are floated under the falsework between the piers, and the structure transferred to the scows by first partially filling the scows with water, and, when they are in place under the bearings provided, pumping the water out. Four scows each 275 ft. × 46 ft. are proposed for this operation.

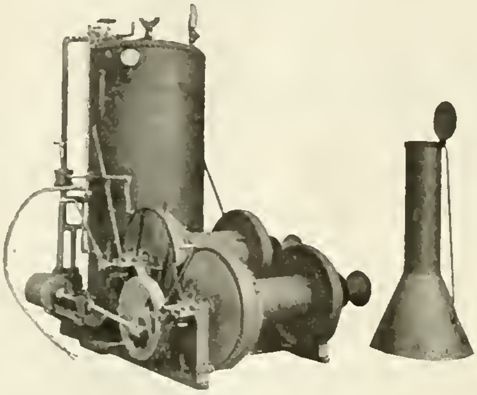
When the suspended span has been towed to the site and placed in position, water is again let into the scows, and the entire scaffolding is lowered to such an extent as to enable its being freely floated out from under the bridge.

Freight Handling Machinery

For 28 years leading Railroads of the country have found

"AMERICAN"

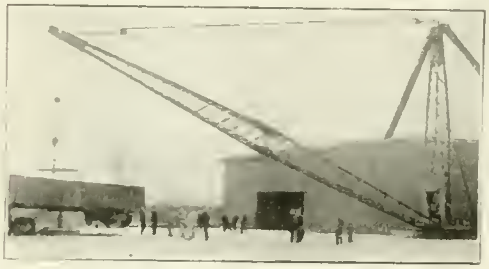
HOISTING ENGINES



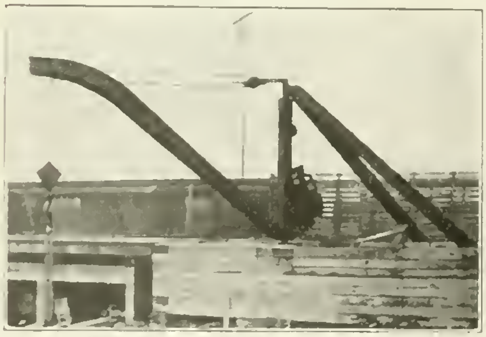
Standard "American" Engine

DERRICKS, LOCOMOTIVE CRANES, ETC.

Brim full of strength and reliability



Oregon R.R. & Nav. Co. Albina, Ore., 35 ton "American" Steel Stiff Leg Derrick



Gt. Northern Railway Local Yards, Vancouver, B.C. "American" R.R. Derrick

They can be moved from place to place and never grow old or wear out. They seldom need repairs. All parts are so accessible that a man can quickly get to every corner or connection and he cannot HONESTLY spend much time repairing it.

They only cost a few dollars more at the start than the ordinary kind. We know of lots of cases, where the "cheaper-to-install" machinery, working right alongside of the "American" costs FOUR times as much for repairs.

There isn't a single day but what occasion demands the SAFE, QUICK AND ECONOMICAL HANDLING of expensive, heavy objects in railroad yards, and if you want more material handled in quicker time, minus accidents and a high maintenance cost, then let us come and talk it over with you. It will cost you nothing and put you under no obligations. Name the date when we may call, please.

34,548	Detroit. Grand Haven and Milwaukee Ry. deficiency	39,685 19 3
699,806		729,377 17 4
347,160	Leaving a surplus of...	362,997 2 7
£1,046,966		£1,092,374 19 11

Adding balance of £9,105 5s. 5d. at credit of net revenue account, 1910, to above surplus of £362,997 2s. 7d., the total available for dividends is £372,102 8s. 0d., from which the directors recommend the payment of the following dividends:—

Half-year on 4% guaranteed stock..	£211,811 1 11
Half-year on first preference stock..	85,420 15 0
Half-year on second preference stock	63,210 0 4
	£360,441 17 3

leaving £11,660 10s. 9d. to be carried forward to next half-year's account.

Following is a comparison of receipts for the half-years ended June 30, 1911, and 1910:—

Description	1911	1910	Increase
	£	£	£
Passengers	914,570	884,274	60,296
Mails and express	156,656	146,426	10,230
Freight and live stock	2,347,951	2,186,027	161.927
Other receipts	112,002	104,909	7,093
	3,561,182	3,321,636	239,546

TRAFFIC STATISTICS.

	1911	1910	Increase
Passengers carried	5,170,916	4,990.401	180,515
Average fare per passenger ..	43.84*d.*	42.53*d.*	1.31*d.*
Tons of freight and live stock.	9,050,269	8,832,332	217,937
Average rate per ton	62.26*d.*	59.40*d.*	2.86*d.*
Tons carried one mile	1,655,756,984	1,559,037,718	63,719,266
Earnings per train mile	82.33*d.*	83.49*d.*	....

The average rate per ton per mile on the entire freight business was 0.69c., compared with 0.67. in corresponding half-year.

The working expenses, excluding taxes, were £2,580,641, or 72.47% of gross receipts, compared with £2,409,690, or 72.55%, an increase in amount of £170,951, but a decrease in proportion to gross receipts of 0.08%.

Following is a comparison of revenue expenditure, including taxes, for half-years ended June 30, 1911, and 1910:—

	1911	1910	Increase
	£	£	£
Maintenance of way and structures	395,713	365,487	30,226
Maintenance of equipment	600,415	638,696	....
Traffic expenses........	114,947	107,375	7,572
Conducting transportation	1,373,042	1,204,624	168,418
General expenses	96,524	93,508	3,016
Taxes	47,564	46,375	1,189
Total	2,628,205	2,456,065	172,140
Percentage of gross receipts............ ...	73.81	73.94	....
Expenditure per train mile	60.76*d.*	61.73*d.*	....

The train mileage compares with that for the half-year ended June 30, 1910, as follows:—

	1911	1910	Increase
Passenger........	4,233,413	4,133,538	99,875
Freight	5,870,692	5,141,909	728,783
Mixed trains	276,901	272,592	4,309
Total..........	10,381,006	9.548,039	832,967

The gross receipts show an increase of £239,546, or 7.21%; the working expenses, including taxes, an increase of £172,140, or 7.01%; and the train mileage an increase of 832,967, or 8.72%.

The total charges to capital account were £341.327 19s., of which £9,077 1s. 11d. was discount and commission on 4% consolidated debenture stock and 4% guaranteed stock issued during the half-year.

The expenditure on capital account in respect of new works, new rolling stock, double track and land purchased, was as follows:—

New works	£112,705 0 11
New rolling stock	205,682 19 7
Double track	2,828 12 9
Land purchased	11,034 3 10
	£332,250 17 1

During the half-year 18 Pacific type passenger locomotives, five first class cars, one steam motor car, and two road levellers have been built in the company's shops, and 12 freight locomotives and 840 box cars were purchased on revenue account. The equipment has also been increased during the half-year by the purchase of 1,000 steel coal cars, the cost of which. £205,682 19s. 7d., has been charged to capital account.

CANADA ATLANTIC RAILWAY.

The following summary shows the results of the half-year's working, compared with the corresponding period of 1910:—

1910.		1911.
£192 977	Gross receipts	£205,069
169,500	Working expenses	188,098
23.477	Net traffic receipts	16,971
4,586	Balance of income from rentals. outside operations, and car mileage	7.025
£ 28 063	Total net revenue	£ 23.996

The interest charges were £65,753. against £63.029. so that there was a net revenue deficiency of £41.757. compared with £34.966 in 1910. The number of passengers carried was 254.062, against 253.594, an increase of 468, or 0.18%, and the passenger receipts, including mails and express, were £44,185. against £42.560, an increase of £1,625, or 3.82%. The quantity of freight moved was 833,704 tons, against 749,476 in 1910, an increase of 11.24%, and the receipts from freight traffic were £144,928, against £133,583, an increase of 8.49%.

GRAND TRUNK WESTERN RAILWAY.

The following summary shows the results of the half-year's working, compared with the corresponding period of 1910:—

1910.		1911.
£643,457	Gross receipts	£661,759
509,571	Working expenses	549,482
133,886	Net traffic receipts	112,277
Dr.		Dr.
55,872	Balance of income from rentals, outside operations, and car mileage	53,263
£ 78,014	Total net revenue	£ 59,014

The net revenue charges were £92,187, so that there was a net revenue deficiency of £33,173, which with the deficiency of £3,225 for the half-year ended Dec. 31, 1910, makes a total deficiency for the year of £36,398, and deducting the credit balance at June 30, 1910, of £4,937, there remains a net revenue debit of £31,461 at June 30, which amount is carried forward to the current year. The number of passengers carried was 995,116, against 991,153, an increase of 0.40%, and the passenger train receipts, including mails and express, were £202,176, against £198,224, an increase of 1.99%. The quantity of freight moved was 1,941,374 tons, against 1,937,841, an increase of 0.18%, and the receipts from this traffic were £444,898, against £430,419 in 1910, an increase of 3.36%

DETROIT, GRAND HAVEN & MILWAUKEE RY.

The following summary shows the results of the half-year's working, compared with the corresponding period of 1910:—

1910.		1911.
£199,488	Gross receipts	£205,050
167,654	Working expenses	189,230
31,834	Net traffic receipts	15,820
Dr.		Dr.
29,401	Balance of income from rentals, outside operations, and car mileage	18,524
£ 2,433	Total net revenue	£ 2,704

The net revenue charges were £36,981, in 1910, so that there was a net revenue deficiency of £39,685, as compared with £34,548 for the corresponding period. The number of passengers carried was 373,757, against 371,303, an increase of 0.66%, and the passenger receipts, including mails and express, were £55,511, against £54,685, an increase of 1.51%. The quantity of freight moved was 1,192,105 tons, against 1,140,815 in 1910, an increase of 4.49%, and the receipts from freight traffic were £129,825, against £127,616 in 1910, an increase of 1.73%.

GRAND TRUNK PACIFIC RAILWAY.

Track has been laid to Fitzhugh, 111 miles from Wolf Creek, the end of the prairie section, 1,027 miles from Winnipeg and nearly 1,500 miles from Fort William. Fitzhugh is within 18 miles of the summit in Yellowhead Pass, and considerable grading beyond has been done as far as Tete Jaune Cache. From Prince Rupert on the Pacific coast, grading has been practically completed to Hazelton, 185 miles, and considerable work has been done between that point and Aldermere, a further 60 miles. Tracklaying east of Van Arsdol, the present end of track from Prince Rupert, has been delayed owing to difficulties in the construction of the tunnels and the proposed bridge 16 miles below Hazelton, across the Skeena River. It is expected the tunnel work will be completed by November, and there is every probability that the bridge will be finished before June, 1912. The contract for the remaining portion of the main line between Aldermere and Tete

Jaune Cache, 410 miles, has been let. The whole of the main line has, therefore, now been contracted for. The branch lines, Melville to Yorkton and Canora, and Melville to Regina, have been practically completed, and satisfactory progress has been made with the branches from Regina to the U.S. boundary, Regina to Moose Jaw, Biggar to Calgary, Tofield to Calgary, and the Prince Albert and Battleford branches. In all, over 1,000 miles of branch lines are under construction in Manitoba, Saskatchewan and Alberta.

Reports of Officials.

The Chief Engineer, H. G. Kelley, states that the expenditure for maintenance of property during the half-year was $147,100.71 less than during the corresponding period of 1910.

W. D. Robb, Superintendent of Motive Power, reports expenditure, mileage, etc., as follows:—

Half-year ended	Total expenditure	Train mileage	Rate of expense per mile		
			Train	Engine	Car
			Cents	Cents	Cents
June, 1911	$4,894,198	10,132,184	48 30	36.99	3.04
" 1910	4,941,322	9,548,039	51.78	39.68	3 25

A decrease in expenditure of 1.01%, compared with an increase in train mileage of 6.12%.

	Pass'ger trains.	Freight trains.	Mixed trains.
The average number of cars moved per train was	4.7	24.6	6.9
And for the corresponding period	4.6	25.5	7.0

During the half-year one locomotive was sold and nine were scrapped, leaving 11 old light capacity locomotives set aside to be scrapped. Eighteen Pacific type passenger locomotives were built at the company's works, Point St. Charles, and 12 compound consolidation freight locomotives were purchased, delivered and put into service.

The actual stock at June 30, 1911, was 958 locomotives, against the official figure of 803 locomotives.

The comparative cost of repairs per train, engine and car mile was:—

Cost per mile.	Repairs and renewals of locomotives		All repairing charges, including shop, machinery, tools and marine equipment, etc.	
	1911	1910	1911	1910
	Cents.	Cents.	Cents.	Cents.
Train	11 48	16.99	13.11	19.00
Engine	8.79	13.02	10.04	14.56
Car	0.72	1.07	0 83	1.19

J. Coleman, Superintendent, Car Department, reports expenditure, mileage, etc., as follows:

Half-year ended	Total cost of repairs and renewals.	Total miles run by cars			Cost per mile	
		Passenger	Freight	Total	Car	Train
					Cents.	Cents.
June, 1911	$1,632,423	20,447,399	140,523,639	160,971,038	1.014	16.11
" 1910	1,344,588	19,599,216	132,637.532	152,236,748	0.883	14.08

An increase in expenditure of 21.41%, with an increase in car miles of 5.74%

A. W. Smithers, Chairman, in moving the adoption of the report, went in detail through the various items, and also dealt with his annual inspection of the system in company with the President. The report was unanimously adopted, as was also a resolution to exercise the powers conferred by the Grand Trunk Act, 1911, as amended by the Grand Trunk Amendment Act, to guarantee the principal and interest of the first mortgage bonds of the G.T. Western Ry.

◆

Quebec Central Railway Co's. Annual Meeting.

Following are extracts from the report for the year ended June 30, 1911, presented at the annual meeting in London, Eng., Oct. 18:—

The following summary shows a comparison of the year's revenue with that of the previous year:—

	1910-1911.	1909-1910.
Gross Earnings	$1,208,949	$1,105,867
Working Expenses	820,803	759,556
Net Operating Revenue	388,146	346,311
Interest earned	7,911	5,675
Net Income	$ 396,057	$ 351,986
Brought forward from June 30, 1910	46,593	
Total Revenue	$ 442,650	

Amount as shown above		$442,650
Interest on 4% debenture stock	$117,742	
Interest on 3% debenture stock	49,348	167,090
Balance		$275,560
Interest on 7% income bonds (coupon 11)		115,145
Surplus		$160,415

Out of the surplus shown, the directors recommend the payment of a dividend on the share capital at the rate of 3% per annum (15s. per share) as follows:—

Surplus as shown above		$160,415
3% on share capital	$101,448	
Less proportion on shares held in the treasury, $601,277	18,038	83,410
Balance to carry forward		$ 77,005

The directors regret to report the death of the Vice President, Frank Grundy, which took place in November, 1910. The invaluable services he rendered to the company as General Manager, during the days of its adversity, and until the time that his health failed him, contributed in no small measure to its present satisfactory position.

Your directors, having been approached by the Canadian Pacific Ry. Co., entered, in August last, after protracted negotiations—into a provisional agreement to lease (subject to your approval) your railway and all its assets to that company for 999 years. Bills will be presented to the Dominion Parliament and Quebec Legislature, and if passed, special meetings of the various classes of security holders will be summoned to consider, and, if thought fit, sanction the lease. Matters may be sufficiently advanced to enable the special meetings to be summoned early next year, but the date of such meetings cannot, of course, be fixed until the necessary parliamentary sanction has been obtained in Canada.

RECEIPTS.

	1911.
Passenger	$ 361 957.27
Freight	788 439.98
Mails	19.721.12
Express	17.871.91
Miscellaneous	20.958.60
	$1,208,948.88

EXPENDITURE.

Maintenance of Way and Structures	$ 161 480.51
Maintenance of Equipment	123.372.57
Traffic Expenses	26.225.21
Transportation Expenses	444,128.65
General Expenses	65,596.18
*Total Working Expenses	$ 820,803.12
Balance carried to net revenue account	388,145.76
	$1,208,948.88
*Per cent of Gross Earnings	67.89

Maintenance of way and structures cost 13.36% of gross earnings; maintenance of equipment, 10.20%; traffic expenses, 2.17%; transportation expenses, 36.74%; general expenses, 5.42%.

The gross receipts per mile of road operated were $4,797, the expenses and taxes, $3,257 and the net from operation $1,540.

The classification of freight tonnage carried was: products of fruit, 56.92%; agricultural and dairy products, 4.24%; minerals, 14.90%; manufactured goods and merchandise, 23.94%.

The mileage owned, main line and branches, is 253.44, yard tracks, sidings and spur tracks, 46.85, total 300.29; and there are five miles of trackage rights on the Intercolonial Ry., Harlaka Jct. to Levis.

Number of passengers carried, 384,689½; average earnings per passenger $0.941; tons of freight handled, 780,798, average earnings per ton, $1.01; total train miles run, 874,003.

After the chairman, Edward Dent, had moved the adoption of the report, Langham Reed said he wished, on behalf of a large body of the security holders whom he represented, to state that he did not approve of the proposed leasing arrangement to the C.P.R. He thought the security holders ought to be paid more than 3%. The report was adopted and the directors were re-elected.

◆

A recent Ottawa report states that Mackenzie, Mann & Co. are likely to submit a proposition to the Dominion Government in regard to leasing the Intercolonial Ry.

The Piling of Treated Ties.

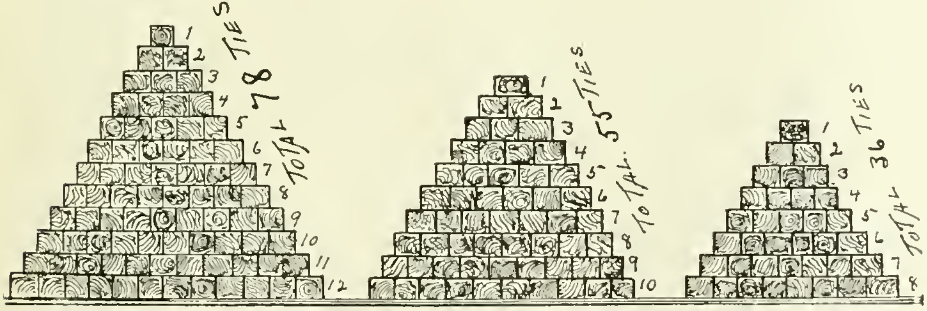
At the Roadmasters' and Maintenance of Way Associations annual meeting at St. Louis, Mo., recently, J. H. Lynch presented the report of the committee on this subject, from which the following is abstracted.

Ties treated with creosote are, as a rule, just in their infancy when received from the treating plant. Owing to the different kinds of lumber, and other causes, the amount of oil admitted into the tie varies considerably, and the amount of oil not absorbed when the tie is received from the treating plant is unquestionably noticeable.

We are of opinion that when creosoted ties are received from the plant, particularly for a road bed of gravel, rock ballast, burnt gumbo, of such nature that the track gets a box dressing and the tie is practically covered up and surrounded with material to prevent air and climatic conditions to any great extent, would be the most economical and opportune time to put them in the track and that the ties would then practically absorb all the creosote.

In many cases it is impossible to get ties in track immediately after receiving.

When ties are treated with creosote, the closer they are piled, to prevent air, rain, etc., getting between them, the better. As soon as they are unloaded they should be piled on suitable high ground, and on single track care should be used not to unload on the same side as telegraph wires, and if so, not closer than 50 ft. to telegraph poles or crossing or station signs, to eliminate danger in case of fire.



Proposed Way of Piling Creosoted Ties.

Unlike the untreated or zinc chloride treated tie, we do not consider it necessary to place old ties on the ground under creosoted ties. The sod should be removed from around the ties for at least 15 ft., to prevent fire. The number of ties unloaded along the section depends on the number of ties, per mile to be placed in the track, and that to some extent should govern the size of the piles. But most railroads have a standard of piling creosoted ties by placing two ties as sleepers and then piling them in close layers cross box style, with about 77 or 88 ties in each pile.

We wish to have considered the method of piling them all one way, either lengthwise or crosswise the track, first placing two ties for sleepers and then all other ties piled the opposite way in layers, each row one tie less, from the bottom, and tapering to the top, with one tie, as shown in the accompanying illustration. Put 78 ties in the pile with 12 ties on bottom, on the two sleepers, and if smaller piles are desired, place eleven, ten, nine or any number desired at the bottom, owing to the size of pile wanted.

Another consideration about piling them this way is that they are easier discovered if taken away or stolen; or if it is desired to protect them, all the outside ties can be bound with wire, fastened to the outside of pile with one strand.

Ties treated with zinc chloride, should be piled so as to be exposed as much as possible, to bring about rapid evaporation, and be practically free from moisture before being placed in the track. The drier the wood becomes after treating, the more securely it becomes impregnated with the zinc chloride, and the tie suffers less from climatic conditions, particularly if the ties are put in a soft roadbed, or in a wet season, or in a damp country. This has a tendency to wash away and cause the chemicals to evaporate very materially, and in a short time shows a general decay from

◆

Lake Superior Corporation's Annual Report.

Following are extracts from the report presented at the annual meeting at Camden, N.J., Ot. 4.

The steel plant has had its full share of orders for rails. The mill has been in steady operation with the exception of a shutdown for necessary repairs. The output as compared with the previous year is as follows:—

	1909-10	1910-11
Pig Iron	153,528	170,359
Steel rails	201,615	208,283

The production is the highest yet attained, and has been obtained in the face of difficulties consequent upon new construction work, particularly in bringing certain of the new operations into line with the old.

The Algoma Central and Hudson Bay Ry. Co.'s earnings for the year have increased and show a very satisfactory excess over those for the previous year. The operation of the railway has been conducted under similar conditions to those prevailing during the preceding year. Rapid progress is being made with the construction of the railway to a junction with the C.P.R., some 220 miles from Sault Ste. Marie, northwards. It is expected that the Hawke Lake section will be completed and in operation by October, and this will provide an immediate route from the C.P.R. to Lake Superior, via Michipicoten. The main line is being pushed on with. The viaduct at Montreal River will be completed next month, and it is hoped that the whole of this line will be finished early next year.

In view of the traffic possibilities and of your directors' desire that a complete proposition should be made of the railway, a contract has been let for its extension from the C.P.R. to a junction with the National Transcontinental Ry., 100 miles further north. The A.C. & H.B. Ry. will be, when completed to this point, the first great Canadian railway running to the north, and it will have the advantage of intersecting the three great transcontinental lines, the C.P.R., the C.N.R. and the N.T.R., from all of which satisfactory interchange of traffic is expected.

The Algoma Eastern Ry., (Formerly the Manitoulin and North Shore Ry.). As indicated in our last report, the entire construction of this railway to Manitoulin Island was contemplated. Satisfactory arrangements having been made with the Ontario Government, for extension of time for earning the land grant, and for financing the line, contracts were let in February last for its completion and the work is being rapidly pressed forward. It is hoped that the railway will be completed and in operation early next year. A valuable land grant will, on its completion, be secured. Satisfactory arrangements are being made with connecting railroads for interchange of traffic.

International Transit Co., Trans St. Mary's Traction Co. The International Transit Company has to report satisfactory progress. It commenced the year with a debit balance at profit and loss. This has been entirely wiped out, and a small profit carried forward. The Trans St. Mary's Traction Co., has maintained its earnings, and with extra service now given it is expected that increased earnings will be obtained. The ferry connecting both street railways shows very satisfactory results from its operation.

The following directors were elected for the current year: T. J. Drummond, D. C. Newton, Montreal; H. M. Price, Quebec.; T. Gibson, Toronto; J. F. Taylor, Sault Ste. Marie, Ont.; W. K. Whigham, London, Eng.; J. S. Dale, H. Coppell, J. T. Terry Jr., New York City; J. T. Lea, R. L. Austin and F. McOwen, Philadelphia, Pa.

◆

The Crossen Car Company, Ltd.

In connection with the refinancing of this company a prospectus has been issued of the 6% first mortgage gold bonds. The Crossen Car Co., Ltd., has taken over the properties and business of the Crossen Car Manufacturing Co., of Cobourg, Ont., the properties being free from debt and unincumbered. The capitalization is 6% first mortgage bonds authorized £200,000, issued £115,600; capital stock ordinary, authorized $1,000,000, issued $600,000. The Crossen Car Manufacturing Co., of Cobourg, was formed about 20 years ago by W. J. Crossen and his associates to continue the business founded by the late James Crossen. The arrangements for refinancing this year in connection with the new company were made by the Royal Securities Corporation.

The old company's net earnings for 1910 were $124,443 and the average net earnings for the last eight years were equal to over two and a half times the present interest charges. The reproductive value of the company's property is about $780,000. Against this there is the bond issue of £115,600 ($565,000), but the company's great strength lies in its earning power. The net earnings of the company over and above the amount required to pay bond interest and sinking fund, which will retire all the bonds by yearly drawings, commencing Jan., 1912, at 105 and accrued interest are to be used in the purchase of new property or in development and reconstruction of the present plant, until an amount equal to the present outstanding bond issue has been expended in this manner.

Alberta Railway and Irrigation Co's Annual Meeting.

For the first time the A.R. & I. Co.'s annual meeting was held at the C.P.R. general offices, Montreal, Nov. 1, previous meetings having been held in London, Eng. Following are extracts from the report of the year ended June 30, 1911:

Revenue:—		
Balance from July 1, 1910		$106,566.20
Revenue from colliery, railways, canals, profit on land sales, etc. (after providing for depreciation)		340,494.29
		$447,060.49
Deduct interest on prior lien debenture stock (now redeemed)	$ 2,243.09	
Deduct London expenses (including directors' fees, London and Canada)	18,807.79	
Deduct interim payment of 2% on the 5% debenture stock made July 1, 1911	65,000.00	
Deduct final payment of 3% on the 5% debenture stock made Oct. 20, 1911	97,500.00	
		183,550.88
Surplus		$263,509.61
The directors recommend a dividend of 5% upon the share capital, which will absorb		162,500.00
And leave		$101,009.61

to be carried forward to next account.

The coal sales for the year were 271,950 tons, compared with 239,623 for the previous year. The gross earnings of the railway were $346,573.48, compared with $378,128.02 for the previous year. The land sales aggregated 5,658 acres and realized $229,199.60, the average price being about $64.33 per acre for irrigable land, and $5.28 for non-irrigable land. These sales comprised 2,228 acres covered by the trust deed for the debenture stockholders and 3,430 acres free from the trust. The profit from sale of town lots was $45,046. The estimated net profit from all the above sales was $211,000. The profit received during the year in cash from lands free from the trust sold during that and previous years (after deducting the commissions and land expenses for the year) viz., a net sum of $217,300, is included in the present revenue account, the balance remaining in reserve pending the realization of the outstanding instalments and the lands still unsold. The total amount in reserve in connection with sales of the company's lands is now $1,705,372.15, and in connection with sales of C.P.R. lands $48,187.96, a total of $1,753,560.11. On June 30 last the company had 215,848 acres remaining unsold, in addition to many lots in Lethbridge, Raymond, Milk River, New Dayton and Chin. The receipts from water rentals were $31,002.05, compared with $48,018.84 for the previous year.

At a special general meeting of shareholders on Feb. 22 last, approval was given to the disposal of all the company's railways and other properties to the C.P.R. Co., partly by conveyance and partly by lease, which arrangement has been confirmed by the latter company. The lease is for 999 years, commencing from Jan. 1, 1912, and comprises this company's existing railways and any railways which the company is or may be authorized to construct, together with the stations, shops, rolling stock and equipment, and generally everything which has been or may be acquired in connection with the railways and the franchise. By the agreement this company sells to the C.P.R. Co. all the lands, irrigation works and generally all assets of this company, except the railway and property which is leased. As on and from Jan. 1, 1912, the C.P.R. Co. assumes liability for all outstanding obligations, including the debenture stock, both as to principle and interest. In view of the arrangements made with the C.P.R. Co. it was found convenient to transfer the head office of this company from London to Montreal.

Under the agreement with the C.P.R. Co., provision was made for the shareholders of this company receiving a dividend of 5% per annum from July, 1910, to Dec. 31, 1911. In accordance therewith, a dividend of 5% for the year ended June 30, 1911, will be payable after the annual general meeting, and notice will be given when the dividend of 2½% for the half year ending Dec. 31, 1911, will be payable. The share certificates will, on and after Jan. 1, 1912, be endorsed with the obligation of the C.P.R. Co. to pay 3% half-yearly, commencing with a payment on July 1, 1912, in respect of the preceding six months. By arrangement with the C.P.R. Co. notice has been given for the redemption on Jan. 1, 1912, of the outstanding 5% debenture stock of this company.

A bylaw was submitted for adoption decreasing the number of directors to five and, in accordance with the Railway Act of Canada, the directors retire from office. Following are the officers and directors for the current year:—President, E. T. Galt; Vice President, A. M. Nanton; other directors, Sir Edward Clouston, W. M. Ramsay, and John Galt.

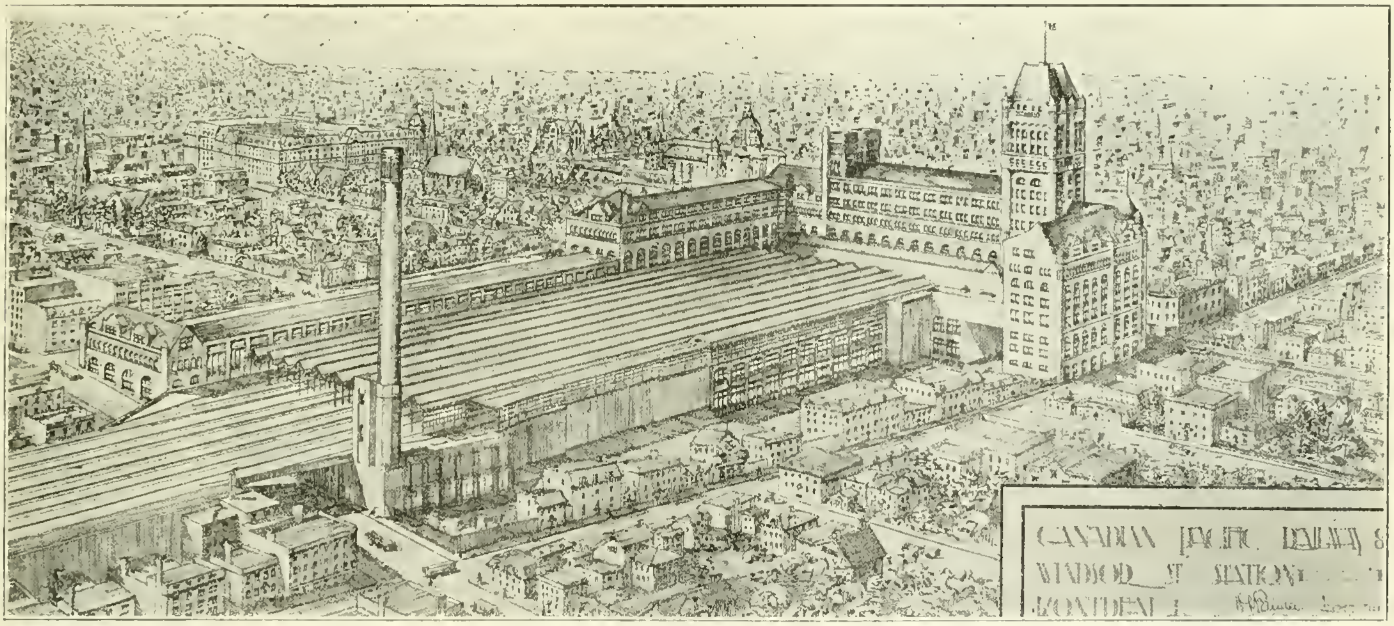
C.P.R. Windsor St. Station, Montreal

Work on the extensive additions which the C.P.R. is building at the Windsor St. Station, Montreal, is progressing very favorably. It is expected that the new structure will be ready for occupancy by May next. Many changes will be made in the arrangement of the present departments, many of them contemplating removal to the newer portion. It is also stated that a number of officials in other parts of the city will be brought to these headquarters. The staffs that will be transferred first will be those located at the southern end of the present structure, which will permit the workmen to tear down the end wall and proceed with the extension of the new building to join the present structure.

The building is now entirely sheathed with its stone veneer, which covers the reinforced concrete shell. In the interior, the partitions are being rapidly put in place, and outside a start has been made in enclosing the part of the concourse not fronted by tracks. The boiler house is practically completed and the boilers installed. The big stack has reached a height of 200 ft. A large force of men is at work on the viaduct. On the top of the viaduct, a big steam shovel is levelling off the ground to the rear of the new station.

When completed, this building will be the largest and best equipped station in Canada. The accompanying illustration from a photograph of the architect's perspective drawing gives a comprehensive and realistic view of the station as it will finally appear. Nearly all the portion to the right of the two short towers in the centre of the building is the new section being built.



Perspective View of Canadian Pacific Railway Windsor St. Station, Montreal, as enlarged.

Grand Trunk Railway Construction, Betterments, Etc.

Montreal Yards.—The Board of Railway Commissioners has authorized the company to expropriate certain lands in Ste. Ann's Ward, Montreal, in connection with the enlargement of its yards, and to maintain the ship fever monument. While this order was made in Jan. last, it has just been issued, as certain details had to be adjusted.

Kingston Freight Sheds.—Property owners on Place d'Armes St., Kingston, Ont., have been notified by the G.T.R. that possession is to be taken at once of their properties. The properties acquired by the company lie between Wellington and King streets, and from Place d'Armes to Anglin's lumber yards, and on the site of the present buildings a large new freight shed is to be built.

Granite for Ballast.—Application is being made to the Kingston, Ont., city council by the G.T.R. for the supply of 750 h.p. electrical energy, to be delivered at a quarry near Kingston Mills. It is stated that the quarry will be opened in the spring, and that a large crushing plant will be installed to provide crushed granite for ballast. It is said that this ballast will first be laid between Montreal and Toronto.

Tay Jct. to Birch Jct.—The Board of Railway Commissioners has authorized the opening for traffic of the line between Tay Jct., on the Orillia-Midland line, and Birch Jct., on the Penetanguishene line. This order rescinds the previous order under which the line was opened for traffic, as mentioned in our last issue.

Nipissing Jct., Ont.—The Board of Railway Commissioners has authorized the building of a branch line crossing the C.P.R. at Nipissing Jct., Ont., to the Temiskaming and Northern Ontario Ry., and the installation of an interlocking plant.

Toronto Belt Line.—While in Toronto recently C. M. Hays, President, went over the old Belt Line, and it is said that as a result of his inspection the remaining portion of the line will be put in order for traffic. The company is at present using the section from its West Toronto yards to Yonge St.

Hamilton, Ont.—C. M. Hays, President, and other officials met the Hamilton city council and representatives of the business interests of the city, Oct. 28, and discussed the railway situation. The claims of the city for a new passenger station and other improvements were presented, and Mr. Hays said that while a new station would be built, the company had to consider it in connection with the claims of other places, where improvements were necessary. The question of a site had to be settled, together with a number of other incidental matters, before any definite work could be undertaken. The company had expended a large amount of money upon improvements during the past 15 years; money was still being spent upon improvements, and there were demands from towns all along the line for equally large expenditures upon necessary improvements. While the company was desirous of doing all it could to meet these demands it could not go further than its financial resources, or other circumstances which had to be considered, would permit.

Guelph, Ont.—The old station building at Guelph, Ont., is to be demolished and the site is to be utilized for laying an additional siding for yard accommodation.

Chatham, Ont.—The Board of Railway Commissioners has authorized the building of a spur and interchange track connecting with the Lake Erie and Detroit River Ry. tracks (operated by the Pere Marquette Rd.), and an interchange track with the Chatham, Wallaceburg and Lake Erie Ry. in Chatham, Ont.

Detroit Station, etc.—On the occasion of a recent visit to Detroit, Mich., C. M. Hays, President, intimated that the G.T.R. might use the tunnel under the Detroit River, and the station which the Michigan Central Rd. proposes to build. Nothing, however, will be done for some time. If the arrangement cannot be made it is expected that the present station at Brush St. will be considerably enlarged. (Nov., pg. 1039.)

Pontiac, Oxford and Northern Rd.—President, C. M. Hays; Vice President, H. G. Kelley; Secretary and Treasurer, G. W. Alexander.

St. Clair Tunnel Co.—President, C. M. Hays; Vice President, H. G. Kelley; Treasurer, Frank Scott; Secretary, G. W. Alexander.

◆

Minneapolis, St. Paul and Sault Ste Marie Ry. Co's Annual Report.

The report for the year ended June 30, of this subsidiary C.P.R. company, includes the Wisconsin Central Ry., now operated as the Chicago Division of the line. Following are the figures for the year:—

	Sault Line.	Chicago Division.	Entire System.
Gross earnings	$13,135,907.80	$8,836,669.98	$21,972,577.78
Operating expenses	8,375,995.03	6,622,343.25	14,998,333.28
Net earnings	$ 4,759,912.77	$2,214,326.73	$ 6,974,239.50
Income from other sources	913,204.23	50,878.34	964,082.57
Total income	$ 5,673,117.00	$2,265,205.07	$ 7,938,322.07
Fixed charges, taxes, etc.	3,841,690.35	2,496,484.10	6,338,174.45
Surplus	$ 1,831,426.65		$ 1,600,147.62
Deficit		$ 231,279.03	

Compared with the previous year, the Sault line gross earnings show a reduction of $2,271,271.60; this is accounted for by the fact that last season's grain crop in North Dakota and portions of Minnesota was almost a total failure and resulted not only in a large loss of grain tonnage but also, on account of the reduced purchasing power of rural districts in a considerable reduction in general business. Two thousand miles of the company's lines are located in what may be termed the grain district of the Northwest and crop conditions are naturally very promptly reflected in its districts, in a considerable reduction of earnings.

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given or orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

15044. Oct. 10.—Authorizing G.T.R. to open for traffic portion of its line from Tay Jct. between Orillia and Midland to Birch Jct., between Colwell and Penetanguishene, Ont., and rescinding order 14910, Oct. 3.

15045. Oct. 11.—Extending to Nov. 30, time for completion by G.T.R., of overhead bridge at Queen St., Palmerston, Ont., as authorized by order 14164, June 24.

15046. Oct. 10.—Authorizing G.T.R. to rebuild four bridges on its Northern Division and rescinding order 14896, Sept. 29.

15047. Oct. 10.—Authorizing Ottawa Electric Ry. to maintain wires across C.P.R. at Victoria St. Westboro, Ont.

15048. Oct. 11.—Authorizing Vancouver Victoria and Eastern Ry. to divert Yale Road, Yale District, B.C.

15049. Oct. 10.—Authorizing Point Anne Ry. to connect with C.N.R. siding on lot 20, near Pointe Anne.

15050 to 15052. Oct. 5.—Authorizing C.N.Q.R. to cross La Salle Ave., Desjardins St. and Piux IX Avenue, Maisonneuve.

15053. Oct. 11.—Authorizing C.N.R. to operate trains with C.P.R. over Soo Line crossing near Midale, Sask., without stopping, interlocker having been installed.

15054. Oct. 11.—Amending order 14047, June 23, by removing speed limit over portion of C.N.R. Maryfield to Luxton, Sask.

15055, 15056. Oct. 10.—Authorizing C.N.R. to open for traffic its line from Luxton to Radville, Sask., 72 miles, and for freight traffic from Radville to end of track on Moose Jaw extension, 83 miles.

15057. Oct. 11.—Authorizing C.N.R. to cross with its Deslisle extension, 33 highways in Saskatchewan.

15058. Oct. 14.—Substituting Maisonneuve for Montreal in order 14925, Oct. 5.

15059. Oct. 13.—Authorizing Ottawa Electric Ry. to erect wires across C.P.R. on Carling ave., Ottawa.

15060. Oct. 12.—Authorizing Alberta Central Ry. to build two bridges between Red Deer and Rocky Mountain House, over Flemings Creek, mileage 60.1, and over south branch of Horseguard River, at mileage 50.

15061. Oct. 13.—Authorizing T. H. & B. R. to build two spurs for Diamond Flint Glass Co., Hamilton, Ont.

15062. Oct. 14.—Authorizing C.P.R. to build bridge 85.1 on its Brandon subdivision, Manitoba Division.

15063 to 15065. Oct. 13.—Authorizing C.P.R. to build spurs for city of Regina, Sask., city of Medicine Hat, and O. Ludwig, near Dunmore, Alta.

15066. Oct. 13.—Authorizing C.P.R. to rebuild bridge 102.6 on its Cascade subdivision, B.C. Division.

15067, 15068. Oct. 10.—Approving location C.P.R. stations at Blackie and Brant, Alta.

15069, 15070. Oct. 12.—Authorizing C.N.R. to cross with its Rossburn line 22 highways, and with its Maryfield branch, 12 highways in Saskatchewan.

15071, 15072. Oct. 13.—Approving C.N.O.R. revised location through unsurveyed territory, Algoma District, mileage 124.2 to 127.32 and 92.37 to 93.27, from Sudbury Jct.

15073, 15074. Oct. 13, 11.—Authorizing C.N.R. to cross with its Maryfield branch one public road and 17 highways in Saskatchewan.

15075. Oct. 12.—Authorizing C.N.Q.R. to cross Main and Union Sts., Hawkesbury, Ont.

15076. Oct. 13.—Authorizing Saskatchewan Government to build Christopher St. across C.P.R., in Theodore.

15077. Oct. 14.—Amending order 14924, Oct. 5, by substituting town of Maisonneuve for city of Montreal.

15078. Oct. 13.—Authorizing C.N.R. to cross public road on its Maryfield branch, Sask.

15079. Oct. 13.—Dismissing Powell Door & Lumber Co.'s application re G.T.R. level crossing over Front St., Toronto.

15080. Oct. 12.—Postponing effective date of tariffs on hay and straw between eastern points and U.S. points until Jan. 1, 1912, matter to be heard at Board's sittings at Ottawa on Nov. 21, on application of Montreal Board of Trade Transportation Bureau. This order is given in full on another page.

15081. Oct. 11.—Ordering Grand Valley Ry. to maintain suitable fence in front of property in lot 9, con. 3, South Dumfries tp., Ont., within 30 days, under penalty $10 for every day in default.

15082, 15083. Sept. 8.—Naming express collection and delivery limits for Lethbridge and Medicine Hat, Alta.

15084. Sept. 11.—Dismissing Board of Trade's application, with leave to renew if railways fail to take care of traffic at transfer track between C.P.R. and C.N.R., near Stettler, Alta.

15085. Sept. 14.—Authorizing Qu'Appelle, Long Lake & Saskatchewan Rd. and Steamboat Co. to take possession of C.P.R. lands for building spur near Saskatoon, Sask.

15086, 15087. Oct. 11.—Authorizing T.H. & B.R. to build spurs into premises of Steel Co. of Canada and thence to J. W. Marsh's lands, near Sherman Inlet, to Standard Underground Cable Co., and E. C. Atkins and Co., Hamilton, Ont.

15088. Oct. 13.—Amending order 14686, Aug. 1, re interlocking plant between G.T.P. Branch Lines Co. and C.P.R., Langdon Branch, Alta.

15089. Oct. 12.—Amending order 14696, Sept. 5, re G.T.R. spur for Houedry & Sons, Peterboro, Ont.

15090. Oct. 11.—Authorizing city of Hamilton, Ont., to build subway under T.H. & B.R. spur at proposed intersection of Birch Ave., near Sherman Inlet.

15091. Sept. 14.—Authorizing C.P.R. to complete spurs for A. Bowerman, Saskatoon, Sask., as provided in order 14466, July 17, subject to council's approval.

15092. Oct. 13.—Amending order 13608, May 8, re G.T.R. Humber River Bridge compensation.

15093. Oct. 16.—Authorizing V.V. & E. Ry. and Navigation Co. to build dock and warehouse on Burrard Inlet, B.C.

15094. Oct. 17.—Authorizing Algoma Central and Hudson Bay Ry. to open for traffic its line from mileage 65 to 85 from Sault Ste Marie and from Hawk Lake Jct. mileage 164 to Josephine Jct., mileage 170. Michipicoten Branch.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

15269. Nov. 2.—Approving Pere Marquette Rd. bylaw authorizing G. C. Conn, F.T.M., and H. F. Moeller, G.P.A., to prepare and issue tariffs of tolls.

15270. Nov. 3.—Ordering G.T.R. within two months to erect gates at John St., Toronto.

15271. Oct. 31.—Approving location of C.N.O.R. station grounds at Lombardy, South Elmsley tp.

15272. Nov. 2.—Ordering C.N.R. to fence its right of way from McCreary Jct., on main line from mileage 139 to 143, from crossing west of mileage 144 to 15 poles west of mileage 145, and from crossing west of mileage 147 to Laurier, mileage 148.6, to be completed by July, 1912, under penalty of $25 a day.

15273. Sept. 14.—Ordering C.P.R. to build sidewalk across its main line by June 15, 1912, to Belle Plaine station, Sask.

15274. Nov. 3.—Authorizing E. A. Murphy to prepare and issue tariffs of tolls for Klondyke Mines Ry.

15275. Nov. 2.—Authorizing C.P.R. to take for construction of proposed roundhouse, machine shops and tracks for extension of yards at certain lands at West Toronto, Ont.

15276. Nov. 4.—Authorizing C.N.O.R. to open for freight traffic its Sudbury-Port Arthur line from Gowganda Jct., at mileage 315, to one mile west of Ruel station, mileage 329, 14 miles.

15277. Oct. 31.—Authorizing C.P.R. to cross with its Weyburn-Lethbridge branch 15 highways, mileage 66.64 to 78.22.

15278. Nov. 3.—Approving revised location of G.T.R. crossover switch on Edward St., Berlin, Ont.

15279. Nov. 3.—Authorizing C.P.R. to open for traffic its Regina, Saskatoon and North Saskatchewan branch from mileage 0 to 83.00, between Regina and Imperial, Sask.

15280. Sept. 11.—Authorizing C.N.R. to build branch through block 4, of Hudson's Bay Co.'s reserve, Edmonton, Alta., crossing Mackenzie, Peace and Athabasca Aves.

15281. Nov. 3.—Approving G.T.R. amended plan showing 50 ft. span over Front St., St. Lambert, Que.

15282. Oct. 12.—Ordering E. and B. Baxter to notify Board, within two months, as to plan desired re G.T.R. spur to stone quarry.

15283. Nov. 7.—Authorizing G.T.P.R. to build spur for Great West Coal Co. in s.e. ¼ sec. 17, tp. 53, to s. ½ sec. 6, tp. 53, r. 23, w. 4 m., mileage 0 to 2.3.

15284, 15285. Nov. 7.—Authorizing C.P.R. to open for traffic its Bulyea South branch from mileage 0 to 18.31, between Bulyea and a junction with the Regina, Saskatoon and North Saskatchewan branch at mileage 24.38, and that portion of its Brandon subdivision between Carberry and Douglas, Man., 16 miles.

15286. Mar. 15.—Fixing rates on binder twine from Welland, Ont., to be charged by G.T.R., M.C.R. and Wabash Rd.

15287. Sept. 1.—Naming express delivery and collection limits for Nanaimo, B.C.

15288. Nov. 8.—Ordering express companies under Board's jurisdiction, pending disposition of question of joint tariffs, to make certain charges on shipments of express freight subject to graduate charges. This order is given in full on another page under heading of Among the Express Companies.

15289. Sept. 22.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) Cobourg to Glen Tay line from mileage 0 to westerly limit of Belleville, across city, at mileage 2.3.

15290. Nov. 7.—Approving location of G.T.R. station at Brule, Ont.

15291. Oct. 31.—Authorizing G.T.P. Branch Lines Co. to cross with its Melville-Regina branch five highways in Saskatchewan.

15292. Nov. 9.—Approving Kingston and Pembroke Ry. bylaw authorizing W. R. Baker, V.P. and G.M., and F. Conway, G.F. and P.A., to prepare and issue tariffs of tolls.

15293. Nov. 7.—Authorizing G.T.R. to build spur for J. R. Booth, west of Whitney station, Ont.

15294. Nov. 7.—Authorizing T.H. and B.R. to operate spur jointly with G.T.R. into lands of L. C. Gage and Grasselli Chemical Co., Hamilton, Ont.

15295. Nov. 9.—Ordering C.P.R. within 90 days to install improved type of electric bell at crossing 2½ miles east of St. Basile, Que., 20% to be paid from railway grade crossing fund.

15296. Nov. 9.—Authorizing C.P.R. to build spur for J. B. Bonhomme and Co. and Wm. Rutherford and Sons Co., Montreal.

15297. Nov. 9.—Authorizing C.P.R. to appeal to Supreme Court re application of British American Oil Co., concerning rates on crude oil from Stoy, Ill., to Toronto, Ont., on a question of law.

15298, 15299.—Nov. 8.—Authorizing city of Toronto to maintin relay telephone and 2,200 volt line in connection with its hydro-electric system across C.P.R. and G.T.R., and across C.P.R. and G.N.W. Telegraph Co.'s wires at Strachan Ave., and rescinding order 14918, Oct. 3.

15300. Nov. 10.—Authorizing C.N.O.R. to open for traffic its Sudbury-Port Arthur line from Gowganda Jct. at mileage 315, to 1 mile west of Ruel station, mileage 329, 14 miles, and rescinding order 15276, Nov. 4.

15301. Sept. 14.—Ordering G.T.P.R. to grant to E. A. Purcell equal privileges with any other cab or hack drivers or transportation agency at Saskatoon station, for receiving and delivery of traffic to platforms, and restraining it from discriminating in favor of Saskatoon Forwarding Co.

15302. Nov. 7.—Rescinding order 14120, June 30, in so far as it authorizes erection of G.T.P.R. station at Cana, Sask.

15303. Nov. 7.—Authorizing G.T.P.R. to cross two highways in secs. 17 and 5, tp. 53, r. 23, w. 4 m.

15304. Nov. 11.—Authorizing C.P.R. to open for traffic its double track from Smiths Falls to Glen Tay, Ont., 16 miles.

15305. Nov. 9.—Approving C.N.R. plans for crossing one mile south of Camrose, Alta.

15306. Nov. 10.—Authorizing C.N.R. to build spur for J. Harty and L. J. Marsh, Fort Frances, Ont.

15307. Nov. 10.—Ordering C.P.R. to carry out terms of order 14765, Sept. 11, re extension of crossing at Henderson St., Grayson, Sask., within 20 days, subject to a penalty of $25 each day in default.

15308. Nov. 10.—Authorizing city of Calgary, Alta., to cross with its municipal street railway the C.P.R. at Eleventh St., half-interlocking plant to be installed.

15309. Nov. 9.—Authorizing C.P.R. and G.T.R. to appeal to Supreme Court re application of Canadian Oil Co. on question of law.

15310. Nov. 10.—Authorizing C.P.R. to build bridge 9.6 on its Swift Current subdivision, Sask.

15311. Nov. 10.—Authorizing C.P.R. to cross C.N.R. with its second track near corner of Sixth Ave. and Algoma St., Port Arthur.

15312. Nov. 10.—Authorizing C.P.R. to cross G.T.P.R. with its Wilkie-Anglia branch, at mileage 6.1, Sask., interlocker to be installed.

15313. Nov. 9.—Authorizing C.P.R. to operate passing track across road allowance, and approving location of station building at Woods, Man.

15314. Nov. 9.—Authorizing C.P.R. to rebuild bridge 8.4 on its Swift Current subdivision. Sask.

15315. Nov. 9.—Approving slight deviation in C.P.R. main line at mileage 95.16, near Graham station, Ont.

15316. Nov. 10.—Authorizing G.T.P.R. to divert road at mileage 113, Winnipeg district, Man.

15317, 15318. Nov. 10.—Authorizing G.T.R. to build spurs for National Land, Fruit and Packing Co., Mimico, and Robson and Precious, Hamilton, Ont.

15319 to 15322. Nov. 10.—Authorizing C.P.R. to cross 17 highways and diversions with its Moose Jaw Southwesterly branch; 18 highways with its Swift Current Southeasterly branch; highway and diversion with its Moose Jaw Southwesterly branch, and highway with its Moose Jaw Northwesterly branch at mileage 167.93, Sask.

15323. Nov. 10.—Authorizing South Ontario Pacific Ry. (C.P.R.) to divert road between East Flamboro and West Flamboro tps. at mileage 14.43.

15324. Nov. 10.—Approving revised location of C.N.O.R. Sudbury-Port Arthur line, mileage 182.03 to 183.78 from Sudbury Jct.

15325. Nov. 10.—Amending order 15247, Oct. 11, re G.T.R. bridge carrying James St. and street railway, Hamilton, Ont., by striking out last part of order beginning with words "Subject to," in 7th line.

15326. Nov. 10.—Ordering C.N.R. within 30 days, under penalty of $25 in default, to remove stones from W. J. Elliott's land, Makaroff, Man.

15327. Nov. 10.—Authorizing British Columbia Public Works Department to build highway crossing over Shuswap and Okanagan Ry. at Okanagan Landing.

15328. Nov. 10.—Authorizing G.T.R. to operate trains under Queen St. bridge, Toronto until viaduct plans are finally settled, men not to be allowed on top of cars.

15329. Nov. 11.—Relieving Quebec Ry., Light and Power Co. from further protection of crossing at Limoilou, Que.

15330, 15331. Nov. 11.—Authorizing C.N.O.R. to build bridge on its Sudbury-Port Arthur line over Mackenzie River, mileage 14.67 from Port Arthur, and over Coldwater Creek, mileage 49 east of Port Arthur.

15332. Sept. 12.—Dismissing application of Interprovincial Coal Co., Strathcona, Alta., re rates on coal from Clover Bar to Strathcona, over G.T.P.R., C.P.R. and C.N.R.

15333. Nov. 11.—Authorizing Sarnia Gas and Electric Co. to maintain intake pipe under G.T.R., Sarnia, Ont.

15334. Nov. 10.—Ordering Bell Telephone Co. to install telephone for W. Ellins, on Scarboro Rd., outside of Toronto Jct., within 30 days.

15335. Sept. 15.—Dismissing application of Continental Oil Co., Prairie Oil Co. and Winnipeg Oil Co. for order requiring railways to reduce commodity rates on oil, coal fuel, gas, petroleum, etc., from points in western United States to Winnipeg, Calgary, Regina and Saskatoon.

15336. Nov. 10.—Amending order 14961, Oct. 4, re highway crossings by C.P.R. Manitou Lake Branch, Manitoba, by striking out crossing 6.

15337. Oct. 12.—Authorizing G.T.R. to rearrange existing team tracks across Norwich St., Guelph, Ont., question of protection to be provided at Elora Rd. and Norwich St. to be considered later, and rescinding order 15256.

15338, 15339. Nov. 13.—Authorizing Kettle Valley Ry. to build trestle over Voght Creek and at station 1523, Coldwater Division, south of Merritt, B.C.

15340. Nov. 13.—Authorizing Alberta Central Ry. to cross highways and road diversion between mileage 40 and 64.5, west of Red Deer.

15341. Nov. 11.—Authorizing C.N.R. to cross eight highways with its Maryfield line, Sask.

15342, 15343. Nov. 11.—Approving C.N.O.R. revised location, mileage 68.7 to 76.5, and 70 to 80.8 from Sudbury Jct.

15344. Oct. 31.—Approving plans of C.N.R. standard pile and frame trestles for eastern lines.

15345. Nov. 11.—Authorizing C.N.O.R. to build bridge on its Sudbury-Port Arthur line over Pearl River, mileage 36.04 east of Port Arthur.

15346. Nov. 11.—Authorizing C.N.R. to build spur to Hudson's Bay Co.'s warehouse, south of Union station, Winnipeg.

15347. Nov. 13.—Amending order 12818, Jan. 26, re C.N.O.R. providing crossing without diverting highway in lot 3, con. 2, Gloucester tp.

15348. Nov. 10.—Authorizing G.T.R. to rebuild bridge 83, at mileage 93.50, District 9, Northern Division.

15349, 15350. Nov. 11, 13. — Authorizing C.P.R. to build spurs for E. G. Hazell, at mileage 99.3, on its Crowsnest subdivision, and for A. T. and W. J. Stephenson, at Red Deer, Alta.

15351, 15352. Nov. 11.—Approving location of Esquimalt and Nanaimo Ry. branch line from Comox, via Cumberland to Alberni, for 11.1 miles, to Great Central Lake, on Vancouver Island, and authorizing it to cross and divert nine highways.

15353. Nov. 13.—Approving location of G.T.P. Branch Lines Co. station at Irricana, on its Tofield-Calgary branch, Alta.

15354. Nov. 11.—Authorizing C.N.O.R. to cross eight highways in Medora tp., Ont.

15355. Nov. 13.—Ordering Atlantic, Quebec and Western Ry. to build farm crossing for J. A. Chedore, Gascon, Que.

15356, 15357. Nov. 13.—Authorizing Kettle Valley Ry. to build pile trestles at stations 1517 and 1468.

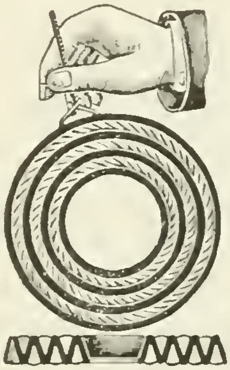
15358. Nov. 10.—Authorizing Midland Ry. of Manitoba (G.N.R.) to use crossing over G.T.P.R., St. Boniface parish, for construction purposes only.

15359. Aug. 10.—Naming express collection and delivery limits for Kenora, Ont.

15360. Nov. 13.—Authorizing C.P.R. to cross seven streets, avenues and lanes in Strathcona, Alta.

15361. Nov. 13. — Authorizing Norfolk

Have You Tried These?



This one—

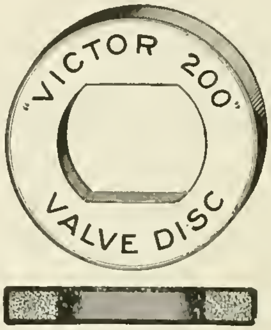
World-Goetze Elastic Corrugated Copper Gasket

with Asbestos Lining No. 2—is for flanged joints. It makes such joints tight when nothing else will—it makes them permanently tight and one in a joint is enough.

Why not try them on a few of your most troublesome joints? Why not try them *now* and pass up your flanged joint troubles for good.

This one—

"Victor 200" Copper Valve Disc



is for valves of Jenkins or similar types.

These Discs not only ensure longer life to *new* valves, but enable you to renew the life and usefulness of many an old valve—and besides they save a lot of time in renewals.

Being made of copper and asbestos they have just enough "give" to make an absolutely tight joint, without going to pieces like rubber or composition discs.

If you haven't received a copy of our Catalogue listing these Gaskets and Discs, we shall gladly send you one.

T. McAVITY & SONS, Ltd., - ST. JOHN, N.B.

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

THE HALL SIGNAL COMPANY

NEW YORK
25 Broad Street

CHICAGO
Peoples Gas Building

County Telephone Co. to erect wires across M.C.R. at Main St., Waterford, Ont.

15362. Nov. 13.—Ordering Temiscouata Ry. to restore watercourse to original source or compensate J. A. Nadeau, Caron Brook, N.B., for damage to land.

15363. Nov. 7.—Rescinding order 14943, Oct. 6, re G.T.R. spur to St. Mary's Portland Cement Co.'s premises, Blanshard tp., Ont., and including Cement Co. as party to application.

15364. Nov. 13.—Authorizing C.P.R. to use bridges at mileages 61.64 and 63.33, Lac Du Bonnet subdivision, Man.

15365. Nov. 13.—Authorizing Niagara, St. Catharines and Toronto Ry. to build bridge over Welland canal feeder in lot 27, con. 6 and 7, Crowland tp., Ont.

15366. Nov. 14.—Authorizing G.T.P.R. to build spur for Hardstone Bros., St. Boniface parish, Man.

15367. Nov. 7.—Authorizing C.P.R. to build second track on west side of main line between Highlands, Que., and south switch, to cross Upper Lachine Road, G.T.R. main line, and G.T.R. old main line, by bridges, and to move station at Highlands 350 ft. south.

15368. Nov. 14.—Relieving C.P.R. from further protection of crossing at west end of Dorval station, Que.

15369. Nov. 14.—Rescinding order 11663, Sept. 15, 1910, re crossing Main St., Glencoe, Ont., G.T.R. to operate gates there day and night.

15370. Nov. 13.—Authorizing Algoma Central and Hudson Bay Ry. to cross under C.P.R. with its Bruce St. extension, Sault Ste. Marie, Ont.

15371. Nov. 14.—Approving C.N.R. revised location through tps. 26-25, r. 23-25, w. 4 m., Alta., from mileage 211.62 (old location) to 224.91 (revised location).

15372. Nov. 13.—Authorizing C.N.Q.R. to cross Montreal St. Ry. at Ontario St., additions to be made to interlocking plant.

15373. Oct. 11.—Approving plans of subway to be built by city of Hamilton, Ont., under G.T.R., near Sherman Inlet, subject to G.T.R. approval of plans.

15374. Nov. 14.—Authorizing Montreal and Southern Counties Ry. Express Department to use certain form of merchandise receipt. This order is given in full on another page, under "Among the Express Companies."

15375. Oct. 27.—Authorizing G.T.P.R. to cross and divert highway in s.w. ¼ sec. 23, tp. 14, r. 27, w. p.m., Man.

15376. Nov. 14.—Approving location of G.T.P. Branch Lines Co. station at Edgeley, Sask.

15377. Nov. 7.—Ordering G.T.R. to erect gates by May 1, 1912, at crossing 300 yds. west of Cornwall station, Ont., 20% from railway grade crossing fund, 20% by Cornwall tp., 25% by town of Cornwall, 55% by company; pending completion, crossings to be protected by day and night watchmen.

15378. Nov. 7.—Adding Government Railways Managing Board as party to proceedings, without prejudice to any contention it may wish to advance, in connection with doing away with level crossings in Montreal.

15379. Nov. 14.—Authorizing C.N.R. to build bridge over Fairford River, Fairford Settlement, Man.

15380. Nov. 13.—Authorizing C.N.R. to open for traffic its Moose Jaw extension from Radville to end of track, 83 miles, and rescinding order 15056.

15381. Nov. 15.—Rescinding orders 13971 and 14536 re C.P.R. bridge in Ops tp., Ont.

15382. Nov. 14.—Authorizing C.N.R. to cross with its Vegreville-Calgary branch the C.P.R. Didsbury-Kininvie branch in s.e. and s.w. ¼ sec. 28, tp. 25, r. 24, w. 4 m., Alta., interlocking plant to be installed.

15383. Nov. 14.—Authorizing G.T.P. Branch Lines Co. to cross highways on its Calgary branch at mileage 98.4 and 98.7, Alta.

15384. Nov. 14.—Ordering G.T.P. to operate gates day and night at John St., Aylmer, Ont.

15385. Nov. 15.—Authorizing Moose Jaw Electric Ry. to cross C.P.R. spur at Seventh Ave., Moose Jaw, Sask.

15386. Nov. 14.—Amending order 15286, Mar. 15, 1910, re rates on binder twine, by adding words "Plymouth Cordage Co." before "Welland," etc.

15387. Nov. 15.—Ordering that crossing of Norfolk St., Simcoe, Ont., by G.T.R., be protected by watchman between 7 a.m. and 7 p.m. daily.

15388. Nov. 16.—Approving location of G.T.P. Branch Lines Co. station at Cudworth, Sask.

15389. Nov. 14.—Authorizing C.P.R. to extend spur into Martin Senour Co.'s premises, St. Boniface, Man.

Great Northern Railway Lines in Canada.

In the annual report for the year ended June 30, the following references are made to construction on lines owned and controlled by the company in Canada and to those approaching the International boundary:

The expenditure on construction of new lines and purchase of property charged to cost of road amounted to $2,407,367, but it is not shown how much of this was expended in Canada. Of the lines under construction tracklaying has been started on the line from Stanley to Wildrose, N.D., and the work is expected to be completed by the end of the year. This branch will be 51 miles, its present terminus being on the North Dakota-Montana boundary, about 25 miles south of the International boundary. The branch line from Bainville to Plentywood, Mont., 53.19 miles, has been in operation since March. Plentywood is about 20 miles south of the International boundary. Grading has been completed from Oroville, on the Washington section of what is in British Columbia, the Vancouver, Victoria and Eastern Ry., southerly to Pateros, 70 miles. Work has been continued during the year on the V.V. and E.R. and N. Co.'s lines. On the line between Princeton and Tulameen, B.C., the grade has been completed for 14 miles and track will be laid this fall from Princeton to Coalmount. (Since the date of the report this track has been laid). About 14 miles of grading is being proceeded with between Abbotsford and Chilliwack, at the east end of the line. There has been added during the year 1.02 miles of side tracks on the Canadian lines. The work of reducing the line grade at Vancouver, mentioned in previous reports, has been completed, the grade having been reduced from a maximum of 2.54 to 1% for 8,200 ft. A portion of the material removed has been used in filling in a part of the bed of False Creek and so enlarging the company's terminal property in Vancouver. Particulars of the cost of lines in Canada, etc., are given on another page under "Great Northern Ry. Co.'s Annual Report."

The following is our own compilation of current construction news:

Fort William, Ont.—A party of engineers, said to be in the G.N.R. employ, has been at work for some time west of Fort William, and was at the beginning of Nov. working in Blake tp.

The city council had under discussion Oct. 26, the question of building a bridge across Mission River in the vicinity of Island No. 2. In the course of the discussion, Alderman Hamilton stated that if the bridge did not materialize it might result in the acquisition of the island by another railway company. In a subsequent interview, he declined to say anything further about the matter.

Midland Great Northern Ry.—Midland Ry. of Manitoba.—The Board of Railway Commissioners has authorized the M.R. of M. to connect with the Canadian Northern Ry., and to cross the Grand Trunk Pacific Ry. in parish lot 55, St. Boniface, Man., the interlocking plant there to be enlarged.

Grading for the line from Oak Point Jct. to the freight yards on Isabel St., Winnipeg, has been completed, and the laying of the track and the finishing of the line is expected to be completed early in Dec. The steelwork for the viaducts crossing several streets is practically finished. The freight yard has been laid out, and the building of the freight shed is well forward. This building is 600 by 50 ft. At Oak Point Jct. are located a four-stall locomotive house, section foreman's house, yard office, coaling platform and some other small buildings. The contractor for the building of the line was A. Guthrie, St. Paul, Minn., and the buildings are being put up by the J. McDiarmid Co., Winnipeg.

A number of G.N.R. traffic officers were in Winnipeg, Nov. 10, inspecting the work in progress. W. P. Kenny, General Traffic Manager, is reported as stating that the company would be running its own freight trains into Winnipeg, over its own line, and into its own terminals by Jan. 1, 1912.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Tracklaying is reported to have been completed as far as the fourth crossing of the Tulameen River, B.C. From near this point a branch line has been surveyed to Ashnola, where the B.C. Copper Co. is carrying on operations, and it is reported that the line will be built at an early date. Plans of the revised location of the line from Hope to the western boundary of Yale district, 24.17 miles, have been approved by the Board of Railway Commissioners.

The company is acquiring some additional lands in the vicinity of False Creek, Vancouver, in connection with its development there, and arbitration proceedings in connection therewith are in progress. A start has been made in laying out the site south of False Creek, where the freight yards are to be situated. For this four tracks are being laid east, and two west, from Main St. The piling and filling in of the area to be levelled up is in progress. The filling is being done from the head of False Creek westward to where the union station will be located at the foot of Park Lane. The material for this filling in is being brought from Sapperton, about 13 miles, and additional material will be secured when the present cut through Grandview is deepened, as projected.

The Board of Railway Commissioners has authorized the company to build a dock and warehouse on Burrard Inlet. (Nov., pg. 1053.)

A Railway to Hudson Bay.

In a recent interview J. D. McArthur, of J. D. McArthur & Co., who have the contract for building the first section of 143 miles of the projected Dominion Government railway to Hudson Bay, stated that all preliminary work was well started and would be continued. The starting point of construction will be the north bank of the Saskatchewan River at Pas Mission, at which point the supply camp has been located and where has been concentrated the construction plant, and the necessary supplies for distribution along the route, as soon as construction gangs go in. It is intended to establish camps and distribute supplies during the winter. Construction will be proceeded with at several points, particularly where there is any rock work. The greater part of the work is light. It is anticipated that the grading for the 143 miles from Pas Mission to Split Lake will be completed by the end of 1912.

The construction of the bridge across the Saskatchewan River at Pas Mission is reported to be well advanced and it is expected to be completed during 1912. (Nov., pg. 1053.)

John A. Tait, District Freight Agent, Canadian Northern Ry., Regina, Sask., writes:—"I enclose money order to pay my subscription, which is just expiring, to your valuable publication, The Railway and Marine World, and also another year's subscription in advance. It is needless to say that I enjoy reading the many interesting and instructive matters contained in your paper from month to month."

Mrs. G. C. Royce, wife of Major Royce, Manager of the Toronto Suburban Ry., has been elected a member of the executive of the Toronto Women's Rifle Club.

110,600 Pounds Tensile Strength in Vanadium Steel Castings

"MASVAN"

Certain parts cannot be forged without prohibitive waste and expense. Vanadium Crucible Steel Castings have the qualities of Carbon Steel Forgings and are easily made at a comparatively low cost.

Vanadium Crucible Steel Castings are now being used in sizes up to 200 pounds weight.

Vanadium Open Hearth Furnace Steel has been cast in parts weighing from less than one ounce to more than twenty tons each.

Vanadium is the only element that greatly increases the elastic limit, or useful strength of steel, without impairing its ductility.

Simplicity and economy of manufacture, and strength and durability of service, dictate the use of Vanadium Steel Castings for countless purposes.

Put your requirements for extra strong, extra durable steel castings up to a good foundry and specify "Masvan" Ferro-Vanadium, the "Master Alloy."

"American Vanadium Facts," limited to facts about all types and applications of Vanadium Steel, sent to any manufacturar on request.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B.—The filling up of the old lumber pond at the head of St. John harbor has been completed, and work was started, Nov. 9, on the erection of a warehouse on the site reclaimed. The building will be 400 by 40 ft.

Aroostook Jct.—The Board of Railway Commissioners is being asked for authority to take possession of certain lands at Aroostook Jct., N.B., for additional tracks.

Quebec Station, etc.—The mayor, in an interview Nov. 4, stated that on the recent visit of D. McNicoll, Vice President, C.P.R., to the city, he said that the company was desirous of facilitating communication between the wharves and the railway yards, and showed plans which it had under consideration for the extension of its facilities there. They showed yards at St. Malo, where property has been acquired, with tracks along the St. Charles River to near the General Hospital, where they would be connected with the existing line into the city. Other property would be acquired, and a new station would be built. When details have been worked out the plans would be submitted to the city for approval.

Western Junction, Montreal.—Considerable progress has been made towards the completion of the new yards. The object in building this terminal yard was to relieve the Outremont yard, where practically all the through freight is now sorted. Western Junction will be the make-up point for all southbound trains. A 24-stall roundhouse is under construction. The yard is to be a plain poling one, and the present small capacity is being augmented by the addition of eight new tracks with necessary roundhouse tracks, ashpits, etc. These new sidings are of sufficient length to handle 85 car trains. As a part of the improvement scheme at this place, it is reported a boarding house for the men may be erected. The work now being carried out only represents about a third of the scheme mapped out for the future.

Ottawa Entrance, etc.—The matter of the entrance of the railway into the city, which has been under consideration for some time, was down for hearing before the Board of Railway Commissioners Nov. 7, but was postponed. The plans showing what it is proposed to do are, it is said, being prepared at Montreal under the direction of N. Cauchon, consulting engineer, but it was found impossible to complete them before Nov. 7.

D. McNicol, Vice President, had an interview with representatives of the city council Oct. 24, when he stated that the objections made to the tunnel project would be met by the amended plans which were being prepared, and that as soon as the necessary authority was obtained, work would be started. A new station would also be built on Canal St., to the south of Tupper's Bridge. A local report states that there will be a 0.4% gradient in the tunnel, and that electricity will be used as a motive power.

Montreal-Toronto Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track recently completed from Smiths Falls to Glen Tay, Ont., 16 miles. Glen Tay is the point from which the new line is projected under the charter of the Campbellford, Lake Ontario and Western Ry. to and along the Lake shore to the Montreal-Toronto line between Locust Hill and Leaside Jct.

Location plans have also been approved by the Board for the section from Cobourg to the westerly limit of Belleville, across the city, to mileage 2.3.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has approved location plans from mileage 0, at Glen Tay, on the C.P.R. Montreal-Toronto line, to the western boundary of South Sherbrooke tp., 15.1 miles.

Georgian Bay and Seaboard Ry.—Ballasting the last portion of this line to be completed to Bethany Jct., on the C.P.R. Montreal-Toronto line is being proceeded with rapidly. It is expected that everything will be ready for opening for traffic by Dec. 15. The line extends from Bethany Jct. to Victoria Harbor, Georgian Bay.

West Toronto Yard Extensions, etc.—The application of the C.P.R. as exercising the franchises of the Ontario and Quebec Ry. for the right to expropriate certain lands in West Toronto in connection with its yard extension and other improvements came before the Board of Railway Commissioners at Ottawa, Nov. 14. This application is in addition to the lands authorized, Nov. 2, to be taken for the proposed roundhouse, machine shops, etc.

South Ontario Pacific Ry.—The Board of Railway Commissioners has authorized the connecting of this line from Guelph Jct. to Hamilton, Ont., with the Toronto, Hamilton and Buffalo Ry. at Hamilton, mileage 16.17 from Guelph Jct.

Application is being made for final sanction of a lease of the company's line from Guelph Jct. to Hamilton, now being completed, to the C.P.R. for 999 years from Jan. 1, 1912.

Application is being made to the Dominion Parliament to authorize the building of a railway from Hamilton southerly and easterly to the Niagara River.

Spur Line at Guelph.—An extension of time has been granted by the Board of Railway Commissioners for the building of the spur to the Provincial Reformatory farm, Guelph, Ont.

Entrance to Stratford.—H. W. Killaly, Engineers of Surveys, Montreal, is in charge of the surveys being made to secure a route through Stratford, Ont., for the projected branch of the Guelph and Goderich Ry., from near Millbank, and for the extension of the Tillsonburg, Lake Erie and Pacific Ry., or the St. Marys and Western Ontario Ry., which are to meet there.

London Roundhouse, etc.—Work has been completed on the new roundhouse on Quebec St., and it is expected the coaling plant and watering tank will be completed by Dec. 31. The yard round the new roundhouse is being laid out, but will not be finished until early in the new year.

Bridge at Sault Ste. Marie.—We are advised that designs for a 336 ft. double leaf, single track bridge over the new U.S. ship canal at Sault Ste. Marie, Mich., have been accepted. This bridge will form part of the connection between the C.P.R. at Sault Ste. Marie, Ont., and the Minneapolis, St. Paul and Sault Ste. Marie Ry. at Sault Ste. Marie, Mich.

Port Arthur-Fort William Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track between Port Arthur and Fort William, Ont., 4.2 miles.

Fort William Sidings.—The Fort William city council notified Superintendent Armstrong, Nov. 2, that it could not grant the use of any streets for sidings except on condition that the city could take them over at any time. This and some other questions affecting the interpretation of the agreement with the company were discussed by George Bury, Vice President and General Manager, and the mayor, Nov. 11.

Graham, Ont.—The Board of Railway Commissioners has approved location plans for a slight deviation of the main line near Graham station, Ont., at mileage 95.16.

Winnipeg Terminals.—A press report Nov. 14 states that the company is preparing plans for increasing the accommodation at the Winnipeg terminals. It is stated that new yards will be built outside the city.

Express Building for Winnipeg.—The C.P.R. has started work on a building on Main St., Winnipeg, opposite the station, to be used by the Dominion Express Co. It is to have a frontage of 50 ft., beside the subway, and will extend to King St., 300 ft., where it will have a frontage of 80 ft. The building will be four stories high, over a basement. The contractors are John Gunn and Co., Winnipeg.

Carberry to Douglas.—The Board of Railway Commissioners has authorized the opening for traffic of the portion of the Brandon subdivision between Carberry and Douglas, Man., 16 miles, this being a portion of the second track now under construction between Portage la Prairie and Brandon.

Brandon Yards.—The company is laying out a yard on Rosser Ave., just south of the industrial spur for city freight. Local reports stated Nov. 11 that it is intended to build a new freight shed early in the new year.

Boissevain to Lauder.—The Board of Railway Commissioners has approved location plans for the branch from Boissevain to Lauder, Man., between sec. 22, tp. 3, r. 20, northwesterly to sec. 17, tp. 5, r. 24, west principal meridian.

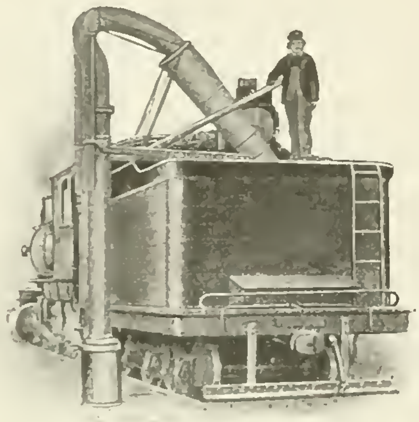
Manitoba and North Western Ry.—Application is being made to the Dominion Parliament to authorize the building of a branch from Theodore westerly to the C.P.R. Pheasant Hills branch between Govan and Lanigan, Sask.

Proposed Extensions of Western Lines.—Application is being made to the Dominion Parliament for power to build the following branch lines: from Hawarden on the Moose Jaw Northwesterly branch, to near Floral or Cheviot, on the Pheasant Hills branch, Sask.; from the Estevan-Forward branch to the Weyburn-Lethbridge branch, Sask.; from Sedgewick, on the Hardisty subdivision, southerly to tp. 39 or 40, range 10, 12 or 13, west 4th meridian, Alta.; from near Wilkie, on the line authorized by sec. 3 (c), chap. 74, statutes of 1907, northwesterly and northerly to the North Saskatchewan River in tps. 51 to 56, ranges one to eight, west 4th meridian, Sask. or Alta.; from near Kipp, on the Crowsnest branch, easterly and northeasterly to tp. 12 or 13, range 12 or 13, west 4th meridian, Alta.; from the authorized terminus of the line from Asquith, authorized by sec. 3 (c), of the C.P.R. Act of 1910, northwesterly to Battleford, Sask.; from Irricana easterly and southeasterly to tp. 20 or 21, ranges 11 to 14, west 4th meridian, Alta.; from Osborne to Cartwright and Boissevain, Man.; from Otterburn to Stuartburn, Man.; from the Icelandic River northerly and northeasterly for 100 miles, and from Killam to near Strathcona, Alta., and also to make the terminus of the line from Lauder westerly near Stoughton, on the Arcola branch.

Second Track Work on Western Lines.—In a recent interview the President, Sir Thomas Shaughnessy, is reported to have stated that the company would have to continue second track construction in the west. We are advised that the second track through from Winnipeg to Brandon, Man., will be fully completed this year, and that when the appropriations are being considered in the near future a decision will be

RAILROAD STANDPIPES

Sheffield-Johnson, the Ideal Combination of Valve and Spout



Sheffield-Johnson Standpipe.

The Sheffield-Johnson Standpipe was designed to meet the demand for a greater range of drop required to serve the small yard engine and the large passenger and freight engines. It is a combination of the Sheffield valve, long recognized as the standard for this service, and the Johnson flexible upper works. Having no trolley arrangement, inside rods, or other internal mechanism, this pipe is specially adapted to the severe Canadian climate, as tests by leading roads have conclusively proved.

Grading for about 20 miles of second track east and west of Moose Jaw, Sask., between Pasqua and Caron, has been in progress during the past season.

Transfer Track at Balcarres.—The Board of Railway Commissioners has directed the C.P.R. and the Grand Trunk Pacific Ry. to build a transfer track for the interchange of traffic at Balcarres, Sask.

Regina-Colonsay-Bulyea Branch. — The company opened for traffic Nov. 5 its completed line out of Regina, extending via Craven to Colonsay, on the extension of the Manitoba and North Western Ry., from Yorkton into Saskatoon. The total length of the branch, part of which was in operation in 1910, is 133 miles. At Valeport, at the southern end of Lost Mountain Lake, a branch of 19 miles extends to Bulyea, on the Pheasant Hills branch. This branch was also opened for traffic Nov. 5.

Regina Southeasterly.—Local press reports state that arrangements are being made for starting construction early in 1912 on a line from Regina towards the International boundary, near Portal. It is stated that the right of way as far as Griffin, Sask., was purchased a year or so ago, and that right-of-way agents are now working beyond Griffin.

Saskatoon Improvements.—The Saskatoon city council is applying to the Saskatchewan Legislature for confirmation of an agreement with the C.P.R. for the purpose of effecting certain improvements in the city.

Cutknife Branch.—Tracklaying was started Oct. 27, on the branch running northerly from Wilkie, Sask., into the Cutknife district, on which grading has been completed for about 30 miles.

Wilkie-Anglia Branch.—The Board of Railway Commissioners has approved the location of this branch between mileage 7.46 and 24.90. This branch will form another connection between the Pheasant Hills branch and the Manitoba and North Western Ry. extension, which effects a junction at Macklin, Sask.

Asquith to Conquest, Sask.—The branch which it is proposed to build will be practically a straight line of 42 miles, crossing the G.T. Pacific Ry. and the Canadian Northern Ry. Goose Lake branch. It will connect at additional points the extension of the Manitoba and North Western Ry. from Yorkton to the Calgary and Edmonton Ry. Wetaskiwin branch with the Moose Jaw northwesterly branch, which now joins it at Macklin.

Moose Jaw Northwesterly. — The Board of Railway Commissioners has authorized the opening for traffic of the extension of this branch from Kerrobert to Conquest, Sask., 93.07 miles.

Moose Jaw Southwesterly.—The route map has been approved for this projected branch southerly from near the starting point of the Outlook branch to south of Lake Johnston, 35 miles. This is a revised location of the route approved in 1910. The plan then approved showed the line to near the same points, but continuing the Weyburn-Lethbridge line now under construction.

Swift Current Northwesterly. — The Board of Railway Commissioners granted permission Nov. 2 for the operation of a train service over the completed branch line northwesterly from Swift Current, Sask.

Medicine Hat to Shepherd, Alta.—The route plan of a projected line from Medicine Hat to Shepherd is before the Minister of Railways at Ottawa for approval. The projected line runs north of Grassy Lake, crosses the Bow River, west and north through the Sundial country, and then northwesterly by Lake McGregor and Queenstown, crossing the Bow River south of Cheadle, and running into Shepherd, where it will connect with the main line.

Bassano to Irricana.—The Board of Railway Commissioners has approved location plans of a branch from Bassano, on the main line, to the branch from Irricana easterly, 22 miles.

Calgary Hotel.—A contract has been let to P. Lyall and Sons, Montreal, for the erection of a C.P.R. hotel at Calgary, Alta. The contractors were reported, Nov. 14, to be making arrangements for starting on the building, which is to be ready for opening in the spring of 1913. The foundation contract, which was let some months ago, is nearly completed.

Calgary Shops.—A survey party has been at work since Nov. 1 laying out the site of the proposed shops, etc., at Calgary. It is expected that a considerable number will be employed during the winter preparing the foundations, etc.

Strathcona - Edmonton High Level Bridge.—A large quantity of steel for the superstructure of the bridge to connect these two points has been delivered. The contractors have got most of the falsework in place, and expect to get on with the erection at an early date.

Royal Collieries Co.—Permission has been granted by the Board of Railway Commissioners for the building by the C.P.R. of two spurs for the Royal Collieries Co. at Royal View, near Lethbridge, Alta.

Macleod to Frank, Alta.—The Board of Railway Commissioners has approved location plans for a branch from Macleod to Frank, Alta., 54.52 miles.

Kipp-Aldersyde Branch.—The Board of Railway Commissioners has authorized the opening for traffic of a further section of this branch from Carmangay, mileage 28.2, to Aldersyde, mileage 84.2, from Lethbridge, Alta.; the extension was opened Nov. 5.

Fort Steele to Skookumchuck, B.C.—Press reports state that a contract has been let to Foley, Welch and Stewart to build a line from Fort Steele to Skookumchuck, about 50 miles.

Kootenay Central Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the lines already authorized and for power to build a branch from the C.P.R. Crowsnest branch near Galloway, B.C., southerly to the International boundary.

Improvements at Coquitlam, B.C.—A bylaw approving the agreement between the council and the C.P.R. with reference to the laying out of yards, etc., at Coquitlam was voted on by the taxpayers Nov. 18, and passed by a majority of 136, only six voting against it.

Victoria Hotel.—A contract has been let to Skene and Christie, Victoria, B.C., for the erection of a six story addition to the Hotel Empress, Victoria. Work was started Nov. 1, under the charge of J. L. Skene.

Esquimalt and Nanaimo Ry.—The steel bridge, replacing the wooden trestle across Niagara Canyon, has been completed and will be opened for traffic as soon as it has been accepted from the contractors.

The Board of Railway Commissioners has approved location plans for a branch line from Comox, via Cumberland, to Alberni, 11.1 miles, and to Great Central Lake.

A contract has been let, we are officially advised, to the Westholme Lumber Co. for clearing the right of way for the extension of the E. and N. Ry. between McBride Jct. and Union Bay. This extension is about 40 miles, and starts from the main line, where the line to Alberni branches off. The contractors are reported to have started work, and will push it forward rapidly, as it is intended to start grading as soon as possible.

The extension into Port Alberni will, it is expected, be put in operation early in Dec.

Application is being made to the Dominion Parliament to increase the company's bonding powers and give it power to build the following additional lines: from near the north fork on the Oyster River, on the line authorized by par. a, sec. 2, chap. 92 of the statutes of 1906, northerly and northwesterly to Hardy Bay, on the west coast of Vancouver Island. (Nov., pg. 1060a.)

Canadian Pacific Railway Hotel Extensions.

Travel on the C.P.R., particularly through the west, has grown so enormously that extensive additions to many of the hotels on the system are being planned. The hotels at Banff, Lake Louise, Field and Glacier were forced almost daily during the past season, to turn away tourists.

At St. Andrews, N.B., the accommodation of the Algonquin Hotel has been increased, bringing the number of rooms up to nearly 250. The McAdam Hotel at McAdam Jct., N.B., has been recently added to.

While it was expected when the Royal Alexandra at Winnipeg was being built that sufficient accommodation had been provided for at least 20 years, its extension has already become necessary.

The new Calgary hotel, to contain 350 rooms, is being fitted up with the most modern conveniences, the work being rushed with the idea of early completion.

The Banff Springs hotel is also having extensive additions built in, the main part consisting of a centre wing to contain 100 rooms. New employes' quarters are also being built. The new sulphur water swimming pool will be completed for the 1912 season. These pools are tiled throughout. A considerable number of artisans will be retained on these improvements all winter.

At the Lake Louise hotel there is to be an immediate addition of at least 125 rooms, making a total of nearly 250. There will also be added more kitchen space, and a new boiler plant and laundry. A detached employes' quarter, as at Banff, is being built.

At Balfour, B.C., the new Kootenay Lake hotel, situated on the lake of the same name, was opened last August.

At Glacier, B.C., the Glacier House is having another 100 rooms added, making a total of 190 in all.

The Fraser Canyon House at North Bend, B.C., was recently re-opened after thorough renovation. It has 16 bedrooms.

Extensive additions and improvements are being carried out at the Hotel Vancouver, which when completed, will bring the rooming capacity up to 600. The improvements include a new centre part, kitchen, dining room and grill room. This year, in spite of the two new additions recently put up containing 58 and 72 rooms, respectively, the management was heavily handicapped for room.

At Victoria, B.C., the Empress is having another 70 rooms added to its original number of 220, which at the time of construction was deemed sufficient for the next five years.

◆

The C.P.R. has now 2,000 men enrolled in classes for first aid to the injured, at about 100 points on its lines.

Traffic Orders by the Board of Railway Commissioners.

Summaries of other orders are given on another page, under "Orders by the Board of Railway Commissioners."

EXPORT LUMBER RATES TO MONTREAL.

14964. Sept. 19.—Re application of Robert Cox and Co. complaining that the rate charged by the C.P.R. on lumber from Routhier, Que., to Montreal, for export, was excessive and discriminatory, it is ordered that the company reduce its export rate on lumber from Loranger, Hebert and Campeau to 5c. per 100 lbs., and from Routhier and Mont Laurier to 6c. per 100 lbs., and that the company file a tariff making the said rates effective not later than Oct. 18.

RATES ON HAY TO EASTERN U.S. POINTS.

15080. Oct. 12.—Re application of Montreal Board of Trade Transportation Bureau, on behalf of the shippers of hay of the city of Montreal, under sec. 323 of the Railway Act, for an order disallowing the increased rates on hay from Ontario and Quebec to eastern United States points, which otherwise will become effective on Oct. 16, and reinstating the present rates of the Grand Trunk, Canadian Pacific, Canadian Northern, and Quebec, Montreal & Southern railway companies: Upon representations made to the Board by the Freight Traffic Manager of the G.T.R. on behalf of the carriers which have published and filed tariffs of advanced rates on hay and stray from points in Canada to points in the U.S., to become effective Oct. 16, that the carriers desire to postpone the effective date of the said tariffs until Jan. 1, 1912: It is ordered that the effective date of the said tariffs published and filed by the Grand Trunk, Canadian Pacific, Canadian Northern Ontario, Canadian Northern Quebec, Quebec, Montreal & Southern, Central Vermont, Ottawa & New York, Central Ontario, Thousand Islands, and Lotbiniere & Megantic railway companies, and the New York Central & Hudson River and Rutland railroad companies, be postponed until Jan. 1, 1912, until which date the tariffs on hay and straw, lawfully in force from and to the said points at the date of this order, shall not be increased. And it is also ordered that the said companies be required to justify the said advanced rates at a sittings of the Board to be held at Ottawa on Nov. 21, 1911.

ADJUSTMENT OF FREIGHT CLAIMS.

15141. Sept. 15.—Re application of Canadian Freight Claims Bureau of Winnipeg, complaining of delay by Canadian Pacific and Canadian Northern railway companies in payment of claims for overcharges caused by referring complaints to Montreal for adjustment, and applying for an order requiring that the same be investigated and disposed of at Winnipeg. It appearing that the Board has no jurisdiction to afford the relief asked for, the application is hereby dismissed.

Commissioner McLean gave the following judgment: The complaint as launched was directed against both the C.N.R. and the C.P.R. At the hearing, the complaint as to the C.N.R. was withdrawn by the applicants. The complaint in brief is that when a claim for an overcharge is filed, it has to be sent to the head offices of the company at Montreal; thence it is returned to Winnipeg to be examined into; then it is returned to Montreal with the report of the railway official who has looked into it; and that, thereafter, the settlement, if any, is made from the Montreal office. It is alleged that this involves an unnecessary delay. The applicants desire that the claims should be investigated and settled at the Winnipeg office. It appears that the C.P.R. has its Freight Claims Auditor at Montreal, to whom all claims are sent either by the claimant or the local representative of the company with whom the claim may have been lodged. The central claims office is a recognized institution with all large railways. It [illegible] appears that the more extensive the company's operations, the greater necessity for centralization in the matter of disbursements. There was at one time a branch claims office at Winnipeg, but I understand that when this was in existence it was none the less necessary to have the vouchers signed in Montreal. A. J. Beatty, who appeared for applicants, stated at the hearing that he was unable to find anything in the Railway Act which empowered the Board to order claims to be paid at Winnipeg, and that whatever might be urged by him in this matter was a matter of inference from the Board's powers as to rates. Under sec. 78 of the Railway Act, the tolls and tariffs legally in force are conclusive against the railway in case of prosecution under the Act. Sec. 398 sets out the penalties attaching to the disregard of the provisions of the Act in respect of tolls. It is established that the Board has no power, under the Railway Act, to order the refund of such portion of a rate as is in excess of the legal rate. If, on determination by the Board that there is such excess, the railways refuse to refund, then the remedy is by action in the courts. The powers of the Board being so limited as to a matter in which it makes a formal adjudication, it follows with greater force that in the matter of an alleged overcharge, as to the conditions of which the Board is not cognizant, it has no jurisdiction to determine when and where such refund shall be made. Parliament not having spoken in the matter, the Board has no jurisdiction, and the application fails.

UNPREPAID JOINT FREIGHT TRAFFIC.

The Board on Nov. 11 notified railway companies that it would require them on Nov. 21 to show cause why a regulation should not be made that in transferring to a second carrier unprepaid joint freight traffic, they should show that carrier how their charges are made up; the second, or delivering, carrier to show the information in its advice note to the consignee.. A second circular, issued Nov. 14, postponed the hearing to Dec. 19.

◆

Oil Fuel For C. P. R. Locomotives in British Columbia.

As announced in our issue of June last, the C.P.R. has decided to use crude oil for fuel for the locomotives on a portion of its British Columbia Division. We are now further officially advised that circular tanks of rivetted steel boiler plate, with a capacity of 200,000 gallons, will be built on the Shuswap and Mountain subdivisions of the first district of the B.C. division, at Field, Golden, Roger's Pass, Revelstoke, Sicamous Jct., Notch Hill and Kamloops.

We are also advised that the only change necessary in the locomotives will be the insertion of jet burners in the fire boxes. The tenders will be changed to hold oil instead of coal.

◆

The Master Boiler Makers Association will hold its next convention at Pittsburgh, Pa., May 14-17, 1912. J. Rogers Flannery, of the Flannery Bolt Co., is secretary of arrangements.

P. A. Freeman, General Superintendent and Chief Engineer, Halifax Electric Tramway Co., read a paper on "Development of Electric Power at the Pit Mouth" at the annual meeting of the Nova Scotia Society of Engineers recently.

Canadian Northern Railway Earnings' Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

	Earnings.	Expenses.	Net Earnings.	Net Increase
July	$1,475,900	$1,114,300	$361,600	$13,400
Aug.	1,420,600	1,105,900	314,700	51,700
Sept.	1,576,400	1,157,000	419,400	38,200
	$4,472,900	$3,377,200	$1,095,700	$103,300
Inc.	874,900	771,600	103,300	....

Approximate earnings for October, $2,028,900, and for two weeks ended November 14, $1,030,000 against $1,627,800 and $737,100, for same periods 1910.

◆

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:

Approximate earnings for October, $11,113,000, and for two weeks ended November 14, $4,979,000, against $10,150,000 and $4,375,000 for same periods 1910.

◆

Grand Trunk Railway Earnings, Expenses, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Sept., as compared with those for Sept., 1910:—

GRAND TRUNK RAILWAY.

	1911.	1910.
Earnings	$3,458,600	$3,217,700
Expenses	2,476,200	2,269,200
Net earnings	$ 982,400	$ 948,500

CANADA ATLANTIC RAILWAY.

	1911.	1910.
Earnings	$ 184,400	$ 175,800
Expenses	156,700	158,700
Net earnings	$ 27,700	$ 17,100

GRAND TRUNK WESTERN RAILWAY.

	1911.	1910.
Earnings	$ 560,000	$ 529,600
Expenses	431,600	402,100
Net earnings	$ 128,400	$ 127,500

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1911.	1910.
Earnings	$ 206,500	$ 184,900
Expenses	149,500	147,700
Net earnings	$ 57,000	$ 37,200

Approximate earnings for Oct., $4,468,718, and for two weeks ended Nov. 14, $1,916,798, against $4,180,039 and $1,802,180 for same periods, 1910.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Oct. 31:—

	1911.	1910.
Grand Trunk Railway	£2,834,963	£2,481,267
Canada Atlantic Railway	155,660	137,289
Grand Trunk Western Ry	465,435	403,703
Detroit Grand Haven and Milwaukee Ry.	164,179	136,562
Totals	£3,620,257	£3,158,821

Quebec Public Utilities Commission.

The Commission has passed the following orders recently:—

Authorizing the Shawinigan Water and Power Co. to cross the Shawinigan Terminal Ry. Co.'s line and divert a roadway.

Approving the C.P.R.'s plans for a bridge over the branch of the St. Maurice River at Cap de la Madeleine, to connect with Belle River Island.

Authorizing the Quebec County Ry. to operate the extension of its upper town line from St. Louis St. to St. George St., and along St. George St. to St. Edward St., two-thirds of a mile.

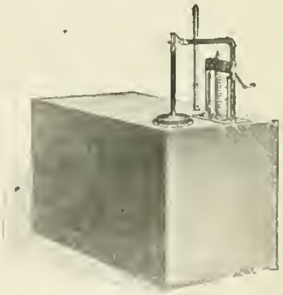
Read This

This is what Mr. J. P. Murphy, G.S. for the L.S. & M.S. Ry., says about Bowser Systems:

"In the handling of oils the Bowser System is being used extensively, and with it, at every engine house where it has been installed we have been able to decrease our forces two men, one night and one day, as it has been entirely possible to have the supply man deliver the oils in addition to his other duties. The pumps are located so the oils and supplies are delivered over the same counter."

The Bowser always economizes. It saves its own cost and then continues to pay a remarkable dividend as long as you use it.



Let us send you our new Railroad Book listing all the outfits and explaining their adaptability, Free. Ask for Book No. 18.

S. F. Bowser & Co., Inc., 66-68 Frazer Ave., Toronto.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Central Ry.—The Board of Railway Commissioners has approved the deviation of location for the line between mileage 0 and 64.5 west of Red Deer, Alta.; and plans of bridges over Medicine River, Horseguard River, mileage 50, and Fleming's Creek, mileage 60.1, all west of Red Deer. (Nov., pg. 1035.)

Alberta Ry. and Irrigation Co.—The town council of Pincher Creek, Alta., decided at a meeting, Nov. 3, to protest against the approval by the Dominion Government of plans filed for the entrance of one of the company's branch lines into the town. (Oct., pg. 935.)

Algoma Central and Hudson Bay Ry.—The section of the line from mileage 65 to 79 has been taken over by the company from the contractors, and a regular train service was put in operation Oct. 28. The Board of Railway Commissioners has authorized the operation of regular trains on the extension as far as mileage 85 from Sault Ste Marie, Ont. Track has been laid to mileage 91, at the crossing of the Montreal River, where a large bridge has been completed. Three trestles at mileage 93 are nearing completion; two other trestles at mileage 99 are well advanced, and three trestles between mileage 104 and 106 are also under construction. Grading has been completed to Agawa, at mileage 126, and it is expected that track will be laid to that point this season. The remainder of the grading to Hawk Lake Jct. has been completed, and the line is being operated from that point to Josephine Jct., the point of connection with the Michipicoten branch. This junction is at mileage 170 from Sault Ste Marie. The grading between Hawk Lake Jct. and Hobon, on the C.P.R. transcontinental line is well advanced, a late report stating that there is only about nine miles to be completed. The Board of Railway Commissioners has approved a revised location on this section between mileage 30.08 and 53 from Hawk Lake Jct., and ordered an interlocking plant at the crossing at grade of the C.P.R. at Hobon. It is expected that the line will be completed to Hobon early in 1912. Grading is also in progress from Hobon towards the National Transcontinental Ry.

A contract has been entered into with the Dominion Government under the act granting aid to certain railways for a line from Sault Ste. Marie to the C.P.R. between White River and Dalton stations, about 200 miles, and for a line from Michipicoten harbor towards the C.P.R., about 25 miles. Both lines are under construction, and trains have been operated over nearly 100 miles for several years, but until the present time the Dominion subsidies have not been granted. The Michipicoten line joins the main line at Hawk Lake Jct., and the junction with the C.P.R. is at Hobon.

Atlantic, Quebec and Western Ry.—Local reports state that although track has been laid into Gaspe, Que., on the extension of this line, it is not intended to have it fully ballasted and completed for the regular operation of trains until next year. (Nov., pg. 1035.)

Burrard Inlet Tunnel and Bridge Co.—E. Cruttwell, London, Eng., representing Sir J. W. Barry, the special engineer engaged by the municipalities in connection with the planning of the bridge proposed to be built over the second narrows of Burrard Inlet, arrived in Vancouver, B.C., Nov. 2. After consultation with the local engineers, and an inspection of the site, he took charge of the plans, etc., that had been prepared, and stated that he would remain in the city until he had completed the work of examining them and advising the municipalities. (Nov., pg. 1035.)

Calgary and Fernie Ry.—The Dominion Parliament is being asked to extend the time for the building of this line and to increase the company's bonding powers. Pringle and Guthrie, Ottawa, are solicitors for applicants. (May, 1910, pg. 349.)

Canadian Collieries (Dunsmuir), Ltd.—Press reports state that $1,000,000 has been appropriated for improvements at the company's collieries, and railways in the vicinity of Wellington, Vancouver Island, B.C.

Central Ry. of Canada.—Application is being made to the Dominion Parliament to confirm certain transfers and agreements between the company and the Ottawa River Ry., the Central Counties Ry., the Great Eastern Ry., the Ottawa Valley Ry., the Carillon and Grenville Ry., and the Ottawa River Navigation Co., and to amalgamate these companies with the Central Ry. Co. of Canada. An extension of time for the construction of the several authorized lines is asked, and also power to build the following additional lines of railway:—from a point in Laval county to St. Jerome, Terrebonne county, from the main line in Two Mountains county to St. Scholastique, Que.; from the main line in Hochelaga county passing through Chambly, Vercheres and St. Hyacinthe counties to Ste. Rosalie, on the Intercolonial Ry.; from a point in Chambly county on the last named line through Laprairie and Napierville counties to the Intercolonial boundary in St. John's county. The company also asks power to enter into agreements for various purposes with the Pontiac Central Ry., Western Central Ry., Quebec, Montreal and Southern Ry., Montreal and Southern Counties Ry., Joliette and Lake Manuan Colonization Ry., and the Imperial Traction Companies. The notice of application is signed by J. D. Wells, Secretary.

A meeting of the shareholders of the Great Eastern Ry. has been called to be held in Montreal, Dec. 18. Among other things to consider is an agreement of the sale of part of the company's assets.

We are officially advised that L. B. Howland represents the C. Ry. Co. of Canada as Superintendent of Construction for the entire line from Montreal to Georgian Bay, together with the projected branches. It is proposed to carry on survey work east and west of Hawkesbury, Ont., during the winter, and to make arrangements for starting construction in the spring. The contractors, C. J. Willis and Sons, of London, Eng., have a branch office in Montreal, and also have a temporary construction office at Hawkesbury. (Nov., pg. 1035.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has approved revised location plans of the projected North Mountain branch from Centreville to Lakeville, N.S., 5.1 miles. (Nov., pg. 1035.)

Dominion Pacific Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the International boundary in range 23 west of 4th meridian, Alberta, northeasterly to Cardston, and on via Pincher Creek to Lundcreek on the C.P.R. Crowsnest branch, thence northerly and west of the Porcupine Hills to Calgary; thence northerly, and west of Snake, Gull and Pigeon Lakes to Edmonton, and on northwesterly to Fort St. John, B.C., with a branch from Pincher Creek southwesterly and along the south fork of the Old Man River to the boundary between Alberta and British Columbia. O. E. Culbert, Ottawa, is solicitor for applicants. (July, pg. 645.)

Duluth and Northern Minnesota Ry.—During the hearing of an application of the company for power to increase rates on logs and forest products, before the Minnesota State Railroad and Warehouse Commission, Nov. 9. J. Mullen, Vice President and General Manager, said it was planned to extend the line through Lake and Cook counties about 60 miles to a junction with the Canadian Northern Ry. The company's line now extends from Knife River to Cramer, Minn., 62 miles. At Knife River connection is made with the Duluth and Iron Range Rd., and the apparent junction with the C.N.R. would be at or near Gunflint Lake, at the International boundary, where the C.N.R. Gunflint branch—the Old Port Arthur, Duluth and Western Ry. ends.

Essex Terminal Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the company's line in Walkerville to east of Giles Ave., between Windsor Ave. and Macdougall St., Windsor, Ont. (Sept., pg. 853.)

Fredericton and Grand Lake Coal and Ry. Co.—Application is being made to the Dominion Parliament to declare the line proposed to be built from Gibson to Minto, N.B., to be a work for the general advantage of Canada, and to authorize the company to enter into any agreement with the C.P.R. under sec. 361 of the Railway Act. The notice of application is signed by H. P. Timmerman, President, who is Industrial Commissioner, C.P.R. Eastern Lines.

The C.P.R. is applying to the Dominion Parliament for power to enter into an agreement with the Province of New Brunswick for any of the purposes specified under sec. 361 of the Railway Act in respect of a line extending from near Norton to Minto, N.B. This is the New Brunswick Coal and Ry. Co.'s line of which the proposed F. and G.L.C. and R. Co.'s line would be a connection. The N.B. Legislature last session passed an Act guaranteeing bonds for the construction of the Gibson-Minto line, on certain conditions, one of which had to do with the taking over of the N.B.C. and R. Co.'s line.

Sir Thomas Tait is taking an active interest in the proposition, and it is said that proposals have been submitted to the New Brunswick Government which will be embodied in an act amending that passed last session. If the rearrangement of the conditions as to a guarantee of bonds is carried through it is expected that construction will be proceeded with early in 1912. (Nov., pg. 1035.)

Gatineau and Ungava Ry.—Application is being made to the Dominion Parliament to change the name of the company to the Ottawa and Ungava Ry. Co., and to extend the time within which it may build the lines authorized by sec. 7, chap 102, of the statutes of 1909-10. A. T. Genest, Ottawa, is solicitor for applicants. (Jan., 1910, pg. 19.)

Hudson Bay, Peace River and Pacific Ry.—See Winnipeg City Power Line.

Intercolonial Ry.—On the branch line to Sydney Mines, N.S., a four span steel bridge across Georges River has been completed.

The overhead bridge on St. George St., Moncton, carrying the street over the railway is nearing completion. The substructure is of concrete, and the superstructure of steel. It has a span of 180 ft., and is 36 ft. wide.

The proposed cut-off at Moncton leaves the main line, Moncton to Halifax, at Sunny Brae station, 1.22 miles east of Moncton station, and extends 1.14 miles westerly through the northern part of the city to the east of the proposed freight terminal yard. This cut-off will be a double track line laid with 80-lb. rails: it will cross Hall's Creek on a steel superstructure of three

Nicholson Co.

The Only Satisfactory Test of a File is Actual Use

Mechanics are particular and will continue to use a make of file they have found to give the best results. The Nicholson File Company adopted and adhered to the policy of making the best file possible.

The result of this policy is that their business has increased from 100 dozen a day sold in a local market in 1864 to 16,000 dozen a day sold all over the world, and Nicholson-made Files are recognized as the standard wherever files are used.

spans—70, 125, and 60 ft. respectively—carried by concrete substructures on pile foundations, and will be carried over Church and Archibald Sts. by steel spans on concrete abutments, crossing three other streets at grade. The yard will extend from the west end of the cut-off, westerly 1.97 miles to an intersection with both the I.R.C. main line, Moncton to Montreal, and the National Transcontinental Ry., 2.6 miles northwest of Moncton station. This yard will be a gravity switching system, with receiving, classification, and dispatching yards, from and to Moncton, Halifax, and St. John, and two humps; it will have two locomotive houses, coal chutes, ash pits, water supply, etc., and about 35 miles of track. Tenders for the graduation, sub-structures, track-laying, ballasting, etc., have been advertised for, and it is expected that work will be commenced this year. (Nov., pg. 1035.)

Interprovincial and James Bay Ry.—Application is being made to the Dominion Parliament to revive the act of incorporation, extend the time for construction, and increase the bonding powers. An alternative notice asks for the incorporation of a company with this title to build a railway from near Lumsden's Mills, on the Lake Temiskaming Colonization Ry., to or towards the Des Quinze River, Que. Pringle, Thompson and Guthrie, Ottawa, are solicitors for applicants. (July, 1909, pg. 477.)

Joliette and Lake Manuan Colonization Ry.—A press report states that a contract has been let to the British Canadian Construction Co., Ottawa, to build a line from Montreal, through Joliette, Que., to the National Transcontinental Ry., about 217 miles, the work to be completed by Dec., 1913. Further reports state that work has been started between Joliette and Ste. Emelie de L'Energie, and that some miles of grading has been completed. It is proposed to continue work all winter on the rock sections. J. A. Patten, St. Felix de Valois, Que., is Chief Engineer.

The B. C. C. Co. was incorporated under the Dominion Companies Act, Nov. 4, with $500,000 capital and office at Ottawa, to carry on a railway and general contracting business, the incorporators being: A. M. Laredo, London, Eng.; H. S. Ross, P. O'Reilley, R. M. Bobier and A. Gay, Montreal. (Oct., pg. 935.)

Kelowna, B.C.—Survey parties are reported to be going over a section of the route projected for the abandoned Midway and Vernon Ry., in the vicinity of Kelowna, but with what object has not been made public. One report states that an extension of the Shuswap and Okanagan Ry. from Vernon to Kelowna is proposed, and another states that the surveys are in connection with the projected construction of electric railways in the Okanagan Valley.

Kettle Valley Lines.—About 57 miles of track has been laid, and an additional 84 miles of grading is in various stages of construction. At the Midway end, track has been laid to the third crossing of the third fork of the Kettle River, 27 miles, and it is expected that track will be laid to Carmi, 18 miles further, by the end of the year. At the other end track has been laid from Merritt to Otter Summit, 30 miles, and it is expected that a train service will be put in operation over it at an early date. Construction work on another section between Penticton and Osprey Lake, 40 miles, has been started, and L. M. Rice, one of the contracting firm, stated Nov. 2, that he expected to have it completed by the summer of 1913. (Nov., pg. 1035.)

Kootenay and Alberta Ry.—The Board of Railway Commissioners has authorized the company to take for railway purposes, land at the junction of its line with the C.P.R. main line, on the Crowsnest Division, Alta.

L. B. Merriam, Chief Engineer, was in Pincher Creek, Alta., Nov. 3, looking over routes for a possible entrance. (Nov., pg. 1035.)

London and Port Stanley Ry.—The directors, who represent the city of London, have under consideration a proposition for the purchase of a considerable area in the eastern section of London, to provide for an extension of the line, and for factory sites. (Oct., pg. 937.)

Michigan Central Rd.—A good deal of work has been done in the laying out of the site for a new terminal station in Detroit, Mich. A number of directors visited the site Nov. 10, when the complete plans were explained by G. H. Webb, Chief Engineer. It is said that the building of the station will be pushed forward as fast as possible. (Nov., pg. 1035.)

Minneapolis and St. Louis Rd.—The company's engineers were reported, Nov. 16, to be engaged in preliminary surveys south of the International boundary for a line to connect with one of the Canadian lines. Three routes are under examination: one from Bagley to Clearwater county, N.D., northwesterly; a second easterly, and the third towards Thief River Falls, through Rosseau and north to the International boundary. (Nov., pg. 1035.)

Minneapolis, St. Paul and Sault Ste. Marie Ry.—The Central Terminal Ry. has given a mortgage, filed Nov. 18, to the Guaranty Trust Co. of New York to secure an issue of $20,000,000 first Chicago Terminal 4 per cent. 30-year sinking fund gold bonds. The C.T.R. Company was organized in connection with the M.. St. P. and S.S.M. Ry., and has taken title to 105 parcels of land in Chicago, on which it is proposed to lay out freight terminals.

Montreal Central Terminal Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the authorized lines, tunnel and bridge, and to permit the issue of an increased amount of common stock and bonds. The notice is signed by F. E. Carne, Secretary. (July, pg. 647.)

Naas and Skeena River Ry.—Vancouver press reports state that arrangements are being made to open up some extensive deposits of anthracite in the Nasoga Gulf and Naas River districts of British Columbia, and that a railway will be built from the mines to the mouth of the Naas River, Nasogo Gulf, to bring out the product. R. C. Campbell-Johnson, mining engineer, Vancouver, who is interested in the project, is one of the provisional directors of the N. and S.R. Ry., incorporated last session of the B.C. Legislature. (April, pg. 321.)

North Arm Bridge and Ry. Co.—The incorporators of this projected railway and bridge include —. Loewen, Vancouver, and —. McCartney, Victoria, and the company was stated, by Vancouver press reports, Nov. 8, to be entirely independent of affiliations with existing railway companies. The route, as outlined by the promoters, is from the end of the C.P.R. spur which runs around the head of the south arm of Burrard Inlet, across the Admiralty reserve, over a bridge to be built to the north shore and thence northwesterly along the shore line of Burrard Inlet to North Vancouver. (Nov., pg. 1037.)

North Shore Colonization Co.—A company with a capital of $200,000 and office at Newcastle, N.B., has taken over the development of what is known as the Legan settlement on the North Shore of the Mirimichi Bay. W. L. Allen is Secretary of the company, which held its organization meeting at Newcastle, recently. The question of the extension of the company's operations was discussed and it was considered advisable that steps should be taken with the view of securing a railway connection. This may be done either by building an independent line, or by getting the Government to build the line as a branch of the Intercolonial Ry.

Point Anne Ry.—The Board of Railway Commissioners has authorized the company to connect its line with the Canadian Northern Ontario Ry. on lot 20 near Point Anne, Ont. (See Belleville and Point Anne Ry., July, 1903, pg. 233.)

Quebec and Saguenay Ry.—The grading of this line is reported to be progressing at a rapid rate, and it is expected that a portion of the mileage under contract will be in operation early next year. It is hoped to have the line to Murray Bay completed by the end of the year, and then the question of the extension to Tadousac, Que., will be considered.

We are officially advised that the construction work during the season now drawing to a close has been very satisfactory. The part under contract to the Bishop Construction Co., from Pointe au Pic wharf to the new pulp mills at Nairne Falls, 7½ miles, is completed, with the exception of ballasting, which will be done next spring. The rest of the road from Cape Tourmente to Pointe au Pic wharf, 56.5 miles, is well advanced. Thirty-three miles of grading has been completed; the work will be continued during the winter, and it is expected that the contractors, O'Brien and Doheny, will complete the grading in good time next season, to get the rails laid for the entire distance early next fall, and mostly, if not all, ballasted. The amount of solid rock moved on the O'Brien and Doheny contract this season from June to Oct. 31, was 450,000 cubic yards. The rock is completely covered by sub-contractors, thus ensuring rapid construction.

It is said that surveys for the continuance of the road to Cape St. Charles, on the Labrador coast, will be started in the near future.

Quebec Central Ry.—Application is being made to the Quebec Legislature to authorize the company to build a branch line through Megantic, Lotbiniere and Levis counties. In an interview, Nov. 18, J. H. Walsh, General Manager, is reported to have said the proposed branch would start from the main line between Thetford Mines and Broughton, and would connect with the proposed branch from Scotts to Quebec. The building of the branch had always been contemplated, as it would shorten the distance between Sherbrooke and Quebec, and avoid the heavy gradients in the Chaudiere Valley and the summit near Broughton for through traffic from Quebec. Preliminary surveys show that very favorable alignments and gradients can be secured. (Nov., pg. 1035.)

Quebec Eastern Ry.—We are officially advised that trial and location surveys are now being made through Sherbrooke, Richmond, Wolfe, Megantic, Lotbiniere and Levis to Quebec, about 125 miles. Three parties are in the field working under the direction of E. H. Drury, Chief Engineer. The character of the country is rough and broken, and eight bridges will be necessary. Maximum gradient, 1 per cent. compensated; maximum curvature, five degrees spiralized. (Nov., pg. 1037.)

Quebec Harbor Railway Bridge.—The new steel bascule railway bridge at Louise basin, Quebec, which is being built by the Harbor Commission, is approaching completion. Tracks have been laid on both sides of the abutments, and everything is ready for the passage of trains as soon as the bridge work is completed.

Reid Newfoundland Ry.—The Bonavista branch, the first of the new branch lines to be built, was opened for traffic

A UNIQUE CABLE

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	- - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	- - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto	- - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto	- - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service.

SLEEPING CAR SPACE HELD

Toronto City Office, 16 King St. East

North Toronto Station **King Edward Hotel** **West Toronto Station**

Nov. 8. About one-third of the Trepassey branch has been completed, and work has been started on the branch from Broad Cove to Heart's Content. The other lines proposed to be built are the Bonne Bay and Fortune Bay branches. (Nov., pg. 1037.)

Royal Canadian Ry. System.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Ste Anne du Bout de l'Isle, westerly through Vaudreuil and Soulanges counties, Que., to the St. Lawrence River in Glengarry county, Ont., with a bridge over the branch of the Ottawa River separating Montreal Island from Ile Perrot, and another bridge over the branch of the Ottawa River separating Ile Perrot from the mainland in Vaudreuil county. It is desired that these bridges be built so as to provide for general as well as railway traffic. The company also desires power to build dams, to develop electricity and dispose of the same. Gouin, Lemieux, Murphy and Berard, Montreal, are solicitors for applicants.

St. John Valley Ry.—An early start on construction of this projected railway is anticipated. The New Brunswick Premier states that a satisfactory agreement has been reached with the Dominion Government in regard to its operation. The details in so far as they differ from those laid down in the provincial legislation, and the resolutions of the Dominion Parliament, will be submitted to these bodies for their approval. (Nov., pg. 1037.)

The St. John Valley Construction Co. has been incorporated under the New Brunswick Companies Act with a capital of $49,000 and office at Woodstock, N.B., to carry on a general contracting business, and to enter into contracts with the Dominion and provincial governments for the construction of railways and other public works. The provisional directors are:—H. F. Smith, Peel, N.B.; C. Smith, H. G. Smith, St. John; J. N. Winslow, Woodstock, N.B.; G. McPhail, railway contractor, Woodstock, N.B.

Salisbury and Albert Ry.—The renovation of this line is reported to have been practically completed. The bridges have been rebuilt, and several miles of track has been relaid with heavier steel. It was expected that the line to Albert would be ready for re-opening early in Dec. (Sept., pg. 855.)

Saskatchewan Central Ry.—The Dominion Parliament is being asked to grant an extension of time within which the company may build the lines authorized by chap. 160 of the statutes of 1910. (May, 1910, pg. 353.)

Temiskaming and Northern Ontario Ry.—Speaking at Ottawa, recently, J. L. Englehart, Chairman, T. and N.O.R. Commission, said the Commission had been slow to build into Elk Lake and Gowganda because such a branch would not tap any agricultural country and also because there already existed facilities which could be utilized for water transportation. The Porcupine branch was already paying well, and a branch might be built from South Porcupine to Elk Lake. The Commission intended in the very near future to build about 100 miles beyond Cochrane towards Moose Factory. Ultimately the line would reach James Bay. Speaking at Sault Ste Marie, Ont., a few days later, Mr. Englehart said just as soon as work in hand would permit, a survey would be started for a line to connect Sault Ste Marie with the T. and N.O.R. The junction with the main line had not been determined, but it would be south of the Porcupine district. He could not make any definite statement as to when construction would be proceeded with on the line northerly from Cochrane, as there was a good deal of preliminary work to be done, but it would be at as early a date as possible.

The Premier of Ontario was quoted as having stated, Nov. 16, that application had been made to the Dominion Government for a subsidy not exceeding $6,400 a mile for this railway, and that there was every possibility it would be successful.

Owing to a slide at Pearl Lake on the Porcupine branch 500 ft. of the line disappeared. A temporary bridge is being put in pending a decision as to what will have to be done in the way of permanent reconstruction. (Nov., pg. 1037.)

Vancouver Island and Eastern Ry.—The Dominion Parliament is being asked to extend the time for building the lines authorized by the company's acts of 1908 and 1910. Smith and Johnston, Ottawa, are solicitors for applicants. (Mar., 1910, pg. 187.)

Vancouver-Nanaimo Coal Mines Co.—We are advised that this company is operating a coal mine west of the Esquimalt and Nanaimo Ry., about 2.5 miles from Nanaimo, B.C., and is delivering its output to the E. and N.R. over a logging railway. It is reported that the company proposes to extend this line to tide water, but we are advised that nothing has been done, except to secure an order from the Board of Railway Commissioners to cross the E. and N.R. overhead. A. von Alvensleben, Vancouver, B.C., is President of the company.

Winnipeg City Power Line.—With the completion of the Winnipeg city power plant the usefulness of the line built from Lac du Bonnet to Pointe du Bois, 27 miles, has ceased, and the Winnipeg city council is considering what will be done with it. One proposition which has been made is that the city should endeavor to make a bargain with the Hudson Bay, Peace River, and Pacific Ry., by which the line would form part of that company's projected line from Winnipeg to Hudson Bay, with a branch to the Peace River. While this has been suggested and may be developed, the board of control has under consideration applications from the J. D. McArthur Co., and John Gunn and Sons, who wish to secure rights over the line for the transportation of freight for industries in which they are interested.

Canadian Freight Association (Western Lines).—At the recent annual meeting at Winnipeg, the following officers were elected for the ensuing year: President, J. P. Driscoll, C.N.R.; Vice President, C. E. Dewey, G.T.P.R.; Executive Committee, W. C. Bowles, C. E. Dewey and G. Stephen; Inspection Committee, W. G. Manders, G. H. Smith, W. J. Hunter and H. H. Brown; Car Service Committee, D. C. Coleman, J. P. Driscoll, W. H. Harris and W. C. Watrous; Classification Committee, W. B. Lanigan, C. Stephen, C. E. Dewey, W. C. Bowles, W. G. Manders, R. J. Foreman and H. H. Brown; Secretary-Treasurer, W. E. Campbell.

Dominion Railway Subsidy Contracts.—Contracts have been entered into with the Algoma Central and Hudson Bay Ry., under the act granting aid to certain railways for the building of the following lines: from Sault Ste. Marie, Ont., to a point on the C.P.R. between White River and Dorion, Ont., 200 miles; and from Michipicoten Harbor, Lake Superior, towards the main C.P.R. line, 25 miles.

C. Morrow, formerly freight clerk, Quebec Central Ry., Thetford Mines, who was recently arrested on two charges of embezzlement, was acquitted at Arthabaska, Nov. 9, on the ground of irregularities in the preliminary hearing. It is stated that the terms of the acquittal do not preclude further action.

Great Northern Railway Co's Annual Report.

The annual report for the year ended June 30, shows that the authorized capital stock is $210,000,000, of which $209,981,875 is outstanding. The unissued stock is being retained for acquiring 145 shares of the stock of the St. Paul, Minneapolis and Manitoba Ry. which are still outstanding. The mortgage securing an issue of $600,000,000 first and refunding mortgage gold bonds, dated May 1, is a first lien on the company's lines, which include 533.74 miles in Canada, with all their equipment. There has been reserved $100,000,000 of this issue for the construction of additional lines, the purchase of additional property, the betterment and improvement of existing lines, and additions to rolling stock and equipment.

In 1899 the company purchased a majority of the stock of the four companies forming the Spokane Falls and Northern Ry., among them being the entire capital stock and mortgage bonds of the Nelson and Fort Sheppard Ry., and the Red Mountain Ry. in Canada. No bonds have ever been issued against any of the lines which the company has caused to be built in Canada and, during the year, the company cancelled and surrendered $1,293,000, face value, of Nelson and Fort Sheppard Ry. first mortgage bonds and $217,000, face value, Red Mountain Ry. first mortgage bonds, in each case the entire issue outstanding, receiving in lieu thereof, the full paid capital stock of each company, at par, to the same amount.

The company's investment in controlled Canadian companies, on account of advances made to pay for property, construction, additions and betterments, has been increased during the year, as follows:

Brandon, Saskatchewan and Hudson's Bay Ry.	$ 13,192.99
Crow's Nest Southern Ry.	1,686.34
Nelson and Fort Sheppard Ry.	7,236.70
Red Mountain Ry.	684.17
Vancouver, Victoria and Eastern Ry. and Navigation Co.	1,794,093.32
New Westminster Southern Ry. ..*Cr.*	558.91
Total	$1,816,334.61

To apply on the above advances and those previously made, the company has received during the year and credited at its par value, 88 shares ($8,800) of the fully paid capital stock of the Nelson and Fort Sheppard Ry. Co. and 68,000 shares ($6,800,000) of the Vancouver, Victoria and Eastern Ry. and Nav. Co. Shares of their capital stock will be duly issued by the above companies to cover the balances remaining due from them.

In 1900 the G.N.R. Co. guaranteed the payment, principal and interest, of £480,000 5% debenture stock of the Kootenay Ry. and Navigation Co., nearly half of which debenture stock and a large amount of its common stock were owned by the G.N.R. Shortly thereafter the G.N.R. purchased the balance of the common stock. During the year the K.R. and N. Co. redeemed its outstanding debentures, cancelled the entire amount, including those owned by the G.N.R., and went into liquidation. In due season the securities that were pledged to secure this debenture stock will be returned to the G.N.R. and at least a portion will be disposed of. The cancellation of the K.R. and N. Co.'s debenture stock at once terminated the G.N.R.'s guaranty.

The financial report showed gross operating revenue $61,257,632.93, a decrease of $3,207,736.94, against the figures for 1909-10; while the net income from operation was $20,562,461.37, a decrease of $1,294,519. The decrease was almost entirely in freight. The revenues of the company's Canadian lines are not given separately.

PROFESSIONAL CARDS.

The Railway and Marine World is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. The Railway and Marine World is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

Write to-day mentioning Railway and Marine World to

Walter MacLeod & Co., East Pearl Street **Cincinnati, Ohio, U.S.A.**

Canadian Northern Railway Construction, Betterments, Etc.

James Bay and Eastern Ry.—The Board of Railway Commissioners has approved revised location for this projected railway from mileage 18.2 to 19.6, in Ashuapmouchouan tp., Que.

Quebec and Lake St. John Ry.—In addition to the sections relating to finance in the act which the Quebec Legislature is being asked to pass, the company is applying for power to build branch lines from any point on its existing lines, and for an extension of time within which already authorized branch lines may be built.

Canadian Northern Quebec Ry.—The Dominion Parliament is being asked to extend the time within which the lines described in pars. c, e and f, sec. 3, chap. 73 of the statutes of 1907 may be completed. These lines are, from Quebec to Moncton, N.B., and Pugwash, N.S.; from St. Jerome towards the Ottawa, Northern and Western Ry. in Wright county, Que.; and the branches and extensions of the Chateauguay and Northern Ry. mentioned in sec. 2, chap. 75 of the Quebec statutes for 1899.

The action brought by the Quebec city council to recover from the company $200,000 cash subsidy paid, owing to its alleged failure to comply with the condition that shops should be built in the city, was set down for hearing Nov. 6. The agreement was made with, and the subsidy paid to the old Great Northern Ry., which is now part of the C.N.Q.R. Before the action came on for hearing, an agreement was reached between the city and the company. A plan showing the layout of the company's yards at Limoilou was placed before the committee on Nov. 6, and a letter, signed by D. B. Hanna, President, was read. In this letter Mr. Hanna said while the company's plan of reorganization had not yet been ratified by Parliament, but with a desire to meet the city the company was willing to make a start on the new shops at Limoilou. The building of the roundhouse, machine shop and car shop would be proceeded with at once. It was desired, however, to have an assurance that the council would not directly or indirectly assist in the expropriation for a highway through the company's property, and would also agree to the closing of certain streets within the area acquired or sought to be acquired for yards, etc.; and that the property of the C.N.Q.R. and Quebec and Lake St. John Ry. in the city be subject to a fixed assessment of $6,000 a year for 20 years. The company had already acquired 85 per cent. of the property proposed to be secured for yard purposes. In explaining the matter to the committee, Mr. Hanna said the buildings would be completed by Nov., 1912; as a result of the discussion it was agreed to allow the action to remain in abeyance; to approve the company's proposals as to terms, upon a report of the city engineer that a serious start had been made upon the erection of the buildings, and to deal with the question of a fixed assessment later.

A plan for the construction of a bridge over the St. Charles River was also considered. After some discussion it was agreed that further plans be submitted, the bridge to provide accommodation for two steam railway tracks, two electric railway tracks, a road for ordinary traffic and one for foot passengers. This bridge will replace an existing one, connecting with Limoilou.

The Board of Railway Commissioners has authorized the company to build a double track across Orleans and Ste. Jean d'Arc streets, Montreal.

Montreal Terminal Plans.—It was stated unofficially in Montreal, Nov. 17, that all the plans in connection with the tunnel and central terminal plans had been completed, and would be laid before the city council within a few days. The plans, it is said, show that the company's tracks will enter a tunnel at the back of the mountain near the east end of St. Genevieve opposite to St. Eustache, which will lead to a terminal station, bounded by Cathcart, St. Monique, Lagauchetiere, and Mansfield streets. The section between Dorchester and Lagauchetiere street, it is stated, will be used for the station building, while a hotel may be built on the remaining portion of the site. The transfer of the whole of the property within the area named was reported to have been completed Nov. 9.

Canadian Northern Ontario Ry.—The Dominion Parliament is being asked to authorize the sale of a portion of the constructed right of way of the Carillon and Grenville Ry., between Grenville and Carillon, Que., by the Carillon and Grenville Ry., to the C.N.O.R., and to confirm a notarial deed of sale thereof dated July 25.

Montreal city officials were notified, Nov. 6, that application had been made to the Board of Railway Commissioners for making the necessary connections at Montreal for the new direct line to Hawkesbury. This line will join the existing line near Maisonneuve, and trains will run into the present station on Moreau st., pending the construction of the new central terminal station. This line is a part of the main line to Sudbury, Ont., for which a subsidy was granted last session of the Dominion Parliament. Nothing has been done in the way of constructing the Ottawa-Sudbury section of the line, but the usual preparatory work is being gone on with. Beyond the junction with the existing Toronto-Sudbury line, a further section has been opened for traffic, from Gowganda Jct. to one mile west of Ruel, 14 miles, the order permitting this being dated Nov. 10. The line through to Port Arthur from this point is under contract, and construction gangs are at work from both ends. The Board of Railway Commissioners has approved revised location plans for the following sections: mileage 68.7 to 80.8; 92.37 to 93.27; 124.27 to 127.32, and 182.03 to 183.79, all from Sudbury Jct., Ont.

The first section of the Toronto-Ottawa line was opened recently to Trenton, where a roundhouse, machine shop, etc., are being erected. The buildings with the necessary yard space and tracks will cover about five acres. Permission has been granted for the opening for freight traffic of a further section, from Trenton to Belleville, 15.5 miles, and for its connection with the Thurlow Ry. on lot 25, con. 1, Thurlow tp.; and with the Belleville and Point Anne Ry. The grading of the line between Belleville and Deseronto has been completed and track is being laid. From Deseronto to Sydenham the Bay of Quinte Ry. line will be used. The location of this line is being revised at two places in order to give better gradients. Work is also in progress between Sydenham and Smiths Falls, and from the Ottawa end to Smiths Falls. The Board of Railway Commissioners has approved revised locations at Perth Road, Loughborough tp., mileage 170.35 to 171.4 from Toronto; in South Crosby tp., mileage 186.77 to 188.78 from Toronto, and has authorized the operation of construction trains across the C.P.R. and the G.T.R. near Ottawa.

The land which has recently been bought near Rideau Jct., Ottawa, is, we are advised, for yards, etc., for a divisional point.

No official announcement has been made in regard to the construction of the portion of the main line between Rideau Jct., Ont., near Ottawa and the junction with the Toronto-Gowganda line in Capreol tp., Ont., but we have reason to believe that contracts will be let in the near future to J. P. Mullarkey for the work between Rideau Jct. and Pembroke, Ont., and to Angus Sinclair, C.E., for the work between Pembroke and Capreol tp.

The Board of Railway Commissioners as a result of the hearing of the company's application for a right of way adjacent to the C.P.R. tracks in the north part of Toronto, has made an order, to the effect that the C.P.R. give the company running rights over a sufficient number of tracks east of Yonge St. to Summerhill Ave., to enable it to have access to its proposed terminal yards west of Yonge St. There is to be a subway at Yonge St., where each company will have three tracks. Plans for this subway were ordered to be made in conformity with this decision.

Sir Wm. Mackenzie, President, is reported to have stated in an interview, Nov. 14, that the company is now in a position to undertake construction on the line west from Toronto, and that it is proposed to start work in the spring. It is also expected that construction will be started between Niagara and Hamilton, so that the entire line from Toronto to the Niagara frontier will be under construction by the summer. The route follows the right of way of the Electric Development Co.'s power transmission line for the greater part of the distance, and presents no engineering difficulties. There are, however a considerable number of bridges to be built. The Board of Railway Commissioners has approved revised location plans from mileage three (instead of mileage 0 as mentioned in our Nov. issue) to mileage 10.97, west from Yonge St., and from that point to mileage 34.84; thus covering the distance from just outside Toronto, through York, Etobicoke, Toronto, Trafalgar and Nelson tps. The question of the position of the Hamilton terminals, and the route by which access will be had to them is under consideration.

T. Foley, of Foley, Welch and Stewart which firm is interested in the contract for building the line from the junction with the Sudbury-Toronto line to Port Arthur, was in Toronto, Nov. 20, and is reported to have stated that there are 4,500 men engaged on the line and that in a short time there will be 400 teams at work. Construction will be gone on with during the winter as labor is plentiful, and the work is of such a character that there is no necessity to stop.

Canadian Northern Ry.—The Board of Railway Commissioners has authorized the company to build a new line across Rainy River, in the Rainy Lake District, Ont., and has approved revised location plans for the same, subject to making suitable provision for tying up logs and for the passage of steamboats and logs.

Plans have been filed for the proposed new viaduct at the south end of Main St., Winnipeg. The city council is considering the plans, particularly in reference to the lowering of the bridge three feet at the north end, in order to secure a suitable gradient from the Winnipeg side.

The Premier of Manitoba, in a recent speech, said that with the enlargement of the boundaries of the province, the building of a direct line under provincial guarantee from Winnipeg to Hudson Bay would be undertaken. Such a line could be secured by the building of about 175 miles. There is already a Canadian Northern Ry. line in operation from Winnipeg to Gypsumville tp. 31, range 9, west of 1st meridian, and a line from that point due north to intersect the line now under construction from Pas Mission, would be less than

WOOD'S FLEXIBLE NIPPLE END PROTECTOR
FOR AIR-BRAKE AND SIGNAL HOSE
Prevents chafing and abrasion effecting a saving of from 40 to 50% in maintenance of air-brake hose.

THE MONOGRAM BRACKET
will absolutely stop shifting and leaking of air-brake train pipes. All M.C.B. requirements are obtained and maintained.

P. & W. HOSE PRESERVATIVE
FOR AIR-BRAKE AND PNEUMATIC TOOL HOSE
will prevent cracking of rubber cover and deterioration due to climatic changes. Easily applied.

175 miles in length. It is proposed that this line will be built by the C.N.R. under contract with the province. Another report states that a route along the east shore of Lake Winnipeg is also under consideration. At Ottawa, Nov. 21, Premier Roblin, after settling the boundary question with the Dominion Government, said the Manitoba Government would take immediate steps to provide transportation to the Hudson Bay hinterland.

The new station at Brandon, Man., has been completed and business was transferred there Nov. 11.

The Board of Railway Commissioners has authorized the building of a transfer track with the C.P.R. at Carberry, Man., and has authorized the opening for traffic of the following lines:—Thunderhill extension from Pelly to Preeceville, Sask., mileage 35.6 to 72.6; the branch from Delisle to MacRorie, Sask., 46 miles: from Luxton to Radville, 72 miles: and for freight traffic only from Radville to the end of its Moose Jaw extension, 83 miles. Further authority was given, Nov. 14, for the operation of trains over this latter section. Other branch lines opened for traffic in Saskatchewan are:—the Jackfish Lake branch from North Battleford to Edam, 39 miles; the Big River branch from Shellbrook to Big River; from Shellbrook southwesterly to Marcelin, about 30 miles, and the extension of the line from Saskatoon towards Calgary, between Kindersley and Alaska, 43 miles.

The old Qu'Appelle Long Lake and Saskatchewan Ry. has been considerably improved. The relaying with 85 lb. steel on new ties has been completed and the line has been reballasted.

Considerable betterments have been made on the line between Kamsack and Edmonton, Alta., and it is said that this work will be continued during 1912.

The Board of Railway Commissioners has authorized the opening for traffic of the branch line from Vegreville, southerly to Warden, 109 miles. This line is practically completed into Calgary.

The Board of Railway Commissioners has authorized the building of a spur line across block four of the Hudson's Bay Co.'s reserve in Edmonton, Alta.

Westward from Edmonton grading has been completed to the Pembina River, to which point it is expected that track will be laid by Dec. 31. The line to Athabasca Landing is also expected to be completed by the end of the year. On the line to Peace River it is expected that grading will be done to the crossing of the Athabasca, 30 miles from the confluence with the Macleod River, early in January.

The C.N.R. Co. is applying to the Dominion Parliament to extend the time within which the 11 branch lines, described in paragraphs a to k, inclusive, of sec. 2, chap. 80, of the statutes of 1910; and the lines authorized by paragraphs e, g, i, k and l of sec. 2, chap. 92, of the statutes of 1908, may be built; and also the lines authorized by the provincial legislatures to be built by the Alberta Midland Ry., and the Saskatchewan Midland Ry., and the Saskatchewan Northwestern Ry., now amalgamated with the C.N.R., may be built.

Canadian Northern Pacific Ry.—T. G. Holt, Executive Agent in British Columbia, in an interview at Ottawa, Nov. 9, is reported to have stated that rapid progress is being made with the building of the company's lines in British Columbia. Eighty miles have been graded from Port Mann to Hope, and a further stretch of 160 miles is covered with teams and men. From this point to the boundary near the Yellowhead Pass, is under contract, and work is going ahead. There does not appear to be any reason why the line cannot be completed within two years.

In connection with the work along the Fraser River Canyon the C.P.R. has secured an order from the courts regulating the blasting operations. It was stated that traffic had been tied up owing to large pieces of rock being thrown on the C.P.R. tracks.

Between Cisco and Kamloops, there are a number of large bridges to be built, and a contract has been arranged with Waddell and Harrington, Kansas City, Mo., for the supervision and inspection of construction of these and other bridges on the line in the province.

A sub-contract has been let to Twohey Bros., Portland, Ore., for the grading of 100 miles of the line along the Thompson River valley from mileage 62 to 162.

Vancouver Island Lines.—Tenders were received to Nov. 20 for the building of a further section of the line on Vancouver Island, from mileage 60 to 100. This 40 mile section extends from about six miles west of Duncan, to about five miles north of Cowichan Lake. Two tenders were asked for, one being on the basis of "solid rock, loose rock, hard pan and earth," and the other for "solid rock and all other material." (Nov., pg. 1055.)

Railway Finance, Meetings, Etc.

Alberta Ry. & Irrigation Co.—There has been filed with the Secretary of State at Ottawa a duplicate original of the lease of the lines, etc., of the Alberta Ry. and Irrigation Co. to the C.P.R. for 999 years from Jan. 1, 1912.

The Dominion Parliament is being asked to authorize the issue of mortgage bonds secured upon the company's railways for retiring previous mandatory securities, improving the railway and for other purposes.

Algoma Central and Hudson Bay Ry.—Following are directors for the current year,—T. J. Drummond, J. F. Taylor, W. K. Whigham, W. C. Franz, H. M. Price, H. Coppell, J. S. Dale, John T. Terry, Jr., J. T. Lea, R. L. Austin, T. Gibson and D. C. Newton.

Algoma Eastern Ry.—Following are the directors for the current year,—T. J. Drummond, W. K. Whigham, J. F. Taylor, T. Gibson, H. M. Price, W. C. Franz and D. C. Newton.

Canadian Northern Pacific Ry.—An issue of £1,400,000 of 4% debenture stock, guaranteed by the Province of British Columbia, was placed on the London, Eng., market, Nov. 13.

Canadian Northern Ry.—There has been filed with the Provincial Secretary at Toronto a mortgage dated Oct. 20, made by the company to the Imperial Rolling Stock Co., securing notes on rolling stock, which is subject to a conditional sale or bailment. The National Trust Co., Toronto, is also a party.

Cap de la Madeleine Ry.—The Dominion Parliament is being asked to declare this railway to be an undertaking for the general advantage of Canada, to change the location of its head office to Montreal, and to authorize it to enter into agreements with the C.P.R. for any purpose under sec. 361 of the Railway Act.

Dominion Atlantic Ry.—Application is being made to the Board of Railway Commissioners for a recommendation to the Governor in Council to sanction a lease of the company's railway to the C.P.R. for 999 years from Jan. 1, 1912.

Estimated passenger earnings for Oct., $76,200: freight, $93,400: total, $169,600.

The Grand Trunk Ry. Co. issued a prospectus in London, Eng., Nov. 7, of £1,250,000 four per cent. guaranteed stock, at 92, the proceeds to be applied to the company's general purposes. This stock ranks for dividend out of the profits of each year in priority of all the preference stocks. On Jan. 1, 1912, Midland 5% 1st mortgage bonds for £856,800, the balance of an original issue of £1,571,600 will mature and be paid off, reducing the company's preference charges by £42,840 a year.

Ontario, Hudson Bay and Western Ry.—Following are directors for the current year,—T. J. Drummond, J. F. Taylor, W. K. Whigham, W. C. Franz, H. M. Price, H. Coppell, J. S. Dale, John T. Terry, Jr., J. T. Lea, R. L. Austin, T. Gibson, D. C. Newton.

Quebec and Lake St. John Ry.—Application is being made to the Quebec Legislature to confirm an agreement with the Railway Share Trust and Agency Co., London, Eng., and the Canadian Northern Ry. Co., to provide that such agreement, having been sanctioned by resolutions of the company's prior lien and other bondholders, shall be binding on all holders of stock whether present at the meeting or not; to authorize the issue of the new debenture stock as provided for the winding up of the Lake St. Joseph Hotel Co., and the transfer of its properties to the Q. and L. St. J. R. Co. the discharge of the existing trust-deed, and the exchange of the securities issued thereunder for the new debenture stock.

Quebec Central Ry.—In settling up matters in connection with the lease of the Q.C.R. to the C.P.R., it was found that certificates for 1,760 shares of £25 each, originally issued to E. C. Bower, one of the original contractors for the line, were missing. The certificates were transferred some time ago to the Railway Finance and Construction Co., but it appears they have gone astray. As the result of an action, June 28, the courts decided that the R. F. and C. Co. was the owner of the certificates: that duplicates must be issued; and that the shares should not be sold for the space of a year unless with the consent of the court, the Q.C. Ry. to be indemnified for that period, and the R.F. and C. Co. to make every endeavor to locate the certificates by advertising in England and Canada.

Quebec Southern Ry.—Quebec and South Shore Ry.—The action before the U.S. Circuit Court in New York, in which $2,500,000 is claimed by H. A. Hodge and F. D. White, from A. L. Meyer, in connection with the amalgamation of these companies, prior to the receivership and the subsequent sale to the Quebec, Montreal and Southern Ry. Co., terminated in a mis-trial, Nov. 8. The plaintiffs, who represent the old Q.S.R. interests, were given time to file an amended complaint. The defendants represent the interests which brought about the amalgamation.

Temiscouata Ry.—Gross earnings for Sept., $20,269.68; expenses $14,610.17; net earnings $5,659.51, against $3,736 net earnings for Sept., 1910.

Temiskaming and Northern Ontario Ry.—Revenue for Sept., $200,177.29; expenditure, $119,112.56; balance, $81,204.73; less hire of equipment, $5,389.80; net result, $75,814.93; expenses per cent. of earnings, 59.4.

Victoria and Sidney Ry.—The Victoria city council has been informed by the Great Northern Ry., which owns the line through a subsidiary company, that while the company is prepared to hand over to the city and the province all surplus earnings to meet the interest on the bonds guaranteed by the city and the province, and to relieve them from future obligations under the guarantees, it cannot do anything in the way of recouping the city for the amounts it has already paid out on account of the line having failed to earn sufficient to meet the interest on bonds guaranteed.

White Pass and Yukon Route.—Gross earnings for six months ended Sept. 30, $969,080, against $1,089,427 for same period 1910.

Malniy About Transportation People.

Lord Strathcona has subscribed $2,500 to the King Edward Memorial Fund in Montreal.

R. B. Bennett, M.P., Calgary, has resigned his position as counsel for the C.P.R. in Alberta.

C. R. Hosmer, director, C.P.R., has been elected a director of the Montreal Citizens' Association.

T. P. Mooney, G.T.R. baggage agent, Bonaventure station, Montreal, was married Nov. 14 to Miss White.

Lord Strathcona has been gazetted as Honorary Colonel of the Royal Canadian cavalry corps, the Strathcona Horse.

Lady Mackenzie and Miss Mackenzie left Toronto, Nov. 6, for New York, whence they sailed for England.

Sir William Mackenzie has subscribed £1,000 to the habitation fund of the Society of Knights Bachelor, London, Eng.

W. H. Jordan, of the Canadian Northern Ry. freight tariff bureau, Toronto, died there, after a brief illness, Oct. 29.

C. E. E. Ussher, Passenger Traffic Manager, C.P.R., left Montreal, Nov. 6, on a tour of inspection to the Pacific coast.

H. N. Ruttan, M. Can. Soc. C.E., City Engineer, Winnipeg, has been granted six months leave of absence on account of ill health.

Sir William Whyte has been elected a director of the Imperial Guarantee and Accident Insurance Co., in place of the late J. J. Kenny.

J. P. Mullarkey, railway contractor, has been appointed a commissioner of the school of higher commercial education for Quebec.

W. G. Webster, on retiring from the G.T.R. ticket agency at Stuart St. station, Hamilton, Oct. 30, was presented with a purse of gold.

J. C. Weir, President and Managing Director of J. and R. Weir, shipbuilders and marine engineers, Montreal, died there Nov. 9, aged 76.

Miss Hebert, daughter of E. J. Hebert, First Assistant General Passenger Agent, C.P.R., Montreal, was married there, Nov. 14, to Dr. Bemers.

C. E. Morgan, G.T.R. ticket agent at Hamilton, Ont., who died there recently, left an estate valued at $49,665 to his son and daughters.

A. E. Chamberlain, who was recently appointed Development Commissioner, Great Northern Ry., St. Paul, Minn., was born in Ontario in 1860, and has lived in the U.S. since 1886.

F. P. Gutelius, General Superintendent, Eastern Division, C.P.R., after being absent from duty for some little time owing to ill health, returned to his office in Montreal, Nov. 14.

W. J. Shaughnessy, eldest son of Sir Thos. G. Shaughnessy, President, C.P.R., was married, Nov. 16, at Montreal, to Miss L. M. Graham, niece of Sir Hugh Graham, proprietor Montreal Star.

S. O. Greening, President, B. Greening Wire Co., Ltd., Hamilton, Ont., who died there recently, left an estate valued at $470,155 to his widow and children.

W. C. Matthews, General Manager in Canada for R. G. Dun and Co., who died at Toronto, Nov. 1, was a director of the Great North Western Telegraph Co.

W. Tout, who died in Hamilton, Ont., Nov. 2, aged 79, was foreman engineer of the old Great Western Ry. He had retired from active service many years ago.

J. L. Englehart, Chairman, Temiskaming and Northern Ontario Ry. Commission, Toronto, addressed the Canadian Club, Ottawa, recently, on the future of Northern Ontario.

D. A. McDonald, who was associated with the firm of Ironsides, Rennie and Campbell in its railway contracting work, died in Victoria, B.C., recently, after a lengthened illness.

G. R. Joughins, Superintendent Motive Power and Rolling Stock, Intercolonial Ry., Moncton, N.B., is spending a holiday in Europe, during which he will visit his old home in Dublin.

Lord Mount Stephen has given £10,000 towards the establishment of a fund for providing pensions of £100 a year to Scotch Presbyterian ministers of 70 years of age and upwards.

H. B. Darnell, at one time in the C.P.R. service in Japan, and now General Agent of the International Sleeping Car Co., at Yokohama, was in Canada in November on a holiday trip.

Arthur Hawkes, formerly Superintendent of Publicity, Canadian Northern Ry., has been appointed Special Commissioner of Immigration in connection with the Dominion Department of the Interior.

O. L. Dickeson, Vice President and General Manager, White Pass and Yukon Ry., after spending some time in Ottawa, went to his old home in Ottumwa, Iowa, Nov. 10, for a holiday, accompanied by Mrs. Dickeson.

A recount of the ballots applied for by Conservatives has been refused in Queens-Sunbury, N.B., where Col. McLean (Liberal), Vice President, St. John Ry., was elected at the recent Dominion elections.

The marriage of Miss M. Jaques, youngest daughter of C. A. Jaques, Montreal, of G. E. Jaques and Co., shipping agents, Montreal, to L. P. Thompson, of Wallaceburg, Ont., is announced to take place at Montreal early in Dec.

H. Campbell Oswald, who has been appointed Assistant Secretary, C.P.R., Montreal, was born there, Sept. 6, 1871, and has been in the company's service for 25 years. He is also Secretary of several C.P.R. subsidiary companies.

W. H. Flynn, railway contractor, who died at South Berwick, Me., recently, was a native of St. Andrews, N.B. He carried out contracts on the New York, New Haven and Hartford Rd., the Pennsylvania Rd., and the Central Rd. of New Jersey.

E. W. Smith, Superintendent, Dining Cars, G.T.R., Toronto, was elected a member of the executive committee of the American Association of Dining Car Superintendents at the annual meeting held at Cincinnati, Ohio, recently.

John Brown, C.P.R. ticket agent, Stratford, Ont., who is mayor of the city and a former member of the Ontario Legislature, has been nominated by the liberals in North Perth as their candidate in the pending Ontario general election.

H. H. Tatum, a retired English surgeon, for some years connected with the G.T.R. motive power office, Montreal, died suddenly in the street while on his way home on Nov. 6. One of his daughters was married Oct. 18, to F. Jaques, of G. E. Jaques and Co.

W. H. Hill, Assistant General Freight Agent, Chicago, Burlington and Quincy Ry., Kansas City, Mo., son of A. S. D. Hill, of Eramosa, Ont., and nephew of J. J. Hill, Chairman of the Board, Great Northern Ry., died recently and was buried at Guelph, Ont.

E. Pennington, President, Minneapolis, St. Paul and Sault Ste. Marie Ry., accompanied by Mrs. and Miss Pennington, returned to Minneapolis, Minn., Nov. 5 from a pleasure tour along the Pacific coast, the return trip being over the C.P.R. from Vancouver, B.C.

J. S. Wood, who has been appointed Assistant General Freight Agent, Lehigh Valley Rd., New York, commenced his railway career in 1888 in the division freight office, G.T.R., Hamilton, Ont., and was later transferred to Montreal, where he remained to Dec., 1892.

W. E. Allinson, who has been appointed General Travelling Baggage Agent, C.P.R., Winnipeg, commenced service with the C.P.R. Baggage Department, Montreal, as office boy, Feb., 1905, and was subsequently stenographer, clerk, and since Jan. 1, 1911, chief clerk there.

W. S. Painter, who recently resigned his position as Architect, C.P.R., at Montreal, has entered into partnership with F. H. Swales as Painter and Swales, with offices at Montreal and Vancouver. Mr. Painter is still looking after the C.P.R.'s architectural work west of Calgary.

J. B. Elliott, Master Mechanic, Eastern Division, C.P.R., Ottawa, was presented with a purse of gold, Nov. 14, on his retirement from the company's service. He entered the service of one of the companies now amalgamated with the C.P.R. as fireman in 1865, and was appointed Master Mechanic in 1887.

Sir H. Montagu Allan has been elected President of the St. Andrew's Society of Montreal, and the other officers include: D. Seath, of the Montreal Harbor Board, as Recording Secretary; Lord Strathcona, R. B. Angus, and D. McNicoll, of the C.P.R. directorate, as members of the finance committee.

W. G. Ross, ex-Managing Director, Montreal Street Ry., and H. J. Fuller, President, Canadian Fairbanks-Morse Co., have been elected members of an advisory committee to represent the Canadian bondholders of the Amalgamated Asbestos Co., a re-organization of the finances of which is necessary.

Sir William H. White, director, Grand Trunk Ry., who has been touring the G.T.R. system, prior to sailing from New York, for England, recently, was presented with the John Fritz medal for long and honorable service in the engineering profession. He was for several years Chief Architect of the British navy.

Robt. Hobson, Vice President and Managing Director, Steel Company of Canada, Hamilton, Ont., has been elected a director of the American Iron and Steel Institute for three years. The other Canadian director is T. J. Drummond, of Drummond McCall and Co., Montreal, and President, Lake Superior Corporation.

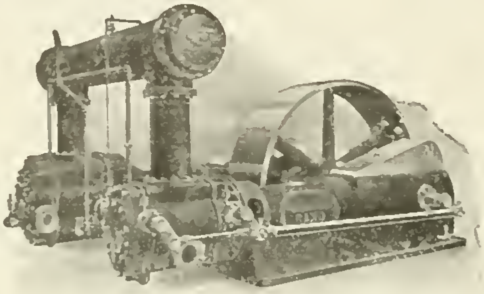
C. R. Stovel, who was engaged on survey work on the C.P.R. in its early stages and for some years latterly was Claims and Right of Way Agent for the Canadian Northern Railway, died Nov. 10 at St. Paul, Minn., where he has resided for the past year. He married a step sister of Sir William Mackenzie, President, C.N.R.

Probate of the will of the late Robt. Meighen, director, C.P.R., and President, Lake of the Woods Milling Co., has been granted in Ontario, on an estimated value of $2,483,783, of which $1,974,612 is represented by stock holdings. Subject to some minor bequests, the income of the entire estate is bequeathed to his widow.

A. MacDougall, who died at Montreal recently, aged 86, was at one time in G.T.R. service, and subsequently was chiefly interested in the organization and operation of the Montreal Grain Elevating Co., which he joined in 1860, eventually becoming Manager and later Managing Director, which latter position he held when the company went out of business in 1910.

A provincial branch of the St. John's Ambulance Association has been formed

RAND DUPLEX POWER-DRIVEN COMPRESSORS



In buying Rand Compressors, you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

for Quebec, with Montreal as headquarters. Lieut.-Col. L. R. Johnson, Assistant Superintendent Motive Power, C.P.R., is a member of the local committee. The Honorary President of the Association in Canada is Sir Thos. G. Shaughnessy, K.C.V.O., Knight of Grace of the Order of St. John of Jerusalem.

Sir William Whyte was the principal guest at a dinner in Winnipeg recently, at which there were present practically all the principal officials of the C.P.R. Western lines, and a number of former officials. George Bury, who has succeeded Sir William as Vice President, presided, and the presentation of a silver tray, silver tea set, and silver punch bowl was made by F. W. Peters, assistant to the Vice President.

Scott Griffin, Manager, Canadian Northern Steamships, London, Eng., and Mrs. Griffin returned to London from the country recently, and have taken a house at 22 Cumberland Place for the winter.

W. H. Flynn, railway contractor, who recently died at South Berwick, Me., was born at St. Andrews, N.B. He carried out considerable construction work on the Boston and Maine Rd., Pennsylvania Rd., and the Central Rd. of New Jersey.

J. H. Forrest, in charge of the Toronto Railway Co.'s accident department, was seriously injured, Nov. 11, owing to a ladder slipping and throwing him to the granolithic pavement while he was putting up a storm window on his house. His left heel and ankle were broken, and he was severely bruised. He was taken to the General Hospital, and after five days there, was removed to his house. He will probably be laid up for several weeks.

S. H. Graves, of Chicago, Ill., President, White Pass and Yukon Ry., was found dead in bed at the Aylmer Apartments, Ottawa, Nov. 13. He was in the city on business with the Board of Railway Commissioners, arising out of the recent valuation of the line by the Commissioners' staff, made in order to enable a decision to be reached as to freight rates on the line. Heart failure was certified as the cause of death, and the body was taken to Chicago for burial.

The fund of $1,000,000 which has been raised recently for McGill University, Montreal, includes the following contributions:—Robt. Reford, of the Robt. Reford Co., Ltd., $100,000; R. B. Angus, Director, C.P.R., $50,000; E. A. Robert, President, Montreal Street Ry., $30,000; M. L. Hersey, Consulting Chemist, C.P.R., $30,000; N. Curry, President, Canadian Car & Foundry Co., $25,000; G. E. Drummond, of Drummond McCall & Co., $25,000; Reid Bros., of the Newfoundland Ry., $10,000.

The body of R. S. Lewis, Canadian Passenger Agent, Lehigh Valley Rd., Toronto, was found in Lake Ontario, at Wilson, N.Y., a few miles east of the mouth of the Niagara River, Nov. 25. The deceased, who was about 70 years old, had represented the L.V.R. in Toronto for many years. He had been staying at the Niagara House, Niagara-on-the-Lake, under an assumed name for a week or so before his death, and probably committed suicide, as he had been despondent for some time owing to ill health.

James Waugh, whose appointment as Commercial Agent, G.T.R., Omaha, Neb., was announced in our last issue, entered G.T.R. service in 1891 as clerk in the Commercial Express Line office at Milwaukee, Wisc., since when he has been, from 1894 to 1900, Soliciting Freight Agent, same line, Chicago, Ill.; 1900 to July 1, 1905, Travelling Freight Agent, same line, Detroit, Mich.; July 1, 1905, to July, 1908, Michigan State Agent, Reading Despatch Line, Detroit, Mich.; July, 1908, to Oct. 31, 1911, Travelling Freight Agent, G.T.R., Philadelphia, Pa.

R. J. S. Weatherston, whose appointment as Division Freight Agent, G.T.R., Stratford, Ont., was announced in our last issue, entered G.T.R. service, July 4, 1893, since when he has been, to Jan. 1, 1902, in Transportation Department; Jan. 1, 1902, to July 18, 1906, in various positions in the Traffic Department, Toronto; July 18, 1906, to Jan. 10, 1907, chief clerk, Division Freight Agent's office, Ottawa, Ont.; Jan. 10, 1907, to Oct., 1911, chief clerk, Division Freight Agent's office, Hamilton, Ont.

H. H. Hamill, who has been appointed Travelling Freight Agent, G.T.R., New York City, was born at Somerville, Mass., Apr. 6, 1874, and entered transportation service with the Johnson Steamship Line, Boston, Mass., in 1893, and from Feb. 1, 1900, to June 1, 1906, was city solicitor, National Despatch Line, Boston, Mass.; June 1, 1906, to Apr. 1, 1910, Travelling Agent, National Despatch-Great Eastern Line, Boston, Mass.; Apr. 1, 1910 to Nov. 1, 1911, Soliciting Freight Agent, G.T.R., New York City.

Russell, who has been appointed Superintendent of Car Service, Central Vermont Ry., St. Albans, Vt., was born at Rednersville, Ont., Oct. 18, 1874, and entered railway service in 1891, since when he has been, to 1892, in office of Assistant Superintendent, G.T.R., Belleville, Ont.; 1892 to Aug., 1896, in Superintendent's office, G.T.R., Toronto; Aug., 1896, to Mar., 1898, secretary to Superintendent, G.T.R., Toronto; Mar., 1898, to June, 1902, chief clerk to Joint Superintendent, G.T.R. and Wabash Rd., St. Thomas, Ont.; June to Dec., 1902, private secretary to General Manager, Central Vermont Ry., St. Albans, Vt.; Jan., 1903, to Dec., 1904, chief clerk to Superintendent of Transportation, Central Vermont Ry., St. Albans, Vt.; Dec., 1904, to Nov., 1911, secretary to General Manager, Central Vermont Ry., St. Albans, Vt.

Sir Donald D. Mann, Vice President, Canadian Northern Ry., while travelling from Montreal to Toronto in his private car, Oct. 26, was taken ill suddenly, suffering severe pain similar to several attacks which he had had on previous occasions, and which were attributed to acute indigestion. Physicians who were called in consultation after his arrival in Toronto diagnosed the cause as gall stones, and he was operated on at his house, Fallingbrook, Toronto, on Oct. 30 by Dr. Starr, Drs. A. McPhedran and W. Goldie assisting. Lady Mann and her son were in Europe, where they had been for several months, and Sir Wm. Mackenzie was in Winnipeg. D. B. Hanna, Third Vice President, C.N.R., was at Fallingbrook during the operation. Lady Mann returned to Toronto Nov. 10. Sir Donald is convalescing satisfactorily and is expected to be out early in December.

J. R. Cameron, who has been appointed Assistant General Manager, Canadian Northern Ry., Winnipeg, was born at Truro, N.S., Nov. 5, 1865, and entered railway service, May, 1882, since when he has been, to Apr., 1883, brakeman and baggage man, C.P.R., Winnipeg; Apr., 1883, to Mar., 1886, conductor, C.P.R., Winnipeg; Apr., 1886, to Apr.,

Central Vermont Railway Co's Annual Report.

The report for the year ended June 30, shows the following results,—

Gross receipts	$4,337,644.14
Operating expenses	3,256,260.79
Balance	$1,081,383.35
Taxes	146,763.23
	$ 934,620.12
Net debit from rentals	9,088.83
	$ 925,531.29
Outside operations, parlor cafe car service	6,611.43
	$ 932,142.72
Hire of equipment, debit balance	169,477.92
	$ 762,664.80
Interest on securities held by company	43,720.00
	$ 806,384.80
Fixed charges	716,133.35
Net result	$ 90,251.45

During the year, $27,864.20 was spent on new tracks, sidings and spurs, crossings, stations and ballasting, the amount being included in operating expenses. Eight stock cars, four flat cars, four construction cars and six cabooses were built at the St. Albans shops. An additional $21,654.08 was spent on improvements and charged to capital account. The balance sheet shows assets of $17,488,824.18; liabilities of $17,396,994.40, and a balance to profit and loss of $91,829.78.

Following are the officers and directors for the current year: Chairman of the Board, C. M. Hays; President, E. H. Fitzhugh; Vice President, C. W. Witters, St. Albans, Vt.; other directors, G. C. Jones, E. C. Smith, St. Albans, Vt.; W. S. Webb, Shelbourne, Vt.; J. W. Stewart, Middlebury, Vt.; J. W. McCullough, Bennington, Vt.; E. H. Baker, Boston, Mass.; S. E. Kilmer, E. L. Marston, New York; A. Tuttle, Fairhaven, Mass.; C. P. Smith, Burlington, Vt.; auditor, W. G. Crabbe; treasurer and clark, W. H. Chaffee.

◆

National Transcontinental Railway Construction, Etc.

A report given out at Ottawa, Nov. 1, set out that on Oct. 1, to which date the figures had all been received, track had been laid on 1,245 miles of the 1,845 miles between Moncton and Winnipeg. This track has been laid on different contracts and has not been connected. The report further states that owing to its inaccessibility, work has not been started on a section of 115 miles in the Abitibi country, for which Macdonnell and O'Brien are contractors. In connection with this report, J. T. Davis, one of the firm having the contract for the line from the Quebec Bridge location towards the New Brunswick boundary, stated recently that the work would be completed during 1912.

The shops at Transcona, Man., are expected to be opened early in January, 1912. At present only the motive power and car repair shops have been built, and work is in progress on the other shops.

R. W. Leonard, the newly appointed Chairman of the Commission, entered upon his duties Oct. 26, and after attending to office details, began on Nov. 4 the inspection of the work under construction. The first portion of the line visited was the district under the charge of A. E. Doucet. He completed the inspection of the finished line from Quebec towards Weymontachene, and on Nov. 14, left Ottawa for Winnipeg to inspect the work in progress there, the completed line to Superior Jct., and the work easterly from that point. (Nov., pg. 1059.)

◆

Grand Trunk Pacific Railway Construction, Etc.

After considerable discussion the Fort William, Ont., city council, on Oct. 31, made a considerable number of amendments in the agreement proposed by the company covering the building of a road, and car lines, etc., on Mission Island. The amended agreement is being considered by the company. A new freight shed has been completed on the Mission terminals, Fort William. It will be used for freight storage during this winter, but it is intended for through lake and rail traffic.

The building of the viaduct south of Main St., Winnipeg, for the entrance of trains into the Fort Garry station is being pushed forward. It is expected that it will be completed early in the new year.

The mayor of Brandon, Man., in a recent interview with E. J. Chamberlin, Vice President and General Manager, was told that until difficulties which have arisen in connection with the crossing of the C.P.R. east of Chater are adjusted, the company will not be able to do any grading to within at least three miles of the C.P.R. on the north side.

It is stated in Regina that the company's line to the International boundary, about 130 miles, will be completed, and put in operation by the end of the year.

The grading on the line from Young to Prince Albert, of which the last 45 miles was put under contract this season, will not be completed this year.

——TOOLS FOR ALL PURPOSES——

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

Wiley & Russel, Stocks, Dies, Taps, Etc.
Butterfield, Stocks, Dies, Taps, Etc.

THE COMPANY OFFERS FOR SALE

Farming and Grazing Lands in Manitoba and the Northwest Territories

ON EASY TERMS OF PAYMENT

Town Lots for Sale at Winnipeg, Ft. William, Edmonton, Prince Albert, etc.

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

The company is arranging for the building of a large bridge, at the end of the present grade, and the last six or seven miles of grading will be completed when the bridge is built.

The Board of Railway Commissioners has approved revised location plans for the following lines in Alberta:—from sec. 33, tp. 23, range 29 west of 4th meridian to north line of sec. 1, tp. 24, range 1, west of 5th meridian, mileage 196.81 to 193.44; from sec. 9, tp. 47, range 1, to sec. 23, tp. 45, range 4, west of 6th meridian, mileage 99.70 to 129; and from sec. 1, to sec. 8, tp. 45, range 1, west of 6th meridian, mileage 110.57 to 113.53.

J. W. Stewart, of Foley, Welch and Stewart, returned to Vancouver, Nov. 3, from a trip of inspection over the company's contracts on the line between Wolf Creek, Alta., and the coast. He stated that track has been laid across the summit of the Rocky Mountains in the Yellowhead Pass and that it is expected Tete Jaune Cache will be reached early in Dec. The right of way along the south fork of the Fraser River has been cleared to 30 miles west of Tete Jaune Cache, and a good deal of clearing had been done in the vicinity of Fort George. The present contract extends to Aldermere, from which point the right of way had been graded for 60 miles easterly. Work will be continued all winter. West of Aldermere, the work is also being proceeded with, and with the completion of the Kitselas tunnels, early in Dec., the company will be enabled to lay track easterly to the first crossing of the Skeena River, a few miles below Hazleton, B.C.

The management has still under consideration the building of a branch from Fort George to Vancouver, B.C. The company's steamship wharf at Vancouver was completed Nov. 8, and on the following day a communication was received by the Board of Trade from C. H. Nicholson, Manager, G.T.P. Coast Steamship Co., asking for its aid in some negotiations with the city council, in connection with the extension of the company's steamship terminals.

We are officially advised that F. W. Bergman, Manager of the Chateau Laurier, Ottawa, left Montreal, Nov. 4, for Prince Rupert, B.C., for the purpose of reporting upon hotel matters there. Pending receipt of his report, nothing definite has been decided as to the erection of a new hotel there.

In an interview at Victoria, Nov. 13, F. W. Bergman is reported to have said that the company is about to start the building of a big hotel at Prince Rupert, and that the object of his visit to the coast is to arrange with a local architect as to plans. The building will have 250 rooms, and construction will be started in the spring. The company contemplated building eight hotels in all. Of these the first is the G.T.R. hotel at Ottawa, now approaching completion; construction has been started on another at Winnipeg; the site of a third has been located at the Yellowhead Pass, and the location for the other hotels is under consideration. Nothing has been settled about the building of one at Victoria. (Nov., pg. 1059.)

◆

Quebec Central Ry.—In connection with the lease of the line, application is being made by the C.P.R. to the Dominion Parliament to authorize it to enter into an agreement with the Q.C.R. Co. for any of the purposes specified in sec. 361 of the Railway Act.

The G.T. Pacific Ry. Co. is seeking to obtain an injunction in the British Columbia courts to restrain the use of the words "Grand Trunk" or "Grand Trunk Pacific" in the title of the Grand Trunk Pacific Transfer Co., of Vancouver.

TRADE AND SUPPLY NOTES.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Dominion Iron and Steel Co.'s output for Sept. comprised,—rails 16,975 tons, rods 3,065 tons, blooms 23,705 tons, steel ingots 27,290 tons, pig iron 22,390 tons, coke 39,290 tons.

The National Boiler Washing Co., Ltd., Montreal, has obtained the contract for the entire heating of the Canadian Steel Foundries, Ltd., new works at Longue Pointe, Montreal.

The Steel Co. of Canada will, it is said, made a very large addition to its Hamilton, Ont., plant next year, providing for rod, bloom and billet mills and two 60-ton continuous open hearth furnaces.

Price Bros. & Co., pulp manufacturers, Jonquiere, Que., are having installed eight 90 in. return tubular boilers of rated capacity 300 h.p. each, by the Robb Engineering Co., Amherst, Nova Scotia.

The International P.-A.-Y.-E. Tramcar Co. has been incorporated under the Dominion Companies Act, with a capital of $3,750,000 and office at Montreal, for the purpose of building cars under the p.-a.-y.-e. patents, and various other incidental purposes. The provisional directors are:—G. V. Cousins, E. G. T. Penny, P. F. Brown, A. H. Elder, and S. T. Mains, Montreal.

E. C. Brown, Manager, Foreign Dept., Dearborn Drug and Chemical Works, has returned to Chicago after spending the last two years in the Orient. He established a branch office in the Philippines and agencies covering Japan, Formosa, Korea and China. Several of the principal railways in China and the Philippines are using the Dearborn water treatment, and tests are being made on the Japanese lines.

◆

C.P.R. Spur Line near Toronto.—It is reported that the company will build a spur line of about 4½ miles from the Toronto-Windsor line 7½ miles west of Toronto to a junction with the Toronto-Owen Sound line.

G.T.R. International Bridge.—It is reported that the international bridge between Bridgeburg, Ont., and Buffalo, N.Y., will be widened at an early date, so as to permit a second track to be laid. The cost is reported at being estimated at $3,000,000.

Railway Contracts with Cartage Agencies.—The Board of Railway Commissioners issued an order, Nov. 15, requiring railway companies to file within 60 days copies of all existing contracts with their cartage agents for the cartage of freight traffic at so-called cartage points, and thereafter to file from time to time any new contracts or modifications of existing ones, or of cartage limits.

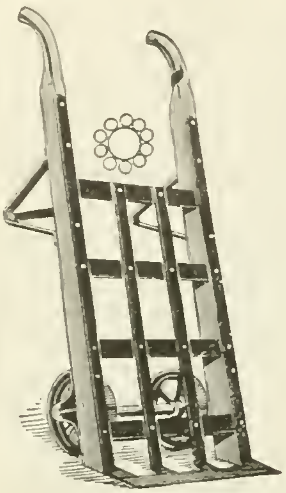
G.T.R. New England Projects.—In connection with the project for the extension of the Southern New England Ry. to Providence, R.I., under the arrangement of the Central Vermont Ry., which is controlled by the G.T.R., the merchants of Boston, Mass., and the State Legislature have expressed their desire that the company should extend its lines into Boston. E. H. Fitzhugh, President, C.V.R., recently went to Boston for consultation with the various interests there, and it is said that an announcement will be made at an early date of the route by which the G.T.R. lines will secure a direct entrance into Boston. The nature of the negotiations in progress has not been made public.

The Board of Railway Commissioners has removed its offices from 66 Queen St., Ottawa, to the new union station building erected by the G.T.R.

During September three railway employes were killed, and four injured, in the course of their work in connection with Canadian railways. Of the fatalities, two were due to being run over and one to falling through the hopper door of a dump car.

The presentation of a silver tray to W. Jackson at the Canadian Ticket Agents Association's annual meeting at Sault Ste. Marie in October, in commemoration of his attendance at 25 consecutive annual meetings as mentioned in our November number, was participated in by members of the Association, as well as by the guests present. To emphasize the general nature of the tribute, C. A. Cairns, G.P. and T.A., Chicago and Northwestern Ry., spoke on behalf of the donors, the President of the Association, J. F. Dolan, making the presentation.

An Alberta court decided, Nov. 7, that the Provincial Government was entitled to the $7,400,000, proceeds of the issue of bonds of the Alberta and Great Waterways Ry. Co., guaranteed by the province, the charter of which company was afterwards cancelled. The money was deposited in the Royal, Union and Merchants banks, the last two paying the amounts held by them into court. The Royal Bank was directed to pay over the $6,000,000 it holds, with 5 per cent. interest. An appeal has been entered, which will not be heard until March, 1912.



For Railroad and Steamboat

The Corbet Roller Bearing Truck

IS USED BY

The Canadian Pacific Railway

And Other Large Companies

This truck has many **SPECIAL** features over the old style, and is made Strong and Heavy, to withstand the abuse to which it is subject.

The Roller Bearings reduce friction to a minimum, thereby **Doubling** the **Life** of the **Truck.**

Purchasing Agents will consult their own interests by having this **Truck** in their Freight Sheds.

Dearborn Treatment Overcomes All Bad Water Troubles

Because Scientifically Prepared to Suit Water Conditions

Boiler troubles such as scale, leaking, corrosion, priming and foaming, are caused by mineral salts in the water, and can be overcome only by the use of proper reagents for these salts. To this end the waters along the line must be analyzed, and specific treatment applied accordingly.

Gallon samples of the waters are required for analysis. When reports are completed, we are ready to prepare treatment, and will send an expert engineer to instruct in the proper handling of the material.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ry.—Consequent on the rapid growth of the system the company's lines have been divided into two grand divisions, one including districts 1, 2 and 3, with headquarters at Winnipeg, and the other districts 4, 5 and 6, with headquarters at Edmonton, Alta. The dividing point of the two grand divisions on the main line is Humboolt, Sask.

J. R. Cameron, heretofore General Superintendent all lines, has been appointed Assistant General Manager. Office, Winnipeg.

A. E. Warren, heretofore Superintendent District 2, Winnipeg, has been appointed General Superintendent, Central Division. Office, Winnipeg.

A. Wilcox, Superintendent, District 1, Port Arthur, Ont., was on Nov. 1, appointed Assistant General Superintendent, with jurisdiction over matter pertaining to transportation, and with office at Winnipeg. On Dec. 1 he was appointed General Superintendent, Western Division, with office at Edmonton, Alta.

J. E. Nelson, heretofore Trainmaster, Rainy River, Ont., has been appointed Superintendent, District 1, Port Arthur, Ont., vice A. Wilcox, promoted.

M. B. Murphy, heretofore Superintendent, Duluth Rainy Lake & Winnipeg Ry., Virginia, Minn., has been appointed Superintendent, District 2, vice A. E. Warrent, promoted. Office, Winnipeg.

W. A. Kirkpatrick, heretofore Operating Inspector, has been appointed acting Assistant Superintendent in charge of Winnipeg Terminals.

E. Durrell, heretofore conductor, has been appointed Trainmaster at Dauphin, Man., vice G. W. Chapman, transferred.

Canadian Pacific Ry.—G. M. Bosworth, Vice President in charge of the company's traffic and ocean steamship lines, has also been given jurisdiction over the telegraph, hotel and sleeping, dining and parlor cars departments, and chiefs of these departments now report to him.

H. G. Jones, Assistant Architect, Montreal, has resigned. We are officially advised that no appointment will be made to succeed him.

W. A. Cowan, heretofore Resident Engineer, Farnham, Que., has been appointed Inspecting Engineer, reporting to the Assistant Chief Engineer, Montreal.

H. Campbell Oswald has been appointed Assistant Secretary of the Company. Office, Montreal.

A. R. G. Heward, who has been absent from business for some time on account of ill health, retains the position of Assistant Secretary, also.

H. T. Ruhl, heretofore Resident Engineer, Sudbury, Ont., has been appointed Resident Engineer, District 1, Eatsern Division, vice W. A. Cowan, promoted. Office, Farnham, Que.

J. D. Wells, heretofore locomotive engineer, Farnham, Que., has been appointed acting District Master Mechanic, District 1, Eastern Division, vice A. W. Horsey, transferred. Office, Farnham, Que.

H. A. Asty, heretofore Assistant Foreman at Ottawa, Ont., has been appointed Locomotive Foreman at Farnham, Que., vice H. A. Pepler, appointed District Master Mechanic, District 2 and Montreal, as announced in our last issue.

With reference to the re-arrangement of territory of the district master mechanics of the Eastern Division, as announced in our last issue, there are now four, instead of three, as heretofore, their names, districts and locations being as follows:—J. D. Wells, acting, District 1, Farnham, Que., vice A. W. Horsey, absent on sick leave; H. A. Pepler, District 2 and Montreal Terminals, Montreal; W. Borbridge, District 3, Montreal; J. M. Burke, District 4, Ottawa, Ont.

The following ticket agents have been appointed: T. C. Ivory, Omemee, Ont.; A. J. Leitch, Dutton, Ont.; McKenzie and Co., Thedford, Ont.; W. S. Beamish, Bothwell, Ont., vice E. Humphries; R. Scott, Clifford, Ont.; W. J. Jones, Parry Sound, Ont., vice W. B. W. Armstrong, resigned.

A. E. Stewart, heretofore locomotive engineer, has been appointed acting District Master Mechanic, London, Ont., vice John Burns, appointed Master Mechanic, Eastern Division, Montreal. We are advised that it is expected that A. W. Horsey, District Master Mechanic, District 1, absent on sick leave, Eastern Division, Farnham, Que., will be appointed District Master Mechanic at London, Ont.

A. Sturrock has been appointed Shop Foreman at Fort William, Ont.

D. Cossar has been appointed Shop Foreman at Kenora, Ont.

T. S. Bertram has been appointed Night Shop Foreman at Kenora, Ont.

As announced in our last issue, C. H. Temple, formerly Assistant Superintendent of Motive Power, Western Lines, has been appointed Superintendent of Motive Power, Western Lines, in consequence of the appointment of Grant Hall as Assistant General Manager, Western Lines, Mr. Temple has charge of the Car Department as well, though this was not stated in the circular. G. H. Eaton continues as Assistant Master Car Bulider.

W. E. Allison, heretofore chief clerk, General Baggage Agent's office, Montreal has been appointed General Travelling Baggage Agent. Office, Winnipeg.

James Jones, heretofore Freight Claims Agent, Vancouver, B.C., has been appointed Freight Claims Agent, Moose Jaw, Sask., vice James Black, transferred to Vancouver.

J. W .Keppel, hertofore leading fitter, has been appointed Night Foreman at Sutherland, Sask.

R. B. Bennett, K.C., M.P., has resigned as the company's counsel for Alberta.

L. Charlton has been appointed Travelling Freight Agent, Alberta Division. Headquarters, Calgary. C. S. Morse is also Travelling Freight Agent, with headquarters at Lethbridge.

Joseph Little has been appointed Night Foreman at Medicine Hat, Alta.

A Martin has been appointed Night Foreman at Calgary, Alta.

T. Riordan has been appointed Roadmaster, Red Deer subdivision, Alberta Division, vice M. Newlands, transferred to MacLeod.

James Boyes has been appointed Shop Foreman at Cranbrook, B.C.

James Black, heretofore Freight Claims Agent, Moose Jaw, Sask., has been appointed Freight Claims Agent, Vancouver, B.C., vice James Jones, transferred to Moose Jaw.

Consequent upon W. J. Pugsley leaving to take a position in the company's service in Canada, on account of health, the position of Passenger Agent at Liverpool, Eng., has been abolished. All correspondence for the Liverpool Passenger Departmnent, should be addressed to F. W. Forster, Agent, Royal Liver Bldg., Liverpool.

Central Vermont Ry.—S. S. Russell, heretofore secretary to General Manager, has been appointed Superintendent of Car Service. Office, St. Albans, Vt.

A. C. West, heretofore Master Mechanic, Quebec, Montreal and Southern Ry., has been appointed Roundhouse Foreman, C.V.R., at St. Albans, Vt., vice R. G. Gilbride, resigned to enter G.T.P.R. service.

W. J. Hamilton, heretofore chargeman, St. Albans shops, has been appointed Roundhouse Foreman, Montpelier Jct., vice H. J. Hague, transferred.

R. Ross, Boiler Foreman, St. Albans shops, has resigned to return to private business.

H. J. Hague, heretofore Roundhouse Foreman at Montpelier Jct., has been appointed Roundhouse Foreman at White River Jct., vice T. Palos, resigned to enter private business.

Grand Trunk Pacific Ry.—Niblock & Tull, Grain Exchange Building, Calgary, Alta., have been appointed city ticket agents, G.T.P.R. D. B. Niblock, of this firm, was formerly C.P.R. Ticket Agent at Calgary.

The following agents have been appointed:—Pope, Man., J. E. Lalonde; Uno, Man., A. W. Gould; Gerald, Sask., H. R. Adams.

Grand Trunk Ry.—C. R. Moore, heretofore chief clerk to the Superintendent, Middle Division, Toronto, has been appointed chief clerk to Vice President Kelley, Montreal.

J. A. Murphy has been appointed chief clerk to the Superintendent, Middle Division, Toronto, vice C. R. Moore, promoted.

T. Short, heretofore stationmaster at Stratford, Ont., has been appointed stationmaster at Hamilton, Ont., vice J. Carrol, resigned.

F. Baker, heretofore conductor, has been appointed stationmaster at Stratford, Ont., vice T. Short, transferred.

H. H. Hamill, heretofore Soliciting Freight Agent, New York City, has been appointed Travelling Freight Agent, there, vice S. E. Dewey, appointed Commercial Agent, Pittsburgh, Pa.

T. J. Brown has been appointed Chief Train Dispatcher, Durand, Mich., vice H. J Tobin, resigned

The title of Second Assistant General Freight Agent, heretofore held by R. L. Burnap, recently appointed Assistant Freight Traffic Manager, Chicago, Ill., as announced in our last issue, has been abolished.

T. A. Chappell has been appointed Travelling Freight Agent, Philadelphia, Pa., vice Jas. Waugh, appointed Commemrcial Agent, Omaha, Neb., as announced in our last issue.

The following agents have been appointed:—St. Annes, Que., S. A. Wickens; Emsdale, Ont., G. F. Meyers; Milton, Ont., B. Sine; Grimsby, Ont., S. B. Bradley; Thorold, Ont., W. G. Baker; Harley, Ont., R. E. Strain; Fergus, Ont., S. Young; Lucknow, Ont., O. A. Martin; Welland, Ont., J. McMillan; Carlsbad Springs, Ont., J. L. Foster; Barry's Bay, Ont., M. G. Billings; Rainy Lake, Ont., H. D. Reynolds; the stations at Holland Landing, Ont., J. L. O'Brien, acting agent, and at Wyebridge, Ont., G. McMann, acting agent, have been closed. The following outside agents have been appointed:—Hamilton, Ont., C. R. Morgan, acting city passenger and ticket agent; St. Marys, Ont., L. Spearin.

Great Northern Ry.—V. Kistler, heretofore District Freight and Passenger Agent, Grand Forks, B.C., has been appointed Contracting Freight Agent, Portland, Ore.

Kaslo and Slocan Ry.—The officials of this company, as recently re-organized, are:—President, James Anderson; Vice President, H. Giegerick; Manager, J. L. Retallack; Secretary, W. H. Burgess.

Maine Central Rd.—A. P. Foss, heretofore Auditor of Disbursements, has been appointed Assistant Comptroller. Office, Portland, Me.

A. J. Raynes has been appointed Auditor of Disbursements, vice A. P. Foss, promoted. Office, Portland, Me.

National Transcontinental Ry.—A. G. McFarlane, heretofore Inspecting En-

gineer, has been appointed acting District Engineer, District F, Winnipeg, vice S. R. Poulin, deceased.

New York Central Lines. — J. F. Deems, General Superintendent of Motive Power, Rolling Stock Machinery, has resigned to become President, Ward Equipment Co., New York. The position of General Superintendent of Motive Power has been abolished, each Superintendent of Motive Power and Rolling Stock has full charge of his department and reports to his General Manager.

Pere Marquette Rd.—W. L. Kellog, heretofore Superintendent of Motive Power, Cincinnati, Hamilton and Dayton Ry., is reported to have been appointed Superintendent of Motive Power, P.M.R., Detroit, Mich.

Railway Rolling Stock Notes.

The C.P.R. is in the market for ten sleeping cars.

F. H. Hopkins and Co. have ordered one Lidgerwood flat car from the Canadian Car and Foundry Co., Montreal.

The Grand Trunk Ry. has ordered 2,000 steel underframe box cars, 30 tons capacity, from the Canadian Car and Foundry Co., Montreal.

The Algoma Steel Co. has ordered 15 all steel flat cars, 40 tons capacity, and ten special coke transfer cars, from the Canadian Car and Foundry Co., Montreal.

The 2,000 steel underframe box cars which the G.T.R. has ordered from the Canadian Car and Foundry Co., Montreal, will be mainly similar to the 1,000 mentioned in our July issue.

The Intercolonial Ry. has ordered 52 box cars from the Canadian Car and Foundry Co., Montreal; five first class passenger cars from the Preston Car and Coach Co., Preston, Ont., three vans from its Moncton shops, and nine box cars.

The G.T.P.R. has received 12 consolidation and two switching locomotives from the Montreal Locomotive Works, and six colonist cars, nos. 3032 to 3037, and four mail and express cars, nos. 106 to 109, from the Canadian Car and Foundry Co., Montreal.

The Algoma Central and Hudson Bay Ry. has ordered six first class cars, two baggage cars, and 30 steel frame box cars, 40 tons capacity, from the Canadian Car and Foundry Co., Montreal, and four second class cars from the Preston Car and Coach Co., Preston, Ont.

The Canadian Northern Ry., between Oct. 15 and Nov. 15, received the following additions to rolling stock: 175 box cars, two first class cars, two baggage cars, and one sleeping car, from the Canadian Car and Foundry Co., Montreal, and 35 box cars from the Crossen Car Co., Cobourg, Ont.

The eight second class and baggage cars and the two second class and mail cars, which the Canadian Northern Ry. is having built by the Preston Car and Coach Co., Preston, Ont., are 72½ ft. long over all, and equipped with six-wheel trucks, steel tired wheels, Simplex high speed brake beams, cast steel bolsters, diamond S steel back brake shoes, Gold hot water and steam heating, acetylene gas, etc.

The Canadian Northern Ry., between Oct. 15 and Nov. 15, ordered nine baggage cars from the Canadian Car and Foundry Co., Montreal; 31 ten-wheel passenger locomotives, 20 ten-wheel freight locomotives, and one rotary snow plough from the Montreal Locomotive Works, and 25 freight consolidation superheater locomotives, and five 6-wheeled switching locomotives from the Canadian Locomotive Co., Kingston, Ont.

The C.P.R., between Oct. 14 and Nov. 14, received the following additions to rolling stock: 125 wooden box cars, one van, three flangers, six D.10 locomotives, one R.1 Mallet locomotive, from its Angus shops, Montreal; 485 steel frame box cars, from the Canadian Car and Foundry Co., Montreal; 13 N.3 locomotives from the Montreal Locomotive Works; six N.3 locomotives from the Canadian Locomotive Co., Kingston, Ont., and 197 steel frame box cars from the United States.

The C.P.R., between Oct. 14 and Nov. 14, placed orders at its Angus shops, Montreal, for the following rolling stock: 59 box cars, six stock cars, three vans, one freight refrigerator car, two flangers, two snow ploughs, one superintendent's car, 12 tourist cars, six observation cars, five dining cars, six sleeping cars, three cafe-parlor car, two switching locomotives, and five G.2 locomotives, and ordered 2,500 steel frame box cars, 40 tons capacity, from the Canadian Car and Foundry Co., Montreal.

The Algoma Steel Co. has ordered 25 all steel Otis general service cars, 40 tons capacity, from the Hart-Otis Car Co., Montreal. These will be built by the Canadian Car and Foundry Co., Montreal. Following are the chief details:—

Length over end sills	21 ft. 9½ ins.
Length inside	19 ft. 1 in.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	4 ft. 6 ins.
Height from rail to top	8 ft. 10¾ ins.
Height from rail to floor	4 ft. 4¾ ins.
Truck centres	11 ft. 11 ins.
No. of doors on each side	4
Width of door opening	2 ft. 2 ins.
Length of door opening	19 ft. 1 in.

Following are chief details of the 15 first class cars which the Canadian Northern Ry. has ordered from the Canadian Car and Foundary Co., Montreal, as mentioned in our last issue:—

Length over end sills	72 ft. 6 ins.
Width over side sills	9 ft. 10½ ins.
Width over all at eaves	10 ft. 2¾ ins.
Width between deck sills	5 ft. 6 ins.
Height top of sill to bottom plate	6 ft. 8½ ins.
Platforms	Standard Coupler Co.
Body bolsters	Double cast steel
Lighting	Commercial Acetylene Co.
Heating	Gold Duplex. Frumveller hester
Hoppers	Duner Co.
Air brakes	Westinghouse P.M. 1612
Truck wheels	36 ins. steel tired, cast steel centres
Axles	M.C.B., 4¼ by 8 ins.
Brake beams	Simplex high speed
Journal boxes	McCord malleable

The Algoma Central and Hudson Bay Ry. has ordered 75 Otis composite general service cars, one of which is illustrated on this page, from the Hart-Otis Car Co., Montreal, in addition to the 50 previously ordered. Following are the chief dimensions:—

Length over end sills	38 ft. 9 ins.
Length inside	36 ft. 5 ins.
Width over all	9 ft. 11 ins.
Width inside	9 ft. 7 ins.
Height inside	4 ft. 6 ins.
Height from rail	8 ft. 10 13-16 ins.
Height from rail to floor	4 ft. 4 13-16 ins.
Wheel base of truck	5 ft. 6 ins.
Truck centres	26 ft.
No. of doors on each side	6
Width of door opening	2 ft.
Length of door opening	36 ft. 5 ins.
Capacity	110,000 lbs.
Tare weight	37,800 lbs.

Following are chief dimensions and details of special equipment of the 15 steel flat cars and 10 special coke cars, which the Algoma Steel Co. is having built by the Canadian Car and Foundry Co., Montreal:

Steel Flat Cars.

Capacity	80,000 lbs.
Length over end sills	36 ft.
Width over side sills	8 ft. 10 ins.
Brakes	Westinghouse H.C. 812
Couplers	Simplex cast steel
Trucks	Diamond arch har
Wheel base	5 ft. 2 ins.
Axles	M.C.B.
Bolsters and brake heams	Simplex
Journal bearings	M.C.B.
Journal boxes	Cast iron
Wheels	33 ins. M.C.B.

Special Coke Cars.

Capacity	60,000 lbs.
Length inside body	37 ft. 2¾ ins.
Width inside body	7 ft. .5¾ ins.

Other particulars as above.

Following are chief details of the 400 Hart convertible ballast and construction cars, which the Canadian Northern Ry. has ordered from the Hart-Otis Car Co., Montreal, as mentioned in our last issue. These cars will be of the latest type, and will be built, under license, by the Canadian Car and Foundry Co., Montreal. They are intended for delivery during 1912:

Capacity	80,000 lbs.
Width over side sills	8 ft. 10 ins.
Length inside as hopper	20 ft. 10 ins.
Length inside as gondola	34 ft. 8 ins.
Width inside	8 ft. 3 ins.
Width over all	10 ft. 2½ ins.
Width at top	9 ft. 10 ins.
Height from rail to floor	4 ft. 4⅛ ins.
Height from rail to top of car	8 ft. 1⅜ ins.
Height inside	3 ft. 9¼ ins.
Truck centres	26 ft. 8 ins.
Wheel base of truck	5 ft. 4 ins.
Length of hopper door opening	16 ft. 8½ ins.
Width of hopper door opening	2 ft.

Following are chief details of the 300 steel underframe flat cars which the Canadian Northern Ry. has ordered from the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:—

Back to back of end sills	41 ft. 9¼ ins.
Width over side sills	8 ft. 10 ins.
Truck centres	31 ft. 2 ins.
Wheel base	5 ft. 4 ins.
Height from top of rail to top of floor	4 ft. 2⅞ ins.
Height, top of rail to centre of drawbar	2 ft. 10½ ins.
Draft springs	M.C.B. Class G
Air brakes	Westinghouse K.C. 812
Trucks	Standard 40 ton Diamond arch bar type
Wheels	Cast iron, 33 ins.
Axles	M.C.B.
Journals	5 by 9 ins
Journal bearings	M.C.B.
Journal boxes	McCord
Truck springs	M.C.B. Class C
Brakebeams and bolsters	Simplex
Brake shoes	Steel back

Following are the chief details of the rotary snow plough which the Canadian Northern Ry. has ordered from the Montreal Locomotive Works:—

Cylinders, diar. and stroke	17 by 22 ins.
Truck wheels	33 ins.
Boiler, diar.	60 ins.
Boiler, pressure	190 lbs.
Firebox, length and width	92 by 50 ins.
Tubes, no. and diar.	202 2 ins.
Tubes, length	9 ft. 8 ins.
Wheel base, trucks	4 ft. 6 ins.
Wheel base, total	19 ft. 8½ ins.
Total wheel base, plough and tender	52 ft. 6 ins.
Weight on forward truck	82,000 lbs.
Weight on rear truck	70,000 lbs.
Weight, total	152,000 lbs.
Weight, tender	123,600 lbs.
Heating surface, tubes	1,022 sq. ft.
Heating surface, firebox	130 sq. ft.
Heating surface, total	1,152 sq. ft.
Grafe area	31.9 sq. ft.
Width of drum	10 ft.
Width of cut	10 ft. 7 ins.
Rotary wheel diar.	9 ft. 8½ ins.
Rotary wheel, type	Scoop

Following are chief details of the D.10g locomotives which the C.P.R. is building at its Angus shops, Montreal, as mentioned in a recent issue:—

Weight on drivers	149,000 lbs
Weight, total	198,500 lbs.
Cylinders, diar. and stroke	21 by 28 ins.
Valves, diar. and kind	11 ins. piston
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Heating surface, tubes	2,229 sq. ft.
Heating surface, firebox	180 sq. ft.
Heating surface, total	2,409 sq. ft.
Heating surface, superheater	408 sq. ft.
Tubes, no. and diar	239 2 ins., 24 5 ins.
Tubes, length	14 ft. 2⅞ ins.
Firebox	8 ft. 6⅛ ins. by 5 ft. 9⅞ ins.
Grate area	49 sq. ft.
Tank capacity, water	5,000 imp. gals.
Tank capacity, coal	10 tons
Axles, main	9½ by 12 ins.
Axles, others	9 by 12 ins.
Brakes	Westinghouse E.T.6
Headlight	Pyle National Electric
Valve gear	Walschaert
Superheater	Vaughan and Horsey

The Quebec Central Ry. has ordered two mogul locomotives from the Cana-

Blau-Gas TRADE MARK

FOR WELDING PURPOSES

THE ROYAL LINE SS. ROYAL GEORGE

"At your request for a recommendation with reference to Blau-gas, I would say that we have used your Blau-gas and Oxygen for cutting out rivets and plates and have found it extremely satisfactory. It is much quicker than any other method of cutting I have seen used, also it can be used in places where hand work is impossible. I have much pleasure in recommending it to anyone requiring expeditious work of this kind."

THOS. DAVIDSON MFG. CO., MONTREAL.

"We have your favor of the 31st ult., and beg to say that we have tested the boiler you welded for us, and found it perfect."

Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

ALGOMA CENTRAL 4201

Otis Composite General Service Cars, built for the Algoma Central and Hudson Bay Railway.

dian Locomotive Co., Kingston, Ont. Following are the chief details:—

Weight on drivers	122,000 lbs.
Weight, total	141,000 lbs.
Wheel base, rigid	15 ft.
Wheel base, total	23 ft.
Heating surface, tubes	1,741 sq. ft.
Heating surface, firebox	153 sq. ft.
Heating surface, total	1,894 aq. ft.
Driving wheels, diar.	56 ins.
Driving wheel centres	Main, steel; other cast iron
Driving journals	9 by 12 ins.
Cylinders, diar. and stroke	20 by 26 ins.
Boiler, type	Radial stay
Boiler, pressure	200 lbs.
Tubes, no. and diar.	280 2 ins.
Tubes, length	11 ft. 11 ins.
Brakes	Westinghouse American
Weight of tender, loaded	104,000 lbs.
Capacity water	4,300 imp. gals.
Capacity, coal	9½ tons
Tank, type	U-shape, sloping back
Truck, type	4-wheel with steel bolster
Wheels, diar.	33 ins.
Wheels, type	Steel tires, w.i. centres
Journals	5 by 9 ins.
Brake beams	Steel

Following are chief details of the five six-wheeled switching locomotives which the Canadian Northern Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont.:—

Weight	123,000 lbs.
Wheel base	11 ft.
Heating surface, tubes	1,206 sq. ft.
Heating surface, firebox	131 sq. ft.
Heating surface, total	1,337 sq. ft.
Driving wheels, diar.	50 ins.
Driving wheel centres	Cast iron
Driving journals	8½ by 10 ins.
Cylinders, diar. and stroke	19 by 26 ins.
Boiler, type	Radial stay
Boiler, pressure	180 lbs.
Tubes no. and diar.	223 2 ins.
Tubes, length	10 ft. 5 ins.
Injectors	Locomotive type
Safety valves	Locomotive pop
Brakes	Westinghouse American
Tender, weight, loaded	86,000 lbs.
Capacity, water	3,500 imp. gals.
Capacity, coal	5 tons
Tank, type	Sloping back
Truck, type	Arch bars with steel bolsters
Wheels, diar.	33 ins.
Wheel, type	Wrought iron, steel tired
Journals	4¼ by 8 ins.
Brake beams	Steel trussed

Following are chief details of the 25 consolidation superheater locomotives which the Canadian Northern Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont.:—

Weight on drivers	163,000 lbs.
Weight, total	188,000 lbs.
Wheel base rigid	15 ft. 6 ins
Wheel base, total	23 ft. 9 ins.
Heating surface, tubes	1,772 sq. ft.
Heating surface, firebox	179 sq. ft.
Heating surface, total	1.921 sq. ft.
Driving wheels, diar.	57 ins.
Driving wheel centres	Cast steel
Driving journals	Main 9½ by 12, others 9 by 12 ins.
Cylinders, diar. and stroke	23 by 26 ins.
Boiler, type	Radial stay
Boiler pressure	170 lbs.
Tubes, no. and diar.	179 2 ins., 24 5⅜ ins.
Tubes, length	14 ft.
Brakes	Westinghouse American
Superheater	Schmidt
Tender, weight, loaded	144,000 lbs.
Capacity, water	6,000 imp. gals.
Capacity, coal	12 tons
Tank, type	Water bottom
Truck, type	Four wheeled equalized
Wheels, diar.	33 ins.
Wheels, type	Steel tired
Journals	5½ by 10 ins.
Brake beams	Simplex
Wheels, type	Solid steel
Journals	5½ by 10 ins.
Brake beams	Simplex high speed trussed beams

Following are the chief details of the D.4g locomotives which the C.P.R. is building at its Angus shops, Montreal, as mentioned in a recent issue:—

Weight on drivers	100,000 lbs.
Weight, total	135,000 lbs.
Weight of tender, loaded	118,000 lbs.
Tender capacity, coal	10 tons
Tender capacity, water	4,000 imp. gals.
Heating surface, firebox	152 sq. ft.
Heating surface, tubes	844 sq. ft.
Heating surface, total	996 sq. ft
Heating surface, superheater	229 sq. ft.
Grate area	28.5 sq. ft.
Tubes, no. and diar.	115 2 ins., 18 5 ins.
Wheel base, driving	11 ft. 10 ins.
Wheel base of engine	22 ft. 1 in.
Wheel base, engine and tender	50 ft. 2 ins.
Boiler, type	Wagon top
Boiler pressure	180 lbs.
Superheater	Vaughan and Horsey
Staying	Radial and cross
Cylinders, diar. and stroke	19 by 24 ins.
Driving wheels, diar.	62 ins.
Valve gear	Walschaert
Valve, kind and size	Piston 11 ins.
Axles, main	8½ by 8½ ins.
Axles, others	8 by 8½ ins.
Axles, tender	5 by 9 ins.
Axles, engine truck	5 by 8 ins.
Brakes	Westinghouse E.T.6
Headlight	Pyle National Electric

The Temiskaming and Northern Ontario Ry. has ordered four consolidation superheater locomotives from the Canadian Locomotive Co., Kingston, Ont. Following are the chief details:—

Weight on drivers	180,000 lbs.
Weight, total	206,000 lbs.
Wheel base, rigid	15 ft. 10 ins.
Wheel base, total	24 ft. 8 ins.
Heating surface, tubes	1,898 sq. ft.
Heating surface, superheater	455 sq. ft.
Heating surface, firebox	166 sq. ft.
Heating surface, total	2,519 sq. ft.
Driving wheels, diar.	57 ins.
Driving wheel centres	Cast steel
Driving journals	Main 9½ by 12 ins.; others 9 by 12 ins.
Cylinders, diar. and stroke	23 by 30 ins.
Boiler, type	Extended wagon top, radial stayed
Boiler pressure	180 lbs.
Tubes, no. and diar.	250 2 ins., 24 5 ins.
Tubes, length	14 ft. 6 ins
Air brakes	Westinghouse ET. 6
Superheater	Vaughan and Horsey, 24 superheater elements of 4 1¼ ins. tubes each
Tender, weight, loaded	130,000 lbs.
Capacity, water	5,500 imp. gals
Capacity, coal	10 tons
Tank, type	Water bottom
Truck, type	Four wheeled equalized
Wheels, diar.	36 ins.

With reference to press reports to the effect that the Canadian Northern Ry. is considering the use of gasoline motors in the operation of local services on som in the operation of local services on some of the lines of its subsidiary companies in the east, we are officially advised that the management has the matter under consideration, and is looking for the proper kind of car. When that is secured, services will be run out to Quebec and other points still to be determined. As mentioned in our last issue, one of the lines which may be so operated is the Ctntral Ontario Ry., between Trenton and Picton.

Following are chief details of the 31 ten-wheel passenger locomotives and the 20 ten-wheel freight locomotives, equipped with superheaters, which the Canadian Northern Ry. has ordered from the Montreal Locomotive Works:—

	Passenger.	Freight.
Cylinders, diar. and stroke	22 by 26 ins.	20 by 24 ins.
Driving wheels, diar.	63 ins.	57 ins.
Boiler, diar. front end	66 ins.	58¼ ins.
Boiler, pressure	170 lbs.	170 lbs.
Firebox, length	113 ins.	102 ins.
Firebox, width	40¼ ins.	41¼ ins.
Tubes, no. and diar.	185 2 ins. 26 5⅜ ins.	133 2 ins. 18 5⅜ ins.
Tubes, length	13 ft. 2¼ ins.	13 ft. 2¼ ins.
Wheel base, driving	14 ft. 6 ins.	13 ft. 6 ins.
Wheel base, engine	24 ft. 10 ins.	23 ft. 8 ins.
Wheel base, engine and tender	54 ft. 3 ins.	52 ft. 8 ins.
Weight on engine truck	36,000 lbs.	36,000 lbs.
Weight on driving wheels	136,000 lbs.	115,000 lbs.
Weight, total, engine	172,000 lbs.	151,000 lbs.
Weight of tender	122,000 lbs.	122,000 lbs.
Heating surface, tubes	1,746 sq. ft.	1,241 sq. ft.
Heating surface, firebox	183 sq. ft.	139 sq. ft.
Heating surface, total	1,929 sq. ft.	1,380 sq. ft.
Grate area	31.6 sq. ft.	29.2 sq. ft.
Maximum tractive power	28,900 lbs.	24,300 lbs.
Tender, water capacity	5,000 imp. gals.	5,000 imp. gals.
Tender, coal capacity	10 tons	10 tons

Following are chief dimensions and details of special equipment of the six first class cars, two baggage cars and 30 steel frame box cars, which the Algoma Central and Hudson Bay Ry. is having built by the Canadian Car and Foundry Co., Montreal:

First Class Cars.

Length over end sills	60 ft. 8 ins.
Width over side sills	9 ft. 10 ins.
Width between deck sills	5 ft. 6 ins.
Vestibules	Pullman, type
Curtains	Holden Co.
Diaphragms	Ajax
Bolsters	Double cast steel
Buffers and platforms	Standard Coupler Co.
Water system	Gravity and air
Hoppers	Duner Co.
Heating	Hot water, Canadian Gold Car Heating and Lighting Co.
Air brakes	Westinghouse L.N. 1412
Trucks	Standard 4-wheel wood frame, 80,000 lbs. capacity
Axles	M.C.B.
Wheels	Steel tired c.i. centres, 36 ins
Journal boxes	McCord
Journal bearings	M.C.B.
Brake beams	Simplex

The two baggage cars are mainly as above.

Among the Express Companies.

W. A. Best has been appointed agent, Canadian Northern Ex. Co., Regina, Sask.

E. A. Brand has been appointed agent, Canadian Ex. Co., Hamilton, Ont., vice W. A. Robinson.

J. H. Parr, heretofore Route Agent, Canadian Ex. Co., has been appointed agent at Quebec, Que.

E. C. Macintyre has been appointed agent, Dominion Ex. Co., Rossland, B.C., vice C. W. Waistell.

W. McKellar has been appointed agent, Canadian Ex. Co., Seaforth, Ont., vice W. Somerville, resigned.

R. S. Cradock has been appointed agent, Dominion Ex. Co., Port Arthur, Ont., vice J. Wood, resigned.

W. S. Martin, heretofore acting agent, Dominion Ex. Co., has been appointed agent at Portage la Prairie, Man.

J. Wood, heretofore agent, Dominion Ex. Co., Port Arthur, Ont., has been appointed agent at Brandon, Man., vice W. S. Martin, transferred.

The Canadian Northern Ex. Co. is now operating over the Central Ontario Ry., having displaced the Dominion Ex. Co., which, however, retains its offices at Marmora and Bannockburn.

The Canadian Ex. Co. is now operating its service over the Quebec Oriental Ry., between Matapedia and Grand River, Que., and has opened offices at Gascons, Grand River, Newport, Paspebiac, Port Daniel, Ste. Adelaide and St. Godefroi.

The town of Montcalm is making complaint before the Quebec Public Utilities Commission, against the Dominion and American Express Companies, regarding their refusal to deliver parcels within the town limits. The question as to the jurisdiction of the Commission to deal with the matter was raised, and after some discussion it was agreed to leave the matter to be settled by the Chairman. If he decides that the Commission has jurisdiction, a date will be fixed for the hearing.

The Board of Railway Commissioners has authorized the Montreal and Southern Counties Ry. Express Department to use for local service between Montreal and Longueuil, the form of merchandise receipt contained in the Board's judgment, Dec. 24, 1910, without pars. 4, 5 (1), 7 (b), 7 (c), and 8, also the last clause of par. 3, for which the company shall add to its Standard Tariff, which was approved by order 15236, Oct. 11, the following clause:—"If the shipper desires the company to assume liability in excess of $50, an additional charge of 5c for each $100 or fraction thereof will be made."

The Board of Railway Commissioners recently ordered express companies subject to its jurisdiction, pending the disposition of question of joint tariffs, to graduate shipments of express freight subject to graduate charges and carried by two or more companies, under the lowest through or aggregate rate per 100 lbs. The graduate under $2 per 100 lbs. to be the minimum through rate, unless joint rate is published. Companies to submit supplement to Express Classification for Canada C.R.C. 2, making such changes as may be necessary by Nov. 22, and to prepare with reasonable dispatch, joint tariffs in accordance with the Board's judgment of Dec. 24, 1910, for traffic over any continuous route in Canada operated by two or more companies.

The Express Traffic Association recently applied to the Board of Railway Commissioners to cancel section D of the express classification, relating to books, maps, almanacs and other printed matter, on the ground that the rates had proved unremunerative, that for long distances they favored some shippers more than others, and that they should be made to conform to the other express rates of the association. Chief Commissioner Mabee, in dismissing the application, said that the association had given no evidence to show that the rates had not been remunerative, indeed the association had extended the classification to cover shipments of 10 lbs., whereas the postal service limited each shipment to 5 lbs. He also stated that the association had agreed to an international scale with the United States express companies covering many items in schedule D. The application of the Toronto Board of Trade to increase the weight of books carried under schedule D, was also dismissed, the Chief Commissioner stating that the Board had no authority to grant the request. The Express Traffic Association obtained the Board's consent to vary the order, so as to provide that the charges on empties must be prepaid by the consignees, unless an agreement to the contrary is made.

The Board of Railway Commissioners has sent a circular to the mayors of municipalities at 46 points east of Port Arthur, Ont., regarding express delivery limits within such towns, as follows: "The express collection and delivery limits in cities, towns and villages were fixed by the Board's order 13357, at the municipal boundaries, but this was merely a provisional measure, and leave was reserved to the companies to apply to the Board for the establishment of reasonable collection and delivery zones in cities, towns and villages, if any, where for any special reasons it might be unreasonable to require collection and delivery services to be made throughout the entire area thereof. Applications have been made in regard to these limits at various points, and these have either been settled by conference between the municipal authorities and the express companies, or failing such agreement, have been settled by the Board. The express companies concerned will take up the matter of collection and delivery limits with you, and if you and the representative or representatives of the express company or companies are unable to agree as to what are reasonable limits, the matter will then be dealt with by an officer of the Board.

◆

Telegraph and Cable Matters

It is reported in North Sydney, N.S., that the Western Union Telegraph Co. is considering the removal of its North Sydney office to Lloyd's Cove.

G. M. Bosworth, Vice President, C.P.R., in charge of traffic, has had his jjurisdiction extended to cover, among other departments, the whole of the telegraph system, the chief of which will now report to him.

The Assistant Postmaster General, in response to questions, in the British House of Commons, Nov. 14, stated that he hoped to be in a position shortly to make a statement regarding the reduction of cable rates between Great Britain and Canada.

S. J. Baker has been appointed acting Telegraph Inspector, Saskatchewan Division, C.P.R. Telegraphs, with headquarters at Saskatoon. We are officially advised that the appointment is only a temporary one. A. C. Fraser is Telegraph Inspector, Saskatchewan Division, with headquarters at Moose Jaw.

The Great North Western Telegraph Co. has offered to place its wires underground at Sparks and Rideau Sts., Ottawa, for a cash payment of $9,000. The city board of control is favorable to the proposition, and, it is stated, will recommend to the city council that it be accepted.

C. E. Davies, Local Manager, Great North Western Telegraph Co., Ottawa, Ont., has also been appointed Supervisor of Equipment, with jurisdiction over the company's equipment at London, Hamilton, Toronto, Kingston, Ottawa, Montreal, Quebec and Campbellton. This latter position is a new one.

At a recent meeting of the directors of the Montreal Telegraph Co., Hugh A. Allan resigned the Presidency, and his seat on the board, on account of having taken up his residence in England. Since the organization of the company in 1847, with the exception of the first five years, an Allan has been President. W. McMaster, heretofore Vice President, was elected President, and Wm. Wainwright was elected Vice President. B. McLennan was elected a director to fill the vacancy on the board.

James Kent, Manager, C.P.R. Telegraphs, who returned to Montreal recently from a trip of inspection of the lines to the Pacific coast, stated that two additional wires have been strung from Winnipeg to Calgary, one by way of Arcola and Regina, and the other by way of Saskatoon and Edmonton. A new wire has also been erected between Calgary and Vancouver. In speaking of the C.P.R. building now being erected at Toronto, he said that the Telegraph Department would occupy the top floor, which would be equipped with the latest type of instruments.

The Marconi's Wireless Telegraph Co., Ltd., of London, Eng., has, we are advised, instituted proceedings against Siemens Bros. and Co., Ltd., for alleged infringement of the Marconi Co.'s patents by the use of the German Telefunken Co.'s system. This is the third suit which has recently been instituted by the Marconi's Co. The first suit against the British Radio-Telegraph and Telephone Co., Ltd., resulted in a decision being given in Feb. last in favor of the Marconi's Co. The second suit, against the Lodge-Muirhead Syndicate, terminated in a settlement by which the Marconi's Co. took over all the Lodge-Muirhead patents, and by which Sir Oliver Lodge becomes associated with the Marconi's Co. as a scientific adviser.

American Railway Master Mechanics' Association.—Master Car Builders' Association. At a recent joint meeting of the executive committees of these associations, it was decided to hold the annual conventions for 1912, at Atlantic City, N.J., June 12 to 14 for the first named and June 17 to 19 for the latter. It was also decided, on the suggestion of railway men to make certain changes in the entertainment programme, which it is anticipated will dispense with all of the entertainment items except the ball game. Preference in the assignment of accommodation at the headquarters hotel will be given to members who made application by Dec. 1.

A. Dwight Smith, Railway Sales Engineer, Northern Electric & Manufacturing Co., Montreal, who is contributing a series of articles on telephone train dispatching to the Railway and Marine World, read a paper on the subject before the Central Railway and Engineering Club at Toronto, Nov. 21.

"A man never catches up with his good intentions for to-morrow."—
Poor Richard, Jr.

Send today for our book about the

EDISON BSCO
PRIMARY BATTERY

The Edison BSCO was the first "unit" construction zinc plate copper oxide battery made. The present type of Edison BSCO for railway signal purposes represents a long progressive step in the field of railway signal battery construction and is as far in advance of the early type of Edison Battery as that battery was in advance of other batteries of its time.

Reliability in the highest degree possible is the first thing you require of a battery. You can't afford to accept a *less* degree of reliability than the Edison BSCO affords—and you get the highest degree of reliability in this.

When you consider, in addition, the low operating and maintenance cost, and that the slight difference in first cost between the Edison BSCO and other batteries is more than covered by the *50 per cent saving in labor cost alone*, isn't the Edison BSCO the battery for you?

Our booklet covers the subject. Write for it to-day—every railway signal engineer and purchasing agent should have it.

INTERNATIONAL LIBRARY OF TECHNOLOGY

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. The Proposed Tube Railways in Toronto and Surface Connections.

The Toronto city council's legal department is preparing for submission to the ratepayers on Jan. 1, a bylaw to authorize the construction of a tube system of railways, with surface connections for the city. The ratepayers have already approved a bylaw favoring the carrying out a rapid transit project of which a tube railway was a principal part, but a proviso was attached to this bylaw to the effect that no construction of a tube railway should be undertaken until the money was specifically voted for that object. In order to provide the necessary data for this bylaw, plans were prepared in the City Engineer's offices of the railway department of which E. L. Cousins is in charge, for the complete system, and tenders were invited for the building of the tube. Fourteen tenders were received, Nov. 2, for the work either as a whole or for sections. That of M. J. Haney & Co., Toronto, is the lowest, the cost working out at $2,474,781. The McKnight Construction Co., Toronto, Clark and Monds, Toronto, and the Litchfield Construction Co., Brookline, Mass., tendered upon one section of the work each; while the following firms tendered upon the whole work, the figures appended being the approximate cost on the basis of the price per cubic yard tendered:

M. J. Haney & Co., Toronto	$2,474,781
F. L. Crawford, Brooklyn, N.Y.	2,845,590
Canadian Stewart Co., Montreal	2,930,713
Connors Bros., Lowell, Mass.	2,962,887
Orpen & Co., Toronto	3,091,927
Larkin & Sangster, St. Catharines, Ont.	3,456,754
Hugh Navin & Co., Boston, Mass.	3,730,580
P. McGovern, Boston, Mass.	3,849,390
Smith & Pinnock, New York	3,900,000
Coleman Bros., Boston, Mass.	3,912,186
Anglo-Canadian Construction Co., Toronto	5,196,542

The estimates presented to the board of control by the City Engineer, Nov. 20, place the total cost of the work at $5,171,395, made up as follows: The contract for the bare tube, $2,474,781; rearrangement of gas and water mains, sewers, etc., $1,251,581; underpinning buildings, $75,000; equipment, block signals, wiring, lighting tracking, station entrances, etc., $573,000; land damages, $250,000; carrying expenses during work of construction, including interest and sinking fund, $250,000; engineering, $75,000.

The plans and specifications upon which the tenders for the tube construction were asked, provided that the tenders were submitted on the understanding that no contract could be entered into until the taxpayers had passed a bylaw authorizing the expenditure. The plans show a line starting at Front St., and extending under Bay St. to Queen St. West, under the corner of the City Hall lawn to Terauley St., across under College St., to St. Vincent St., under the property on the west side of Chapel St., under North St. to Bloor St., under several properties to Ketchum Ave., then swinging round across under Davenport Road, and keeping west of Yonge St., crossing the C.P.R. and coming out to Yonge St. at Alcorn and Shaftesbury Avenues, then along Yonge St. to St. Clair Ave., a distance of three miles. The profile shows that the total rise in gradient from Front St. to St. Clair Ave. is 208½ ft. The gradient rises gradually to near McMurrich Ave., where it is 122 ft. higher than Front St.; and then descends to Gibson Ave., where it is 105¼ ft. higher than Front St.; ascending again to Balmoral Ave., the remaining portion of the subway being level. Provision is made for stations at Front St., King St., Albert St., College St., Bloor St., Davenport Road, Roxborough St., Shaftesbury Ave., and St. Clair Ave. The section plans show a subway 32 ft. 2 in. wide and over 19 ft. high over all, with an up and down tube, the inside measurements of each tube being 12 ft. side to side, 16 ft. 6 in. in height. When the ballasting is put in each tube will have a height of 15 ft. from top of rail to the top of tube arch. The top of the outside of the subway will be from three to ten feet below the surface of the ground. The subways at stations will be 44 ft. 3 in. over all, a platform 16 ft. in width being provided in each tube. The walls at the stations are set back just over eight feet on each side, to the platform level, which is extended on a cantilever to within about three inches of the car; the lower portion of the subway being of the same width as the tubes.

According to the specifications prices were asked for the work upon each quarter of a mile of tunnel, at per cubic yard for excavation, and at per cubic yard of concrete, with reinforcing steel at per pound. The walls of the subway are to be 2 ft. 7 in. thick, with a partition wall 1 ft. thick; provided with proper drainage and waterproofed on the top outside. The estimated quantity of material to be excavated is 462,658 cubic yards the greater part of which is blue clay, varying from 3 to 17 ft. below the surface, with a covering of filled in material, and occasionally a small quantity of quick sand. It is estimated that there will be required for the construction of the tube work, 150,416 cubic yards of concrete, of which 127,381 will be 1:2:4 mixture, and 23,035 will be 1:4:8 mixture. The quantity of steel for reinforcing is estimated at 9,134,920 lbs. The waterproofing material required will average about 11.10 square yards per lineal foot of tunnel.

The city has under construction a surface line along St. Clair Ave., for about three miles westerly from Yonge St. St. Clair Ave. is being extended and widened to 100 ft. for this distance, and as soon as possible track laying will be gone on with. At the extreme eastern boundary of the city another line is under construction on Gerrard St., westerly towards Yonge St. Considerable grading has been done, and track laying has been started. It is proposed that these lines will connect with the Yonge St. tube line, if it is built.

◆

The Quebec Public Utilities Commission conducted a test of car fenders at Montreal, Nov. 8 and 9. Six patterns had been put before the Commission, but only four of the inventors submitted fenders for the test.

The Selection and Method of Instruction of Trainmen in Order to Obtain Complete and Intelligent Accident Reports.

By A. E. Beck, Claim Agent, British Columbia Electric Railway.

In the selection of trainmen the management of a line should exercise great care and select none, even for trial, except such as are physically sound, quick as to intelligence and sober as to habits. When selected the candidate for service should receive thorough instruction as to the duties he will be called upon to perform, thus being made fit to become a servant of an exacting public, it being a well known and generally accepted fact that efficient and courteous trainmen have much to do with the securing and maintaining of the good repute of a public service corporation.

The selection of trainmen should be placed in the hands of one particular official. Once chosen for the service of the line the man should be turned over to the operating department for practical instructions in duties he will be called upon to perform, including knowledge of the various parts of a car and the best method of operating the equipment under every possible condition. When the term of instruction is completed the same official who originally selected the man for service should examine him as to proficiency, the responsibility for the appointment thus resting upon one man, the person who originally selected the candidate on general grounds and, after training and examination, finally passes upon the would-be employe on the strength of the detailed knowledge concerning the operation of trains which he is found to possess. The claim agent of the line should personally, so far as is practicable, impart to the new employe, with responsibility and dignity, the final instructions, as it is to this official that the trainman must eventually make his excuses in case of errors resulting in accidents.

The methods usually adopted in securing accident reports are by formal question and answer or by narrative. Prominence should be given to the narrative form, especially in primary investigation, as in this manner the trainman will, in his own way, best tell his story. The majority of trainmen object to being catechized, and usually respond to questions with monosyllabic replies which do not bring out the full facts of the case. The narrative form should, however, always include questions relating to date, time, place, speed, name of person or owner concerned, and witnesses.

The formal accident report should contain a few direct questions for stated answer, chiefly covering the specific points mentioned as necessary in the preceding paragraph. The form of the report should be such as to encourage the trainman to tell the whole story clearly and concisely, although not with the brevity of "Dog crossing track. Dog hesitates. Dog gone." It is often found that the general education of the average trainman has been neglected, and the inclusion of a long list of questions on the accident report frequently confuses him and leads to his submitting a report which does not give the assistance or information needed by the claim agent.

It is not expected that a report from a trainman will be a literary production, but it is to be always expected that

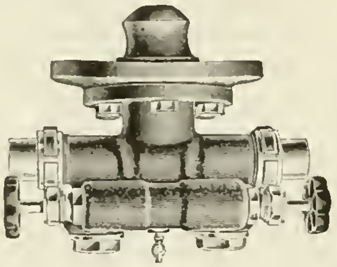
DOUBLE BOILER CHECK VALVE



The position of this valve is on top of the boiler. It is provided with a stop valve for each check valve, so that either one of the check valves, if out of order, may be "cut out" without interfering with the feeding of the boiler. Removable caps on top of each check permit inspection and grinding of valves without disconnecting pipes.
Simple and pleasing design, compact and efficient. Furnished complete with boiler flange.

Turntables
Portable Flare Lights

International Marine Signal Company, Ltd.
OTTAWA - - CANADA

the statements will be truthful and in strict conformity with the facts of the case. To give assurance on this point the trainman should make certain to obtain the names and addresses of the greatest possible number of witnesses in any case where his own actions or the management of the line by which he is employed are liable to be called to account for any cause.

"Were you afraid to obtain witnesses?" "It was your duty to thus protect your company, yourself and your mate." "Others must be your judge." "An unjust claim may be made against your company." "You or your mate may be reprimanded and, possibly, discharged on account of this affair." "Every passenger is a witness, either directly or in corroboration." "Protect your company, yourself and your mate." "Observe and note carefully remarks, conditions and distances at the time of an accident."—Questions, suggestions and advice such as are above noted might well be used by a claim agent when dealing with trainmen.

Blanks for accident report should, like the book of rules, be always "on the job." They should have printed thereon rules to be observed in case of accident and a number of pointed "Don'ts" and "Hints" for trainmen, in preference to a long list of questions, many of which are superfluous. Space should also be left on the blank for a diagram which will give full information as to the exact location of an accident.

Accident reports should be made out as promptly as possible and handed to the division superintendent or inspector, who should, in turn, transmit them without delay to the claim agent.

The foregoing paper was read before the American Electric Railway Association at Atlantic City recently.

◆

Quebec Ry. Light Heat and Power Co's Annual Report.

The first annual meeting was held in Montreal recently. Following are extracts from the report for the year ended June 30:—

The company owns the whole of, or the majority of the stock of the following companies: Quebec Railway, Light and power Co., Quebec Jacques Cartier Electric Co., Quebec Gas Co., Frontenac Gas Co., Quebec County Ry. Co., Quebec and Saguenay Railway Co., and Canadian Electric Light Co

The gross earnings, $1,280,126.76, compared with $1,127,952.42 in 1910. The operating expenses were $661,907.15, compared with $644,563 60 in 1910. The net earnings were $618,219.61, an increase of $134,830.79 over 1910. After adding miscellaneous income from subsidiary companies' earnings prior to July 1, 1910, and deducting fixed charges of $456,329.02, two dividends, amounting to $199,990, organization expenses of $10,681.47, and less sundry interest earned of $11,109.48, there remains a surplus of $62,328.60.

The mileage on the Quebec Ry., Light and Power Co.'s city division has been increased 26-100 miles by an extension of track in Limoilou ward from the exhibition grounds to the Charlesbourg Road. Extensive repairs and renewals have been made, and the roadway is in excellent physical condition. Sixteen new cars of the modern pay-as-you-enter type and 10 open bench cars of standard type were purchased and put in service. Two large sweepers and two snow scrapers were also added which enabled the company to maintain its service during the heaviest storms. With the enlargement of car barns at St. Malo, the company has now ample room to accommodate its rolling stock. Provision has been made at these barns for additions to the rolling stock and for the enlargement of the barns when rendered necessary.

The mileage of the Montmorency division has been increased by 3½ miles of double track road from Beauport to Kent House park. This extension runs through a thickly settled district, and your directors are of the opinion that it will be almost immediately remunerative. About two miles of main line has been relaid with 80 lb. steel rails, the old rails taken up being used for sidings at various points. Additional tracks have also been laid in the yards at the Quebec terminal to facilitate the handling of the increasing freight traffic. The main line has been rebonded during the year with type e.a. electric welded rail bonds, which has greatly increased the efficiency and enabled the maintenance of a much improved service. The roadway is in excellent physical condition. Forty-eight gondola freight cars, 60,000 lbs. capacity; 15 box freight cars, 60,000 lbs. capacity, and two passenger motor cars of standard 400 class have been added to the equipment during the year, while one electric locomotive no. 6, constructed in the company's shops, has been in operation for some time, with good results. A new sub-station has been constructed at Ste. Anne de Beaupre, and a 500 k.w. motor generator set with exciter and transformers has been installed there. A new transmission line has also been constructed from Montmorency Falls to Ste. Anne de Beaupre, and the voltage increased from 10,000 to 25,000 volts, thus effecting a considerable saving. The company's hotel at Montmorency Falls park, the Kent House, has been enlarged and refurnished throughout. A number of new attractions have been added to the equipment of the Montmorency Falls park, and some of these have already proven profitable, as well as serving to induce people to visit the park.

The construction of the Quebec County Ry. was commenced in July, 1910, and the road opened for operation in Sept., 1910. The earnings of this line have fully warranted the expenditure incurred in its construction. The line runs from Maple Avenue westward through St. Cyrille Street, in Montcalmville, and through private right-of-way and streets in the municipality of St. Columba de Sillery to the top of Sillery Hill, 2⅓ miles, and is double-tracked throughout. The line passes in close proximity to the St. Patrick's and Mount Hermon cemeteries, which are visited daily by a large number of people. Under agreement a through service is operated over the lines of the city division to the Quebec post office.

Attached to the report are a number of interesting diagrams respecting the railway portion of the company's property.

On the City Division the gross earnings rose from $110,000 in 1897-8 to $351,441.96 in 1910-11, and the operating expenses from $80,000 to $218,217.19. The operating expenses per cent. of gross earnings decreased from 72% in 1897-8 to 62.09% in 1910-11.

On the Montmorency Division the gross earnings increased from $50,000 in 1897-8 to $245,039.04 in 1910-11, and the operating expenses from $30,000 to $166,719.68. The operating expenses per cent. of gross earnings were practically the same in 1910-11 as in 1897-8.

QUEBEC RAILWAY BUILDING

The Quebec Railway, Light, Heat and Power Co.'s New Office Building.

On the City Division the total number of passengers carried increased from 3,500,000 in 1897-8 to 10,706,479 in 1910-11. The revenue passengers increased from 2,500,000 in 1897-8 to 7,857,680 in 1910-11. The average fares per revenue passenger were practically the same in 1910-11, as in 1895-6, namely, 4.41c. The average fares for all passengers, transfers included, were also practically the same, namely, 3.23c.

On the City Division the car mileage increased from 700,500 in 1897-8 to 1,556,973 in 1910-11, and the earnings per car mile increased from .15½c. in 1897-8 to 22.26c. in 1910-11.

On the Montmorency Division the total number of passengers carried increased from 200,000 in 1897-8 to 1,475,702 in 1910-11, and the earnings per passenger decreased from .18½c. in 1897-8 to .11½c. in 1910-11.

The pamphlet also contains an illustration of the company's new office building at Crown and St. Joseph Sts., which is reproduced on this page. It is seven stories high, of structural steel, with terra-cotta fireproofing throughout. The building occupies one entire block,

Frogs, Crossings, Curves of Amazing Durability

No metal known to man is so well adapted for special track work as steel purified by Titanium Alloy. Its resistance to shocks and compression is simply wonderful. It has hardness, toughness and ductility where other alloy steels have simply hardness.

TITANIUM

The Wonder-Working Alloy

gives to steel all these qualities without leaving a trace of brittleness. Isn't that ideal steel? It's certainly the kind that will reduce your maintenance expenses. It's far cheaper than other steels for special track work.

Booklet No. 30 tells how steel is purified by Titanium Alloy. Send for it.

CANADIAN PACIFIC RAILWAY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act:—

1. Authorizing it to construct the following branch lines of railway:—

(a) From a point at or near Hawarden on its Moose-jaw Northwesterly Branch in a northerly direction to a point at or near Floral or Cheviot on the Pheasant Hills Branch or to a point between these two places in the Province of Saskatchewan.

(b) From a point on its Estevan-Forward Branch in Township 2 or 3, Range 12, 13 or 14, west 2nd Meridian in a westerly and northwesterly direction to a junction with its Weyburn-Lethbridge Branch in Township 5 or 6, Range 25 or 26, west 2nd Meridian, in the Province of Saskatchewan.

(c) From a point at or near Sedgewick on its Hardisty Subdivision in a southerly direction to a point in Township 39 or 40, Range 11, 12 or 13, west 4th Meridian, in the Province of Alberta.

(d) In a northwesterly and northerly direction from a point on its line from Wilkie authorized by section 3 (b) of chapter 74 of the Statutes of 1907, to a point near the North Saskatchewan River in Township 51, 52, 53, 54, 55 or 56, Range 1, 2, 3, 4, 5, 6, 7 or 8, west 4th Meridian, in the Provinces of Saskatchewan and Alberta.

(e) From a point at or near Kipp on its Crow's Nest Subdivision in an easterly and northeasterly direction to a point in Township 12 or 13, Range 12 or 13, west 4th Meridian, in the Province of Alberta.

(f) From the northwesterly terminus of the line from Asquith authorized by section 3 (b) of the Canadian Pacific Railway Act, 1910, in a westerly and northwesterly direction to a point at or near Battleford, in the Province of Saskatchewan.

(g) From a point at or near Irricana in an easterly and southeasterly direction to a point in Township 20 or 21, Range 11, 12, 13 or 14, west 4th Meridian, in the Province of Alberta.

2. Authorizing it to make the terminus of its line from Lauder Westerly at a point at or near Stoughton on its Arcola Branch.

3. Authorizing it to enter into an agreement with the Province of New Brunswick for any of the purposes specified under section 361 of The Railway Act in respect of a line of railway extending from Norton to Minto, New Brunswick, and for other purposes.

Dated at Montreal, this 25th October, 1911.

WALTER R. BAKER.
Secretary.

CANADIAN NORTHERN ONTARIO RAILWAY COMPANY.

NOTICE is hereby given that application will be made to the Parliament of Canada, at its next session, for an Act authorizing the sale of a portion of the constructed right of way of the Carillon & Grenville Railway Company between Grenville and Carillon by the Carillon & Grenville Railway Company to the Canadian Northern Ontario Railway Company, and confirming a notarial deed of sale thereof, dated July 25th, 1911, passed before Notary Robert Bennett Hutcheson under his number 11283, and registered in the Registry Office at Lachute, P.Q.

GERARD RUEL,
Chief solicitor.

Toronto, 26th October, 1911.

has a length of 145 ft. and a width of 64 ft. at one end and 71 ft. at the other end. The first, second and third floors will be occupied by the company, and the remainder of the building will be leased. Many applications have already been received for space. With this building the transaction of the company's business will be greatly facilitated, admitting as it will of the consolidation of all the company's executive offices in the one building. The company expects to occupy the new offices some time in January.

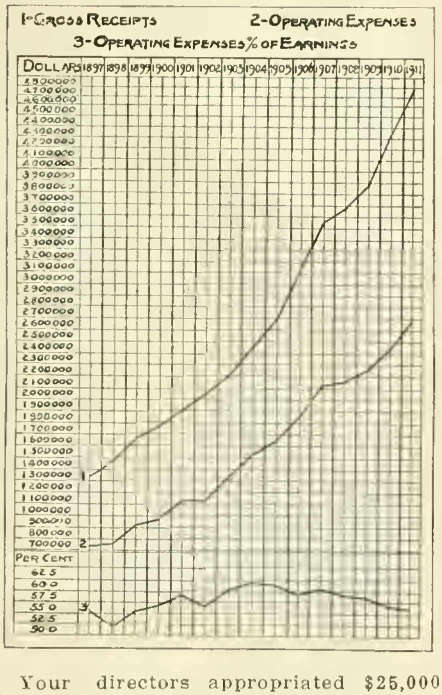
◆

Montreal Street Railway Co's. Annual Report.

Following are extracts from the report for the year ended Sept. 30, presented at the annual meeting, Nov. 1:—

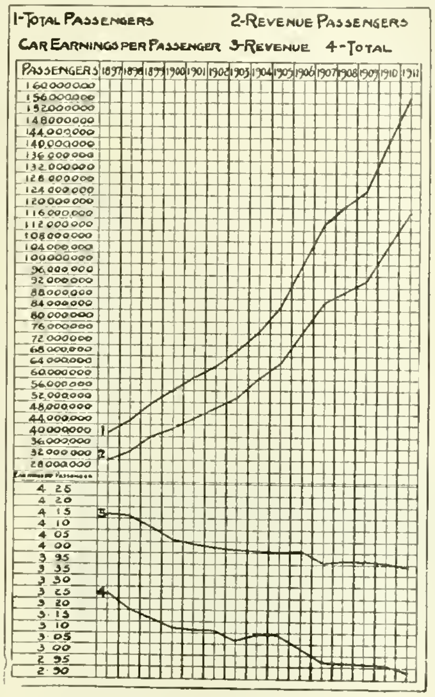
Gross earnings		$4,775,300.64
Operating expenses		2,679,805.85
Net earnings		2,095,494.79
Interest from M.P. & I. Ry. Co.		114,807.83
Total income		$2,210,302.62
From which deduct:—		
City percentage on earnings	$335,194.31	
Interest	185,087.41	
Rental leased lines	7,122.60	
Taxes	56,500.00	
		583,904.32
Net income		$1,626,398.30
Dividend 10%		1,000,000.00
Surplus		$ 626,398.30
From which has been appropriated for:		
Contingent account	$250,000.00	
Fire insurance fund	25,000.00	
		275,000.00
Transferred to general surplus		$ 351,398.30

The gross earnings increased during the year $422,749.46, or 9.71%, the operating expenses $224,504.79, or 9.14%, the net earnings $198,244.67, or 10.45%. The gross earnings continue to show very satisfactory increases. The percentage of expenses to gross earnings is 56.12%, against 56.41% for the previous year.



Your directors appropriated $25,000 from the surplus earnings as a credit to the fire insurance fund. The amount now at the credit of the fund is $571,539.96.

During the year the company secured an amendment to its charter, authorizing the sale, lease or transfer to any person or company of all its undertakings upon such terms as may be approved by the majority of the holders of the shares issued by the company, represented at a special general meeting called to authorize the same. On Oct. 5 a special general meeting of shareholders was held for the purpose of considering the sale of the whole of the company's undertakings to the Montreal Tramways Co. The proposition as submitted was carried by the majority of the issued shares and a circular has been forwarded to the shareholders giving the terms of the sale.



Owing to the continued rapid growth and congestion of the city your directors during the year negotiated with the city for the purpose of making a new contract which would be more applicable to the present day conditions. It is hoped that the amalgamation of this company with its subsidiary companies under the name of the Montreal Tramways Co. will help to speedily complete the negotiations for a new franchise. The property has been maintained in a high state of efficiency, and a considerable sum has been spent in the upkeep of the tracks and rolling stock, the power plants and buildings are in excellent condition, it being the policy of your directors to spare no efforts nor expense in this direction; yet notwithstanding this the surplus earnings are the largest in its history. Notwithstanding this the operating expenses percentage of earnings has decreased. The company has continued its liberal policy towards its employes in respect to wages, having increased them during the year. The company has paid to the city taxes and percentage on earnings amounting to $380,678.99, on account of snow removal $73,364.96, a total of $454,043.95, being an increase over the previous year of $15,860.40.

The Montreal Park and Island Ry.'s gross earnings show an increase of $60,973.72, the operating expenses an increase of $27,843.93, the net result being $114,807.83, against $85,878.04 for the previous year.

The Montreal Terminal Ry.'s gross earnings for the year are $134,019.96, operating expenses $122,116.10, and taxes and percentage on city earnings $4,279.96, leaving a net result of $7,623.90.

STATISTICAL STATEMENT.

Why Not Call A Spade A Spade?

Cuts show One Piece Feature of All Wire Bonds Patented in U.S.A.

Joints made by attaching terminals of a bond to the body are *joints.*

In ALL WIRE RAIL BONDS the terminals are formed out of the body of the bond itself—hence our One Piece feature—result. *NO JOINTS.*

Four "joints" per bond (of other makes) mean 1408 *unnecessary joints* per mile of track.

You would not use a feeder cable that had splices every few feet, no matter how perfect the joints were—why not select *One Piece* Rail Bonds also? Let us tell you the *whole* story.

◆

Electric Railway Projects, Construction, Betterments, Etc.

Bassano, Alta.—The town council Nov. 14, granted a franchise for the building of an electric railway through the town, and out to the C.P.R. dam, five miles. The line is to be completed within nine months, and the town has the option of buying the property at the end of 20 years, or at the end of any ten year period thereafter.

Berlin and Bridgeport Electric St. Ry.—Press reports state that plans are under consideration for the building of a belt line, making connection at King St., with the present city and radial lines. (See Berlin and Waterloo St. Ry., Oct., pg. 973.)

Brandon, Man.—The proposition made by J. D. McGregor for a franchise for an electric railway in the city has been withdrawn for the present. The citizens voted, Nov. 9, on the question of municipal ownership against a company franchise, 458 votes being given for the company franchise and 176 for municipal ownership. This poll represented about half of the electorate who voted at the plebiscite on the question whether an electric railway should be built or not. The result of this vote was 1,238 in favor of and 236 against the building of an electric railway. (Nov., pg. 1067.)

British Columbia Electric Ry.—Work has been started on several small extensions on a number of the lines on the outskirts of Vancouver, and arrangements are being made for the building of an extension to Ladner.

The Vancouver city council proposes to ask the Legislature for power to acquire at some future date the company's lines in greater Vancouver, and to lay aside annually $500,000 from the present time to the expiration of the company's charter when the city may take over the line.

The ratepayers of Barnaby have authorized the company to test the validity of the company's franchise in the courts. (Nov., pg. 1067.)

Calgary Municipal Ry.—Application is being made by the city council for the confirmation by the Alberta Legislature of money bylaws recently passed, one of which was for the raising of $375,000 for street railway purposes. (Nov., pg. 1069.)

The Calgary Municipal Ry. has completed 24 miles of extensions and now operates 30 cars. We are officially advised that 20 miles more are to be built next year.

Calgary to Chestermere, Alta.—Construction is reported to have been started upon the building of an electric railway from Crescent Heights, Calgary, in the direction of Chestermere, Alta. It is expected to have the line completed early in the new year. Those interested in the matter are J. A. MacCullough, W. Horner, A. M. Hamilton, C. T. Gilbert, C. A. Shipps, H. T. Graham, all of Calgary. It is said that when built the line will be operated by the Calgary Municipal Ry. (See Calgary Municipal Ry., Aug., pg. 783.)

Edmonton Radial Ry.—Strathcona Radial Ry.—Application is being made to the Alberta Legislature by the Edmonton city council for an amendment to the city charter, to grant an extension of time within which the several lines authorized may be built. (Nov., pg. 1069.)

Galt, Preston and Hespeler St. Ry.—No definite decision has been reached as to the building of an extension to Riverside Park, Galt, Ont. The work, if undertaken, will be ordinary street railway construction.

Hamilton, Waterloo and Guelph Ry.—The Dominion Parliament is being asked to extend the time within which this projected railway may be built. Pringle and Guthrie, Ottawa, are solicitors for applicants. (July, pg. 683.)

Lethbridge, Alta.—The Lethbridge city council, Nov. 8, appointed T. H. McCauley, Superintendent, Calgary Municipal Ry., as consulting engineer, and A. Reid, supervising engineer, for the building of an electric railway in the city. Construction has been started, and it is hoped to have the line in operation by Aug., 1912. The route will be from Round St. to McDuff St., east on Westminster Road, then west to Galbraith St., and from Round St., west on Redpath St., and on Round St. to Henderson Park on Courtland St. Tenders for the supply of the necessary additional equipment for the power house have been asked, and the city is arranging to order ten cars. The site for the car barns has not yet been chosen. (Nov., pg. 1069.)

London and Lake Erie Ry. and Transportation Co.—The section of the line from London to St. Thomas, Ont., has been strengthened and in part reconstructed, and work was started Nov. 10, reballasting it. The remaining mileage from St. Thomas to Port Stanley will be taken in hand next season. Arrangements are being made for the use of hydro-electric power for the operation of the lines. (Sept., pg. 879.)

London and North Western Ry. of Canada.—Plans are reported to be in preparation for the building of an 80 ft. dam on the Au Sable River, in West William tp., near London, in connection with the company's proposal to build an electric railway from London to Sarnia, Ont.

The surveys for the railway are reported to have been completed, the route following as nearly as possible the Sarnia gravel road. (June, pg. 555.)

London Street Ry.—The directors have authorized the issue of the balance of the $750,000 of authorized stock, of which $552,000 is at present outstanding. The proceeds of the new stock will be utilized for the purpose of building some extensions. No decision has been reached as to the extensions to be built. (Nov., pg. 1069.)

Monarch Ry.—W. H. Price, Toronto, representing this company, is quoted as stating that if the tube railway system is adopted by the Toronto ratepayers on Jan. 1, the company will start the construction of its line from north of Toronto to Barrie, Ont. (Aug., 1910, pg. 682.)

Moncton Tramways, Electricity and Gas Co.—Track has been laid on Main and Mechanic streets, and the overhead work completed. The car bodies have been fitted on to their trucks, and the other work is so far advanced that it is expected to have the lines in operation early in December. (Nov., pg. 1069.)

Montreal and Southern Counties Ry.—W. B. Powell, General Manager, is reported as having stated that a good deal of work has been completed on the extension to Richelieu and that he expects the line will be completed from Montreal to Richelieu, about 60 miles, by July, 1912. A sub-power station is being built at St. Lambert. The question of additional lines in the city of Montreal is being considered by the city council. (Nov., pg. 1069.)

Moose Jaw Electric Ry.—Four miles of this line have been in operation for a couple of months, with satisfactory results. Arrangements are being made for the laying of an additional ten miles of track during 1912. The new lines will include an extension on Main St. north, and a loop line up 18th Ave., then along Grosvenor St., connecting with Main St. (Sept., pg. 879.)

Morrisburg and Ottawa Ry.—The surveys for the projected railway and the plans for the line, so far as they have been completed, were made by J. S. McIntosh, B.Sc. The plans have not yet been filed for the approval of the provincial authorities. The company, which has a provincial charter, proposes to build a line from Ottawa to Morrisburg, Ont., via Metcalfe, Winchester and Williamsburg, about 45 miles. We are advised that it is expected to start building the line in the near future.

Following are the officers and directors for the current year: President, Jas. Oliver; Vice President, W. J. Campbell; Secretary-Treasurer, R. A. Bishop; other directors: H. McDonald, W. C. Strader. With the exception of the last named, who lives in Williamsburg, Ont., all the officers and directors live in Ottawa. (Nov., pg. 1069.)

Nanaimo, B.C.—Another proposal for a franchise for an electric railway in the city has been submitted to the city council by the B.C. Hydraulic Co., and has been taken into consideration. (Nov., pg. 1069.)

Niagara, St. Catharines and Toronto Ry.—We are officially advised that while consideration has been given to a proposal to extend the line from Port Colborne to Fort Erie, and on to Niagara Falls, thus giving the company a belt line through the peninsula, nothing definite has been arranged.

The Board of Railway Commissioners has authorized the opening for traffic of the company's revised line across ponds 1, 2 and 3, opposite locks 12, 13 and 14 of the old Welland canal, at Merritton, Ont. (June, pg. 557.)

Nipissing Central Ry.—J. L. Englehart, Chairman, Temiskaming and Northern Ontario Ry. Commission and President, N.C.R., stated, Nov. 9, that the extension of this line will be gone on with just as soon as the towns interested grant the necessary franchises. Surveys from Haileybury and Liskeard have been completed, and all that is required now is the approval of the Haileybury and Liskeard town councils. (Nov., pg. 1069.)

North Midland Ry.—Negotiations have been reopened with the London, Ont., city council, having for their object the guarantee of the company's bonds. At the last municipal elections the citizens voted in favor of the principle of extending aid to the building of the line, but some difficulties arose, and nothing was done in the way of arranging the bond guarantee. The city council had the matter under discussion, Nov. 15. (Sept., pg. 879.)

Ontario West Shore Ry.—Further deliveries of ties and other construction materials were made at Goderich, Ont., Nov. 10. Track has been laid from God-

erich to Kintoul, 16 miles, over which freight is being carried. It is said that some further track is to be laid, and the line got into order for the operation of a passenger service. (Sept., pg. 879.)

Ottawa Electric Ry.—Press reports state that plans are under consideration for the building of an electric railway from Ottawa to McGregor Lake, Ont. (Oct., pg. 975.)

Owen Sound, Ont.—We are advised by the mayor of Owen Sound, Ont., that the report which he made to the town council on the matter of the building of an electric railway has not yet been dealt with. The project is only in its infancy, but he hopes that it will be endorsed.

The plan outlined by the town engineer shows a line of six miles. The eastern branch would run from Carney's mills up to the Cemetery hill, and the western branch would cross the river at Tenth St., and continue out to Twenty-third St. on Brooke. The Tenth St. bridge would be used for interswitching freight traffic between the G.T.R. and the C.P.R. (Nov., pg. 1069.)

Peoples Ry.—A. N. Warfield, the engineer who made surveys for this projected railway, sued the company at the recent assizes at Stratford, Ont., for $3,000 for services rendered. Judgment was reserved. (Oct., pg. 975.)

Quebec Ry. Light and Power Co.—R. Forget, President, is reported to have stated recently that it is intended to lay a second track from Quebec to Ste Anne de Beaupre, Que. In connection with this projected work it is reported in several quarters that the C.P.R. has under consideration the question of acquiring this section of the line, and the extension now under construction by the same interests, under the Quebec and Saguenay Ry. charter. (Oct., pg. 975.)

St. John Ry.—The Provincial Government is making extensive repairs to the suspension bridge at St. John, N.B., pending the building of a new bridge. Plans for this new bridge, it is stated, are being prepared, so as to provide for a double track line for the electric railway. (July, pg. 685.)

Saskatchewan Power Co.—Application is being made to the Dominion Parliament to authorize the expropriation of lands in addition to those previously authorized, and for the purpose of further defining the company's powers.

Application is being made to the Saskatchewan Legislature for an act confirming the agreement made July 21 between the city and H. M. E. Evans, "whereby a street railway franchise was granted and a contract made for the purchase of electric power." (Nov., pg. 1071.)

Southeast Calgary Ry.—Application is being made to the Alberta Legislature to incorporate a company with this title to build an electric railway from Calgary, southeasterly to Shepard. Loughheed, Bennett, McLaws and Co. are solicitors for applicants.

Toronto and York Radial Ry.—The franchise of the section of the company's Scarboro division, within the city limits, including the portion between Kingston road and the corner of Gerrard and Main streets, expires Nov. 12, 1912, and the Toronto city council has under consideration a bylaw for acquiring it.

A number of residents of the Yonge St. district north of the C.P.R. north track line waited on the Premier of Ontario recently in connection with the Ontario Railway and Municipal Board's conflicting orders as to switches on the Metropolitan Division. This matter has been before the Board since March in different forms. In June it was adjourned until Sept., in order to see if some arrangement would not be reached as to the annexation of North Toronto to the city, and so bring about the double tracking of the line. This could not be arranged, and in October, on a further hearing, two of the commissioners decided that the company's application to put in switches should be refused. The Chairman held that the decision involved some points of law and that his view carried. His judgment gave the company permission to construct switches at certain points on the line according to a plan filed and approved by the Board's engineer, subject to the inspection of the Board's engineer. The residents of North Toronto are not satisfied and it is expected they will carry the matter into the courts.

The company is reported to have purchased a considerable portion of the right of way necessary for building a double track line between Sunnyside and Long Branch. The city has power to acquire this section of the line, on the charter's expiration. The line runs along the side of the Lake Shore road, with the exception of a small length at the Mimico Creek, for which the company acquired a private right of way and built a new line, which was opened for traffic recently. (Oct., pg. 975.)

Toronto Eastern Ry.—The Board of Railway Commissioners has authorized the company to connect its proposed tracks from Wellington St., Bowmanville, Ont., with the Canadian Northern Ontario Ry., in con. 3, Darlington tp.

Press reports state that surveys are being made for an electric railway branching out from the T.E.R. at Port Hope, and passing through Peterboro, Lindsay and Omemee to Orillia. The engineers in charge of the work are Graham and Mann. (Nov., pg. 1071.)

Toronto Suburban Ry.—The reconstructing of sections of the line to Lambton, Ont., is being proceeded with, and Sir Wm. Mackenzie was reported as stating, Nov. 15, that work will probably be started early in the new year on the extension of the line towards Guelph. Press reports state that this line will be built as an extension of the Weston, and not of the Lambton line. (Aug., pg. 785.)

Windsor, Chatham and London Ry.—Application is being made to the Dominion Parliament to amalgamate the W.C. and L. Ry. and the Windsor, Essex and Lake Shore Rapid Ry., and to extend the time within which the lines may be built. Although the notice is given under the title of the W.C. and L. Ry., it is asked that the amalgamation may be made "under the name of either one of them, or such other name as may be chosen." Wilson, Pike and Stewart, Chatham, Ont., are solicitors for both companies interested.

Windsor, Essex and Lake Shore Rapid Ry.—See Windsor, Chatham and London Ry. (Nov., pg. 1071.)

Winnipeg Electric Ry.—The new lines recently opened in Winnipeg extend from Sherbrooke St., along Sargeant St., along Kennedy St. and Ellice St., to Portage Ave., opposite the post office, and along Princess St., to Main St., beyond Logan Ave.

Residents of St. Vital and Norwood are asking the company to extend its line from Marion St., along St. Mary's Road, to the southern limits of St. Boniface. (Nov., pg. 1071.)

Berlin and Waterloo St. Ry.—The Berlin, Ont., town council has under consideration an offer by W. H. Breithaupt, President, Berlin and Bridgeport Electric St. Ry., to lease the B. and W.S.R. on a 25 year agreement, terminable at the end of any five years. The agreement provides for the upkeep of the line by the lessee, and payment of a rental of 25% of the gross proceeds.

The Montreal Tramways Company

The Quebec Public Utilities Commission has approved of the amalgamation of the Montreal Street Ry. Co., the Montreal Park and Island Ry. Co., the Montreal Terminal Ry. Co., and the Public Service Corporation under the title of the Montreal Tramways Co. On the other hand, the Board of Railway Commissioners has refused to recommend that the Governor-General in Council approve agreement for the amalgamation of the Montreal Terminal Ry. Co. and the Montreal Park and Island Ry. Co., which are Dominion companies, with the Montreal Street Ry. Co., which was incorporated by the Quebec Legislature.

The action brought by Senator Beique on behalf of himself and other shareholders to prevent the amalgamation has been dismissed by the courts.

It was announced in Montreal, Nov. 17, that the M.T. Co. would take over, on Dec. 1. the control of the Montreal Street Ry., the Montreal Park and Island Ry., the Montreal Terminal Ry., and the Public Service Corporation, the amalgamation of which under the new title has been approved by the shareholders. In preparation for this N. and W. Harris, Boston, Mass., who have taken $10,000,000 of bonds, arranged for the transfer from New York of $10,000,000 in gold, with which to take over the interests of the shareholders of the Montreal St. Ry. This it is estimated will absorb $9,000,000. The additional $1,000,000 will be used to take up the underlying bonds of subsidiary companies. It is said that a further issue of $7,000,000 of debentures will be marketed in the near future.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Sept., $453,391; working expenses, $282,443; net operating earnings, $170,948; renewal funds, $37,935; net earnings, $133,013; approximate income from investments, $25,000; net income, $158,013, against $311,803 gross earnings; $174,237, working expenses; $137,566, net operating earnings; $22,417, renewal funds; $115,149, net earnings: $20,000, approximate income from investments; $135,149, net income for Sept., 1910. Aggregate gross earnings for three months ended Sept. 30, $1,299,241; net earnings, $441,138, against $897,458 aggregate gross earnings, and $377,856 net earnings for the same period 1910.

Calgary Municipal Railway.—Earnings for October, $35,591.70; operating expenses, $18,027.17; contingent account, 5% of gross receipts, $1,779.58; interest and sinking fund, $5,263.33: net profit, $10,521.62; no. of passengers carried, 865,005; number of miles run, 126,801; revenue per car mile, 28.061c.; operating expenses, per car mile, 13.428c.; profit per car mile, 14.633c.; cost of power per car mile, 4,447c.; proportion operating expenses to revenue, 50.6%.

Following are the figures for the year ended June 30:—earnings, $275,434.51; operating expenses, $139,601.98; interest, $23,220; sinking fund, $9,370; taxes, $2,264.17; net surplus, $87,206.64.

Cape Breton Electric Co.—The regular 3 per cent. dividend on the preferred stock for the half year, and a dividend of 2 per cent. on the common stock were paid Nov. 1.

Grand Valley Ry.—Application has been made for the appointment of a receiver for the G.V.R. Co. The General Accident, Fire and Life Assurance Co. holds $17,000 of the company's bonds

CANADIAN PACIFIC RAILWAY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act,

1. Extending the time within which it may construct the following lines of railway:—

(a) From Osborne to a point between Cartwright and Boissevain, Manitoba.

(b) From Otterbourne to Stuartburn, Manitoba.

(c) From a point on the Icelandic River, northerly and northwesterly 100 miles, Manitoba.

(d) From Killam to Strathcona, Alberta.

2. Amending the Statute relating to the company's power to issue four per cent. Consolidated Debenture Stock for the acquisition of mortgage bonds so as to make it apply also to the debenture stock and other securities of any other railway company, the principal or interest of which has been guaranteed by the company, and for other purposes.

Dated at Montreal this 19th October, 1911.

and alleges that the company has issued a larger amount of bonds than the sale of the railway will realize.

The G.V.R. extends from Brantford via Paris to Galt, Ont., and the same interests also own the Brantford St. Ry. and the Woodstock, Thames Valley and Ingersoll Ry.

Halifax Electric Tramway.—Receipts for Oct., $18,153.21, and for two weeks ended Nov. 14, $7,696.27, against $19,455.30 and $7,927.17 for same periods, 1910.

Hamilton St. Ry.—The city's percentage of the company's earnings for the three months ended Sept. 30 was $12,340.67, an increase of $1,797.61 over that for the same period 1910.

London St. Ry.—Gross earnings for Oct., $22,015.12; expenses, $15,414.32; net earnings, $6,600.80; deductions, $2,441.75; net income, $4,159.05, against $21,021.06 gross earnings; $14,866.12 expenses; $6,154.94 net earnings; $2,441.75 deductions; $3,713.19 net income for Oct., 1910. Aggregate gross earnings for 10 months ended Oct. 31, $231,196.26; expenses, $159,864.45; net earnings, $71,331.81; deductions, $24,012.84; net income, $47,318.97, against $211,745 gross earnings; $149,723.10 expenses; $62,022.69 net earnings; $23,945.20 deductions; $38,077.49 net income for same period 1910.

Montreal St. Ry.—Passenger earnings for Oct., $426,116.76; miscellaneous earnings, $16,275.99; total earnings, $442,392.75; operating expenses, $232,201.90; net earnings, $210,190.85; city percentage on earnings, $14,312.19; interest on bonds and loans, $15,777.43; rental leased lines, $607.10; taxes, $5,000; total charges, $35,696.72; surplus, $174,494.13, against $372,487.35 passenger earnings; $14,200.31 miscellaneous earnings; $386,687.66 total earnings; $205,750.06 operating expenses; $180,937.60 net earnings; $12,392.74 city percentage on earnings; $15,052.37 interest on bonds and loans; $552.90 rental leased lines; $4,000 taxes; $31,998.01 total charges, $148,939.59 surplus for Oct., 1910. Expenses per cent. of earnings for Oct., 52.49, against 53.21 in Oct., 1910.

Nelson St. Ry.—Revenue for three months ended Sept. 30, $4,078.85. Passengers carried, 387,397.

Port Arthur and Fort William Electric Ry.—Revenue for Sept., $17,660.99; operating expenses, $8,896.44; net revenue, $8,767.55. Car mileage, 71,066 miles; gross earnings per car mile, 24.852c.; operating expenses per car mile, 12.514c.; net earnings, 12.338c. per car mile.

Regina Municipal Ry.—Receipts for week ending Nov. 4, $1,041; passengers carried, 4,269.

Sherbrooke Ry. and Power Co.—The Quebec Legislature is being asked to authorize the company, among other things, to acquire or sell shares, stock, debentures, bonds or other securities of other companies; to guarantee the payment of principal, interest and sinking funds for the same, and to authorize amalgamation or consolidation of other companies.

Railway earnings for Sept., $9,582; operating expenses, $4,884; net earnings, $4,700. Gross earnings for three months ended Sept. 30, $25,762; operating expenses, $12,461; net earnings, $13,301.

Toronto Ry.—Gross earnings for Oct., $415,756.92; expenses, $204,825.62; net earnings, $210,931.30, against $379,720.88 gross earnings; $188,567.67 expenses; $191,153.21 net earnings for Oct., 1910. Aggregate gross earnings for 10 months ended Oct. 31, $3,936,539.18; expenses, $1,971,101.99; net earnings, $1,965,437.19, against $3,575,658.89; gross earnings, $1,841,334.61; expenses, $1,734,324.28 net earnings for same period 1910.

Toronto Suburban Ry.—There has been filed with the Provincial Secretary at Toronto a discharge of the mortgage made by the City and Suburban Ry. to the Trust Corporation of Ontario, dated Feb. 1, 1893, and a discharge of the mortgage made by its successor, the T.S. Ry., to the National Trust Co., Mar. 1, 1909.

Winnipeg Electric Ry.—Gross earnings for Sept., $321,664; working expenses, $146,140; net earnings, $175,524, against $267,127 gross earnings; $131,969 working expenses; $135,158 net earnings for Sept., 1910. Aggregate gross earnings for nine months ended Sept. 30, $2,825,637; net earnings, $1,433,507, against $2,298,384 aggregate gross earnings, and $1,144,626 net earnings for same period 1910.

Electric Railway Notes.

The Sherbrooke Ry. and Power Co. has received two new pay-as-you-enter cars for its belt line.

G. Gordon Gale,
General Superintendent, Hull Electric Co.

The London and Lake Erie Ry. and Transportation Co. is reported to be in the market for several new cars.

The Guelph Radial Ry. has received two double truck pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont.

G. Lee has been appointed acting Agent, Oshawa Ry., Deseronto, Ont., vice P. B. Whiteley, transferred to the audit office for general duties.

The Calgary Municipal Ry. has ordered six 36½ ft. electric pay-as-you-enter car bodies, 46½ ft. long over all, from the Ottawa Car Co., Ottawa, Ont.

The Hull Electric Co. has ordered six electric straight platform, semi-convertible car bodies, pay-as-you-enter type, 50 ft. long over all, from the Ottawa Car Co., Ottawa, Ont.

The Board of Railway Commissioners has approved the Montreal and Southern Counties Ry.'s standard tariff of freight rates between Montreal and Longueuil and intermediate points.

F. H. Williams, M. Can. Soc., C.E., one of the Illinois Traction System's electrical engineers, read a paper on that system before the Canadian Society of Civil Engineers in Montreal, Nov. 9.

The Sandwich, Windsor and Amherstburg Ry. has received two single truck pay-within cars from the Preston Car and Coach Co., Preston, Ont. These cars were described and illustrated in our June issue.

The Winnipeg city council decided Nov. 3 that it will not at present ask the Winnipeg Electric Ry. to put on an all night service. The present service starts at 5.30 a.m., and continues until 2 a.m., or 20½ hours out of the 24.

The Board of Railway Commissioners has approved a revised table of standard passenger fares on the Quebec Ry. Light and Power Co.'s line between Quebec and Montmorency Falls Park, via Beauport Jct., and intermediate stopping places.

The Sherbrooke Ry. and Power Co. has received two 18½ ft. electric pay-as-you-enter, semi-convertible car bodies, 29 ft. long over all, mounted on 2IE trucks, with Westinghouse 101-B-2 motor equipments, from the Ottawa Car Co., Ottawa, Ont.

In an action for damages against the Montreal St. Ry., which came before the courts in Montreal, Nov. 13, it was alleged by the plaintiff, who had been injured by one of the cars carrying freight, that the company did not have the right to move such cars in the city.

The British Columbia Government brought the first case of infraction of the rules made under the Tramways Regulation Act, into court Nov. 1. The B.C. Electric Ry. was charged with allowing passengers to ride on the steps of a certain car. Judgment was reserved on a technicality as to who should prosecute, and as to whether the city or company should be held responsible. The case was dismissed Nov. 10, the magistrate holding that the conductor did not give permission to any passengers to ride on the steps of the car. The passengers rushed on the car, and the conductor had no opportunity to have them put off before it was outside the city boundary.

John W. Williams, whose appointment as Secretary, London St. Ry., London, Ont., was mentioned in our last issue, was born at Detroit, Mich., Sept. 21, 1869. He commenced service with the Detroit and Pontiac Ry., and on the purchase of that railway by the Detroit United Ry., he was Assistant to the General Manager and Purchasing Agent. Prior to his present appointment he had been for some years in the Auditing Department, Detroit United Ry.

G. Gordon Gale, whose portrait appears on this page, was, prior to 1907, assistant engineer, Canadian Rubber Co.'s electrical plant, and from 1907 to Nov., 1908, was Superintendent of Power, Hull Electric Co.; Nov., 1908, to 1909, acting General Superintendent, and since 1909, General Superintendent, Hull Electric Co., Deschenes, Que. He is a graduate of McGill University, and an associate member of the Institute of Electrical Engineers, and of the Canadian Society of Civil Engineers.

Proceedings are being taken against the Quebec Ry. Light and Power Co., for conveying sand and stone on a freight car through the city streets, contrary to a bylaw which stipulates that only passengers shall be carried through the streets. The material is being taken to a new building on the Grande Allee, and the contractor recently waited on the city council committee on the subject, explaining the matter, but the committee stated that as they had no right to act contrary to the bylaw, the case would have to be dealt with in the courts.

The Vessel Toiler's Machinery.

In previous issues we have given various particulars about the vessel Toiler, which was built in England, and which is now in Canada engaged in the lake trade. The following additional information will be of interest:—

The propelling machinery consists of two Diesel oil engines driving twin screws which develop 180 b.h.p. each at about 250 revolutions per minute. Their

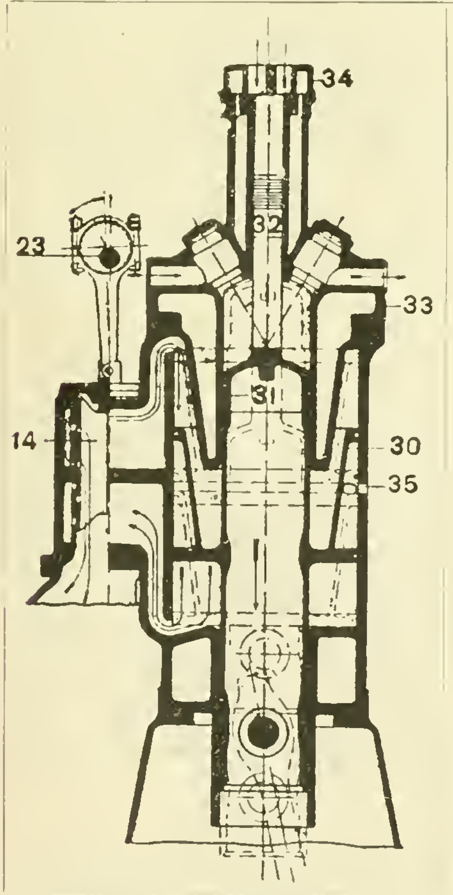

Fig. 4.

arrangement is indicated by sectional drawing, fig. 1, and the photograph, fig. 2. The weight of the engines is only about half that of steam engines and boilers of the same power, while the fuel consumption is only one-fourth the weight of that necessary if coal were being used in the ordinary way, so that there is a very considerable addition to the dead-weight capacity available for cargo, amounting in this case to about 140 tons, compared to the steam-driven ship of similar dimensions. The Toiler is of Canadian canal dimensions, being 248 ft. long, 42½ ft. beam, and 19 ft. molded depth. The cubical capacity available for cargo is also considerably increased both owing to the smaller space occupied by the engines and the fact that fuel can be carried in the double bottom when burning oil. One of the most noteworthy features of the design is the manner in which reversing is accomplished by means of compressed air. Fig. 3 shows the arrangement of the engine in diagrammatic form. The four two-cycle combustion cylinders marked 1 represent the working motor, the two double-acting cylinders marked 2 constituting what are termed the manœuvering motor. Under normal circumstances the manœuvering motor draws air from the atmosphere from the pipe 5 and delivers it slightly compressed through the channel 6 into the working cylinders 1. In the working cylinders this air is compressed to 36-38 atmospheres in order to assist the combustion and the development of power. The products of combustion are driven into the cylinder 17 and pass thence into the open air. When manœuvering the manœuvering motor is connected with a compressed air reservoir 9 instead of the atmosphere by turning the lever 18. The air used during manœuvering is automatically replenished by the air pump 8, which begins to act as soon as the pressure in the reservoir sinks below a certain amount. The liquid fuel is drawn from the tank 14 through the filter 15 by the fuel pump 16, and delivered to the fuel valves 13, being driven thence into the combustion chambers by means of the compressed air supplied from the air pump 11; 3 is the fly wheel and 4 the thrust block.

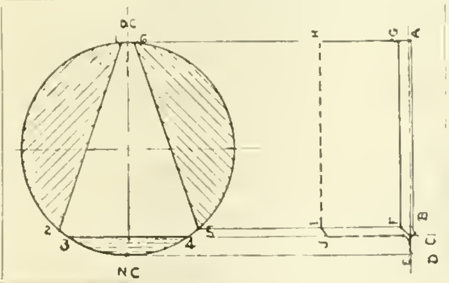

Fig. 5.

The construction and working of the manœuvering cylinders will be better understood from figs. 4 and 5. The circle of fig. 5 shows the order of events during one revolution of the engine, considering this cylinder to act firstly as an air pump under direct running, and secondly, as a compressed air engine when manœuvering. Shortly after the piston has passed the upper dead centre the slide valve opens at 1 and air is drawn into the cylinder until the valve closes at 2 (corresponding to the line A B on the imaginary indicator diagram). From 2 to 3 (B to C) there is a slight decrease in pressure which is neutralized at 3 when the piston passes an opening in the cylinder wall (35 in fig. 4) thus placing the cylinder in communication with the outside air. After the piston passes the lower dead centre this opening is closed again at 4 and compression ensues up to 5 (D to F), after which the compressed air is forced into the channel leading to the working cylinder. When manœuvering, atmospheric air is cut off and compressed air admitted from 1 to 2, the indicator diagram becoming H I J D E D F G.

The action of the internal combustion cylinders is illustrated in fig. 6. Air is supplied, under pressure to the receiver 26 and passes thence through the passage 41, which is laid open to the cylinder when the piston is at the bottom of the stroke. As the piston rises this passage is closed and the air is compresed until at about the top of the stroke a small supply of oil is admitted through the valve 25 and the resulting explosion provides the necessary source of power, the waste gases escaping through the opening 42 as the piston descends. The fuel valve 25 is controlled in the ordinary way by means of cams.

An ingenious method has been adopted for regulating the oil pumps and valves. Briefly the arrangement is such that during the period in which the motor revolves forward after the levers have been partly reversed the pumps supply no oil to the valves, thus avoiding contrary explosions. The manœuvering arrangements have proved very satisfactory in the Toiler and it is claimed that the engine can be changed from full speed ahead to full speed astern more quickly even than a steam engine. On one occasion she was submitted to an unusually severe test on returning to her builders' yard, when she was completely turned around and placed alongside a quay. In 16 minutes no less than 31 manœuvers were accomplished and the pressure never sank below eight atmospheres, the normal being 10 atmospheres.

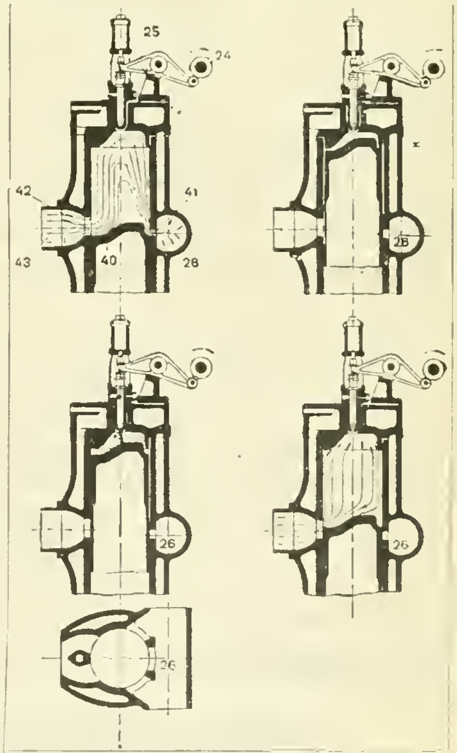

Fig. 6.

The question of auxiliary machinery for the Toiler, in view of the absence of steam, required special consideration. The auxiliaries consist of a ballast donkey pump and a sanitary donkey pump in the engine room, and a capstan aft and a windlass forward on the deck, besides the steering gear. All these are driven by compressed air, which is supplied by a separate compressor driven

QUEBEC AND LAKE ST. JOHN RAILWAY COMPANY.

Notice is hereby given that application will be made by the Quebec and Lake St. John Railway Company to the Legislative Assembly of the Province of Quebec at its next session for an Act:

(a) To confirm a certain agreement made between the Company, the Railway Share Trust and Agency Company, Limited, and the Canadian Northern Railway Company.

(b) To provide that the terms of such Agreement, having been sanctioned by extraordinary resolutions of the holders of the Company's Prior Lien, First Mortgage and Income Bonds, shall be binding on all holders of such Bonds respectively, whether present or not present at the meetings of the bondholders at which such resolutions were passed;

(c) To authorize the issue of the Company's new debenture stock provided for in the said agreement, and to fix the general form of Trust Deed or Mortgage securing such issue, subject to amendments mutually agreed upon between the parties to the said Agreement;

(d) To provide for the winding up of the Lake St. Joseph Hotel Company and the transfer of its properties to the Company, and the discharge of the existing Trust Deed, and the exchange of securities issued thereunder for the said new debenture stock of the Company;

(e) To amend section 2 of 9 Edward VII., chapter 104, by providing that the authorized branch lines may be constructed from any point on the Company's main or branch lines of railway, and to extend the time for the commencement and completion thereof.

Toronto, November 6th, 1911.

CAP DE LA MADELEINE RAILWAY.

NOTICE. The Cap de la Madeleine Railway Company will apply to the Parliament of Canada, at its next session, for an Act declaring its undertaking to be a work for the general advantage of Canada, changing its head office from the Parish of St. Marie Madeleine du Cap de la Madeleine to the City of Montreal, increasing the company's bonding powers, and authorizing it to enter into an agreement with the Canadian Pacific Railway Company for any of the purposes specified under Section 361 of The Railway Act, and for other purposes.

Dated at Montreal, this 26th day of October, 1911.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

◆

NOTICE.

The General Railway Signal Company, the owners of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents, to the fact that it is prepared to sell and furnish, at short notice, all such devices, and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to the office of the company, Room 506, Eastern Townships Bank, 263 St. James St., Montreal, Que.

by a 30 h.p. Diesel engine. In addition there is a small electric light engine working on paraffin. The cabin heating is accomplished by a hot water system.

Vessels Removed from the Register.

The following vessels were removed from the register during Oct. for the reasons assigned: Steam—A. C. Whitney, Halifax, N.S., 41 tons, broken up; Albani, Brockville, Ont., 39 tons, out of existence; Anglo Saxon, Port Hope, Ont., 43 tons, broken up; Aurora, Quebec, Que., 79 tons, burnt; Bella Fair, Port Hope, Ont., 5 tons, broken up; Belle, Owen Sound, Ont., 5 tons, broken up; Besse and Harry, Halifax, N.S., 13 tons, broken up; C. C. Martin, Midland, Ont., 45 tons, wrecked; Comet, Chatham, Ont., 15 tons, wrecked; Derby, Chatham, N.B., 9 tons, broken up: Flash, Peterboro. Ont., 4 tons, broken up; Frank, Charlottetown, P.E.I., 30 tons, sold to foreigners; John Irwin, Halifax, N.S., 80 tons, foundered; La France, Dawson, Yukon, 169 tons, wrecked; Maple Leaf, Peterboro, Ont., 18 tons, broken up: Roddick, Kenora, Ont., 31 tons, wrecked. Sailing—Alice E. L., Halifax, N.S., 59 tons, sold to foreigners; Annie Amelia, Sydney, N. S., 13 tons, transferred to Newfoundland; Georgiana, James A. Gray, Charlottetown, P.E.I., 91 tons, stranded; Lady Napier, Charlottetown, P.E.I., 210 tons, abandoned at sea: May Bell, St. John, N.B., 76 tons, wrecked: Rough Rider, St. Andrews, N.B., 15 tons, sold to foreigners.

◆

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. Virginian, which sailed from Montreal, Nov. 23, was the last passenger vessel sailing from the St. Lawrence for the 1911 navigation season.

A number of longshoremen struck work at Montreal, Nov. 17, demanding an increase of pay. The matter was settled on Nov. 20, the men returning to work at the old rate, on the understanding that certain conditions of which complaints had been made would be ameliorated.

The C.P.R. s.s. Empress of Britain which arrived at Liverpool, Eng., Nov. 10, reported that she had collided with a small coasting steamboat, off the Calf of Man, south of the Isle of Man. She suffered no damage, but the small vessel put in at the Isle of Man in a waterlogged condition.

The Norwegian steamship Halvdan, which was wrecked at Framboise, about 30 miles west of Louisburg, N.S., recently, was bound from Mexillones to Montreal with a cargo of nitrate, valued approximately at £70,000. She was built this year, was 3,925 tons gross, and insured in Norway at a value of £39,000.

G. M. Bosworth, Vice President, C.P.R., is reported to have stated recently, that the company was considering the establishment of a steamship service between Canada and India, with Calcutta as the chief Indian port, but that no details could be given at present. It is reported from New York that freight is being solicited in the western states for this service.

The C.P.R. will, on the completion of the two Pacific Empresses, now under construction in England, have 76 steamships in service. It is stated that if these were placed end to end they would extend for 3½ miles. The number of employes of the steamship department is given as 12,000 and it is said that 3,000 tons of coal are consumed daily in the operation of the vessels.

A London, Eng., press report states that the British Government has decided not to subsidize a steamship service between Great Britain and Canada, by way of the West Indies, and that it is currently reported that the C.P.R. will, in the near future, establish a service, linking up the islands with Canadian ports, with possible extensions to some South American ports.

The Allan Line has placed separate orders in Glasgow, Sotland, for two steamships for the St. Lawrence route. They will be equipped with four screw turbine engines, of the latest design, with special reversing gear for going astern. Their dimensions will be, length 570 ft., beam 71 ft., depth of hold 45½ ft., and of about 18,000 tons each. The first will be ready for service in May, 1913, and the second in the month following.

The steamship which the Union Steamship Co. of New Zealand has under construction on the Clyde, Scotland, for the Canada-Australia mail route, will be 522 ft. long, 66 ft. beam, and be about 13,000 gross tons, with accommodation for 700 passengers. She will be equipped with twin reciprocating engines and turbine amidships, driving triple screws, and 10 boilers, four of which will be arranged for burning oil fuel.

The Donaldson Line s.s. Letitia, which is under construction at Greenock, Scotland, will, it is expected, sail from Glasgow, Mar. 23 on her maiden trip to St. John, N.B. She is of about 10,000 tons, with engines of 6,000 n.h.p., and is being built for one class cabin passengers and third class, with a total accommodation for 1,410. She will be equipped with all the latest improvements, including a Marconi wireless telegraph installation.

Further attempts were made, during November, to float the wrecked C.P.R. s.s. Empress of China off the Japanese coast. It was anticipated that on the completion of blasting operations to clear a channel, an expected high tide would float her clear. It is stated that the chief damage done is to her plates and frames, and that her bulkheads are all good. Should the attempt be successful, she will be drydocked and repaired. In the meantime the s.s. Monteagle is taking her place until the end of the year.

It is reported in Quebec, that "one of the largest steamship companies in the world," the name of which is not divulged, is planning to run a line to Canada, next year, making its summer terminus, either at Montreal or Quebec. It is not stated where the company's vessels will run from, but the preliminary negotiations took place in New York, and it is stated everything was proceeding in a very satisfactory manner. Two vessels, it is said, will be placed on the route at the commencement of the St. Lawrence season next year, in the freight trade.

A London, Eng., press dispatch, Nov.

MALLEABLE IRON CASTINGS
Galt Malleable Iron Co., Limited - - Galt, Ontario

11, stated that it had been announced from Rotterdam, Holland, that a steamship line would shortly be inaugurated with fortnightly sailings from Rotterdam to Canada and the United States, the undertaking being under C.P.R. auspices and financed by that company and a company of Rotterdam bankers. G. M. Bosworth recently denied that the C.P.R. would operate a steamship line between Rotterdam and the United States in connection with the New York, New Haven and Hartford Rd. A later dispatch states that the scheme is financed in Rotterdam by local bankers only, and that they have purchased two vessels from the C.P.R.

The Union Steamship Co. is reported to have completed negotiations whereby the Canadian Mexican Pacific Steamship Co. has been acquired, as from Jan. 1, 1912. J. H. Welsford, of Liverpool, Eng., President, Union Steamship Co., has spent some time in Vancouver recently, in consolidating the interests of his company, and as announced in our last issue, has also acquired the Boscowitz Steamship Co., which will still be operated under its own name. It is stated that, on the opening of the Panama canal, the Union Steamship Co., with its subsidiaries, will operate in conjunction with Welsford and Co.'s vessels now running in the trans-Atlantic service, under the name of the Gulf Transport Line.

W. E. W. Jackson, of the Dominion Meteorological Observatory, who recently returned from a survey trip in Hudson Bay, on behalf of the Government, is reported to have stated that the Hudson Straits are only open for a short period each year, and when he left on Aug. 10, they were almost filled with ice. The bay itself is open much longer. Though he does not say that navigation is impossible, he holds that on the point of cost, the route could not compete with the St. Lawrence route, as on account of the special construction of vessel required, the slow speed, etc., the freight charges, in order to meet the expense would have to be higher than usual, rendering transportation by that route prohibitive.

Maritime Provinces and Newfoundland.

The Norwegian barque Antigua was driven ashore at Martin River, Nov. 17, and completely wrecked, 12 of a crew of 15 being drowned.

The Reid Newfoundland Co.'s s.s. Clyde, which ran ashore at Little Bay, Nfld., Nov. 5, was released Nov. 7 by H.M.S. Brilliant, apparently undamaged. She immediately resumed her service between Newfoundland and Labrador.

The Senlac Steamship Co.'s s.s. Senlac, managed by Wm. Thomson and Co., St. John, N.B., has been sold to a British firm for £1,500. She was built at St. John in 1904, and is screw driven by engine of 66 n.h.p. Her dimensions are, length, 182.4 ft.; breadth, 33 ft.; depth, 16.1 ft.; tonnage, 1011 gross, 615 register.

The steamboat Electra, owned by W. A. Beattie, Picton, N.S., which stranded recently near Margaree, on the Cape Breton coast, has been abandoned as a total wreck, having broken up during a storm. She was built at Arcadia, N.S., in 1887, and was screw driven by engine of 25 n.h.p. Her dimensions were, length 85.9 ft., breadth 16.9 ft., depth 8.2 ft.; tonnage, 107 gross, 78 register. An inquiry is being held into the cause of the loss.

The steamship Robert G. Cann, which has been built by the New Burrill-Johnson Iron Co., Yarmouth, and J. McGill, Shelburne, recently underwent her trials satisfactorily, maintaining a speed of 12 knots an hour. In addition to commodious passenger accommodation, there is hold capacity for 1,200 barrels. She is equipped with compound surface condensing engines of 41 n.h.p., supplied with steam by a horizontal boiler, at 135 lbs., steam steering gear, two steam winches, steam pumps, steam heating, electric lighting, etc. Her dimensions are: length, 119 ft., beam 24½ ft., depth of hold 9½ ft., tonnage 265 gross, 99 register.

Proposals are again being submitted to the Government with a view to obtaining some compensation for bondholders and shareholders in the defunct Chignecto Marine Transport Ry. Co., which had a charter to build a railway for the trans-shipment of vessels across the isthmus which divides the Bay of Fundy and Northumberland Strait. The company was formed in 1882, and in 1886 was granted a subsidy by the Government of the day amounting to $170,000 for 20 years. The charter expired in 1893, but some work was done subsequently, on the understanding, it is claimed, that the charter would be renewed and the subsidy re-voted. This, however, it was decided not to do. It is stated that about $4,000,000 was spent in the construction.

The Dominion Government has, according to a number of daily and other papers, awarded a contract to the British Dry Dock and Shipbuilding Co. for the construction of a dry dock and shipbuilding plant at Sydney, N.S., at an estimated cost of $4,500,000. The statement, as printed, is obviously incorrect. The facts are that the company has recently been incorporated with a capital of $10,000,000, with the object of building a dry dock and shipbuilding plant at some point in the Maritime Provinces, probably at Sydney, chiefly with the view of tendering for the construction of the proposed vessels for the Canadian navy. It was recently reported that the company's tender was one of the lower ones sent in, and that probably it would receive an order for some of the vessels, which would be built. Sir Henry Pellatt, who is chiefly interested in the concern, with the Fairfield Co., Glasgow, Scotland, and John Brown and Co., Middlesbrough, Eng., stated some time ago that unless the company received a Government order for some of the proposed naval vessels, the dock, etc., would not be proceeded with, as far as his company was concerned. The only connection the Government has with the proposed plant is in regard to the question of a subsidy, and before any subsidy could be granted, full plans and details would have to be submitted and approved by the Public Works Department. Since the incorporation of the company, and the receipt of tenders for naval vessels, a change of Government has taken place.

Province of Quebec Marine.

The Minister of Marine visited Montreal, Nov. 8, to inspect the works in progress in the harbor.

The work in connection with the laying of the foundations of the new concrete lighthouse on St. Helen's island was commenced recently.

C. C. Ballantyne, one of the members of the Montreal Harbor Commission, announced, Nov. 9, that he would shortly retire in order to devote more time to his own affairs. He was recently elected a director of the Merchants Bank.

W. I. Gear, of the Robert Reford Co., Montreal, addressed the Nomad's Club, there, Nov. 8, on the future of Montreal as a port, dealing with the question of the present route from the Great Lakes to Montreal, and the proposed Georgian Bay canal route.

At a meeting of the Richelieu and Ontario Navigation Co.'s directors, Nov. 2, the question of purchasing four additional vessels was considered. No decision was arrived at, but it was considered imperative that the company's fleet be increased in the near future.

The Richelieu and Ontario Navigation Co. has under consideration plans for a ferry steamboat for operation beween Montreal and Longueuil. It will probably be double ended, with accomodation for 3,000 passengers, and be in readiness for operation in 1913.

Chantier Maritime de St. Laurent, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at St. Laurent, Ile d'Orleans, Que., to carry on the business of shipbuilders and builders of works of all kinds relating to navigation and the maritime trade.

The St. Lawrence Dry Dock and Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000, and office at Quebec, Que., to build, own and operate all kinds of vessels, wharves, docks, dry docks, dredging equipment, machinery, etc. The incorporators are: L. Kent, R. Wall, J. Desautels, C. Donohue, Montreal, and J. B. Craven, New York.

The Montreal Insurance and Vessel Agency, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000, and office at Mont-

LAKE GRAIN SHIPMENTS.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William and Port Arthur, of the 1910 crop, from Sept. 1 to Oct. 31, with ports of destination. The last two figures in each column represent lbs.:

Destination	Wheat	Oats	Barley	Flax
Buffalo	8,925,818.30		83,539.07	
Depot Harbor	67,700.00	105,000.00		
Erie	409,028.00			
Goderich	1,557,084.30	596,639.28	37,333.12	19,745.17
Kingston	2,434,973.00	165,962.20	164,798.04	7,814.16
Montreal	1,933,673.30	635,022.18	11,091.06	14,064.22
Midland	45,480.10	28,000.00		
Meaford	46,519.50			
Owen Sound	341,849.20	481,315.31	106,919.32	
Prescott		12,282.32		
Point Edward	175,000.00	149,000.00		
Port Colborne	1,784,123.20	20,000.00		
Port Stanley	50,000.00			
Quebec		90,005.00		
Tiffin	849,408.10			
Victoria Harbor		176,575.24		
	18,670,658.20	2,459,784.17	403,681.13	41,622.55
Same period 1910	19,732,543.20	2,210,772.15	324,551.25	400,034.24

In addition to the above, 3,964.09 bushels of rye were shipped to Kingston, and 4,191.40 bush. of screenings to Montreal.

real, to carry on a general financial agency and brokerage business, and act as agents or brokers for steamship, railway, transportation and express companies. G. W. MacDougall, L. Macfarlane, C. A. Pope, G. Barclay, and J. G. Cartwright, Montreal, are the incorporators.

The British North American Dry Dock and Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with $1,000,000 capital and office at Quebec, Que., to build and operate vessels, wharves, dry docks, elevators, tramways, terminals, and to act as carriers of passengers and freight. The incorporators are, W. Price, J. F. Burstall, V. Chateauvert, J. B. E. Letellier, P. J. E. Bazin, W. Shaw, N. Drouin, W. M. Dobell and J. T. Ross, Quebec.

Ontario and the Great Lakes.

The Richelieu and Ontario Navigation Co. has declared a quarterly dividend at the rate of 8% per annum, an increase of 2%.

The Toronto Harbor Commissioners have decided that the harbor must be made deep enough for vessels drawing 24 ft.

The Hamilton city council is applying to Parliament for the appointment of a harbor commission to manage the waters of Burlington Bay.

The Northern Navigation Co. is considering the question of lengthening its steamboat Huronic during tse winter by 50 ft., and increasing the engine power.

The Department of Public Works has awarded the contract for the construction of a breakwater at Wheatley, at a cost of about $28,000, to W. Bermingham.

Negotiations are in progress for the formation of a joint harbor commission for the control of the harbors and water front properties of Fort William and Port Arthur.

Capt. Jas. McMaugh, who retired from the Toronto Ferry Co.'s service a short time ago and who had been connected with the navigation of the Great Lakes for several years, died in California, recently.

The Northern Navigation Co. announced, Nov. 15, that the report that the s.s. Hamonic left Sarnia, Nov. 12, on her last trip of the season, is in error. She will run until Dec. 6, with the company's other vessels.

The Prescott and Ogdensburg Ferry Co.'s steamboat City of Belleville, which drifted on the rocks at Big Island recently, through the breaking of the rudder chains, was taken to Ogdensburg, where repairs to her hull were undertaken.

The Peterborough and Lake Simcoe Navigation Co.'s fleet, consisting of the steamboats Otonabee, Manita, Monarch and Water Lily, and four barges, with the wharf and storehouse at Ashburnham, is offered for sale by tender in one or more lots.

Press reports from Collingwood state that the Western Steamship Co. will have its steamboat J. A. McKee length-

CANADIAN PACIFIC RAILWAY COMPANY.

Dividend Notice.

At a meeting of the Board of Directors, held to-day, a dividend of two and one-half per cent. on the Common Stock, for the quarter ended 30th September last, being at the rate of seven per cent. per annum from revenue and three per cent. from interest on the proceeds of land sales, and from other extraneous assets, was declared payable on 2nd January next to Shareholders of record at 3.00 p.m. on 1st December next.

By order of the Board.

W. R. BAKER,
Secretary.

Montreal, November 13th, 1911.

ESQUIMALT & NANAIMO RAILWAY.

NOTICE.—The Esquimalt & Nanaimo Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct a branch from a point or at or near the North fork of Oyster River on the railway authorized by paragraph (a) of section 2, of chapter 92 of the Statutes of 1906, thence in a northerly and northwesterly direction to a point on or near Hardy Bay on the West Coast of Vancouver Island, and increasing the company's bonding powers; and for other purposes.

W. F. SALISBURY,
Secretary.

Pringle, Thompson and Burgess,
Ottawa agents.

SOUTH ONTARIO PACIFIC RAILWAY COMPANY.

NOTICE. The South Ontario Pacific Railway Company will apply to the Parliamemnt of Canada at its next session for an Act authorizing it to construct and operate a railway from a point at or near Hamilton, in a southerly and southeasterly direction, to a point on the Niagara River in the Province of Ontario, and increasing its bonding powers, and for other purposes.

Dated at Montreal this 8th November, 1911.

H. C. OSWALD,
Secretary.

Pringle, Thompson and Burgess,
Ottawa Agents.

ALBERTA RAILWAY & IRRIGATION COMPANY.

NOTICE is hereby given that the Alberta Railway and Irrigation Company will apply to the Parliament of Canada, at its next session, for an Act authorizing the company to issue mortgage bonds secured upon the company's railways and branches for the purpose of retiring prior mandatory securities, improving its railways, and for other purposes.

Dated at Montreal, this 6th November, 1911.

H. C. OSWALD,
Secretary.

Pringle, Thompson and Burgess,
Ottawa Agents.

KOOTENAY CENTRAL RAILWAY.

NOTICE.—The Kootenay Central Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct a branch from a point on the Crow's Nest Branch of the Canadian Pacific Railway at or near Galloway, in the Province of British Columbia, in a southerly direction to the International Boundary, and extending the time within which it may construct the railways heretofore authorized, and for increasing the company's bonding powers; and for other purposes.

Dated at Montreal this third day of November, A.D. 1911.

H. C. OSWALD,
Secretary.

Pringle, Thompson and Burgess,
Ottawa Agents.

MANITOBA & NORTHWESTERN RAILWAY.

NOTICE.—The Manitoba and Northwestern Railway Company of Canada will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct a branch from a point at or near Theodore in a westerly direction to a junction with the Pheasant Hills Branch of the C.P.R. between Govan and Lanigan in the Province of Saskatchewan, and for other purposes.

Dated at Montreal, this 25th October, 1911.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

CANADIAN PACIFIC RAILWAY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to enter into an agreement with the Quebec Central Railway Company for any of the purposes specified in section 361 of The Railway Act, and to lease the railways of the said company, and for other purposes.

Dated at Montreal, 2nd November, 1911.

W. R. BAKER,
Secretary.

Pringle, Thompson and Burgess,
Ottawa Agents.

The Victoria Rolling Stock & Realty Co. of Ontario, Limited.

Notice is hereby given that a dividend of three per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 30th, 1911, has been declared payable Dec. 1st, 1911, to the shareholders on record as of the 30th of Nov., 1911.

By order of the Board.

G. T. CHISHOLM, Secretary.

Toronto, Nov. 20th, 1911.

EVERYBODY IS GOING into heavier cars and equipment, and of course heavier Dinkeys. Come along. We are ready for you. All sizes in stock.

VULCAN IRON WORKS

New York Office - - - 50 Church St.

ened during the winter. We are, however officially advised that though it has been under consideration, it is not intended to do it this winter.

The Western Navigation Co.'s steamboat Kaministiquia is to be lengthened at Port Arthur by 76 ft. during the winter. She was formerly known as Imperial, and was built at Toronto in 1886, and rebuilt and renamed at Port Arthur in 1906. She is now 109 ft. long.

Press reports from London, Ont., state that a proposal is being considered to dredge the River Thames from Chatham to London, to enable steamboats to come up to the city. It is estimated that in addition to dredging, the installation of four locks between Chatham and London would be all that is necessary.

Press reports from Montreal, Nov. 11, stated that negotiations had been reopened between the Richelieu and Ontario Navigation Co., and shareholders of the Niagara Navigation Co., with the view of merging the two interests, and that Sir Henry Pellatt was conducting the negotiations for the R. & O. N. Co. Sir Henry has denied this.

The Ministers of Railways and Canals is reported to have stated, Nov. 7, that he would not be able to inspect the proposed route of the new Welland canal, until after the first session of Parliament, after which inspection the Government would consider the question of going ahead. It was probable that a year or more would elapse before anything definite was settled.

The Ontario and Ohio Navigation Co., a subsidiary of the London and Lake Erie Ry. and Transportation Co., is reported to have plans prepared for a second steamboat to ply between Port Stanley and Cleveland. S. W. Mower, General Manager, is reported to have stated recently, that though the plans were ready, nothing definite about ordering a new vessel had been done.

The Dominion Government has awarded a contract to Pratt and Hambly, Midland, Ont., for the construction and equipment of a wireless telegraph station at Sault Ste. Marie, Ont. A site is said to have been obtained at Pim Hill, about half a mile north of the old wireless station. Work is said to have been commenced, and it is expected to be completed by Mar. 1, 1912.

The steamboat John Sharples, which ran ashore on the Gallop Islands in Dec., 1910, and which has been lying at Garden Island since it was released in the following spring will, press reports say, be taken to Cleveland or Buffalo, where it is considered there is better opportunity for its sale. The underwriters who have had the sale in hand for some time, are reported to have refused $27,500.

The steamboat Forest B, while running between Kenora and Rainy River, struck a rock to the south of the Little Traverse in the Lake of the Woods, Nov. 8, and foundered. She was built at Rainy River in 1895, and re-built there in 1910, and was formerly named Brandon and Edna Bridges. She is screw driven with engine of 4 n.h.p., and is 75 ft. long, 17 ft. broad, 6 ft. deep, 88 tons, gross, 60 register.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for October, as follows: Superior, 602.23; Michigan and Huron, 579.60; Erie, 571.53; Ontario, 244.62. As compared with the average October levels for the past ten years, Superior was 0.64 ft. below; Michigan and Huron 1.14 ft. below; Erie, 0.62 ft. below, and Ontario, 1.25 ft. below. It was anticipated that during November Superior would fall 0.2 ft. and the other levels 9.3 ft.

Polson Dry Dock and Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and office at Toronto, to carry on the business of engineers, dredgers, contractors, shipowners and shippers, carriers by land and water, etc., to build, own and operate all kinds of vessels and dredging equipment, wharves, docks, dry docks, harbors, breakwaters, etc., and in connection therewith to build and operate tramways, terminals and railway sidings on its own lands.

The Canadian Lake and Ocean Navigation Co.'s s.s. Turret Cape, operated by the Merchants Mutual Line, Toronto, was reported hard ashore on the Middle Bank, near Cove Island, Lake Huron, Nov. 20. She left Point Edward on the previous day, light, for Port Arthur, and was caught in a storm. It is feared she is a total loss. She was built at Sunderland, Eng., in 1895, and was screw driven, with engine of 250 n.h.p. Her dimensions were, length 253 ft., breadth 44 ft., depth 19.4 ft.; tonnage, 1,827 gross, 1,142 register, and she is registered in England. It has since been reported that she has been abandoned to the underwriters.

The lake freighter Toiler, of which we have given a description previously, and the engines of which are described and illustrated on another page, is being operated by C. I. de Sola, Montreal, for the builders. She brought, from England, a cargo of pig iron for Halifax, and scoria blocks for Montreal, and after unloading, proceeded to Port Colborne, light, there taking on a cargo of 94,000 bush. of grain, the largest single cargo to pass through the Welland canal, for Montreal. Her next trip was from Montreal to Charlotte, N.Y., light, where she loaded coal for Montreal, afterwards proceeding to Kingston, where she is berthed for the winter.

◆

Manitoba, Saskatchewan and Alberta

Navigation on Lake Winnipeg was closed for the season, Nov. 5, on the arrival of the Dominion Government steamboat Lady of the Lake at Selkirk.

The municipal council of Assiniboia, Man., is applying to the provincial government to build a lock on the Assiniboine River, and to dredge a channel from where it joins the Red River, to Headingly, to enable steamboats to reach that point.

H. J. Black, Winnipeg, is receiving tenders for one large steam tug, three barges, one ship barge, one sand dredge, three derricks from three to six tons capacity, one stone crusher, with the requisite boilers and engines for same, to be built on the Red River, or Lake Winnipeg.

An Ottawa press dispatch of Nov. 7 states that the Public Works Department will shortly call for tenders for the construction of approaches to the bridge at the St. Andrews locks, on the Red River, below Winnipeg. The bridge has already been built, but without the proper approaches, full use cannot be made of it.

The Manitoba Gypsum Co., which operated some small steamboats on Lake Manitoba, in connection with its business, has disposed of them to Capt. Pollock, of the steamboat Wolverine, as the railway to its works having been completed it has no further use for the vessels. The boats will, it is stated, be taken to Lake Winnipeg, by way of the Saskatchewan River.

The engineers engaged on survey work on the Saskatchewan River between Winnipeg and Edmonton, have completed their work and will submit a report to the Department of Public Works shortly. It is proposed to establish a 6 ft. waterway between Lake Winnipeg and Edmonton by way of the that such a route will prove a valuable aid in transporting coal and grain. Saskatchewan River, and it is claimed

◆

British Columbia and Pacific Coast Marine.

The official trip of the Government tug, Point Ellice, took place on Burrard Inlet, Nov. 11, and the tug was taken over by the Dominion Public Works Department.

The C.P.R. management has decided to build another steamboat for the Kootenay Lakes, but we were advised recently that a contract had not been let for it and that the details had not been fully decided.

The C.P.R. British Columbia Coast Service s.s. Princess Beatrice, which ran aground on Noble Island, Oct. 14, and which was later released with some damage to her bow and stern, is being repaired at Esquimalt.

The Metropole Transportation Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000 and offices at Vancouver, to operate steam and other vessels, and to

carry on a general ship owning and shipping business.

The auxiliary schooner Elsie Bradford, sprang a leak and sank, near the Entrance island lighthouse, Nanaimo, Nov. 4. She was formerly a sailing vessel, named Selma, and was built at Victoria in 1893, her dimensions being, length 47.5 ft., breadth 13.8 ft., depth 6.8 ft.; tonnage, 23 gross, 10 register. She was equipped with a gasoline engine of 6 n.h.p., driving a screw.

The British Columbia Public Works Department has purchased the small steamboat Faloma for departmental work. She was built at Vancouver in 1910, and is equipped with engine of 5 n.h.p. driving a screw. Her dimensions are, length 63.3 ft., breadth 12.2 ft., depth 7.6 ft.; tonnage, 33 gross, 22 register.

Armstrong, Morrison and Co., Vancouver, have sold out their wharf and waterfront properties there to Champion and White. The property includes the steamboat Armoco, built at Vancouver in 1907. She is screw driven with engine of 10½ n.h.p., and her dimensions are, length 56.5 ft., breadth 14.5 ft., depth 7.2 ft.; tonnage, 46 gross, 32 register.

During the past summer the Dominion Government survey steamboat Lillooet, completed the survey of the channels south of the Skeena River to the northern point of Pitt island, and also carried out other work in Hecate straits, near Graham Island, and surveyed the entrance to Skidegate Inlet. She is completing the season's work at Cousins Inlet, surveying Ocean Falls harbor.

The contract for the conversion of the Grand Trunk Pacific Coast Steamship Co.'s steamships Prince Rupert and Prince George to oil burners, has been awarded to the British Columbia Marine Railway Co., Esquimalt. The Dahl system of oil burners is specified, includ-

ing specially constructed heaters, strainers, meters, air distributors and burners. The alterations will be made during the winter months.

The British Columbia Express Co. is having plans prepared for a steamboat to be operated on the Upper Fraser River, between Fort George and Tete Jaune Cache. It is said that she will be ready for service on the re-opening of navigation there in May, and that she will be built at Soda Creek at a cost of about $100,000. She is to be a sternwheeler, equipped with electric light and all modern improvements.

The steamboats Operator and Conveyor, recently operated on the Skeena River, by Foley, Welch and Stewart, in connection with their G.T.P.R. contracts, are being dismantled at Victoria, and their machinery being packed for shipment to Tete Jaune Cache, where it will be installed in new hulls, for operation, next year, on the Upper Fraser River. It is stated that they will run between Tete Jaune Cache and Fort George, where the G.T.P.R. is under contract, and that six scows are being built for carrying freight.

The Union Steamship Co. of British Columbia is sueing Bow, McLachlan and Co., shipbuilders of Paisley, Scotland, for £5,000 damages sustained owing to defective construction of the s.s. Camosun in 1904. The case has been before various courts for several years. The Union Steamship Co. originally withheld payment of $25,000, which amount was sued for by the builders, in the B.C. courts, and they failed to recover, and an appeal confirmed the first decision. The builders later appealed to the Privy Council, when the previous decisions were reversed. The case is now before the Edinburgh Court of Sessions and being dealt with under Scots law, which in method and procedure differs very much from that adopted in any other British courts. The record has been closed and the case placed on the procedure roll.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

108. Oct. 20. 307. Ontario, Lake Ontario, Toronto harbor, east entrance, fog bell established at inner entrance of east pier. 308. Ontario, St. Clair river, Sarnia, wreck, lightship placed. 309. Ontario, Georgian bay, Bears Rump shoal, bell buoy established. 310. United States of America, St. Clair river, Port Huron, Fort Gratiot light station, sounding of fog whistle.

109. Oct. 21. 311. Ontario, Georgian bay, Hope island, Lottie Wolf shoal, gas buoy established. 312. Ontario, Georgian bay, Giants Tomb island, Bennet bank, gas buoy established.

110. Oct. 25. 313. Nova Scotia, southwest coast, Cape Sable, southwest ledge buoy, position. 314. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Cap Charles to Cap a la Roche, changes in buoyage.

111. Nov. 2. 315. Ontario, River St. Lawrence, northeastward of Croil island, uncharted shoal, buoy established. 316. Ontario, Georgian bay, east side, off Delf island, Superior shoal, buoy established.

112. Nov. 4. 317. British Columbia, Vancouver Island, Victoria harbor, Hospital rock buoy, light established. 318. British Columbia, Chatham sound, chart, Digby island to Kennedy island, issued.

113. Nov. 6. 319. British Columbia, Burrard Inlet, Vancouver harbor, Coal harbor, buoys established.

115. Nov. 11. 322. Prince Edward Island, north coast, Malpeque harbor, Fish island, additional range lights established. 323. Quebec, River St. Lawrence, Godbout, bearing of range lights.

116. Nov. 16. 324. Quebec, entrance to the St. Lawrence, The Gaspe current, best routes for vessels to gain time inward or outward bound.

117. Nov. 17. 325. Ontario, Georgian bay, east side, approach to Parry Sound, Red rock, lighthouse rebuilt, intended fog alarm.

Investigations re s.s. Sindad.

Following are summaries of the judgments delivered as the result of investigations into two accidents to the s.s. Sindbad, owned by F. E. Hall and Co., by L. A. Demers, Wreck Commissioner, concurred in by Capts. A. Reid and F. Nash.

The first case dealt with the vessel striking an obstruction in the upper part of the Saguenay River, at Pointe Lachance, June 16, and the court found that in view of the facts elicited, no other conclusion could be arrived at than that the pilot, L. H. Lapierre, was in default, and committed a grave error of judgment in attempting to pilot his vessel on the occasion in question, with his limited knowledge of the river, for which the court severely reprimanded him and cautioned him to be more careful in future, and to study the conditions of the place before undertaking to endanger the property entrusted to his care. The officers of the vessel were exonerated.

The second judgment was in connection with the grounding of the vessel, off Carleton Island, in the St. Lawrence River, Sept. 18, while en route from Toledo to Montreal with grain. The court found that the mate was in fault for having disregarded the orders received by him from the master, when opposite Cape St. Vincent, notwithstanding any motives he may plead in extenuation. He must be reminded that when in a subordinate position, every order given by his superior must be faithfully carried out, and to the letter. However, owing to the fact that he was one month idle, waiting for this investigation, and considering the intelligent and straightforward manner of giving his evidence, the court did not deal with his certificate, but censured him severely for his disobedience to orders, which was the cause of the grounding. The master was exonerated, but the court suggested that the services of a competent wheelman be secured.

The Sinking of the s. s. Emperor.

An investigation into the causes leading to the sinking of the Inland Lines s.s. Emperor, in the Canadian lock of the Sault Ste. Marie canal, Oct. 15, was held at Collingwood, Nov. 1, by L. A. Demers, Wreck Commissioner, assisted by Capt. G. C. Coles, Examiner of Masters and Mates, and Capt. P. M. Campbell.

The court, after hearing the evidence, found that the canal employes were to blame for ordering the flooding of the lock without previously enquiring if the vessel was in readiness, and stated that it believed it to be customary for the master of a vessel to sound one blast of the whistle as a signal to the canal authorities to begin flooding. The officers of the Emperor were exonerated from blame, the responsibility resting with the watchman on board, who happened to be a deck hand, and therefore irresponsible. The court added that it thinks it is extremely necessary that masters of all vessels should have copies of the regulations governing the operation of locks and canals.

A paper on the development of boat davits was read by A. J. Lewkowicz, consulting engineer, before the Central Railway and Engineering Club at Toronto recently.

Stranding of s.s. Princess Beatrice

Following is the judgment of Jas. Gaudin, Agent, Department of Marine, Victoria, B.C., concurred in by C. Eddie and J. T. Walbran as assessors, delivered recently, in the matter of the stranding of the C.P.R. s.s. Princess Beatrice on Noble Island, off the British Columbia coast, Oct. 14.

The court finds that the accident was due to the thoughtlessness of the officer of the watch who permitted the quartermaster to be relieved by the night watchman, known to be suffering from deafness, and who, in disobedience of the rules issued by the C.P.R., as well as of the instructions of the master, not to leave the wheel house without calling the master's attention to the fact, left the bridge with the helm in the becket, the vessel swinging on a starboard helm to her destruction, without assuring himself that his instructions to steady the helm at east had been properly understood. The court has no doubt that the stranding was the outcome of pure negligence on the part of the first officer, attributable to a laxity of discipline, which seems deplorable and inexplicable in a service which has admittedly endeavored to make adequate provision to meet the increasing passenger travel on the B.C. coast. The court therefore suspends the first officer's certificate of competency for six months from Oct. 14. The court also considers that the master's instructions to the officer in charge of the deck at night should be specific and such as to eliminate all choice of the officer accepting responsibility of piloting the vessel in narrow or dangerous waters, and therefore considers under the grave circumstances the master's certificate of competency should be suspended for three months from Oct. 14.

The court also considers that in view of the public safety of life and property, the continually increasing commerce to northern ports, and the possibility of future commerce with the Orient to northern ports in Vancouver Island, that an additional light and fog alarm should be established at some point on the dangers of the northern shore of New Channel.

Stranding of s. s. Lake Champlain.

Following is a summary of the judgment delivered by L. A. Demers, Wreck Commissioner, Nov. 11, which was concurred in by Capt. Koenig and W. Gauthier, as assessors, in the matter of the stranding of the C.P.R. s.s. Lake Champlain, off Longueuil reef, Oct. 27.

The court after carefully weighing the evidence finds that while the pilot, A. Gagnon, exercised a commendable caution in the orders which he issued, in coming to an anchor, during heavy weather, he committed an error in judgment through his failure in more precisely locating his position, for which error he stands censured. Regarding the master and officers of the Lake Champlain, the court holds that to have countermanded the order of the pilot to anchor would have been undue interference on their part, and therefore exonerates them from responsibility.

During September, four employes were killed and two injured in the course of their work in connection with the navigation of Canadian waters. Of the fatalities, two were due to falls into the holds of vessels, one to machinery, and one to fire.

Mackenzie and Mackenzie, Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $15,000 and office at Winnipeg, to carry on a general contracting business, including the construction of docks, harbors, piers, wharves, canals, etc.

SAVE TIME AND MONEY ON LOCOMOTIVE REPAIRS

Use Thermit and weld broken frames and mud rings without removing them from the engine. Locomotives can be repaired and returned to service in less than 24 hours.

The Thermit Process is in general use by the principal railways of the United States, Canada and Mexico, and there is nothing experimental about it.

Write for illustrated Pamphlet No. 22-N, which gives full particulars.

Goldschmidt Thermit Co.
